1.7	West of Sandiacre	Wildlife / Biodiversity	Chris Jones	Response-01718	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Chris O Connor	Response-01641	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Christian Rearson	Response-01763	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Christine Anderson	Response-00484	A lot of endangered species live on this site - the community gains a lot of pleasure from this - using green space like this is, therefore, wrong.
1.7	West of Sandiacre	Wildlife / Biodiversity	Christine Gough	Response-00578	Stoney Clouds is a well known for its abundance of wildlife . I've seen bats, goldfinches , foxes , hedgehogs and insects that have thrived there . Why at this time when we all know that bees , birds and other wildlife are in serious decline does anyone want to tear away their habitat , never to be replaced ? Replaced with a sprawl of houses built with no hedges, trees and hardly any gardens is beyond belief! Not good for biodiversity .Not even considering the wellbeing of people cramped together with no green space .
1.7	West of Sandiacre	Wildlife / Biodiversity	Claire binnall	Response-00459	Stoney clouds had a diverse and beautiful range of wildlife and biodiversity the bats are very prevalent I would suggest a full study to see what wildlife you have up there as frogs and newts have been spotted in the area
1.7	West of Sandiacre	Wildlife / Biodiversity	Clair Ellis	Response-00475	The wildlife affected will be huge!
1.7	West of Sandiacre	Wildlife / Biodiversity	Clare franks	Response-00498	This area has been part of stoney clouds for the last 15 years as long as we have lived here. There are many brownfield sites in the local area, I'm not sure why using green space where there are many species of wildlife is necessary.
1.7	West of Sandiacre	Wildlife / Biodiversity	Clare Green	Response-01751	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Cole Hawkins	Response-01714	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Colin Cox	Response-01716	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Colin Marriott	Response-00686	This proposed site is an area of wide biodiversity, a green space full of wildlife, including over 30 species of birds, foxes, rabbits and bats. The adjoining nature reserve of Stoney Clouds would suffer greatly if this was to go ahead. Developers do not care about wild life only profit.
1.7	West of Sandiacre	Wildlife / Biodiversity	Connor Murfin	Response-00926	We need to protect the rest of the nature we have left, it is very important to preserve this area.
1.7	West of Sandiacre	Wildlife / Biodiversity	Corrina loosemore	Response-00589	Badgers ,voles, shrew, slow worms Birds Trees Native bluebells
1.7	West of Sandiacre	Wildlife / Biodiversity	Courtney Bennett	Response-00593	Sandiacre is one of the very last few towns in the area that has so much beautiful green spaces for natural wildlife, exploration, walks, children so why destroy that? Wildlife population such as birds, badgers, foxes, insects (including bees) are already depleting. We should be doing everything we can to protect them and the world around us by planting more trees, plants and encouraging wildlife to populate as well as providing a green open space environment for children to explore, play in and learn about.
			C Owen	Response-01917	The area is full of our local wildlife that will be lost & it will never return.
1.7	West of Sandiacre	Wildlife / Biodiversity	Craig Freeman	Response-01561	There is evidence of badgers and my wife has often seen deer in the conservation area, often in the woods backing on to the horse fields. Filling this space with housing will likely drive this wildlife away or destroy the habitat they rely on.
1.7	West of Sandiacre	Wildlife / Biodiversity	Craig Richards	Response-01638	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Craig Thims	Response-01765	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Cristina Jenkins	Response-01588	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	C Thompson	Response-01634	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
			DAllen	Response-00525	Spoiling the green belt land as we walk in this area
1.7	West of Sandiacre	Wildlife / Biodiversity	Dana	Response-01173	Need to preserve green spaces not destroy them
1.7	West of Sandiacre	Wildlife / Biodiversity	Daniel	Response-00545	The proposed development borders a nature reserve and mature green space, which currently supports a range of local wildlife including birds, bats, foxes, and potentially protected species. Increased human presence, noise, lighting, and domestic pets will disrupt these ecosystems irreparably. Once natural habitats are lost, they are almost impossible to recover. This development directly threatens local biodiversity and undermines efforts to preserve green corridors for wildlife.
1.7	West of Sandiacre	Wildlife / Biodiversity	Daniel Downes	Response-01630	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	Daniel Hands	Response-00057	With dwindling areas left to wilderness, to further decrease any green space in any shape and form can only negatively impact wildlife, flora and fauna. Not to mention the impact decreased open spaces and increased development will have on people's mental and social wellbeing.
