1.14	South West of Draycott	Flooding / Drainage	Caroline and John Thirwell	Response-01001	The land around Draycott is very susceptible to flooding. In times of high rainfall we can watch the water filtering across the fields adjacent to us and, although it has never breached the road, it is of great concern that the impact of extra housing in this particular area will cause more influx of water (after all water has to go somewhere) when diverted from the surrounding fields. A more detailed assessment is needed before we are subjected to the annual stress of flooding impact, as happens in many other parts of the country, We are very very concerned about this.
1.14	South West of Draycott	Flooding / Drainage	Charlotte Brennan	Response-00931	Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding.
1.14	South West of Draycott	Flooding / Drainage	Colin & Cynthia Green	Response-00922	Standing water/flooding over years at certain times of course, drainage & sewerage affected by this scheme of new builds. I believe Severn Trent will or should confirm this.
1.14	South West of Draycott	Flooding / Drainage	Dale Longmuir	Response-01543	This land is apart of our flood fields, the newly built houses will suffer devastating floods as well as the concrete and housing will make it so that the ground cant prevent the water from getting to other houses which shouldn't flood, roads will be closed, this will have a massive affect on so many homes and roads influengin traffic and quality of life.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Flooding / Drainage	David and Mary Murden	Response-01898	Another cause of confusion is our understanding that the flood risk boundaries have been amended in recent months. No reason has been given to us for this change of boundary. There certainly has been no flood prevention measures in the area, the River Derwent has not changed its course, the weather has been wetter than ever (apart from this past winter) so I would be grateful if someone could explain the reasoning behind this decision. In the past we have had notification that our house, in Lime Grove, backing onto the 'Safeguarded' area of the development, was in the flood zone. We were given information about where to obtain sand bags if needed, and several times have received automated telephone calls giving us advance warning of flooding in this area. The last such call we received was during the night in October 2023. As far as we can see the circumstances in this area have not changed since then. We see first hand how wet this field behind our house gets. Indeed, when we first lived here (we came in 1973) the most regular crop was winter wheat, sown in the autumn and grown on for a summer harvest. This has not been possible for a good few years now as the field is inaccessible for the farmer during the autumn and winter. Nowadays the stubble of last seasons crop is left in the ground until it dries out in April, or sometimes even May, and then a crop such as Spring Barley is sown. This does not seem a very suitable basis for building homes. In fact, Tim Barker (farmer now deceased) once said to us that he would like to have houses on the land but he knew that it would not be possible 'at our end' because of the water on the land.
1.14	South West of Draycott	Flooding / Drainage	David and Nicala O'Leary	Response-00822	The site in question also plays a critical role in flood resilience. It lies close to the River Derwent and is prone to frequent flooding, as witnessed during the storms of late 2023 and early 2024. Local residents have documented flooding on the proposed site, which acts as a natural soakaway. Paving over this land would only increase surface water runoff and elevate the flood risk to existing homes. As residents with long-standing knowledge of the river, the O'Leary family have resided at 20 Cleveland Avenue since 1958 and can confirm that flooding encroaches far closer to homes than recent flood maps suggest. These lived experiences should not be dismissed in favour of overly optimistic modelling.
1.14	South West of Draycott	Flooding / Drainage	David Atchison	Response-01247	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact. NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.
1.14	South West of Draycott	Flooding / Drainage	David Boyle	Response-01426	NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone. Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes.
1.14	South West of Draycott	Flooding / Drainage	David G York	Response-01843	Minimal liaison has been undertaken by EBC with Severn Trent regarding drainage and water management arrangements for the Draycott site. Draycott residents experience multiyear flooding events, and this development will further compound flooding issues. More investigation is needed to determine why this known flood location site is suitable for development. A Flood Risk Assessment should be requested for developments within a Flood Zone.
1.14	South West of Draycott	Flooding / Drainage	David Thompson	Response-00654	Flooding has been an issue to the south of Draycott for years. Adding the development of housing will add impermeable hard surfacing that will create additional surface water run-off and increased flows into surface water drainage, all with the potential to add to the flooding.
1.14	South West of Draycott	Flooding / Drainage	David Thurgood	Response-01195	Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone.

1.14	South West of Draycott	Flooding / Drainage	David Webster	Response-01113	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes. Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact. When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issues. "NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where 50 development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout the year with many residents on Lime Gr
1.14	South West of Draycott	Flooding / Drainage	David Webster	Response-01113	ove not able to obtain flood risk damage cover as a consequence. " NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.
1.14	South West of Draycott	Flooding / Drainage	Dexter Codrington	Response-00986	The services for this development all come from the Main Derby Road. This is regularly being pumped out by the environment agency as the Victorian sewage system can not cope today. How ill it cope with the additional 600 toilets and 6-700 showers and sinks etc. Flooding The proposed site is within a flood Zone, I understand this has now been downgraded but unsure on what basis noting the floods we experienced in 2023/4. If we fill this location with concrete the water will have to go somewhere which will exacerbate the current flooding in residents gardens. Minimal liaison has been undertaken by EBC with Severn Trent regarding drainage and water management arrangements for the Draycott site. Draycott residents experience multiyear flooding events, and this development will further compound flooding issues. More investigation is needed to determine why this known flood location site is suitable for development. A Flood Risk Assessment should be requested for developments within a Flood Zone

1.14	South West of Draycott	Flooding / Drainage	Douglas Walker	Response-00994	w development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.
1.14	South West of Draycott	Flooding / Drainage	Dr CJ Marvell	Response-01901	Flooding in general. Draycott is highly prone to flooding. The previous Environment Agency flood map designated parts of the proposed development site as flood zone 2 or 3.
1.14	South West of Draycott	Flooding / Drainage	Dr CJ Marvell	Response-01901	This has rather conveniently been re-designated in the latest EA flood map (2025) as being free of flooding. Any resident of Draycott will tell you that the area behind Lime Grove does suffer flooding, but mainly by surface water. Once again it appears politically expedient to re-designate this land. The effect of Surface Water. The gardens and occasionally some of the houses on Lime Grove adjacent to the proposed development suffer regular flooding. The Derwent burst its banks seven times in 2024 with the water covering varying amounts of land to the south of Lime Grove, Cleveland Avenue, Derwent Street and South Street. This was not the direct cause of flooding to housing in Draycott as the river floods here are well understood. Much less well understood is the effect of heavy local rainfall on the water table as the river rises and the excess water can no longer be carried away by the river. The water table may rise several metres under these conditions and combined with surface water runoff, this does regularly cause flooding in some gardens and properties in Draycott. The building of the proposed development will exacerbate this problem by increasing surface runoff due to the increase in hard paved areas; the effect on the immediate water table is difficult to determine. Special measures taken to protect the new houses may well save them from flooding but the effect on existing houses, mainly on Lime Grove will be increased.
1.14	South West of Draycott	Flooding / Drainage	Dr Shelagh Brown	Response-01158	The area is a flood plain. I have lived in Draycott for 35 years and flooding has become more frequent and severe during this time. Any building on flood plain at the edge of the village must inevitably put the centre of the village at increased flood risk.
1.14	South West of Draycott	Flooding / Drainage	Dudley Medhurst	Response-01180	The drains cannot cope now so what will another 200 plus houses do to our system along with approx another 400 people adding to the drainage/sewage systems that are struggling now! Many houses are unable to get home insurance.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Flooding / Drainage	Francis Ian Scott	Response-01535	From the correspondence received from the EBC which was in answer to an FOI request. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.
1.14	South West of Draycott	Flooding / Drainage	Gail Holdsworth	Response-00937	Five minutes walk from my house I can be by the river. Any surveys done in houses in this area say ?flood risk? . Residents near the proposed site often have flooded gardens. If there are any thoughts of trying to divert this risk from the proposed building site it will possibly just divert to the middle of Draycott in the future.
1.14	South West of Draycott	Flooding / Drainage	Garry Hickton	Response-01473	This area floods and water even backs up into gardens and toilets on Lime Grove
1.14	South West of Draycott	Flooding / Drainage	Gary Siddall	Response-01237	This is probably the main issue which YOU really should be the most concerned about from a legal standpoint - flooding ! Is this site really "fit for purpose", I ask?? Be under no illusions - the fields for the proposed housing in Draycott, they FLOOD - and flood regularly. I don't care what any of your so-called reports might say - if you live here, you know - the residents of Lime Grove are aware of this all too well ! Virtually every year there are photos documented on social media of the flooding in this area and other places all around Draycott, it's no secret ! Also the fact that Flood Risk Zone for these areas has suddenly and miraculously been downgraded as this building proposal is being pushed through, is highly suspicious. .... But it doesn't matter what risk number you call it, IT WILL FLOOD. Just a few days ago, it was reported that the Association of British Insurers (ABI) are warning that, as part of the Government's project to build 1.5 million new houses, houses built on/near flood plains may be deemed uninsurable ! Conveniently downgrading the Flood Risk "on paper" does not stop flooding. There seems to have been the bare minimum of liaison with Severn Trent on such matters, but even if strenuous efforts ARE undertaken to stop a new housing development in this area from flooding, where will all this water go ?? The mere fact that the removal of all the trees and grasses/plants, etc. will mean massively less root systems to help absorb water.... This could easily make *other* areas of the village newly susceptible to flooding, as the "excess" water is forced elsewhere. I do not believe that anywhere near enough investigative work has been done on this aspect, which quite rightly worries existing village residents in case their family homes potentially become newly at risk of flooding. Building here is almost reckless !

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Flooding / Drainage	Gemma Woolnough	Response-01394	The proposed land for this development is directly on a flood plain which often floods during time of heavy rainfall. For many months the land is water logged which if built on would likely lead to an increased levels of surface water run off. This would increase the flood risk of the whole village including the residents of the proposed new homes. As the effects of global warming increase, we will likely experience wetter weather conditions which if this vital flood plain is built upon will increase the flood risk to the rest of the village. Many homes in the village already experience the effects of flood water and the risk to homes being flooded in the future will be significantly more if the land is built upon.
1.14	South West of Draycott	Flooding / Drainage	George Foster	Response-01199	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes. Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact. When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issue. NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where 50 development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout the year with many residents on Lime Gro
1.14	South West of Draycott	Flooding / Drainage	George Foster	Response-01199	we not able to obtain flood risk damage cover as a consequence. NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.
1.14	South West of Draycott	Flooding / Drainage	Gerri Hickton	Response-01472	The area is already a significant flood risk and the railway lines flood regularly. With the loss of land for water to soak into, this water will have no place to go, exacerbating the problem and causing significantly higher levels of flooding
1.14	South West of Draycott	Flooding / Drainage	Gill Trickitt	Response-01157	Draycott floods. Period. We have a river. Houses are flooded. Fields are flooded. Gardens are often underwater. If you build on greenbelt or any surrounding fields - which this development would be, the water will be displaced and just move somewhere else, threatening to flood more of the village.
1.14	South West of Draycott	Flooding / Drainage	Gordon Dahill	Response-00690	THE fields in question and the surrounding area flood regularly every year causing damage access and inconvenience. WE and other residents in LIME GROVE get regular texts in the early morning from the environment agency warning of flooding. Is it a COINCIDENCE that the flood plane area was CONVENIENTLY CHANGED just a FEW DAYS before the plans were announced As far as we can tell weather river and climate factors have not suddenly changed. What could make things worse, is the possibility by Derby City to start flood control in the city. The result of this would be a greater flow of water down river to Draycott. Extra houses and concrete bases for huge pylons are all going to raise the chance of increased flooding also the water table is only a few inches below the surface. the removal of trees and hedges which help to absorb water, will not help the possibility of flooding.
1.14	South West of Draycott	Flooding / Drainage	Graham Wakeling	Response-01238	the proposed builds are on flood plain areas, this development will increase flood risk to Draycott and other surrounding villages.
1.14	South West of Draycott	Flooding / Drainage	Hannah McMaster	Response-01381	Flooding has increased in severity year on year in Draycott, building on farmland and increasing the surface run off will exacerbate the situation, pushing the flooding further in to homes within the village. The land earmarked for building has flooded and will continue to flood.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Flooding / Drainage	Hannah Pritchard	Response-01399	The proposed development site is known locally to suffer from significant surface flooding during periods of rainfall. Building on this land will increase impermeable surfaces, worsen drainage, and heighten the risk of flooding not only on the site itself but in surrounding areas. This poses a serious risk to property, safety, and insurance premiums for both new and existing residents. The use of attenuation tanks would not be appropriate as these are designed for 1 in 100-year flood events not for areas of consistent flooding.
1.14	South West of Draycott	Flooding / Drainage	James Hargreaves	Response-01315	1. Flood-Prone Area: The land near Lime Grove is known for flooding. New development will worsen the situation, affecting homes and sewer systems. 2. Lack of Coordination: There has been minimal engagement with Severn Trent on drainage. Only four generic questions were asked by EBC in January 2025, showing a lack of serious planning. 3. Flood Risk Reclassification: Although the area is no longer officially in a flood zone, its topography suggests runoff will still increase flood risk. The timing of the reclassification?just before consultation?raises concerns. 4. Sequential Test Ignored: NPPF 174 requires developments to be located in areas with the lowest flood risk. This site was recently in a flood zone, and its selection contradicts national guidance. 5. Climate Resilience: NPPF 162 calls for planning to support net zero and address climate risks. Building on flood-prone land undermines this goal and increases vulnerability to extreme weather.
1.14	South West of Draycott	Flooding / Drainage	James Whyman	Response-01551	1 From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic was questions was asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. 2 Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. 3 There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. 4 In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. 5 NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes. 6 Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. 7 Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact. 8 When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. 9 NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issues. 10 NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where 50 development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout the year with many
1.14	South West of Draycott	Flooding / Drainage	James Whyman	Response-01551	residents on Lime Grove not able to obtain flood risk damage cover as a consequence. 11 NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. 12 NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.
1.14	South West of Draycott	Flooding / Drainage	Jane Barker	Response-01178	Flooding is a big problem in Draycott and this should be considered as a grave concern for any future developments in the village. The current dwellings surrounding the proposed site also already suffer with surface water not draining away and this will be made much much worse by another 190 plus houses trying to join the system. Many homes are unable to obtain home insurance due to this.
1.14	South West of Draycott	Flooding / Drainage	J Morgan	Response-01847	Minimal liaison has been undertaken by EBC with Severn Trent regarding drainage and water management arrangements for the Draycott site. Draycott residents experience multiyear flooding events, and this development will further compound flooding issues. More investigation is needed to determine why this known flood location site is suitable for development. A Flood Risk Assessment should be requested for developments within a Flood Zone.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Flooding / Drainage	John Brayshaw	Response-01379	I have worked close many schemes involving flood protection areas with Severn Trent, The NRA and The Environmental agency. In my experience none have been a success! But developers have made short time profits and left any aftermath to public services and insurance companies. So I would say to the council, get ready to pay our own money down the line for problems you create with this development. We have had an increase in flooding and road closures over recent years and this will only get worse! The problem will only be past downstream to areas already at risk and overloaded multiple times a year I see nothing proposed that would significantly reduce or eliminate this flooding and it's associated cost to the public, businesses and individuals. The flood designs are there for a reason please do not make the mistake often made for short term gain!
1.14	South West of Draycott	Flooding / Drainage	Jonathan Childs	Response-01117	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or have no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. This development presents as little more than a convenient 'box ticking' exercise with little consideration beyond the political and commercial aspects. Although the relevant now falls outside of a Flood Risk Zone (following the recent and laughable 'regrading' by the EA) the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. With 22 years residence and direct experience of these issues, I can state with full confidence that flooding between Lime Grove and the farm drive has become considerably worse in recent years and certainly not better! Any 'hard' development on this land will inevitably exacerbate the already difficult situation which prevails for the greater portion of the calendar year. NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issue. NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where 50 development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout the year with many residents on Lime Grove not able to obtain flood risk damage cover as a consequence. NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by
1.14	South West of Draycott	Flooding / Drainage	Jonathan Childs	Response-01117	following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. 1.14	South West of Draycott	Flooding / Drainage	Julie Pleass	Response-01526	Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact. When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic was questions was asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development
1.14	South West of Draycott	Flooding / Drainage	Juliet Macve	Response-01572	This land is entirely unsuitable for development due to the flooding which happens each year, yet it appears that EBC is not taking this risk at all seriously. There are numerous photos and videos of drone footage available online, showing the scale of the problem. To build on this land would be absolutely ludicrous. The field behind Lime Grove was constantly under water for months at a time during 2024. In fact, a little egret (a wetland bird) was present in the field every day for at least two weeks at some point in that year. Not only is it highly likely that new houses will flood, but the loss of green fields and trees will increase the risk to existing properties. Again, principles in the NPPF are not being adhered to in proposing the change from green belt and housing development. It is vital that flood risk assessments are carried out.
1.14	South West of Draycott	Flooding / Drainage	Justine Murrin	Response-01478	This area is already under high flood risk, so adding more foundations in this area will raise the water levels and increase the flooding even more. There are numerous brown sites that could be used instead of filling up green site soil, which is needed to help drainage in the area
1.14	South West of Draycott	Flooding / Drainage	Karen Doxey	Response-01236	Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact.
1.14	South West of Draycott	Flooding / Drainage	Karen Smith	Response-01484	I'm concerned about the lack of infrastructure to support the proposed development. The village doesn't have capacity to support 200+ houses. That area already floods during heavy rain. What additional drainage is being bought in to support the existing systems?
1.14	South West of Draycott	Flooding / Drainage	Katie May	Response-01518	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic was questions was asked by EBC in January 2025. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified
1.14	South West of Draycott	Flooding / Drainage	Kelly Walker	Response-00911	and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods.
1.14	South West of Draycott	Flooding / Drainage	Kerry Naylor	Response-00993	Banksfield farm land has become a flood plain over the last 20 years. The past two years especially, the field backing Lime Grove has become a lake. Ducks and other water birds have made it their home during wet times. Photographic evidence is held by residence of Lime Grove. Where will the water go. Water can only be diverted not stopped. The water from the field, especially if the houses were built higher than Lime Grove residence home, would means homes being flooded. Gardens are already under water for up to two months in wet months, this will only get worse. What reassurances can be made that Lime Grove gardens/property will not be impacted by a new development? Every year, STWA have to pump the drains on the Main Derby Road, so the drains on Lime Grove can run freely. This is already a worry.
1.14	South West of Draycott	Flooding / Drainage	Laura Charier	Response-01218	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic was questions was asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community.
1.14	South West of Draycott	Flooding / Drainage	Laura Roffey	Response-01479	This a such a major point, especially into today's climate change. Many areas of Draycott experience flooding - the houses in Lime Grove behind the planned houses are one of them. Where will this water go? Into the existing houses, or into the new house as well. Where will this water go if you build on the land? This planned housing estate poses a very real threat of flooding to the surrounding houses and streets.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Flooding / Drainage	Lee	Response-00742	1. The site will flood - that is a fact no matter what the latest reports suddenly state. You can see the massive lake like puddles when it rains heavily. Affordably, cheap and quickly made houses on unsuitable land is a risk. Why is flooding be dismissed when it's a serious consideration and problem? 2. Severn Trent are continually out fixing burst pipes and local water issues. They are constantly in the news and have little credibility. What insurance's & checks will be done to check they are not cutting corners and can support this infrastructure upgrade. 3. It close to a River what precautions have been taken to ensure residence children don't drown? The council claimed / alleged this is essential as 2,000 kids are on the Erewash register awaiting housing?
1.14	South West of Draycott	Flooding / Drainage	Lee Bunday	Response-00028	The proposed developments?of large-scale housing here and across the allocations at Borrowash and Breaston?will increase the amount of impermeable surfaces, leading to greater surface water runoff. This presents a serious risk in this area, which is already susceptible to flooding and has experience issues with the existing drainage systems. Recent years have shown an increase in the frequency and severity of flood events, likely linked to climate change. Yet, the strategy lacks a clear plan to strengthen local flood resilience, modernise drainage systems, or ensure that new developments incorporate sustainable drainage solutions (SuDS). Major concerns include: Insufficient reference to updated flood risk assessments, especially in vulnerable zones. Lack of detailed strategy for upgrading drainage infrastructure. No guarantees that developers will implement and maintain long-term flood mitigation measures. Risk of increased insurance costs and property damage for current and future residents. Any strategy that plans for significant growth must prioritise resilience to environmental hazards. I strongly urge the council to review and amend the Core Strategy to include: Robust flood risk modelling based on latest climate data. Enforceable requirements for SuDS in all new developments. Collaboration with the Environment Agency and local water authorities. Clear investment plans for improving drainage networks. The protection of people, homes, and the natural environment must be at the heart of any long-term planning decisions.
1.14	South West of Draycott	Flooding / Drainage	Linda Jane Jenkins	Response-01007	As I said 93 Derby road, my house lies along side the first field. During the time I have lived here the farmer rents the field to horse owners. The horses are only on this field 6 months of the year because it floods. So it is not good enough for horses but it is good enough for housing for humans? That does not make sense. Just because you have changed the flood status does not mean you are correct. If the build goes ahead and the houses are build up the water has to go somewhere. If it comes to our property we will be looking for redress at your door.
1.14	South West of Draycott	Flooding / Drainage	Louise and Shane Foster	Response-01219	Flooding is a regular problem in the area of the proposed development. Derby Road (A6005) is subject to flooding, as is the development site itself. Surely a Flood Risk Assessment is necessary before developing a known local flood zone?
1.14	South West of Draycott	Flooding / Drainage	Louise Burnell	Response-00262	Increases surface runoff from extensive saved areas will exacerbate flood risk and potentially pollute local watercourses.
1.14	South West of Draycott	Flooding / Drainage	Luke Harper	Response-00898	The greenbelt absorbs rainwater but concrete does not.
1.14	South West of Draycott	Flooding / Drainage	Luke Hatch	Response-00160	This land has historically been part of the River Derwent floodplain. With more extreme weather due to climate change, this should be a red flag. Paving over green space only increases flood risk for the site itself and the surrounding area. It also seems suspicious that it is only now being reclassified, or so I have heard, as no longer a flood plain, right when something needs to be built there. The developers will build and in 3-5 years time, we'll get flooded and the developers will be in Marbella forgetting it ever happened.
1.14	South West of Draycott	Flooding / Drainage	Lynne Dundas	Response-01198	As I live close to the site, I see year on year the water flooding from the River Derwent as it appears to creep ever closer to the home.
1.14	South West of Draycott	Flooding / Drainage	Maggie Murphy	Response-00833	We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site in regards to drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC are not taking the flood issues seriously. Draycott residents experience multiyear flooding events with the houses on Lime Grove, that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this known flood location site is suitable for development. 2. The houses that back onto the land South West of Draycott have experienced significant flooding in the past and this development will further compound this flooding with the erosion of grassland and plants, leading to soil erosion. The water displacement caused by this development must go somewhere and further flooding will occur. 3. In line with the National Planning Policy Framework, we request a Flood Risk Assessment for developments which fall within a Flood Zone.
1.14	South West of Draycott	Flooding / Drainage	Martin Fawcett	Response-01077	Common sense should overrule greed. Everybody knows how much floodwater already appears in this area in bad weather and filling land with concrete and bricks will surely only worsen the issue as water won't naturally drain effectively

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Flooding / Drainage	Martin Kilcoyne	Response-01460	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes. Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact. When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issue. "NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where 50 development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout the year with many residents on Lime Gr
1.14	South West of Draycott	Flooding / Drainage	Martin Kilcoyne	Response-01460	ove not able to obtain flood risk damage cover as a consequence. " NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.
1.14	South West of Draycott	Flooding / Drainage	Mary Walsh	Response-01197	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact. When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where 50 development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout the year with many residents on Lime Grove not able to obtain flood risk damage cover as a consequence.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Flooding / Drainage	Matthew Walker	Response-01313	<p>From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. Until recently, where the EBCs amended Core Strategy was voted to go forward for public consultation on the 27th March the area was largely within FZ1. When questions, Head of Planning (Steven Birkenshaw) advised that the flood zone attribution had recently been removed and reclassified as FZ2. This was a shock to many of the Draycott residents within the EBC chamber, yet it was still on the Severn Trent website maps for some time after this which indicates that the planning work was undertaken in the knowledge at that time that the land was prone to the risk of fluvial flooding. Despite repeated efforts we have been provided with no evidence that any mitigating actions would be employed should development go ahead. Much of the lands surrounding Draycott suffer from surface water flooding, this patch of land is no exception. Given the low-lying nature of the flat lands which are barely above river level the draining of these lands can take some considerable time, often months as the water slowly percolates through to the river. The removal of the land to act as a slow-release of these waters will exacerbate problems elsewhere in the village to the detriment of other residents and road users. The village has been completely isolated from all other surrounding villages by road and rail during periods of exceptionally wet weather for several days at a time, this was almost unheard of until 3-4 years ago. However, the main line rail does appear to have 24hr or more closures at least once a year requiring Network Rail to install 2 large pumps which run continuously for extended periods to alleviate these flooding problems. Therefore, I strongly raise that in line with the National Planning Policy Framework, a Flood Risk Assessment is undertaken before this development is approved to establish the actual facts and viability of the scheme. If this did result in the area being reclassified as not within a flood zone this would be useful for the large number of residents on Lime Grove that are currently not able to take out flood damage cover. NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes and whilst the site now according to EBC falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. NPPF 1</p>
1.14	South West of Draycott	Flooding / Drainage	Matthew Walker	Response-01313	<p>62. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound these issues. NPPF 170. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone. The Parish Council instructed Michael Evans &amp; Associates Ltd to undertake a Flood Risk and Drainage review. Some of the advice given included that the site is shown on the Environment Agency's Flood Map for Planning to be located predominantly within Flood Zone 1, an area with low risk of Fluvial Flooding (less than the 0.1% chance of flooding in any given year). A very small area along the southern boundary of the site is shown to be at medium and high risk of flooding (between 0.1 and 1% chance of flooding and greater than 1% chance of flooding). In Flood Risk terms, Flood Zone 1 areas are suitable for residential development. Flood Zone 3 areas would not be suitable for residential development, and Flood Zone 2 areas would only be suitable for residential development if mitigation measures are put in place. Therefore, from an initial review of the flood maps the majority of the site is likely to be acceptable for residential development, however, the Local Planning Authority any future developer should be aware that parts of the site are unlikely to be suitable for development.</p>

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Flooding / Drainage	Matthew Walker	Response-01313	nt and the housing allocations should be adjusted accordingly. Surface water flooding is also shown to affect parts of the site, which mapping suggests is localised ponding within the site, which is mainly confined to the site boundary, but with some offsite connectivity to the south and east of the site. Care will need to be taken within any development layout to ensure that this flooding is mitigated and not exacerbated, particularly to the east of the site where surface water flooding is already shown to impact on the neighbouring properties fronting Lime Grove. Local residents have reported that the fields which make up the site, and the fields between the site and the River Derwent have flooded in recent years. Photographs were provided from 2022, 2023 and 2024 which showed fluvial flooding of the River Derwent. The flood extents are very similar to the mapped Environment Agency 1 in 100 year (Flood Zone 3) mapped extents. Based on this information, it is suggested that the modelled extents would provide a fairly accurate depiction of fluvial flood extents in the area. Michael Evans & Associates Ltd go onto advise that, they understand that the local residents have some significant concerns regarding the potential impact of any development at the site on the existing drainage infrastructure which serve the local area. It is understood that there have been flooding incidents in the past related to insufficient capacity within the existing public sewer network. This has caused flooding of the manholes/sewers within Lime Grove, to the west of the site, as well as to other areas downstream of the site. The majority of Draycott is drained via a public combined sewer network, taking both foul and surface water drainage, so during times of heavy or prolonged rainfall the network is sometimes unable to cope with the flows. Severn Trent Water have responded to the Local Planning Authority and to the Parish Council to confirm that there is capacity within the downstream pumping station and the Wastewater Treatment Works to accommodate the flows from any future development at the site, but it is unclear if the existing network between the site and the pumping station would be able to accommodate such flows. The Severn Trent Water response confirms that the authority has a duty to accommodate foul flows from any new development into the nearest point of connection into the public sewer. Therefore, it is anticipated that a connection would be provided into the sewer network within Derby Road, to the north of the site. Based on the local topography and the depth of the sewers within Derby Road (approximately 1.6m deep), it is likely that flows from the development would need to be pumped to the point of connection. This would, obviously, add cost to any proposed development as well as land take, which would need to be factored into the overall cost of developing the site. Whilst it would be the responsibility of Severn Trent Water to provide upgrades to the network, if required, the timescale for any such required upgrades could not be guaranteed and could affect the deliverability of the site in the short to medium term. In conclusion, from a thorough review we have undertaken of the information provided by EBC and Severn Trent, it is clear the required flood and drainage assessments/appraisals have not been undertaken when making such a significant decision as to whether the land south west of Draycott is feasible for development. The reviews
1.14	South West of Draycott	Flooding / Drainage	Matthew Walker	Response-01313	undertaken to date by the EBC and Severn Trent can be at best called generic and light touch. This is also compounded by the EBCs Sustainability Assessment which also mirrors this where the land south west of Draycott (CSR00040) has been scored disproportionately high using assumptions rather than facts.
1.14	South West of Draycott	Flooding / Drainage	Maureen Pinchbeck	Response-00041	This land often floods. I have a friend on Lime Grove near to proposed development and her garden frequently floods.
1.14	South West of Draycott	Flooding / Drainage	Melanie Wilson	Response-00974	The surrounding land already floods , protecting the majority of the houses in Draycott any removal of greenspace will increase the risk of flooding in the village. A comprehensive flood risk assessment should be undertaken before any decision is made.
1.14	South West of Draycott	Flooding / Drainage	Michael Atkin	Response-01872	My main objection is that this land is susceptible to flooding, I can confirm this with photographs of my garden underwater. For 3 months 2023-2024 and again in January 2025 which has caused £100s in trees and shrubs and several of my neighbours also flooded. The Victorian sewer system is currently at maximum and certainly could not cope with the extra volume.
1.14	South West of Draycott	Flooding / Drainage	Michael Thirtwall	Response-01196	When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area.
1.14	South West of Draycott	Flooding / Drainage	Michelle Marks	Response-00924	The environmental impact of this development would be devastating: Green Belt land plays a crucial role in natural water absorption and flood prevention. The replacement of permeable land with concrete and tarmac will exacerbate surface water runoff, increasing the risk of flooding in Draycott and surrounding areas.
1.14	South West of Draycott	Flooding / Drainage	Miss Ella Meredith	Response-01850	Minimal liaison has been undertaken by EBC with Severn Trent regarding drainage and water management arrangements for the Draycott site. Draycott residents experience multiyear flooding events, and this development will further compound flooding issues. More investigation is needed to determine why this known flood location site is suitable for development. A Flood Risk Assessment should be requested for developments within a Flood Zone.
1.14	South West of Draycott	Flooding / Drainage	Miss Natalie Walsh	Response-01846	Minimal liaison has been undertaken by EBC with Severn Trent regarding drainage and water management arrangements for the Draycott site. Draycott residents experience multiyear flooding events, and this development will further compound flooding issues. More investigation is needed to determine why this known flood location site is suitable for development. A Flood Risk Assessment should be requested for developments within a Flood Zone.
1.14	South West of Draycott	Flooding / Drainage	Miss Paige Murray	Response-01842	Minimal liaison has been undertaken by EBC with Severn Trent regarding drainage and water management arrangements for the Draycott site. Draycott residents experience multiyear flooding events, and this development will further compound flooding issues. More investigation is needed to determine why this known flood location site is suitable for development. A Flood Risk Assessment should be requested for developments within a Flood Zone.
1.14	South West of Draycott	Flooding / Drainage	Mr Graham Bingham and Mrs Kristine Bingham	Response-01302	Minimal liaison has been undertaken by EBC with Severn Trent Water regarding drainage and water management arrangements for the Draycott site. Draycott residents living adjacent to the proposed site experience multiyear flooding events, and this development would further compound the flooding issues. more investigation is needed to determine why this known flood location site is suitable for development. A flood risk assessment should be carried out for developments within a known flood zone.
1.14	South West of Draycott	Flooding / Drainage	Mr R Sykes	Response-00412	Flooding in the area is severe through out the year.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Flooding / Drainage	Mr Scott Walsh	Response-01844	Minimal liaison has been undertaken by EBC with Severn Trent regarding drainage and water management arrangements for the Draycott site. Draycott residents experience multiyear flooding events, and this development will further compound flooding issues. More investigation is needed to determine why this known flood location site is suitable for development. A Flood Risk Assessment should be requested for developments within a Flood Zone.
1.14	South West of Draycott	Flooding / Drainage	Mrs Elizabeth White	Response-00060	This area is very close to a river and flood alleviation area so there is a risk of flooding in the area if stress is put on the land.
1.14	South West of Draycott	Flooding / Drainage	Mrs Maria E Hardy	Response-00614	Redirecting flood areas. A huge worry for where we live. Could make us in risk of flooding.
1.14	South West of Draycott	Flooding / Drainage	Mrs Mary Walsh	Response-01845	Minimal liaison has been undertaken by EBC with Severn Trent regarding drainage and water management arrangements for the Draycott site. Draycott residents experience multiyear flooding events, and this development will further compound flooding issues. More investigation is needed to determine why this known flood location site is suitable for development. A Flood Risk Assessment should be requested for developments within a Flood Zone.
1.14	South West of Draycott	Flooding / Drainage	Mrs Patricia L Tacey	Response-00283	The area designated for housing has a gravel base which enables the land to drain quickly during periods of flooding of the river Derwent. By building on the land this will create problems further down the river.
1.14	South West of Draycott	Flooding / Drainage	Mrs V Atkin	Response-01871	I understand that more housing is needed but the site EBC have chosen is not fit for purpose. Our property backs onto this site and for the last few years we have had severe flooding. There must be other sites that are more suitable.
1.14	South West of Draycott	Flooding / Drainage	Mr Tony Walsh	Response-01849	Minimal liaison has been undertaken by EBC with Severn Trent regarding drainage and water management arrangements for the Draycott site. Draycott residents experience multiyear flooding events, and this development will further compound flooding issues. More investigation is needed to determine why this known flood location site is suitable for development. A Flood Risk Assessment should be requested for developments within a Flood Zone.
			Nat	Response-00158	The increased volume of people will create more issues with flooding and drainage
1.14	South West of Draycott	Flooding / Drainage	Nigel morton	Response-01351	It's a flood plain and shouldn't be built on, it will create massive problems around the area, the environment agency saying its downgraded the risk does mean they are right, in my opinion having lived opposite since 1989, this year has been worse than ever. its flood zone 2-3, that speaks for itself. Drainage is another issue we have on derby Road too, major work would need undertaking for this development
1.14	South West of Draycott	Flooding / Drainage	Nikki Riches	Response-00950	? As a resident of Draycott, I am extremely worried about the future impact of the new housing estate on flood risk to the area, my home and neighbours. Being a victim of flooding is a devastating thing to experience and can cause risk to peoples safety, their mental health and home security as well as financially. The proposed area is already at risk of flooding, building in the vicinity will only increase the risk to the local area as the flood water has to go somewhere. The proposed 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. ? This proposal will exacerbate the flood risk to the area, before future climate change is even considered. ? From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. ? Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. ? There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. ? Yet the land south west of Draycott experiences significant flooding throughout the year with many residents on Lime Grove not able to obtain flood risk damage cover as a consequence. ? NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. ? NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.
1.14	South West of Draycott	Flooding / Drainage	Oliver Kirk	Response-00569	The area south west of draycott has long been prolific as a flood plain, building on this site will cause an increase in flooding risk into the village and create animosity towards the new residents who will be perceived to have caused any flood damage when it inevitably comes.
1.14	South West of Draycott	Flooding / Drainage	Paul Allen	Response-01082	The site borders on and slightly encroaches on a Flood Zone 2 (GOV.UK-Flood Map) and there is no flood defence barrier around this area of Draycott. The fields to the south-west of the site regularly flood in the winter period and it is likely to become worse with global warming. Future flooding is likely to make any proposed sustainable urban drainage scheme (SUDS) ineffective and raise the risk of pollution in the nearby River Derwent.
1.14	South West of Draycott	Flooding / Drainage	paul butcher	Response-01154	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.
1.14	South West of Draycott	Flooding / Drainage	Pauline Marks	Response-00927	Green Belt land plays a crucial role in natural water absorption and flood prevention. The replacement of permeable land with concrete and tarmac will exacerbate surface water runoff, increasing the risk of flooding in Draycott and surrounding areas.
1.14	South West of Draycott	Flooding / Drainage	Paul Riley	Response-00029	The area in question floods every winter. If the absorbent ground is replaced with hard landscaping (roads, drives etc), then where is this flood water expected to go? That's right, further into the rest of the village. What Muppet thought this would be a sensible place to build on? They need their head examining and should not be allowed near any future planning.
1.14	South West of Draycott	Flooding / Drainage	Peter Sutton	Response-00409	The area is prone to flooding. It currently absorbs a large amount of rainfall which once concreted over will now flow to other areas - making flooding worse downstream - Wilne and Sawley already experience terrible flooding and this will make it worse.
1.14	South West of Draycott	Flooding / Drainage	R Beresford	Response-01907	Our house Insurance costs us more as we have an additional charge as we live on a flood plane by RIAS insurance. This was only renewed in 27th February this year, so if we are no longer on flood plane why did this not come up in February upon renewal ! We often get flood warnings from the environment agency, yellow, amber, and a couple of Red warnings.... Does that mean we are no longer on a flood plane as the council has changed the map!! But the river hasn't moved!!
1.14	South West of Draycott	Flooding / Drainage	R Fazackerley	Response-01415	The proposed development is on a known flood plain for the river Derwent. The loss of the land to development poses a significant flood risk to existing properties in Draycott
1.14	South West of Draycott	Flooding / Drainage	Richard Keith Hanbury	Response-01087	I believe you have changed the flood status of the field next to 93 Derby road. This field floods. How can you change the status when it floods. It beggars belief that you can do this.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Flooding / Drainage	Richard Syson	Response-01317	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. Erewash Borough Council needs to clarify to the Draycott public why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. The land / country lane near to the River Derwent and this land still flood during longer periods of rainy weather, so these risks have not reduced NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout the year with many residents on Lime Grove not able to obtain flood risk damage cover as a consequence.
1.14	South West of Draycott	Flooding / Drainage	Rick Howden	Response-01421	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development.
1.14	South West of Draycott	Flooding / Drainage	Ricky fisher	Response-00048	This area has got worse and worse over the years ive lived in draycott all my life and i can see it through my bedroom window getting scarily close to my house and the more land you build on the less land up river it has to go and draycott does not need more land taking for more water to travel on to draycotts houses
1.14	South West of Draycott	Flooding / Drainage	Robert Alan Duncanson	Response-00855	WORRIES AND CONCERNS THAT THE RIVER, WHICH DOES FLOOD ALOT WOULD CAUSE PROBLEMS WITH THE NEW HOUSES AND SURROUNDING AREA
1.14	South West of Draycott	Flooding / Drainage	Robert Mee	Response-01505	I am concerned about the flood risk at this site.
1.14	South West of Draycott	Flooding / Drainage	Roger Brown	Response-00999	Draycott suffers considerably from surface water run-off and fluvial flooding. The main rail line from Derby to London is shut most years for days at a time as a result of flood water (most recently this last January) and the village has been isolated for several days by all means of travel except helicopter during the last 3 or 4 winters as surface water drainage fails to cope. The proposed site has surface water visible for months at a time and local gardens have flooded numerous times, largely from surface water run-off. There are homes on Lime Grove and nearby which have had sewage backing up in downstairs lavatories and foul water pipes are known to have burst, the system is already close to or at capacity. The surrounding fields of Draycott are often littered with pools of standing water for months at a time as the water slowly seeps through the ground, removing these fields from this delicate balance will exacerbate the problems elsewhere in the village unless sufficient mitigating measures are included in the proposals.
1.14	South West of Draycott	Flooding / Drainage	Ruth Hawkins	Response-01277	The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. As there is already evidence of flooding in this locality it is probable that this will be exacerbated by the development with the erosion of soil and plants increasing the risk of floods to other areas in the local community.
1.14	South West of Draycott	Flooding / Drainage	Sandra Ison	Response-01897	As a resident of Lime Grove our garden has been flooded again and again. Until March 2025 this land has been designated as floodplain. Now Erewash want to use this land for housing the boundary has been changed. On the Environmental Flood Map the fields behind Lime Grove are marked as a high risk for surface water flooding. Flooding also occurs on a regular basis at Gypsy Lane and Shacklecross, closing the road completely. What measures is the Council putting in place to solve this problem. If this change of use is passed and the land is developed for housing, where will all the surface water go. At present the fields, trees and hedges soak up some of the water. The change to roads and concrete will only add to the problem. After heavy rain properties on Lime Grove have ground floor toilets overflowing due to rising water levels, proving that the current sewerage system cannot cope.
1.14	South West of Draycott	Flooding / Drainage	Sarah	Response-01541	This is the biggest concern as we live nearly boarder line with this development and these fields food every year which protects our house and others around. When it rains heavy we have rising water under our house/ floorboards this is only going to increase and I'm sure will flood our house!

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Flooding / Drainage	Sarah Hargreaves	Response-01314	1. Flood Risk: The land Southwest of Draycott experiences significant flooding, impacting residents on Lime Grove. The development will compound these issues, and more investigation is needed. The houses on Lime Grove have experienced severe flooding, affecting gardens and foul sewerage networks. This development will exacerbate these problems, leading to increased flood risk for existing and new residents. 2. Inadequate Assessment: Minimal liaison has been undertaken with Severn Trent regarding drainage and water management. Only four generic questions were asked by EBC in January 2025, indicating a lack of sincere consideration of flood issues. A comprehensive Flood Risk Assessment is required to understand the full impact of the development on local drainage and water management systems. 3. Environmental Agency Flood Risk Survey: Although the relevant area now falls outside of a Flood Risk Zone, the topology of the site indicates that runoff from the development will add to the present flood risk areas within the Environment Agency flood risk zone. Building on a flood plain that has trees, grass, and plants that naturally help absorb water via root systems will have a significant impact when removed. Furthermore, it is not clear why the land was reclassified two days before the consultation was agreed. Who agreed to reclassify this land? And on what basis? Given that recent years have seen unprecedented flooding this is inaccurate. 4. Sequential Test: NPPF 174 states that the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying for this test. Yet the land Southwest of Draycott was recently within a Flood Risk Zone, and again, the reclassification appears to be a coincidence timed with the consultation period. 5. Climate Change Considerations: NPPF 162 states that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts, including storm and flood risks. The development of 190 houses on land Southwest of Draycott contradicts this statement, as the area experiences significant flooding throughout the year. This development will further compound these issues, increasing vulnerability to climate change impacts.
1.14	South West of Draycott	Flooding / Drainage	Sara Walker-Bradley	Response-01440	This area and the other fields flood every year and is getting worse yearly, building in this land would make flooding worse and effecting the roads and existing properties with the excess surface water, these field can absorb the flood water and should be left as is.
1.14	South West of Draycott	Flooding / Drainage	Scott Gardner	Response-01554	Councillor Scott rightly highlighted the catastrophic potential loss of our vital floodplain. Draycott has a long and painful history of flooding , and allowing development on this crucial floodplain will only exacerbate this threat, putting countless homes at even greater risk. The Council's dismissive claim that the site is not in Flood Zone 2 based on potentially flawed data is an insult to residents who have experienced the devastating reality of flooding firsthand
1.14	South West of Draycott	Flooding / Drainage	Sean Peace	Response-01347	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic was questions was asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. 5 2 Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. 6 3 There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. 7 4 In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. 8 5 NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes. 9 6 Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. 10 7 Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact. 11 8 When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. 12 9 NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issues. 13 10 NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where 50 development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Flooding / Drainage	Sean Peace	Response-01347	the year with many residents on Lime Grove not able to obtain flood risk damage cover as a consequence. 14 11 NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. 15 12 NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.
1.14	South West of Draycott	Flooding / Drainage	Simon Jenkins	Response-01287	The land next to us floods every winter without fail, but has not come into our land as yet. If this goes ahead, and they are built slightly above ours and we flood , our Lawyer will be knocking on your door. Some idiot at Long Eaton said it was not flood risk anymore. Come and have a look in about November, and you will see what we mean.
1.14	South West of Draycott	Flooding / Drainage	S M Beresford	Response-01851	Minimal liaison has been undertaken by EBC with Severn Trent regarding drainage and water management arrangements for the Draycott site. Draycott residents experience multiyear flooding events, and this development will further compound flooding issues. More investigation is needed to determine why this known flood location site is suitable for development. A Flood Risk Assessment should be requested for developments within a Flood Zone. Our house Insurance costs us more as we have an additional charge as we live on a flood plane by RIAS insurance. This was only renewed in 27th February this year, so if we are no longer on flood plane why did this not come up in February upon renewal ! We often get flood warnings from the environment agency,yellow, amber, and a couple of Red warnings.... Does that mean we are no longer on a flood plane as the council has changed the map!! But the river hasn't moved!!
1.14	South West of Draycott	Flooding / Drainage	Stephanie Ashley-Lane	Response-01380	There is lots of flooding that already affects houses around this building area. The houses built will be at risk as well as pushing the water to existing homes
1.14	South West of Draycott	Flooding / Drainage	Susan Baker	Response-01316	This land floods. Always has. Residents on Lime Grove know this all too well. The development will make it worse. The council's engagement with Severn Trent has been minimal, and the reclassification of flood zones just days before consultation began is deeply suspicious. We need a proper flood risk assessment?not vague reassurances.
1.14	South West of Draycott	Flooding / Drainage	Susan Foster	Response-00824	The proposed site is prone to flooding and the River Derwent flood bank is there for a reason. I'm sure that the river Derwent will end up as one big sewer and all that it entails, there has been so much about contamination from various sources and pollution in the news recently, you will just be adding to it.
1.14	South West of Draycott	Flooding / Drainage	Teresa Batchelor	Response-01240	As this area has always been known for flooding, it is concerning that it is thought suitable for housing. I believe some residents in Draycott find it difficult, if not impossible, to get adequate insurance cover because of the flooding issues. That being the case, how are the new home owners going to get insurance? Are builders going to ensure that the homes they are building, and hopefully selling, will be insurable at a sensible premium? And if so many houses are being built, will this force the flood waters to other areas, affecting existing residents even more? This should be seriously investigated.
1.14	South West of Draycott	Flooding / Drainage	Teresa Shaw	Response-01309	1. The site in Breaston & Draycott will flood - that is a fact no matter what the latest reports suddenly state. You can see the massive lake like puddles when it rains heavily from Derby Road. The graves flood at Breaston cemetery. Affordably, cheap and quickly made houses on unsuitable land is a risk. Why is flooding be dismissed when it's a serious consideration and problem? 2. Severn Trent are continually out fixing burst pipes and local water issues. They are constantly in the news and have little credibility. What insurance's & checks will be done to check they are not cutting corners and can support this infrastructure upgrade. 3. Draycott's plans is close to a River what precautions have been taken to ensure residence children are safe?
1.14	South West of Draycott	Flooding / Drainage	Tim Hawkins	Response-00661	The development is partially on the flood plain and in an area of high surface water, no matter how generous the various agencies reinterpret the flood zone data. If this natural flow is blocked or diverted the water will go somewhere, either in the neighbouring housing, the storm/sewage system or further down the river. Of all the places that could have been chosen around the village this is the worst, short of building it next to the river bank. Will the new houses be able to insure for flood damage? Unlikely, even existing houses nearby struggle for that type of cover.
1.14	South West of Draycott	Flooding / Drainage	Tony burton	Response-01382	Where will the flood water end up further down river
1.14	South West of Draycott	Flooding / Drainage	Tracey Morton	Response-00968	1 The proposed site and area around it suffers from significant flooding every year, this year being the worst 2 houses on lime grove Draycott suffer heavy flooding resulting in insurance companies removing flooding cover, some having to raise there gardens 3 It's flood zone 2/3 by the foi received from the environment agency 4 removing trees and hedges for development with increase the flooding 5 Flooding will also be increased when pythons are put it 6 development and pythons will act like a damm and push flood waters somewhere else 7 planning officers tried to say risk was lower at ebc meeting on 27 th March , the review I received was ted28 th of March (2)
1.14	South West of Draycott	Flooding / Drainage	T Shields	Response-00570	The site is wholly within Flood Zone 1 (the lowest risk of flooding incidences) according to the flood risk maps available online. On that basis the site is an acceptable location.
1.14	South West of Draycott	Flooding / Drainage	Viv Wright	Response-00035	Our garden already floods if we have heavy rain, the greenbelt and flood plain areas are essential to reduce flooding in our area and protect properties that are Insitu.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Flooding / Drainage	Wilfred Boone	Response-01424	NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone. NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods.
1.14	South West of Draycott	Flooding / Drainage	William Batchelor	Response-01210	land proposed has flooded previously (in last 10 years) and insurance is already constrained by the flood risk. Why would anyone buy a house they can't insure? if extra flood protection is added as a compulsory requirement for developers, where does the water now flood and who is impacted downstream?
1.14	South West of Draycott	Flooding / Drainage	zak butcher	Response-01156	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.
1.14	South West of Draycott	Green Belt	adrian leeming	Response-01249	NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. Understand there is need for new housing but there are an abundance of brownfield, previously developed sites that the developers and council should explore before this location. Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is c.8H. These 8 sites alone will allow 514 net dwelling to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever. It was previously thought that the land of the former Stanton Ironworks was taken out of the EBCs core strategy due to contamination that rendered the site unusable. Yet a recent Freedom of Information (FOI) request which was answered by EBC has advised the site is indeed to be utilised and has been allocated 1000 houses. Can EBC please advise if the status of the Stanton Ironworks sites and if this is included within the Core Strategy and how the planned 1000 houses impacts the Greenbelt review and use of Greenbelt land. "NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greybelt land does not meet this objective and will actually achieve the total opposite. NPPF 4. States that local planning authorities should approach decisions on proposed development in a positive and creative way. They should use the full range of planning tools available, including brownfield registers and permission in principle, and work proactively with applicants to secure developments that will improve the economic, social and environmental conditions of the area. EBC needs to demonstrate what appraisals have been undertaken on the 109 Brownfield sites as detailed within their own Brownfield Register, and why these sites have not been prioritised for development over the identified Green Belt land. NPPF 13. Protecting Green Belt Land:- The government attaches great importance to Green Belts. The fundamental aim of Green Belt is to keep land permanently open; the essential characteristics of Green Belts are their openness and their permanence. This is an inappropriate development in the Green Belt and there is NO evidence of the appraisals that have been undertaken

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Julian Leeming	Response-01249	on existing Brownfield sites within EBC which there are 109 with 8 of these giving over 51H and the opportunity to develop over 500 dwellings. NPPF 20. States that the target level of housing development within the plans should be capped in line with the capacity of Brownfield sites to accommodate it, to protect Green Belt yet these plans significantly exceed it. NPPF 143. The Green Belt serves 5 purposes: 1) To stop urban sprawl 2) To stop towns merging 3) To safeguard from encroachment onto the countryside 4) To preserve special settings, character and history 5) To ensure the recycling of derelict or Brownfield land. The proposals being made by EBC to reclassify existing Green Belt land to the south west of Draycott does not meet any of these 5 purposes and actually looks to achieve the total opposite. Furthermore, no apparent attempt has been made by EBC to demonstrate why the 109 existing Brownfield sites within EBC have not been prioritised over this Green Belt land. NPPF 144. States before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. No attempt has been made by the authority to explore existing Brownfield sites or underutilised land within the EBC. NPPF 146. The applicant and authority MUST make as much use as possible of Brownfield Sites and underutilised land; AND PROVE that there is nothing left before encroaching on the Green Belt. ? There is no PROOF of the authority discussing with neighbouring authorities about whether they could accommodate some of the identified need for this development, in order not to use the Green Belt. NPPF 150. Once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, to retain and enhance landscapes, visual amenity and biodiversity. NPPF 152. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances. This application does not demonstrate any exceptional circumstances. NPPF 153. 'Very Special Circumstances'? have to be proven i.e. all other options exhausted to classify this application as a ?very special circumstance?. We cannot see any evidence that this has taken place. Therefore, it is an inappropriate application and proposal and does not demonstrate exceptional circumstances. NPPF 156. The proposed development of 190 houses to the land south west of Draycott when located in the Green Belt, must demonstrate exceptional circumstances and are inappropriate unless very special circumstances can be demonstrated. "
1.14	South West of Draycott	Green Belt	Alastair Dundas	Response-01200	We need to prioritise brown field and grey belt for the development before the green belt is taken from our village.
1.14	South West of Draycott	Green Belt	Alison Bowley	Response-01174	I wasn't aware during the general election that Green Belt land was under threat. (My vote would have been very different if I had). Existing brownfield sites (109 within EBC), must be prioritised for future housing needs. When people deliberately choose to settle permanently in a rural area they do not expect the rules to be literally torn up and Green Belt land destroyed.
1.14	South West of Draycott	Green Belt	Alison Thirlwall	Response-01390	NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF 143. The Green Belt serves 5 purposes: 1) To stop urban sprawl 2) To stop towns merging 3) To safeguard from encroachment onto the countryside 4) To preserve special settings, character and history 5) To ensure the recycling of derelict or Brownfield land. The proposals being made by EBC to reclassify existing Green Belt land to the south west of Draycott does not meet any of these 5 purposes and actually looks to achieve the total opposite. Furthermore, no apparent attempt has been made by EBC to demonstrate why the 109 existing Brownfield sites within EBC have not been prioritised over this Green Belt land.

1.14	South West of Draycott	Green Belt	Andrew and Jane Gilmour	Response-01329	NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. "NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels of land as identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. " It was previously thought that the land of the former Stanton Ironworks was taken out of the EBCs core strategy due to contamination that rendered the site unusable. Yet a recent Freedom of Information (FOI) request which was answered by EBC has advised the site is indeed to be utilised and has been allocated 1000 houses. NPPF 153. 'Very Special Circumstances? have to be proven i.e. all other options exhausted to classify this application as a 'very special circumstance?. We cannot see any evidence that this has taken place. Therefore, it is an inappropriate application and proposal and does not demonstrate exceptional circumstances. NPPF 156. The proposed development of 190 houses to the land south west of Draycott when located in the Green Belt, must demonstrate exceptional circumstances and are inappropriate unless very special cir
1.14	South West of Draycott	Green Belt	A Northeast	Response-01848	cumstances can be demonstrated. EBC should be protecting Green Belt land. The Green Belt and green fields should remain open and safe, preserving public rights of way and access to local green spaces. The Draycott footpaths are in constant use, providing villagers easy access to a countryside environment. This land is rural in character, offering a tranquil and transitional landscape between Daycott Parish, Borrowwash, and Breaston. All these villages are impacted by the proposal to reclassify Green Belt to Grey Belt for housing development. While there is a need for housing, the NPPF states that existing Brownfield and Grey Belt sites should be prioritized over Green Belt sites. There are 109 existing Brownfield sites within EBC, equating to 81 hectares, with 103 of these having full planning permission. These sites should be prioritized for development before Green Belt land is considered. The NPPF states that Green Belt is to be protected and requires exceptional circumstances for development. There is nothing exceptional about the council plans to build on unspoilt Green Belt land to meet their housing target when existing Brownfield sites are available. The land south west of Draycott meets all the criteria for Green Belt purposes, preventing urban sprawl, preserving the countryside's open character, and enhancing recreational opportunities for local residents. Changing this land to Grey Belt and developing 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density.
1.14	South West of Draycott	Green Belt	Anthony Bradley Anthony Lawton-Reeve	Response-01442 Response-00971	This is designated green belt, use the grey sites that are Erewash before compromising green belt. Protecting Green Belt land, this land should be kept open and unharmed. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate.