1.7	West of Sandiacre	Wildlife / Biodiversity	Danielle Harrison	Response-00568	This is a green belt corridor for foxes, badgers and hedgehogs. I have seen families of foxes at twilight traversing this field the reach the woodland connected to stoney cloud. The foxes use the woodland corridor right along the motorway edge. This land would make a beautiful rewilding project for the local community. The amount of butterflies and moths viewed in the hedgerow grasses is testament to its biodiversity potential. A study must be done.
1.7	West of Sandiacre	Wildlife / Biodiversity	Daniel Naylor	Response-00680	180 new homes would also have a direct effect on the rare and beautiful wildlife that exists in the proposed area. People local and afar use this area for walks that they claim helps with their mental health when wanting to escape the hustle and bustle of everyday life, as they walk amongst all the flora and fauna.
1.7	West of Sandiacre	Wildlife / Biodiversity	Darran and Emma Rea	Response-00597	There are a lot of protected species of wildlife in the area, the development will drive wildlife away which will have a detrimental effect to the area especially when Stoney Clouds is a nature reserve, it will have a huge impact on the wildlife
1.7	West of Sandiacre	Wildlife / Biodiversity	David Casey	Response-01608	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	David Cater	Response-01756	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	David Fry	Response-00596	The stoney cloud nature reserve is used daily by the local residents and visitors alike. To destroy and reduce the local wildlife is totally unacceptable. There are Peregrine Falcons on the proposed site. Are these not protected species?
1.7	West of Sandiacre	Wildlife / Biodiversity	David Ruddock	Response-01776	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	David Thompson	Response-01324	Wildlife forced into gardens
1.7	West of Sandiacre	Wildlife / Biodiversity	David Tindsley	Response-00515	The proposed site is adjoining Stoney Clouds Nature Reserve. The latest available report on the reserve (Stoney Clouds LNR Management Plan 2013-2022) appears to have been commissioned by the Council in 2012?, and the report, produced by the Derbyshire Wildlife Trust was updated 29/4/20. This provides a substantial and detailed description of the site's flora and fauna. There is much anecdotal evidence of foxes, badgers, rabbits and moles, and I know from personal experience that there are field mice and brown rats. Bats are regularly seen in the summer months in the Larch Drive area, where they roost in the woods. In terms of reptiles, common frog and common toad are believed to be resident, together with grass snakes and, we are advised, adders. Resident bird species are many and varied. Our garden backs on to the wood at Stoney Clouds (Compartment 6 Cloud House Plantation). I have personally seen or heard 29 different bird species over the last 12 months, either as visitors to our garden or on walks in the woods themselves. These include over-wintering migrants such as chiffchaff and blackcap, sparrowhawk, greater spotted and green woodpeckers. Also included in this list are birds identified in the report as being priority species in the UK and Lowland Derbyshire Local Biodiversity Action Plan - bullfinch, song thrush, house sparrow and dunnock. All the species are associated with the hedgerow and woodland habitats. The report highlights that here is a legal obligation not to damage or disturb protected species or breeding birds during the breeding season. In my view, despite a requirement to provide a suitable green buffer?, any construction and development work on the site will inevitably have a significant and detrimental effect on the flora and fauna of the site. For these reasons, I strongly object to the proposed development and urge the planning authority to carefully consider the detrimental impact the development will have on the area's wildlife.
1.7	West of Sandiacre	Wildlife / Biodiversity	David Yeo	Response-01705	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Dawn Glennis Smith	Response-00510	This area has already been damaged by house building. What remains should be protected for the animals, birds, insects and plant life.
1.7	West of Sandiacre	Wildlife / Biodiversity	Dean Bosworth	Response-01665	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Dean Lavelle	Response-01774	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Dean Michell	Response-01343	There is a good variety of wildlife and this should get better in time. Building new home will put wildlife in danger.
1.7	West of Sandiacre	Wildlife / Biodiversity	Debra Michell	Response-01346	There are great number of birds and wildlife around Stoney Clouds. Building more house harm there habitats.
1.7	West of Sandiacre	Wildlife / Biodiversity	Debra Scully	Response-00288	The area is adjacent to a nature reserve and the urbanisation will have a dramatic affect on the areas bio diversity as a direct result of the build
1.7	West of Sandiacre	Wildlife / Biodiversity	Debs Washer	Response-00487	It's a nature reserve , the heavy plant used to build the houses will cause untold damage to the wildlife and nature
1.7	West of Sandiacre	Wildlife / Biodiversity	Denise Creasey	Response-00786	This site has a diverse habitat for all of our native species, flora and fauna. It is in close proximity to the Stoney Clouds Nature Reserve and would impact badly on all wildlife in the area. Wild life is already struggling against loss of habitat. Animals and wildlife would be greatly adversely affected by noise, light and air pollution affecting their natural behaviours.
1.7	West of Sandiacre	Wildlife / Biodiversity	Denise Lingard	Response-01759	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Dennis Watts	Response-01726	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	Derek Morton	Response-01607	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Derrick Hunt	Response-00437	We need natural open spaces you can't just keep concreting over the green belt just because you have 5000 people on a housing waiting list who already have somewhere to live.
1.7	West of Sandiacre	Wildlife / Biodiversity	Destiny Jade-Blake	Response-01636	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Diane Jones	Response-00852	There is a diversity of wildlife in the stoney clouds area and the proposed development will encroach on the whole area. We are privileged to see Buzzards , Kestrels and Red Kites regularly.
1.7	West of Sandiacre	Wildlife / Biodiversity	Diane Mcmorrow	Response-00433	Having walked up Stoney Clouds Nature Reserve for many years with my 2 border collies I've seen all walks of life from foxes rabbits squirrels numerous birds nesting owls and woodpecker alike not to mention the beautiful plants the bluebells wild garlic and mushrooms to name a few. It would be such a shame to loose this wild habitat progress isn't always a good thing
1.7	West of Sandiacre	Wildlife / Biodiversity	Diane Meadwell	Response-00807	The vast amount of flora and fauna that inhabit the Stoney Clouds nature reserve is clearly noted in the management plan compiled by Derbyshire Wildlife Trust and commissioned by Erewash Borough Council. The proposed site immediately adjoins this area. In the short term, the construction and all associated traffic will undoubtedly affect the area in a significant way. This damage could very well be irreversible. We are already witnessing a decline in the number of birds, mammals and invertebrates in our area, and this development can only add to this decline, whether this be short or long term. The RSPB reports a serious decline in wildlife due to habitat loss resulting in the UK being one of the most nature depleted countries on Earth. The destruction of Green Belt land will add significantly to this catastrophic situation. We should be protecting these spaces for the future generations
1.7	West of Sandiacre	Wildlife / Biodiversity	Diane Turner	Response-01744	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Donna Steele	Response-00781	Stoney clouds is a beautiful place. There?s lots of wildlife in the area which will disappear if this build goes a head. There will not be anywhere for the wildlife to go and this will slowly disappear, it?s a very sad situation.
1.7	West of Sandiacre	Wildlife / Biodiversity	Dorothy Deeprise	Response-00817	You will wipe out the wildlife
1.7	West of Sandiacre	Wildlife / Biodiversity	D Pallett	Response-01627	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	D Simpson	Response-01712	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	E Cooper	Response-01923	No doubt over spill from nature reserve living here. This needs investigating.
1.7	West of Sandiacre	Wildlife / Biodiversity	Elaine Pickering	Response-00811	Taking more land away from green space
1.7	West of Sandiacre	Wildlife / Biodiversity	Eleanor Moseley	Response-00799	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Eleanor Newman	Response-00718	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Emily	Response-01880	More loss of wildlife, trees etc.
1.7	West of Sandiacre	Wildlife / Biodiversity	Emma	Response-00492	New houses can't be built in our area because birds of prey have been spotted, and their presence indicates the land is an important habitat. Protecting these species means development is restricted to preserve the local ecosystem.
1.7	West of Sandiacre	Wildlife / Biodiversity	Emma Peterson	Response-00491	Save our beauty spot
1.7	West of Sandiacre	Wildlife / Biodiversity	Emma Ryan	Response-00503	Taking green land and turning it into more (somewhat unnecessary) housing will be detrimental to the wildlife, there is no way to avoid that. You can't lay down 180 houses and expect there not to be a knock on effect to the local wildlife that was there before.