1.14	South West of Draycott	Green Belt	Anthony Walsh	Response-00992	Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The taking away of grazing/arable land and the disruption for the wildlife. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The taking away of grazing/arable land and the disruption for the wildlife. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt. "NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite. "
1.14	South West of Draycott	Green Belt	Avice Boyle	Response-01427	NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl. NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside?s open character and the enhancement of recreational opportunities for local residents. "NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels of land as identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. " Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. The development on the land south west of Draycott for the people of Draycott and other areas, will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses.
			Barbara Crane	Response-00268	Why is green belt being targetted? Brownfield sites should be used first.
1.14	South West of Draycott	Green Belt	Ben Kassoul	Response-01024	Reclassifying the green belt to a category suitable for building housing on, rather than utilising existing brownfield sites available to the council, is a permanent detriment to Draycott's biodiversity and local flora and fauna.
1.14	South West of Draycott	Green Belt	Ben Marshall	Response-01212	Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. The development on the land south west of Draycott for the people of Draycott and other areas, will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses.
1.14	South West of Draycott	Green Belt	Bernadette Rothwell	Response-00998	Green belt is conservation of our beautiful countryside. What brown belt sites have been looked at, these should have been first I understand?

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Bev Marvell	Response-01892	I object to this policy. This Green Belt, off Derby Road, Draycott, should not be redefined as Grey Belt in order to develop it for housing. This Green Belt is particularly valuable because it is on the immediate fringe of a significant urban area, and has helped to retain this land as open and hence a valuable resource. It offers open countryside down to the river Derwent and is publicly accessible allowing outdoor recreation for large numbers of people in urban Draycott. The Local Government Association - Planning Advisory Service says that purposes of Green Belt are: ? to check the unrestricted sprawl of large built up areas - Yes this does. ? to prevent neighbouring towns from merging into one another - Yes this does. ? to assist in safeguarding the countryside from encroachment - Yes this does. This Green Belt land does play a strong role in fulfilling its core purposes, and so is not Grey Belt.
1.14	South West of Draycott	Green Belt	Bradley Peace	Response-01348	Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. 5 2 Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. 6 3 This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. 7 4 The taking away of grazing/arable land and the disruption for the wildlife. 8 5 These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. 9 6 Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. There is an opinion that the deer fencing would devalue the area of open farmland and public right of way. 10 7 This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. 11 8 The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. 12 9 These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. 13 10 Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. 14 11 Historical badger sett on part of the site to the Victorian tip at the bridge of Nooning Lane. 15 12 The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. 16 13 To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. This area forms a green corridor and houses a number of RED LIST species 17 14 The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detri
1.14	South West of Draycott	Green Belt	Bradley Peace	Response-01348	mentally impact upon Lime Grove and Derby Road character and appearance. 18 15 NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. 19 16 NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt. 20 17 NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.
1.14	South West of Draycott	Green Belt	Caroline and John Thirwell	Response-01001	The green belt should be protected at all costs. It is our buffer between urban life and the countryside. Everyone can see that too much development between Borrowwash, Draycott, Breaston and Long Eaton will lead to an uninterrupted urban sprawl. We understand the need for housing for the young people in our community but we have been informed that there are plenty of brown field sites in the EBC's jurisdiction and that a high proportion of them already have planning permission for housing. It is surely much more in keeping with the NPPF guidelines to use these sites for housing development than destroy green belt land forever.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Charlotte Brennan	Response-00931	Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside?s open character and the enhancement of recreational opportunities for local residents.
1.14	South West of Draycott	Green Belt	Colin & Cynthia Green	Response-00922	Green belt for us council tax payers if we were to ask to extend on say, would be denied I?m sure but how come EBC/Government can do just this? Plenty of brownfield areas in Erewash area could be used but no, Greenbelt, which you now call Greybelt which has been overturned by council officials. Once greenbelt has gone, it?s gone forever. Also the proposed Pylons due to come through will be affected on this planning, madness again.
1.14	South West of Draycott	Green Belt	Dale Longmuir	Response-01543	The land is a key feature of draycott introducing wildlife and a clean space you will destroy so much and there is much more suitable land to build on do not ruin such a nice area! "NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels of land as identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. "
1.14	South West of Draycott	Green Belt	David and Mary Murden	Response-01898	We are confused and concerned about the decision to build on existing Green Belt land. We know that the government have suggested that existing Green belt which is not in agricultural use, such as car parking areas, small business sites etc should be considered re-assigning as Grey belt, but the fields that are under consideration in Draycott have continually been in agricultural use, the field behind our house having been sown with Spring Barley only this April. Food security for our country is very important and we know that it is increasingly under threat as other countries change their priorities and their marketing strategies. We understand that elsewhere, in Erewash, there are Brownfields sites and other more obvious 'Grey belt' sites which we think should be considered before encroaching on agricultural land.
1.14	South West of Draycott	Green Belt	David and Nicala O'Leary	Response-00822	This proposal represents a serious and irreversible threat to our countryside, environment, infrastructure, and the identity of the village of Draycott. Once lost, Green Belt land cannot be recovered. It is vital that we protect it, not only for its environmental and recreational value, but also to prevent the unchecked urban sprawl that this development would undoubtedly accelerate. Draycott, Breaston, and Borrowash are currently distinct communities; this development risks merging them and eroding their unique character. In planning policy terms, this proposal fails to meet the criteria set out in the National Planning Policy Framework (NPPF 2023). Paragraph 140 makes clear that Green Belt boundaries should only be altered in exceptional circumstances. Paragraphs 149?150 reinforce that inappropriate development in the Green Belt should not be approved except in very special circumstances. No such circumstances have been demonstrated here. Furthermore, the Council has not shown that it has exhausted all available brownfield and non-Green Belt options, nor that it meets the required five-year housing land supply threshold necessary before Green Belt release can even be considered.
1.14	South West of Draycott	Green Belt	David Atchison	Response-01247	Protecting Green Belt land, this land should be kept open and unharmed. NPPF 153. 'Very Special Circumstances? have to be proven i.e. all other options exhausted to classify this application as a ?very special circumstance?. We cannot see any evidence that this has taken place. Therefore, it is an inappropriate application and proposal and does not demonstrate exceptional circumstances. NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. It is the wrong model in the wrong place to deliver housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. This when there are 109 existing Brownfield sites within the EBC that should be prioritised first over Green Belt land.
1.14	South West of Draycott	Green Belt	David Boyle	Response-01426	Protecting Green Belt land, this land should be kept open and unharmed Protecting public rights of way and access, a large number of footpaths would be affected NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. Great weight should be given to the findings and recommendations of independent Landscape Quality Assessment NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside?s open character and the enhancement of recreational opportunities for local residents.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	David G York	Response-01843	EBC should be protecting Green Belt land. The Green Belt and green fields should remain open and safe, preserving public rights of way and access to local green spaces. The Draycott footpaths are in constant use, providing villagers easy access to a countryside environment. This land is rural in character, offering a tranquil and transitional landscape between Draycott Parish, Borrowwash, and Breaston. All these villages are impacted by the proposal to reclassify Green Belt to Grey Belt for housing development. While there is a need for housing, the NPPF states that existing Brownfield and Grey Belt sites should be prioritized over Green Belt sites. There are 109 existing Brownfield sites within EBC, equating to 81 hectares, with 103 of these having full planning permission. These sites should be prioritized for development before Green Belt land is considered. The NPPF states that Green Belt is to be protected and requires exceptional circumstances for development. There is nothing exceptional about the council plans to build on unspoilt Green Belt land to meet their housing target when existing Brownfield sites are available. The land south west of Draycott meets all the criteria for Green Belt purposes, preventing urban sprawl, preserving the countryside's open character, and enhancing recreational opportunities for local residents. Changing this land to Grey Belt and developing 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density.
1.14	South West of Draycott	Green Belt	David Thompson	Response-00654	Our greenbelt should be protected as much as possible. Draycott is already under the threat of the Chesterfield to Willington National Grid Pylon scheme and this proposal adds to that.
1.14	South West of Draycott	Green Belt	David Thurgood	Response-01195	Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is approximately 8H. These 8 sites alone will allow 514 net dwellings to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever.
1.14	South West of Draycott	Green Belt	David Webster	Response-01113	NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. Great weight should be given to the findings and recommendations of independent Landscape Quality Assessment NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl.
1.14	South West of Draycott	Green Belt	Dexter Codrington	Response-00986	I am strongly against this development. It is the wrong location . EBC should be protecting Green Belt land. The Green Belt and green fields should remain open and safe, preserving public rights of way and access to local green spaces. The Draycott footpaths are in constant use, providing villagers easy access to a countryside environment. This land is rural in character, offering a tranquil and transitional landscape between Draycott Parish, Borrowwash, and Breaston. All these villages are impacted by the proposal to reclassify Green Belt to Grey Belt for housing development. While there is a need for housing, the NPPF states that existing Brownfield and Grey Belt sites should be prioritized over Green Belt sites. There are 109 existing Brownfield sites within EBC, equating to 81 hectares, with 103 of these having full planning permission. These sites should be prioritized for development before Green Belt land is considered. The NPPF states that Green Belt is to be protected and requires exceptional circumstances for development. There is nothing exceptional about the council's plans to build on unspoilt Green Belt land to meet their housing target when existing Brownfield sites are available. The land south west of Draycott meets all the criteria for Green Belt purposes, preventing urban sprawl, preserving the countryside's open character, and enhancing recreational opportunities for local residents. Changing this land to Grey Belt and developing 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density.

1.14	South West of Draycott	Green Belt	Diane Webster	Response-01177	Great weight should be given to the findings and recommendations of independent Landscape Quality Assessment NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl. NPPF states that in exceptional circumstances authorities should review Green Belt boundaries in accordance with the policies in this Framework and propose alterations to meet these needs in full, unless the review provides clear evidence that doing so would fundamentally undermine the purposes (taken together) of the remaining Green Belt. Changing the land south west of Draycott to Grey Belt and the development of 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density. Working on the current population of Draycott, 190 new homes will be an at least 17% increase in population. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish and Borrowash and other villages surrounding it of Breaston and Borrowash. "NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels of land as identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. " NPPF states the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate where the development would utilise Grey Belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Bel
1.14	South West of Draycott	Green Belt	Diane Webster	Response-01177	t across the area of the plan. It is clear the authority is now altering existing and acceptable Green Belt land to suit this paragraph/approach of the NPPF by converting it to Grey Belt. This is both hasty and reckless. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. The development on the land south west of Draycott for the people of Draycott and other areas, will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. It is the wrong model in the wrong place to deliver housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. This when there are 109 existing Brownfield sites within the EBC that should be prioritised first over Green Belt land. Understand there is need for new housing but there are an abundance of brownfield, previously developed sites that the developers and council should explore before this location. There are 109 existing Brownfield sites in EBC giving 81H with 103 of these having full planning permission. These sites should be prioritised first for development before Greenbelt land is considered. Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is c.8H. These 8 sites alone will allow 514 net dwelling to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever.

There are 109 existing Brownfield sites in EBC giving 81H with 103 of these having full planning permission. These sites should be prioritised first for development before Greenbelt land is considered. Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is c.8H. These 8 sites alone will allow 514 net dwelling to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever. It was previously thought that the land of the former Stanton Ironworks was taken out of the EBCs core strategy due to contamination that rendered the site unusable. Yet a recent Freedom of Information (FOI) request which was answered by EBC has advised the site is indeed to be utilised and has been allocated 1000 houses. Can EBC please advise if the status of the Stanton Ironworks sites and if this is included within the Core Strategy and how the planned 1000 houses impacts the Greenbelt review and use of Greenbelt land. NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF 4. States that local planning authorities should approach decisions on proposed development in a positive and creative way. They should use the full range of planning tools available, including brownfield registers and permission in principle, and work proactively with applicants to secure developments that will improve the economic, social and environmental conditions of the area. EBC needs to demonstrate what appraisals have been undertaken on the 109 Brownfield sites as detailed within their own Brownfield Register, and why these sites have not been prioritised for development over the identified Green Belt land. NPPF 13. Protecting Green Belt Land:- The government attaches great importance to Green Belts. The fundamental aim of Green Belt is to keep land permanently open; the essential characteristics of Green Belts are their openness and their permanence. This is an inappropriate development in the Green Belt and there is NO evidence of the appraisals that have been undertaken on existing Brownfield sites within EBC which there are 109 with 8 of these giving over 51H and the opportunity to develop over 500 dwellings. NPPF 146. The applicant and authority MUST make as much use as possible of Brownfield Sites and underutilised land; AND PROVE that there is nothing left before encroaching on the Green Belt.
1.14	South West of Draycott	Green Belt	Donna Butcher	Response-01155	? There is no PROOF of the authority discussing with neighbouring authorities about whether they could accommodate some of the identified need for this development, in order not to use the Green Belt. NPPF 152. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances. This application does not demonstrate any exceptional circumstances.

1.14	South West of Draycott	Green Belt	Donna Peace	Response-01344	<p>1 Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. 5 2 Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. 6 3 This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. 7 4 The taking away of grazing/arable land and the disruption for the wildlife. 8 5 These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. 9 6 Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. There is an opinion that the deer fencing would devalue the area of open farmland and public right of way. 10 7 This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. 11 8 The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. 12 9 These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. 13 10 Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. 14 11 Historical badger sett on part of the site to the Victorian tip at the bridge of Nooning Lane. 15 12 The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. 16 13 To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. This area forms a green corridor and houses a number of RED LIST species 17 14 The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would det</p>
1.14	South West of Draycott	Green Belt	Donna Peace	Response-01344	<p>rimentially impact upon Lime Grove and Derby Road character and appearance. 18 15 NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. 19 16 NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt. 20 17 NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.</p>

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Douglas Walker	Response-00994	<p>It is clear from the EBC own policies and the NPPF that protecting Green Belt and Greenfield land that is of good quality is a key priority, yet these plans go totally against these policies. This land should be kept open, unharmed and REMAIN protected for future generations. Furthermore, NPPF 156. The proposed development of 190 houses to the land south west of Draycott when located in the Green Belt, must demonstrate exceptional circumstances and are inappropriate unless very special circumstances can be demonstrated. Can the EBC please advise what 'exceptional circumstances' have lead to the land south west of Draycott being identified for development and losing its Green Belt / Green Field classification ? The NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. The NPPF also states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. Can the EBC please demonstrate what appraisals and outcomes have been undertaken on the existing Brownfield sites within EBC? The NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. Can the EBC please advise how the land south west of Draycott does not meet this criteria? The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. Can the EBC please demonstrate how it has met this policy requirement? NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl. NPPF states that in exceptional circumstances authorities should review Green Belt boundaries in accordance with the policies in this Framework and propose alterations to meet these needs in full, unless the review provides clear evidence that doing so would fundamentally undermine the purposes (taken together) of the remaining Green Belt. Changing the land south west of Draycott to Grey Belt and the development of 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density. Working on the current population of Draycott, 190 new homes will be an at least 17% increase in population. NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review</p>
1.14	South West of Draycott	Green Belt	Douglas Walker	Response-00994	<p>w, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. NPPF 20. States that the target level of housing development within the plans should be capped in line with the capacity of Brownfield sites to accommodate it, to protect Green Belt yet these plans significantly exceed it. NPPF 143. The Green Belt serves 5 purposes: 1) To stop urban sprawl 2) To stop towns merging 3)</p>

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Douglas Walker	Response-00994	To safeguard from encroachment onto the countryside 4) To preserve special settings, character and history 5) To ensure the recycling of derelict or Brownfield land. The proposals being made by EBC to reclassify existing Green Belt land to the south west of Draycott does not meet any of these 5 purposes and actually looks to achieve the total opposite. Furthermore, no apparent attempt has been made by EBC to demonstrate why the 109 existing Brownfield sites within EBC have not been prioritised over this Green Belt land. NPPF 146. The applicant and authority MUST make as much use as possible of Brownfield Sites and underutilised land; AND PROVE that there is nothing left before encroaching on the Green Belt. ? There is no PROOF of the authority discussing with neighbouring authorities about whether they could accommodate some of the identified need for this development, in order not to use the Green Belt.
1.14	South West of Draycott	Green Belt	Dr CJ Marvell	Response-01901	The sprawl between Nottingham and Derby is broken significantly only by the countryside to the west of Draycott, between Draycott and Borrowwash. There is another smaller gap, between Borrowwash and Spondon which is already being encroached upon.
1.14	South West of Draycott	Green Belt	Dr CJ Marvell	Response-01901	Draycott and Breaston are already linked without a gap and Breaston and Long Eaton are separated only by a narrow corridor along the motorway. The proposed development reduces the only significant gap between Derby and Nottingham. Loss of Green space. The land to be developed is mostly high grade farmland and small copses of trees. It is highly objectionable that this beautiful green belt should be designated as
1.14	South West of Draycott	Green Belt	Dr CJ Marvell	Response-01901	"grey belt" merely to suit the purposes of politicians and developers. There is no other justification for this shameful loss of irreplaceable green space.
1.14	South West of Draycott	Green Belt	Dr Shelagh Brown	Response-01158	Loss of Green Belt will have a significant impact for the worse, on the mental health of local residents who currently enjoy walking for relaxation in this area. Brownfield sites should be prioritised for new housing.
			Dudley Medhurst	Response-01180	I strongly beleive that Greenbelt should stay Greenbelt.....where will it stop?
1.14	South West of Draycott	Green Belt	Elaine Wright	Response-01002	strongly object to the Sustainability Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local residents resulted in a score of -6 placing this land ran 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 & 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should received a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed. 11 7 The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Francis Ian Scott	Response-01535	Protecting Green Belt land, this land should be kept open and unharmed Protecting public rights of way and access, a large number of footpaths would be affected Harm to the landscape is therefore intensified. NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. Great weight should be given to the findings and recommendations of independent Landscape Quality Assessment NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl. NPPF states that in exceptional circumstances authorities should review Green Belt boundaries in accordance with the policies in this Framework and propose alterations to meet these needs in full, unless the review provides clear evidence that doing so would fundamentally undermine the purposes (taken together) of the remaining Green Belt. Changing the land south west of Draycott to Grey Belt and the development of 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density. Working on the current population of Draycott, 190 new homes will be an at least 17% increase in population. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish and Borrowash and other villages surrounding it of Breaston and Borrowash. "NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels of land as
1.14	South West of Draycott	Green Belt	Francis Ian Scott	Response-01535	identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. " NPPF states the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate where the development would utilise Grey Belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Belt across the area of the plan. It is clear the authority is now altering existing and acceptable Green Belt land to suit this paragraph/approach of the NPPF by converting it to Grey Belt. This is both hasty and reckless. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. The development on the land south west of Draycott for the people of Draycott and other areas, will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. It is the wrong model in the wrong place to deliver housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. This when there are 109 existing Brownfield sites within the EBC that should be prioritised first over Green Belt land. Will totally spoil a greenbelt area with lovely views. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. The considerable scale, extent and nature of the proposed development would be contrary to national policy in NPPF. Understand there is need for new housing but there are an abundance of brownfield, previously developed sites that the developers and council should explore before this location. There are 109 existing Brownfield sites in EBC giving 81H with 103 of these having full planning permission. These sites should be prioritised first for development before Greenbelt land is considered. Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is c.8H. These 8 sites alone will allow 514 net dwelling to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever. There are more appropriate areas that could hold such a large housing development and n

1.14	South West of Draycott	Green Belt	Francis Ian Scott	Response-01535	ot look out of place and spoil the little green areas left within this community. Whilst we/I understand the need for more housing we/I ask that you reconsider the location proposed and look for an alternative site that would house one more suitably. Supporter of the building of new houses but strongly object to the scale and location of this proposed development on the land South West of Draycott. It was previously thought that the land of the former Stanton Ironworks was taken out of the EBCs core strategy due to contamination that rendered the site unusable. Yet a recent Freedom of Information (FOI) request which was answered by EBC has advised the site is indeed to be utilised and has been allocated 1000 houses. Can EBC please advise if the status of the Stanton Ironworks sites and if this is included within the Core Strategy and how the planned 1000 houses impacts the Greenbelt review and use of Greenbelt land. NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. "NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greybelt land does not meet this objective and will actually achieve the total opposite. " NPPF 4. States that local planning authorities should approach decisions on proposed development in a positive and creative way. They should use the full range of planning tools available, including brownfield registers and permission in principle, and work proactively with applicants to secure developments that will improve the economic, social and environmental conditions of the area. EBC needs to demonstrate what appraisals have been undertaken on the 109 Brownfield sites as detailed within their own Brownfield Register, and why these sites have not been prioritised for development over the identified Green Belt land. NPPF 13. Protecting Green Belt Land:- The government attaches great importance to Green Belts. The fundamental aim of Green Belt is to keep land permanently open; the essential characteristics of Green Belts are their openness and their permanence. This is an inappropriate development in the Green Belt and there is NO evidence of the appraisals that have been undertaken on existing Brownfield sites within EBC which there are 109 with 8 of these giving over 51H and the opportunity to develop over 500 dwellings. NPPF 20. States that the target level of housing development within the plans should be capped in line with the capacity of Brownfield sites to accommodate it, to protect Green Belt yet these plans significantly exceed it. NPPF 143. The Green Belt serves 5 purposes: 1) To stop urban sprawl 2) To stop towns merging 3) To safeguard from encroachment onto the countryside 4) To preserve special settings, character and history 5) To ensure the recycling of derelict or Brownfield land. The proposals being made by EBC to reclassify existing Green Belt land to the south west of Draycott does not meet any of
1.14	South West of Draycott	Green Belt	Francis Ian Scott	Response-01535	these 5 purposes and actually looks to achieve the total opposite. Furthermore, no apparent attempt has been made by EBC to demonstrate why the 109 existing Brownfield sites within EBC have not been prioritised over this Green Belt land. NPPF 144. States before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. No attempt has been made by the authority to explore existing Brownfield sites or underutilised land within the EBC. NPPF 146. The applicant and authority MUST make as much use as possible of Brownfield Sites and underutilised land; AND PROVE that there is nothing left before encroaching on the Green Belt. ? There is no PROOF of the authority discussing with neighbouring authorities about whether they could accommodate some of the identified need for this development, in order not to use the Green Belt. NPPF 150. Once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, to retain and enhance landscapes, visual amenity and biodiversity. NPPF 152. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances. This application does not demonstrate any exceptional circumstances. NPPF 153. 'Very Special Circumstances? have to be proven i.e. all other options exhausted to classify this application as a 'very special circumstance?. We cannot see any evidence that this has taken place. Therefore, it is an inappropriate application and proposal and does not demonstrate exceptional circumstances. NPPF 156. The proposed development of 190 houses to the land south west of Draycott when located in the Green Belt, must demonstrate exceptional circumstances and are inappropriate unless very special circumstances can be demonstrated.
1.14	South West of Draycott	Green Belt	Gail Holdsworth	Response-00937	The proposed site is protected and green belt. There are constantly used footpaths and rights of way. How can the laws just be changed without full consultation of the people who live in this area. I have received no information from Erewash council about these proposals . I only found out in seeing a notice at a bus stop
1.14	South West of Draycott	Green Belt	Garry Hickton	Response-01473	The site is Greenbelt and should not be built on
1.14	South West of Draycott	Green Belt	Gary Siddall	Response-01237	We all know why Green Belt is there and why it's important to preserve - once it's gone, it's gone forever. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. Green Belt land is there to check the unrestricted sprawl of built-up areas, to prevent neighbouring towns from merging into one another and safeguard the countryside. The land to south west of Draycott meets all of these and also sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. Brown Field and Grey belt areas exist - why have they been just passed over to build on Green Belt ??? Scandalous.
1.14	South West of Draycott	Green Belt	Gemma Woolnough	Response-01394	This housing development is proposed on precious green belt land which is home to a diverse rand of nature of wildlife including: deer, bats, barn owls, foxes, rabbits, badgers and many birds. Green belt land is precious and provides essential homes for wildlife. By building on this land it would result in a significant loss of biodiversity, permanently damaging ecosystems. I strongly object to houses being built on green belt land when other alternative areas are available not on previous land.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	George Foster	Response-01199	Protecting Green Belt land, this land should be kept open and unharmed. Protecting public rights of way and access, a large number of footpaths would be affected leading to harm to the landscape is therefore intensified. NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. Great weight should be given to the findings and recommendations of independent Landscape Quality Assessment NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl. NPPF states that in exceptional circumstances authorities should review Green Belt boundaries in accordance with the policies in this Framework and propose alterations to meet these needs in full, unless the review provides clear evidence that doing so would fundamentally undermine the purposes (taken together) of the remaining Green Belt. Changing the land south west of Draycott to Grey Belt and the development of 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density. Working on the current population of Draycott, 190 new homes will be an at least 17% increase in population. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish and Borrowash and other villages surrounding it of Breaston and Borrowash. NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels
1.14	South West of Draycott	Green Belt	George Foster	Response-01199	of land as identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. NPPF states the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate where the development would utilise Grey Belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Belt across the area of the plan. It is clear the authority is now altering existing and acceptable Green Belt land to suit this paragraph/approach of the NPPF by converting it to Grey Belt. This is both hasty and reckless. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. The development on the land south west of Draycott for the people of Draycott and other areas, will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. It is the wrong model in the wrong place to deliver housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. This when there are 109 existing Brownfield sites within the EBC that should be prioritised first over Green Belt land. Will totally spoil a greenbelt area with lovely views. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. The considerable scale, extent and nature of the proposed development would be contrary to national policy in NPPF. We understand there is need for new housing but there are an abundance of brownfield, previously developed sites that the developers and council should explore before this location. Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is c.8H. These 8 sites alone will allow 514 net dwelling to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever. There are more appropriate areas that could hold such a large housing development and not look out of place and spoil the little green areas left within this community. Whilst I understand the need for more housing we/I ask that you reconsider the location proposed and look fo

Therefore, it is an inappropriate application and proposal and does not demonstrate exceptional circumstances. 38 NPPF 156. The proposed development of 190 houses to the land south west of Draycott when located in the Green Belt, must demonstrate exceptional circumstances and are inappropriate unless very special circumstances can be demonstrated.
1.14	South West of Draycott	Green Belt	Jane Barker	Response-01178	I think that GreenBelt land should be just that and should be saved and cherished for future generations that will follow us. It should be for all to use and should be open and safe. It should be as originally planned Protected. The fact that Draycott is a village and rural in character is why many people have moved to the area and more houses will dramatically change this making it into a more urban area. Our council should protecting our Greenbelt/green spaces not building on it. There are plenty of brownfield sites that should be used.
1.14	South West of Draycott	Green Belt	J Morgan	Response-01847	EBC should be protecting Green Belt land. The Green Belt and green fields should remain open and safe, preserving public rights of way and access to local green spaces. The Draycott footpaths are in constant use, providing villagers easy access to a countryside environment. This land is rural in character, offering a tranquil and transitional landscape between Daycott Parish, Borrowwash, and Breaston. All these villages are impacted by the proposal to reclassify Green Belt to Grey Belt for housing development. While there is a need for housing, the NPPF states that existing Brownfield and Grey Belt sites should be prioritized over Green Belt sites. There are 109 existing Brownfield sites within EBC, equating to 81 hectares, with 103 of these having full planning permission. These sites should be prioritized for development before Green Belt land is considered. The NPPF states that Green Belt is to be protected and requires exceptional circumstances for development. There is nothing exceptional about the council plans to build on unspoilt Green Belt land to meet their housing target when existing Brownfield sites are available. The land south west of Draycott meets all the criteria for Green Belt purposes, preventing urban sprawl, preserving the countryside's open character, and enhancing recreational opportunities for local residents. Changing this land to Grey Belt and developing 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density.
1.14	South West of Draycott	Green Belt	John Brayshaw	Response-01379	As they always say "when it is gone, it is gone!" We have already seen much greenbelt removed in the Derby and Erewash areas this has to stop somewhere. How about here and now? To protect fresh air and natural environment for future generations! Please think the Big picture and not the short term financial gain!

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Jonathan Childs	Response-01117	NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brown field and other, less sensitive sites exist. NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. 1NPPF states that in exceptional circumstances authorities should review Green Belt boundaries in accordance with the policies in this Framework and propose alterations to meet these needs in full, unless the review provides clear evidence that doing so would fundamentally undermine the purposes (taken together) of the remaining Green Belt. Changing the land south west of Draycott to Grey Belt and the development of 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density. Working on the current population of Draycott, 190 new homes will be an at least 17% increase in population with no obvious and corresponding expansion of local infrastructure. NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels of land as identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. NPPF states the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate where the development would utilise Grey Belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Belt across the area of the plan. It is clear the authority is now altering existing and acceptable Green Belt land to suit this paragraph/approach of the NPPF by converting it to Grey Belt. This is both hasty and reckless. There are 109 existing Brownfield sites within EBC giving 81Ha with 103 of the
1.14	South West of Draycott	Green Belt	Jonathan Childs	Response-01117	se having full planning permission. These sites should be prioritised first for development before Greenbelt land is considered. Of the 109 existing Brownfield sites in the EBC 8 of these are over 1Ha each giving a combined total of 15.29Ha. The land South West of Draycott is c.8Ha. These 8 sites alone will allow 514 net dwelling to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever. It was previously thought that the land of the former Stanton Ironworks was taken out of the EBCs core strategy due to contamination that rendered the site unusable. Yet a recent Freedom of Information (FOI) request which was answered by EBC has advised the site is indeed to be utilised and has been allocated 1000 houses. Can EBC please advise if the status of the Stanton Ironworks sites and if this is included within the Core Strategy and how the planned 1000 houses impacts the Greenbelt review and use of Greenbelt land. NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greybelt land does not meet this objective and will actually achieve the total opposite. NPPF 4. States that local planning authorities should approach decisions on proposed development in a positive and creative way. They should use the full range of planning tools available, including brownfield registers and permission in principle, and work proactively with applicants to secure developments that will improve the economic, social and environmental conditions of the area. EBC needs to demonstrate what appraisals have been undertaken on the 109 Brownfield sites as detailed within their own Brownfield Register, and why these sites have not been prioritised for development over the identified Green Belt land. NPPF 20. States that the target level of housing development within the plans should be capped in line with the capacity of Brownfield sites to accommodate it, to protect Green Belt yet these plans significantly exceed it. NPPF 144. States before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. No attempt has been made by the authority to explore existing Brownfield sites or underutilised land within the EBC. NPPF 146. The applicant and authority MUST make as much use as possible of Brownfield Sites and underutilised land; AND PROVE that there is nothing left before encroaching on the Green Belt. ? There is no PROOF of the authority discussing with neighbouring authorities about whether they could accommodate some of the identified need for this development, in order not to use the Green Belt. NPPF 150. Once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, to retain and enhance landscapes, visual amenity and biodiversity. NPPF 152. Inappropriate development is, by definition,

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Jonathan Childs	Response-01117	harmful to the Green Belt and should not be approved except in very special circumstances. This application does not demonstrate any exceptional circumstances. NPPF 153. 'Very Special Circumstances? have to be proven i.e. all other options exhausted to classify this application as a ?very special circumstance?. We cannot see any evidence that this has taken place. Therefore, it is an inappropriate application and proposal and does not demonstrate exceptional circumstances. NPPF 156. The proposed development of 190 houses to the land south west of Draycott when located in the Green Belt, must demonstrate exceptional circumstances and are inappropriate unless very special circumstances can be demonstrated.
1.14	South West of Draycott	Green Belt	Jonathan Fletcher	Response-01463	The beauty of Draycott to be ruined forever if these proposals commence! The death of wildlife. Severe congestion and pollution added to the beautiful area. Our green and pleasant land to disappear forever?!!
1.14	South West of Draycott	Green Belt	Judith Boyle	Response-01418	NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside?s open character and the enhancement of recreational opportunities for local residents. Protecting public rights of way and access, a large number of footpaths would be affected
1.14	South West of Draycott	Green Belt	Julie Pleass	Response-01526	NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist.
1.14	South West of Draycott	Green Belt	Juliet Macve	Response-01572	The greenbelt must be preserved. Long-term empty homes should be brought back into use and existing brownfield and grey belt sites prioritised for building. Green belt land should only be built on in exceptional circumstances. In this case, there are no exceptional circumstances and brownfield sites exist in the borough. On this route between Derby and Nottingham, this land is one of very few green spaces left, with all others being very small in size. Urban sprawl cannot be allowed to continue to merge villages etc in this area.
1.14	South West of Draycott	Green Belt	Justine Murrin	Response-01478	I totally disagree with using greenbelt sites when there are many suitable brown sites available. Not only will this remove this green site forever, it will lead to other green belts being under risk. Green belts should NOT be used when brown sites are available!
1.14	South West of Draycott	Green Belt	Karen Doxey	Response-01236	The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites. I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. It is the wrong model in the wrong place to deliver housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. This when there are 109 existing Brownfield sites within the EBC that should be prioritised first over Green Belt land. Will totally spoil a greenbelt area with lovely views. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape.
1.14	South West of Draycott	Green Belt	Karen Smith	Response-01484	There are numerous areas which could accommodate new houses that aren?t being utilised. Industrial areas, like the old factory on Longmoor Lane. Not enough existing brown land is being optimised.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Katie May	Response-01518	Protecting Green Belt land, this land should be kept open and unharmed Protecting public rights of way and access, a large number of footpaths would be affected Harm to the landscape is therefore intensified. NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. Great weight should be given to the findings and recommendations of independent Landscape Quality Assessment NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl. NPPF states that in exceptional circumstances authorities should review Green Belt boundaries in accordance with the policies in this Framework and propose alterations to meet these needs in full, unless the review provides clear evidence that doing so would fundamentally undermine the purposes (taken together) of the remaining Green Belt. Changing the land south west of Draycott to Grey Belt and the development of 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density. Working on the current population of Draycott, 190 new homes will be an at least 17% increase in population. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish and Borrowash and other villages surrounding it of Breaston and Borrowash. "NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels of land as
1.14	South West of Draycott	Green Belt	Katie May	Response-01518	identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. " NPPF states the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate where the development would utilise Grey Belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Belt across the area of the plan. It is clear the authority is now altering existing and acceptable Green Belt land to suit this paragraph/approach of the NPPF by converting it to Grey Belt. This is both hasty and reckless. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. The development on the land south west of Draycott for the people of Draycott and other areas, will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. It is the wrong model in the wrong place to deliver housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. This when there are 109 existing Brownfield sites within the EBC that should be prioritised first over Green Belt land. Will totally spoil a greenbelt area with lovely views. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. The considerable scale, extent and nature of the proposed development would be contrary to national policy in NPPF. Understand there is need for new housing but there are an abundance of brownfield, previously developed sites that the developers and council should explore before this location. There are 109 existing Brownfield sites in EBC giving 81H with 103 of these having full planning permission. These sites should be prioritised first for development before Greenbelt land is considered. Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is c.8H. These 8 sites alone will allow 514 net dwelling to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever. There are more appropriate areas that could hold such a large housing development and n

1.14	South West of Draycott	Green Belt	Kerry Naylor	Response-00993	Please where does it stop? Building on green belt. Its called green belt so it separates housing from the land nature needs to survive. Draycott is a village, it will become a suburb of Derby if it joins with Borrowwash. There are other filds in the area that do not impact on residence. Land off Hopewell Road. No residence to impact and land standing dead and empty.
1.14	South West of Draycott	Green Belt	Laura Charier	Response-01218	NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. 1.14	South West of Draycott	Green Belt	Laura Roffey	Response-01479	What is the point of Green Belt if it can be changed at the drop of a hat? It goes against the whole idea of protecting our green spaces in the UK and all the things that are linked eg. open spaces, habitats for animals, cleaner air, nature etc. Surely using Brownfield site, of which there are over 25 in Derbyshire would be better all round.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Lee	Response-00742	1. Drastic Change of character: Ruining the gateway to the village of Draycott forever, the green belt that runs between Borrowash & Draycott is part of the villages character and charm. You get a rural, vibrant feeling and pass into a real village, boasting flowers, wheelbarrows & Derbyshire flags. You'll never get the character & charm back once this is destroyed. If the Draycott development goes ahead & it's the first thing you see, the village of Draycott becomes an estate. The character was part of the reason I bought my house. I wouldn't have bought my house if I knew this overwhelming and unpleasant encroachment on the village was coming. 2. Local planning authorities, like the council in Draycott and Church Wilne, are expected to use their local plans to safeguard the green belt and protect it from inappropriate development. This is a perfect opportunity to showcase why the objection system is in place and governance is required. If the Council's passes this proposition, then it has no credibility, authority or point. Will planning authority be disbanded? I'd rather see my money channelling to something of use. 3. The government should promote a "brownfield first" strategy, brownfield sites should be prioritized for development before considering green belt land. No such prioritization has been done. 4. Precious green belt is being sacrificed with no reasonable alternative list, or proposed sites - why has this not been done? Where is the due diligence? People are not opposed to the need for some new housing but opposed to the location. 5. Why is the priority not brownfield site reinvigorates city centres or waste land. Which need it!! This is a preposterous proposal that is highly inappropriate. You are wasting taxpayer's money on poor decision to act with pace. The location at Draycott is inappropriate & that should not be overlooked because an alleged necessity. Rushing a big decision is not the answer. Why can't a proper plan with plan be drafted with alternative sites? This Greenbelt is not the right place or location. 6. Brown field is ready to start work now surely that's a massive benefit? 7. The assumed cost of Brownfield renovation is not acceptable by who. Government projects always overshot on budget & time. Has a comparison truly and impartially been done, and numbers vetted?
1.14	South West of Draycott	Green Belt	Lee Bunday	Response-00028	I am writing to object to the Core Strategy Review due to the proposed loss and development of Green Belt land, which undermines its core purposes and long-term environmental and community value. The Green Belt exists to prevent urban sprawl, safeguard the countryside from encroachment, preserve the setting and character of villages, and encourage the regeneration of brownfield land. The current strategy appears to prioritise short-term development gains over these long-standing protections, proposing allocations on Green Belt land without sufficient justification or demonstration of exceptional circumstances? as required by national planning policy. Key concerns include: Lack of robust evidence that all brownfield and non-Green Belt options have been exhausted. Irreversible harm to open landscapes and rural character. Loss of accessible green spaces used by the public for recreation, wellbeing, and mental health. Destruction of natural habitats that support local biodiversity. Risk of setting a precedent for further erosion of the Green Belt boundary in future reviews. Green Belt land plays a crucial role not only in planning policy, but in environmental sustainability? helping to store carbon, reduce flood risk, and act as a buffer against climate change. Once lost, it cannot easily be restored. I urge the council to reconsider proposals that involve Green Belt land and to focus instead on: Prioritising brownfield redevelopment and urban regeneration. Increasing housing density in existing settlements where appropriate. Safeguarding Green Belt boundaries in line with national policy and public interest. Preserving the Green Belt is not an obstacle to growth? it is a commitment to sustainable, responsible, and balanced development.
1.14	South West of Draycott	Green Belt	Linda Jane Jenkins	Response-01007	This is a green and pleasant land supposedly. Once gone it won't be brought back. Green land is good for your health and mental wellbeing. What you are proposing is not. The way you went about it seems to be illegal and if it is not illegal it should be. You announced this policy change on the 19 March but the deadline for questions at the open meeting was 17 of March. How can this be democratic. Aren't you supposed to be representing us your local people?
1.14	South West of Draycott	Green Belt	Louise and Shane Foster	Response-01219	We were given to understand that EBC would protect Green Belt Land, particularly when the NPPF states that existing Brownfield and Grey Belt Land should be prioritised. Within EBC there are over one hundred existing Brownfield sites most having planning permission already granted. Why the need to use Green Belt Land. The NPPF states that Green Belt Land is to be protected unless there are exceptional circumstances. Surely EBC can meet housing targets using the Brownfield sites with existing planning permission. This decision appears to make no sense.
1.14	South West of Draycott	Green Belt	Luke Harper	Response-00898	Have all 'grey belt' possibilities been exhausted?
1.14	South West of Draycott	Green Belt	Luke Hatch	Response-00160	I've already spoken about this in previous representations which have clearly been ignored. Even if the site is being reclassified, it still feels like part of the countryside. Walking from Lime Grove, there's a clear shift from village to open green space? that sense of openness would be lost if this development goes ahead.
			Lynne Dundas	Response-01198	We should consider brown field and grey belt sites before we take green belt that is currently being farmed

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Maggie Murphy	Response-00833	. NPPF 73. States that the authority should identify, through the development plan and brownfield registers, land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within Erewash there are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. The scale and massing of the development, which will begin with 190 houses but will significantly increase when the identified safeguarded land is developed in the future, it is completely out of character with its surroundings and would be incredibly overbearing to the village and neighbourhood, I strongly believe that there are better suited brownfield sites and genuine Grey Belt sites with land that is of poor quality. The land south west of Draycott is Grade 2 Agricultural land (very good) 1. Erewash Borough Council should be protecting Green Belt land, the Green Belt and Green fields should be kept open and safe. Protecting public rights of way and access to the local green spaces must be retained. The Draycott footpaths are in constant use and give people in the village easy access to a countryside environment. This land is rural in character, providing a tranquil and transitional landscape between the rural areas of Draycott Parish, Borrowwash and Breaston. All villages that are also impacted by the proposal to reclassify Green Belt to Grey Belt for development as housing. I Understand that there is need for housing, the NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within Erewash Borough Council should be prioritised first over Green Belt land. NOTE there are 109 existing Brownfield sites within EBC that should be prioritised first over Green Belt land. The 109 existing Brownfield sites in EBC equate to 81Hectares with 103 of these having full planning permission. These sites should be prioritised first for development before Greenbelt land is considered. NPPF states that Green belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt Green Belt land to meet their current housing target when existing Brownfield sites exist. and should be protected
			Martin Fawcett	Response-01077	Grey and brown sites should be used and take priority over what is already green belt and should remain so
1.14	South West of Draycott	Green Belt	Martin Kilcoyne	Response-01460	Protecting Green Belt land, this land should be kept open and unharmed Protecting public rights of way and access, a large number of footpaths would be affected Harm to the landscape is therefore intensified. NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. Great weight should be given to the findings and recommendations of independent Landscape Quality Assessment NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl. NPPF states that in exceptional circumstances authorities should review Green Belt boundaries in accordance with the policies in this Framework and propose alterations to meet these needs in full, unless the review provides clear evidence that doing so would fundamentally undermine the purposes (taken together) of the remaining Green Belt. Changing the land south west of Draycott to Grey Belt and the development of 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density. Working on the current population of Draycott, 190 new homes will be an at least 17% increase in population. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish and Borrowwash and other villages surrounding it of Breaston and Borrowwash. "NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels of land as

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Martin Kilcoyne	Response-01460	identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. " NPPF states the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate where the development would utilise Grey Belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Belt across the area of the plan. It is clear the authority is now altering existing and acceptable Green Belt land to suit this paragraph/approach of the NPPF by converting it to Grey Belt. This is both hasty and reckless. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. The development on the land south west of Draycott for the people of Draycott and other areas, will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. It is the wrong model in the wrong place to deliver housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. This when there are 109 existing Brownfield sites within the EBC that should be prioritised first over Green Belt land. Will totally spoil a greenbelt area with lovely views. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. The considerable scale, extent and nature of the proposed development would be contrary to national policy in NPPF. Understand there is need for new housing but there are an abundance of brownfield, previously developed sites that the developers and council should explore before this location. There are 109 existing Brownfield sites in EBC giving 81H with 103 of these having full planning permission. These sites should be prioritised first for development before Greenbelt land is considered. Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is c.8H. These 8 sites alone will allow 514 net dwelling to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever. There are more appropriate areas that could hold such a large housing development and n
1.14	South West of Draycott	Green Belt	Martin Kilcoyne	Response-01460	ot look out of place and spoil the little green areas left within this community. Whilst we/I understand the need for more housing we/I ask that you reconsider the location proposed and look for an alternative site that would house one more suitably. Supporter of the building of new houses but strongly object to the scale and location of this proposed development on the land South West of Draycott. It was previously thought that the land of the former Stanton Ironworks was taken out of the EBCs core strategy due to contamination that rendered the site unusable. Yet a recent Freedom of Information (FOI) request which was answered by EBC has advised the site is indeed to be utilised and has been allocated 1000 houses. Can EBC please advise if the status of the Stanton Ironworks sites and if this is included within the Core Strategy and how the planned 1000 houses impacts the Greenbelt review and use of Greenbelt land. NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. "NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greybelt land does not meet this objective and will actually achieve the total opposite. " NPPF 4. States that local planning authorities should approach decisions on proposed development in a positive and creative way. They should use the full range of planning tools available, including brownfield registers and permission in principle, and work proactively with applicants to secure developments that will improve the economic, social and environmental conditions of the area. EBC needs to demonstrate what appraisals have been undertaken on the 109 Brownfield sites as detailed within their own Brownfield Register, and why these sites have not been prioritised for development over the identified Green Belt land. NPPF 13. Protecting Green Belt Land:- The government attaches great importance to Green Belts. The fundamental aim of Green Belt is to keep land permanently open; the essential characteristics of Green Belts are their openness and their permanence. This is an inappropriate development in the Green Belt and there is NO evidence of the appraisals that have been undertaken on existing Brownfield sites within EBC which there are 109 with 8 of these giving over 51H and the opportunity to develop over 500 dwellings. NPPF 20. States that the target level of housing development within the plans should be capped in line with the capacity of Brownfield sites to accommodate it, to protect Green Belt yet these plans significantly exceed it. NPPF 143. The Green Belt serves 5 purposes: 1) To stop urban sprawl 2) To stop towns merging 3) To safeguard from encroachment onto the countryside 4) To preserve special settings, character and history 5) To ensure the recycling of derelict or Brownfield land. The proposals being made by EBC to reclassify existing Green Belt land to the south west of Draycott does not meet any of

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Martin Killohane	Response-01460	these 5 purposes and actually looks to achieve the total opposite. Furthermore, no apparent attempt has been made by EBC to demonstrate why the 109 existing Brownfield sites within EBC have not been prioritised over this Green Belt land. NPPF 144. States before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. No attempt has been made by the authority to explore existing Brownfield sites or underutilised land within the EBC. NPPF 146. The applicant and authority MUST make as much use as possible of Brownfield Sites and underutilised land; AND PROVE that there is nothing left before encroaching on the Green Belt. ? There is no PROOF of the authority discussing with neighbouring authorities about whether they could accommodate some of the identified need for this development, in order not to use the Green Belt. NPPF 150. Once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, to retain and enhance landscapes, visual amenity and biodiversity. NPPF 152. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances. This application does not demonstrate any exceptional circumstances. NPPF 153. 'Very Special Circumstances? have to be proven i.e. all other options exhausted to classify this application as a ?very special circumstance?. We cannot see any evidence that this has taken place. Therefore, it is an inappropriate application and proposal and does not demonstrate exceptional circumstances. NPPF 156. The proposed development of 190 houses to the land south west of Draycott when located in the Green Belt, must demonstrate exceptional circumstances and are inappropriate unless very special circumstances can be demonstrated.
1.14	South West of Draycott	Green Belt	Mary Walsh	Response-01197	Protecting Green Belt land, this land should be kept open and unharmed There are 109 existing Brownfield sites in EBC giving 81H with 103 of these having full planning permission. These sites should be prioritised first for development before Greenbelt land is considered. NPPF 143. The Green Belt serves 5 purposes: 1) To stop urban sprawl 2) To stop towns merging 3) To safeguard from encroachment onto the countryside 4) To preserve special settings, character and history 5) To ensure the recycling of derelict or Brownfield land. The proposals being made by EBC to reclassify existing Green Belt land to the south west of Draycott does not meet any of these 5 purposes and actually looks to achieve the total opposite. Furthermore, no apparent attempt has been made by EBC to demonstrate why the 109 existing Brownfield sites within EBC have not been prioritised over this Green Belt land.
1.14	South West of Draycott	Green Belt	Matthew Walker	Response-01313	I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. The NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside?s open character and the enhancement of recreational opportunities for local residents. The land south west of Draycott is also land that has not previously been developed meaning it does not constitute Greybelt classification ad should remain Green Field and be maintained as Grade 2 agricultural land. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. The EBC amended Core Strategy does not meet this criteria. NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl. NPPF states that in exceptional circumstances authorities should review Green Belt boundaries in accordance with the policies in this Framework and propose alterations to meet these needs in full, unless the review provides clear evidence that doing so would fundamentally undermine the purposes (taken together) of the remaining Green Belt. Changing the land south west of Draycott to Grey Belt and the development of 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density. PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Michael Thirtwall	Response-01196	There are 109 existing Brownfield sites within the EBC that should be prioritised before the Green Belt land south west of Draycott is used.
1.14	South West of Draycott	Green Belt	Michelle Marks	Response-00924	The proposed site is designated Green Belt land, which serves a critical role in preventing urban sprawl, protecting natural habitats, and maintaining the rural character of our countryside. The National Planning Policy Framework (NPPF 2023) explicitly states that Green Belt boundaries should only be altered in exceptional circumstances (Paragraph 140), and that inappropriate development should not be permitted unless very special circumstances exist (Paragraphs 149-150). No compelling justification has been provided to demonstrate that these criteria have been met.
1.14	South West of Draycott	Green Belt	Miss Ella Meredith	Response-01850	EBC should be protecting Green Belt land. The Green Belt and green fields should remain open and safe, preserving public rights of way and access to local green spaces. The Draycott footpaths are in constant use, providing villagers easy access to a countryside environment. This land is rural in character, offering a tranquil and transitional landscape between Daycott Parish, Borrowwash, and Breaston. All these villages are impacted by the proposal to reclassify Green Belt to Grey Belt for housing development. While there is a need for housing, the NPPF states that existing Brownfield and Grey Belt sites should be prioritized over Green Belt sites. There are 109 existing Brownfield sites within EBC, equating to 81 hectares, with 103 of these having full planning permission. These sites should be prioritized for development before Green Belt land is considered. The NPPF states that Green Belt is to be protected and requires exceptional circumstances for development. There is nothing exceptional about the council plans to build on unspoilt Green Belt land to meet their housing target when existing Brownfield sites are available. The land south west of Draycott meets all the criteria for Green Belt purposes, preventing urban sprawl, preserving the countryside's open character, and enhancing recreational opportunities for local residents. Changing this land to Grey Belt and developing 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density.
1.14	South West of Draycott	Green Belt	Miss Natalie Walsh	Response-01846	EBC should be protecting Green Belt land. The Green Belt and green fields should remain open and safe, preserving public rights of way and access to local green spaces. 1.14	South West of Draycott	Green Belt	Mr Graham Bingham and Mrs Kristine Bingham	Response-01302	EBC should be protecting the green belt land. While there is a need for housing, the NPPF states that existing Brownfield and Grey belt sites should be prioritized over Green belt sites. There are 109 existing Brownfield sites within EBC, equating to 81 Hectares, with 103 of these having full planning permission. These sites should be prioritized for development before Green Belt land is considered. The NPPF states that Green belt is to be protected and requires exceptional circumstances for development. There is nothing exceptional about the councils plans to build on unspoilt Green Belt land to meet their housing target when existing Brownfield sites are available. The land south west of Draycott meets all the criteria for Green Belt purposes, preventing urban sprawl, preserving the countryside's open character, and enhancing recreational opportunities for local residents. Changing this land to Grey belt and building 190 homes on it will negatively impact the remaining Green Belt land.
1.14	South West of Draycott	Green Belt	Mr G Wyatt	Response-01269	With regard to the proposed planning on the green belt in SW Draycott, in particular the large field that goes down to the main road. This field has been growing cereal crops for the last 15 to 20 years to my knowledge (I have lived in Draycott for the last 73 years). Your proposal says this is going to be taken out of production for housing. Please explain how many acres of green belt and farm land have been taken out of production in Erewash. Production of crops to feed the British people is declining in England and due to climate change, across the world. So in future how will you feed the British people.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Mr R Sykes	Response-00412	That is exactly how it should stay, since the area floods heavily through out the year, the village commitment to supply housing within the Parish was fulfilled in the conversion of Victoria Mills, some 300 homes, Market Street Mills, and Cowslip Meadow. Greed is fuelling the situation, with an estimated 600000 empty properties around the country, get those occupied first.
1.14	South West of Draycott	Green Belt	Mr Scott Walsh	Response-01844	EBC should be protecting Green Belt land. The Green Belt and green fields should remain open and safe, preserving public rights of way and access to local green spaces. The Draycott footpaths are in constant use, providing villagers easy access to a countryside environment. This land is rural in character, offering a tranquil and transitional landscape between Daycott Parish, Borrowwash, and Breaston. All these villages are impacted by the proposal to reclassify Green Belt to Grey Belt for housing development. While there is a need for housing, the NPPF states that existing Brownfield and Grey Belt sites should be prioritized over Green Belt sites. There are 109 existing Brownfield sites within EBC, equating to 81 hectares, with 103 of these having full planning permission. These sites should be prioritized for development before Green Belt land is considered. The NPPF states that Green Belt is to be protected and requires exceptional circumstances for development. There is nothing exceptional about the council plans to build on unspoilt Green Belt land to meet their housing target when existing Brownfield sites are available. The land south west of Draycott meets all the criteria for Green Belt purposes, preventing urban sprawl, preserving the countryside's open character, and enhancing recreational opportunities for local residents. Changing this land to Grey Belt and developing 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density.
1.14	South West of Draycott	Green Belt	Mrs Elizabeth White	Response-00060	It is wrong to build on green belt when there is so much brown site that could be used.
1.14	South West of Draycott	Green Belt	Mrs Mary Walsh	Response-01845	EBC should be protecting Green Belt land. The Green Belt and green fields should remain open and safe, preserving public rights of way and access to local green spaces. The Draycott footpaths are in constant use, providing villagers easy access to a countryside environment. This land is rural in character, offering a tranquil and transitional landscape between Daycott Parish, Borrowwash, and Breaston. All these villages are impacted by the proposal to reclassify Green Belt to Grey Belt for housing development. While there is a need for housing, the NPPF states that existing Brownfield and Grey Belt sites should be prioritized over Green Belt sites. There are 109 existing Brownfield sites within EBC, equating to 81 hectares, with 103 of these having full planning permission. These sites should be prioritized for development before Green Belt land is considered. The NPPF states that Green Belt is to be protected and requires exceptional circumstances for development. There is nothing exceptional about the council plans to build on unspoilt Green Belt land to meet their housing target when existing Brownfield sites are available. The land south west of Draycott meets all the criteria for Green Belt purposes, preventing urban sprawl, preserving the countryside's open character, and enhancing recreational opportunities for local residents. Changing this land to Grey Belt and developing 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density.
1.14	South West of Draycott	Green Belt	Mrs Patricia L Tacey	Response-00283	The stretch of land between Draycott and Borrowwash is practically the only Green Belt left on the route from Long Eaton to Derby. If this is built on, which once the precedent is set will almost certainly happen, then the whole area will become one extended urban sprawl instead of the individual villages each with it's own character.
1.14	South West of Draycott	Green Belt	Mr Tony Walsh	Response-01849	EBC should be protecting Green Belt land. The Green Belt and green fields should remain open and safe, preserving public rights of way and access to local green spaces. The Draycott footpaths are in constant use, providing villagers easy access to a countryside environment. This land is rural in character, offering a tranquil and transitional landscape between Daycott Parish, Borrowwash, and Breaston. All these villages are impacted by the proposal to reclassify Green Belt to Grey Belt for housing development. While there is a need for housing, the NPPF states that existing Brownfield and Grey Belt sites should be prioritized over Green Belt sites. There are 109 existing Brownfield sites within EBC, equating to 81 hectares, with 103 of these having full planning permission. These sites should be prioritized for development before Green Belt land is considered. The NPPF states that Green Belt is to be protected and requires exceptional circumstances for development. There is nothing exceptional about the council plans to build on unspoilt Green Belt land to meet their housing target when existing Brownfield sites are available. The land south west of Draycott meets all the criteria for Green Belt purposes, preventing urban sprawl, preserving the countryside's open character, and enhancing recreational opportunities for local residents. Changing this land to Grey Belt and developing 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density.
1.14	South West of Draycott	Green Belt	Nicole Howe	Response-00881	Prevents Urban Sprawl Green Belts act as buffers around cities and towns to stop them from expanding uncontrollably into the countryside, maintaining distinct boundaries between urban and rural areas. 2. Protects the Environment and Biodiversity These areas often include valuable natural habitats, farmland, and woodland, helping preserve biodiversity, wildlife corridors, and clean air. 3. Preserves Natural Beauty and Open Space Green Belts provide open landscapes that enhance quality of life, offering space for recreation, walking, and connection to nature. 4. Supports Sustainable Development By discouraging outward sprawl, development is directed to brownfield or previously developed land, promoting urban regeneration and more efficient use of infrastructure
1.14	South West of Draycott	Green Belt	Nigel morton	Response-01351	I object to the core strategy being used to change this area of greenbelt to grey .it is arable land and an area of outstanding beauty and high grade greenbelt .There are 109 brownfield and grey sites which should be used first and areas in draycott that would be better than this ie sawley lane and Hopwell road.This area is absolutely irreplaceable