1.7	West of Sandiacre	Wildlife / Biodiversity	Emma Wall	Response-00319	I walk my dogs regularly around this area and there are huge amounts of wildlife just on my phone alone on the Merlin app counted more than 20 species of different birds. The raptors hunt on these fields. There?s a lot of wildlife that will be lost damaged displaced or gone forever of that area. It?s unacceptable to build on this piece of land.
1.7	West of Sandiacre	Wildlife / Biodiversity	Emma Wilson	Response-01222	We should not be building on our green spaces. There will be none left soon
1.7	West of Sandiacre	Wildlife / Biodiversity	Esme Moss	Response-00592	Will destroy locally important habitat for a range of species, including a range of protected species (bats, reptiles, badger, shrews) and locally important species. This area of land contributes and increases habitat connectivity in the area, allowing for safe dispersal of a range of species (invertebrates, small mammals, badger) and therefore promotes the success of local species populations. With the changes being made, biodiversity will decrease in the local area which in turn will contribute to the national and international biodiversity crisis.
1.7	West of Sandiacre	Wildlife / Biodiversity	Esther Cook	Response-01861	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Ewan Snowdon	Response-00766	By building these homes it will disrupt the wildlife and as an avid wildlife photographer it will mean that I?m losing out on witnessing the wildlife in its natural habitat and capturing those moments.
1.7	West of Sandiacre	Wildlife / Biodiversity	Fay Cresswell	Response-00701	There is a wide range of wildlife on the fields presently we have Foxes,Badgers.hedgehogs, frogs return annually. There is an abundance of bird life we have buzzards, Sparrow Hawks. Kestrel s and various garden birds from tits robins wrens blackbirds Jays Doves Sparrows Magpies Goldfinches and more.
1.7	West of Sandiacre	Wildlife / Biodiversity	Finlay Moss	Response-00588	Building on horse fields and grey belt that supports the local biodiversity in the area
1.7	West of Sandiacre	Wildlife / Biodiversity	Gail Berry	Response-01644	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	Geoff Tindsley	Response-00755	1. I?m aware that there is much anecdotal evidence of foxes, badgers, rabbits and moles, and I know from my parents? experience that there are field mice and brown rats. They do see bats regularly during the summer, where they roost in the woods. In terms of reptiles, common frog and common toad are believed to be resident, together with grass snakes and, I understand, adders. 2. Resident bird species are many and varied. My parents house backs on to the wood at Stoney Clouds (Compartment 6 Cloud House Plantation). They tell me that they have personally seen or heard 29 different bird species over the last 12 months, either as visitors to their garden or on walks in the woods themselves. These include over-wintering migrants such as chiffchaff and blackcap, sparrowhawk, greater spotted and green woodpeckers. Also included in this list are birds identified in the report as being priority species in the UK and Lowland Derbyshire Local Biodiversity Action Plan - bullfinch, song thrush, house sparrow and dunnoek. All the species are associated with the hedgerow and woodland habitats.
1.7	West of Sandiacre	Wildlife / Biodiversity	Georgia C	Response-01296	Noise and disturbances to local nature reserve (which is already a small area) and the animals living there.
1.7	West of Sandiacre	Wildlife / Biodiversity	Georgia Marvin	Response-00261	I am so angry and passionate about this subject because building 180 homes will destruct so many more habitats, it will destroy breeding cycles. It will cause so many more deaths which will means all animals will flee towards the motorway. Stoney clouds is a nature reserve. Not really reserving nature when you want to destroy all their habitats.
1.7	West of Sandiacre	Wildlife / Biodiversity	Gill West	Response-01725	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Glyn Holner	Response-01697	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Gordon Bruce	Response-01455	Stoney Clouds is a much loved local amenity where children can learn about nature and see it in action with a huge variety of birds and mammals living there. The conurbation that is Sandiacre, Stapleford and Long Eaton is sadly lacking in wild life space, so this area of nature reserve should not be removed.
1.7	West of Sandiacre	Wildlife / Biodiversity	Gordon Daris	Response-01639	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Greg Cox	Response-01702	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Gregg Bartrum	Response-01591	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Greg Watts	Response-00733	Access across or near the Stoney Clouds escarpment could be environmentally damaging
	West of Sandiacre	Wildlife / Biodiversity	Hannah	Response-00657	Huge area for biodiversity and enjoyable walks
1.7	West of Sandiacre	Wildlife / Biodiversity	Harriet Farnsworth	Response-01914	Even less habitat for our fast declining wildlife.