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Nikki Riches	Response-00950	<p>? As a local resident, I relay on the local greenbelt, and public rights of way to stay both mentally and physically fit. I whole heartedly object to these proposals due to the importance of the green belt for fauna flora, wildlife and the local community as once it's lost its lost forever for future generations. I walk in the area of the proposed development and have seen many different types of wildlife living in the area which is their home. ? Green belt land should be kept open and unharmed, and we should be protecting public rights of way and access, a large number of footpaths would be affected. ? I don't feel taking the green belt for this development constitutes as an ?exceptional circumstance?, I appreciate the housing need, but this is a way for developers to maximise profit, its cheaper to build on unspoilt land and the ?edge? of the village helps with this. There are 109 existing Brownfield sites in EBC giving 81H with 103 of these having full planning permission. These sites should be prioritised first for development before Greenbelt land is even considered. ? NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. ? NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. ? Great weight should be given to the findings and recommendations of independent Landscape Quality Assessment ? NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. ? The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. ? NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl. ? NPPF states that in exceptional circumstances authorities should review Green Belt boundaries in accordance with the policies in this Framework and propose alterations to meet these needs in full, unless the review provides clear evidence that doing so would fundamentally undermine the purposes (taken together) of the remaining Green Belt. Changing the land south west of Draycott to Grey Belt and the development of 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density. Working on the current population of Draycott, 190 new homes will be an at</p>
1.14	South West of Draycott	Green Belt	Nikki Riches	Response-00950	<p>least 17% increase in population. ? This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish and Borrowash and other villages surrounding it of Breaston and Borrowash. ? NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: ? necessary improvements to local or national infrastructure; and ? the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. ? The proposal to remove the parcels of land as identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. ? NPPF states the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate where the development would utilise Grey Belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Belt across the area of the plan. It is clear the authority is now altering existing and acceptable Green Belt land to suit this paragraph/approach of the NPPF by converting it to Grey Belt. This is both hasty and reckless. ? Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. The development on the land south west of Draycott for the people of Draycott and other areas, will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. ? The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. ? It is the wrong model in the wrong place to deliver housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. This when there are 109 existing Brownfield sites within the EBC that should be prioritised first over Green Belt land. ? The development will totally spoil a greenbelt area with lovely views and provide unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. ?</p>

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Nikki Riches	Response-00950	The considerable scale, extent and nature of the proposed development would be contrary to national policy in NPPF. ? Understand there is need for new housing but there are an abundance of brownfield, previously developed sites that the developers and council should explore before this location. ? There are 109 existing Brownfield sites in EBC giving 81H with 103 of these having full planning permission. These sites should be prioritised first for development before Greenbelt land is considered. ? Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is c.8H. These 8 sites alone will allow 514 net dwelling to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever. ? There are more appropriate areas that could hold such a large housing development and not look out of place and spoil the little green areas left within this community. ? Whilst we/I understand the need for more housing we/I ask that you reconsider the location proposed and look for an alternative site that would house one more suitably. ? Supporter of the building of new houses but strongly object to the scale and location of this proposed development on the land South West of Draycott. ? It was previously thought that the land of the former Stanton Ironworks was taken out of the EBCs core strategy due to contamination that rendered the site unusable. Yet a recent Freedom of Information (FOI) request which was answered by EBC has advised the site is indeed to be utilised and has been allocated 1000 houses. Can EBC please advise if the status of the Stanton Ironworks sites and if this is included within the Core Strategy and how the planned 1000 houses impacts the Greenbelt review and use of Greenbelt land. ? NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. ? NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greybelt land does not meet this objective and will actually achieve the total opposite. ? NPPF 4. States that local planning authorities should approach decisions on proposed development in a positive and creative way. They should use the full range of planning tools available, including brownfield registers and permission in principle, and work proactively with applicants to secure developments that will improve the economic, social and environmental conditions of the area. EBC needs to demonstrate what appraisals have been undertaken on the 109 Brownfield sites as detailed within their own Brownfield Register, and why these sites have not been prioritised for development over the identified Green Belt land. ? NPPF 13. Protecting Green Belt Land:- The government attaches great importance to Green Belts. The fundamental aim of Green Belt is to keep land permanently open; the e
1.14	South West of Draycott	Green Belt	Nikki Riches	Response-00950	ssential characteristics of Green Belts are their openness and their permanence. This is an inappropriate development in the Green Belt and there is NO evidence of the appraisals that have been undertaken on existing Brownfield sites within EBC which there are 109 with 8 of these giving over 51H and the opportunity to develop over 500 dwellings. ? NPPF 20. States that the target level of housing development within the plans should be capped in line with the capacity of Brownfield sites to accommodate it, to protect Green Belt yet these plans significantly exceed it. ? NPPF 143. The Green Belt serves 5 purposes: 1) To stop urban sprawl 2) To stop towns merging 3) To safeguard from encroachment onto the countryside 4) To preserve special settings, character and history 5) To ensure the recycling of derelict or Brownfield land. The proposals being made by EBC to reclassify existing Green Belt land to the south west of Draycott does not meet any of these 5 purposes and actually looks to achieve the total opposite. Furthermore, no apparent attempt has been made by EBC to demonstrate why the 109 existing Brownfield sites within EBC have not been prioritised over this Green Belt land. ? NPPF 144. States before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. No attempt has been made by the authority to explore existing Brownfield sites or underutilised land within the EBC. ? NPPF 146. The applicant and authority MUST make as much use as possible of Brownfield Sites and underutilised land; AND PROVE that there is nothing left before encroaching on the Green Belt. ? There is no PROOF of the authority discussing with neighbouring authorities about whether they could accommodate some of the identified need for this development, in order not to use the Green Belt. ? NPPF 150. Once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, to retain and enhance landscapes, visual amenity and biodiversity. ? NPPF 152. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances. This application does not demonstrate any exceptional circumstances. ? NPPF 153. 'Very Special Circumstances' have to be proven i.e. all other options exhausted to classify this application as a ?very special circumstance?. We cannot see any evidence that this has taken place. Therefore, it is an inappropriate application and proposal and does not demonstrate exceptional circumstances. ? NPPF 156. The proposed development of 190 houses to the land south west of Draycott when located in the Green Belt, must demonstrate exceptional circumstances and are inappropriate unless very special circumstances can be demonstrated.
1.14	South West of Draycott	Green Belt	Oliver Kirk	Response-00569	Development here sets a dangerous precedent for the loss of future greenbelt land.
1.14	South West of Draycott	Green Belt	Paul Allen	Response-01082	The area and its distant views towards Risley in the North and Kings mills in the South will be negatively impacted by this substantial, overbearing, development. There are sufficient Brownfield and Grey Belt site located with Erewash Borough Council's control, which should be considered for development before Green Belt sites.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Pauline Marks	Response-00927	The land earmarked for development is part of the designated Green Belt? a vital buffer that prevents urban sprawl, preserves wildlife habitats, and maintains the open, rural landscape that defines Draycott. According to the National Planning Policy Framework (NPPF, 2023), changes to Green Belt boundaries should occur only under exceptional circumstances (Para 140), and inappropriate development must be avoided unless truly special justification exists (Paras 149?150). No such justification has been presented in this case.
1.14	South West of Draycott	Green Belt	Paul Riley	Response-00029	There are plenty of brown belt and grey belt areas that should be built on before we look to build on ANY green belt land. There is absolutely no excuse for it.
1.14	South West of Draycott	Green Belt	Peter Bates	Response-01912	This has been a Green Belt location for many years and to change its status would be damaging to the Village, its residents, the wildlife and the environment. This is not protecting our fragile environment or providing biodiversity in our green spaces. Crops that feed the nation are also grown on some of this green belt land. Food vs Housing I believe food should come first Especially in to-days world political environment. I am a supporter of building new houses in the Erewash area but strongly object to the scale and location of this proposed development on the land south west of Draycott. This is particularly annoying when the EBC have not demonstrated what appraisals they have done on their current 109 Brownfield sites as detailed within their own Brownfield register, and why these have not been prioritised for development over identified Green Belt land. Why has the former Stanton Iron works land not been mentioned?
1.14	South West of Draycott	Green Belt	Peter Sutton	Response-00409	Green belt is a finite resource and other areas must be used. This area is massively used by the local community and visitors. It offers huge benefits to physical and mental health.
1.14	South West of Draycott	Green Belt	R Fazackerley	Response-01415	The development of housing g on thr greenbelt and in a known flood prone area is irresponsible the loss of this land and amenity will adversely affect thr localcommunity and it's wellbeing
1.14	South West of Draycott	Green Belt	Richard Keith Hanbury	Response-01087	We love our green belt as it is. It is great when I walk to my parents. It helps my health and wellbeing. I would hate to see it all go. The green belt is for the future not just for us to use. Once gone it will never be given back. The green belt is precious and should not be written off so lightly. How can you be so heartless in taking it away. There are plenty of affordable houses for sale in this area right now. Please leave our precious, beautiful countryside alone.
1.14	South West of Draycott	Green Belt	Richard Syson	Response-01317	Protecting Green Belt land, this land should be kept open and unharmed. Protecting public rights of way and access, a large number of footpaths would be affected. Harm to the landscape is therefore intensified. The updated NPPF - 12/12/24 states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. The updated NPPF - 12/12/24 states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. The Labour Party stated in their 2024 election manifesto that they were committed to "brownfield first approach" but would loosen planning laws to create a new class of "grey belt" land for "low quality green belt areas", where "low quality" would include "poor quality scrubland / mothballed on the outskirts of towns" - the green belt land earmarked for this preposterous development proposal is neither - it is unspoiled green fields There are 109 existing Brownfield sites in EBC giving 81H with 103 of these having full planning permission. These sites should be prioritised first for development before Greenbelt land is considered. Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is c.8H. These 8 sites alone will allow 514 net dwelling to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever.
1.14	South West of Draycott	Green Belt	Rick Howden	Response-01421	This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish and Borrowash and other villages surrounding it of Breaston and Borrowash. NPPF states the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate where the development would utilise Grey Belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Belt across the area of the plan. It is clear the authority is now altering existing and acceptable Green Belt land to suit this paragraph/approach of the NPPF by converting it to Grey Belt. This is both hasty and reckless.
1.14	South West of Draycott	Green Belt	Robert Alan Duncanson	Response-00855	IF BUILDING IS ALLOWED THEN IT WILL JUST CONTINUE TO EXPAND THE VILLAGE AND IT WILL CEASE TO BE A VILLAGE AND LOSE ALL THE APEAL FOR PEOPLE

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Robert Mee	Response-01505	My main reason for objecting to these developments is that I do not believe that the criteria set out in the NPPF has been met justifying any encroachment into the Green Belt at this time. The Core Strategy and this Amendment are developed in order to meet the housing targets allocated to the council by central government. I do not believe that the number of houses required by government constitutes, in itself, the 'exceptional circumstances' which are required under the Framework. This is particularly so in view of there being no published objective basis for the numbers allocated to each authority. The term 'exceptional circumstances' does include 'instances where an authority cannot meet its identified need for homes?'. The waiting list for social housing in the general area might suggest that this is the case, but I do not accept that these plans will go far to address this issue? the vast majority of the planned housing allocations are not even for affordable housing, let alone social housing. Additionally, I do not remember seeing evidence that Erewash has specifically quantified local (i.e. Erewash) housing needs. I also do not believe that much, if any, of the Green Belt selected for development would fit the definition of 'Grey Belt?'. As a concept, I can support the idea of Grey Belt as originally reported, i.e. pieces of land within the Green Belt which have previously been developed? indeed, I can think of a few locally, though they are all fairly small. I find the arguments that I have heard over distances between the edge of Derby and the edge of other towns, and how these distances will still be maintained, extremely spurious. The Green Belt in its entirety exists to prevent Nottingham and Derby from merging? while building on any of these sites does not immediately make the two cities any closer to each other, it does reduce the green space between the two cities, which is precisely what the Green Belt was established to prevent. The Green Belt is a regional initiative, covering two counties and several local authorities. With Erewash having such a high proportion of its land earmarked as Green Belt it is incumbent on the region as a whole to find a solution to the housing shortage, rather than to expect our authority to have to sacrifice its green spaces.
1.14	South West of Draycott	Green Belt	Roger Brown	Response-00999	Once green belt has been used for development it can never be returned. The green belt which surrounds Draycott is precious for its ecosystems, its access to nature, the envelopment of a village atmosphere and the now almost disappeared green separation of Derby and Nottingham. There are precious few fields evident along the A6005 corridor from Derby to Nottingham, this would involve the loss of two more and would put Draycott a little closer to Borrowash by narrowing that gap, the last between Draycott and Derby.
1.14	South West of Draycott	Green Belt	Ross Roberts	Response-01377	We should not be building on green belt land
1.14	South West of Draycott	Green Belt	Ruth Hawkins	Response-01277	I understand there is a need for new housing but there are brownfield, previously developed sites that the developers and council should explore before this location. ie the 109 existing Brownfield sites in EBC with 103 of these having full planning permission. These sites should be prioritised first for development before Greenbelt land is considered.
1.14	South West of Draycott	Green Belt	Sandra Ison	Response-01897	Erewash Borough Council should be looking at existing brown field sites or the regeneration of empty buildings for development.
1.14	South West of Draycott	Green Belt	Sarah	Response-01541	We use this area for dog walks and wildlife. It's very limited already.
1.14	South West of Draycott	Green Belt	Sarah Hargreaves	Response-01314	1. Contradiction to NPPF: The reclassification of Green Belt land to Grey Belt contradicts the National Planning Policy Framework (NPPF) 2024 and the EBC Local Plan 2022. The Grey Belt policy has been implemented hastily and lacks transparency. 2. Impact on Green Spaces: The proposed development threatens to destroy protected green spaces, which are essential for preventing urban sprawl, safeguarding the countryside, and preserving the character of a historic village such as Draycott. 3. Housing Targets: The current housing targets driving this development are flawed and unrealistic, leading to overburdening local communities and disregarding the impact on the village.
1.14	South West of Draycott	Green Belt	Sara Walker-Bradley	Response-01440	This is green belt land, there are plenty of grey sites already in Erewash which should be allocated first, green belt should be protected.
1.14	South West of Draycott	Green Belt	Scott Gardner	Response-01554	My fundamental objection lies in the proposed development on Green Belt land. This directly contradicts the core principles of the National Planning Policy Framework (NPPF), which places significant importance on protecting the Green Belt from inappropriate development. The loss of this "sensitive Green Belt land" will irrevocably harm the character of our village and the surrounding countryside. Policy 3 of the Erewash Core Strategy also addresses the Green Belt, and this proposal appears to be in direct conflict with its aims to safeguard this vital asset. The claim that there is "no other choice" than to build on the Green Belt is unsubstantiated given the lack of transparency regarding the consideration of alternative sites. Performing basic research of alternatives provides numerous options, there are significant numbers of vacant, run down old factories etc in Long Eaton just as one example, the old school site in Breaston is another. There are 109 existing brownbelt sites within EBC, 81 Hectares! 103 of these have full planning permission. There is nothing exceptional about the circumstances of this proposal other than the political desire of Councillors to fulfill national housing targets

1.14	South West of Draycott	Green Belt	Sean Peace	Response-01347	<p>1 Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. 5 2 Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. 6 3 This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. 7 4 The taking away of grazing/arable land and the disruption for the wildlife. 8 5 These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. 9 6 Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. There is an opinion that the deer fencing would devalue the area of open farmland and public right of way. 10 7 This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. 11 8 The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. 12 9 These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. 13 10 Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. 14 11 Historical badger sett on part of the site to the Victorian tip at the bridge of Nooning Lane. 15 12 The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/ I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. 16 13 To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. This area forms a green corridor and houses a number of RED LIST species 17 14 The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would det</p>
1.14	South West of Draycott	Green Belt	Sean Peace	Response-01347	<p>rimentially impact upon Lime Grove and Derby Road character and appearance. 18 15 NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. 19 16 NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt. 20 17 NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.</p>
1.14	South West of Draycott	Green Belt	Simon Jenkins	Response-01287	<p>We worked hard all our lives to live in a house that we love. Bought specifically because it is at the side of greenbelt land that we thought would never be built on. We've not been consulted about the proposed change to greybelt, nobody from Labour will even have the bottle to come and talk to us about it and we do not agree. The recent meeting to vote in the proposal at Long Eaton was an absolute stich up, and a total disgrace. Can you please tell me what sort of compensation we are going to get if our property gets devalued ?????</p>

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	S M Beresford	Response-01851	EBC should be protecting Green Belt land. The Green Belt and green fields should remain open and safe, preserving public rights of way and access to local green spaces. The Draycott footpaths are in constant use, providing villagers easy access to a countryside environment. This land is rural in character, offering a tranquil and transitional landscape between Daycott Parish, Borrowwash, and Breaston. All these villages are impacted by the proposal to reclassify Green Belt to Grey Belt for housing development. While there is a need for housing, the NPPF states that existing Brownfield and Grey Belt sites should be prioritized over Green Belt sites. There are 109 existing Brownfield sites within EBC, equating to 81 hectares, with 103 of these having full planning permission. These sites should be prioritized for development before Green Belt land is considered. The NPPF states that Green Belt is to be protected and requires exceptional circumstances for development. There is nothing exceptional about the council plans to build on unspoilt Green Belt land to meet their housing target when existing Brownfield sites are available. The land south west of Draycott meets all the criteria for Green Belt purposes, preventing urban sprawl, preserving the countryside's open character, and enhancing recreational opportunities for local residents. Changing this land to Grey Belt and developing 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density.
1.14	South West of Draycott	Green Belt	Susan Baker	Response-01316	Reclassifying Green Belt land to ?Grey Belt? flies in the face of national policy and local plans. These green spaces are vital?they stop urban sprawl, protect our countryside, and preserve the soul of our village. The way this has been handled feels rushed and lacking in transparency.
1.14	South West of Draycott	Green Belt	Susan Foster	Response-00824	I am sure there are other sites, not Green Belt ones. Stealing the green belt is reprehensible, there are many fields around the village that are not being used for agricultural purposes that could fulfil the need for housing.. Why not research those, some of them do not have the flooding problems that the proposed fields have. I would not buy a house that was liable to flooding, especially with the climate change that is forecast!
1.14	South West of Draycott	Green Belt	Teresa Batchelor	Response-01240	Green Belt land was designated as such to ensure that local communities, villages and residential areas generally, could be assured that green spaces would remain for their enjoyment and avoid residential areas just "joining up" over time as development continued, and forming just one huge residential area. Keeping green open spaces, i.e. Green Belts, ensures communities stay independent of each other and retain their own individuality with their own traditions and pride in their communities. This is the way communities have existed for centuries and what makes an area attractive to live in. Removing our Green Belt and just replacing it with 190 houses is blatantly not in the interests of the residents of Draycott.
1.14	South West of Draycott	Green Belt	Teresa Shaw	Response-01309	1. Drastic Change of character: Ruining the gateway to the villages forever, the green belt that runs between Borrowwash & Draycott is part of the villages character and charm. You get a rural, vibrant feeling and pass into a real village, boasting flowers, wheelbarrows & Derbyshire flags. You'll never get the character & charm back once this is destroyed. If the Draycott development goes ahead & it's the first thing you see, the village of Draycott becomes an estate. The pleasant drive I enjoy passing from Borrowws to Draycott will be ruined. I wouldn't have bought my house if I knew this overwhelming and unpleasant encroachment on the village was coming. 2. Local planning authorities, like the council in Draycott and Church Wilne, are expected to use their local plans to safeguard the green belt and protect it from inappropriate development. This is a perfect opportunity to showcase why the objection system is in place and governance is required. If the Council's passes this proposition, then it has no credibility, authority or point. Will planning authority be disbanded? I'd rather see my money channelling to something of use. 3. The government should promote a "brownfield first" strategy, brownfield sites should be prioritized for development before considering green belt land. No such prioritization has been done to an acceptable level. 4. Precious green belt is being sacrificed with no reasonable alternative list, or proposed sites - why has this not been done? Where is the due diligence? People are not opposed to the need for some new housing but opposed to quantity and certain poor locations. 5. Why is the priority not brownfield site reinvigorates city centres or waste land. Which need it!! This is a preposterous proposal that is highly inappropriate. The location at Draycott is inappropriate & that should not be overlooked because an alleged necessity. Rushing a big decision is not the answer. Why can't a proper plan with plan be drafted with alternative sites? This Greenbelt is not the right place or location. 6. Brown field is ready to start work now surely that's a massive benefit? 7. The assumed cost of Brownfield renovation is not acceptable by who. Government projects always overshoot on budget & time. Has a comparison truly and impartially been done, and numbers vetted?
1.14	South West of Draycott	Green Belt	Tim Hawkins	Response-00661	Proposal to build on a productive area of the greenbelt, grade 2 agricultural land, is against any sustainable approach for food security. By erroneously renaming it as greenfield is both disingenuous and misleading.
		Green Belt	Tony burton	Response-01382	Greenbelt should be left alone
1.14	South West of Draycott	Green Belt	Tracey Morton	Response-00968	This area of beauty should be kept as it is and brownfield sites used 2 protect public right of way 3 This development would increase Draycott population by 17% 4 the scale of the development, extent and nature of it is contrary o NPPF 5 unnecessary damage to green belt resulting in irreversible blot on the landscape 6 This site is higher grade greenbelt and shouldn't even be considered 7 te footpath is well used through this site dur to its beauty, wildlife and views
1.14	South West of Draycott	Green Belt	T Shields	Response-00570	Even if EBC chose not to designate the site as grey-belt, It is VERY likely that in a planning appeal for housing on the site a planning Inspector would decide it is grey-belt when using the qualifying criteria in the NPPF. As grey-belt land any housing development would be required to meet the 'Golden Rules' at paragraphs 156/157 of the NPPF. It is this requirement that means that developers would be obligated to provide higher levels of affordable housing.
1.14	South West of Draycott	Green Belt	Viv Wright	Response-00035	The reasons for retaining Green belt areas around villages and towns still stands, urban sprawl and merging of communities creates loss of identity, and community a basic human need and mental health necessity, open green spaces accessible for all .The loss of wildlife habitat is against everything we are trying to correct .

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	Wilfred Boone	Response-01424	"NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels of land as identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. "
1.14	South West of Draycott	Green Belt	William Batchelor	Response-01210	There are still exisiting Brown field sites in Erewash to be developed but because it costs more for developers, they are being ignored. Planners must not take easy option to convert Green Belt land because it's easier.
1.14	South West of Draycott	Green Belt	zak butcher	Response-01156	Protecting Green Belt land, this land should be kept open and unharmed Protecting public rights of way and access, a large number of footpaths would be affected NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. Great weight should be given to the findings and recommendations of independent Landscape Quality Assessment The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl. NPPF states that in exceptional circumstances authorities should review Green Belt boundaries in accordance with the policies in this Framework and propose alterations to meet these needs in full, unless the review provides clear evidence that doing so would fundamentally undermine the purposes (taken together) of the remaining Green Belt. Changing the land south west of Draycott to Grey Belt and the development of 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density. Working on the current population of Draycott, 190 new homes will be an at least 17% increase in population. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish and Borrowash and other villages surrounding it of Breaston and Borrowash. NPPF states the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate where the development would utilise Grey Belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Belt across the area of the plan. It is clear the authority is now altering existing and acceptable Green Belt land to suit this paragraph/approach of the NPPF by converting it to Grey Belt. This is both hasty and reckless. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. The development on the land south west of Draycott for the people of Draycott and other areas, will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Green Belt	ok butcher	Response-01155	an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. It is the wrong model in the wrong place to deliver housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. This when there are 109 existing Brownfield sites within the EBC that should be prioritised first over Green Belt land. Understand there is need for new housing but there are an abundance of brownfield, previously developed sites that the developers and council should explore before this location. There are 109 existing Brownfield sites in EBC giving 81H with 103 of these having full planning permission. These sites should be prioritised first for development before Greenbelt land is considered. Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is c.8H. These 8 sites alone will allow 514 net dwelling to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever. It was previously thought that the land of the former Stanton Ironworks was taken out of the EBCs core strategy due to contamination that rendered the site unusable. Yet a recent Freedom of Information (FOI) request which was answered by EBC has advised the site is indeed to be utilised and has been allocated 1000 houses. Can EBC please advise if the status of the Stanton Ironworks sites and if this is included within the Core Strategy and how the planned 1000 houses impacts the Greenbelt review and use of Greenbelt land. NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF 4. States that local planning authorities should approach decisions on proposed development in a positive and creative way. They should use the full range of planning tools available, including brownfield registers and permission in principle, and work proactively with applicants to secure developments that will improve the economic, social and environmental conditions of the area. EBC needs to demonstrate what appraisals have been undertaken on the 109 Brownfield sites as detailed within their own Brownfield Register, and why these sites have not been prioritised for development over the identified Green Belt land. NPPF 13. Protecting Green Belt Land:- The government attaches great importance to Green Belts. The fundamental aim of Green Belt is to keep land permanently open; the essential characteristics of Green Belts are their openness and their permanence. This is an inappropriate development in the Green Belt and there is NO evidence of the appraisals that have been undertaken on existing Brownfield sites within EBC which there are 109 with 8 of these giving over 51H and the opportunity to develop over 500 dwellings. NPPF 146. The applicant and authority MUST make as much use as possible of Brownfield Sites and underutilised land; AND PROVE that there is nothing left before encroaching on the Green Belt.
1.14	South West of Draycott	Green Belt	ok butcher	Response-01155	? There is no PROOF of the authority discussing with neighbouring authorities about whether they could accommodate some of the identified need for this development, in order not to use the Green Belt. NPPF 152. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances. This application does not demonstrate any exceptional circumstances.
1.14	South West of Draycott	Healthcare Facilities	adrian leeming	Response-01249	Draycott does not have the infrastructure, shops, restaurants, dentists, doctors or schools to support 190 new families and from experience it has been proven that developers don't do anything to remedy this, why would they, there is no profit in doing this? It has also been proven that the local economy does not address this, there is a chronic shortage of all of these things, even more critically in rural area and the demand doesn't prompt supply to the detriment of society.
1.14	South West of Draycott	Healthcare Facilities	Alison Bowley	Response-01174	Draycott has little in the way of facilities, no doctor's surgery, no dental surgery. People have to travel to obtain the increasingly sought after NHS services. Potentially, there could be approximately another extra 800 people from Draycott alone requiring GP/Dental appointments. It is difficult enough now trying to obtain NHS care. I say this as a retired NHS worker, so speak from years of experience.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Healthcare Facilities	Alison Thirlwall	Response-01390	Loss of open space and green spaces ? this is vital for our community?s wellbeing. Primary School affected with noise and traffic. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would not benefit from the current sprawling Greenbelt views as it will be gone forever. It will have a detrimental effect on the wellbeing of people who enjoy the countryside, not to mention wildlife habitats, which are already under extreme pressure. The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the small villages surrounding it of Borrowash and Breaston. It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of development on this green belt. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant lengths of footpaths that will be affected by the development of 190 houses on land south west of Draycott. Promoting healthy and safe communities the effect on our healthy lifestyles, especially our local health and well-being needs ? taking away our green space and facility would be detrimental to our community and our day to day needs would fall short by the loss of our valued facilities Open space and recreation. NPPF102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development To improve local accessibility to healthcare, educat
1.14	South West of Draycott	Healthcare Facilities	Alison Thirlwall	Response-01390	tion, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health, including mental and emotional wellbeing.
1.14	South West of Draycott	Healthcare Facilities	Andrew and Jane Gilmour	Response-01329	The proposed development of 580 houses across Draycott, Borrowash and Breaston will have a significant effect on the access to Doctors surgery appointments. There are 3 surgeries serving these areas that might have to accommodate a further 1000 to 1500 patients with car parking and access already an issue. This is without taking into account further development taking place on the four safeguarded areas.
1.14	South West of Draycott	Healthcare Facilities	Anthony Bradley	Response-01442	The current practices can not support so many extra houses, which will effect the current residents care.
1.14	South West of Draycott	Healthcare Facilities	Anthony Lawton-Reeve	Response-00971	Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter. This action by the EBC was irresponsible and not acting in the interests of the local communities this plan impacts.
1.14	South West of Draycott	Healthcare Facilities	Anthony Walsh	Response-00992	I have just tried for four days to get an appointment Our current doctors availability is not fit for purpose. Adding to this will literally collapse this 'not fit for purpose' system
1.14	South West of Draycott	Healthcare Facilities	Avice Boyle	Response-01427	To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools.
1.14	South West of Draycott	Healthcare Facilities	Barbara Crane	Response-00268	There is no doctors? surgery in Draycott. The Overdale Medical practice serves Draycott, Breaston and Borrowash. It is at capacity.
1.14	South West of Draycott	Healthcare Facilities	Ben Kassoul	Response-01024	The additional homes will increase demand to the local doctors in Breaston and make it extremely difficult to get appointments.
1.14	South West of Draycott	Healthcare Facilities	Ben Marshall	Response-01212	The area already struggles with health care facilities. The additional burden will further cripple residents ability to get access to health care.
1.14	South West of Draycott	Healthcare Facilities	Bernadette Rothwell	Response-00998	I see no information on this brief for the extension of local medical services all of which are stretched to beyond breaking for both appointments and parking.
1.14	South West of Draycott	Healthcare Facilities	Bradley Peace	Response-01348	Local GP surgeries and dental practices are already struggling to meet the needs of existing residents. Increasing the population significantly will make it even harder for people to access timely medical and dental care.
1.14	South West of Draycott	Healthcare Facilities	Caroline and John Thirwell	Response-01001	There has been little time to consider the impact on our community of this increase in the village population. The infrastructure of a doctor or dentist is not present in our village (the doctor was withdrawn many years ago even though the village has grown in numbers since we first settled here) and we are still not fully aware of the plans for the land South West of the village.
1.14	South West of Draycott	Healthcare Facilities	Colin & Cynthia Green	Response-00922	No Dentist either NHS or private in Draycott, no GP surgery in Draycott, nearest Breaston or Borrowash so Pharmacy will not cover extra patients. Currently, very difficult to get to speak to a GP representative so will only get much worse.
1.14	South West of Draycott	Healthcare Facilities	David and Nicala O'Leary	Response-00822	There are no medical facilities within Draycott; residents must travel to Breaston or Borrowash for GP and dental services.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Healthcare Facilities	David Atchison	Response-01247	Local health care facilities are already completely overwhelmed and this proposal will only put further strain on them, reducing availability and quality of care for existing residents.
1.14	South West of Draycott	Healthcare Facilities	David Thompson	Response-00654	Local doctors are already at breaking point and those of us who are residents in the village already to struggle to get into our own doctors that we've been registered with for years. Adding further housing will mean further applications to register with the local doctors / dentists etc and create even more problems for getting appointments.
1.14	South West of Draycott	Healthcare Facilities	David Webster	Response-01113	Has there been a study of the extra 17% of population will have on our healthcare can it cope ?
1.14	South West of Draycott	Healthcare Facilities	Dexter Codrington	Response-00986	Draycott does not have a doctors or dentist surgery. The current doctors practise is shared between Borrowwash, Breaston and Draycott. Yet again this is about the cumulative effect for the 3 planned developments. It is very difficult to get an appointment today, the surgery will not cope. There is no NHS Dentist locally. There are no NHS dentists taking on new patients as at today. I have spent 2 hrs trying to find one
			Diane Webster	Response-01177	Has a survey taken place so that the Local Doctors practice can cope with the additional 17% plus patients
1.14	South West of Draycott	Healthcare Facilities	Donna Peace	Response-01344	Healthcare: Local GP surgeries and dental practices are already struggling to meet the needs of existing residents. Increasing the population significantly will make it even harder for people to access timely medical and dental care.
			Donna Wheatley	Response-00863	It is hard enough to get a GP appointment as it is, how is adding an additional 700 homes going to help, it won't....
1.14	South West of Draycott	Healthcare Facilities	Douglas Walker	Response-00994	The General Practice Doctors and Dental Surgeries are already over subscribed with many of them no not taking on any new patients with many Draycott residents having to use other surgeries in other villages/towns. This development will further compound these issues. How does the EBC plan to mitigate these very real issues and pressure on local infrastructure?
1.14	South West of Draycott	Healthcare Facilities	Dr Shelagh Brown	Response-01158	Draycott, Borrowwash and Breaston already have an inadequate number of GPs and dentists.
1.14	South West of Draycott	Healthcare Facilities	Dudley Medhurst	Response-01180	There are no available NHS dentists in the area. The docotors (2 practises covering Breaston, Draycott & Borrowwash) are already struggling with current population and another 700 houses and approx another 2000 people will not help anybody .
1.14	South West of Draycott	Healthcare Facilities	Gail Holdsworth	Response-00937	There us one very small GP surgery in Draycott. I do not see how it can cope with such a large influx. It is hard enough to get appointments as it is.
1.14	South West of Draycott	Healthcare Facilities	Gary Siddall	Response-01237	Draycott has NO doctors or dentists - so new residents (even IF they could actually afford to live in the new houses...) have no "basic amenities" in the village. Everybody knows that it's difficult enough as it is to get in to a doctors, but almost impossible to get an NHS dentist anywhere in the area. This is the case NOW - it will be massively worse with 190+ additional households ! There is not enough local infrastructure to support so many more people.
1.14	South West of Draycott	Healthcare Facilities	Gemma Woolnough	Response-01394	Currently in Draycott there is not a doctors or a dentist. The nearest doctors is in Breaston or Borrowwash which is already very busy with limited appointment capacity. There are currently no NHS dentist places for adults in Breaston or Borrowwash meaning that the new residents in the housing development would need to travel some way out to try and find a dentist. The village is not set up to cater for more residents due to the lack of any medical provision in the form of a doctors or dentist.
1.14	South West of Draycott	Healthcare Facilities	Gerri Hickton	Response-01472	Local doctors and dentists are already struggling to provide a service to current residents
1.14	South West of Draycott	Healthcare Facilities	Gill Trickitt	Response-01157	We have no doctor or dentist in Draycott currently so it's ridiculous to consider that the local area can accommodate these extra needs for likely 400 or so more people.
1.14	South West of Draycott	Healthcare Facilities	Gordon Dahill	Response-00690	Doctors and dentists are only in the adjoining villages and are already overloaded with patients.
1.14	South West of Draycott	Healthcare Facilities	Graham Wakeling	Response-01238	Local Doctors, Dentists and pharmacies will be affected, increasing waiting times, and making it even more impossible to be seen, and treated locally.
1.14	South West of Draycott	Healthcare Facilities	Hannah McMaster	Response-01381	The local doctors is at capacity, waiting times are already long and services stretched. The local GP will not only have to serve the additional housing in Draycott but those proposed in Breaston also.
1.14	South West of Draycott	Healthcare Facilities	Hannah Pritchard	Response-01399	The Overdale Medical Practices in Breaston and Borrowwash, which serve Draycott, are already overstretched. In January, they released a public statement citing overwhelming patient demand, leading to outsourcing of minor cases to the Draycott pharmacy. Local dental practices have also stopped accepting new NHS patients. Adding hundreds more residents without parallel investment in new or expanded facilities will render healthcare inaccessible for both current and new residents.
1.14	South West of Draycott	Healthcare Facilities	Jacqueline Hyett	Response-01548	Loss of open space and green spaces ? this is vital for our community's wellbeing This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the small villages surrounding it of Borrowwash and Breaston. To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing.
1.14	South West of Draycott	Healthcare Facilities	James Hargreaves	Response-01315	1. Overstretched Services: Draycott lacks GP and dental services. Nearby facilities are already overwhelmed and unable to meet current demand.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Healthcare Facilities	James Whyman	Response-01551	1 Loss of open space and green spaces ? this is vital for our community?s wellbeing 2 Primary School affected with noise and traffic 3 The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would not benefit from the current sprawling Greenbelt views as it will be gone forever. 4 It will have a detrimental effect on the wellbeing of people who enjoy the countryside, not to mention wildlife habitats, which are already under extreme pressure. 6 The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. 7 This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the small villages surrounding it of Borrowash and Breaston. 8 It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. 9 Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. 10 The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of development on this green belt. 11 Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. 12 NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant lengths of footpaths that will be affected by the development of 190 houses on land south west of Draycott. 13 Promoting healthy and safe communities the effect on our healthy lifestyles, especially our local health and well-being needs ? taking away our green space and facility would be detrimental to our community and our day to day needs would fall short by the loss of our valued facilities 14 Open space and recreation. NPPF102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected 15 There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development 16 Only the bare min
1.14	South West of Draycott	Healthcare Facilities	James Whyman	Response-01551	imum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter. This action by the EBC was irresponsible and not acting in the interests of the local communities this plan impacts. 17 To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing. 18 To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools.
1.14	South West of Draycott	Healthcare Facilities	Jane Barker	Response-01178	It is a known local fact that there are NO dentists in the area taking on new NHS patients. This covers Breaston, Draycott & Borrowash. It is also a concern that the already pressured local Doctors surgeries will be unable to cope as there are only 2 practices that cover the area of Breaston, Draycott and Borrowash which could possibly be in the region of 700 houses and subsequently say double or triple that for residents. We are struggling now to get appointments. The doctors are concerned but cannot turn anybody away but this will long term impact everybody new and old alike. It is a big concern to many people in the village.
1.14	South West of Draycott	Healthcare Facilities	Jonathan Childs	Response-01117	Contrary to comments and statements made by stakeholders with a clear and vested interest in progressing this development, requirements for local healthcare provision already very clearly exceed the available capacity. I have personally waited 15 months for a routine hospital appointment to be issued. We have had no access to NHS dentistry services since Covid - despite widely-publicised suggestions to the contrary - and my family do NOT in fact now have an NHS dentist, despite remaining registered at a local practice! As a result, we have been forced to resort to inconvenient and expensive private treatment. Availability of doctors has reduced in recent years and is likely to continue to do so whilever more senior practitioners retire and the younger ones leave the profession. With no visible or apparent efforts in place to relieve any of the above issues, any increase in the present level of local population can only compound and exacerbate the current issues.
1.14	South West of Draycott	Healthcare Facilities	Jonathan Fletcher	Response-01463	The introduction of all these new properties will make it impossible to get a doctor?s appointment, when it?s already an impossible situation .
1.14	South West of Draycott	Healthcare Facilities	Julie Pleass	Response-01526	Our local surgery is excellent but already extremely busy with the patients. The additional houses will cause much stress on an already busy surgery making it more difficult to get appointments with doctors and healthcare workers
1.14	South West of Draycott	Healthcare Facilities	Juliet Macve	Response-01572	It is already difficult to get an appointment at Overdale Medical Practice in either Breaston or Borrowash. For those of us who suffer ongoing, chronic health conditions this is a major problem which affects ability to work as well as to have an acceptable quality of life. I also understand that local dentist practices are not able to take on additional patients. The number of proposed new houses will create major issues with the availability of healthcare.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Healthcare Facilities	Karen Doxey	Response-01236	Loss of open space and green spaces ? this is vital for our community?s wellbeing It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. There is will be a negative impact on local services such as healthcare, ie doctors, dentists , education with so many extra people.
1.14	South West of Draycott	Healthcare Facilities	Karen Smith	Response-01484	I'm concerned about the lack of infrastructure to support the proposed development.
1.14	South West of Draycott	Healthcare Facilities	Karla Williams	Response-00077	Healthcare contributions are welcome to improve surgeries in the area given the volume of site put forward in Breaston, Draycott and Borrowwash collectively.
1.14	South West of Draycott	Healthcare Facilities	Kayleigh Bonallie	Response-01375	There are no health are facilities in the village, and the surrounding villages are at breaking point
1.14	South West of Draycott	Healthcare Facilities	Kerry Naylor	Response-00993	As a Draycott resident I cannot get registered for the doctors due to shortage of doctors. I have been unable to find an NHS dentist in the area. We do not even have a dentist in Draycott.
1.14	South West of Draycott	Healthcare Facilities	Laura Charier	Response-01218	NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. Surrounding healthcare facilities are already struggling to cope with the current demand. The accessibility and quality of the service offered to the exiting and future habitants will be negatively impacted. Promoting healthy and safe communities the effect on our healthy lifestyles, especially our local health and well-being needs ? taking away our green space and facility would be detrimental to our community and our day to day needs would fall short by the loss of our valued facilities.
1.14	South West of Draycott	Healthcare Facilities	Laura Roffey	Response-01479	The influx of 190 homes would prove to be a massive burden on the local doctors and dentists. These are both already overstretched NHS resources and adding more people would be extremely detrimental to the healthcare of any residents in the locale. Are there plans to add more support healthcare facilities as well - I think not.
1.14	South West of Draycott	Healthcare Facilities	Lee	Response-00742	1. Doctors - Draycott has no services are already shared with neighbouring villages and stretched. What investments will be made in existing new surgeries or expansions. Are people?s health and wellbeing no longer a priority? 2. Dentist - Draycott has none therefore my family drive miles for a dentist. What investments will be made in existing new surgeries or expansions. Are people?s dental health and well-being no longer a priority?
1.14	South West of Draycott	Healthcare Facilities	Lee Bunday	Response-00028	The strategy outlines significant residential growth, which will place increased pressure on local healthcare services ? including GPs, hospitals, urgent care centres, and community health services. However, there is little evidence in the review that this expected demand has been matched with clear, funded plans to expand and enhance local healthcare capacity. Many local residents already experience long wait times for GP appointments, delays in specialist care, and overcrowding in emergency departments. The village has no Dentist or Doctors available, with villagers already travelling to Breaston or Borrowwash to get these services. So again the allocations here, and Borrowwash and Breaston without proactive investment and coordination with the NHS and Integrated Care Systems, the influx of new residents will further strain a system that is already under pressure. Key concerns include: No clear identification of new healthcare facility sites in development zones. Lack of committed funding or partnerships to deliver new or expanded services. No strategic health needs assessment tied to population growth. Risk of reduced service quality and accessibility for both new and existing residents. Healthcare is a fundamental public service, and any strategic growth plan must prioritise the health and well-being of the community. I urge the council to revise the Core Strategy Review to include detailed plans for healthcare provision, supported by collaboration with relevant health authorities and a commitment to infrastructure delivery that keeps pace with development.
1.14	South West of Draycott	Healthcare Facilities	Linda Jane Jenkins	Response-01007	There is no doctor in Draycott. Most of us use the overdale practice in breaston and Borrowwash. With 150 homes nere and 400 in Borrowwash it will become impossible to see a doctor in a timely fashion. Already the pharmacy is overstretched. There is no dentist. How will these people get proper care and attention.
1.14	South West of Draycott	Healthcare Facilities	Louise and Shane Foster	Response-01219	Causing extra pressure on amenities particularly medical and dental care.
1.14	South West of Draycott	Healthcare Facilities	Louise Burnell	Response-00262	Healthcare facilities unable to cope with increase in demand
1.14	South West of Draycott	Healthcare Facilities	Luke Harper	Response-00898	There is no GP surgery or Dentist in the village. Breaston Dentist does not accept new NHS patients. Overdale Medical Practice takes over 30 mins trying to get through when called to make an appointment
1.14	South West of Draycott	Healthcare Facilities	Luke Hatch	Response-00160	Access to GPs and dentists is already limited. Adding more pressure to the system without increasing provision will make it even harder for local people to get the care they need. We already go to Breaston or Borrowwash for our doctors. With more people in Draycott and both those areas, these surgeries will be further stretched.
1.14	South West of Draycott	Healthcare Facilities	Maggie Murphy	Response-00833	an additional 700 homes in Borrowwash, Breaston and Draycott will destroy an already swamped doctors practice. NOTE there is on practice shared across the 3 villages with no actual doctors building in Draycott
1.14	South West of Draycott	Healthcare Facilities	Martin Fawcett	Response-01077	It?s difficult to get appointments now so building more houses with occupants will only make matters worse
1.14	South West of Draycott	Healthcare Facilities	Martin Kilcoyne	Response-01460	It is currently almost impossible to get a doctor's appointment at our local practices (neither of which are in Draycott but wither Breaston or Borrowwash). The addition of these houses will only make matters worse as there is no provision made for an additional doctors surgery in these plans.
1.14	South West of Draycott	Healthcare Facilities	Maureen Pinchbeck	Response-00041	Already difficult to get a doctor?s appointment. Will only get worse.
1.14	South West of Draycott	Healthcare Facilities	Melanie Wilson	Response-00974	The Healthcare providers are already overstretched , the development should not be considered without a robust plan to increase the healthcare facilities in the area.
1.14	South West of Draycott	Healthcare Facilities	Michael Thirtwall	Response-01196	There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. Existing facilities will be overwhelmed by 190 new households.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Healthcare Facilities	Michelle Marks	Response-00924	Local GP surgeries and dental practices are struggling to meet current demand. A significant increase in population will further reduce access to timely medical care.
1.14	South West of Draycott	Healthcare Facilities	Mr Graham Bingham and Mrs Kristine Bingham	Response-01302	Draycott has no GP service, residents are reliant on the already overstretched Overdale Medical practice centered in Breaston and Borrowwash. the addition of 190 houses and a possible 550 people (at a conservative estimate) will overwhelm the already overstretched GP service.
1.14	South West of Draycott	Healthcare Facilities	Mr R Sykes	Response-00412	Overloading an existing NHS practice and non- existent Dental service.
1.14	South West of Draycott	Healthcare Facilities	Mrs Elizabeth White	Response-00060	The local doctors may have trouble accommodating the possibility of an extra 500 people.
1.14	South West of Draycott	Healthcare Facilities	Mrs Patricia L Tacey	Response-00283	Since the surgery in Draycott was removed residents have to go to either Breaston, Borrowwash or Long Eaton to see a doctor. With a further 190 more families to cater for from Draycott alone this will put even more pressure on an already stretched National Health service.
1.14	South West of Draycott	Healthcare Facilities	Mrs V Atkin	Response-01871	Also the surgery will be impacted.
		Healthcare Facilities	Nat	Response-00158	It's difficult to get an appointment at the local doctors as it is without having even more people in the area
1.14	South West of Draycott	Healthcare Facilities	Nigel morton	Response-01351	Draycott has no doctors ,we have to use the park borrowash or overdale borrowash/ breaston .As a patient of the park for 60 years I had to leave because of standards and am now with overdale ,who are very good but already stretched ,as someone with poor health are fear there may get harder to get appointments dur to 700 proposed houses over draycott,breaston and borrowash
1.14	South West of Draycott	Healthcare Facilities	Nikki Riches	Response-00950	? There is already an undue strain on local healthcare facilities, how are these going to cope not only with the additional proposed housing in Draycott, but those proposed in Breaston and Borrowwash. The GP services are already stretched and we don't have anything designated in Draycott. Dentists are not available....what about social care? I don't feel like these have been considered in the core strategy and it is expected to be absorbed by existing services, which is not acceptable and another of the many reasons why i object to these proposals.
1.14	South West of Draycott	Healthcare Facilities	Oliver Kirk	Response-00569	Will additional healthcare facilities be uplifted to cope with the increase demand from new housing in the area. What proposals will housing developers provide to mitigate the strain put on healthcare that is already at breaking point.
1.14	South West of Draycott	Healthcare Facilities	Owen	Response-01547	Will there be any additional NHS dentist and Doctors to help with the additional people in the area.
1.14	South West of Draycott	Healthcare Facilities	Paul Allen	Response-01082	There is insufficient school spaces, school parking, village parking and medical services at present and the development can only make matters worse.
1.14	South West of Draycott	Healthcare Facilities	Pauline Marks	Response-00927	Local GP and dental services are overstretched, and the added pressure could lead to longer wait times and reduced access to care.
1.14	South West of Draycott	Healthcare Facilities	Paul Riley	Response-00029	Doctors and dentists are already operating at capacity and have now room for any additional patients.
1.14	South West of Draycott	Healthcare Facilities	Peter Sutton	Response-00409	There are no NHS GP or Dental facilities in Draycott. Residents use surgeries in nearby Breaston and Borrowwash but these are oversubscribed. I cannot get through to my GP surgery until mid afternoon or an appointment for weeks. Urgent care in the area all have extremely long waits. This is compounded by the other proposed developments in Breaston, Sandiacre and Borrowwash.
1.14	South West of Draycott	Healthcare Facilities	R Beresford	Response-01907	There are just 2 doctors practices within the area of Borrowwash Breaston and Draycott. They are difficult enough to get appointments, how on earth will they cope with all the extra residents. As for dentists there aren't any NHS ones.. within the area.
1.14	South West of Draycott	Healthcare Facilities	R Fazackerley	Response-01415	Local doctors surgery's cannot cope with the current demand of existing residents - this development will make it even harder to access services
1.14	South West of Draycott	Healthcare Facilities	Richard Keith Hanbury	Response-01087	It's hard enough getting a doctors appointment at the moment. When the population increases substantially this could become life threatening when you can't see a doctor. Are you funding new GPs to cope with the increased work load. And are you funding them before the massive influx of people.
1.14	South West of Draycott	Healthcare Facilities	Richard Syson	Response-01317	The addition of 190 + potential further 70 homes would have a significant impact upon the local surgery - Overdale Medical Practice - as there could be an additional 500+ people living in Draycott. There does not appear to be any mention of any obligation for the developers to fund any necessary expansion of the surgery's capacity or any increased NHS funding. Therefore, the level of service / ability to book appointments / receive healthcare must be detrimentally impacted
1.14	South West of Draycott	Healthcare Facilities	Robert Alan Duncanson	Response-00855	DRAYCOTT DOES NOT HAVE ITS OWN DOCTORS OR DENTIST, SO THE STRAIN ON THOSE FACILITIES BY THIS NUMBER OF PEOPLE WOULD MEAN IT WOULD BE HARDER FOR PEOPLE ALREADY LISTED AT SURGERIES TO GET APPOINTMENTS AND BE SEEN PROMPTLY
1.14	South West of Draycott	Healthcare Facilities	Roger Brown	Response-00999	There are no doctors or dentists in Draycott. The nearest doctors surgery is a branch surgery of one of the Borrowwash practices located in Breaston but all practices are already at or near capacity. The nearest dentists are in Breaston, Borrowwash and Long Eaton but there are no local dental practices offering NHS care.
1.14	South West of Draycott	Healthcare Facilities	Ruth Hawkins	Response-01277	There are no healthcare facilities in the south west of Draycott and the addition of 190 homes will place added pressure on already overstretched facilities in the neighbouring areas
		Healthcare Facilities	Sarah	Response-01541	Already struggle to get an appointment and the service is overstretched.
1.14	South West of Draycott	Healthcare Facilities	Sarah Hargreaves	Response-01314	1. NHS Services: There are no provisions within Draycott for GP or Dentistry. Existing local services are already over subscribed and struggling to cope with demand.
1.14	South West of Draycott	Healthcare Facilities	Sara Walker-Bradley	Response-01440	The local practice is not large enough to support all the extra residents, it's already a struggle to get appointments
1.14	South West of Draycott	Healthcare Facilities	Scott Gardner	Response-01554	It is ludicrous to suggest that 190 new homes will not overwhelm our already struggling local services. Councillor Wayne Major's past concerns about the lack of infrastructure consideration for other developments are directly applicable here. Councillor Scott's stark reminder that Draycott residents already have to travel to neighboring villages for basic NHS care and even further to Derby for dental services paints a clear picture of existing capacity limitations. This development will undoubtedly push our healthcare facilities, and other essential services to breaking point. Draycott doesn't have a doctor or a dentist, its impossible to get a dental appointment within a reasonable timeframe locally.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Healthcare Facilities	Sean Peace	Response-01347	Local GP surgeries and dental practices are already struggling to meet the needs of existing residents. Increasing the population significantly will make it even harder for people to access timely medical and dental care.
1.14	South West of Draycott	Healthcare Facilities	Simon Jenkins	Response-01287	Difficult enough as it is. Draycott does not have a doctors surgery and getting an appointment at Breaston or Borrowwash is not easy. Again, stating the obvious 600 to 800 extra people flooding in would cause chaos !!!
1.14	South West of Draycott	Healthcare Facilities	S M Beresford	Response-01851	There are just 2 doctors practices within the area of Borrowwash Breaston and Draycott. 1.14	South West of Draycott	Healthcare Facilities	Susan Baker	Response-01316	There?s no GP or dentist in Draycott. The services we do have nearby are stretched to breaking point. Adding hundreds more residents without expanding healthcare is simply irresponsible. I wait weeks for appointments
1.14	South West of Draycott	Healthcare Facilities	Susan Foster	Response-00824	No dentist,no doctor's surgery in the village, no space for new patients and not enough specialists to tend to the extra bodies.
1.14	South West of Draycott	Healthcare Facilities	Teresa Batchelor	Response-01240	Our local GP Practice, Overdale Medical, is stretched as it is. This is obvious by the time it takes to get through to the practice or get an appointment. Again, as with the schooling situation, where are the new residents expected to register for a GP Practice without it having a huge detrimental effect on Overdale and those local residents already registered with the practice. More patients will make its ability to offer a good level of care to its patients virtually impossible.
1.14	South West of Draycott	Healthcare Facilities	Teresa Shaw	Response-01309	1. Doctors - Draycott has no services are already shared with neighbouring villages and stretched. What investments will be made in existing new surgeries or expansions. Are people?s health and wellbeing no longer a priority? 2. Are people?s dental health and well-being no longer a priority?
1.14	South West of Draycott	Healthcare Facilities	Tim Hawkins	Response-00661	As there are currently no Doctors surgery or Dentists in the village, and no commitment in the sustainability assessment to provide additional infrastructure to provide these services then having a larger population is not going to make the situation any easier. The current Doctors is full, and there is no NHS dentistry service within miles of the village as now, despite what an EBC member falsely claimed during the public meeting.
			Tony burton	Response-01382	It's a problem trying to get to the doctors now more houses.jess chance.
1.14	South West of Draycott	Healthcare Facilities	Tracey Morton	Response-00968	Draycott has no doctors surgery or dentist 2 people in draycott have to use one of 2doctors surgeries which are near capacity 3 the proposed 700 house s between Draycott, Breaston and borrowwash will have a massive effect on the doctors surgeries 4 These surgeries will be pushed to breaking point and patients will suffer 5 maternity services have already Benn moved from overdale to long eaton
1.14	South West of Draycott	Healthcare Facilities	T Shields	Response-00570	Any infrastructure shortfall/need arising for healthcare can be offset by a proportionate financial requirement from developers through a section 106 obligation.
1.14	South West of Draycott	Healthcare Facilities	Viv Wright	Response-00035	It is already challenging to access healthcare in a timely manner, GP services are at bursting point already.
1.14	South West of Draycott	Healthcare Facilities	Wilfred Boone	Response-01424	To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. 1.14	South West of Draycott	Healthcare Facilities	William Batchelor	Response-01210	Overdale Medical Centre in Breaston already stretched covering Breaston and Drayott, does not have capacity to take on 190 extra households. Overdale Borrowwash will also be over capacity meaning that it ceases to be a potential offering for Draycott peopel who can travel
1.14	South West of Draycott	Landscape	adrian leeming	Response-01249	There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development of this size. NPPF 207. States in determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets? importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation. Yet development on the land south west of Draycott will significantly impact and later the heritage of the Village including the destruction of unspoilt Green Belt land, the adjacent conservation site of the canal and other listed heritage sites that surround the identified area.

1.14	South West of Draycott	landscape	Alison Thirlwall	Response-01390	Our local surroundings will become dominated by housing estates and will blight the local walks along the Public Right of Way which connect the village. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents who rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. Footpaths, the amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. This unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. These plans, plus the plans for National Grid to install super pylons only circa 600 meters away, means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. The development of the 190 homes will also have a significantly negative impact on the spatial openness of the area, impacting both the physical and geographical characteristics of the open land, which prevents urban sprawl and maintains the separation between settlements. It will overwhelmingly impact the natural and undeveloped nature of the Green Belt area. Protecting public rights of way and access, footpaths would be affected by this development.
1.14	South West of Draycott	landscape	A Northeast	Response-01848	The existing footpaths and access to the small wood bring great enjoyment to all who walk these trails, providing substantial benefits for physical and mental health. The development will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The proposal is far too big and overpowering for the village, impacting its heritage and cherished greenbelt landscape.
1.14	South West of Draycott	landscape	Anthony Lawton-Reeve	Response-00971	Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape when existing Brownfield sites within EBC should be prioritised before the Greenbelt land south west of Draycott.
1.14	South West of Draycott	landscape	Anthony Walsh	Response-00992	The taking away of grazing/arable land and the disruption for the wildlife. Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. There is an opinion that the deer fencing would devalue the area of open farmland and public right of way.
1.14	South West of Draycott	landscape	Avice Boyle	Response-01427	Under S106 of the Town and Country Planning Act 1990, as amended, contributions can be sought from developers towards the costs of providing community and social infrastructure, the need for which has arisen as a result of new development taking place. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would feel imprisoned by a housing estate. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development.
1.14	South West of Draycott	landscape	Ben Marshall	Response-01212	The development of 190 homes will have a significantly negative impact on the spatial openness of the area, impacting both the physical and geographical characteristics of the open land, which prevents urban sprawl and maintains the separation between settlements. It will overwhelmingly impact the natural and undeveloped nature of the Green Belt area.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	landscape	Bradley Pearce	Response-01348	wrong model in the wrong place to meet the EBCs housing needs when existing Brownfield sites exist within EBC being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. 32 30 Our local surroundings will become dominated by this housing development and will blight the local walks along the Public Right of Way which connect our Village. 33 32 The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. There are 109 existing Brownfield sites within the EBC that should be prioritised before the Green Belt land south west of Draycott is used. 34 33 Historic structures act as a focal point in countryside views and make a huge contribution to environmental quality. Their setting is often a major part of their significance. The proposed housing development to the land South West of Draycott deprives them of their context. 35 34 The proposed development is considered to have an adverse impact on the setting of local heritage assets. 36 35 This would have a detrimental and cumulative impact which would be harmful to local heritage assets. 37 36 The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. 38 37 Historic England show 14 listed building in Draycott: - Victoria Mill Grade 2 listed building, list entry number 1281333 / Church of St Chads, Church Wilne, Grade 1 listed building, list entry number 1281336 / Cart Shed and Stable at Draycott Mills, Grade 2 listed building, list entry number 1140155 / Cedars Farm House, Grade 2 listed building, list entry number 1087964 / The Cotton Processing and Storage Building at Draycott Mills, Grade 2 listed building, list entry number 1329376 / Doubling Mill at Draycott Mills, Grade 2 listed building, list entry number 1140154 / Draycott Hall and Outbuildings, Grade 2 listed building, list entry number 1334834 / Front Range Draycott Mills, Grade 2 listed building, list entry number 1334835 / Levers Machine Shed, Draycott Mills, Grade 2 listed building, list entry number 1250092 / Cotton warehouse, chimney and outbuilding, Draycott Mills, Grade 2 listed building, list entry number 1250121 / Cotton spinning mill and office block, Draycott Mills, Grade 2 listed building, list entry number 1250046 / Potter Lane Bridge, Grade 2 listed building, list entry number 1087966 / Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 / Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963 39 38 NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. 40 41 The amenity value of the footpaths through the application site would be entirely lost, and that of the surrounding footpaths greatly diminished due to the change from a beautiful rural landscape to a vast housing estate, with high fences/walls and a significant amount of houses adding to this negative impact. 41 45 It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landsca
1.14	South West of Draycott	landscape	Bradley Pearce	Response-01348	pe and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. 42 46 Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape when existing Brownfield sites within EBC should be prioritised before the Greenbelt land south west of Draycott. 43 47 NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant amount of footpaths that will be affected by the development of 190 houses. 44 48 NPPF states that sustainable development should be achieved. There is an obvious lack of definition of why this site is a ?sustainable location?. The introduction of 190 houses will increase waste, carbon footprint and impact the areas future biodiversity needs. 45 49 NPPF 150. States that if it is necessary to restrict development in a village primarily because of the important contribution which the open character of the village makes to the openness of the Green Belt, the village should be included in the Green Belt. If, however, the character of the village needs to be protected for other reasons, other means should be used, such as conservation area or normal development management policies, and the village should be excluded from the Green Belt. The land south west of Draycott significantly contributes to the village and its character. This village is a part of this land and the Green Belt status allows villagers to access green spaces and enhances the village feel of the area which is rural. 46 50 NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. 47 51 NPPF 207. States in determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets? importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation. Yet development on the land south west of Draycott will significantly impact and later the heritage of the Village including the destruction of unspoilt Green Belt land, the adjacent conservation site of the canal and other listed heritage sites that surround the identified area. 48 52 NPPF 208. States the local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affect

The proposed development is considered to have an adverse impact on the setting of local heritage assets. This would have a detrimental and cumulative impact which would be harmful to local heritage assets. The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. Historic England show 14 listed building in Draycott: - Victoria Mill Grade 2 listed building, list entry number 1281333 / Church of St Chads, Church Wilne, Grade 1 listed building, list entry number 1281336 / Cart Shed and Stable at Draycott Mills, Grade 2 listed building, list entry number 1140155 / Cedars Farm House, Grade 2 listed building, list entry number 1087964 / The Cotton Processing and Storage Building at Draycott Mills, Grade 2 listed building, list entry number 1329376 / Doubling Mill at Draycott Mills, Grade 2 listed building, list entry number 1140154 / Draycott Hall and Outbuildings, Grade 2 listed building, list entry number 1334834 / Front Range Draycott Mills, Grade 2 listed building, list entry number 1334835 / Levers Machine Shed, Draycott Mills, Grade 2 listed building, list entry number 1250092 / Cotton warehouse, chimney and outbuilding, Draycott Mills, Grade 2 listed building, list entry number 1250121 / Cotton spinning mill and office block, Draycott Mills, Grade 2 listed building, list entry number 1250046 / Potter Lane Bridge, Grade 2 listed building, list entry number 1087966 / Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 / Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963 NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The amenity value of the footpaths through the application site would be entirely lost, and that of the surrounding footpaths greatly diminished due to the change from a beautiful rural landscape to a vast housing estate, with high fences/walls and a significant amount of houses adding to this negative impact. It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape when existing Brownfield sites within EBC should be prioritised before the Greenbelt land south west of Draycott.</p>

1.14	South West of Draycott	Landscape	Donna Butcher	Response-01155	<p>The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would feel imprisoned by a housing estate. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. An extensive network of public footpaths is within the application site, and there are many in the near vicinity. The footpaths are well used and highly valued as an amenity. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. NPPF 150. States that if it is necessary to restrict development in a village primarily because of the important contribution which the open character of the village makes to the openness of the Green Belt, the village should be included in the Green Belt. If, however, the character of the village needs to be protected for other reasons, other means should be used, such as conservation area or normal development management policies, and the village should be excluded from the Green Belt. The land south west of Draycott significantly contributes to the village and its character. This village is a part of this land and the Green Belt status allows villagers to access green spaces and enhances the village feel of the area which is rural. NPPF 207. States in determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets? importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation. Yet development on the land south west of Draycott will significantly impact and later the heritage of the Village including the destruction of unspoilt Green Belt land, the adjacent conservation site of the canal and other listed heritage sites that surround the identified area.</p>

1.14	South West of Draycott	Landscape	Donna Peace	Response-01344	<p>1 Under S106 of the Town and Country Planning Act 1990, as amended, contributions can be sought from developers towards the costs of providing community and social infrastructure, the need for which has arisen as a result of new development taking place. 5 2 No additional open space opportunities, protection of the public right of way or indeed to better facilities. If S106 funding is available for an application of this type this must be considered. 6 3 This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the villages surrounding it of Borrowash and Breaston. 7 4 The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. 8 5 The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would feel imprisoned by a housing estate. 9 6 Loss of open land frequently used 10 7 These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. 11 8 Our local surroundings will become dominated by housing estates and will blight the local walks along the Public Right of Way which connect our Village. 12 9 The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. 13 10 Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. 14 11 Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. 15 12 Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. 16 13 These plans plus the plans for National Grid t</p>
1.14	South West of Draycott	Landscape	Donna Peace	Response-01344	<p>o install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. 17 14 The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. 18 15 The development of 190 homes will have a significantly negative impact on the spatial openness of the area, impacting both the physical and geographical characteristics of the open land, which prevents urban sprawl and maintains the separation between settlements. It will overwhelmingly impact the natural and undeveloped nature of the Green Belt area. 19 16 Protecting public rights of way and access, footpaths would be affected by this development. 20 17 Increased harm to the character of Public Rights of Way. 21 18 Boundaries are changed by fencing and walls. 22 19 The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. 23 20 Strongly object to this application the amenity and enjoyment of the use of the paths which cross the site will be severely compromised by the development. These paths provide an important means by which residents from the local area can get access to the countryside with substantial benefits for their physical and mental health. 24 21 The suggested 190 houses to the land south west of Draycott would enclose the paths, which would have a devastating effect on the enjoyment of walks, as would the replacement of green fields with 190 houses. 25 22 We acknowledge it is a balance between the adverse effects on the footpaths against the desirability of the development taking place, but question if the proposed measures would be sufficient to prevent a severe adverse effect on the use of the paths. 26 23 The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. 27 24 An extensive network of public footpaths is within the application site, and there are many in the near vicinity. The footpaths are well used and highly valued as an amenity. 28 25 Public footpaths this development would surely take away the enjoyment of what countryside walks we have left around. 29 27 The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. 30 28 The footpaths that cross the land have amazing views and are used regularly by residents and visitors. Strongly object to this application the amenity and enjoyment of the use of the paths which cross the site will be severely compromised by the development. These paths provide an important means by which residents from the local area can get access to the countryside with substantial benefits for their physical and mental health. The suggested 190 houses to the land south west of Draycott would enclose the paths, which would have a devastating effect on the enjoyment of walks, as would the replacement of green fields with 190 houses. We acknowledge it is a balance between the adverse effects on the footpaths against the desirability of the development taking place, but question if the proposed measures would be sufficient to prevent a severe adverse effect on the use of the paths. The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. An extensive network of public footpaths is within the application site, and there are many in the near vicinity. The footpaths are well used and highly valued as an amenity. Public footpaths this development would surely take away the enjoyment of what countryside walks we have left around. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. It is the wrong model in the wrong place to meet the EBCs housing needs when existing Brownfield sites exist within EBC being of a scale that is ultimately det</p>

1.14	South West of Draycott	Landscape	Francis Ian Scott	Response-01535	<p>rimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. Our local surroundings will become dominated by this housing development and will blight the local walks along the Public Right of Way which connect our Village. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. There are 109 existing Brownfield sites within the EBC that should be prioritised before the Green Belt land south west of Draycott is used. Historic structures act as a focal point in countryside views and make a huge contribution to environmental quality. Their setting is often a major part of their significance. The proposed housing development to the land South West of Draycott deprives them of their context. The proposed development is considered to have an adverse impact on the setting of local heritage assets. This would have a detrimental and cumulative impact which would be harmful to local heritage assets. The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. Historic England show 14 listed building in Draycott: - Victoria Mill Grade 2 listed building, list entry number 1281333 / Church of St Chads, Church Wilne, Grade 1 listed building, list entry number 1281336 / Cart Shed and Stable at Draycott Mills, Grade 2 listed building, list entry number 1140155 / Cedars Farm House, Grade 2 listed building, list entry number 1087964 / The Cotton Processing and Storage Building at Draycott Mills, Grade 2 listed building, list entry number 1329376 / Doubling Mill at Draycott Mills, Grade 2 listed building, list entry number 1140154 / Draycott Hall and Outbuildings, Grade 2 listed building, list entry number 1334834 / Front Range Draycott Mills, Grade 2 listed building, list entry number 1334835 / Levers Machine Shed, Draycott Mills, Grade 2 listed building, list entry number 1250092 / Cotton warehouse, chimney and outbuilding, Draycott Mills, Grade 2 listed building, list entry number 1250121 / Cotton spinning mill and office block, Draycott Mills, Grade 2 listed building, list entry number 1250046 / Potter Lane Bridge, Grade 2 listed building, list entry number 1087966 / Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 / Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963 NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The amenity value of the footpaths through the application site would be entirely lost, and that of the surrounding footpaths greatly diminished due to the change from a beautiful rural landscape to a vast housing estate, with high fences/walls and a significant amount of houses adding to this negative impact. It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape when existing Br</p>
1.14	South West of Draycott	Landscape	Francis Ian Scott	Response-01535	<p>ownfield sites within EBC should be prioritised before the Greenbelt land south west of Draycott. NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant amount of footpaths that will be affected by the development of 190 houses. NPPF states that sustainable development should be achieved. There is an obvious lack of definition of why this site is a ?sustainable location?. The introduction of 190 houses will increase waste, carbon footprint and impact the areas future biodiversity needs. NPPF 150. States that if it is necessary to restrict development in a village primarily because of the important contribution which the open character of the village makes to the openness of the Green Belt, the village should be included in the Green Belt. If, however, the character of the village needs to be protected for other reasons, other means should be used, such as conservation area or normal development management policies, and the village should be excluded from the Green Belt. The land south west of Draycott significantly contributes to the village and its character. This village is a part of this land and the Green Belt status allows villagers to access green spaces and enhances the village feel of the area which is rural. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. "NPPF 207. States in determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets? importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation. Yet development on the land south west of Draycott will significantly impact and later the heritage of the Village including the destruction of unspoilt Green Belt land, the adjacent conservation site of the canal and other listed heritage sites that surround the identified area. " "NPPF 208. States the local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affecting the setting of a heritage asset) taking account of the available evidence and any necessary expertise. They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between</p>

1.14	South West of Draycott	landscape	Rancis Ian Scott	Response-01935	the heritage asset?s conservation and any aspect of the proposal. This development will impact Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622." NPPF 102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development of this size. To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing. To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools. To conserve and enhance the Borough landscape character. This proposal does not promote the conservation or enhancement of the local landscape and is an inappropriate development.
1.14	South West of Draycott	landscape	Gail Holdsworth	Response-00937	This is a village in a rural setting. This will create a total change to Draycott. Houses for sale in Draycott will no longer be able to say ?house for sale in the ever sought after village?.
1.14	South West of Draycott	landscape	Gary Siddall	Response-01237	This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the villages surrounding it of Borrowwash and Breaston - land which is frequently used ! The housing proposal is far too big overpowering, it will completely change the landscape of the whole area, denying the villagers of Draycott and surrounding areas some of its most beautiful countryside to walk in freely and experience the trees. flowers and diverse wildlife, as they have done for many, many years. Once it's gone, it's gone - please don't let it go !
1.14	South West of Draycott	landscape	Gemma Woolnough	Response-01394	The land proposed for the housing development is directly adjacent and opposite many residential homes and is kept as agricultural fields with horses grazed on the fields. By building on this land it would negatively impact the landscape of the whole village with the loss of beautiful open space, which many people find positively impacts their mental health. The housing development would cause a loss of this landscape, instead built on and concreted over, negatively impacting the area.
1.14	South West of Draycott	landscape	George Foster	Response-01199	Under S106 of the Town and Country Planning Act 1990, as amended, contributions can be sought from developers towards the costs of providing community and social infrastructure, the need for which has arisen as a result of new development taking place. No additional open space opportunities, protection of the public right of way or indeed to better facilities. If S106 funding is available for an application of this type this must be considered. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the villages surrounding it of Borrowwash and Breaston. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would feel imprisoned by a housing estate. Loss of open land frequently used. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. Our local surroundings will become dominated by housing estates and will blight the local walks along the Public Right of Way which connect our Village. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the

This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing. 56 To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools. 57 To conserve and enhance the Borough landscape character. This proposal does not promote the conservation or enhancement of the local landscape and is an inappropriate development.
1.14	South West of Draycott	landscape	Jane Barker	Response-01178	To change the landscape of the village would be detrimental to those that already choose to live there. You will change the pleasure that people have using the green spaces/. footpaths etc. and do not wish to walk through housing estates.
1.14	South West of Draycott	landscape	J Morgan	Response-01847	The existing footpaths and access to the small wood bring great enjoyment to all who walk these trails, providing substantial benefits for physical and mental health. The development will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The proposal is far too big and overpowering for the village, impacting its heritage and cherished greenbelt landscape.
1.14	South West of Draycott	landscape	Jonathan Childs	Response-01117	Under S106 of the Town and Country Planning Act 1990, as amended, contributions can be sought from developers towards the costs of providing community and social infrastructure, the need for which has arisen as a result of new development taking place. No additional open space opportunities, protection of the public right of way or indeed to better facilities. If S106 funding is available for an application of this type this must be considered. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the villages surrounding it of Borrowwash and Breaston. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red list species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would feel imprisoned by a housing estate. These decisions are irreversible, and our children (and their children) will have less open countryside to explore and play in, losing safe connecting space between locations. Once given up, this can NEVER be recovered or replaced! Our local surroundings will become dominated by housing estates and will blight or obstruct the local walks along the Public Right of Way which connect our village. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. Historic England show 14 listed bui

1.14	South West of Draycott	Landscape	Jonathan Childs	Response-01117	lding in Draycott: - Victoria Mill Grade 2 listed building, list entry number 1281333 / Church of St Chads, Church Wilne, Grade 1 listed building, list entry number 1281336 / Cart Shed and Stable at Draycott Mills, Grade 2 listed building, list entry number 1140155 / Cedars Farm House, Grade 2 listed building, list entry number 1087964 / The Cotton Processing and Storage Building at Draycott Mills, Grade 2 listed building, list entry number 1329376 / Doubling Mill at Draycott Mills, Grade 2 listed building, list entry number 1140154 / Draycott Hall and Outbuildings, Grade 2 listed building, list entry number 1334834 / Front Range Draycott Mills, Grade 2 listed building, list entry number 1334835 / Levers Machine Shed, Draycott Mills, Grade 2 listed building, list entry number 1250092 / Cotton warehouse, chimney and outbuilding, Draycott Mills, Grade 2 listed building, list entry number 1250121 / Cotton spinning mill and office block, Draycott Mills, Grade 2 listed building, list entry number 1250046 / Potter Lane Bridge, Grade 2 listed building, list entry number 1087966 / Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 / Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963 NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The amenity value of the footpaths through the application site would be entirely lost, and that of the surrounding footpaths greatly diminished due to the change from a beautiful rural landscape to a vast housing estate, with high fences/walls and a significant amount of houses adding to this negative impact. NPPF states that sustainable development should be achieved. There is an obvious lack of definition of why this site is a ?sustainable location?. The introduction of 190 houses will increase waste, carbon footprint and impact the areas future biodiversity needs. NPPF 150. States that if it is necessary to restrict development in a village primarily because of the important contribution which the open character of the village makes to the openness of the Green Belt, the village should be included in the Green Belt. If, however, the character of the village needs to be protected for other reasons, other means should be used, such as conservation area or normal development management policies, and the village should be excluded from the Green Belt. The land south west of Draycott significantly contributes to the village and its character. This village is a part of this land and the Green Belt status allows villagers to access green spaces and enhances the village feel of the area which is rural. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. NPPF 207. States in determining applications, local planning authorities should require an applican
1.14	South West of Draycott	Landscape	Jonathan Childs	Response-01117	t to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets? importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation. Yet development on the land south west of Draycott will significantly impact and later the heritage of the Village including the destruction of unspoilt Green Belt land, the adjacent conservation site of the canal and other listed heritage sites that surround the identified area. NPPF 208. States the local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affecting the setting of a heritage asset) taking account of the available evidence and any necessary expertise. They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between the heritage asset?s conservation and any aspect of the proposal. This development will impact Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622. NPPF 102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development of this size.
1.14	South West of Draycott	Landscape	Jonathan Fletcher	Response-01463	I don?t think I really have to explain how the effects of so many new properties will destroy the beauty of the landscape!!
1.14	South West of Draycott	Landscape	Judith Boyle	Response-01418	The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the s</p>
1.14	South West of Draycott	Landscape	Katie May	Response-01518	<p>outh west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. The development of 190 homes will have a significantly negative impact on the spatial openness of the area, impacting both the physical and geographical characteristics of the open land, which prevents urban sprawl and maintains the separation between settlements. It will overwhelmingly impact the natural and undeveloped nature of the Green Belt area. Protecting public rights of way and access, footpaths would be affected by this development. Increased harm to the character of Public Rights of Way. Boundaries are changed by fencing and walls. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Strongly object to this application the amenity and enjoyment of the use of the paths which cross the site will be severely compromised by the development. These paths provide an important means by which residents from the local area can get access to the countryside with substantial benefits for their physical and mental health. The suggested 190 houses to the land south west of Draycott would enclose the paths, which would have a devastating effect on the enjoyment of walks, as would the replacement of green fields with 190 houses. We acknowledge it is a balance between the adverse effects on the footpaths against the desirability of the development taking place, but question if the proposed measures would be sufficient to prevent a severe adverse effect on the use of the paths. The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. An extensive network of public footpaths is within the application site, and there are many in the near vicinity. The footpaths are well used and highly valued as an amenity. Public footpaths this development would surely take away the enjoyment of what countryside walks we have left around. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. 1.14	South West of Draycott	Landscape	Kerry Naylor	Response-00993	Nature is grass, soil, landscapes to help with water, animals, food for wildlife. To change the current landscape will change the who ethos of Draycott. It is a village with green boundaries, it must remain so.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	landscape	Laura Charier	Response-01218	These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. This proposal does not promote the conservation or enhancement of the local landscape and is an inappropriate development.
1.14	South West of Draycott	landscape	Laura Roffey	Response-01479	The landscape of Draycott would not benefit by stretching and extending the the houses further. This is a village, not a town.
1.14	South West of Draycott	landscape	Lee	Response-00742	1. A development as big as this only negatively impacts the existing natural environment. The village and residents will suffer loss of trees or hedgerows ? which is the rural visual landscape the village is known for. No design can compensate for green belt? it is irreplaceable. 2. The proposed maintenance of the public walking path is a pointless gesture you will ruin the landscape and walk for all. Who wants to walk around a building site or estate? Why ruin greenbelt and public walkways build in a more suitable location? Loss of privacy, personal & public visual amenity. 3. I and many other residents on Derby Road & Lime Grove would suffer a major Loss of visual amenity. I bought a house with greenbelt on the back and paid a premium. This development will change the pleasantness of views and surroundings, affecting the quality of life for residents such as me. What will be done for residents whose lives, health and wellbeing that will be directly impacted? 4. Permission has already been granted to the rear left of my garden causing much stress and anxiety. You have ruined views, wildlife habitat, ripped out a large volume of trees and de-valued my house. Encroaching on our properties further and blocking us in is an invasion of privacy. How can this even be considered when other plots are already available? 5. The overall aesthetic quality and enjoyment of an area's landscape and surrounding will be affected for all walkers, visitors and residents. Why punish the enjoyment of all these beneficiaries? 6. You are blocking my views I sort after and paid for and worked extremely hard for. My reasons for picking Draycott as a semi-rural location. The scale is excessive estate you would be blocking in my / our properties and removing a key reason for living here. The significant impact to the enjoyment of my property and other residence on Derby Road needs careful consideration. If plans go through, a compensation scheme should be set up for directly affected residence to cover losses. This development will drastically overwhelm mine & other's views, it will be inescapably dominant and will be unpleasantly encroaching on Derby Road & Lime Grove residence. Why are other needs be considered over ours? 7. If this development is passed all properties with green belt views will see a reduction in value some huge & a key sort after attribute being needlessly taken away. The council should have to pay the difference between the value of the property before and after the development. This is the only fair compensation for this rushed and cobbled together development plan. Will a scheme be set up to compensate residents so they can sell without losing financially what they have worked so hard for? 8. We planned to do a loft extension at some point to take further benefit of our views. Many houses on derby road & Lime Groove have made improvements or alterations to take advantage of these views. For me this is no longer an option as all I do is overlook other houses. Why is the council supportive of taking away views?
1.14	South West of Draycott	landscape	Louise and Shane Foster	Response-01219	The trails and footpaths are vital to residents to enjoy the outdoors with the positive impact this has on physical and mental health.
1.14	South West of Draycott	landscape	Luke Hatch	Response-00160	The site forms part of the rural edge of the village. Building here would change the character of Draycott permanently replacing green fields with dense housing and concrete. It'd also be an obvious and ugly new build area to replace the views of fields on both sides. It doesn't seem to be in the spirit of the "Grey Belt" legislation changes.
1.14	South West of Draycott	landscape	Maggie Murphy	Response-00833	NPPF states the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate where the development would utilise Grey Belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Belt across the area of the plan. It is clear the authority is now altering existing and acceptable Green Belt land to suit this paragraph/approach of the NPPF by converting it to Grey Belt. This is an inappropriate interpretation of what Grey Belt land is. NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users. The existing footpaths and access to the small wood, brings great enjoyment to all who walk these trails and it provides an important means by which residents of the local villages can get access to the countryside locally with substantial benefits for their physical and mental health . The development on the land south west of Draycott for the people of Draycott and other areas, will have a devastating effect on the enjoyment of walks, replacing green space with an initial 190 houses.
1.14	South West of Draycott	landscape	Martin Fawcett	Response-01077	Having lived in the village for 60yrs I'm familiar with flooding that occurs and certain wildlife that is rare. We have owls, herons and bats and building more homes in the proposed area will affect these animals. There are plenty of other non green belt areas that should seriously be considered first

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	landscape	Martin Kilcoyne	Response-01460	<p>Under S106 of the Town and Country Planning Act 1990, as amended, contributions can be sought from developers towards the costs of providing community and social infrastructure, the need for which has arisen as a result of new development taking place. No additional open space opportunities, protection of the public right of way or indeed to better facilities. If S106 funding is available for an application of this type this must be considered. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the villages surrounding it of Borrowwash and Breaston. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would feel imprisoned by a housing estate. Loss of open land frequently used These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. Our local surroundings will become dominated by housing estates and will blight the local walks along the Public Right of Way which connect our Village. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the s</p>
1.14	South West of Draycott	landscape	Martin Kilcoyne	Response-01460	<p>South west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. The development of 190 homes will have a significantly negative impact on the spatial openness of the area, impacting both the physical and geographical characteristics of the open land, which prevents urban sprawl and maintains the separation between settlements. It will overwhelmingly impact the natural and undeveloped nature of the Green Belt area. Protecting public rights of way and access, footpaths would be affected by this development. Increased harm to the character of Public Rights of Way. Boundaries are changed by fencing and walls. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Strongly object to this application the amenity and enjoyment of the use of the paths which cross the site will be severely compromised by the development. These paths provide an important means by which residents from the local area can get access to the countryside with substantial benefits for their physical and mental health. The suggested 190 houses to the land south west of Draycott would enclose the paths, which would have a devastating effect on the enjoyment of walks, as would the replacement of green fields with 190 houses. We acknowledge it is a balance between the adverse effects on the footpaths against the desirability of the development taking place, but question if the proposed measures would be sufficient to prevent a severe adverse effect on the use of the paths. The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. An extensive network of public footpaths is within the application site, and there are many in the near vicinity. The footpaths are well used and highly valued as an amenity. Public footpaths this development would surely take away the enjoyment of what countryside walks we have left around. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. It is the wrong model in the wrong place to meet the EBCs housing needs when existing Brownfield sites exist within EBC being of a scale that is ultimately det</p>

1.14	South West of Draycott	landscape	Martin Kilcoyne	Response-01460	<p>rimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. Our local surroundings will become dominated by this housing development and will blight the local walks along the Public Right of Way which connect our Village. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. There are 109 existing Brownfield sites within the EBC that should be prioritised before the Green Belt land south west of Draycott is used. Historic structures act as a focal point in countryside views and make a huge contribution to environmental quality. Their setting is often a major part of their significance. The proposed housing development to the land South West of Draycott deprives them of their context. The proposed development is considered to have an adverse impact on the setting of local heritage assets. This would have a detrimental and cumulative impact which would be harmful to local heritage assets. The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. Historic England show 14 listed building in Draycott: - Victoria Mill Grade 2 listed building, list entry number 1281333 / Church of St Chads, Church Wilne, Grade 1 listed building, list entry number 1281336 / Cart Shed and Stable at Draycott Mills, Grade 2 listed building, list entry number 1140155 / Cedars Farm House, Grade 2 listed building, list entry number 1087964 / The Cotton Processing and Storage Building at Draycott Mills, Grade 2 listed building, list entry number 1329376 / Doubling Mill at Draycott Mills, Grade 2 listed building, list entry number 1140154 / Draycott Hall and Outbuildings, Grade 2 listed building, list entry number 1334834 / Front Range Draycott Mills, Grade 2 listed building, list entry number 1334835 / Levers Machine Shed, Draycott Mills, Grade 2 listed building, list entry number 1250092 / Cotton warehouse, chimney and outbuilding, Draycott Mills, Grade 2 listed building, list entry number 1250121 / Cotton spinning mill and office block, Draycott Mills, Grade 2 listed building, list entry number 1250046 / Potter Lane Bridge, Grade 2 listed building, list entry number 1087966 / Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 / Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963 NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The amenity value of the footpaths through the application site would be entirely lost, and that of the surrounding footpaths greatly diminished due to the change from a beautiful rural landscape to a vast housing estate, with high fences/walls and a significant amount of houses adding to this negative impact. It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape when existing Br</p>
1.14	South West of Draycott	landscape	Martin Kilcoyne	Response-01460	<p>ownfield sites within EBC should be prioritised before the Greenbelt land south west of Draycott. NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant amount of footpaths that will be affected by the development of 190 houses. NPPF states that sustainable development should be achieved. There is an obvious lack of definition of why this site is a ?sustainable location?. The introduction of 190 houses will increase waste, carbon footprint and impact the areas future biodiversity needs. NPPF 150. States that if it is necessary to restrict development in a village primarily because of the important contribution which the open character of the village makes to the openness of the Green Belt, the village should be included in the Green Belt. If, however, the character of the village needs to be protected for other reasons, other means should be used, such as conservation area or normal development management policies, and the village should be excluded from the Green Belt. The land south west of Draycott significantly contributes to the village and its character. This village is a part of this land and the Green Belt status allows villagers to access green spaces and enhances the village feel of the area which is rural. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. "NPPF 207. States in determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets? importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation. Yet development on the land south west of Draycott will significantly impact and later the heritage of the Village including the destruction of unspoilt Green Belt land, the adjacent conservation site of the canal and other listed heritage sites that surround the identified area. " "NPPF 208. States the local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affecting the setting of a heritage asset) taking account of the available evidence and any necessary expertise. They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between</p>

			Melanie Wilson	Response-00974	The development will have a detrimental effect on the Landscape of Draycott

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	landscape	Michael Thirtwall	Response-01196	The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of development on this green belt. It is the wrong model in the wrong place to meet the EBCs housing needs when existing Brownfield sites exist within EBC . The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance.
1.14	South West of Draycott	landscape	Michelle Marks	Response-00924	Draycott is a historic village with a strong sense of community and a distinct rural character. The addition of 190 houses would fundamentally alter the village's landscape, effectively turning it into a town and undermining the reasons many people choose to live here. Furthermore, this proposal is in direct conflict with local and national planning policies: Local authorities must demonstrate a five-year housing land supply before considering Green Belt release. There is no evidence that all suitable brownfield and non-Green Belt land options have been exhausted. The UK's Climate Change Act 2008 aims to reduce carbon emissions, yet this development would increase pollution and car dependency due to inadequate transport links
1.14	South West of Draycott	landscape	Miss Ella Meredith	Response-01850	The existing footpaths and access to the small wood bring great enjoyment to all who walk these trails, providing substantial benefits for physical and mental health. The development will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The proposal is far too big and overpowering for the village, impacting its heritage and cherished greenbelt landscape.
1.14	South West of Draycott	landscape	Miss Natalie Walsh	Response-01846	The existing footpaths and access to the small wood bring great enjoyment to all who walk these trails, providing substantial benefits for physical and mental health. The development of 190 homes will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. It will have a significantly negative impact on the spatial openness of the area, impacting both the physical and geographical characteristics of the open land, which prevents urban sprawl and maintains the separation between settlements. It will overwhelmingly impact the natural and undeveloped nature of the Green Belt area. ? The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. ? Strongly object to this application the amenity and enjoyment of the use of the paths which cross the site will be severely compromised by the development. These paths provide an important means by which residents from the local area can get access to the countryside with substantial benefits for their physical and mental health. ? The suggested 190 houses to the land south west of Draycott would enclose the paths, which would have a devastating effect on the enjoyment of walks, as would the replacement of green fields with 190 houses. ? We acknowledge it is a balance between the adverse effects on the footpaths against the desirability of the development taking place, but question if the proposed measures would be sufficient to prevent a severe adverse effect on the use of the paths. ? The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. ? An extensive network of public footpaths is within the application site, and there are many in the near vicinity. The footpaths are well used and highly valued as an amenity. ? Public footpaths this development would surely take away the enjoyment of what countryside walks we have left around. ? The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. ? The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. ? It is the wrong model in the wrong place to meet the EBCs housing needs when existing Brownfield sites exist within EBC being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. ? Our local surroundings will become dominated by this housing development and will blight the local walks along the Public Right of Way which connect our Village. ? The NPPF includes an overar</p>

1.14	South West of Draycott	Landscape	Nikki Riches	Response-00950	<p>ching objective to protect and enhance our natural, built and historic environment, including making effective use of land. There are 109 existing Brownfield sites within the EBC that should be prioritised before the Green Belt land south west of Draycott is used. ? Historic structures act as a focal point in countryside views and make a huge contribution to environmental quality. Their setting is often a major part of their significance. The proposed housing development to the land South West of Draycott deprives them of their context. ? The proposed development is considered to have an adverse impact on the setting of local heritage assets. ? This would have a detrimental and cumulative impact which would be harmful to local heritage assets. ? The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. ? Historic England show 14 listed building in Draycott: - Victoria Mill Grade 2 listed building, list entry number 1281333 / Church of St Chads, Church Wilne, Grade 1 listed building, list entry number 1281336 / Cart Shed and Stable at Draycott Mills, Grade 2 listed building, list entry number 1140155 / Cedars Farm House, Grade 2 listed building, list entry number 1087964 / The Cotton Processing and Storage Building at Draycott Mills, Grade 2 listed building, list entry number 1329376 / Doubling Mill at Draycott Mills, Grade 2 listed building, list entry number 1140154 / Draycott Hall and Outbuildings, Grade 2 listed building, list entry number 1334834 / Front Range Draycott Mills, Grade 2 listed building, list entry number 1334835 / Levers Machine Shed, Draycott Mills, Grade 2 listed building, list entry number 1250092 / Cotton warehouse, chimney and outbuilding, Draycott Mills, Grade 2 listed building, list entry number 1250121 / Cotton spinning mill and office block, Draycott Mills, Grade 2 listed building, list entry number 1250046 / Potter Lane Bridge, Grade 2 listed building, list entry number 1087966 / Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 / Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963 ? NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. ? The amenity value of the footpaths through the application site would be entirely lost, and that of the surrounding footpaths greatly diminished due to the change from a beautiful rural landscape to a vast housing estate, with high fences/walls and a significant amount of houses adding to this negative impact. ? It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. ? Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape when existing Brownfield sites within EBC should be prioritised before the Greenbelt land south west of Draycott. ? NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to pr</p>
1.14	South West of Draycott	Landscape	Nikki Riches	Response-00950	<p>ovide better facilities for users, this area has significant amount of footpaths that will be affected by the development of 190 houses. ? NPPF states that sustainable development should be achieved. There is an obvious lack of definition of why this site is a ?sustainable location?. The introduction of 190 houses will increase waste, carbon footprint and impact the areas future biodiversity needs. ? NPPF 150. States that if it is necessary to restrict development in a village primarily because of the important contribution which the open character of the village makes to the openness of the Green Belt, the village should be included in the Green Belt. If, however, the character of the village needs to be protected for other reasons, other means should be used, such as conservation area or normal development management policies, and the village should be excluded from the Green Belt. The land south west of Draycott significantly contributes to the village and its character. This village is a part of this land and the Green Belt status allows villagers to access green spaces and enhances the village feel of the area which is rural. ? NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. ? NPPF 207. States in determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets? importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation. Yet development on the land south west of Draycott will significantly impact and later the heritage of the Village including the destruction of unspoilt Green Belt land, the adjacent conservation site of the canal and other listed heritage sites that surround the identified area. ? NPPF 208. States the local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affecting the setting of a heritage asset) taking account of the available evidence and any necessary expertise. They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between the heritage asset?s conservation and any aspect of the proposal. This development will impact Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622. ? NPPF 102. 1.14	South West of Draycott	landscape	SINKI RICHES	Response-00950	opportunities for physical activity and health and wellbeing would be adversely affected ? There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development of this size. ? To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing. ? To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools. ? To conserve and enhance the Borough landscape character. This proposal does not promote the conservation or enhancement of the local landscape and is an inappropriate development.
1.14	South West of Draycott	landscape	paul butcher	Response-01154	The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would feel imprisoned by a housing estate. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	landscape	Richard Syson	Response-01317	The sheer scale of the proposed site would have an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of development on this green belt. This is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. There is no guarantee that if this proposal did go ahead, Erewash Borough Council would not try to reclassify more of Draycott's Green Belt into Grey Belt in future years
1.14	South West of Draycott	landscape	Rick Howden	Response-01421	Under S106 of the Town and Country Planning Act 1990, as amended, contributions can be sought from developers towards the costs of providing community and social infrastructure, the need for which has arisen as a result of new development taking place. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the villages surrounding it of Borrowash and Breaston.
1.14	South West of Draycott	landscape	Roger Brown	Response-00999	The village feel of Draycott will inevitably change with an addition of 20% more residents of a younger cross-section. Many of the existing residents (average aged is apparently about 58) moved to the village for a slower, quieter and more relaxed village life, the village does not therefore have many of the attractions that this younger population might desire without some radical change to its character.
1.14	South West of Draycott	landscape	Ruth Hawkins	Response-01277	National planning guidance states that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness.
1.14	South West of Draycott	landscape	Sarah	Response-01541	We've already had some beautiful trees and privacy taken away to make room for houses joining on to this proposals. It is also going to devalue homes.
1.14	South West of Draycott	landscape	Sarah Hargreaves	Response-01314	1.Chesterfield to Willington: The route for the Pylon's is not yet confirmed. Any changes to the Greenbelt should be considered alongside the already detrimental impact of these proposals. Residents in this area of the village face been overwhelmed with development. The impact on wellbeing and mental health of many should not be underestimated. I will be clear; this is already impacting people.
1.14	South West of Draycott	landscape	Scott Gardner	Response-01554	The proposed desecration of Green Belt land west of Draycott is an environmental outrage. The loss of this protected land will rob our community of vital green spaces for recreation and irrevocably scar the visual character of our village. This development will irrevocably damage the unique character and landscape of Draycott. Building on this Green Belt site will destroy the visual amenity that residents cherish. Policy P3 of the Erewash Borough Core Strategy explicitly states that development proposals that negatively impact the character or appearance of an area will not be permitted. This proposal is a clear violation of this policy.
1.14	South West of Draycott	landscape	Sean Peace	Response-01347	Under S106 of the Town and Country Planning Act 1990, as amended, contributions can be sought from developers towards the costs of providing community and social infrastructure, the need for which has arisen as a result of new development taking place. 5 2 No additional open space opportunities, protection of the public right of way or indeed to better facilities. If S106 funding is available for an application of this type this must be considered. 6 3 This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the villages surrounding it of Borrowash and Breaston. 7 4 The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. 8 5 The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would feel imprisoned by a housing estate. 9 6 Loss of open land frequently used 10 7 These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. 11 8 Our local surroundings will become dominated by housing estates and will blight the local walks along the Public Right of Way which connect our Village. 12 9 The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. 13 10 Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. 14 11 Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. 15 12 Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. 16 13 These plans plus the plans for National Grid to

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Landscape	Sean Peace	Response-01347	<p>install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. 17 14 The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. 18 15 The development of 190 homes will have a significantly negative impact on the spatial openness of the area, impacting both the physical and geographical characteristics of the open land, which prevents urban sprawl and maintains the separation between settlements. It will overwhelmingly impact the natural and undeveloped nature of the Green Belt area. 19 16 Protecting public rights of way and access, footpaths would be affected by this development. 20 17 Increased harm to the character of Public Rights of Way. 21 18 Boundaries are changed by fencing and walls. 22 19 The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. 23 20 Strongly object to this application the amenity and enjoyment of the use of the paths which cross the site will be severely compromised by the development. These paths provide an important means by which residents from the local area can get access to the countryside with substantial benefits for their physical and mental health. 24 21 The suggested 190 houses to the land south west of Draycott would enclose the paths, which would have a devastating effect on the enjoyment of walks, as would the replacement of green fields with 190 houses. 25 22 We acknowledge it is a balance between the adverse effects on the footpaths against the desirability of the development taking place, but question if the proposed measures would be sufficient to prevent a severe adverse effect on the use of the paths. 26 23 The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. 27 24 An extensive network of public footpaths is within the application site, and there are many in the near vicinity. The footpaths are well used and highly valued as an amenity. 28 25 Public footpaths this development would surely take away the enjoyment of what countryside walks we have left around. 29 27 The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. States the local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affect
1.14	South West of Draycott	Landscape	Sean Peace	Response-01347	ing the setting of a heritage asset) taking account of the available evidence and any necessary expertise. They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between the heritage asset?s conservation and any aspect of the proposal. This development will impact Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622. 49 53 NPPF 102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected 50 54 There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development of this size. 51 55 To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing. 52 56 To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools. 53 57 To conserve and enhance the Borough landscape character. This proposal does not promote the conservation or enhancement of the local landscape and is an inappropriate development.
1.14	South West of Draycott	Landscape	Simon Jenkins	Response-01287	Who put this together ??? OVIOUSLY TOTALLY RUINED !!!!!
1.14	South West of Draycott	Landscape	S M Beresford	Response-01851	The existing footpaths and access to the small wood bring great enjoyment to all who walk these trails, providing substantial benefits for physical and mental health. The development will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The proposal is far too big and overpowering for the village, impacting its heritage and cherished greenbelt landscape. Our house (owning it for 58 years) is next to the footpath on Lime Grove, and it is very well used by people /ramblers. dog walkers all wanting to enjoy the beautiful scenery and peaceful countryside.. This will soon be concrete and noise if Erewash council have their way.
1.14	South West of Draycott	Landscape	Susan Baker	Response-01316	We?re already facing the looming threat of pylons from Chesterfield to Willington. Now this? It?s too much. People here are already feeling overwhelmed, and the toll on mental health is real. This isn?t just about land?it?s about lives
1.14	South West of Draycott	Landscape	Susan Foster	Response-00824	A blot on the landscape for those who already live in that area, their hopes and dreams shattered of having a beautiful view from their present properties and the ultimate reduction of value. What a legacy for their family!
1.14	South West of Draycott	Landscape	Teresa Batchelor	Response-01240	Again, residents of Draycott want to see green areas where they can walk and enjoy nature. The proposed development will destroy a natural and beautiful area of the village which generations of families know well and have loved and enjoyed for decades. This lovely entrance to the village, if replaced by modern housing, will be a total eyesore.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	landscape	Teresa Shaw	Response-01309	1. A developments as big as this only negatively impacts the existing natural environment. The village and residents will suffer loss of trees or hedgerows ? which is the rural visual landscape the villages are known for. No design can compensate for green belt? it is irreplaceable. 2. The proposed maintenance of the public walking paths in Draycott is a pointless gesture you will ruin the landscape and walk for all. Who wants to walk around a building site or estate? Why ruin greenbelt and public walkways build in a more suitable location? 3. Visual amenity the development will change the pleasantness of views and surroundings, affecting the quality of life for all village residents. What will be done for residents whose lives, health and wellbeing that will be directly impacted? 4. The overall aesthetic quality and enjoyment of an area's landscape and surrounding will be affected for all walkers, visitors and residents. Why punish the enjoyment of all these beneficiaries? 5. The scale project is excessively large estate you are blocking all beautiful views into the village. The significant reducers enjoyment of the drive into Draycott for residence and all users of Derby Road for the wrong reasons. This development will drastically overwhelm the landscape and other?s views, it will be inescapably dominant and will be unpleasantly encroaching into Borrowash. Why are other people?s needs be considered over residents? 6. If this development is passed all properties with green belt views will see a reduction in value some huge & a key sort after attribute being needlessly taken away. The council should have to pay the difference between the value of the property before and after the development.
1.14	South West of Draycott	landscape	Tim Hawkins	Response-00661	How this development can said to enhance the landscape is certainly a mystery. The claim in the sustainability assessment that at present is a small industrial estate is false, it is a farmhouse with outbuildings, small cropped fields and grazing land. The current vista of sparse housing will be blighted on the entry to the village by a new estate. There are other sites around the village which could be used with almost no impact on the current landscape.
1.14	South West of Draycott	landscape	Tracey Morton	Response-00968	Area is rural and beautiful and should remain as greenbelt land
1.14	South West of Draycott	landscape	T Shields	Response-00570	Green spaces can be provided within the development site, and the site boundaries can be planted with native trees/hedgerow so that the visual impact of the site on the surrounding green belt/landscape beyond is adequately mitigated. The housing would also be opposite existing housing on the north side of the Derby Road and immediately adjacent existing housing on the south side, so it would not appear as being out of context with the village edge.
1.14	South West of Draycott	landscape	Viv Wright	Response-00035	On a personal level our immediate outlook changes from open fields to a housing estate. Our outside spaces , country walks on the doorstep will totally disappear. While accepting we need more housing, there are brownfield sites, old industrial sites laying abandoned which could be utilised. A lot more effort required on the councils part to look to alternative sites away from green belt.
1.14	South West of Draycott	landscape	Wilfred Boone	Response-01424	The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. Protecting public rights of way and access, footpaths would be affected by this development. Strongly object to this application the amenity and enjoyment of the use of the paths which cross the site will be severely compromised by the development. These paths provide an important means by which residents from the local area can get access to the countryside with substantial benefits for their physical and mental health.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	landscape	zak butcher	Response-01156	<p>The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would feel imprisoned by a housing estate. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. An extensive network of public footpaths is within the application site, and there are many in the near vicinity. The footpaths are well used and highly valued as an amenity. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The amenity value of the footpaths through the</p>
1.14	South West of Draycott	landscape	zak butcher	Response-01156	<p>application site would be entirely lost, and that of the surrounding footpaths greatly diminished due to the change from a beautiful rural landscape to a vast housing estate, with high fences/walls and a significant amount of houses adding to this negative impact. It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. NPPF 150. States that if it is necessary to restrict development in a village primarily because of the important contribution which the open character of the village makes to the openness of the Green Belt, the village should be included in the Green Belt. If, however, the character of the village needs to be protected for other reasons, other means should be used, such as conservation area or normal development management policies, and the village should be excluded from the Green Belt. The land south west of Draycott significantly contributes to the village and its character. This village is a part of this land and the Green Belt status allows villagers to access green spaces and enhances the village feel of the area which is rural. NPPF 207. States in determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets? importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation. Yet development on the land south west of Draycott will significantly impact and later the heritage of the Village including the destruction of unspoilt Green Belt land, the adjacent conservation site of the canal and other listed heritage sites that surround the identified area.</p>

1.14	South West of Draycott	Number of Houses	adrian leeming	Response-01249	NPPF 223. States that planning policies should set out criteria or requirements to ensure that permitted and proposed operations do not have unacceptable adverse impacts on the natural and historic environment or human health, taking into account the cumulative effects of multiple impacts from individual sites and/or a number of sites in a locality. The EBC are proposing a combined number of nearly 700 houses in the locality of Draycott, Borrowwash and Breaston which is significantly overbearing and unrealistic when considering infrastructure, road networks and amenity. The scale of the development is completely NOT in keeping with the character of the village. The proposed development should follow existing settlement patterns. New buildings and the volume of housing should harmonise with the neighbourhood. Retain local character and the retention of open spaces as is the character of the village. Views into and out of the village should be preserved. Clear lines of hills and spatial openness must be preserved. NPPF 61. States that to support the Government's objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay. The overall aim should be to meet an area's identified housing need, including with an appropriate mix of housing types for the local community. The land identified south west of Draycott is Green Belt and Grade 2 quality land. This development neither looks to protect the BMV nor does it look to bring forward the 109 existing Brownfield sites within the EBC that has full planning consent.
1.14	South West of Draycott	Number of Houses	Alison Bowley	Response-01174	The proposal by EBC To build 700 houses in Draycott, Borrowwash and Breaston will absolutely change the village's look and it will become combined with Borrowwash hugely impacting Draycott's rural identity.
1.14	South West of Draycott	Number of Houses	Alison Thirlwall	Response-01390	The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. NPPF 73. States that the authority should identify, through the development plan and brownfield registers, land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC there are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. If the issue with brownfield sites is cost, this issue should be raised with the government and additional funding sought.
1.14	South West of Draycott	Number of Houses	A Northeast	Response-01848	EBC is proposing nearly 700 houses in Draycott, Borrowwash, and Breaston, which is significantly overbearing and unrealistic considering infrastructure, road networks, and amenities. The proposal for 190 houses will change the villages look and feel, impacting its rural identity and risking morphing into a combined town with Breaston and Borrowwash.
1.14	South West of Draycott	Number of Houses	Anthony Bradley	Response-01442	Far too many houses, almost a quarter the size of the village the roads and services in the village cannot support this.
1.14	South West of Draycott	Number of Houses	Anthony Lawton-Reeve	Response-00971	NPPF 223. States that planning policies should set out criteria or requirements to ensure that permitted and proposed operations do not have unacceptable adverse impacts on the natural and historic environment or human health, taking into account the cumulative effects of multiple impacts from individual sites and/or a number of sites in a locality. 			Caroline and John Thirwell	Response-01001	The character of the village would also be changed irrevocably giving it a more urban feel
1.14	South West of Draycott	Number of Houses	Colin & Cynthia Green	Response-00922	190 I believe on this green belt land initially with ability to increase number of houses on safeguarded land marked out. This figure is not set in stone & just wonder how many many will be added in future. Madness.
1.14	South West of Draycott	Number of Houses	David and Mary Murden	Response-01898	In recent years Draycott has added to its housing stock in very inventive ways. Wisely, using brownfield sites, we have added many homes at the large Mill, known as Parrys, and also at the smaller Mill in Market Street. Cowslip Meadow is also a large estate of mixed social and private housing which has been added to the village. In all, I believe we now have around 1,500 homes. Adding another 190 (or is the rumour right that it will be more than that?), is a large addition, about 8% that will alter the nature of our rural village. This land is one of the few remaining fields that separate us from Borrowwash, we feel that before long the three communities of Borrowwash, Draycott and Breaston will be strung together into one unit. This is not what we want. It is difficult to know how our medical services will manage with this increase. Having no actual doctor's surgery or dentist in Draycott, we already struggle to find appointments in Breaston or Borrowwash, and this will clearly be a problem.
1.14	South West of Draycott	Number of Houses	David and Nicala O'Leary	Response-00822	Draycott is a historic rural village with a strong sense of community and a unique character. The scale and nature of this proposed development would fundamentally alter that character, turning our village into a suburban extension of nearby towns. This loss of identity and community cohesion is unacceptable.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Number of Houses	David Atchison	Response-01247	NPPF 61. States that to support the Government's objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay. States that the authority should identify, through the development plan and brownfield registers, land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC their are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.
			Dexter Codrington	Response-00986	190 + 60 houses is a 17% increase in homes in Draycott. This is too many and it is a development in the wrong place