1.7	West of Sandiacre	Wildlife / Biodiversity	Helen Gillain	Response-00964	There is a wild variety of wildlife on the proposed site .. it has been reported that over 50 different bird species have been noted including rare birds of prey including and sparrowhawks and buzzards! .. building on this site would affect the natural habitat and may lead to extinction
1.7	West of Sandiacre	Wildlife / Biodiversity	Helen Richardson	Response-00432	Stoney Cloud is a significant site with many threatened native plants. The building works alone will threaten the diversity, may well disturb the bats and other wildlife that inhabit the area.
1.7	West of Sandiacre	Wildlife / Biodiversity	Helen Thompson	Response-01356	This site is part of an important wildlife corridor linking to Stoney Clouds Nature reserve, the Erewash canal and across to Stanton by Dale. The area provides a range of habitats for wildlife. It should be preserved not built on. Have the views of Derbyshire Wildlife Trust been sought?
1.7	West of Sandiacre	Wildlife / Biodiversity	Helen whiteman	Response-00447	Stoney clouds has lots of mammals insects reptiles and amphibians on the site the poor animals have been squeezed enough as it is without more of it. Where are all the animals going to go. Leave well alone
1.7	West of Sandiacre	Wildlife / Biodiversity	Ian	Response-00493	Building on these meadows will impact invertebrate breeding and therefore have a knock on effect up the food chain. The nature reserve supports species such as sparrowhawk, kestrel and barn owl which will suffer as a result.
1.7	West of Sandiacre	Wildlife / Biodiversity	Ian Bailey	Response-00505	This is an area off the Stoney Clouds nature reserve and this will affect the wildlife living in the area in the short term while building and long term with additional people and pet animals
1.7	West of Sandiacre	Wildlife / Biodiversity	IAN TAYLOR	Response-00972	The proposed site forms part of an important wildlife corridor adjoining the M1. The open space currently used for grazing is just as important for biodiversity as the wooded areas. The site adjoins the Stoney Clouds Nature Reserve and is essentially part of the same ecosystem. The destruction of the open spaces representing the development site and increased footfall on the Nature Reserve in the future will have an irreversible impact on the wildlife in the local area.
1.7	West of Sandiacre	Wildlife / Biodiversity	Ian Ward	Response-01628	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Irina Anthony	Response-01867	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Isabelle Love	Response-00529	The area is home to a wide range of wild life, we frequently spot birds of prey up there, not to mention badgers, bats and hedgehogs - all of which should be protected and have had the land they should be living on squeezed further and further. The surrounding areas were once green and are now concrete.
1.7	West of Sandiacre	Wildlife / Biodiversity	Isobel Ball	Response-01092	Building housing in an area so large and so eco diverse will no doubt have various implications on the wildlife in this zone. As someone passionate about ecosystems and habitats i simply cannot endorse it. Many animals will die as a result of building this many houses here.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	J. E. Lord	Response-01601	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jack Greatorex	Response-01731	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jacob Whitt	Response-01748	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jacqueline Marshall	Response-01436	Stones Clouds
1.7	West of Sandiacre	Wildlife / Biodiversity	Jade Smith	Response-01783	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jake Simpson	Response-00667	A loss of plants and trees would negatively impact local wildlife
1.7	West of Sandiacre	Wildlife / Biodiversity	James Meadwell	Response-01653	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	James Roberts	Response-01708	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	James Seward	Response-01683	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	James White	Response-01883	The build will disturb wildlife at Stoney Clouds.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jane Dennett	Response-00965	The area is established with trees and lots birds will ruin the area and their habitat if destroy it.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jane Elizabeth Tindsley	Response-00669	The proposed site is adjoining Stoney Clouds Nature Reserve. The latest available report on the reserve (Stoney Clouds LNR Management Plan 2013-2022) appears to have been commissioned by the Council in 2012?, and the report, produced by the Derbyshire Wildlife Trust was updated 29/4/20. This provides a substantial and detailed description of the site's flora and fauna. There is much anecdotal evidence of foxes, badgers, rabbits and moles, and I know from personal experience that there are field mice and brown rats. Bats are regularly seen in the summer months in the Larch Drive area, where they roost in the woods. In terms of reptiles, common frog and common toad are believed to be resident, together with grass snakes and, we are advised, adders. Resident bird species are many and varied. Our garden backs on to the wood at Stoney Clouds (Compartment 6 Cloud House Plantation). My husband and I have personally seen or heard 29 different bird species over the last 12 months, either as visitors to our garden or on walks in the woods themselves. These include over-wintering migrants such as chiffchaff and blackcap, sparrowhawk, greater spotted and green woodpeckers. Also included in this list are birds identified in the report as being priority species in the UK and Lowland Derbyshire Local Biodiversity Action Plan - bullfinch, song thrush, house sparrow and dunno. All the species are associated with the hedgerow and woodland habitats. The report highlights that here is a legal obligation not to damage or disturb protected species or breeding birds during the breeding season. In my view, despite a requirement to provide 'a suitable green buffer', any construction and development work on the site will inevitably have a significant and detrimental effect on the flora and fauna of the site. For these reasons, I strongly object to the proposed development and urge the planning authority to carefully consider the detrimental impact the development will have on the area's wildlife.