1.14	South West of Draycott	Number of Houses	Diane Webster	Response-01177	<p>The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The potential harm caused by the application far outweighs the potential public benefit. The scale of the development is completely NOT in keeping with the character of the village. The proposed development should follow existing settlement patterns. New buildings and the volume of housing should harmonise with the neighbourhood. Retain local character and the retention of open spaces as is the character of the village. Views into and out of the village should be preserved. Clear lines of hills and spatial openness must be preserved. This out of scale development rides roughshod over the NPPF and other relating policies and guidelines with the barest of lip service paid, with the minimum consultation being undertaken with residents which is compounded by the lack of information available and transparency. The scale and massing of the development, which will begin with 190 houses but will significantly increase when the identified safeguarded land is developed in the future, is completely out of character with its surroundings and would be incredibly overbearing on the village and neighbourhood I strongly believe that there are better suited brownfield sites and genuine Grey Belt sites with land that is of poor quality. The land south west of Draycott is Grade 2 land (very good) and should be protected. NPPF 73. States that the authority should identify, through the development plan and brownfield registers, land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. 1.14	South West of Draycott	Number of Houses	Dr CJ Marvell	Response-01901	Character of the proposed development. The development is misconceived as it will change the character of the village. Draycott has a very strong community spirit but the new proposed development will not only not contribute to this but will detract from it, as it appears that the development will be constructed as a separate enclave with only one entry/exit onto Derby Road. It will in effect be a "dormitory" settlement, with very few of the new inhabitants taking part in village life because of the isolated nature of the proposed development. This sort of development is very much out of keeping with the existing mixed housing in Draycott.
1.14	South West of Draycott	Number of Houses	Dr Shelagh Brown	Response-01158	The proposal for 190 new houses will diminish the feel of being a small village with a strong sense of community cohesion and support.
1.14	South West of Draycott	Number of Houses	Dudley Medhurst	Response-01180	The village community will not be able to cope with another 400 people.
1.14	South West of Draycott	Number of Houses	Francis Ian Scott	Response-01535	NPPF 223. 1.14	South West of Draycott	Number of Houses	Gail Holdsworth	Response-00937	The proposed number of houses Will massively increase the population with all the negative outcomes that will create. There is a strong community feel in the village with volunteers maintaining its look and character and cleanliness. As it gets bigger that will be impossible to maintain.
1.14	South West of Draycott	Number of Houses	Gary Siddall	Response-01237	The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful countryside. And with reference to the use of the word "safeguarded", it has not gone unnoticed that an area of the proposed building site which has been marked as "safeguarded land" on the map seems to be intentionally misleading to imply that it will NOT be built on in the future, whereas the actual meaning was clearer in the original wording on the map before it was mysteriously altered recently, as it is really "safeguarded FOR future building" ! Naughty. The scale of the development is completely NOT in keeping with the character of the village. The proposed development should follow existing settlement patterns. New buildings and the volume of housing should harmonise with the neighbourhood. Retain local character and the retention of open spaces as is the character of the village. Views into and out of the village should be preserved. Clear lines of hills and spatial openness must be preserved.
1.14	South West of Draycott	Number of Houses	Gemma Woolnough	Response-01394	The 190 houses proposed seems far too many for a village with no Doctors's, Dentist or Secondary School. The residents would need to travel out to find any of these essentials services. The primary school is only small with limited nursery spaces so parents with young families would need to travel out of the village to find a nursery with spaces if they require it. The proposed land is very close to a bridge which likely means there would be limited access roads going in and out of the development, which does not seem feasible or viable with so many houses. The road is already busy at peak times, with a high level of fatalities for a village this size, the vast increase in houses the would likely increase the traffic level significantly which may result in further fatalities.
1.14	South West of Draycott	Number of Houses	George Foster	Response-01199	NPPF 223. States that planning policies should set out criteria or requirements to ensure that permitted and proposed operations do not have unacceptable adverse impacts on the natural and historic environment or human health, taking into account the cumulative effects of multiple impacts from individual sites and/or a number of sites in a locality. The EBC are proposing a combined number of nearly 700 houses in the locality of Draycott, Borrowwash and Breaston which is significantly overbearing and unrealistic when considering infrastructure, road networks and amenity. The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Number of Houses	George Foster	Response-01199	at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC there are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.
1.14	South West of Draycott	Number of Houses	Gill Trickitt	Response-01157	Any number of houses is unacceptable. If houses need to be built, build on greybelt areas or the edge of suburbs, towns and cities. The definition of village is rural area. If this is built on, the village no longer exists. There are other areas houses can be built that would meet the government requirements without building on greenbelt in a rural location putting a strain on all of these categories - services, road congestion etc
1.14	South West of Draycott	Number of Houses	Graham Wakeling	Response-01238	The proposed number of houses is ridiculous, 190... That would significantly impact local infrastructure, traffic, safety and peoples wellbeing. Destroying the local family feel to the village.
1.14	South West of Draycott	Number of Houses	Hannah McMaster	Response-01381	The number of houses is excessive for the space and location.
1.14	South West of Draycott	Number of Houses	Hannah Pritchard	Response-01399	A total of 190 dwellings represents a disproportionate expansion of Draycott village. During a population census done 21/03/2023, Draycott's population was noted as being 3,029 people. According to national statistics, the average occupation of dwellings in the UK is 2.4 people with the intended occupation for dwellings being 3.2; meaning that there would be a near certain population increase within the village of circa 456-608 people equating to a 15%-20% uplift. Bearing this in mind, modern property developments and affordable housing schemes design with the intention for the capability to house 5-7 people per dwelling, therefore there is also the possibility that off the back of this development, the local population could swell by 950 residents (over 30%)- an unsustainable and abrupt change for a small parish. This will strain every aspect of village life and service provision.
1.14	South West of Draycott	Number of Houses	James Hargreaves	Response-01315	Unrealistic Targets: The housing targets driving this proposal are flawed, placing undue pressure on local infrastructure and ignoring the village's capacity.
1.14	South West of Draycott	Number of Houses	James Whyman	Response-01551	1 NPPF 223. States that planning policies should set out criteria or requirements to ensure that permitted and proposed operations do not have unacceptable adverse impacts on the natural and historic environment or human health, taking into account the cumulative effects of multiple impacts from individual sites and/or a number of sites in a locality. 1.14	South West of Draycott	Number of Houses	James Whyman	Response-01551	to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC their are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. 9 The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.
1.14	South West of Draycott	Number of Houses	Jane Barker	Response-01178	I honestly don't think that the village can cope with another 190 houses considering the road networks, the drainage systems and health services are only just coping with the village residents now. It will also completely change the outlook of the village and the community atmosphere it now has.
1.14	South West of Draycott	Number of Houses	J Morgan	Response-01847	EBC is proposing nearly 700 houses in Draycott, Borrowwash, and Breaston, which is significantly overbearing and unrealistic considering infrastructure, road networks, and amenities. The proposal for 190 houses will change the villages look and feel, impacting its rural identity and risking morphing into a combined town with Breaston and Borrowwash.
1.14	South West of Draycott	Number of Houses	Jonathan Childs	Response-01117	NPPF 223. States that planning policies should set out criteria or requirements to ensure that permitted and proposed operations do not have unacceptable adverse impacts on the natural and historic environment or human health, taking into account the cumulative effects of multiple impacts from individual sites and/or a number of sites in a locality. The EBC are proposing a combined number of nearly 700 houses in the locality of Draycott, Borrowwash and Breaston which is significantly overbearing and unrealistic when considering infrastructure, road networks and amenity. The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The potential harm caused by the application far outweighs the potential public benefit. The scale of the development is completely NOT in keeping with the character of the village. The proposed development should follow existing settlement patterns. New buildings and the volume of housing should harmonise with the neighbourhood. Retain local character and the retention of open spaces as is the character of the village. Views into and out of the village should be preserved. Clear lines of hills and spatial openness must be preserved. This out of scale development rides roughshod over the NPPF and other relating policies and guidelines with the barest of lip service paid, with the minimum consultation being undertaken with residents which is compounded by the lack of information available and transparency. The scale and massing of the development, which will begin with 190 houses but will significantly increase when the identified 'safeguarded' land is developed in the future, is completely out of character with its surroundings and would be incredibly overbearing on the village and neighbourhood I strongly believe that there are better suited brownfield sites and genuine Grey Belt sites with land that is of poor quality. The land south west of Draycott is Grade 2 land (very good) and should be protected. NPPF 61. States that to support the Government's objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay. The overall aim should be to meet an area's identified housing need, including with an appropriate mix of housing types for the local community. The land identified south west of Draycott is Green Belt and Grade 2 quality land. This development neither looks to protect the BMV nor does it look to bring forward the 109 existing Brownfield sites within the EBC that has full planning consent. NPPF 73. States that the authority should identify, through the development plan and brownfield registers, land to accommodate
1.14	South West of Draycott	Number of Houses	Jonathan Childs	Response-01117	e at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC their are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless. Whilever there is an abundance of vacant property available for sale in the immediate locality ? some of which can clearly be identified as 'affordable' ? what possible justification can be presented for the pursuit of this particular development other than perhaps using the greed of any particular individual to convert a political objective into 'low hanging fruit'?

1.14	South West of Draycott	Number of Houses	Kelly Walker	Response-00911	the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.
1.14	South West of Draycott	Number of Houses	Laura Charier	Response-01218	The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The EBC are proposing a combined number of nearly 700 houses in the locality of Draycott, Borrowash and Breaston which is significantly overbearing and unrealistic when considering infrastructure, road networks and amenity.
1.14	South West of Draycott	Number of Houses	Laura Roffey	Response-01479	Whilst there is obviously a need for more housing, one main objection is to the number of houses - 190- that are planned. Squashing this many houses in on the green belt will have a detrimental effect on all the people in Draycott with regards to increased traffic, people, pollution and accessing healthcare. I understand that this number may be just below the number of houses needed to actually also provide supporting infrastructure eg. shops, doctors etc, but the space available would be much better suited to a small number of houses, so not to invade so much of the green belt.
1.14	South West of Draycott	Number of Houses	Lee	Response-00742	1. The need for some houses is not in question the location & number per area is very much so. This plan seems to be persecuting certain areas to take the brunt of the burden. Why was our village singled out? Why can this strategy not share expansion equally between suitable locations? A proposal of 50 ? 60 houses not on the gateway to the village would be welcomed. 2. Nuisance factor, we have had a new build passed at 101Draycott. We've have already had 6 months of trucks, builders, cars parked over the drive. Builders have cut all the trees down and opened the back of my garden for everyone to see. I've lost my privacy, security and even kids' safety, anybody could be watching. It's been an exhausting stress just for 4 houses. My view has been ruined. Now you plan a 190 plus houses which is devastating news. So, you will turn our lovely village & Derby road into a building site for the next 5 - 10 years. My kids will only remember Draycott as a messy building site. With such a massive inconvenience planned. Why would the council consider putting such misery & inconveniences on residents? When finding a plot away from Derby Road would cause way less disruption to all?
1.14	South West of Draycott	Number of Houses	Louise and Shane Foster	Response-01219	The proposal for the development of 190 houses will totally change the character of the village and we have concerns that it will become a town merging with developments in Breaston and Borrowash.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Number of Houses	Luke Hatch	Response-00160	Draycott already has a good supply of affordable and starter homes, thanks to recent developments like Cowslip Meadow and the Victoria Mill conversion - something I forgot to write in the types of houses. Why do we need 40% affordable houses in Draycott? There are plenty of places you can get for under £170k here. On numbers: 190 homes is a huge number for a village of just over 3,000 people. That's around a 15% population increase in one go. It's too much, too fast, and the village infrastructure isn't built for it. It's not just Draycott. There are also large housing developments happening in Breaston and Borrowwash, both nearby villages that share many of the same roads, schools, health services, and public transport links. Looking at Draycott in isolation ignores the cumulative impact all this extra housing will have on our local services. It feels like a building frenzy with no joined-up thinking around infrastructure.
			Lynne Dundas	Response-01198	This is an excessive amount of houses for a village
1.14	South West of Draycott	Number of Houses	Maggie Murphy	Response-00833	This too many houses in the wrong location
1.14	South West of Draycott	Number of Houses	Martin Fawcett	Response-01077	Housing development should be built on grey/brown sites of which there are plenty. Why even consider green belt and ruin a lovely backdrop for residents to enjoy
1.14	South West of Draycott	Number of Houses	Martin Kilcoyne	Response-01460	NPPF 223. 1.14	South West of Draycott	Number of Houses	Matt Tovey	Response-00929	Whilst I am happy to see small developments of c 10 houses. These large developments are a detriment to the local character and feels like profiteering from the large property developers.
1.14	South West of Draycott	Number of Houses	Melanie Wilson	Response-00974	The increase in the number of houses is excessive for the village.
1.14	South West of Draycott	Number of Houses	Michael Atkin	Response-01872	The other amenities doctors, dentist, local school are full to capacity and will not be able to cope with the extra from this development.
1.14	South West of Draycott	Number of Houses	Michael Thirtwall	Response-01196	190 new homes is far too many for the existing infrastructure, (roads, public transport and health care facilities for example) to cope with unless they are significantly expanded, which does not seem to be proposed.
1.14	South West of Draycott	Number of Houses	Miss Ella Meredith	Response-01850	EBC is proposing nearly 700 houses in Draycott, Borrowwash, and Breaston, which is significantly overbearing and unrealistic considering infrastructure, road networks, and amenities. The proposal for 190 houses will change the villages look and feel, impacting its rural identity and risking morphing into a combined town with Breaston and Borrowwash.
1.14	South West of Draycott	Number of Houses	Miss Natalie Walsh	Response-01846	EBC is proposing nearly 700 houses in Draycott, Borrowwash, and Breaston, which is significantly overbearing and unrealistic considering infrastructure, road networks, and amenities. The proposal for 190 houses will change the villages look and feel, impacting its rural identity and risking morphing into a combined town with Breaston and Borrowwash.
1.14	South West of Draycott	Number of Houses	Miss Paige Murray	Response-01842	EBC is proposing nearly 700 houses in Draycott, Borrowwash, and Breaston, which is significantly overbearing and unrealistic considering infrastructure, road networks, and amenities. The proposal for 190 houses will change the villages look and feel, impacting its rural identity and risking morphing into a combined town with Breaston and Borrowwash.
1.14	South West of Draycott	Number of Houses	Mr Graham Bingham and Mrs Kristine Bingham	Response-01302	Proposing to build nearly 700 houses in Draycott, Borrowwash and Breaston is significantly overbearing and unrealistic considering infrastructure, road networks, and amenities. The proposal to build 190 homes in Draycott will change the village's look and feel, impacting its rural identity and risk morphing into a combined town with Breaston and Borrowwash
1.14	South West of Draycott	Number of Houses	Mr R Sykes	Response-00412	Far too many, in fact none should be built.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Number of Houses	Mr Scott Walsh	Response-01844	EBC is proposing nearly 700 houses in Draycott, Borrowwash, and Breaston, which is significantly overbearing and unrealistic considering infrastructure, road networks, and amenities. The proposal for 190 houses will change the villages look and feel, impacting its rural identity and risking morphing into a combined town with Breaston and Borrowwash.
1.14	South West of Draycott	Number of Houses	Mrs Elizabeth White	Response-00060	When the area of Cowslip Meadow was developed the number of people went up by approximately 50 percent. I feel the village has already played its part with housing needs.
1.14	South West of Draycott	Number of Houses	Mrs Mary Walsh	Response-01845	EBC is proposing nearly 700 houses in Draycott, Borrowwash, and Breaston, which is significantly overbearing and unrealistic considering infrastructure, road networks, and amenities. The proposal for 190 houses will change the villages look and feel, impacting its rural identity and risking morphing into a combined town with Breaston and Borrowwash.
1.14	South West of Draycott	Number of Houses	Mr Tony Walsh	Response-01849	EBC is proposing nearly 700 houses in Draycott, Borrowwash, and Breaston, which is significantly overbearing and unrealistic considering infrastructure, road networks, and amenities. The proposal for 190 houses will change the villages look and feel, impacting its rural identity and risking morphing into a combined town with Breaston and Borrowwash.
1.14	South West of Draycott	Number of Houses	Nat	Response-00158	The houses will all be squashed together
1.14	South West of Draycott	Number of Houses	Nigel morton	Response-01351	Proposed number of houses is too many for our small village with limited infrastructure
1.14	South West of Draycott	Number of Houses	Nikki Riches	Response-00950	? NPPF 223. States that planning policies should set out criteria or requirements to ensure that permitted and proposed operations do not have unacceptable adverse impacts on the natural and historic environment or human health, taking into account the cumulative effects of multiple impacts from individual sites and/or a number of sites in a locality. The EBC are proposing a combined number of nearly 700 houses in the locality of Draycott, Borrowwash and Breaston which is significantly overbearing and unrealistic when considering infrastructure, road networks and amenity. ? The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. ? The potential harm caused by the application far outweighs the potential public benefit. ? The scale of the development is completely NOT in keeping with the character of the village. The proposed development should follow existing settlement patterns. New buildings and the volume of housing should harmonise with the neighbourhood. Retain local character and the retention of open spaces as is the character of the village. Views into and out of the village should be preserved. Clear lines of hills and spatial openness must be preserved. ? This out of scale development rides roughshod over the NPPF and other relating policies and guidelines with the barest of lip service paid, with the minimum consultation being undertaken with residents which is compounded by the lack of information available and transparency. ? The scale and massing of the development, which will begin with 190 houses but will significantly increase when the identified safeguarded land is developed in the future, is completely out of character with its surroundings and would be incredibly overbearing on the village and neighbourhood I strongly believe that there are better suited brownfield sites and genuine Grey Belt sites with land that is of poor quality. The land south west of Draycott is Grade 2 land (very good) and should be protected. ? NPPF 61. States that to support the Government's objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay. The overall aim should be to meet an area's identified housing need, including with an appropriate mix of housing types for the local community. The land identified south west of Draycott is Green Belt and Grade 2 quality land. This development neither looks to protect the BMV nor does it look to bring forward the 109 existing Brownfield sites within the EBC that has full planning consent. ? NPPF 73. States that the authority should identify, through the development plan and brownfield registers, land
1.14	South West of Draycott	Number of Houses	Nikki Riches	Response-00950	to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC there are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. ? The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.

1.14	South West of Draycott	Number of Houses	Simon Jenkins	Response-01287	NONE !!!!!
1.14	South West of Draycott	Number of Houses	S M Beresford	Response-01851	EBC is proposing nearly 700 houses in Draycott, Borrowash, and Breaston, which is significantly overbearing and unrealistic considering infrastructure, road networks, and amenities. The proposal for 190 houses will change the villages look and feel, impacting its rural identity and risking morphing into a combined town with Breaston and Borrowash.
1.14	South West of Draycott	Number of Houses	Susan Baker	Response-01316	The housing targets being used to justify this development don't reflect the reality on the ground. They're pushing too much, too fast, and our village is paying the price
1.14	South West of Draycott	Number of Houses	Susan Foster	Response-00824	Smaller enclaves would cause less disruption and stress for current villagers. Too many houses, crammed into the area, less houses in a brown field site would be a better option.
1.14	South West of Draycott	Number of Houses	Teresa Batchelor	Response-01240	I believe the number of houses is far more than the village can cope with, both from the perspective of health care support, schooling, transport and impact on the environment because of the loss of green space, extra vehicles and emissions they will produce. Plus the intrusion on existing residents by the increased traffic.
1.14	South West of Draycott	Number of Houses	Teresa Shaw	Response-01309	1. The need for some houses is not in question the location & number per area is very much so. This plan seems to be persecuting certain areas to take the brunt of the burden. Why was our village singled out? Why can this strategy not share expansion equally between suitable locations? A proposal of 50 ? 60 houses in Draycott not on the gateway to the village would be welcomed. 2. Nuisance factor. Now you plan a 190 in Draycott & 400 in Borrowash which is a huge expansion. So, you will turn our lovely village & Derby road into a building site for the next 5 - 10 years. Why would the council consider putting such misery & inconveniences on residents? When finding a plot away from Derby Road Draycott would cause way less disruption?
1.14	South West of Draycott	Number of Houses	Tim Hawkins	Response-00661	190 houses will, by expanding onto the duplicitously named safeguarded land, become 260. Too many for the current population and services as they are. However, as I have not been permitted to see EBC's master plan for the development it's difficult to say.
1.14	South West of Draycott	Number of Houses	Tracey Morton	Response-00968	Number of houses are too many Draycott as a small rural village doesn't have the infrastructure to cope with this increase 2 This will not be houses for that will be affordable for Draycott residents
1.14	South West of Draycott	Number of Houses	T Shields	Response-00570	8.3 Ha for 190 houses is a LOW density of approximately 23 houses per Ha. This should be increased to make more efficient use of the land and provide more homes.
1.14	South West of Draycott	Number of Houses	Viv Wright	Response-00035	It appears the numbers are not capped, once started a great fear of more and more houses until no more land.
1.14	South West of Draycott	Number of Houses	Wilfred Boone	Response-01424	The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.
1.14	South West of Draycott	Number of Houses	William Batchelor	Response-01210	Draycott doesn't need this amount of additional houses. Infrastructure is not suited and the village will cease to exist as a community as this will create a pocket of residents remote to the village itself

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	adrian leeming	Response-01249	<p>As simple matter of principal please recognise that people move to rural village locations in order to escape the city and towns, it's not possible to develop hundreds of new homes in these villages and retain or extend the rural escape, instead it inevitably removes this benefit. The British village concept is one worth protecting for mental health and cultural benefit. Rather than destroy village life new housing developments should be adjacent to existing towns, like Long Eaton or Ilkeston, to strengthen their position and would have less negative impact than adjacent to a smaller village. It is also a Government ambition to reduce unnecessary/extra vehicle journeys. By building substantial numbers of houses miles away from commercial centres and supermarkets this will encourage more journeys. Draycott does have a bus service but the reality is that most of the 190 new families will jump in the car rather than catch a bus because that's the society we now live in. I strongly object to the Sustainability Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local residents resulted in a score of -6 placing this land ran 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 &amp; 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should received a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed. I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do</p>
1.14	South West of Draycott	Other	adrian leeming	Response-01249	<p>not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter half term and the consultation window included 4 Bank Holidays. This when much of the information required was not available and FOI requests were submitted and took 20 working days for a response to be received, when the government agencies contacted themselves did not work the said Bank Holidays. This has meant important information has not been received by residents when developing objections. This action by the EBC was irresponsible, some may say planned, and not acting in the interests of the local communities this plan impacts.</p>
1.14	South West of Draycott	Other	Alison Bowley	Response-01174	<p>Draycott has little in the way of facilities no large supermarket, just a few independent coffee shops, hairdressers, a newsagents and small corner shops. I attended the meeting held at Long Eaton Town Hall when the proposals first came to light in March. It was obvious that EBC had already pre-determined to limit the public consultation period to an absolute minimum. Our local Parish council, never mind the residents, were completely unaware of the magnitude of the proposed changes. I found out about that meeting through social media, but as you know, many people choose not to use, or do not have access to social media, so it appeared that EBC did not want to engage with the public, i.e. the people who had voted them in. The meeting itself was shameful, with party politics being played out in full. It has been a very rushed consultation process, especially considering two Bank Holidays have occurred during the 6 week period. I feel the whole so-called consultation process has been a box-ticking exercise by EBC. The proposals will undoubtedly get the green light despite how the majority of residents (VOTERS) feel. Many people have already witnessed workmen measuring up/surveying the proposed land and I know of a company who have already been approached regarding the site. The Government are going to railroad these proposals through no matter what and I strongly suspect I have wasted the last few weeks trying to find out facts.</p>

1.14	South West of Draycott	Other	Alison Thirlwall	Response-01390	Noise and Vibration consultation should be undertaken to consider impacts during construction on nearby noise sensitive properties and ongoing management of a solar farm and the impact of noise and disturbance. An environment noise assessment needs to be carried out, particularly for the residents directly opposite the site entrance; but also the whole route that the construction traffic will take. This passes through Draycott, Borrow ash and Beaston villages. Passing busy junctions, Doctor's surgeries, public car parks, Primary schools, local cricket clubs as well as numerous resident's homes.
1.14	South West of Draycott	Other	Andrew and Jane Gilmour	Response-01329	I strongly object to the consultation process which as best can be described as limited and not fully transparent when engaging with the local community. EBC has only given local residents 6 weeks to submit objections to what is an incredibly important change to the original Local Plan and Core Strategy. This is simply not enough time for residents to review and analyse the magnitude of information and formulate objections, this when significant information is also missing which includes the master plan for the land south west of Draycott. The manner in which EBC has undertaken the 6 week consultation is not inclusive and does not allow non internet users to be aware of the consultation and changes to the Core Strategy. The average age within Draycott and Church Wilne Parish is 58 and there is a large proportion of the community that was not aware of this important change. We fully object to the whole process and in particular the 6 week consultation period. I do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenities. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being approx. 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land.
1.14	South West of Draycott	Other	A Northeast	Response-01848	We strongly object to the consultation process, which has been limited and not fully transparent. Erewash Borough Council (EBC) has only given local residents the minimum six-week period to submit objections to this significant change to the Local Plan and Core Strategy. This timeframe is insufficient for residents to review and understand the magnitude of the change and formulate objections, especially given the missing details such as the master plan for the land south west of Draycott. These plans do not align with the National Planning Policy Framework (NPPF) 2024 and EBC Local Plan 2022. Furthermore, adequate consultation has not been undertaken with the Draycott Local Parish Council or residents regarding the impact of these plans on the local community, village, and amenity. Noise from construction and operational phases of the development has not been adequately addressed. An environmental noise assessment needs to be carried out, particularly for residents living adjacent and opposite the site entrance.
1.14	South West of Draycott	Other	Anthony Lawton-Reeve	Response-00971	As residents living next to the site of the proposed change in Green Belt status and future housing development, we are of the view that these proposals will have a serious negative impact on the village, visual openness, spatial openness, the local community and our standard of living. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.

1.14	South West of Draycott	Other	Anthony Walsh	Response-00992	Loss of open space and green spaces ? this is vital for our community?s wellbeing Primary School affected with noise and traffic The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would not benefit from the current sprawling Greenbelt views as it will be gone forever. It will have a detrimental effect on the wellbeing of people who enjoy the countryside, not to mention wildlife habitats, which are already under extreme pressure. The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the small villages surrounding it of Borrowash and Breaston. It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of development on this green belt. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant lengths of footpaths that will be affected by the development of 190 houses on land south west of Draycott. Promoting healthy and safe communities the effect on our healthy lifestyles, especially our local health and well-being needs ? taking away our green space and facility would be detrimental to our community and our day to day needs would fall short by the loss of our valued facilities Open space and recreation. NPPF102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development Only the bare minimum consultation has been undertaken
1.14	South West of Draycott	Other	Anthony Walsh	Response-00992	by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter. This action by the EBC was irresponsible and not acting in the interests of the local communities this plan impacts. To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing. To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools.
1.14	South West of Draycott	Other	Avice Boyle	Response-01427	Primary School affected with noise and traffic The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. 1.14	South West of Draycott	Other	Barbara Crane	Response-00268	I have no doubt that this will be pushed through to meet the government?s target. The public?s objections made in the consultation will be treated as nimbyism. Shame on you as a council for not listening to your community. It will rebound on you.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	Bev Marvell	Response-01892	The public footpath across this proposed development is old, it is marked on the oldest maps I can find (Bennetts 1841) and was a route to the nearby important 'Ambaston Ford' over the Derwent. This footpath is now part of the 'Nomad Way - Circling Derby'. This footpath should not be re-routed or downgraded. I am unhappy with this consultation process. I attended the Council meeting at Long Eaton Town Hall 27th March, when an extension from 6 to 12 weeks consultation was denied. 6 weeks maybe appropriate for a new garage application, but not for a large development on Green Belt for 190 houses (also considering the Easter break). Some online sources of information do not appear to work. Such as the 'Mapping Portal' and other pages like: <a href="http://erewash.gov.uk/images/green_belt_review.pdf">erewash.gov.uk/images/green_belt_review.pdf</a> January 2025 'Page not found'. Also, I cannot find the Council's biodiversity report. I would have liked to consult these.
1.14	South West of Draycott	Other	Bradley Peace	Response-01348	Loss of open space and green spaces ? this is vital for our community?s wellbeing 5 2 Primary School affected with noise and traffic 6 3 The footpaths that cross the land have amazing views and are used regularly by residents and visitors. 1.14	South West of Draycott	Other	Caroline and John Thirwell	Response-01001	We are always being told to walk for our health. There are many pleasant walks in the proposed development area which would be taken away by the huge influx of 190 houses (and maybe more). These plans do not seem to follow the NPPF 2024 and Erewash Borough Council's Local Plan 2022 and seem rushed with little thought to the residents of our village and the changes it will bring.
1.14	South West of Draycott	Other	Charlotte Brennan	Response-00931	Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate.
1.14	South West of Draycott	Other	Colin & Cynthia Green	Response-00922	We strongly disagree with this planning application, using Green Belt when other areas down as Brownfield areas could & should be considered. Concerns over proposed Pylons coming through this area, flooding/drainage unable to cope. Wildlife & trees/hedgerows removed probably or severely affected, species of bats recorded may be wiped out. Infrastructure unsuitable & unable to cope, school places not available, health facilities eg GP appointments or Surgery not able to cope now never mind extra influx of adults & children say 400+ for 190 new homes. Worries over extra vehicles on unsuitable road 30mph should be but speeding due to nature of road set up, railway bridge & incline goes from 30-40 mph where a motorcyclist was killed a couple of years ago towards Derby. We suggest if new homes to be build, EBC consider brownfield areas never Greenbelt .

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	David and Mary Murden	Response-01898	Lastly we feel we must comment on the unreasonably short amount of time that has been allowed for consultation. None of the local councillors have shown their face for public discussion or to answer questions. We always thought that the local Council was there to protect the rights of the local people and its land, so we hope you will reconsider this decision,
1.14	South West of Draycott	Other	David Atchison	Response-01247	I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. There are around 2000 vacant social housing in Derbyshire County. Why are these houses not being prioritised ahead of this land being used for development.
1.14	South West of Draycott	Other	David Boyle	Response-01426	Require the submission of an environmental noise assessment, prior to development works commencing, to rate and assess operational sound from all fixed installations comprising mechanical and electrical plant and equipment, with a scheme of mitigation measures where necessary; that all site preparation and construction to comply with specified working hours and limits to noise and dust emissions, waste disposal and lighting; and the submission of proposals, including the design and operating times, of any permanent external lighting on site. The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. This will include Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 and Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963. An environment noise assessment needs to be carried out, particularly for the residents directly opposite the site entrance; but also the whole route that the construction traffic will take. This passes through Draycott, Borrow ash and Beaston villages. Passing busy junctions, Doctor?s surgeries, public car parks, Primary schools, local cricket clubs as well as numerous resident?s homes.
1.14	South West of Draycott	Other	David G York	Response-01843	We strongly object to the consultation process, which has been limited and not fully transparent. Erewash Borough Council (EBC) has only given local residents the minimum six-week period to submit objections to this significant change to the Local Plan and Core Strategy. This timeframe is insufficient for residents to review and understand the magnitude of the change and formulate objections, especially given the missing details such as the master plan for the land south west of Draycott. These plans do not align with the National Planning Policy Framework (NPPF) 2024 and EBC Local Plan 2022. Furthermore, adequate consultation has not been undertaken with the Draycott Local Parish Council or residents regarding the impact of these plans on the local community, village, and amenity. Noise from construction and operational phases of the development has not been adequately addressed. An environmental noise assessment needs to be carried out, particularly for residents living adjacent and opposite the site entrance.
1.14	South West of Draycott	Other	David Thompson	Response-00654	Crime Rates - Draycott has seen increased crime in the form of break ins, theft of motorcycles / vehicles, van break-ins, anti-social behavior etc. Additional housing is going to attract more thieves into the area and if social housing is required as part of any development, this could also create unwanted crime. I experienced this personally whilst being a resident of Cowslip Meadow when it was developed!
1.14	South West of Draycott	Other	David Thurgood	Response-01195	Loss of caravan and motorhome storage facilities - It is likely that future associated developments could see the closure of the existing local secure storage compound which will mean that alternative facilities further afield (outside Draycott) will have to be found. The additional travelling will have an impact with additional fuel costs, journey times and less convenience than the current situation. Similarly closure or relocation of the current caravan and motorhome service / repair business will reduce the business diversity and capability within Draycott as well as negatively impacting current business users. The loss of safe and convenient horse stabling and pasturing will negatively effect local users.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	David Webster	Response-01113	There are around 2000 vacant social housing in Derbyshire County. Why are these houses not being prioritised ahead of this land being used for development. I strongly object to the Sustainability Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local residents resulted in a score of -6 placing this land ran 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 & 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should received a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed. I would like the EBC to confirm that if this does go ahead that they would pay for any damages that accrue due any flooding to my house and pay any house insurance increase that is if i can get home insurance as residents on Lime Grove are not able to obtain flood damage cover due to flooding Who ever gave the go ahead with this proposal should be remove from there job
1.14	South West of Draycott	Other	Dexter Codrington	Response-00986	I strongly object to the whole application for the proposed development on Green Belt land south west of Draycott. This location is inappropriate for development due to its impact on the village, its residents, the environment, and local wildlife. Consultation Process I strongly object to the consultation process, which has been limited and not fully transparent. Erewash Borough Council (EBC) has only given local residents the minimum six-week period to submit objections to this significant change to the Local Plan and Core Strategy. This timeframe is insufficient for residents to review and understand the magnitude of the change and formulate objections, especially given the missing details such as the master plan for the land south west of Draycott. These plans do not align with the National Planning Policy Framework (NPPF) 2024 and EBC's Local Plan 2022. Furthermore, adequate consultation has not been undertaken with the Draycott Local Parish Council or residents regarding the impact of these plans on the local community, village, and amenity
1.14	South West of Draycott	Other	Diane Webster	Response-01177	Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter half term and the consultation window included 4 Bank Holidays. This when much of the information required was not available and FOI requests were submitted and took 20 working days for a response to be received, when the government agencies contacted themselves did not work the said Bank Holidays. This has meant important information has not been received by residents when developing objections. This action by the EBC was irresponsible, some may say planned, and not acting in the interests of the local communities this plan impacts. I strongly object to the consultation process which as best can be described as limited and not fully transparent when engaging with the local community. EBC has only given local residents mere 6 weeks to submit objections to what is an incredibly important change to the original Local Plan and Core Strategy. This is simply not enough time for residents to review and analysis the share magnitude of information and formulate objections, this when significant information is also missing which includes the master plan for the land south west of Draycott. The manner in which EBC has undertaken the 6 week consultation is not inclusive and does not allow non internet users to be aware of the consultation and changes to the Core Strategy. The average age within Draycott and Church Wile Parish is 58 and there is a large proportion of the community that was not aware of this important change. We fully object to the whole process and in particular the 6 week consultation period. I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. This when much of the information required was not available and FOI requests were submitted and took 20 working days for a response to be received, when the government agencies contacted themselves did not work the said Bank Holidays. This has meant important information has not been received by residents when developing objections. This action by the EBC was irresponsible, some may say planned, and not acting in the interests of the local communities this plan impacts. I strongly object to the consultation process which as best can be described as limited and not fully transparent when engaging with the local community. EBC has only given local residents mere 6 weeks to submit objections to what is an incredibly important change to the original Local Plan and Core Strategy. This is simply not enough time for residents to review and analysis the share magnitude of information and formulate objections, this when significant information is also missing which includes the master plan for the land south west of Draycott. I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. As residents living next to the site of the proposed change in Green Belt status and future housing development, we are of the view that these proposals will have a serious negative impact on the village, visual openness, spatial openness, the local community and our standard of living. I strongly object to the Sustainability Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local residents resulted in a score of -6 placing this land ran 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions</p>

1.14	South West of Draycott	Other	Donna Butcher	Response-01155	Incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 & 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should received a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed.
1.14	South West of Draycott	Other	Donna Peace	Response-01344	1 Loss of open space and green spaces ? this is vital for our community?s wellbeing 5 2 Primary School affected with noise and traffic 6 3 The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would not benefit from the current sprawling Greenbelt views as it will be gone forever. 7 4 It will have a detrimental effect on the wellbeing of people who enjoy the countryside, not to mention wildlife habitats, which are already under extreme pressure. 8 6 The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. 9 7 This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the small villages surrounding it of Borrowash and Breaston. 10 8 It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. 11 9 Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. 12 10 The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of development on this green belt. 13 11 Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. 14 12 NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant lengths of footpaths that will be affected by the development of 190 houses on land south west of Draycott. 15 13 Promoting healthy and safe communities the effect on our healthy lifestyles, especially our local health and well-being needs ? taking away our green space and facility would be detrimental to our community and our day to day needs would fall short by the loss of our valued facilities 16 14 Open space and recreation. NPPF102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected 17 15 There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housin

Promoting healthy and safe communities the effect on our healthy lifestyles, especially our local health and well-being needs ? taking away our green space and facility would be detrimental to our community and our day to day needs would fall short by the loss of our valued facilities Open space and recreation. NPPF102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter. This action by the EBC was irresponsible and not acting in the interests of the local communities this plan impacts. To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing. To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools.
1.14	South West of Draycott	Other	Gail Holdsworth	Response-00937	. This building proposal will totally change the look and community feel of Draycott. It will no longer be a village in a rural setting. It will create major negative changes to the area and I cannot see anything positive about the proposals. It is too many houses to add to such a small village. Once Draycott is destroyed by overdevelopment on protected land it will be lost forever. Plus there is the whole, probably , years long building work of noise and disruption and the possibility that the one bus we have will have to be rerouted.
1.14	South West of Draycott	Other	Gary Siddall	Response-01237	For reasons I do not profess to understand, there are clearly brown field and grey belt sites which have apparently been skipped straight over in order to somehow attempt to justify building on wholly unsuitable beautiful Green Belt land. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation (despite claims to the contrary).. This consultation process has been "pushed through" with only the bare minimum time afforded to the residents of Draycott to absorb, investigate and comment. EBC have not exactly been "understanding" when considering residents feelings and concerns in this matter, considering that many residents who maybe don't use Social Media, etc, were unaware of all this - yet EBC still refused to allow an extended 12 weeks consultation time. Also, some of the comments about residents could be taken as disrespectful. EBC have also not been "helpful", in what could be seen as "dragging their feet" with things like taking 20 days to return FOI requests, etc. It is clear where their interests lie and they are certainly not impartial.... I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. Just during the construction process ("if" it should go ahead - which by now should be obvious that it really shouldn't), the sheer amount of construction traffic that will be in and around the area will be HUGE ! And not just the proposed construction in Draycott, but in the surrounding villages as well: All of the construction vehicles, delivery trucks and other site vehicles will already be giving the roads more of a pounding than they have ever had, potentially spreading mud and dirt on them too (clogging drains...?), for some distance - not to mention all the potentially damaging vibration they will bring to all the roads in the area. Which leads me to construction pollution - the dust, fumes, smoke, etc., and especially the noise which the closer residents (and wildlife) will be forced to endure for years while all this goes on (if it ever gets finished...?!). Not acceptable. It is known that there are around 2,000 vacant Social Housing properties in Derbyshire county - why are these not being prioritised over new building ???

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	George Foster	Response-01199	I strongly object to the consultation process which as best can be described as limited and not fully transparent when engaging with the local community. EBC has only given local residents mere 6 weeks to submit objections to what is an incredibly important change to the original Local Plan and Core Strategy. This is simply not enough time for residents to review and analysis the share magnitude of information and formulate objections, this when significant information is also missing which includes the master plan for the land south west of Draycott. Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. As residents living next to the site of the proposed change in Green Belt status and future housing development, we are of the view that these proposals will have a
1.14	South West of Draycott	Other	George Foster	Response-01199	serious negative impact on the village, visual openness, spatial openness, the local community and our standard of living. I strongly object to the Sustainability Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local residents resulted in a score of -6 placing this land ran 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 & 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should received a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.
1.14	South West of Draycott	Other	Gill Trickitt	Response-01157	Access to the fields, the bridge as you enter the village, the danger to add possibly 400 cars coming in and out. The site being a location for another fatal accident a few years ago when a motorcyclist died and the bridge causing a lack of visibility as people already speed in and through the village.

1.14	South West of Draycott	Other	Gordon Dahill	Response-00690	CONNCIL COMMUNICATION WITH PUBLIC When we finaly receive information it is LATE often MISLEADING and INACCURATE. Some replys to public queries ARROGENT CODESCENDING and SMOKE and MIRRORS.This sort of treatment and attitude from the council is not acceptable and would hope measures will be taken seriously in the future. NPPF GOLDEN RULES Two of these rules appear to be relevent to the situation. 1) .To prevent unrestricted urban sprawl. 2).To assist in safeguarding countryside from encroachment. Draycott is a small village .It has already had two large industrial buildings converted to housing .Also several other areas of small estates of housing within the Draycott village boundaries. This change of GREEN to GREY was the last green area within the village boundary 3)This developed area will be,apart from field between Draycott and Borrowash will complete the joining of Nottingham and Derby.
			Graham Wakeling	Response-01238	Simply this proposed development cannot be allowed to go ahead. Regards, a local resident of 16 years.
1.14	South West of Draycott	Other	James Hargreaves	Response-01315	I moved away from a city to live in a village- this development will impact upon my quality of life and mental and physical well being
1.14	South West of Draycott	Other	James Whyman	Response-01551	1 Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter half term and the consultation window included 4 Bank Holidays. This when much of the information required was not available and FOI requests were submitted and took 20 working days for a response to be received, when the government agencies contacted themselves did not work the said Bank Holidays. This has meant important information has not been received by residents when developing objections. This action by the EBC was irresponsible, some may say planned, and not acting in the interests of the local communities this plan impacts. 2 I strongly object to the consultation process which as best can be described as limited and not fully transparent when engaging with the local community. EBC has only given local residents mere 6 weeks to submit objections to what is an incredibly important change to the original Local Plan and Core Strategy. This is simply not enough time for residents to review and analysis the share magnitude of information and formulate objections, this when significant information is also missing which includes the master plan for the land south west of Draycott. 3 The manner in which EBC has undertaken the 6 week consultation is not inclusive and does not allow non internet users to be aware of the consultation and changes to the Core Strategy. The average age within Draycott and Church Wile Parish is 58 and there is a large proportion of the community that was not aware of this important change. We fully object to the whole process and in particular the 6 week consultation period. 4 I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. 5 I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Noise and Vibration consultation to be undertaken to consider impacts during construction on nearby noise sensitive properties and ongoing management of a solar farm and the impact of noise and disturbance. Loss of open space and green spaces ? this is vital for our community?s wellbeing Primary School affected with noise and traffic The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would not benefit from the current sprawling Greenbelt views as it will be gone forever. It will have a detrimental effect on the wellbeing of people who enjoy the countryside, not to mention wildlife habitats, which are already under extreme pressure. The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the small villages surrounding it of Borrowash and Breaston. It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem i</p>

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	Steve May	Response-01518	<p>nsignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of development on this green belt. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant lengths of footpaths that will be affected by the development of 190 houses on land south west of Draycott. Promoting healthy and safe communities the effect on our healthy lifestyles, especially our local health and well-being needs ? taking away our green space and facility would be detrimental to our community and our day to day needs would fall short by the loss of our valued facilities Open space and recreation. NPPF102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter. This action by the EBC was irresponsible and not acting in the interests of the local communities this plan impacts. To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing. To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools.</p>
1.14	South West of Draycott	Other	Kelly Walker	Response-00911	<p>Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter half term and the consultation window included 4 Bank Holidays. This when much of the information required was not available and FOI requests were submitted and took 20 working days for a response to be received, when the government agencies contacted themselves did not work the said Bank Holidays. This has meant important information has not been received by residents when developing objections. This action by the EBC was irresponsible, some may say planned, and not acting in the interests of the local communities this plan impacts. I strongly object to the consultation process which as best can be described as limited and not fully transparent when engaging with the local community. EBC has only given local residents mere 6 weeks to submit objections to what is an incredibly important change to the original Local Plan and Core Strategy. This is simply not enough time for residents to review and analysis the share magnitude of information and formulate objections, this when significant information is also missing which includes the master plan for the land south west of Draycott. The manner in which EBC has undertaken the 6 week consultation is not inclusive and does not allow non internet users to be aware of the consultation and changes to the Core Strategy. The average age within Draycott and Church Wilne Parish is 58 and there is a large proportion of the community that was not aware of this important change. We fully object to the whole process and in particular the 6 week consultation period. I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. I strongly object to the Sustainability Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local residents resulted in a score of -6 placing t</p>

1.14	South West of Draycott	Other	Elly Walker	Response-00911	his land ran 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 & 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should received a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.
1.14	South West of Draycott	Other	Kerry Naylor	Response-00993	Its not about the loss of view from Lime Grove. Its about the wildlife, the loss of beautiful trees, the change in noise level, the change to the air quality. There has to be fields that do not affect and impact residence and wildlife as much as this development would.
1.14	South West of Draycott	Other	Laura Charier	Response-01218	I strongly object I do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. There are around 2000 vacant social housing in Derbyshire County. Why are these houses not being prioritised ahead of this land being used for development.
1.14	South West of Draycott	Other	Laura Roffey	Response-01479	Considering all the points, I realise we need more housing, but personally I feel a much smaller number of houses should be considered as it would reduce the negatives on everyone of the points. Moving houses away from the back of Lime Grove where flooding occurs, leaving space for the water to run off would be a more considered plan overall.
1.14	South West of Draycott	Other	Lee	Response-00742	1. Will additional 10 ? 15% funds be allocated & re-distributed for Erewash Policing & Fire Services to cope with increased expansion of communities. 2. Diminution in Value: If the development is passed all properties with green belt views will be reduce in property value, The council should have to pay the difference between the value of the property before and after the development. This is the only fair compensation for this rushed development plan. Then we can sell without loss and move out of the village.
1.14	South West of Draycott	Other	Linda Jane Jenkins	Response-01007	You will probably not care about this. I am losing my sight (by the way I cannot see what I am typing because your system does not allow me to make the type face bigger. I thought you were all into inclusivity.) We bought this house 2 years ago , because it was on the bus route, because the doctor is good and because it is near my family. What sold it to us was the beautiful space, light and view. Anyone who buys a house near green belt pays a premium. I have been told you don't care about this. Well you should. One day it might be you in our shoes. There are over 100 brown sites and probably more grey sites. Is it being lazy that makes picking on a green belt, or is it spiteful politics?
1.14	South West of Draycott	Other	Louise and Shane Foster	Response-01219	The consultation process has given the residents and Draycott Parish Council very limited time to absorb all the details and the changes it will bring to the Local Plan and Core Strategy.
1.14	South West of Draycott	Other	Louise Burnell	Response-00262	Loss of village character. Does not represent sustainable development. Increased population will place significant strain on green spaces and reduce quality of life.
1.14	South West of Draycott	Other	Luke Hatch	Response-00160	I appreciate the proactive reaching out to seek my comment this time around but this does seem to have been done deliberately under the radar and avoiding public consultation, for obvious reasons. I do understand the need for more housing. Forcing 190 new green belt houses on a village with a population of 3000 with only tickbox consultation is not the way to get people on side about it though.
1.14	South West of Draycott	Other	Maggie Murphy	Response-00833	Public Consultation 1 The Public consultation period runs for 6 weeks. This is the minimum time frame for a Public Consultation and limits the detail that individuals and concerned groups can bring together to provide detailed and evidential responses 2 The Public consultation does not appear to be inclusive as the main mechanism for responding to the change in the New Allocations is via the Erewash Borough Council Website. This does not provide for the Erewash residents who do not have easy access to the Portal. The ability to respond via a paper based method would support a full and inclusive set of views and concerns. A good example of a recent Public consultation that was inclusive for all residents was the National Grid Chesterfield to Willington Grid Upgrade . This provided Customer engagement sessions and written documentation supported by a Web Site.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	Martin Kilcoyne	Response-01460	Noise & Disturbance Noise from the construction (including vehicle movements) and operational phases of the proposed development have not been adequately addressed. An environment noise assessment needs to be carried out, particularly for the residents directly opposite the site entrance; but also the whole route that the construction traffic will take. This passes through Draycott, Borrow ash and Beaston villages. Passing busy junctions, Doctor?s surgeries, public car parks, Primary schools, local cricket clubs as well as numerous resident?s homes. Require the submission of an environmental noise assessment, prior to development works commencing, to rate and assess operational sound from all fixed installations comprising mechanical and electrical plant and equipment, with a scheme of mitigation measures where necessary; that all site preparation and construction to comply with specified working hours and limits to noise and dust emissions, waste disposal and lighting; and the submission of proposals, including the design and operating times, of any permanent external lighting on site. Access and egress to the proposed housing development on Derby Road raises several issues relating to highway and pedestrian safety, ease of access and disruption from increased traffic. The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. This will include Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 and Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963. Noise and Vibration consultation to be undertaken to consider impacts during construction on nearby noise sensitive properties and ongoing management of a solar farm and the impact of noise and disturbance. Health & Wellbeing Loss of open space and green spaces ? this is vital for our community?s wellbeing Primary School affected with noise and traffic The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would not benefit from the current sprawling Greenbelt views as it will be gone forever. It will have a detrimental effect on the wellbeing of people who enjoy the countryside, not to mention wildlife habitats, which are already under extreme pressure. The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the small villages surrounding it of Borrowash and Breaston. It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and ot
1.14	South West of Draycott	Other	Martin Kilcoyne	Response-01460	her areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of development on this green belt. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant lengths of footpaths that will be affected by the development of 190 houses on land south west of Draycott. Access and egress to the proposed housing development on Derby Road raises several issues relating to highway and pedestrian safety, ease of access and disruption from increased traffic.</p>
1.14	South West of Draycott	Other	Matthew Walker	Response-01313	<p>Firstly, I would like to set out my views clearly before I submit my objection to the proposed plans for the land South West of Draycott. I understand that new housing is required and new houses must be built. However, these developments MUST be built in the correct areas and Brownfield, 'true' Grey Belt, derelict land/sites and existing empty social housing MUST be utilised and prioritised first ahead of building on Green Belt and Green Field land. The Land South West of Draycott is Green Field and Grade 2 quality land and should not be develop on until the EBC can clearly demonstrate the aforementioned options have been fully/and properly been appraised and exhausted first. Surely, the EBC must also demonstrate why the existing stock of 109 Brownfield sites within EBC are not used ahead of the Greenfield land south west of Draycott. Whilst the Government and Trevor Phillips publicly stated that 'newts cannot be more protected than people needs' when referring to the changes to the NPPF when allowing Green Belt to be developed, surely this methodology must work in the opposite direction where the prioritisation of Brownfield and the viability of these sites cannot be overlooked in favour of Green Belt or Green Field because the short term financial benefit is a cheaper than using Brownfield sites. This will lead to reduced Green Belt whilst carrying a growing Brownfield stock which is reckless, irresponsible and surely cannot be right. Therefore, I strongly object to the consultation process which at best can be described as limited and not fully transparent when engaging with the local community. EBC has only given local residents a mere 6 weeks to submit objections to what is an incredibly important change to the original Local Plan and Core Strategy. This is simply not enough time for residents to review and analyse the share magnitude of information and formulate objections, this when significant information is also missing which includes the master plan for the land south west of Draycott. This means only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter half term and the consultation window included 4 Bank Holidays. This when much of the information required was not available and FOI requests were submitted and took 20 working days for a response to be received, when the government agencies contacted themselves did not work the said Bank Holidays. This has meant important information has not been received by residents when developing objections. This action by the EBC was irresponsible, some may say planned, and not acting in the interests of the local communities this plan impacts. The EBC also did not consultant with the Draycott and Church Wilne Parish or local residents ahead of the EBCs Extraordinary Meeting held on the 27th March 2025 where the EBC passed a motion to take the amended Core Strategy forward to public consultation. To further demonstrate this, only one public questions was asked as the EBC released information on the 19th March and closed the public questions submission window on the 24th March giving no time for residents and local Parish's time to review information and to formulate que</p>

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	Matthew Walker	Response-01313	<p>tions. This against a backdrop of over 100 residents attending the EBCs Extraordinary Meeting yet only one public question was asked. This clearly demonstrates how EBC purposely did not share important information, or consult properly with local residents with many if not all residents finding out about these proposal via social media and Facebook. This issue was raised at the EBCs Extraordinary meeting by Councillor Wayne Major and the EBC Mayor agreed this was not adequate and it would be investigated. However, not further action has seemingly been taken. There is a significant number of residents that feel that their views have been disregarded by EBC and EBC are not acting in the best interests of the community and have treated them with disdain. Furthermore, it is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. EBC Sustainability Assessment: I strongly object to the Sustainability Assessment (CSR00040) which was undertaken by the EBC when assessing land in the borough and when identifying the land south west of Draycott as one of the proposed development sites. The EBC assessment scored this land as +3, giving this land a ranking of joint 3rd place from 44 sites. However, when an independent review using professionals and informed local residents was undertaken this resulted in a score of -6, placing this land in 10th position. When reviewed, clear and obvious errors have been made where the EBC when assessing the land south west of Draycott, with a significant number of the question scores being underplayed and positively scored incorrectly to achieve a desired outcome. I have placed below a set of examples with supporting commentary and would strongly suggest this assessment is undertaken again using independent and informed professionals. This review of the assessment has also been undertaken when comparing it and the scores given to two rejected sites (CSR0008a and CSR0008b) which are sites assessed by EBC as not fit for development, this whilst CSR0008a being only partially cropped Greenfield with a large area of Brownfield whereas CSR0008b is agricultural but is currently unworked scrub, when the land south west of Draycott is Grade 2 very good quality Greenfield that is fully used and cropped. Example of incorrect scoring is below: O1 - The land south west of Draycott (CSR00040) is deemed by EBC to deliver minor positive housing needs, but less than the two rejected sites (CSR0008a and CSR0008b). The call for 40% affordable housing is very unlikely to be achieved due to the location of the site. No upgrading of infrastructure is thought to be expected or even required. O2 - Delivers minor negative employment as opposed to major positive for CSR0008a and neutral for CSR0008b. The scale of the development is too small to have any impact on employment or jobs. O3 - N</p>
1.14	South West of Draycott	Other	Matthew Walker	Response-01313	<p>o economic structure and innovation benefit to any of the sites due to rural nature of area. O4 - Claims a positive retail effect for all sites but less so for CSR00040 (+1). Describing the development as being reliant on the local retail facilities is optimistic particularly in the variety and size of the retail services offered. The ease of access to other much larger facilities in surrounding villages and Derby retail parks will increase private traffic and delivery services into and out of the village. The vitality or the viability of the services offered would be unlikely to change. The two other rejected sites are somehow rated as even more positive (+2) which does not make sense and should be reviewed. O5 - Claims that the development would have major benefits in the health and wellbeing of new residents (+2), although the two rejected sites do not. The claim that the possible (but not guaranteed) retention of the PROW?s and the inclusion of POS?s in the development as well as the easy 600m (realistically 900m) walk to the village centre would promote healthy travel. No additional health care facilities are considered to be needed as they are available in nearby towns, despite a possible population increase of 10%. O6 - An increase in crime is to be expected in all three sites. A major negative (-2). O7 - The increase in population is seen as an improvement on social inclusion allowing interaction with local culture, although no provision of additional facilities is deemed to be required due to the small scale of the development. O8 - The assessment assumes that there would be few problems integrating the existing transport infrastructure and that access to the village centre would mitigate any need for major improvements. There is an assumption that the use of private cars will be reduced because of the distance to the village centre. The proposed site therefore gets only a minor negative score (-1), but the brownfield site closer to the centre of the village (CSR0008a) is assessed as a major negative for transport (-3). This is clearly incorrect and requires review. O9 - The site is currently entirely classified as Greenfield, and is good grade 2 agricultural land used for small scale crop production and grazing. This is scored as a minor negative (-1) although CSR0008a and CSR00 8b both score as major negative (-2). CSR0008a is only partially cropped Greenfield with a large area of Brownfield whereas CSR0008b is agricultural but is currently unworked scrub. How can CSR00040 therefore score higher than CSR00080a and CSR00080b. O10 - All three sites are somehow seen as positive contributors (+1) to energy and climate change criteria. It is worth noting that there would be no compulsory provision for rooftop solar generation and that the developer would ensure the highest standards of energy efficiency. O11 - All three sites are assessed as having a minor negative effects on pollution (-1). However, it has been noted that the existing sewage and storm water systems are already stressed and any additional development would only increase the risk of emergency outfall into the Derwent. O12 - Flood risk is seen as neutral. Local knowledge and evidence would suggest that this is optimistic at best. Photographic evidence shows that the fields do flood on a regular basis without particularly high river levels, typically around 2.2m at the Wilne measuring station. The highest level recorded, as recently as October 2023, was 2.53m. The wa</p>

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	Matthew Walker	Response-01313	ter table is just below the surface during the winter and can be seen as surface water during extended wet spells. Although the site has been reclassified as FZ1, if the risk of flooding is completely eliminated from the development (by mechanical means) the risk of knock on hydrostatic effects in the surrounding properties will increase. The properties near to the proposed development are already at high risk and are not insured for flood. This important sections needs further review and scrutiny to ensure the site, from a flood perspective, is adequate as there are serious and valid concerns that the EBC is just brushing aside the real flooding issues in the area. It is widely reported that due to climate change flooding is increasing and not decreasing yet the flood zoning in the area has only very recently 27th March 2025 been reclassified. from FZ2 to FZ1. O13 - The proposed site somehow scores as a major positive (+2) on the local environment. This appears to be based on the premise that as there are no major biodiversity interests near the site, even though it has yet to be assessed - how can this element therefore be scored. The other mitigating factor appears to be that the developer will provide POS?s, some hedgerows and tree planting within the area yet when we have contacted the EBC via an FOI there is apparently no master plan available and plans for the scheme are not available for review, therefore this score is being made purely on assumptions and not facts. How can incredibly important scoring and review of this site be undertaken in this manner. O14 - The new landscape provided by the development is seen as a major positive (+3) because any new development would blend in with the existing village outlook. As a comparison both the other sites are scored as major negatives (-4). CSR0008a in particular is part Brownfield and is hidden from most aspects and CSR0008b is scrubland and would blend in with the existing newer developments along the mainline railway. The aspect of the CSR0008b would be almost identical to CSR0040 when entering the village from the West. Therefore, why has CSR00040 scored higher than the two declined sites, this does not make logical sense. O15 - No heritage assets would be lost or disturbed as a result of the development and is therefore seen as a minor positive (+1). However, both the alternative sites are claimed to have major negatives (-2, although no information is provided for this assumption). It may be argued that CSR0008a could be close to the heritage assets of the village and could be scored as a negative, but the difference between CSR0008b and CSR0040, separated by the A6005 is minimal at best. Logic would dictate that the proximity of CSR0040 to the older parts of the village would count as a negative score compared to CSR0008b. O16 - The site registers as a major negative (-3) for natural resources and waste management. However, the two other sites have disproportionate negative impacts (-7). As mentioned previously, the entire village is already stressed in terms of sewage and storm water runoff, so, as per O15 if CSR0008b is seen as major negative (-7) then so should CSR0040. These scores imply do not make sense and are not balanced. Anyone that has visited the sites can clearly see this and it would point towards a desktop exercising having been undertaken. In conclusion, based on the above analysis serious and valid questions have been raised about the accuracy of the EBCs Sus
1.14	South West of Draycott	Other	Matthew Walker	Response-01313	tainability Assessment which is the key metric used in identifying the land south west of Draycott for development. This assessment is being used to demonstrate that the land does not act as well performing Green Belt and Green field but makes assumptions and gives scoring that is clearly not correct, particularly when assessed against other similar sites that have not been identified as development land. It should be noted that some of the rejected sites scores seem skewed in favour of rejection, but without the data available for the reasons of the scores it is difficult to verify as to why, which also enhances the claim of poor transparency and consultation by EBC throughout this process. If the scores are adjusted to more fair and fact based conclusions CSR0040 would be in joint 10th place with a score of -6. I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. Surely some sort of logic and common sense must be applied to this area when considering the planned development and National Grids plans. If both go ahead as planned this would result in the area being unrealistically developed and ruined.
1.14	South West of Draycott	Other	Melanie Wilson	Response-00974	The consultation is poorly advertised and rushed through.
1.14	South West of Draycott	Other	Michael Thirtwall	Response-01196	Noise from the construction (including vehicle movements) and operational phases of the proposed development have not been adequately addressed. An environment noise assessment needs to be carried out, particularly for the residents directly opposite the site entrance; but also the whole route that the construction traffic will take. This passes through Draycott, Borrow ash and Beaston villages. Passing busy junctions, Doctor?s surgeries, public car parks, Primary schools, local cricket clubs as well as numerous resident?s homes.

1.14	South West of Draycott	Other	Michelle Marks	Response-00924	Conflict with Labour's Election Policy on Green Belt Development Labour's current housing policy emphasizes a 'brownfield-first' approach and opposes building on high-quality Green Belt land. Instead, the party has introduced the concept of developing on 'grey belt' land/areas within the Green Belt that are of poor quality, such as disused car parks and wastelands. This approach seeks to tackle the housing crisis while preserving natural spaces and protecting vital ecosystems. The proposed development in Draycott does not align with this policy, as it involves building on high-quality Green Belt land that serves as a crucial natural habitat and contributes to the village's rural character. Labour's stance prioritizes sustainable development, ensuring that genuine green spaces remain protected while focusing on lower-quality, underutilized land for housing. Approving this development would contradict Labour's stated commitment to preserving Green Belt land, further undermining national policy efforts to prevent unnecessary urban sprawl. Conclusion This proposal represents an unjustified loss of Green Belt land, an unsustainable burden on local services, and a threat to Draycott's rural character. There are more appropriate locations for housing that do not require the destruction of protected countryside. For these reasons, I urge the council to reject this planning application and uphold its commitment to protecting the Green Belt and ensuring sustainable development.
1.14	South West of Draycott	Other	Miss Ella Meredith	Response-01850	We strongly object to the consultation process, which has been limited and not fully transparent. Erewash Borough Council (EBC) has only given local residents the minimum six-week period to submit objections to this significant change to the Local Plan and Core Strategy. This timeframe is insufficient for residents to review and understand the magnitude of the change and formulate objections, especially given the missing details such as the master plan for the land south west of Draycott. These plans do not align with the National Planning Policy Framework (NPPF) 2024 and EBC Local Plan 2022. Furthermore, adequate consultation has not been undertaken with the Draycott Local Parish Council or residents regarding the impact of these plans on the local community, village, and amenity. Noise from construction and operational phases of the development has not been adequately addressed. An environmental noise assessment needs to be carried out, particularly for residents living adjacent and opposite the site entrance.

1.14	South West of Draycott	Other	Nigel morton	Response-01351	The proposed site is not the right one ,flood plain ,very busy road already ,accident black spot ,outstanding piece of high grade land .Just because Steven barker wants to sell doesn't make it the roghrmt site Just because its easier because of this doesn't make it the right site either .I'm hoping you will see its the wrong site and protect it as it should be under the greenbelt
1.14	South West of Draycott	Other	Nikki Riches	Response-00950	? I strongly object to the consultation process, if I hadn't seen Facebook I would have not had the opportunity to respond to this consultation and stand up to our local village from the risk of flooding, increased traffic and risk to safety, stretching further local services, the green belt, biodiversity and wildlife that surrounds it. It feels like the lack of communication and short time scales to respond to the consultation was a conscious decision by Erewash to push this through without local community consultation and is irresponsible by the Council. ? EBC has only given local residents only the bare minimum consultation of a mere 6 weeks to submit objections to what is an incredibly important change to the original Local Plan and Core Strategy. This is simply not enough time for residents to review and analysis the share magnitude of information and formulate objections, this when significant information is also missing which includes the master plan for the land south west of Draycott. This when much of the information required was not available and FOI requests were submitted and took 20 working days for a response to be received, when the government agencies contacted themselves did not work the said Bank Holidays. This has meant important information has not been received by residents when developing objections. This action by the EBC was irresponsible, some may say planned, and not acting in the interests of the local communities this plan impacts. ? The manner in which EBC has undertaken the 6 week consultation is not inclusive and does not allow non internet users to be aware of the consultation and changes to the Core Strategy. The average age within Draycott and Church Wile Parish is 58 and there is a large proportion of the community that was not aware of this important change. I fully object to the whole process and in particular the 6 week consultation period. ? I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. ? I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. ? As residents living next to the site of the proposed change in Green Belt status and future housing development, I am of the view that these proposals will have a serious negative impact on the village, visual openness, spatial openness, the local community and our standard of living. ? I strongly object to t

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	Nikki Riches	Response-00950	<p>he Sustainability Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local residents resulted in a score of -6 placing this land ran 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 &amp; 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should received a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed. ? The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless. ? There are around 2000 vacant social housing in Derbyshire County. Why are these houses not being prioritised ahead of this land being used for development. ? The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would not benefit from the current sprawling Greenbelt views as it will be</p>
1.14	South West of Draycott	Other	Nikki Riches	Response-00950	<p>gone forever. ? It will have a detrimental effect on the wellbeing of people who enjoy the countryside, not to mention wildlife habitats, which are already under extreme pressure. ? The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. ? This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the small villages surrounding it of Borrowash and Breaston. ? It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. ? Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. ? The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of development on this green belt. ? Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. ? NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant lengths of footpaths that will be affected by the development of 190 houses on land south west of Draycott. ? Promoting healthy and safe communities the effect on our healthy lifestyles, especially our local health and well-being needs ? taking away our green space and facility would be detrimental to our community and our day to day needs would fall short by the loss of our valued facilities ? Open space and recreation. NPPF102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected ? There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development ? Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter. This action by the EBC was irresponsible and not acting in the interests of the local communities this plan impacts. ? To improve local accessibility to healthcare</p>

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	Nikki Riches	Response-00950	, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing. ? To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools. ? Noise from the construction (including vehicle movements) and operational phases of the proposed development have not been adequately addressed ? An environment noise assessment needs to be carried out, particularly for the residents directly opposite the site entrance; but also the whole route that the construction traffic will take. This passes through Draycott, Borrow ash and Beaston villages. Passing busy junctions, Doctor?s surgeries, public car parks, Primary schools, local cricket clubs as well as numerous resident?s homes. ? Require the submission of an environmental noise assessment, prior to development works commencing, to rate and assess operational sound from all fixed installations comprising mechanical and electrical plant and equipment, with a scheme of mitigation measures where necessary; that all site preparation and construction to comply with specified working hours and limits to noise and dust emissions, waste disposal and lighting; and the submission of proposals, including the design and operating times, of any permanent external lighting on site. ? Access and egress to the proposed housing development on Derby Road raises several issues relating to highway and pedestrian safety, ease of access and disruption from increased traffic. ? The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. This will include Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 and Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963. ? Noise and Vibration consultation to be undertaken to consider impacts during construction on nearby noise sensitive properties and ongoing management of a solar farm and the impact of noise and disturbance
1.14	South West of Draycott	Other	Oliver Kirk	Response-00569	Increasing the village population by circa 17% is an abhorrent oversight in the proposal, this will drastically alter the community in the area and along with developments in Borrowash will cause many local businesses to be inundated with new residents that will make it all but impossible to enjoy anything in the local area without queuing for three hours or booking a year in advance. In addition, there are many brownfield sites in Erewash that should receive prioritisation for development over the use of this land. I object in the highest possible manner.
1.14	South West of Draycott	Other	Paul Allen	Response-01082	I would like to register my objection to the proposed development on the following grounds: Flooding: The site borders on and slightly encroaches on a Flood Zone 2 (GOV.UK-Flood Map) and there is no flood defence barrier around this area of Draycott. The fields to the south-west of the site regularly flood in the winter period and it is likely to become worse with global warming. Future flooding is likely to make any proposed sustainable urban drainage scheme (SUDS) ineffective and raise the risk of pollution in the nearby River Derwent. Green Belt: The area and its distant views towards Risley in the North and Kings mills in the South will be negatively impacted by this substantial, overbearing, development. There are sufficient Brownfield and Grey Belt site located with Erewash Borough Council's control, which should be considered for development before Green Belt sites. Wildlife/ Biodiversity: The green space provides an important corridor for wildlife, which will be impacted by light pollution and urban noise. There does not seem to be an Ecological survey carried by EBC prior to this proposal, which seems to be at odds with the Biodiversity Supplementary Planning Document. Infrastructure: There is insufficient school spaces, school parking, village parking and medical services at present and the development can only make matters worse.

When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions
1.14	South West of Draycott	Other	paul butcher	Response-01154	incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 & 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should received a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed.
1.14	South West of Draycott	Other	Pauline Marks	Response-00927	This development also conflicts with established planning policies: There is no evidence that alternative, non-Green Belt or brownfield sites have been fully considered, as required before Green Belt land can be released. The Climate Change Act 2008 commits the UK to cutting carbon emissions. This car-dependent development contradicts that goal, increasing emissions and environmental impact. Contradiction of Labour's Green Belt Housing Policy Labour's national housing policy explicitly supports a 'brownfield-first' approach and opposes building on high-quality Green Belt land. Instead, the focus is on developing 'grey belt' areas?poor-quality or previously developed land within the Green Belt.
1.14	South West of Draycott	Other	Peter Sutton	Response-00409	There is massive local objection to this with over 70 residents attending the Parish Council meeting. An online petition has almost 1300 signatures.
1.14	South West of Draycott	Other	Richard Keith Hanbury	Response-01087	You have been elected to represent all the people in your area. But you are not representing me and my views. Don't I matter? Village life in England should be kept . Soon we wont have villages they will just merge into one suburb.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	Richard Syson	Response-01317	This proposal has not been widely communicated to the general public, and there has been no apparent engagement with the residents of Draycott. I have seen a paper poster at on the notice board next to Breaston Cemetery, and nothing in Draycott. I receive the monthly EBC newsletter and this has no mention of the proposal. This appears to be a very underhand attempt by Erewash Borough Council to push through this proposed destruction of Draycott (and other local areas) Green Belt land in order to satisfy arbitrary house building targets imposed by the UK Government. I was only made aware of this proposal when I received manual leaflets from the Draycott Parish Residents Working Group. I believe it is not unreasonable for Erewash Borough Council to have communicated this in detail to every resident. To remain almost silent and issue the bare legal minimum of information to the local residents is totally unacceptable I strongly object to the superficial consultation process which as best can be described as limited and not fully transparent when engaging with the local community. EBC has only given local residents mere 6 weeks to submit objections to what is an incredibly important change to the original Local Plan and Core Strategy. This is simply not enough time for residents to review and analysis the share magnitude of information and formulate objections, this when significant information is also missing which includes the master plan for the land south west of Draycott. There does not appear to be any emphasis on using already available brownfield sites first. Instead, Erewash Borough Council appears to be trying to quietly push through an outrageous destruction / development of prime rural Green Belt land as quietly as possible. Only the bare minimum consultation has been undertaken by EBC with little / no attempt to inform the local residents of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. This action by the EBC was irresponsible and not acting in the interests of the local communities this plan impacts.
1.14	South West of Draycott	Other	Rick Howden	Response-01421	The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would not benefit from the current sprawling Greenbelt views as it will be gone forever. Primary School affected with noise and traffic Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses.
1.14	South West of Draycott	Other	Ricky fisher	Response-00048	Draycott needs to stay a village not a town not more houses to be added this will just start a chain reaction and they will not stop i am a bricklayer by trade and i dont want more houses on my doorstep is sooner turn away the work then have it drown our little village its perfect the way it is with out overflowing it with new builds thats not needed just to benefit some one elses pockets please dont let this happen just because it can make a stand
1.14	South West of Draycott	Other	Roger Brown	Response-00999	EBC have not conducted themselves well with regard to this proposal. The public have not been given sufficient time to adequately inform themselves of the plans, the availability of information has been limited or non-existent and the manner in which the process started by denying the public both the chance to put questions to the council by closing the submissions before the publishing of the agenda and then denying the public the opportunity to speak at the meeting removed their democratic right to be heard. This disregard for fairness and transparency is nothing short of scandalous.
1.14	South West of Draycott	Other	Ruth Hawkins	Response-01277	I strongly object to the consultation process which at best can be described as limited and not fully transparent when engaging with the local community. EBC has only given local residents a mere 6 weeks to submit objections to what is an incredibly important change to the original Local Plan and Core Strategy. This is simply not enough time for residents to review and analyse all the information and formulate objections and this is compounded by the fact that significant information is also missing including the master plan for the land south west of Draycott.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	Sarah Hargreaves	Response-01314	<p>Consultation Process 1. Insufficient Consultation Period: The six-week consultation period is wholly inadequate given the scale of the proposed development and its impact on the village. This period included Easter half-term and four Bank Holidays, during which essential information was not available, and FOI requests took 20 working days for responses. This limited period has hindered residents' ability to develop informed objections. The council's decision to include multiple public holidays within the consultation period appears to be a deliberate attempt to minimize public engagement and reduce the number of objections. Requests via the parish council to extend this period were dismissed, despite their own processes acknowledging that FOI requests would be unavailable for inclusion in objections. 2. Lack of Inclusivity: The consultation process has not been inclusive, particularly for non-internet users. The average age in Draycott and Church Wilne Parish is 58, and many residents were unaware of these significant changes. The council's reliance on online methods for consultation has excluded a sizable portion of the community, which is unacceptable for the development of this magnitude. Residents should at least have been provided with written details of these proposals. 3. Transparency Issues: The consultation process has been limited and not fully transparent. Significant information, including the master plan for the land Southwest of Draycott, is missing. The council has failed to provide adequate time and resources for residents to review and understand the full implications of the proposed development. Steve Birkinshaw, Head of Planning, indicated that it was not necessary for residents to review such information, which contradicts the purpose of a consultation. My conclusion, therefore, is that the council has sought to undertake the classification without challenge in an undemocratic and immoral manner. Full Copy of my OBJECTION Subject: EBC Core Strategy Objection - Land Southwest of Draycott Dear Sir/Madam, I am writing to formally object to the Erewash Borough Council's Core Strategy proposal to reclassify the land Southwest of Draycott to Grey Belt and to build 190 houses, with a further 70 houses on the adjacent identified land. My objections are based on several critical issues that I believe have not been adequately addressed by the EBC. Consultation Process 1. Insufficient Consultation Period: The six-week consultation period is wholly inadequate given the scale of the proposed development and its impact on the village. This period included Easter half-term and four Bank Holidays, during which essential information was not available, and FOI requests took 20 working days for responses. This limited period has hindered residents' ability to develop informed objections. The council's decision to include multiple public holidays within the consultation period appears to be a deliberate attempt to minimize public engagement and reduce the number of objections. Requests via the parish council to extend this period were dismissed, despite their own processes acknowledging that FOI requests would be unavailable for inclusion in objections. 2. Lack of Inclusivity: The consultation process has not been inclusive, particularly for non-internet users. The average age in Draycott and Church Wilne Parish is 58, and many residents were unaware of these significant changes. The council's reliance on online methods for consultation</p>
1.14	South West of Draycott	Other	Sarah Hargreaves	Response-01314	<p>has excluded a sizable portion of the community, which is unacceptable for the development of this magnitude. Residents should at least have been provided with written details of these proposals. 3. Transparency Issues: The consultation process has been limited and not fully transparent. Significant information, including the master plan for the land Southwest of Draycott, is missing. The council has failed to provide adequate time and resources for residents to review and understand the full implications of the proposed development. Steve Birkinshaw, Head of Planning, indicated that it was not necessary for residents to review such information, which contradicts the purpose of a consultation. My conclusion, therefore, is that the council has sought to undertake the classification without challenge in an undemocratic and immoral manner. Green Belt Reclassification 1. Contradiction to NPPF: The reclassification of Green Belt land to Grey Belt contradicts the National Planning Policy Framework (NPPF) 2024 and the EBC Local Plan 2022. The Grey Belt policy has been implemented hastily and lacks transparency. 2. Impact on Green Spaces: The proposed development threatens to destroy protected green spaces, which are essential for preventing urban sprawl, safeguarding the countryside, and preserving the character of a historic village such as Draycott. 3. Housing Targets: The current housing targets driving this development are flawed and unrealistic, leading to overburdening local communities and disregarding the impact on the village. Environmental and Landscape Impact 1. Loss of Open Land: The development will result in the loss of open land frequently used by residents for recreation, negatively impacting mental health and wellbeing. 2. Impact on Wildlife: The land is home to significant wildlife, including red-listed species such as birds, foxes, hedgehogs, and squirrels. The development will destroy habitats and nesting sites, which is unacceptable when existing Brownfield sites can be used. The area also includes historical badger sets, Muntjac Deer, and potentially water voles, which are all protected species. The excavation and construction activities will likely force these animals to relocate, causing irreversible damage to the local ecosystem. 3. Protected Bats and Deer: The land Southwest of Draycott is known to be a habitat for protected bat species and deer. Bats are protected under the Wildlife and Countryside Act 1981 and the Conservation of Habitats and Species Regulations 2017. The development will disrupt their roosting sites and foraging areas, leading to a decline in their population. Similarly, the presence of deer in the area contributes to the biodiversity and ecological balance. The construction activities and subsequent human encroachment will severely impact their natural habitat. 4. Visual and Spatial Openness: The development will have a significant impact on the visual and spatial openness of the area, obstructing the landscape and diminishing the visual experience of the countryside. 5. Tree Preservation: Many the trees within the area are subject to TPO classification. These should remain protected. National Grid Proposal 1. Chesterfield to Willington: The route for the Pylon's is not yet confirmed. Any changes to the Greenbelt should be considered alongside the already detrimental impact of these proposals. Residents in this area of the village face been overwhelmed with development. The impact on wellbeing and</p>

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	Sarah Hargreaves	Response-01314	<p>mental health of many should not be underestimated. I will be clear; this is already impacting people. Infrastructure and Road Safety 1. Traffic Congestion: The A6005 (Derby Road) already experiences significant traffic, with over 3,861 cars per day. The addition of 190 houses will exacerbate congestion and increase the risk of accidents. Recent work by Cadent Gas has caused gridlock within the village due. 2. Accident Hot Spot: The area planned for access to the development has been the site of several serious accidents, unfortunately including a fatality in March 2020 and May 2025. The proposed entrance to the site is unsuitable and has not been given consideration. 3. Road Network Inadequacy: The current road network, including Gypsy Lane and Hopwell Road, cannot handle the increased traffic volume. Significant investment and remodelling are required, which has not been planned. 4. Environmental Impact: Increased traffic will negatively impact the local environment, including Green Belt land, the Erewash River, and local habitats. Air quality deteriorates when traffic builds up due to congestion. Flooding and Drainage 1. Flood Risk: The land Southwest of Draycott experiences significant flooding, impacting residents on Lime Grove. The development will compound these issues, and more investigation is needed. The houses on Lime Grove have experienced severe flooding, affecting gardens and foul sewerage networks. This development will exacerbate these problems, leading to increased flood risk for existing and new residents. 2. Inadequate Assessment: Minimal liaison has been undertaken with Severn Trent regarding drainage and water management. Only four generic questions were asked by EBC in January 2025, indicating a lack of sincere consideration of flood issues. A comprehensive Flood Risk Assessment is required to understand the full impact of the development on local drainage and water management systems. 3. Environmental Agency Flood Risk Survey: Although the relevant area now falls outside of a Flood Risk Zone, the topology of the site indicates that runoff from the development will add to the present flood risk areas within the Environment Agency flood risk zone. Building on a flood plain that has trees, grass, and plants that naturally help absorb water via root systems will have a significant impact when removed. Furthermore, it is not clear why the land was reclassified two days before the consultation was agreed. Who agreed to reclassify this land? And on what basis? Given that recent years have seen unprecedented flooding this is inaccurate. 4. Sequential Test: NPPF 174 states that the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying for this test. Yet the land Southwest of Draycott was recently within a Flood Risk Zone, and again, the reclassification appears to be a coincidence timed with the consultation period. 5. Climate Change Considerations: NPPF 162 states that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts, including storm and flood risks. The development of 190 houses on land Southwest of Draycott contradicts this statement, as the area experiences</p>
1.14	South West of Draycott	Other	Sarah Hargreaves	Response-01314	<p>significant flooding throughout the year. This development will further compound these issues, increasing vulnerability to climate change impacts. Housing Type and Scale 1. Mismatch with Existing Housing: The proposed 40% affordable housing is not in keeping with the surrounding 4-5 bedroom detached houses. This allocation is overbearing and does not harmonize with the village character. The homes on Derby Road are established older homes, all unique in their design and do not fit with an 'Estate' or 'New Build' design aesthetic. 2. Scale of Development: The scale of the development is unrealistic and will significantly change the heritage and landscape of Draycott. There are better-suited Brownfield sites that should be prioritized. 3. National Housing Policies: The government's long-term housing strategy emphasizes the importance of prioritizing brownfield development and adhering to mandatory local housing targets. The strategy also includes plans to regenerate towns and cities, focusing on sustainable and beautiful neighborhoods. The proposed development contradicts these policies by prioritizing Green Belt land over available brownfield sites. 4. Affordable Housing Requirements: The government's policy mandates that any Green Belt development should include targets of 50% affordable housing with a focus on social rent. The proposed development's allocation of 40% affordable housing does not meet this requirement, and the type of housing proposed is not in keeping with the surrounding area. Local Facilities 1. NHS Services: There are no provisions within Draycott for GP or Dentistry. Existing local services are already over subscribed and struggling to cope with demand. In conclusion, I strongly urge the EBC to reconsider the proposed development on the Southwest of Draycott. The objections outlined above highlight the significant negative impacts on the environment, community, and local infrastructure. I request that the EBC prioritize existing Brownfield sites and engage in a more inclusive and transparent consultation process. Thank you for considering my objections. Yours sincerely, Sarah Hargreaves</p>

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	Scott Gardner	Response-01554	The public consultation process has been inadequate and has left residents feeling unheard. The "frustration" and "anger" expressed at public meetings highlight the community's dissatisfaction with the lack of information and transparency. The timing of agenda releases for crucial council meetings has also been questionable. I remain unconvinced that all reasonable alternative sites have been thoroughly explored. The Council's reliance on the financial viability of the Draycott West site as a primary justification completely disregards the significant environmental and community costs associated with this Green Belt development. The public consultation process surrounding the Erewash Core Strategy Review Amendment has been nothing short of a cynical exercise in ticking boxes. The widespread "frustration" and "anger" expressed at public meetings are a direct result of residents feeling deliberately excluded and uninformed about these life-altering proposals. The questionable timing of the agenda publication for the Erewash Borough Council meeting, after the deadline for submitting questions, reeks of an attempt to stifle public scrutiny and dissent. The legally mandated minimum consultation period of six weeks was woefully inadequate for such a significant and controversial issue, a point rightly raised by Councillor Major who called for a more reasonable 12-week period. Due diligence and consideration should be given for development that will impact our village negatively forever. For all the reasons outlined above, I strongly object to the proposed housing development west of Draycott. This development is unsustainable, will have severe negative consequences for our community, and flies in the face of established planning policies. I urge the Erewash Borough Council and the Planning Inspectorate to reject this ill-conceived proposal.
1.14	South West of Draycott	Other	Sean Peace	Response-01347	Loss of open space and green spaces ? this is vital for our community's wellbeing 5 2 Primary School affected with noise and traffic 6 3 The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would not benefit from the current sprawling Greenbelt views as it will be gone forever. 7 4 It will have a detrimental effect on the wellbeing of people who enjoy the countryside, not to mention wildlife habitats, which are already under extreme pressure. 8 6 The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. 9 7 This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the small villages surrounding it of Borrowash and Breaston. 10 8 It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. 11 9 Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. 12 10 The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of development on this green belt. 13 11 Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. 14 12 NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant lengths of footpaths that will be affected by the development of 190 houses on land south west of Draycott. 15 13 Promoting healthy and safe communities the effect on our healthy lifestyles, especially our local health and well-being needs ? taking away our green space and facility would be detrimental to our community and our day to day needs would fall short by the loss of our valued facilities 16 14 Open space and recreation. NPPF102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected 17 15 There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing
1.14	South West of Draycott	Other	Sam Jackson	Response-01287	development 18 16 Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter. This action by the EBC was irresponsible and not acting in the interests of the local communities this plan impacts. 19 17 To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing. 20 18 To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools.
1.14	South West of Draycott	Other	Simon Jenkins	Response-01287	Look forward to a Labour person visiting our house and explaining things to us !!!!!!!!!!!!!!!

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	S M Beresford	Response-01851	We strongly object to the consultation process, which has been limited and not fully transparent. Erewash Borough Council (EBC) has only given local residents the minimum six-week period to submit objections to this significant change to the Local Plan and Core Strategy. This timeframe is insufficient for residents to review and understand the magnitude of the change and formulate objections, especially given the missing details such as the master plan for the land south west of Draycott. These plans do not align with the National Planning Policy Framework (NPPF) 2024 and EBC Local Plan 2022. Furthermore, adequate consultation has not been undertaken with the Draycott Local Parish Council or residents regarding the impact of these plans on the local community, village, and amenity. Noise from construction and operational phases of the development has not been adequately addressed. An environmental noise assessment needs to be carried out, particularly for residents living adjacent and opposite the site entrance.
1.14	South West of Draycott	Other	Susan Baker	Response-01316	I moved to Draycott from Grimsby- i craved the village life, open space and nature. I feel devastated this will be taken away from us- especially when there are alternatives
1.14	South West of Draycott	Other	Susan Foster	Response-00824	All the infrastructure and facilities that would be needed to accommodate the huge number of people, cars etc. could be built with less upheaval to those already residing here. It's not a case of nimby, try to spread the 190 homes around the village where they will be more likely to fit in and be better received by the current population.
1.14	South West of Draycott	Other	Teresa Shaw	Response-01309	1. Will additional 10 ? 15% funds be allocated & re-distributed for Erewash Policing & Fire Services to cope with increased expansion of communities. 2. Diminution in Value: If the development is passed in Drayco all properties with green belt views will be reduce in property value, The council should have to pay the difference between the value of the property before and after the development. This is the only fair compensation for this rushed development plan. Then owners can sell without loss and move out of the village. Has this been considered and put in plac?
			Tim Hawkins	Response-00661	Possibly the worst site to build in the area. EBC's insistence on rushing this through is misguided.
1.14	South West of Draycott	Other	Tracey Morton	Response-00968	The loss of this green space will have a significant.effect on residents mental health and wellbeing 2 primary school with being effected by noise and traffic 3 the footpath though the site was heavily used during covid and still is, fabulous views over the fields and the river and beyond 4 destroyed the wildlife particularly the protected bats and protected badgers 5 This development is simply being proposed in the wrong place, just because the farmer wants to sell doesn't make it the right place / fit 6 Other sites around Draycott would be better areas where traffic could be absorbed more and brown field which some already have tanning permissions on 7 The area significantly contributes to people quality of life 8 on a personal note I overlook this area and walked that area, just standing absorbing it, has helped me during tough times in my life
1.14	South West of Draycott	Other	Tracie ready	Response-01383	Re: Objection to Proposed 190-Home Development in Draycott I am writing to formally object to the proposed construction of 190 new homes in Draycott, near the River Derwent. This development raises significant environmental, infrastructural, and community concerns. Firstly, the site is located on greenbelt land, which currently supports a rich and diverse range of wildlife and biodiversity. This natural habitat not only offers a haven for flora and fauna but also contributes to the rural character that defines Draycott. Destroying this landscape in favour of large-scale housing would result in irreversible ecological damage. The proximity of the proposed development to the River Derwent is deeply troubling. The land acts as a natural floodplain, serving as a vital barrier that mitigates the risk of flooding in the village. Building on this area could increase the likelihood of flooding events, especially in light of the growing impact of climate change. Beyond environmental concerns, the village already experiences considerable strain on its infrastructure. Local schools and GP surgeries are at capacity, and the existing road network is not equipped to handle a significant increase in population. Draycott is often used as a cut-through route, and this development would exacerbate existing traffic issues, the village roads are already congested. Furthermore, the scale of this development is wholly inappropriate for a village of Draycott's size. Such a substantial influx of new residents would fundamentally alter the character of the village, eroding its distinct rural identity and transforming it into something closer to a town. This loss of community feel and heritage would be a tragic and permanent shift. For the reasons outlined above?flood risk, environmental destruction, infrastructure strain, increased traffic, and loss of village identity?! strongly urge you to reject this proposal.
1.14	South West of Draycott	Other	T Shields	Response-00570	There will be some impacts: increase in traffic, a small loss of Green Belt land. But the benefits are substantial in terms of providing increased houses, a high proportion of which would be affordable, particularly in the face of a local and regional shortage. The increase in residents would also help to boost the local economy - the local businesses/shops/pubs etc struggle so increased spending locally will support their economic viability. The developers would also have to provide the usual section 106 financial contributions towards health, education and other infrastructure. These would be significant from 190+ houses. The benefits far outweigh the relatively minor negative impacts and will support the future for the upcoming generation in Draycott. There are too many NIMBYS in Draycott who don't think about the next generation. As a resident of Draycott I am saddened that the Parish Council have leafleted the village urging people to oppose the allocation.
1.14	South West of Draycott	Other	Viv Wright	Response-00035	Certainly in our area of Derbyshire we are losing our local green spaces . We are creating an access difficulty for many people.. During COVID our local spaces kept us sane. The ability to walk to and through a natural green space is something we should all cherish and protect.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	Wilfred Boone	Response-01424	Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter half term and the consultation window included 4 Bank Holidays. This when much of the information required was not available and FOI requests were submitted and took 20 working days for a response to be received, when the government agencies contacted themselves did not work the said Bank Holidays. This has meant important information has not been received by residents when developing objections. This action by the EBC was irresponsible, some may say planned, and not acting in the interests of the local communities this plan impacts. I strongly object to the Sustainability Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local residents resulted in a score of -6 placing this land ran 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 & 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should received a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on
1.14	South West of Draycott	Other	Wilfred Boone	Response-01424	certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed.
1.14	South West of Draycott	Other	zak butcher	Response-01156	Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter half term and the consultation window included 4 Bank Holidays. This when much of the information required was not available and FOI requests were submitted and took 20 working days for a response to be received, when the government agencies contacted themselves did not work the said Bank Holidays. This has meant important information has not been received by residents when developing objections. This action by the EBC was irresponsible, some may say planned, and not acting in the interests of the local communities this plan impacts. I strongly object to the consultation process which as best can be described as limited and not fully transparent when engaging with the local community. EBC has only given local residents mere 6 weeks to submit objections to what is an incredibly important change to the original Local Plan and Core Strategy. This is simply not enough time for residents to review and analysis the share magnitude of information and formulate objections, this when significant information is also missing which includes the master plan for the land south west of Draycott. I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. As residents living next to the site of the proposed change in Green Belt status and future housing development, we are of the view that these proposals will have a serious negative impact on the village, visual openness, spatial openness, the local community and our standard of living. I strongly object to the Sustainability Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local residents resulted in a score of -6 placing this land ran 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Other	ix butcher	Response-01155	Incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 & 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should received a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed.
1.14	South West of Draycott	Road Safety	adrian leeming	Response-01249	The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents. A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents. "NPPF 109. States that transport issues should be considered from the earliest stages of plan-making and development proposals, using a vision-led approach to identify transport solutions that deliver well-designed, sustainable and popular places. This should involve identifying, assessing and taking into account the environmental impacts of traffic and transport infrastructure ? including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains. Yet no traffic survey has been undertaken. If it had it would have highlighted that along A6005 (Derby Road) and exactly adjacent the proposed development. The peak traffic hours on Fridays are between 4 PM and 6 PM, with the highest average vehicle count observed from 4 PM to 5 PM. The average number of cars per day in the traffic data is approximately 3,861 vehicles. The highest recorded traffic day in the data is June 11, 2023, with a total of 4,779 vehicles. The maximum speed recorded in the traffic data is 106 mph and the number of times 70 mph is exceeded in the traffic data is 174." The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment. NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowash. This is totally unrealistic and the current roads would not cope with the volume of traffic. NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development wou
1.14	South West of Draycott	Road Safety	adrian leeming	Response-01249	Id require significant investment and remodelling to handle the anticipated volume of cars. 1.14	South West of Draycott	Road Safety	Andrew and Jane Gilmour	Response-01329	that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowash. This is totally unrealistic and the current roads would not cope with the volume of traffic. It has been proposed that a pedestrian crossing should be put in place linking this proposed development to the bus route going into Nottingham. Such a pedestrian crossing would be an accident waiting to happen, visibility as you come into Draycott from Borrowash is limited by two road bridges crossing the canal and railway lines and has been pointed out elsewhere in the document the speed limit is routinely ignored by many.
1.14	South West of Draycott	Road Safety	A Northeast	Response-01848	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will increase traffic volume, impacting road safety and increasing the risk of accidents. A transport assessment needs to be undertaken, particularly for the residents opposite and adjoining the proposed site entrance. Moreover, the increased traffic will pose a significant risk to pedestrians and cyclists. The A6005 is a key route for local residents, including children walking to school and elderly residents. Higher traffic volumes increase the likelihood of accidents involving these vulnerable road users. Implementing traffic calming measures such as speed bumps, pedestrian crossings, and improved signage could mitigate some risks, but these measures need to be carefully planned and executed. A comprehensive transport assessment is essential to understand the full impact of the proposed development on road safety. This assessment should consider current traffic levels, projected increases, and the capacity of existing road infrastructure. It should also evaluate the potential need for new traffic control measures and improvements to pedestrian and cyclist safety.
1.14	South West of Draycott	Road Safety	Anthony Lawton-Reeve	Response-00971	The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. 1.14	South West of Draycott	Road Safety	Charlotte Brennan	Response-00931	A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents.
1.14	South West of Draycott	Road Safety	Colin & Cynthia Green	Response-00922	Again, crossing this busy road problematic already so additional 190 homes will increase traffic say 2 vehicles per new build will pose problems to Derby or Nottingham. Not safe to cross now at peak times as no crossing available & speeds in excess of 30 mph now.
1.14	South West of Draycott	Road Safety	David and Mary Murden	Response-01898	Other concerns that we have are Road Safety and the Amenities in the village. The stretch of Derby Road from Shacklecross to the village of Draycott is a notorious danger spot. It is still called by many 'The Draycott Straight', as it used to have a 60 mph speed limit. Now, of course, that is down to 40 mph, then 30 mph, but we all know that there are very many motorists and motocyclists who ignore these limits and still use it as a fast run, and this has been the cause of many accidents. Having a new road opening onto this area, which we believe would be near to the railway bridge, would add to this peril and put many more lives in danger.
1.14	South West of Draycott	Road Safety	David and Nicala O'Leary	Response-00822	Speed Indicator Devices in the village routinely show vehicles exceeding safe limits, often surpassing speeds seen on major highways. Adding 190 homes could introduce over 380 additional vehicles to local roads, significantly increasing the risk of accidents
1.14	South West of Draycott	Road Safety	David Atchison	Response-01247	A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment.
1.14	South West of Draycott	Road Safety	David Boyle	Response-01426	An environment noise assessment needs to be carried out, particularly for the residents directly opposite the site entrance; but also the whole route that the construction traffic will take. This passes through Draycott, Borrow ash and Beaston villages. Passing busy junctions, Doctor?s surgeries, public car parks, Primary schools, local cricket clubs as well as numerous resident?s homes.
1.14	South West of Draycott	Road Safety	David G York	Response-01843	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will increase traffic volume, impacting road safety and increasing the risk of accidents. A transport assessment needs to be undertaken, particularly for the residents opposite and adjoining the proposed site entrance. Moreover, the increased traffic will pose a significant risk to pedestrians and cyclists. The A6005 is a key route for local residents, including children walking to school and elderly residents. Higher traffic volumes increase the likelihood of accidents involving these vulnerable road users. Implementing traffic calming measures such as speed bumps, pedestrian crossings, and improved signage could mitigate some risks, but these measures need to be carefully planned and executed. 1.14	South West of Draycott	Road Safety	Gerri Hickton	Response-01472	require significant investment and remodeling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic.
1.14	South West of Draycott	Road Safety	Gerri Hickton	Response-01472	Traffic exiting the site will be turning into / against traffic coming over the bridge which makes them blind until last minute. This causes a significant risk to pedestrians, cyclists, horse riders, motorcyclists and other drivers Exacerbating this problem is speeding traffic which whilst it happens, cannot be prevented - it is already a danger, adding further traffic would be to increase this risk
1.14	South West of Draycott	Road Safety	Gill Trickitt	Response-01157	The one point in the village which all cars and vehicles must pass to get from one side of Draycott to the other - was sadly the scene of a fatal accident last night. There are not enough roads or routes through the village to accommodate the traffic that currently passes, road safety is already an issue and adding additional homes, cars and people to this village will only make the situation more grave.
1.14	South West of Draycott	Road Safety	Gordon Dahill	Response-00690	Access to Derby A6005 just beyond the bridge after the 40 to 30mph is barley 100 yards ,plus the fact that view of the road ahead is compromised by the road dropping down towards the entrance after the bridge,where there will queuing for the entrance causing a hazard . this junction has already had several accidents , one FATAL. It will become an accident black spot.I believe that a resident living opposite the entrance recalls that an application for a small garden centre on the proposed site was rejected in the past due to highway safety concerns. Putting a pedestrian crossing will only make the road more dangerous ant the bus stop east to Nottingham is only a narrow pavement 'no shelter. Anything of any width on the pavement will mean people will need to step into the road to get by, with possible consequences. Also other proposed changes ,signes dragons teeth will not remove the basic dangers associated with this junction.
1.14	South West of Draycott	Road Safety	Graham Wakeling	Response-01238	Further to road congestion, Road safety will suffer, many accidents have occurred in and around Draycott (even one just this week). Also as a pet owner who's cat has suffered RTA recently, The proposed new housing developments will increase the problem.
1.14	South West of Draycott	Road Safety	Hannah McMaster	Response-01381	There have been several fatalities in the village due to speeding along the main route of Derby Road. An increase of vehicles and a new junction will increase the likelihood of more fatalities, potentially involving children as the homes are earmarked for social housing.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Road Safety	Hannah Pritchard	Response-01399	The roads surrounding the proposed development site are narrow and not designed to accommodate high traffic volumes. Increased vehicle numbers will raise the risk of accidents, particularly for pedestrians, cyclists, and school children using already pressured routes such as Hopwell Road. The lack of safe pedestrian crossings and cycleways will create a hazardous environment and increase the potential for road traffic incidents, especially near Draycott Primary School and village amenities.
1.14	South West of Draycott	Road Safety	James Hargreaves	Response-01315	Road Safety 1. High-Risk Area: The proposed access point for the development is located in an area with a history of serious accidents, including fatalities in March 2020 and May 2025. The entrance design is inappropriate and lacks proper evaluation. 2. Inadequate Infrastructure: Roads such as Gypsy Lane and Hopwell Road are not equipped to handle increased traffic. Major upgrades are necessary but have not been planned.
1.14	South West of Draycott	Road Safety	James Whyman	Response-01551	1 The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. 1.14	South West of Draycott	Road Safety	Jane Barker	Response-01178	The part of the A6005 road that will be the main access to this prosed developement is already a hazard due to it being the entrance to the village going from 40mph to 30mph and the bridges etc. and I cannot see that adding a further 400 (approx) vehicles is going to help and will only increase the risk of accidents turning into and out of this development.
1.14	South West of Draycott	Road Safety	J Morgan	Response-01847	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will increase traffic volume, impacting road safety and increasing the risk of accidents. A transport assessment needs to be undertaken, particularly for the residents opposite and adjoining the proposed site entrance. Moreover, the increased traffic will pose a significant risk to pedestrians and cyclists. The A6005 is a key route for local residents, including children walking to school and elderly residents. Higher traffic volumes increase the likelihood of accidents involving these vulnerable road users. Implementing traffic calming measures such as speed bumps, pedestrian crossings, and improved signage could mitigate some risks, but these measures need to be carefully planned and executed. A comprehensive transport assessment is essential to understand the full impact of the proposed development on road safety. This assessment should consider current traffic levels, projected increases, and the capacity of existing road infrastructure. It should also evaluate the potential need for new traffic control measures and improvements to pedestrian and cyclist safety.

This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowash. This is totally unrealistic and the current roads would not cope with the volume of traffic. In addition to the above, issues already exist at the junction of Lime Grove and Derby Road where bus stops are positioned adjacent to and directly opposite Lime Grove and issues with vehicles parking too close to the junction are common. There have been numerous instances of near head-on collision where traffic travelling west-east on Derby Road has chosen not to wait behind the stopped eastbound bus and thus has created a 'near miss' situation with vehicles turning left out of Lime Grove. Similarly, with vehicles parked sometimes partly on the pavement (and illegally) too close to the junction with Lime Grove prevent a clear view of the Derby Road traffic and thus make it a difficult and dangerous task for anyone attempting to emerge from Lime Grove. Nothing has been done to address or police this in my 22 year residence and it is reasonable to expect that given the proposed topology of the proposed new site access road that similar situations will develop there too. It should also be considered that the stretch of Derby Road west of Draycott (known locally as 'Draycott Straight' is a mile long, effectively uninterrupted section of straight road. Typically, traffic found to be exceeding the speed limit is travelling west to east. There is a 30mph transition upon entering Draycott village but this (and the proposed new site access road) is very effectively masked from the view of any approaching vehicle until said vehicle 'crests' the railway bridge - as discussed elsewhere, often at illegal and dangerously high speeds. This topology gives drivers very little time (and obviously less at high speeds) to react and prepare for either the speed transition or the presence of any vehicle entering or emerging from the new site. It is therefore quite reasonable to expect that if the proposed development proceeds, there is very likely to be a significant rise in road traffic collisions in the vicinity.
1.14	South West of Draycott	Road Safety	Judith Boyle	Response-01418	"NPPF 109. PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Road Safety	Juliet Macve	Response-01572	A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. I have personally seen that there is very often a dangerous level of traffic and congestion around the entrance to the primary school on Hopwell road at the start and end of the school day. Cars are often parked very close to junctions throughout the day. The roads and footpaths are used a great deal by vulnerable road users - ie motorcyclists, cyclists, runners and walkers (including families with children). The inevitable large increase in traffic from the proposed development will obviously increase dangers to all, and especially to vulnerable road users. The high speed of traffic close to the entrance to the proposed development makes accidents involving vehicles turning onto and off Derby Road a near-certainty.
1.14	South West of Draycott	Road Safety	Karla Williams	Response-00077	The site is sustainable and the railway bridge is the natural boundary to the village. The crossing is a welcome addition as crossing the road to use the canal path has always been difficult at peak times.
1.14	South West of Draycott	Road Safety	Katie May	Response-01518	The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents. A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents. "NPPF 109. States that transport issues should be considered from the earliest stages of plan-making and development proposals, using a vision-led approach to identify transport solutions that deliver well-designed, sustainable and popular places. This should involve identifying, assessing and taking into account the environmental impacts of traffic and transport infrastructure ? including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains. Yet no traffic survey has been undertaken. If it had it would have highlighted that along A6005 (Derby Road) and exactly adjacent the proposed development. The peak traffic hours on Fridays are between 4 PM and 6 PM, with the highest average vehicle count observed from 4 PM to 5 PM. The average number of cars per day in the traffic data is approximately 3,861 vehicles. The highest recorded traffic day in the data is June 11, 2023, with a total of 4,779 vehicles. The maximum speed recorded in the traffic data is 106 mph and the number of times 70 mph is exceeded in the traffic data is 174." The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment. NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowash. This is totally unrealistic and the current roads would not cope with the volume of traffic. NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development wou
1.14	South West of Draycott	Road Safety	Katie May	Response-01518	ld require significant investment and remodelling to handle the anticipated volume of cars. 1.14	South West of Draycott	Road Safety	Laura Roffey	Response-01479	access to the new houses would be just over the bow a hill from Borrowwash - not a great place for a new junction.
1.14	South West of Draycott	Road Safety	Lee	Response-00742	1. Planning permission was rejected a small business at this local site because of access & egress issues in that area. Why can this genuine safety issue now be ignored when it suites? Who will be liable if the rush to build causes actual loss of life? This is double standards. 2. Bridges coming into the village create a blind spot - this is fact. A new access & egress sight will cause major issues. A pedestrian crossing may help a little, but the current speed limit of 40MPH into the village is regularly abused. Have you considered what a car doing 60MPH will do? It takes 73 meters to stop! Cars will overshoot the proposed site entrance by some way. This will likely become a black spot and lives we be lost. What other plans are in place to slow these cars down to allow safe access? E.g. Islands, Speed bumps, cameras. 3. A popular dedicated cyclist?s route passes through Draycott and this busy junction with increase?s traffic will put cyclist and a much greater risk. I ride to work but wont in the future as the danger isn?t worth the risk. What is being done or considered to ensure the safety of cyclist? And encourage this greener mode of transport without risking lives. 4. Motor bikes race through the village a serious accident happened July 2019 & a fatality in March 2020. Your regularly get motorcycles going over a 100MPH up to and through the village. How will you prevent these motor cyclists killing themselves and now the new residents in this dangerous location.
1.14	South West of Draycott	Road Safety	Linda Jane Jenkins	Response-01007	my objection is the same as traffic congestion
1.14	South West of Draycott	Road Safety	Louise and Shane Foster	Response-01219	The plan to install a pedestrian crossing on Derby Road is inadequate. Access to the site by large plant and delivery trucks will cause potential accidents. Again, has there been a risk assessment with regard to this?
1.14	South West of Draycott	Road Safety	Louise Burnell	Response-00262	Increased traffic flow will lead to a decline in road safety.
1.14	South West of Draycott	Road Safety	Luke Harper	Response-00898	Cars often speed as they enter/exit the village at this point and with new families in the proposed site this will be dangerous
1.14	South West of Draycott	Road Safety	Luke Hatch	Response-00160	The A6005 is a busy, fast road. More vehicles entering and exiting a new development near this junction will increase the risk to drivers, pedestrians, and cyclists. A single pedestrian crossing and minor junction improvements don?t feel like enough.
1.14	South West of Draycott	Road Safety	Lynne Dundas	Response-01198	I feel the location is not safe for a road to be created at the foot of the hill coming into Draycott from Borrowwash

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Road Safety	Maggie Murphy	Response-00833	The A6005 (Derby Road) is an already significantly busy main road which experiences an average of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean at least an additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents. We also need to be cognisant of the cumulative impact of the proposed sites in Borrowash and Breaston. Derby Road is the main road between all 3 villages. A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase road traffic accidents. NPPF 89. This should involve identifying, assessing and taking into account the environmental impacts of traffic and transport infrastructure ? including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains. Yet no traffic survey has been undertaken. If it had it would have highlighted that along A6005 (Derby Road) and exactly adjacent the proposed development. The peak traffic hours on Fridays are between 4 PM and 6 PM, with the highest average vehicle count observed from 4 PM to 5 PM. The average number of cars per day in the traffic data is approximately 3,861 vehicles. The highest recorded traffic day in the data is June 11, 2023, with a total of 4,779 vehicles. The maximum speed recorded in the traffic data is 106 mph and the number of times 70 mph is exceeded in the traffic data is 174. To date, the EBC have not applied a vision-led approach and the surveys and appraisals undertaken to date have been brief at best, which includes the Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic. A transport assessment needs to undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This passes through Draycott and Borrowwash. Passing busy junctions, Doctor?s surgeries, public car parks, Primary schools, local cricket club as well as numerous resident?s homes. The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead. The A6005 (Derby Road) is an already busy
1.14	South West of Draycott	Road Safety	Matthew Walker	Response-01313	road at peak times during the week and weekend which currently experiences over 3,861 cars a day. Adding 190 additional houses will cause significant congestion issues throughout the village and increase accidents within this overburdened area. The current road network between Borrowwash and Draycott, which includes Derby Road, Hopewell Road and Gypsy Lane, already struggles to handle current traffic demand let alone the potential for at least 190 more cars. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic. NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. 1.14	South West of Draycott	Road Safety	Maureen Pinchbeck	Response-00041	Pedestrian crossing fairly near to bridge.
1.14	South West of Draycott	Road Safety	Melanie Wilson	Response-00974	The numerous trips generated by the additional housing will increase accidents and reduce the safety of vehicles entering Derby Road from the existing side streets and properties, the speeds though the village are already in excess of 30mph in particular where the vehicles enter the village at the location of the proposed Junction.
1.14	South West of Draycott	Road Safety	Michael Thirlwall	Response-01196	Access and egress to the proposed housing development on Derby Road raises several issues relating to highway and pedestrian safety, ease of access and disruption from increased traffic.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Road Safety	Miss Ella Meredith	Response-01850	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will increase traffic volume, impacting road safety and increasing the risk of accidents. A transport assessment needs to be undertaken, particularly for the residents opposite and adjoining the proposed site entrance. Moreover, the increased traffic will pose a significant risk to pedestrians and cyclists. The A6005 is a key route for local residents, including children walking to school and elderly residents. Higher traffic volumes increase the likelihood of accidents involving these vulnerable road users. Implementing traffic calming measures such as speed bumps, pedestrian crossings, and improved signage could mitigate some risks, but these measures need to be carefully planned and executed. A comprehensive transport assessment is essential to understand the full impact of the proposed development on road safety. This assessment should consider current traffic levels, projected increases, and the capacity of existing road infrastructure. It should also evaluate the potential need for new traffic control measures and improvements to pedestrian and cyclist safety.
1.14	South West of Draycott	Road Safety	Miss Natalie Walsh	Response-01846	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will increase traffic volume, impacting road safety and increasing the risk of accidents. A transport assessment needs to be undertaken, particularly for the residents opposite and adjoining the proposed site entrance. Moreover, the increased traffic will pose a significant risk to pedestrians and cyclists. The A6005 is a key route for local residents, including children walking to school and elderly residents. Higher traffic volumes increase the likelihood of accidents involving these vulnerable road users. Implementing traffic calming measures such as speed bumps, pedestrian crossings, and improved signage could mitigate some risks, but these measures need to be carefully planned and executed. 1.14	South West of Draycott	Road Safety	Nat	Response-00158	The main road through draycott is already heavily used- more traffic will make it worse and the road isn't big enough to accommodate this
1.14	South West of Draycott	Road Safety	Neil Johnstone	Response-00725	Increase in traffic and road users potentially speeding through the village. Especially from leaving the 40mph zone into the 30mph zone. This is already bad enough.
1.14	South West of Draycott	Road Safety	Nigel morton	Response-01351	The road is has heavy traffic all day ,we have had several vehicles hit and written off legally while parked outside our house,as have our neighbours .The junction for backfield Farm has alot of traffic in and out ,the caravans are a problem We have had 2 fatal accidents on this road in the last 5 years ,one on the bridge with working traffic lights .Most recent (may 13th 2025 ( a fatal motorbike accident on Gertrude Road and derby Road entry point ,well in the 30 mph zone.We also have alot of cyclists along this proposed site ,who since the rains were put in on the bridge now ride down the pavement instead ,which is not a cycle path ,Derbyshire County Council and police are aware ,I have contacted them many times
1.14	South West of Draycott	Road Safety	Nikki Riches	Response-00950	? As a resident in Draycott the amount of traffic that uses Derby Road has increased in time. Trying to cross it is a already a nightmare and risk, numerous vehicles exceeding the current speed limit, this will only be compounded by a significant increase to the village of 190 cars (min) if the development does go ahead. ? The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents. ? A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents. ? NPPF 109. States that transport issues should be considered from the earliest stages of plan-making and development proposals, using a vision-led approach to identify transport solutions that deliver well-designed, sustainable and popular places. This should involve identifying, assessing and taking into account the environmental impacts of traffic and transport infrastructure ? including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains. Yet no traffic survey has been undertaken. If it had it would have highlighted that along A6005 (Derby Road) and exactly adjacent the proposed development. The peak traffic hours on Fridays are between 4 PM and 6 PM, with the highest average vehicle count observed from 4 PM to 5 PM. The average number of cars per day in the traffic data is approximately 3,861 vehicles. The highest recorded traffic day in the data is June 11, 2023, with a total of 4,779 vehicles. The maximum speed recorded in the traffic data is 106 mph and the number of times 70 mph is exceeded in the traffic data is 174. ? The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment. ? NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic. ? NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be
1.14	South West of Draycott	Road Safety	Nikki Riches	Response-00950	found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. 1.14	South West of Draycott	Road Safety	Ricky fisher	Response-00048	Road safety is only going to get worse with a 190 odd houses with multiple cars more traffic and more accident's waiting to happen
1.14	South West of Draycott	Road Safety	Robert Alan Duncanson	Response-00855	WITH PLAY AREAS SPEARD ACROSS THE VILLAGE IT WOULD MAKE IT MORE UNSAFE FOR LOCA CHILDREN TO USE THOSE FACILITIES

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Road Safety	Roger Brown	Response-00999	The stretch of Derby Rd where residents of this development will join has had several serious and some fatal accidents within metres of this point in recent years. Speeds in excess of 100mph have been recorded here on several occasions with 70mph being regularly exceeded. To make this more dangerous there is a central reservation which puts cyclists in danger, private drive entrances and a slight dip and bend reducing visibility as you enter the village just as you would meet any new junction with cars, bikes and pedestrians. There is a limit to what type of junction could be installed here given that it is on the edge of a rail bridge.
1.14	South West of Draycott	Road Safety	Ross Roberts	Response-01377	Someone has already died this week on the road, we do not need more unsafe roads , also the are is right next to the bridge for the train and will be a terrible blind spot for the drivers if a junction is added
1.14	South West of Draycott	Road Safety	Ruth Hawkins	Response-01277	The A6005 (Derby Road) is an already significantly busy main road which experiences an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this could mean at least an additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents.
			Sarah	Response-01541	Far too many already passing through well over the speed limit.
1.14	South West of Draycott	Road Safety	Sarah Hargreaves	Response-01314	1. Accident Hot Spot: The area planned for access to the development has been the site of several serious accidents, unfortunately including a fatality in March 2020 and May 2025. The proposed entrance to the site is unsuitable and has not been given consideration. 2. Road Network Inadequacy: The current road network, including Gypsy Lane and Hopwell Road, cannot handle the increased traffic volume. Significant investment and remodelling are required, which has not been planned.
1.14	South West of Draycott	Road Safety	Scott Gardner	Response-01554	There are serious concerns about the excessive speed limit and existing congestion near the proposed site access. This development also threatens to disrupt the reliability of essential bus services operating on the A6005. Paragraph 109 of the NPPF clearly states that development should be refused if it leads to unacceptable impacts on highway safety or severe residual cumulative impacts on the road network , and this proposal undoubtedly meets that threshold. I urge the council to consider the recent tragic accident as evidence that the A6005 is dangerous and more traffic will risk lives.
1.14	South West of Draycott	Road Safety	Sean Peace	Response-01347	The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents. 5 2 A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents. 6 3 NPPF 109. 1.14	South West of Draycott	Road Safety	Simon Jenkins	Response-01287	As per the first box, but adding a minimum of 300 plus extra cars is obviously going to cause congestion. That's a given, its safety that is paramount and quite clearly whoever is behind this proposal is not a Draycott resident !!!!!