1.7	West of Sandiacre	Wildlife / Biodiversity	Janet Whildes	Response-01869	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Janice Taylor	Response-01743	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Janice West	Response-00989	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Janine Holmes	Response-01595	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jason Deepprose	Response-00818	Stop destroying the nature.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jason Harwood	Response-01667	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jason Webb	Response-01637	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jayne Rowley	Response-01279	This area is home to a variety of wildlife including sparrow hawks, bats, foxes, hedgehogs, woodpeckers, owls, squirrels and a variety of birds which also use this as a hunting ground. Some of these due to increasing development of areas are becoming endangered, this has already been impacted by the nearby Stanton Park development. Not only would a lot of these animals lose their habitat through this land being ripped up but also their lives with the increased human presence and additional traffic.
1.7	West of Sandiacre	Wildlife / Biodiversity	J Cates	Response-01750	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jeanette O Connor	Response-01640	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jeffrey Whittaker	Response-00594	Should be kept as a boundary between M1 and the present houses for the natural wildlife to grow not enough green space in Sandiacre as it is
1.7	West of Sandiacre	Wildlife / Biodiversity	Jenna Mitchell	Response-01407	Our wildlife is in crisis and this would make it worse

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	Jennie Handley	Response-00723	This is an area for wildlife. It is next to a nature reserve. The building of this new estate will disturb the wildlife and their habitat. It should not be permitted, this is happening to often.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jennifer Bailey	Response-01857	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jennifer Saville	Response-00516	would affect biodiversity of Stoney Clouds
1.7	West of Sandiacre	Wildlife / Biodiversity	Jennifer Tindsley	Response-00751	1. I'm aware that there is much anecdotal evidence of foxes, badgers, rabbits and moles, and I know from my parents' experience that there are field mice and brown rats. They do see bats regularly during the summer, where they roost in the woods. In terms of reptiles, common frog and common toad are believed to be resident, together with grass snakes and, I understand, adders. 2. Resident bird species are many and varied. My parents house backs on to the wood at Stoney Clouds (Compartment 6 Cloud House Plantation). They tell me that they have personally seen or heard 29 different bird species over the last 12 months, either as visitors to their garden or on walks in the woods themselves. These include over-wintering migrants such as chiffchaff and blackcap, sparrowhawk, greater spotted and green woodpeckers. Also included in this list are birds identified in the report as being priority species in the UK and Lowland Derbyshire Local Biodiversity Action Plan - bullfinch, song thrush, house sparrow and dunnoek. All the species are associated with the hedgerow and woodland habitats.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jenny Stephens	Response-01723	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Joanna hardy	Response-01304	In sandiacre we are luck enough to be close to the countryside. To start removing our greenbelt would damage the local wildlife and harm the ecosystems we have. The proposed site is next to stony clouds nature reserve and acts as an extension, as wildlife does not follow human boundaries. The area also helps protect the biodiversity by acting as a buffer. Any large construction so close to a nature reserve would adversely effect the plants and animals living there and potentially irrevocably damage the biodiversity of the area.
1.7	West of Sandiacre	Wildlife / Biodiversity	Joanne Guyatt	Response-01784	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Joanne Johnson	Response-00765	Butterflies, Bees as well as Foxes, Badgers, Weasels, Owls, Buzzards and other birds all frequent this area. The habitat loss of this field and trees would be very harmful to them. Our local biodiversity is has sadly been depleted over the few decades, this development would cause further habitat loss and be detrimental to what wildlife is left, please destroy it.