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Road Safety	S M Beresford	Response-01851	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will increase traffic volume, impacting road safety and increasing the risk of accidents. A transport assessment needs to be undertaken, particularly for the residents opposite and adjoining the proposed site entrance. Moreover, the increased traffic will pose a significant risk to pedestrians and cyclists. The A6005 is a key route for local residents, including children walking to school and elderly residents. Higher traffic volumes increase the likelihood of accidents involving these vulnerable road users. Implementing traffic calming measures such as speed bumps, pedestrian crossings, and improved signage could mitigate some risks, but these measures need to be carefully planned and executed. A comprehensive transport assessment is essential to understand the full impact of the proposed development on road safety. This assessment should consider current traffic levels, projected increases, and the capacity of existing road infrastructure. It should also evaluate the potential need for new traffic control measures and improvements to pedestrian and cyclist safety.
1.14	South West of Draycott	Road Safety	Stephanie Ashley-Lane	Response-01380	Many cars speed once they come from Borrowwash into Draycott and do not reduce down to 30mph. Many cars have been written off on derby road due to the terrible driving and the main road is dangerous without adding more cars and parking to the area.
1.14	South West of Draycott	Road Safety	Susan Baker	Response-01316	We've already seen tragedy on these roads?fatal accidents in March 2020 and again in May 2025. The proposed access point for this development is not only unsuitable, it's dangerous. Roads like Gypsy Lane and Hopwell Road simply weren't built to handle this kind of volume. Major upgrades would be needed, but none are planned.
1.14	South West of Draycott	Road Safety	Susan Foster	Response-00824	The speed limit means nothing to some drivers at present, even though there is a speed indicator to show them when they are exceeding the 30mph limit. How much worse will it become with all the extra cars the 190 homes will bring, most homes having 2cars at least! The amount of traffic generated is going to cause significant problems for the community, as they speed through the village.
1.14	South West of Draycott	Road Safety	Teresa Batchelor	Response-01240	Having lived on Derby Road for over 20 years, it is my experience that speeding is a very serious problem, especially at this end of Derby Road as it leads out of the village and onto the straight roadway, which is locally known as 'Draycott Straight'. Cars and motorbikes speed up in anticipation of being able to "put their foot down" once they start to approach "the straight". This is just about at the point where the entrance to the new housing proposed would join Derby Road.
1.14	South West of Draycott	Road Safety	Teresa Shaw	Response-01309	1. Planning permission was rejected a small business at this local site because of access & egress issues in that area. Why can this genuine safety issue now be ignored when it suites? Who will be liable if the rush to build causes actual loss of life? This is double standards. 2. Bridges coming into the village create a blind spot - this is fact. A new access & egress sight will cause major issues. A pedestrian crossing may help a little, but the current speed limit of 40MPH into the village is regularly abused. Have you considered what a car doing 60MPH will do? It takes 73 meters to stop! Cars will overshoot the proposed site entrance by some way. This will likely become a black spot and lives we be lost. What other plans are in place to slow these cars down to allow safe access? E.g. Islands, Speed bumps, cameras. 3. A popular dedicated cyclist's route passes through Draycott and this busy junction with increase's traffic will put cyclist and a much greater risk. What is being done or considered to ensure the safety of cyclist? And encourage this greener mode of transport without risking lives. 4. Cycling clubs use derby road for club rides these will be exposed to a very busy junction. What precautions, safety measures are in place to consider cyclist. 5. Many Bridal paths surround the village riding is a popular past time. People ridding horses regularly plod down Derby Road. Purposely making the roads even busier will on increase the risk of fatality and incident. 6. Motor bikes race through the village a serious accident happened July 2019 & a fatality in March 2020. There was another fatality this week on Derby Road outside the one stop in Draycott. Your regularly get motorcycles going over a 100MPH from Borrowwash up to and through the village of Draycott & Breaston. It's a popular route for motorcycles. How will you prevent these motor cyclists killing themselves and now the new residents in this dangerous location blind spot.
1.14	South West of Draycott	Road Safety	Tim Hawkins	Response-00661	Putting pelican crossing so close to a blind bridge is asking for an increase in accidents. However, as I have not been permitted to see EBC's master plan for the development it's difficult to say.
1.14	South West of Draycott	Road Safety	Tracey Morton	Response-00968	The A6005 is very busy already 3861 cars per day average, highest being 4,779 per day in 2023,this will significantly increase road safety and accidents 2 speeding along this road is a big problem cars rarely do 30mph, more like 50-70, maximum speed recorded is 109 mph 3 There has been a fatal accident on the bridge out to borrowwash with traffic lights present 4 we have had a number of vehicles hit whilst parked on the road as have many residents along here 5 Lighting is not adequate resulting in accidents with parked vehicles 6 Developments need to be sensitive to there surroundings and not cause heavy impact to the road network 7 Limited bus service
1.14	South West of Draycott	Road Safety	T Shields	Response-00570	A new crossing is proposed as well as improvements to the main junction. It would be a short walk to the bus stop for trips between Derby and Long Eaton/Nottingham. There is no reason why there would be any adverse impact on road safety subject to the already existing 30mph speed limits.
1.14	South West of Draycott	Road Safety	William Batchelor	Response-01210	already a speeding blackspot with a fatal accident in recent years near the exisiting junction over the brow of a hill. Speeding from Drayott out and for reckless drivers coming in from Borrowwash (especially motorcycles and boy racers) is a constant problem

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Road Safety	zak butcher	Response-01156	The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowash. This is totally unrealistic and the current roads would not cope with the volume of traffic. NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowash. This is totally unrealistic and the current roads would not cope with the volume of traffic.
1.14	South West of Draycott	School Capacity	Anthony Walsh	Response-00992	The local school is currently under performing (OFSTED) and is not suitably equipped for any additional influx of children
1.14	South West of Draycott	School Capacity	Ben Kassoul	Response-01024	The additional homes will place a massive strain on the number of available places at the local school for existing residents who are yet to have children.
1.14	South West of Draycott	School Capacity	Bernadette Rothwell	Response-00998	The local primary has plenty of capacity I'd imagine as it's terrible. The local secondary schools are getting flier and fuller, with first choice options becoming increasingly hard to get, taking away the choice to send our kids to a school of good standard.
1.14	South West of Draycott	School Capacity	Bradley Peace	Response-01348	secondary schools are at or near capacity. An influx of families will put immense pressure on school places, potentially forcing local children to travel further afield for education.
1.14	South West of Draycott	School Capacity	Colin & Cynthia Green	Response-00922	Local Draycott infants/primary school not able to extend boundaries so where are extra schoolchildren going to go? Believe school capacity currently about right but extra places will definitely be needed so will be overcrowded.
1.14	South West of Draycott	School Capacity	David and Nicala O'Leary	Response-00822	Local schools are already oversubscribed and would not be able to accommodate the additional demand without significant, unfunded investment in staff and facilities.
1.14	South West of Draycott	School Capacity	David Boyle	Response-01426	The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents.
			David Webster	Response-01113	Has there been a study if our local school can cope with the extra children that will require education
1.14	South West of Draycott	School Capacity	Dexter Codrington	Response-00986	A lot of local children across the Borough have to travel to an available secondary school. There are limited places at the local schools as it is
			Diane Webster	Response-01177	Will the Draycott school have the capacity to cater for the addition children I assume a survey has taken
1.14	South West of Draycott	School Capacity	Donna Peace	Response-01344	The village primary school and surrounding secondary schools are at or near capacity. An influx of families will put immense pressure on school places, potentially forcing local children to travel further afield for education.
1.14	South West of Draycott	School Capacity	Gail Holdsworth	Response-00937	There is a small school right in the middle of Draycott. Such an increase in numbers will obviously result in more traffic congestion and pollution. Obviously not good for young children.
1.14	South West of Draycott	School Capacity	Gary Siddall	Response-01237	Yes, Draycott does have a school - I admit I do not know whether it has capacity for new children at the moment, but even if it does, will it be able to cope in the near future with potentially 190+ additional families...?? This needs to be taken in account.
1.14	South West of Draycott	School Capacity	Gerri Hickton	Response-01472	There is only one small primary school. Local secondary schools are further away which further increases the traffic congestion , air quality and accident risk
1.14	South West of Draycott	School Capacity	Gill Trickitt	Response-01157	The school is tiny. 1 class per year group. There would not be space for 190 children and with 190 or more homes, this figure is not even a worse case scenario.
1.14	South West of Draycott	School Capacity	Gordon Dahill	Response-00690	Availability of spaces in the local schools is not certain and secondary schools require buses to reach the schools More congestion.
1.14	South West of Draycott	School Capacity	Graham Wakeling	Response-01238	School capacities will increase locally, forcing current Draycott residents to seek schooling outside of the village, having a knock on affect to other local small communities.
1.14	South West of Draycott	School Capacity	Hannah Pritchard	Response-01399	Local primary and secondary schools are already near or at capacity. An influx of potentially hundreds of children from the development would overwhelm existing education provision. There is no confirmed plan or funding commitment for expanding school capacity to accommodate this growth, meaning local children may have to travel out of the area, reducing educational accessibility and increasing traffic burden.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	School Capacity	James Hargreaves	Response-01315	Local schools are underperforming, and parents are opting for already oversubscribed schools elsewhere, increasing car travel.
1.14	South West of Draycott	School Capacity	Jane Barker	Response-01178	The local village school is running at near full capacity now and I'm pretty sure that a further approx 200 more children would swamp the system. This would also increase pressure on the already heavily used buses to the secondary schools in the area.
1.14	South West of Draycott	School Capacity	Justine Murrin	Response-01478	This will increase demand on an already overstretched school system in this area.
1.14	South West of Draycott	School Capacity	Karen Smith	Response-01484	I'm concerned about the lack of infrastructure to support the proposed development. The village school doesn't have capacity to support 200+ houses.
1.14	South West of Draycott	School Capacity	Karla Williams	Response-00077	The school has capacity.
1.14	South West of Draycott	School Capacity	Kayleigh Bonallie	Response-01375	The school is a school that requires improvement. The local area have relocated their children to school in other villages as the school does not meet the needs of children
1.14	South West of Draycott	School Capacity	Kerry Naylor	Response-00993	What secondary school will be used for the pupils? How will the rather small primary school cope. The playground area is too small now. Classrooms are not fit for purpose and the building is very old.
1.14	South West of Draycott	School Capacity	Laura Charier	Response-01218	This may have a detrimental effect to the local school as number of pupils would drastically increase over a short period. Moreover, the Primary School will affected with noise and additional traffic.
1.14	South West of Draycott	School Capacity	Lee	Response-00742	1. Claims were made in council meeting @ Long Eaton 2,000 children are on the waiting list for affordable housing. Are School expansions being planned to cope with the accelerated builds? 2. Can schools flex / increase their capacity to cope with an escalated plan for these new builds or will students? educations suffer for a metric?
1.14	South West of Draycott	School Capacity	Louise and Shane Foster	Response-01219	Causing extra pressure on amenities particularly schooling
1.14	South West of Draycott	School Capacity	Louise Burnell	Response-00262	Existing schools will not cope with increased demand.
1.14	South West of Draycott	School Capacity	Luke Harper	Response-00898	The school has space for more children, but is a small school with limited space and not for as many as the potential amount the new houses will bring to the village.
1.14	South West of Draycott	School Capacity	Luke Hatch	Response-00160	Adding hundreds of new residents could easily overwhelm places and there's no detail on how education will be expanded to meet that need.
1.14	South West of Draycott	School Capacity	Maggie Murphy	Response-00833	Many children go to school outside of the village which again will increase traffic and pollution
1.14	South West of Draycott	School Capacity	Martin Kilcoyne	Response-01460	Local schools are already oversubscribed so the addition of 190 new homes, most of which will be likely purchased by families with children of school age will only exacerbate the situation.
1.14	South West of Draycott	School Capacity	Melanie Wilson	Response-00974	The primary school in the village would not have the capacity for the additional pupils, therefore the children would have to look for places elsewhere which would increase the traffic through the village
1.14	South West of Draycott	School Capacity	Michelle Marks	Response-00924	The village primary school and surrounding secondary schools are either full or near capacity. Additional housing will force families to seek school places further afield, creating logistical challenges and disrupting children's education.
		School Capacity	Mr R Sykes	Response-00412	Will overload an existing situation.
1.14	South West of Draycott	School Capacity	Mrs Elizabeth White	Response-00060	The local school would possibly have a problem with number of pupils.
1.14	South West of Draycott	School Capacity	Mrs Maria E Hardy	Response-00614	Very full primary school can only hold so many places.Furfield in Breaston I believe to be full capacity.
1.14	South West of Draycott	School Capacity	Mrs Patricia L Tacey	Response-00283	Draycott school is a typical village school and not designed to cope with the influx of children that a further 190 houses will bring.
1.14	South West of Draycott	School Capacity	Mrs V Atkin	Response-01871	Also the school will be impacted.
1.14	South West of Draycott	School Capacity	Nat	Response-00158	The schools in the area may not be able to cope with the increased volume of children- staffing are already stretched with the lack of teaching assistants/ dinner ladies etc
1.14	South West of Draycott	School Capacity	Neil Johnstone	Response-00725	The school is only small and probably at its limit. Adding more children to the mix will only put a strain on an already strained school.
1.14	South West of Draycott	School Capacity	Nicole Howe	Response-00881	Draycott school is already a small school. Building more houses is going to lead to overcrowding in schools. Affecting children's education due to disruptions in classrooms, not enough teachers etc.
1.14	South West of Draycott	School Capacity	Nigel morton	Response-01351	Local primary and secondary schools are low on spaces, 700 houses over draycott, breaston and borrowash will put a strain on them all.Draycott primary school does have space but there is reasons for that and until the head changes it will never be well used .
1.14	South West of Draycott	School Capacity	Oliver Kirk	Response-00569	There is already a shortage of school availability, the addition of 190 houses, will cause a significant increase on the schooling system in the area. Putting unfair pressure on the schools, nursery and colleges along with their staff to increase staff sizes and absorb this influx of people.
		School Capacity	Owen	Response-01547	With extra houses being built, what if any extra resources will be given to ensure that schools are not over crowed?
1.14	South West of Draycott	School Capacity	Paul Allen	Response-01082	There is insufficient school spaces, school parking, village parking and medical services at present and the development can only make matters worse.
1.14	South West of Draycott	School Capacity	Pauline Marks	Response-00927	Local schools are operating at or near full capacity. Additional pupils would likely have to travel outside the area, disrupting families and increasing traffic
1.14	South West of Draycott	School Capacity	Peter Sutton	Response-00409	Draycott only has one small primary school which would not have the capacity to accept the number of children expected on the development. the schools footprint is too small to expand even with Section 106 money.
1.14	South West of Draycott	School Capacity	R Fazackerley	Response-01415	There is insufficient local capacity in thr local schools to accommodate this development
1.14	South West of Draycott	School Capacity	Richard Syson	Response-01317	Assuming 'typical' population demographics, the addition of 190 + potential further 70 homes would have a significant impact upon Draycott Community Primary School. There does not appear to be any mention of any obligation for the developers to fund any necessary expansion of the school's capacity to be able to accomodate the influx of additional pupils
		School Capacity	Robert Alan Duncanson	Response-00855	THERE JUST ISNT THE CAPACITY FOR LOTS MORE CHILDREN IN THE VILLAGE

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	School Capacity	Roger Brown	Response-00999	The local primary school possibly has sufficient capacity for any new children resident at this site. However, all secondary aged children require buses to take them to and from school in Lon Eaton, Sandiacre and Spondon.
			Sarah	Response-01541	We've already struggled to get our son into a secondary school of choice and both in the area are full to capacity each year.
1.14	South West of Draycott	School Capacity	Sarah Hargreaves	Response-01314	School is underperforming- Parent will choose other local schools- already full and requiring travel by car
1.14	South West of Draycott	School Capacity	Scott Gardner	Response-01554	Draycott School I'm sure has vacancies. Numeric capacity is not my primary concern. Draycott school does not have the capacity to provide quality education and hasn't had within my lifetime. Adding more pupils to this system will make the quality worse for all children involved.
1.14	South West of Draycott	School Capacity	Sean Peace	Response-01347	secondary schools are at or near capacity. An influx of families will put immense pressure on school places, potentially forcing local children to travel further afield for education.
1.14	South West of Draycott	School Capacity	Simon Jenkins	Response-01287	I have no knowledge of the local school, but can it handle a minimum 200 and possibly up to 400 extra children ?
1.14	South West of Draycott	School Capacity	Susan Baker	Response-01316	Our local school is already under strain. Parents are opting for schools further afield, which means more cars on the road and more pressure on families.
1.14	South West of Draycott	School Capacity	Susan Foster	Response-00824	Draycott school has nowhere to be extended for an influx of children and the secondary schools are in the same position, therefore children would have to be bused elsewhere for their education, totally unsuitable for most parents who would prefer a school on the doorstep.
1.14	South West of Draycott	School Capacity	Teresa Batchelor	Response-01240	We only have a small infant/junior school, so where is it proposed the children of these new residents will be educated? Surely the housing is being built with families in mind, who will obviously, at some point, produce children! I do not consider enough consideration has been given to this aspect.
1.14	South West of Draycott	School Capacity	Teresa Shaw	Response-01309	1. Claims were made in council meeting @ Long Eaton 2,000 children are on the waiting list for affordable housing. Are School expansions being planned to cope with the accelerated builds? 2. Can schools flex / increase their capacity to cope with an escalated plan for these new builds or will students' educations suffer for a metric?
1.14	South West of Draycott	School Capacity	Tracey Morton	Response-00968	Popular Schools in the area are near the limit 2 Draycott primary is the only one with space but that's because children left on mass 3 people of lost confidence in Draycott school will take alot to turn it round
1.14	South West of Draycott	School Capacity	T Shields	Response-00570	Any infrastructure shortfall/need arising for education can be offset by a proportionate financial requirement from developers through a section 106 obligation.
1.14	South West of Draycott	Traffic Congestion	adrian leeming	Response-01249	The roads through Draycott are already an accident hotspot. There is daily speeding past the proposed site and at least 2 fatal accidents in recent years. 190+ more road users will certainly add to this. The Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic. A transport assessment needs to be undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This passes through Draycott and Borrowwash. Passing busy junctions, Doctor's surgeries, public car parks, Primary schools, local cricket club as well as numerous resident's homes. Noise from the construction (including vehicle movements) and operational phases of the proposed development need to be adequately addressed. The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead and will cause significant congestion issues throughout the village and increase accidents within this overburdened area. It will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. "NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic." NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and t
					he current roads would not cope with the volume of traffic.
1.14	South West of Draycott	Traffic Congestion	Alastair Dundas	Response-01200	The road that would need to be created for this development of 190 houses, would cause traffic buildup as you enter Draycott. Also Draycott has very little parking facilities.
1.14	South West of Draycott	Traffic Congestion	Alison Bowley	Response-01174	The A6005 Derby Rd is the main thoroughfare through the village from Borrowwash to Breaston. It carries a large volume of traffic, and the increased number of cars from a new housing estate will really impact both the safety and bring along environmental issues such as air pollution. ( Will all 190 households be able to afford electric vehicles?).

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Traffic Congestion	Alison Thirlwall	Response-01390	The roads in and around the proposed housing development South-West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead. The A6005 (Derby Road) is an already busy road at peak times during the week and weekend which currently experiences over 3,861 cars a day. Adding 190 additional houses will cause significant congestion issues throughout the village and increase accidents within this overburdened area. The current road network between Borrowwash and Draycott, which includes Derby Road, Hopewell Road and Gypsy Lane, already struggles to handle current traffic demand let alone the potential for at least 190 more cars. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment.
1.14	South West of Draycott	Traffic Congestion	Andrew and Jane Gilmour	Response-01329	The Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopwell Road which cannot take the current volume of traffic. A transport assessment needs to undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This will have to travel through Draycott and Borrowwash, using busy junctions, passing by busy shopping centres, public car parks, Primary schools, as well as numerous resident's homes. Noise from the construction (including vehicle movements) and operational phases of the proposed development need to be adequately addressed. The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopwell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 vehicles if this development goes ahead. The A6005 (Derby Road) is an already busy road at peak times during the week and weekend which currently experiences over 3,861 cars a day. Adding 190 additional houses will cause significant congestion issues throughout the village and increase accidents within this overburdened area. The current road network between Borrowwash and Draycott, which includes Derby Road, Hopwell Road and Gypsy Lane, already struggles to handle current traffic demand let alone the potential for at least 190 more vehicles. The increased road traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the River Derwent and the partially restored canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. "NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of vehicles. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. 1.14	South West of Draycott	Traffic Congestion	David Thurgood	Response-01195	The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with the increased number of vehicles (>250) if this development goes ahead. It is likely that further new access routes will have to be incorporated for this and any associated future development into areas not designed for increased traffic causing real safety risks.
1.14	South West of Draycott	Traffic Congestion	David Webster	Response-01113	"NPPF 109. States that transport issues should be considered from the earliest stages of plan-making and development proposals, using a vision-led approach to identify transport solutions that deliver well-designed, sustainable and popular places. This should involve identifying, assessing and taking into account the environmental impacts of traffic and transport infrastructure ? including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains. Yet no traffic survey has been undertaken. If it had it would have highlighted that along A6005 (Derby Road) and exactly adjacent the proposed development. The peak traffic hours on Fridays are between 4 PM and 6 PM, with the highest average vehicle count observed from 4 PM to 5 PM. The average number of cars per day in the traffic data is approximately 3,861 vehicles. The highest recorded traffic day in the data is June 11, 2023, with a total of 4,779 vehicles. The maximum speed recorded in the traffic data is 106 mph and the number of times 70 mph is exceeded in the traffic data is 174."
1.14	South West of Draycott	Traffic Congestion	Dexter Codrington	Response-00986	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will increase traffic volume, impacting road safety and increasing the risk of accidents. A transport assessment needs to be undertaken, particularly for the residents opposite and adjoining the proposed site entrance. The increased traffic and congestion will increase the pollution in the village. The traffic situation will be a cumulative impact of an additional 700 plus homes using the same main road from Borrowwash to Draycott to Breaston and onwards.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Traffic Congestion	Diane Webster	Response-01177	A transport assessment needs to undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This passes through Draycott and Borrowwash. Passing busy junctions, Doctor?s surgeries, public car parks, Primary schools, local cricket club as well as numerous resident?s homes. Noise from the construction (including vehicle movements) and operational phases of the proposed development need to be adequately addressed. The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead. The A6005 (Derby Road) is an already busy road at peak times during the week and weekend which currently experiences over 3,861 cars a day. Adding 190 additional houses will cause significant congestion issues throughout the village and increase accidents within this overburdened area. The current road network between Borrowwash and Draycott, which includes Derby Road, Hopewell Road and Gypsy Lane, already struggles to handle current traffic demand let alone the potential for at least 190 more cars. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. "NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic."
1.14	South West of Draycott	Traffic Congestion	Donna Butcher	Response-01155	he Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic. A transport assessment needs to undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This passes through Draycott and Borrowwash. Passing busy junctions, Doctor?s surgeries, public car parks, Primary schools, local cricket club as well as numerous resident?s homes. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic.
1.14	South West of Draycott	Traffic Congestion	Donna Peace	Response-01344	The road n and around Draycott are not designed to accommodate the extra vehicles this development will bring. Increased congestior and parking issues wil iegatively impact both resident: and commuters

1.14	South West of Draycott	Traffic Congestion	Gail Holdsworth	Response-00937	I rely on the only bus from Nottingham. Always full. The main road through Draycott near the Olympic is virtually one way traffic . Often difficult to cross the road. There is a history of speeding through Draycott especially near the proposed site.
1.14	South West of Draycott	Traffic Congestion	Garry Hickton	Response-01473	The site will bring in congestion to the village and the access and egress to the houses is in a dangerous place. With an additional 190 vehicles moving on and off the site there is the potential of major accidents
1.14	South West of Draycott	Traffic Congestion	Gary Siddall	Response-01237	The A6005 is a busy road already - but as a main "A" road between Nottingham and Derby (and excluding the A52 "bypass"), it's expected to be, that's what it's there for. (Figures for the amount of traffic using the road through Draycott are available, if you wish to ask.) However, it doesn't take much to snarl it all up and bring the whole area to a virtual standstill ! The most recent example has been all the roadworks etc. happening in Draycott and out towards Borrowwash... The almost constant traffic lights for weeks have caused some considerable disruption in the village and surrounding roads. I live on the main A6005 and although I personally live towards the opposite end of the village to where the works and traffic lights were, it was a regular occurrence to see traffic queuing past my house and cause difficulty for me to get on and off my own driveway. But yes, this case was "temporary", I know.... But it gives a good indication of what life could be like with increased traffic and - God forbid - (potentially) additional traffic lights to allow cars to get in and out of a "new housing estate". The increased traffic will not only congest the local roads in Draycott though - I fully expect many of the additional cars will be wanting to use the A52 as well.... Access to that is already just barely adequate (IMO), but add another 190+ cars (plus all of the ones from Borrowwash's "new houses") going up and down Cole Lane...?? Really...?? Traffic flow in the area is almost on a knife-edge, so any significant increase in traffic is likely to cause huge congestion.... And with 190/240 new houses, an additional one car per household on the roads in Draycott is surely a greatly conservative estimate...? I don't know how access/egress to the "proposed new houses" is going to work, there is potentially a lot of traffic trying to get in and out there... There have been RTA/RTI's in that area in the past (including one fatal, that I can recall), But as I said above, the thought of installing traffic lights there will likely disrupt traffic in the whole area, IMO. Increased traffic will also inevitably mean increased wear and tear on the roads too: It is already obvious, that the County Council are incapable of maintaining the roads (potholes !) to an acceptable standard - has this been taken into account at all....? As far as I'm aware, road safety/traffic planning should be addressed at the very early/primary stages of planning and development proposals, but this does not appear to be the case in this instance. The road infrastructure needs to have a LOT more thought than just putting one or two "side streets" into the "proposed new estate" - in fact, the WHOLE road traffic assessment by EBC seems to have been woefully inadequate. And remember - when I keep saying "190+ cars", that is a VERY conservative "absolute best case scenario" that unrealistically assumes that every new household has just one car.... Which we all know will NOT be the case in reality.
1.14	South West of Draycott	Traffic Congestion	Gemma Woolnough	Response-01394	The location of this housing development is directly off the main road through Draycott, a road which is already very busy at peak times and on which there is a high level of traffic speeding. There has also been multiple fatalities on this road involving cars entering the road from various streets & avenues going off it. It is very likely that the entrance to this housing development will require traffic to merge near the bridge which means less time for cars/motorbikes to react to new cars entering the road. The increase in traffic will also result in increased noise and air pollution, negatively impacting the lives of villagers.

1.14	South West of Draycott	Traffic Congestion	Gerri Hickton	Response-01472	The village is busy at key times- this was shown by the recent roadworks which caused carnage! This is going to be worse with additional housing and associated cars. Add construction traffic into the mix and the roads will be horrific at key times
1.14	South West of Draycott	Traffic Congestion	Gill Trickitt	Response-01157	As soon as there are any temporary lights in the village, the road straight through the centre which is a main road I believe for the emergency services too - comes to a standstill with queueing traffic and basic gridlock. There is one single passing point to get from one side of the village to the other and there are no other routes around without a huge detour and the congestion is terrible.
1.14	South West of Draycott	Traffic Congestion	Gordon Dahill	Response-00690	The extra traffic congestion between Breaston Draycott and Borrowwash with a possible extra 1000 cars is going to cause significant traffic problems
1.14	South West of Draycott	Traffic Congestion	Graham Wakeling	Response-01238	Draycott's roads are already far too busy, adding more houses will only further the traffic congestion problem(s) and that will be unacceptable.
1.14	South West of Draycott	Traffic Congestion	Hannah McMaster	Response-01381	The main Derby Road route is used as an alternative to the A52 at peak times. An increase in housing will increase the traffic through the village.
1.14	South West of Draycott	Traffic Congestion	Hannah Pritchard	Response-01399	The introduction of 190 new dwellings is projected to increase the local population by up to 950 residents, leading to a significant rise in vehicle use. Draycott's road network, particularly the pinch points along Station Road and Wilne Road, already experiences congestion during peak hours. Adding potentially 300-500 more vehicles from the development would severely exacerbate traffic issues, increase commute times, and reduce quality of life for current residents. No substantial traffic mitigation measures have been proposed.
1.14	South West of Draycott	Traffic Congestion	James Hargreaves	Response-01315	1. Existing Road Pressure: The A6005 (Derby Road) already handles a high volume of traffic, with over 3,861 vehicles daily. Adding 190 new homes will worsen congestion and heighten the likelihood of accidents. Recent utility works by Cadent Gas have already caused severe traffic disruption in the village. Road Safety

1.14	South West of Draycott	Traffic Congestion	Jonathan Childs	Response-01117	ic transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic. In addition to the above, issues already exist at the junction of Lime Grove and Derby Road where bus stops are positioned adjacent to and directly opposite Lime Grove and issues with vehicles parking too close to the junction are common. There have been numerous instances of near head-on collision where traffic travelling west-east on Derby Road has chosen not to wait behind the stopped eastbound bus and thus has created a 'near miss' situation with vehicles turning left out of Lime Grove. Similarly, with vehicles parked sometimes partly on the pavement (and illegally) too close to the junction with Lime Grove prevent a clear view of the Derby Road traffic and thus make it a difficult and dangerous task for anyone attempting to emerge from Lime Grove. Nothing has been done to address or police this in my 22 year residence and it is reasonable to expect that given the proposed topology of the proposed new site access road that similar situations will develop there too.
1.14	South West of Draycott	Traffic Congestion	Jonathan Fletcher	Response-01463	With an already busy village, the introduction of many more homes will only significantly increase severe congestion.
1.14	South West of Draycott	Traffic Congestion	Judith Boyle	Response-01418	A transport assessment needs to undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This passes through Draycott and Borrowwash. Passing busy junctions, Doctor?s surgeries, public car parks, Primary schools, local cricket club as well as numerous resident?s homes. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment.
1.14	South West of Draycott	Traffic Congestion	Julie Pleass	Response-01526	The Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead. The A6005 (Derby Road) is an already busy road at peak times during the week and weekend which currently experiences over 3,861 cars a day. Adding 190 additional houses will cause significant congestion issues throughout the village and increase accidents within this overburdened area.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Traffic Congestion	Juliet Macve	Response-01572	I understand that the Road Traffic Assessment carried out in March 2025 did not include Draycott, or assess the road network in or around the land South-West of Draycott. This appears to be a massive oversight, and had it been carried out it would have shown that the roads are already congested. A transport assessment must be carried out. NPPF (para 20) states that "Strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for: ... b) infrastructure for transport ...." NPPF (para 89) states that "Planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads and exploits any opportunities to make a location more sustainable (for example by improving the scope for access on foot, by cycling or by public transport). The use of previously developed land, and sites that are physically well-related to existing settlements, should be encouraged where suitable opportunities exist. The road network in and around the area is not suitable to cope with additional demand from new housing, especially taking into account the high number of new houses proposed for Draycott, Breaston and Borrowwash. The main road through Draycott (A6605) is already busy, particularly at peak times. Additional traffic will cause further congestion, thus increasing noise levels and reducing air quality and potentially causing health issues for residents. In addition, given the proximity to other green belt land and footpaths it will impact biodiversity as well as enjoyment of the countryside.
1.14	South West of Draycott	Traffic Congestion	Justine Murrin	Response-01478	this many houses will significantly and negatively impact on our infrastructure and traffic.
1.14	South West of Draycott	Traffic Congestion	Katie May	Response-01518	The Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic. A transport assessment needs to be undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This passes through Draycott and Borrowwash. Passing busy junctions, Doctor's surgeries, public car parks, Primary schools, local cricket club as well as numerous residents' homes. Noise from the construction (including vehicle movements) and operational phases of the proposed development need to be adequately addressed. The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 cars per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead. The A6005 (Derby Road) is an already busy road at peak times during the week and weekend which currently experiences over 3,861 cars a day. Adding 190 additional houses will cause significant congestion issues throughout the village and increase accidents within this overburdened area. The current road network between Borrowwash and Draycott, which includes Derby Road, Hopewell Road and Gypsy Lane, already struggles to handle current traffic demand let alone the potential for at least 190 more cars. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. "NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic." NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead.
1.14	South West of Draycott	Traffic Congestion	Laura Roffey	Response-01479	190 homes will add massively to the number of cars using Draycott and the surrounding area which will be a huge negative to Draycott as a village.
1.14	South West of Draycott	Traffic Congestion	Lee	Response-00742	1. With the increased traffic throughput is the road budget for maintenance to be increased locally? 2. Slowing Derby Road down to make it safe enough for the new housing estate and existing residents. Will impact the Ambulances that pass through the village to the hospital. This new pinch point / bottle neck plus additional traffic in general in Erewash will add crucial time to a critical ambulance route. Minutes will cost lives. Has this been seriously considered at all? 3. With the average household owning 1.3 Car this will introduce another 247 cars just in Draycott. When taking into account Borrowwash & Breaston our close neighbours another 572 vehicles will be zooming around. With planned extension to the plan, it will easily tip the 1000 figure. Is introducing this many cars in condensed area safe & particle? 4. Congestion, Road works & speed on the humpback bridge on Derby Road in March 2020 contributed to a fatality.
1.14	South West of Draycott	Traffic Congestion	Lee Bunday	Response-00028	The proposed development plans, as outlined in the strategy, will significantly increase the volume of vehicles on already overburdened road networks. There is one key route in and out of the area and with the additional allocations on the same road at Borrowwash and Breaston, will lead to regular congestion during peak hours. The addition of new housing developments without a corresponding, robust transport infrastructure plan will only exacerbate this issue. There appears to be a lack of detailed traffic impact assessments that take into account cumulative effects of multiple developments over time. The review also does not present any substantial mitigation strategies, such as improved public transport, new road links, or traffic management systems to support the proposed growth. Unchecked traffic congestion leads to: Increased air pollution and public health risks. Reduced economic productivity due to longer commute times. Lower quality of life for residents affected by noise, stress, and safety concerns. Greater wear and tear on local infrastructure, leading to higher maintenance costs. I urge the council to reconsider the scale and scope of the proposed developments until a comprehensive and sustainable transport plan is in place, supported by proper consultation and technical studies.
1.14	South West of Draycott	Traffic Congestion	Linda Jane Jenkins	Response-01007	I object on the grounds that if 190 houses are built in Draycott there are likely to be over 300 cars. Already it is difficult to turn right out of the current lane. Cars come far too fast over the double hump bridges to the west. There is no line of sight on traffic. A fatality occurred a couple of years ago just 30m from this exit. There is likely to be more accidents or worse.
1.14	South West of Draycott	Traffic Congestion	Louise and Shane Foster	Response-01219	Derby Road is a busy road and more houses will increase traffic volume. Again, has there been a risk assessment with regard to this and the disruption to the area whilst the building work takes place? Access to the site by large plant and delivery trucks will cause long delays.
1.14	South West of Draycott	Traffic Congestion	Louise Burnell	Response-00262	Increased traffic flow will lead to congestion.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Traffic Congestion	Luke Hatch	Response-00160	Draycott already sees traffic build-up, particularly on the A6005. Another 190 homes means hundreds more cars using the same narrow road network and there?s no clear plan for how that will be managed. This will only be compounded with the Borrowwash and Breaston developments, which all use the same road to access the A6 or Long Eaton/M1.
1.14	South West of Draycott	Traffic Congestion	Lynne Dundas	Response-01198	The location of the additional houses would mean that a road at the bottom of the hill coming into Draycott from Borrowwash, which would be a very bad traffic hazard.
1.14	South West of Draycott	Traffic Congestion	Maggie Murphy	Response-00833	The proposal for an initial 190 houses, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering for the area. It will totally change the look and feel of the village and will distract from the existing buildings and fields that welcome visitors to the village entrance alongside the proposed site. Draycott has some lovely footpaths and bridleways that allow simple and accessible access to the countryside and the surrounding villages. The village has a thriving community of horse riders with many Horse livery stables, keen cyclists and numerous walking and ramblers groups. They all happily coexist and share these paths throughout the locality. Increased urbanisation and the massive increase in traffic will impact this from Day 1. The roads will become unsuitable for horse riders and cyclists and the footpaths will be limited due to the development. The village will lose its rural identity and risk morphing into a combined town with Breaston and Borrowwash.
1.14	South West of Draycott	Traffic Congestion	Martin Fawcett	Response-01077	You don?t need to be a rocket scientist to know what impact this will have
1.14	South West of Draycott	Traffic Congestion	Martin Kilcoyne	Response-01460	The Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic. 1.14	South West of Draycott	Traffic Congestion	Miss Paige Murray	Response-01842	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will exacerbate traffic volume, impacting road safety and increasing the risk of accidents. Increased traffic can lead to congestion, longer travel times, and heightened frustration among drivers, which may result in more aggressive driving behaviours. The road infrastructure may not be equipped to handle the additional load, leading to potential bottlenecks and increased wear and tear on the road surface.
1.14	South West of Draycott	Traffic Congestion	Mr R Sykes	Response-00412	The access is on to heavily used between Borrowwash and Draycott.
1.14	South West of Draycott	Traffic Congestion	Mr Scott Walsh	Response-01844	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will exacerbate traffic volume, impacting road safety and increasing the risk of accidents. Increased traffic can lead to congestion, longer travel times, and heightened frustration among drivers, which may result in more aggressive driving behaviours. The road infrastructure may not be equipped to handle the additional load, leading to potential bottlenecks and increased wear and tear on the road surface.
1.14	South West of Draycott	Traffic Congestion	Mrs Elizabeth White	Response-00060	It would bring extra traffic to the area with danger to the stress put on the bridges on that road and the village is already overcrowded with traffic.
			Mrs Maria E Hardy	Response-00614	Too much congestion. Making a peaceful village noisy, polluted, and unsafe.
1.14	South West of Draycott	Traffic Congestion	Mrs Mary Walsh	Response-01845	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will exacerbate traffic volume, impacting road safety and increasing the risk of accidents. Increased traffic can lead to congestion, longer travel times, and heightened frustration among drivers, which may result in more aggressive driving behaviours. The road infrastructure may not be equipped to handle the additional load, leading to potential bottlenecks and increased wear and tear on the road surface.
1.14	South West of Draycott	Traffic Congestion	Mrs V Atkin	Response-01871	Not only that but the road through the village is already far to busy, without adding extra traffic.
1.14	South West of Draycott	Traffic Congestion	Mr Tony Walsh	Response-01849	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will exacerbate traffic volume, impacting road safety and increasing the risk of accidents. Increased traffic can lead to congestion, longer travel times, and heightened frustration among drivers, which may result in more aggressive driving behaviours. The road infrastructure may not be equipped to handle the additional load, leading to potential bottlenecks and increased wear and tear on the road surface.
			Nat	Response-00158	Increased traffic to the area
1.14	South West of Draycott	Traffic Congestion	Neil Johnstone	Response-00725	Increased traffic on an already busy main road through the village.
1.14	South West of Draycott	Traffic Congestion	Nicole Howe	Response-00881	Draycott already had a busy main road leading from borrowwash through to breaston. Adding more houses is only going to create more traffic and pollution.
1.14	South West of Draycott	Traffic Congestion	Nigel morton	Response-01351	The traffic is very heavy along proposed site location and surrounding area ie Cole Lane borrowwash for A52 ,Victoria avenue to A52 and routes to A50 and M1 ,the 700 houses proposed over draycott ,breaston and borrowwash will add to that drastically .my property is opposite the proposed site and I have trouble getting off my drive at all times of the day ,road traffic doesn't slow till around 8 at night .The speed monitor on the bridge has recorded a highest speed of 100mph ,most vehicles don't do 30mpn but much higher
1.14	South West of Draycott	Traffic Congestion	Nikki Riches	Response-00950	As a resident in Draycott the amount of traffic that uses Derby Road has increased in time. Trying to cross it is a already a nightmare and risk, which will only be compounded by a significant increase to the village of 190 cars (min) if the development does go ahead. The Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC or quite frankly ineptitude, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic - struggling to handle current traffic demand let alone the potential for at least 190 more cars. A transport assessment needs to undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This passes through Draycott and Borrowwash. Passing busy junctions, Doctor?s surgeries, public car parks, Primary schools, local cricket club as well as numerous resident?s homes. The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic. NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require signific

This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic.
1.14	South West of Draycott	Traffic Congestion	Pauline Marks	Response-00927	Draycott?s road network was not designed to handle high traffic volumes. Increased vehicle use would lead to congestion, parking shortages, and road safety concerns. The development offers no improvements to public transport, making it car-dependent and environmentally unsustainable. Loss of Village Identity and Policy Non-Compliance
1.14	South West of Draycott	Traffic Congestion	Peter Bates	Response-01912	why has no traffic survey been carried out by EBC when we have an average of over 4000 cars per week entering and leaving the village? The increase in traffic to the area will have a detrimental impact when considering the close proximity of Green Belt land, the River Derwent and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density and the carbon footprint does not align to the NPPFs sustainable assessment. Increased traffic will also cause more pollution to the air quality thus adversely effecting the village population.
1.14	South West of Draycott	Traffic Congestion	R Fazackerley	Response-01415	The planned development access onto the A6005 will add significant additional traffic to the local area . Site access during construction and use is unsafe as the access is obscured by thr bridge over the canal for traffic coming from Borrowwash
1.14	South West of Draycott	Traffic Congestion	Richard Keith Hanbury	Response-01087	The huge increase in traffic will cause congestion. I ride a bike to work and have already been hit by a car 2 years ago. I am worried that the increase traffic will cause more safety issues with cyclists and pedestrians. The road works already cause problems with the traffic lights often breaking down and causing chaos.
1.14	South West of Draycott	Traffic Congestion	Richard Syson	Response-01317	The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences c. 4,000 vehicles per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead. Adding another 190 homes plus a potential extra 70 homes would add c. 500 extra vehicles. The current road noise and pollution from vehicles is already considerable and would obviously worsen, especially as there appears to be no thought or plan as how to alleviate the already significant traffic issues in the village.
1.14	South West of Draycott	Traffic Congestion	Rick Howden	Response-01421	The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead. The current road network between Borrowwash and Draycott, which includes Derby Road, Hopewell Road and Gypsy Lane, already struggles to handle current traffic demand let alone the potential for at least 190 more cars.
1.14	South West of Draycott	Traffic Congestion	Ricky fisher	Response-00048	Traffic congestion in the village is already at a high with out another 190 houses adding to it as soon as one road work goes up in the village its absolute chaos
1.14	South West of Draycott	Traffic Congestion	Robert Alan Duncanson	Response-00855	THE INCREASE IN TRAFFIC WOULD BE DETRIMENTAL TO THE VILLAGE, WE ALREADY HAVE ALOT OF TRAFFIC AT PEAK TIMES
1.14	South West of Draycott	Traffic Congestion	Roger Brown	Response-00999	The A6005 Derby Rd through Draycott already has in excess of 500 vehicles per hour travelling in each direction during morning and evenings, these additional homes, together with those of other nearby developments will add considerably with these homes having access to and egress from the development onto this busy road at a known speeding location. These additional homes are likely to have an average of about 2 cars per home and the likely residents will be of working age with younger children who will commute to work and school making this a busy new junction in a dangerous location.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Traffic Congestion	Ruth Hawkins	Response-01277	The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead. Adding 190 additional houses will cause significant congestion issues throughout the village and increase accidents within this overburdened area.
1.14	South West of Draycott	Traffic Congestion	Sarah	Response-01541	There is already enough through traffic with road works and traffic lights almost weekly
1.14	South West of Draycott	Traffic Congestion	Sarah Hargreaves	Response-01314	1. Traffic Congestion: The A6005 (Derby Road) already experiences significant traffic, with over 3,861 cars per day. The addition of 190 houses will exacerbate congestion and increase the risk of accidents. Recent work by Cadent Gas has caused gridlock within the village due.
1.14	South West of Draycott	Traffic Congestion	Scott Gardner	Response-01554	The proposed development will have a catastrophic impact on the already strained traffic conditions on the A6005 (Derby Road). This road is a vital artery for Draycott, connecting us to Derby and Nottingham. It is already a busy road suffering from significant congestion and has a concerning history of traffic accidents. The addition of approximately 190 homes will inevitably lead to a severe increase in traffic volume, exacerbating existing congestion , increasing the risk of accidents , and further endangering pedestrians.
1.14	South West of Draycott	Traffic Congestion	Sean Peace	Response-01347	The road in and around Draycott are not designed to accommodate the extra vehicles this development will bring. Increased congestion and parking issues will negatively impact both resident and commuters
1.14	South West of Draycott	Traffic Congestion	Simon Jenkins	Response-01287	Derby Road is already a dangerous road. Every night without fail some idiot will be speeding, almost rocking the houses on the main road. Proper speed cameras would need to be installed as a minimum, but if you go ahead with this purely political decision to build 190 houses there will without doubt be more deaths on this road.
1.14	South West of Draycott	Traffic Congestion	S M Beresford	Response-01851	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will exacerbate traffic volume, impacting road safety and increasing the risk of accidents. Increased traffic can lead to congestion, longer travel times, and heightened frustration among drivers, which may result in more aggressive driving behaviours. The road infrastructure may not be equipped to handle the additional load, leading to potential bottlenecks and increased wear and tear on the road surface.
1.14	South West of Draycott	Traffic Congestion	Stephanie Ashley-Lane	Response-01380	The traffic is already terrible at times through draycott without adding more!
1.14	South West of Draycott	Traffic Congestion	Susan Baker	Response-01316	As someone who's lived here for over 3 years, I can say with certainty that the A6005 (Derby Road) has long struggled with heavy traffic?over 3,800 vehicles a day, and that's without the added pressure of 190 new homes. The recent chaos caused by Cadent Gas works brought the village to a standstill. Adding more cars will only make things worse and increase the risk of serious accidents.
1.14	South West of Draycott	Traffic Congestion	Susan Foster	Response-00824	Imagine the infrastructure in a project like you are proposing, just replacing a few gas pipes has caused chaos, mess and delays due to traffic lights. The whole village will become gridlocked, a no go area and everyone will avoid the village.
1.14	South West of Draycott	Traffic Congestion	Teresa Batchelor	Response-01240	I appreciate the proposed improvements to footpaths and the junction to the site, but nevertheless, the increased traffic, on an already busy Derby Road, where there has been at least one fatality, to my knowledge, would only cause more problems for existing residents.
1.14	South West of Draycott	Traffic Congestion	Teresa Shaw	Response-01309	1. With the increased traffic throughput is the Derby road budget for maintenance to be increased locally? 2. Slowing Derby Road down to make it safe enough for the new housing estate and existing residents. Will impact the Ambulances that pass through the villages to the hospital. This new pinch point / bottle neck plus additional traffic in general in Erewash will add crucial time to a critical ambulance route. Minutes will cost lives. Has this been seriously considered at all? 3. With the average household owning 1.3 Car this will introduce another 247 cars just in Draycott and 40 Breaston. When taking into account Borrowash, Draycott & Breaston our close neighbours another 612 vehicles will be zooming around. With planned extensions to the plan, it will easily tip the 1000 figure. Is introducing this many cars in a condensed area is this safe & practical? 4. Congestion, Road works & speed on the humpback bridge on Derby Road in March 2020 contributed to a fatality. Having a junction after a blind spot will only cause a permanent congestion point making it highly unsafe.
1.14	South West of Draycott	Traffic Congestion	Tim Hawkins	Response-00661	Well, it won't relieve it will it? It is unlikely that the 300 or so new cars in the village will be heading into the village centre, rather to the out of town facilities in Derby, but it will possibly mean a huge increase in delivery services as the development is proposed to increase the local population by some 10% or so. However, as I have not been permitted to see EBC's master plan for the development it's difficult to say.
1.14	South West of Draycott	Traffic Congestion	Tom	Response-01477	With the addition of 190 new houses, it's reasonable to expect at least one car per household. This increase in vehicles is unnecessary and will only worsen the already existing traffic issues in the village, where speeding is already a serious concern. This is a quiet, peaceful village that does not need the added burden of more traffic and speeding vehicles. There was a fatality last week in the village, having more vehicles will only make the risks of crashing higher.
1.14	South West of Draycott	Traffic Congestion	Tracey Morton	Response-00968	1 The road traffic assessment did not include Draycott, huge error by EBC, hasty approach and reckless, over 40 vehicles travel along A6005 per day, very busy road. 2. Cole Lane, Gypsy Lane, Victoria Av, Hopewell Road already have significant traffic volume 3 Traffic assessment required particularly for residents opposite the site entrance, also for the route of construction traffic 4 Noise from construction vehicles needs to be addressed 5. Traffic heavy already building 190+ houses will add more traffic causing more problems 6 Living opposite this junction causing problem getting on and off my driveway at most times of the day 7 Increased traffic will have an effect on the environment, wildlife, air quality and people's health and wellbeing 8 Roads around the area don't cope with volume of traffic ATM, the proposed houses within Draycott, Breaston and Borrowash will cause major problems

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Traffic Congestion	T Shields	Response-00570	Draycott is not heavily congested. It can get busy at peak times which is short-lived, so any increase in traffic resulting from the proposed housing would not be significant. A new crossing is proposed as well as improvements to the main junction. It would be a short walk to the bus stop for trips between Derby and Long Eaton/Nottingham so the site is sustainably located in accordance with the NPPF and local Development Plan policies in that sense.
1.14	South West of Draycott	Traffic Congestion	William Batchelor	Response-01210	already a busy road at peak hours, difficulty in safely exiting Derby Road properties already
1.14	South West of Draycott	Traffic Congestion	zak butcher	Response-01156	he Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic. A transport assessment needs to be undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This passes through Draycott and Borrowash. Passing busy junctions, Doctor's surgeries, public car parks, Primary schools, local cricket club as well as numerous resident's homes. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowash. This is totally unrealistic and the current roads would not cope with the volume of traffic.
1.14	South West of Draycott	Type of Housing	adrian leeming	Response-01249	My belief is that the existing brownfield sites are seen as not attractive enough to attract developers however the objective is to address the housing crisis, not maximise developer returns. The developers want the work so the UK authorities and government need to play a bit harder with them and oblige them to develop sites which will earn them revenue, but not convert new sites in order to maximise their profits. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000. The intention of the government push for more housing is an intention to resolve the housing shortage created by enabling too high borrowing levels, leading to house price inflation and building mostly 4 and 5 bedroom homes isn't the right approach. Building cheaper 3 bedroom houses on the edge of a town which would be reasonably priced and attractive to new buyers is more in line with this requirement.
1.14	South West of Draycott	Type of Housing	Alison Bowley	Response-01174	Interestingly, as I write this objection, there are 50 houses for sale in Draycott, 25 of them having been reduced in price, so obviously not selling. Would people want to buy a house in a known flood risk area? Affordable housing would certainly not be in keeping with the type of houses along Derby Rd. Draycott already has a large number of EMH social housing developments, including Wallis Close, The Green, St Mary's Court, Queen's Court, Walter St, Elvaston St and many houses/flats on Cowslip Meadow, Mapleton Rd and in Victoria Mill are let as social housing.
1.14	South West of Draycott	Type of Housing	Alison Thirlwall	Response-01390	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will border the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village's strong historic character? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem.
1.14	South West of Draycott	Type of Housing	A Northeast	Response-01848	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing, particularly the houses along Derby Road. Careful consideration must be given to ensure similar housing is developed to maintain the neighborhood and village character.
1.14	South West of Draycott	Type of Housing	Anthony Lawton-Reeve	Response-00971	The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village's strong historic character? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Type of Housing	Anthony Walsh	Response-00992	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing,
1.14	South West of Draycott	Type of Housing	Avice Boyle	Response-01427	Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. 1.14	South West of Draycott	Type of Housing	David G York	Response-01843	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing, particularly the houses along Derby Road. Careful consideration must be given to ensure similar housing is developed to maintain the neighborhood and village character.
1.14	South West of Draycott	Type of Housing	David Thompson	Response-00654	Allowed development of this land will bring the requirement for potential developers to include further development of social housing. Previous required development of social housing in Draycott brought waves of increased crime rates, which are not welcomed in the village.
1.14	South West of Draycott	Type of Housing	David Webster	Response-01113	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing, The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village's strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.
1.14	South West of Draycott	Type of Housing	Dexter Codrington	Response-00986	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing, particularly the houses along Derby Road. Any planned development should take place on Brownfield sites.
1.14	South West of Draycott	Type of Housing	Diane Webster	Response-01177	Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. 1.14	South West of Draycott	Type of Housing	Donna Butcher	Response-01155	Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The taking away of grazing/arable land and the disruption for the wildlife. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield si
1.14	South West of Draycott	Type of Housing	Donna Butcher	Response-01155	tes existing in EBC which should be used first before Green Belt. NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.
1.14	South West of Draycott	Type of Housing	Donna Peace	Response-01344	1 The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. 1.14	South West of Draycott	Type of Housing	Gill Trickitt	Response-01157	any large number of homes on the edge of a village will feel like a heavy set of building and not at all create a village. The road currently has a single file each side of independant detached houses, each unique and gently creating a blend into countryside as you leave the village. No-one wants to enter a village and be met with a huge housing estate of towering buildings, crammed together in a tight space.
1.14	South West of Draycott	Type of Housing	Graham Wakeling	Response-01238	New build house will not be in keeping with traditional local houses and mills in the surrounding area. They will be a complete eye sore.
1.14	South West of Draycott	Type of Housing	Hannah Pritchard	Response-01399	The type and size of housing proposed have not been sufficiently detailed. If the homes are aimed at families (as is typical with new developments), this will exacerbate school and healthcare capacity issues. There is also no clear provision for genuinely affordable housing or properties suited to the elderly or first-time buyers, which should be prioritised for local housing need.
1.14	South West of Draycott	Type of Housing	James Hargreaves	Response-01315	1. Mismatch with Local Character: The proposed 40% affordable housing does not align with the existing 4?5 bedroom detached homes. The design and density are inconsistent with the village?s character. 2. Overdevelopment: The scale of the project is excessive and will alter the village?s heritage and landscape. Brownfield sites should be prioritized. 3. Policy Misalignment: National housing policy emphasizes brownfield development and sustainable communities. This proposal contradicts those goals by targeting Green Belt land. 4. Affordable Housing Standards: Government guidelines require 50% affordable housing on Green Belt land, with a focus on social rent. The proposed 40% falls short and is out of character with the area.
1.14	South West of Draycott	Type of Housing	James Whyman	Response-01551	1 The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. 2 Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing, 3 The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village?s strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. 4 The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.
1.14	South West of Draycott	Type of Housing	Jane Barker	Response-01178	The proposed plans say 40% affordable housing but how will this work. The developers will try and build the least that they can and the rest will be 3/4 bed houses.
1.14	South West of Draycott	Type of Housing	J Morgan	Response-01847	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing, particularly the houses along Derby Road. Careful consideration must be given to ensure similar housing is developed to maintain the neighborhood and village character.

1.14	South West of Draycott	Type of Housing	Jonathan Childs	Response-01117	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development (and some on Lime Grove) are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the 190 no. dwellings has been designated as affordable housing. 40% of 190 = 76 homes. A recent, cursory search of local estate agents reveals that at least half of this number are currently vacant in the immediate locality, bringing into question whether or not the proposed development serves any true purpose other than to satisfy a political/theoretical requirement which in practice, does not actually exist? This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only 66 of the 190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing, What consideration/compensation will be offered to affected property owners when their properties are devalued by the presence of this unwanted blight? The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village, in particular, Lime Grove The proposed housing mix is out of keeping with the village?s strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem and while the proposed site may (for reasons of sheer, individual greed) be an easy purchase, there are comparable sites very close by which have none of the flooding problems and no adjoining properties to consider or affect. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000 and existing two-bedroom properties remaining vacant with prices as low as £155k!
1.14	South West of Draycott	Type of Housing	Jonathan Fletcher	Response-01463	The types of properties outlined will definitely introduce multiple vehicles per household into the community bringing all the problems that go along with heightened congestion.
1.14	South West of Draycott	Type of Housing	Judith Boyle	Response-01418	Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.
1.14	South West of Draycott	Type of Housing	Juliet Macve	Response-01572	The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village?s strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. 1.14	South West of Draycott	Type of Housing	Lee	Response-00742	1. Why 40% for affordable living this is an insult to the people that have worked hard for what they have. This plan enables the current abuse of the system to continue by certain people who are not worthy. Its encouraging people not to go to work, claim benefit or seek asylum.
1.14	South West of Draycott	Type of Housing	Linda Jane Jenkins	Response-01007	I currently live in a quiet Dorma bungalow just off Derby road. My garden runs along the field that you are propsing to build on. What type of housing will be built. I currently have 3 neighbours bordering my property I don't want another 3-5. The likelihood of noise and disturbance is immense. How much imput will we have.
1.14	South West of Draycott	Type of Housing	Luke Hatch	Response-00160	I don't know much about the different types of housing. It seems densely packed for a village development, especially one the size of Draycott. I don't particularly understand the argument that building affordable homes in Draycott will make flat prices in Long Eaton cheaper, as they serve completely different people. People live in Long Eaton for restaurants, amenities, and fast transport links. Draycott offers a more countryfied feel but none of the things that people want in Long Eaton. It's just building to hit government targets and not thinking about where 190 houses need to be built. Also, why do we need more affordable housing in Draycott? We have a good number of council homes, and we have the Victoria Mills conversion and Cowslip Meadow. There are plenty of houses under £190k available in Draycott. How will adding 40% affordable here help with housing pressures elsewhere in Erewash?
1.14	South West of Draycott	Type of Housing	Maggie Murphy	Response-00833	1. The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. 2. Within the EBCs Core Strategy plan it details a draft housing allocation which refers to the type of houses. It states that 40% of the 190 dwellings have been designated as affordable housing which breaks down to 29 '2 Bed Terraces' and 95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only 66 of the 190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing.
1.14	South West of Draycott	Type of Housing	Martin Fawcett	Response-01077	Focus should be building on non green belt sites and houses that the younger generation can afford

1.14	South West of Draycott	Type of Housing	Martin Kilcoyne	Response-01460	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing. The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village?s strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.
1.14	South West of Draycott	Type of Housing	Mary Walsh	Response-01197	The proposed siting of the development is particularly ill-considered. 1.14	South West of Draycott	Type of Housing	Mrs Mary Walsh	Response-01845	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing, particularly the houses along Derby Road. Careful consideration must be given to ensure similar housing is developed to maintain the neighborhood and village character.
1.14	South West of Draycott	Type of Housing	Mr Tony Walsh	Response-01849	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing, particularly the houses along Derby Road. Careful consideration must be given to ensure similar housing is developed to maintain the neighborhood and village character.
1.14	South West of Draycott	Type of Housing	Nigel morton	Response-01351	The houses will not be affordable ,they will not be in character with the present houses next to and across from the proposed site .none will be for single and elderly people because not enough profit for the developer
1.14	South West of Draycott	Type of Housing	Nikki Riches	Response-00950	The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000 - not affordable!
1.14	South West of Draycott	Type of Housing	Oliver Kirk	Response-00569	40% of affordable housing is unacceptable.
1.14	South West of Draycott	Type of Housing	Owen	Response-01547	I have read that 40% will be affordable housing. What percentage of housing will be, private owned, private rent, social housing and temporary accommodation?
1.14	South West of Draycott	Type of Housing	paul butcher	Response-01154	Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The taking away of grazing/arable land and the disruption for the wildlife. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield si
1.14	South West of Draycott	Type of Housing	paul butcher	Response-01154	tes existing in EBC which should be used first before Green Belt. NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.
1.14	South West of Draycott	Type of Housing	Richard Keith Hanbury	Response-01087	Are you building flats? Are you taking into account the existing housing and building to match the new houses into the environment. Or do you care?
1.14	South West of Draycott	Type of Housing	Richard Syson	Response-01317	The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village's strong historic character. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000 - therefore these houses would not be 'affordable' to many people. Houses should not be allowed to be built on this site. They should be built on the many brownfield sites which already exist and are not being used - and building on such sites would allow cheaper housing that would be more 'affordable'

1.14	South West of Draycott	Type of Housing	Rick Howden	Response-01421	Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing,
1.14	South West of Draycott	Type of Housing	Roger Brown	Response-00999	The proposed housing seems inappropriate for its surroundings. 40% affordable housing is suggested for a village that already has a large amount of social housing and these will be located close to larger detached 3-5 bedroom homes.
1.14	South West of Draycott	Type of Housing	Ruth Hawkins	Response-01277	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. Also, the need for affordable housing which is needed will not actually be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000. At 20% less to meet the affordable housing definition remains unaffordable housing
1.14	South West of Draycott	Type of Housing	Sarah	Response-01541	Never enough starter homes and even the smaller built are purchased by investors.
1.14	South West of Draycott	Type of Housing	Sarah Hargreaves	Response-01314	1. Mismatch with Existing Housing: The proposed 40% affordable housing is not in keeping with the surrounding 4-5 bedroom detached houses. This allocation is overbearing and does not harmonize with the village character. The homes on Derby Road are established older homes, all unique in their design and do not fit with an 'Estate' or 'New Build' design aesthetic. 2. Scale of Development: The scale of the development is unrealistic and will significantly change the heritage and landscape of Draycott. There are better-suited Brownfield sites that should be prioritized. 3. National Housing Policies: The government's long-term housing strategy emphasizes the importance of prioritizing brownfield development and adhering to mandatory local housing targets. The strategy also includes plans to regenerate towns and cities, focusing on sustainable and beautiful neighborhoods. The proposed development contradicts these policies by prioritizing Green Belt land over available brownfield sites. 4. Affordable Housing Requirements: The government's policy mandates that any Green Belt development should include targets of 50% affordable housing with a focus on social rent. The proposed development's allocation of 40% affordable housing does not meet this requirement, and the type of housing proposed is not in keeping with the surrounding area
1.14	South West of Draycott	Type of Housing	Scott Gardner	Response-01554	The large proportion of affordable housing is not in proportion to the village and wont therefore be in keeping. This doesn't support social cohesion. There are >150 houses within a 5 mile radius of Draycott presently for sale, the presence of affordability housing is not an issue.
1.14	South West of Draycott	Type of Housing	Sean Peace	Response-01347	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. 5 2 Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing, 6 3 The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village's strong historic character? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. 7 4 The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.
		Type of Housing	Simon Jenkins	Response-01287	NONE !!!!!!!
1.14	South West of Draycott	Type of Housing	S M Beresford	Response-01851	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing, particularly the houses along Derby Road. Careful consideration must be given to ensure similar housing is developed to maintain the neighborhood and village character.
1.14	South West of Draycott	Type of Housing	Susan Baker	Response-01316	This plan doesn't fit our village. Forty percent affordable housing might sound good on paper, but it doesn't match the character of our area, which is made up of older, unique homes. This isn't just about aesthetics?it's about preserving the identity of Draycott. And let's be honest: there are better places for this kind of development, like brownfield sites, which the government itself says should be prioritized.
1.14	South West of Draycott	Type of Housing	Susan Foster	Response-00824	What is affordable housing, cheaply built homes that will not stand the test of time?

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	type of Housing	Teresa Batchelor	Response-01240	Why 40% social housing? I believe this is more than the Government actually demands to be built on new estates, so why is Draycott expected to accept this level? In my experience of working in the housing sector, cheaper housing tends to attract investors who purchase and then re-let property, quite often to anyone who can afford the rent, with no regard to their suitability to the type of housing or the area and this often leads to anti-social behaviour . At the very least there should be some restrictions put in place to ensure such housing is sold to owner-occupiers, not investors.
1.14	South West of Draycott	type of Housing	Teresa Shaw	Response-01309	1. Why 40% for affordable living this is an insult to the people that have worked hard for what they have. This plan enables the current abuse of the system to continue by certain people who are not worthy. Its encouraging people not to go to work, claim benefit or illegal immigration
1.14	South West of Draycott	type of Housing	Tim Hawkins	Response-00661	The claimed 40% affordable housing is a laudable claim, but it will never happen (from past experience) and the development will end up as a faceless 3 or 4 bedroom executive estate with a bit of buy off for social accommodation somewhere in the area. However, as I have not been permitted to see EBC's master plan for the development it's difficult to say.
1.14	South West of Draycott	type of Housing	Tracey Morton	Response-00968	The houses will be for newcomers to the village 2 there will be no houses for single people or older people
1.14	South West of Draycott	type of Housing	T Shields	Response-00570	Erewash, like many parts of the region is failing to provide enough full-market housing and affordable housing. The proposed development would provide a high (40%) proportion of affordable housing. Draycott needs to play its part in providing homes for its children's future.
1.14	South West of Draycott	type of Housing	Wilfred Boone	Response-01424	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.
1.14	South West of Draycott	Wildlife / Biodiversity	adrian leeming	Response-01249	If there are no other options housing people is ultimately a priority however whilst other sites are available green belt land needs to be held to protect wildlife and biodiversity. This is a national/global policy and essential for the survival of our ecosystem. I have regularly spotted a bird of prey on this site as well as bats and a fox. Across the road the canal was blocked to protect a water vole. I'm amazed that developing this site is seen as viable given the wildlife it supports and will of course be killed if the work takes place. This site is a mature natural habitat which can not be replaced. It will create unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. The taking away of grazing/arable land and the disruption for the wildlife. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. Planners must recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. There is an opinion that the deer fencing would devalue the area of open farmland and public right of way. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. There us a historical badger sett on part of the site to the Victorian tip at the bridge of Nooning Lane. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. This area forms a green corridor and houses a number of RED LIST species The proposed site will lead to removal of several TPO trees which contribute to the visual amenity of the ar

1.14	South West of Draycott	Wildlife / Biodiversity	Alastair Dundas	Response-01200	The development will negatively impact the ecology/wildlife and beauty of the area.
1.14	South West of Draycott	Wildlife / Biodiversity	Alison Bowley	Response-01174	Any development will hugely impact the local wildlife and biodiversity which the area currently has. As I understand it, if developments go ahead, builders have to incorporate biodiversity conservation measures through Biodiversity Net Gain(BNG). Can you inform me of any such measures currently occurring in Derbyshire please? If our local green space is replaced by 190 houses, what will happen to the local wildlife? The Covid pandemic illustrated just how important our green spaces are in helping with mental well being.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Wildlife / Biodiversity	Alison Thirlwall	Response-01390	The loss of the ecology in the area and the impact on the flora, fauna and wildlife is a serious concern as is the unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. It will result in the taking away of grazing/arable land and the disruption for the wildlife. These decisions are irreversible, and our residents will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites. I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance. and cause psychological distress for residents.
1.14	South West of Draycott	Wildlife / Biodiversity	A Northeast	Response-01848	The area has an abundance of wildlife, including protected species such as bats and many migrating birds. These animals and birds will lose their habitats and nesting sites, which is not protecting our fragile environment or providing for biodiversity in our green spaces. The development will damage the biodiversity of the site and adjoining Green Belt. The area has an abundance of wildlife, including protected species. This development will remove grazing land, a valuable asset for horses, and scatter local wildlife, leading to the loss of habitats.
1.14	South West of Draycott	Wildlife / Biodiversity	Anthony Lawton-Reeve	Response-00971	This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife.
1.14	South West of Draycott	Wildlife / Biodiversity	Anthony Walsh	Response-00992	The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance. "NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite. "
1.14	South West of Draycott	Wildlife / Biodiversity	Ashley Cartlidge	Response-01420	Wildlife is being squeezed and many of our native species are under threat.
1.14	South West of Draycott	Wildlife / Biodiversity	Avice Boyle	Response-01427	These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. Historical badger sett on part of the site to the Victorian tip at the bridge of Nooning Lane.

The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.
1.14	South West of Draycott	Wildlife / Biodiversity	Bernadette Rothwell	Response-00998	I can?t imagine the destruction to wildlife from these plans. There is much wildlife and bird life in the area which will be disrupted from these plans.
1.14	South West of Draycott	Wildlife / Biodiversity	Bev Marvell	Response-01892	This Green Belt is valuable for its ecological contributions. The wooded area included on the map of this proposal has a Council Tree Preservation order: 'EV14, PROTECTION OF TREES AND HEDGEROWS,DC5 - 88, Land near Bankfields Farm, Draycott, 19830429,19840203,W1 - Hawthorn copper beech sycamore limes willows & oaks' This is to protect groups of trees/woodlands considered important for their contribution to the local environment and the public's enjoyment. Half of this wooded area is in the proposal for development. The other half of the wood is within the area of 'safeguarded land'. Aerial maps show this wooded area is an 'oasis' for natural habitat within a sea of open countryside. It can not be lost or replaced. It is known that there are bats, owls, hedgehogs in this area, as well as other creatures. The Wildlife & Countryside Act 1981 provides protection for Barn Owls and Hedgehogs. Bats are protected under the Conservation of Habitats and Species Regulations 2017. There have been Barn Owl boxes very nearby for many years which are used by owls every year to raise their young

1.14	South West of Draycott	Wildlife / Biodiversity	David and Mary Murden	Response-01898	As well as its primary use as agricultural land, this area is also a much valued haven for local wildlife, much of which is considered endangered in our country. At present we are visited by badgers, foxes, hedgehogs, bats and many, many birds. At the last RSPB birdcount we recorded 20 different species in our garden. Also in the fields and woods which are under consideration we know that Sparrow hawks regularly make their nests, they are a home for the Little Owl and the Barn Owl, both Green and Greater spotted woodpeckers and buzzards. It goes without saying that once building work commences in this area much of this wildlife will disappear and this would be a very sorry state of affairs.
1.14	South West of Draycott	Wildlife / Biodiversity	David and Nicala O'Leary	Response-00822	The proposed site is rich in biodiversity, supporting a variety of bird species, bats, and small mammals. Development would destroy these habitats permanently. It would also eliminate a key green corridor that serves as a natural buffer between settlements. The proposed development also contradicts commitments under the Climate Change Act 2008 and Environment Act 2021, including the legal requirement to achieve a 10% Biodiversity Net Gain.
1.14	South West of Draycott	Wildlife / Biodiversity	David Atchison	Response-01247	The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.
1.14	South West of Draycott	Wildlife / Biodiversity	Gail Holdsworth	Response-00937	The village is surrounded by wildlife and nature reserves. Chad Water for example. The proposed sites proximity to the river and other bodies of water make it a haven for wildlife. Why is green belt and protected areas like trees being used when there is plenty of brown field and grey belt available. There are paths and walks around Draycott that are well used by residents for dog walking and for the positive effect in mental health, for adults but especially for children.
			Garry Hickton	Response-01473	Bats and other wildlife live in the area concerned
1.14	South West of Draycott	Wildlife / Biodiversity	Gary Siddall	Response-01237	This site not only has a number of protected trees/woodland areas, but is also many species of wildlife too: It is known - and recorded - that the area is home to various species of hedgehogs, squirrels, foxes, and also deer, bats and badgers. As well as these there are many types of birds - importantly, including some on the "Red List" - which use or return to the area annually, for their nesting habitat. Obviously, their whole environment will be destroyed, with no chance of it ever coming back again. A few years ago, Water Voles were discovered at an adjacent site on Derby Road and immediately, steps were taken to protect them. Now, due to the close proximity of this proposed housing site, it is highly possible that it's development could affect/disrupt the Voles' colonies... As Water Voles are legally protected in the UK, has this been properly investigated/assessed ??
1.14	South West of Draycott	Wildlife / Biodiversity	Gemma Woolnough	Response-01394	The land this development is planned for is precious green belt land, which provides homes for lots of nature & wildlife. By building on this land it would negatively impact the wildlife in the area due to a significant loss of habitat. Deer, badgers, foxes, pheasants, barn owls & bats and many bird species have been seen on this land, all of which would be displaced if this housing development were to go ahead. Also being very close to multiple water sources water vole have also been seen in the very near surrounding areas. As more and more green belt land is being built on this will only continue to get worse with less & less places for wildlife to live in leading to a loss of biodiversity in Draycott and surrounding villages but also negatively disrupting vital ecosystems.

The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.
1.14	South West of Draycott	Wildlife / Biodiversity	Gerri Hickton	Response-01472	The area is a haven for wildlife. I have personally seen bats, Mont jack deer and a barn owl.
1.14	South West of Draycott	Wildlife / Biodiversity	Gill Trickitt	Response-01157	There are multiple protected wildlife that live I the area. Deer fawn wandering in the fields in question just last week. How is this move going to be anything other than negative for the wildlife living in this GREEN belt area.
1.14	South West of Draycott	Wildlife / Biodiversity	Gordon Dahill	Response-00690	The woods hedges and field borders are home to much wild life, and the field itself. These also help to CO2 and other emissions. Badgers foxes hedgehogs little owls greater spotted woodpeckers green woodpeckers buzzards sparrow hawkes (nesting in the trees) many smaller birds blue tits great tits gold finchand many others. Occasionally a rare little egret when the field is waterlogged behind Lime Grove .
1.14	South West of Draycott	Wildlife / Biodiversity	Graham Wakeling	Response-01238	I strongly object to the to the proposed reclassification of greenbelt land, Wildlife and biodiversity will be heavily affected, and will not recover, Wildlife will be forced away from its natural habits and closer to dangerous inner city locations. Biodiversity will be massively affected, many wild plants will be destroyed and lost forever. Newt populations will also suffer. From a human prospective green spaces, trees and wild life are important to local residents mental health and wellbeing.
1.14	South West of Draycott	Wildlife / Biodiversity	Hannah McMaster	Response-01381	The site earmarked for development is a natural habitat for hordes of wildlife including bats and badgers. This would devastate their natural habitat
1.14	South West of Draycott	Wildlife / Biodiversity	Hannah Pritchard	Response-01399	The development would result in the destruction of mature hedgerows, open grassland, and habitats vital for local wildlife, including bats, owls, badgers, and newts which have been reported in the area. Disruption to the local ecosystem cannot be reversed. The removal of these green spaces would break ecological corridors and have a knock-on effect on biodiversity in the wider area. No adequate mitigation or biodiversity net gain strategy has been demonstrated.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Wildlife / Biodiversity	Jacqueline Hyett	Response-01548	The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. The taking away of grazing/arable land and the disruption for the wildlife.
1.14	South West of Draycott	Wildlife / Biodiversity	James Hargreaves	Response-01315	1. Loss of Recreational Land: The development will eliminate open green spaces used by locals for leisure, negatively affecting mental health and community wellbeing. 2. Threat to Wildlife: The area supports diverse wildlife, including red-listed species like hedgehogs, foxes, squirrels, and birds. Construction will destroy habitats, despite the availability of brownfield alternatives. 3. Protected Species: The site is home to protected bats and deer. Bats are safeguarded under UK law, and development will disrupt their habitats. Deer also play a role in maintaining ecological balance and will be displaced. 4. Visual Impact: The development will obstruct scenic views and reduce the rural character of the area. 5. Tree Protection: Many trees in the area are protected by Tree Preservation Orders (TPOs) and must remain untouched.
1.14	South West of Draycott	Wildlife / Biodiversity	James Whyman	Response-01551	1 Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. 2 Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. 3 This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. 4 The taking away of grazing/arable land and the disruption for the wildlife. 5 These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. 6 Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. There is an opinion that the deer fencing would devalue the area of open farmland and public right of way. 7 This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. 8 The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. 9 These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. 10 Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. 11 Historical badger sett on part of the site to the Victorian tip at the bridge of Nooning Lane. 12 The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. 13 To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. 1.14	South West of Draycott	Wildlife / Biodiversity	Jane Barker	Response-01178	This area of Draycott is home to a wide range of wildlife including 4 species (maybe now more during the warmer climate) of bats (which are by law protected), badgers, deer, foxes and many many other small mammals. This also includes a very wide range of birds including Owls and sparrowhawks using as nesting areas.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Wildlife / Biodiversity	J Morgan	Response-01847	The area has an abundance of wildlife, including protected species such as bats and many migrating birds. These animals and birds will lose their habitats and nesting sites, which is not protecting our fragile environment or providing for biodiversity in our green spaces. The development will damage the biodiversity of the site and adjoining Green Belt. The area has an abundance of wildlife, including protected species. This development will remove grazing land, a valuable asset for horses, and scatter local wildlife, leading to the loss of habitats.
1.14	South West of Draycott	Wildlife / Biodiversity	John Brayshaw	Response-01379	Too much natural habitat is being destroyed. We already see an increase in the urban foxes in the area and this is a known habitat area for them as well as the pipistral bats too.
1.14	South West of Draycott	Wildlife / Biodiversity	Jonathan Childs	Response-01117	This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area and is totally disproportionate to the existing population. The taking away of grazing/arable land and the disruption for the wildlife. While this may no longer be required by the farm, why should the adjacent residents suffer the imposition of a new (and largely unwanted) development when this area has been protected for so long? These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels as well as a considerable number of protected species. The development of 190+ homes will mean the 'eviction' or death of many different animals and the destruction of this mature natural habitat. Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190+ houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area and disturb or destroy the present ecological balance of the area. To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. This area forms a green corridor and houses a number of RED LIST species. The proposed site and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Bankfields Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance and overall, destroy something which has been protected for many, many years merely for political reasons! NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EB
1.14	South West of Draycott	Wildlife / Biodiversity	Jonathan Childs	Response-01117	C which should be used first before Green Belt. NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite. In addition to the above, there is a large wildlife population which includes a considerable number of protected species in a wooded/hedgerow area immediately located between one of the main site areas and the ironically-named 'safeguarded' field adjacent. The development cannot proceed without consideration of this and to do so is fundamentally illegal!
1.14	South West of Draycott	Wildlife / Biodiversity	Jonathan Fletcher	Response-01463	There are currently thousands of varied species of wildlife using the green space as home. This will destroy and kill many of those and I feel very strongly about this!!
1.14	South West of Draycott	Wildlife / Biodiversity	Judith Boyle	Response-01418	The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. This area forms a green corridor and houses a number of RED LIST species
1.14	South West of Draycott	Wildlife / Biodiversity	Julie Pleass	Response-01526	The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Wildlife / Biodiversity	Juliet Macve	Response-01572	The proposed area is very important to flora and fauna, both as a wildlife corridor and in its own right. The area either supports or is home to several endangered and declining species including, but not limited to, skylarks, house sparrows, little owls, hedgehogs, hares and various species of bat. In addition, water voles are present very close by, in the canal. The UK is amongst the world's most nature-depleted nations. Changing the status of this land away from greenbelt, and subsequently building on it will only go to further this trend and this is entirely reckless and unacceptable. There is insufficient alternative habitat for displaced wildlife to establish elsewhere, and any damage caused to the area is irreversible. The fundamental purpose of the Nottingham and Derby Green Belt is to prevent urban sprawl and restrict development in order to preserve the countryside and the environment. This change absolutely does not fit in with those objectives. It is also entirely unrealistic that the rules noted below could be met in developing an area that is currently so rich in wildlife. Please see the following excerpts from the NPPF: Para 8 - "Achieving sustainable development means that the planning system has three overarching objectives, which are interdependent and need to be pursued in mutually supportive ways ... c) an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy." Para 151 - "Once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as ... to retain and enhance landscapes, visual amenity and biodiversity ..." Para 192 - "To protect and enhance biodiversity and geodiversity, plans should: a) Identify, map and safeguard components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national and locally designated sites of importance for biodiversity; wildlife corridors and stepping stones that connect them; and areas identified by national and local partnerships for habitat management, enhancement, restoration or creation; and b) promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. In addition to the NPPF, the Town and Country Planning Act (as amended by the Environment Act), requires a biodiversity net gain of 10%.
1.14	South West of Draycott	Wildlife / Biodiversity	Justine Murrin	Response-01478	This will cause significant loss to local wildlife, greenspace and local biodiversity. There are many brown sites that could be utilised to these new houses.
1.14	South West of Draycott	Wildlife / Biodiversity	Karen Doxey	Response-01236	Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The taking away of grazing/arable land and the disruption for the wildlife. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat.

The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.
1.14	South West of Draycott	Wildlife / Biodiversity	Kerry Naylor	Response-00993	There are numerous different species of wildlife that will be affected by development. The copse of trees in the field has birds of prey, buzzards as well as a well established nesting site of crows. The barn owl feeds in the filed area. Bats are seen every night feeding from the insects in the filed and nearby gardens. We have blue tits nesting in a bird box, who fly across the field to find food. Where will they find the natural food when the trees are gone?! Rabbits and foxes can be seen in the fields every day/evening. Where will they go? It cannot be right to affect the rural landscape for housing when wildlife is established.
1.14	South West of Draycott	Wildlife / Biodiversity	Laura Charier	Response-01218	This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness.
1.14	South West of Draycott	Wildlife / Biodiversity	Laura Roffey	Response-01479	The loss of the greenbelt will have a huge negative effect on wildlife and biodiversity with the reduced open spaces, fields and hedgerows being lost.
1.14	South West of Draycott	Wildlife / Biodiversity	Lee	Response-00742	1. The development will cause further loss of wildlife habitats like trees grasslands, hedges. When we first moved in, we regularly saw foxes, squirrels, rabbits, hedgehogs, frogs and the odd badger. Bird life was in abundance robins and finches were continuous visitors. At night you could & can see the Bats circling. Wildlife has already been negatively impacted by the development shoehorned in at 101 Derby Road. Anymore further building and sprawl will just decimate this end of the village's wildlife - how can this be justified?
1.14	South West of Draycott	Wildlife / Biodiversity	Lee Bunday	Response-00028	The review outlines significant housing expansion, much of which is planned near or within ecologically sensitive areas ? including woodlands, Grasslands and hedgerows that support a diverse range of species. However, the strategy does not sufficiently identify or safeguard priority habitats, nor does it provide robust measures to prevent habitat fragmentation, species displacement, or biodiversity loss. Key concerns include: A lack of detailed ecological assessments for the proposed development areas. Insufficient integration of green corridors and habitat connectivity into site plans. Absence of binding targets or enforcement mechanisms to ensure biodiversity net gain. Risk to protected species and loss of ecosystem services such as pollination, flood mitigation, and air purification. The Environment Act 2021 places a legal duty on planning authorities to ensure that new developments deliver measurable biodiversity net gain. This obligation appears to be under-addressed in the current Core Strategy Review. I urge the council to revise the strategy to include: Comprehensive ecological surveys and impact assessments. Requirements for developers to enhance, not just preserve, local biodiversity. Long-term monitoring and funding for habitat restoration. Strategic green infrastructure planning that connects and protects natural spaces. Without these steps, the strategy risks doing irreversible damage to local ecosystems and undermining commitments to environmental sustainability.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Wildlife / Biodiversity	Linda Jane Jenkins	Response-01007	I live at 93 Derby road. There are bats, foxes, hedgehogs and numerous birds. The wild life has already reduced with the building of Lace Gardens at the back of 91 and 93 Derby road. It isn't right that our green and pleasant land should be further diminished just because it is now easy to do this.
1.14	South West of Draycott	Wildlife / Biodiversity	Louise and Shane Foster	Response-01219	This development seems to fly in the face of preserving our open spaces and wildlife, including protected species such as bats.
1.14	South West of Draycott	Wildlife / Biodiversity	Louise Burnell	Response-00262	Loss of greenfield land will lead to destruction of natural habitats and negative impacts for local wildlife populations.
1.14	South West of Draycott	Wildlife / Biodiversity	Luke Harper	Response-00898	This is green belt land with many beautiful trees.
1.14	South West of Draycott	Wildlife / Biodiversity	Luke Hatch	Response-00160	The area includes open fields and hedgerows used by local wildlife. Losing this space disrupts nature and chips away at local biodiversity something we should be protecting, not replacing with tarmac. When Keir Starmer spoke about "Grey Belt land" he spoke about abandoned petrol stations, not green fields!
1.14	South West of Draycott	Wildlife / Biodiversity	Maggie Murphy	Response-00833	. EBC must acknowledge the loss of Ecology in the area and the importance of Flora, fauna and wildlife The irreversible and unnecessary damage to the planned site and adjacent greenfield environments The size of the development will damage the biodiversity of the site and the adjoining greenbelt. The area has an abundance of wildlife including numerous Badger sets, foxes, hares and deer. There are protected species such as Bats and many migrating bird including Swallows , Resident birds include Buzzards these animals and birds will lose their habitats and their annual breeding sites . This is not protecting our fragile environment or providing for biodiversity in our green spaces. This development will remove grazing land which is a valuable asset when used by horses to protect and retain the greenspaces and Green Belt. Once our local wildlife has been scattered by this development it will be lost as there will be nowhere to re-establish their habitats
1.14	South West of Draycott	Wildlife / Biodiversity	Martin Fawcett	Response-01077	See landscape comments
1.14	South West of Draycott	Wildlife / Biodiversity	Martin Kilcoyne	Response-01460	Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. 1.14	South West of Draycott	Wildlife / Biodiversity	Michael Thirtwall	Response-01196	Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat.
1.14	South West of Draycott	Wildlife / Biodiversity	Michelle Marks	Response-00924	The proposed site is designated Green Belt land, which serves a critical role in preventing urban sprawl, protecting natural habitats, and maintaining the rural character of our countryside. The National Planning Policy Framework (NPPF 2023) explicitly states that Green Belt boundaries should only be altered in exceptional circumstances (Paragraph 140), and that inappropriate development should not be permitted unless very special circumstances exist (Paragraphs 149-150). No compelling justification has been provided to demonstrate that these criteria have been met. The environmental impact of this development would be devastating: Destruction of vital ecosystems ? The site is home to a range of wildlife, including birds, bats, and small mammals, which rely on this area for survival. Habitat destruction will result in biodiversity loss, contravening the Environment Act 2021, which mandates a 10% Biodiversity Net Gain.
1.14	South West of Draycott	Wildlife / Biodiversity	Miss Ella Meredith	Response-01850	The area has an abundance of wildlife, including protected species such as bats and many migrating birds. These animals and birds will lose their habitats and nesting sites, which is not protecting our fragile environment or providing for biodiversity in our green spaces. The development will damage the biodiversity of the site and adjoining Green Belt. The area has an abundance of wildlife, including protected species. This development will remove grazing land, a valuable asset for horses, and scatter local wildlife, leading to the loss of habitats.
1.14	South West of Draycott	Wildlife / Biodiversity	Miss Natalie Walsh	Response-01846	The area has an abundance of wildlife, including protected species such as bats and many migrating birds. These animals and birds will lose their habitats and nesting sites, which is not protecting our fragile environment or providing for biodiversity in our green spaces. The development will damage the biodiversity of the site and adjoining Green Belt. The area has an abundance of wildlife, including protected species. This development will remove grazing land, a valuable asset for horses, and scatter local wildlife, leading to the loss of habitats.
1.14	South West of Draycott	Wildlife / Biodiversity	Miss Paige Murray	Response-01842	The area has an abundance of wildlife, including protected species such as bats and many migrating birds. These animals and birds will lose their habitats and nesting sites, which is not protecting our fragile environment or providing for biodiversity in our green spaces. The development will damage the biodiversity of the site and adjoining Green Belt. The area has an abundance of wildlife, including protected species. This development will remove grazing land, a valuable asset for horses, and scatter local wildlife, leading to the loss of habitats.
1.14	South West of Draycott	Wildlife / Biodiversity	Mr Graham Bingham and Mrs Kristine Bingham	Response-01302	The development will damage the biodiversity of the site and adjoining Green belt land. the area has an abundance of wildlife, including some protected species. This development will remove valuable grazing land and scatter local wildlife leading to the loss of habitats
1.14	South West of Draycott	Wildlife / Biodiversity	Mr R Sykes	Response-00412	Destruction of habitat.
1.14	South West of Draycott	Wildlife / Biodiversity	Mr Scott Walsh	Response-01844	The area has an abundance of wildlife, including protected species such as bats and many migrating birds. These animals and birds will lose their habitats and nesting sites, which is not protecting our fragile environment or providing for biodiversity in our green spaces. The development will damage the biodiversity of the site and adjoining Green Belt. The area has an abundance of wildlife, including protected species. This development will remove grazing land, a valuable asset for horses, and scatter local wildlife, leading to the loss of habitats.
1.14	South West of Draycott	Wildlife / Biodiversity	Mrs Maria E Hardy	Response-00614	Beautiful wildlife will be destroyed and that another reason we love Draycott so much.
1.14	South West of Draycott	Wildlife / Biodiversity	Mrs Mary Walsh	Response-01845	The area has an abundance of wildlife, including protected species such as bats and many migrating birds. These animals and birds will lose their habitats and nesting sites, which is not protecting our fragile environment or providing for biodiversity in our green spaces. The development will damage the biodiversity of the site and adjoining Green Belt. The area has an abundance of wildlife, including protected species. This development will remove grazing land, a valuable asset for horses, and scatter local wildlife, leading to the loss of habitats.
1.14	South West of Draycott	Wildlife / Biodiversity	Mrs V Atkin	Response-01871	Not to mention the amount of wildlife that will be affected.
1.14	South West of Draycott	Wildlife / Biodiversity	Mr Tony Walsh	Response-01849	The area has an abundance of wildlife, including protected species such as bats and many migrating birds. These animals and birds will lose their habitats and nesting sites, which is not protecting our fragile environment or providing for biodiversity in our green spaces. The development will damage the biodiversity of the site and adjoining Green Belt. The area has an abundance of wildlife, including protected species. This development will remove grazing land, a valuable asset for horses, and scatter local wildlife, leading to the loss of habitats.
1.14	South West of Draycott	Wildlife / Biodiversity	Nat	Response-00158	The horses/ birds etc will loose their homes
1.14	South West of Draycott	Wildlife / Biodiversity	Neil Johnstone	Response-00725	This speaks for itself. Building a housing estate on green belt will ruin the wildlife of that area.
1.14	South West of Draycott	Wildlife / Biodiversity	Nicole Howe	Response-00881	Habitat Protection Green Belt areas often contain: ? Woodlands, hedgerows, grasslands, and wetlands that support a wide range of species. ? Species include badgers, foxes, bats, hedgehogs, owls, bees, butterflies, and many types of birds. These spaces are especially important in regions where urban sprawl has already reduced natural habitats. 2. Wildlife Corridors ? Green Belts act as ?green corridors? allowing animals to move safely between habitats. ? This movement is vital for feeding, mating, and genetic diversity, particularly for species that are threatened or declining. 3. Protection for Pollinators ? Bees, butterflies, and other pollinators thrive in wildflower meadows and hedgerows. ? Their presence supports wider ecosystems, including agriculture, by aiding in plant pollination. 4. Buffer Against Extinction ? Many species in the UK are under threat due to habitat loss, pollution, and climate change. ? Green Belt land helps slow this decline by offering protected, undisturbed zones

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Wildlife / Biodiversity	Nigel morton	Response-01351	We have lots of wildlife surrounding us and in the protected wooded area at the side of bankfield farm ,TPO88 ,as confirmed by ererwash Borough Council, there are 4 different sorts of bats ,foxes ,birds,deers and several badgers sets ,I fear where they will go to.
1.14	South West of Draycott	Wildlife / Biodiversity	Nikki Riches	Response-00950	<p>? The new development is unnecessarily damaging green field sites, resulting in an irreversible stain on the landscape. ? This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area, which is highly important to the biodiversity of the area. ? The taking away of grazing/arable land and the disruption for the wildlife. ? These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. ? The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. ? These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. ? Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area, if not disappear. ? Historical badger sett on part of the site to the Victorian tip at the bridge of Nooning Lane. ? The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. ? To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. This area forms a green corridor and houses a number of RED LIST species ? The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance. ? NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged</p>
1.14	South West of Draycott	Wildlife / Biodiversity	Nikki Riches	Response-00950	<p>and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. ? NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt. ? NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.</p>
1.14	South West of Draycott	Wildlife / Biodiversity	Oliver Kirk	Response-00569	The loss of greenspaces will reduce local wildlife, driving them to unfamiliar habitats and causing secondary chain issues far beyond the initial unsettling of this environment.
1.14	South West of Draycott	Wildlife / Biodiversity	Owen	Response-01547	What steps will be followed to ensure that the wildlife in the surrounding areas will not be at risk.
1.14	South West of Draycott	Wildlife / Biodiversity	Paul Allen	Response-01082	The green space provides an important corridor for wildlife, which will be impacted by light pollution and urban noise. There does not seem to be an Ecological survey carried by EBC prior to this proposal, which seems to be at odds with the Biodiversity Supplementary Planning Document.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Wildlife / Biodiversity	paul butcher	Response-01154	Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The taking away of grazing/arable land and the disruption for the wildlife. 1.14	South West of Draycott	Wildlife / Biodiversity	paul butcher	Response-01154	tes existing in EBC which should be used first before Green Belt. NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.
1.14	South West of Draycott	Wildlife / Biodiversity	Paul Daniel Murrin	Response-01517	This will have a detrimental impact on the fauna and flora of this area.
1.14	South West of Draycott	Wildlife / Biodiversity	Pauline Marks	Response-00927	The area supports a diverse range of wildlife, including protected species such as bats and nesting birds. The destruction of these habitats violates the principles of the Environment Act 2021, which requires a minimum 10% biodiversity net gain. Increased flood risk: Natural land currently helps absorb rainfall and reduce surface water runoff. Replacing it with impermeable surfaces will raise the risk of flooding in Draycott and nearby communities.
1.14	South West of Draycott	Wildlife / Biodiversity	Peter Bates	Response-01912	The area has an abundance of wildlife including numerous Badger sets,foxes hares and Deer There are also protected species such as Bats and Water voles. Many migrating birds such as Swallows, Swifts, House and Sand Martins, Red Wings, aswell as Owls, Buzzards, Red Kites, Crows, Sparrows, Blackbirds, Thrushes, Robins, various Finches and Blue Tits, even Wood Peckers. This is by no means an exhaustive list but does gives a good idea of the variety of species that have their habitat on this Green Belt area. If this plan goes ahead these animals and birds will lose their habitats and their annual nesting sites.
1.14	South West of Draycott	Wildlife / Biodiversity	Peter Sutton	Response-00409	The area is home to bats, badgers, foxes, birds, insects and too many species to name. Once this habitat is removed, it cannot be replaced.
1.14	South West of Draycott	Wildlife / Biodiversity	R Beresford	Response-01907	Along with all the loss of the wildlife in the wooded area through which the footpath runs, including Buzzards, green and Greater spotted Wood peckers - bats ,foxes, hedgehogs, owls ,sparrow hawks, also a little egret often in early spring behind our house while the field is waterlogged. All this habitat will be lost.
1.14	South West of Draycott	Wildlife / Biodiversity	R Fazackerley	Response-01415	The proposed development will adversely impact the local wildlife in the river Derwent valley and poses additional new risks to the river based on the proximity and scale of the development
1.14	South West of Draycott	Wildlife / Biodiversity	Richard Keith Hanbury	Response-01087	We currently get hedgehogs in the garden. There are deer in the field. Foxes inhabit this area along with hares, bats and many other animals. What right do we have to take their habitat. away from them.
1.14	South West of Draycott	Wildlife / Biodiversity	Richard Syson	Response-01317	This is a colossal proposed development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. This would cause appalling damage to green field sites by taking away grazing land, resulting in an irreversible stain on the landscape. NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Green Belt to Grey Belt land does not meet this objective and will actually achieve the total opposite.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Wildlife / Biodiversity	Rick Howden	Response-01421	Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. This area forms a green corridor and houses a number of RED LIST species
1.14	South West of Draycott	Wildlife / Biodiversity	Ricky fisher	Response-00048	Lots of wildlife lives the area that the houses are going to be built in i often walk my dog along them and its full of badgers foxes rabbits birds owls you name it there in and along the area highlighted it will kill all of them
1.14	South West of Draycott	Wildlife / Biodiversity	Roger Brown	Response-00999	Bats, barn owls, badgers, deer and foxes are known to live in this area and have been surveyed. A recent bat survey showed the presence of 4 bat species resident in the area. There are a number of TPOs on the site.
1.14	South West of Draycott	Wildlife / Biodiversity	Ruth Hawkins	Response-01277	The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC should be used first before Green Belt. The development will negatively impact the ecology, wildlife and beauty of the area. The land is home to a significant amounts of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective and this area of the village will be unrealistically overburdened with development on what should be Green Belt and green space.
1.14	South West of Draycott	Wildlife / Biodiversity	Sarah Hargreaves	Response-01314	1. Loss of Open Land: The development will result in the loss of open land frequently used by residents for recreation, negatively impacting mental health and wellbeing. 2. Impact on Wildlife: The land is home to significant wildlife, including red-listed species such as birds, foxes, hedgehogs, and squirrels. The development will destroy habitats and nesting sites, which is unacceptable when existing Brownfield sites can be used. The area also includes historical badger sets, Muntjac Deer, and potentially water voles, which are all protected species. The excavation and construction activities will likely force these animals to relocate, causing irreversible damage to the local ecosystem. 3. Protected Bats and Deer: The land Southwest of Draycott is known to be a habitat for protected bat species and deer. Bats are protected under the Wildlife and Countryside Act 1981 and the Conservation of Habitats and Species Regulations 2017. The development will disrupt their roosting sites and foraging areas, leading to a decline in their population. Similarly, the presence of deer in the area contributes to the biodiversity and ecological balance. The construction activities and subsequent human encroachment will severely impact their natural habitat. 4. Visual and Spatial Openness: The development will have a significant impact on the visual and spatial openness of the area, obstructing the landscape and diminishing the visual experience of the countryside. 5. Tree Preservation: Many the trees within the area are subject to TPO classification. These should remain protected.
1.14	South West of Draycott	Wildlife / Biodiversity	Sara Walker-Bradley	Response-01440	There are barn owls and other wild life in this area, these habitats need to be kept.
1.14	South West of Draycott	Wildlife / Biodiversity	Scott Gardner	Response-01554	The proposed housing development west of Draycott raises significant concerns regarding its impact on local wildlife and ecosystems. The land is described as greenfield arable land , which, while currently agricultural, can still support wildlife. Draycott is noted to be suitable for ground-nesting birds such as skylarks, and lapwings are also common in the area. The nearby Derby Canal, which the proposed development is close to, is a known wildlife haven, supporting smooth newts, frogs, fish, and potentially water voles. The Trust restoring the canal has even planted hedges at Draycott specifically to attract wildlife. Developing this Green Belt land for housing will inevitably lead to habitat loss. The construction process itself can cause direct harm to wildlife through land clearing and excavation, potentially destroying nests, burrows, and other important habitats. Noise and light pollution from the construction and the subsequent residential area can also disturb wildlife, affecting their feeding and breeding behaviours, and potentially causing them to avoid the area. While the provided research doesn't explicitly list protected species on this specific site, Derbyshire is home to several protected species, including the great crested newt, water vole, and various bat species. The loss of habitat due to this development could negatively impact these or other protected species that may be present in the area. The Erewash Valley, where Draycott is located, is identified as one of the key landscape areas in the Lowland Derbyshire Biodiversity Action Plan , highlighting the ecological importance of this region. It is crucial that a thorough ecological survey is conducted to identify the presence of any protected species or important habitats on the proposed development site. The potential for significant harm to local wildlife must be a key consideration in the planning decision, in line with national planning policies that aim to protect and enhance biodiversity. The long-term impact of habitat loss and fragmentation on the local ecosystem must be carefully weighed against the perceived benefits of this housing development.

The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.
1.14	South West of Draycott	Wildlife / Biodiversity	Simon Jenkins	Response-01287	We have badgers, foxes, Bats and owls frequently passing through the garden or spotted in the air. Again, obviously, it will greatly affect them.
1.14	South West of Draycott	Wildlife / Biodiversity	S M Beresford	Response-01851	The area has an abundance of wildlife, including protected species such as bats and many migrating birds. These animals and birds will lose their habitats and nesting sites, which is not protecting our fragile environment or providing for biodiversity in our green spaces. The development will damage the biodiversity of the site and adjoining Green Belt. The area has an abundance of wildlife, including protected species. This development will remove grazing land, a valuable asset for horses, and scatter local wildlife, leading to the loss of habitats. This will soon be concrete and noise if Erewash council have their way. Along with all the loss of the wildlife in the wooded area through which the footpath runs, including Buzzards green and Greater spotted Wood peckers - bats ,foxes, hedgehogs, owls, sparrow hawks, also a little egret often in early spring behind our house while the field is waterlogged. All this habitat will be lost.
	South West of Draycott	Wildlife / Biodiversity	Stephanie Ashley-Lane	Response-01380	There is so much protected wildlife in and around the farm area. They simply can't just be moved on.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Wildlife / Biodiversity	Susan Baker	Response-01316	We're not just losing land?we're losing a way of life. That open space is where many of us walk, reflect, and connect with nature. It's home to red-listed birds, foxes, hedgehogs, and squirrels. There are badger sets, Muntjac deer, and possibly water voles?all of which will be displaced. Bats, protected by law, roost here too. Once these habitats are gone, they're gone for good. And let's not forget the trees?many of which are protected and should remain so.
1.14	South West of Draycott	Wildlife / Biodiversity	Susan Foster	Response-00824	There is an abundance of wildlife in the area which will be affected by the building of that many houses, birds, especially those on the river Derwent will be put off nesting so close to habitation. There are foxes, hedgehogs, voles and mice which will be driven away.
1.14	South West of Draycott	Wildlife / Biodiversity	Teresa Batchelor	Response-01240	The site proposed for development is a lovely, fairly unspoilt area, with a small copse and views down towards the river. I believe it is a precious site, which locals enjoy for walking, bird watching and general relaxation and its loss will be to the detriment of the village and the area generally.
1.14	South West of Draycott	Wildlife / Biodiversity	Teresa Shaw	Response-01309	1. The development will cause further loss of wildlife habitats like trees grasslands, hedges. I regularly go on walks with the grandkids these areas are home to foxes, squirrels, rabbits, hedgehogs, frogs and the odd badger. Wildlife has already been negatively impacted by the development shoehorned in at 101 Derby Road. Anymore further building and sprawl will just decimate this end of the village's wildlife - how can this be justified?
1.14	South West of Draycott	Wildlife / Biodiversity	Tim Hawkins	Response-00661	The proposals will lead to the destruction of cropping and grazing land for horses. There are also bats, badgers, deer and numerous species of birds both within the hedgerow system and the protected coppice on the safeguarded area. The propensity for the drainage and sewerage system to overflow and pollute the water courses leading to the river will effect the fish, waterfowl and other population, especially in the short term where there will inevitably be run off from the building works.
1.14	South West of Draycott	Wildlife / Biodiversity	Tom	Response-01477	That land is the home to many different animals.
1.14	South West of Draycott	Wildlife / Biodiversity	Tony burton	Response-01382	Supposed to be greenbelt land what about the wild life
1.14	South West of Draycott	Wildlife / Biodiversity	Tracey Morton	Response-00968	1 Taking away arable and grazing land 2 these decisions are not irreversible, brownfield sites should be used and greenbelt protectex at all cost 3 There are a significant amount of animals in this area, birds 4 types of bats (protected), foxes, squirrels, deer hedgehogs which will have there habitat destroyed resulting in the death of many 4 Historical badgers sets (protected) on the victorian tip at nooning lane back g on to this site 5 loss of ecology in the area and the importance of fauna, flora and wildlife 6 The wooded area that the footpath goes though has Tpo 88 on it, as informed by ebc tree officer 7 the proposed development is to big, out of character for the area
1.14	South West of Draycott	Wildlife / Biodiversity	T Shields	Response-00570	There is now in place a national requirement for all housing developments to provide a minimum 10% net gain in biodiversity. As such there is no reason why biodiversity concerns should weigh against the proposed development.
1.14	South West of Draycott	Wildlife / Biodiversity	Viv Wright	Response-00035	World wide we are constantly being told we need to protect our natural world for the sake of our planet!! Meanwhile we appear to be destroying habitats locally to build houses!!!!
1.14	South West of Draycott	Wildlife / Biodiversity	Wilfred Boone	Response-01424	NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt. To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate.
1.14	South West of Draycott	Wildlife / Biodiversity	William Batchelor	Response-01210	destruction pf protected wildlife and woodland. Exisiting hedgerow and trees alongside on Derby Road likely to be removed by developers loosing more essential wildlife habitat

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Wildlife / Biodiversity	zak butcher	Response-01156	<p>Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The taking away of grazing/arable land and the disruption for the wildlife. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield si</p>
1.14	South West of Draycott	Wildlife / Biodiversity	zak butcher	Response-01156	<p>tes existing in EBC which should be used first before Green Belt. NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.</p>