1.7	West of Sandiacre	Wildlife / Biodiversity	Joanne Lambert	Response-00494	Construction so close to the nature reserve is going to impact on the wildlife there, through disturbance of habitats and through the disruption of the natural food chain. I have recently seen kestrels and buzzards in the reserve.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jodie Owen	Response-01688	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jodie Shrive	Response-00601	The land in which you are proposing these 180 houses to be built on is home to endangered, protected species that are native to that area. Once you destroy that, the ecosystem can NEVER be replaced, you will be murdering animals and ending entire species, why? To house people that don't belong here? You're all willing to destroy our planet to make a few extra £ and you should all be ashamed. THERE IS NO PLANET B.
1.7	West of Sandiacre	Wildlife / Biodiversity	Jo Gerhardt	Response-01286	I have Multiple Sclerosis and former military veteran, and use Stoney Clouds, which is an area next door to the proposed building site, as a therapy both mentally and physically as I walk my dog. Its a privilege to see wildlife in all shapes and sizes. Birds of prey are often seen, kites, buzzards as well as seeing bats and hearing owls. Just hearing nature is a recipe for the soul. I feel the proposed development would have a detrimental effect on the existing wildlife and ultimately spoil the essence of the place. Green spaces are important for mental health, it seems like it was a good idea during Covid. We were all practically told to by the Government and health charities to use nature as a way of dealing with emotional stress. Building on Green Belt land would be counter-intuitive in this case.
1.7	West of Sandiacre	Wildlife / Biodiversity	John Gardner	Response-01694	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	John G Brown	Response-01752	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	John Hibbitt	Response-01855	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	John Ledger	Response-01605	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	John Payne	Response-01785	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	John whiteman	Response-00450	Please leave the wild life alone they have enough hardship without making it worse by a king the animals homeless
1.7	West of Sandiacre	Wildlife / Biodiversity	Jon Burn	Response-01722	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Josh Williams	Response-01632	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	J Pearson	Response-01772	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	West of Sandiacre	Wildlife / Biodiversity	J Telfer	Response-01876	Not sure
1.7	West of Sandiacre	Wildlife / Biodiversity	Judith A Pulfer	Response-01863	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Julie Hill	Response-01643	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Julie Taylor	Response-01503	The planning of these new houses on green belt land is terrible for our wildlife we're the ones that's supposed to be protecting it not bulldozing them down, we have butterflies, bees, bats, squirrels just to name a few.
1.7	West of Sandiacre	Wildlife / Biodiversity	Karen Alldread	Response-01868	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Karen Blain	Response-01732	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
	West of Sandiacre	Wildlife / Biodiversity	Karen Evans	Response-00523	We need to preserve the wildlife in this area. Building will push it out to roads etc where it will not survive.
1.7	West of Sandiacre	Wildlife / Biodiversity	Karen Harwood	Response-01668	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Karen Pitts	Response-00643	Stoney Clouds is a beautiful green space for all to enjoy and should stay as such. Lockdown taught us the importance of access to nature for good mental health not just for dog walkers but for all. There is a great variety of flora and fauna that will be severely disrupted or destroyed as a result of this development. There a several variety of bats present, trees adjacent to the site (that I helped to plant over 30 years ago with British Trust for Conservation Volunteers) a beautiful array of bluebells in Spring, hundreds of birds (who along with the bats rely on a good supply of insects) all of these plus more would be put at risk from this development.
1.7	West of Sandiacre	Wildlife / Biodiversity	Kathryn Martin	Response-00527	Stoney Clouds nature reserve will be negatively impacted.
1.7	West of Sandiacre	Wildlife / Biodiversity	Katie Morrice	Response-00664	This site has a diverse habitat for all of our native species, flora and forna. It is in close proximity to the Stoney Clouds Nature Reserve and would impact badly on all wildlife in the area. Wild life is already struggling against loss of habitat. Animals and wildlife would be greatly adversely affected by noise, light and air pollution affecting their natural behaviours.
1.7	West of Sandiacre	Wildlife / Biodiversity	Katie Robinson	Response-00943	In the last year (since I have lived here) I have seen so much wildlife in Stoney Clouds but also in the land that you would like to build on. The sheer volume of birds of prey that use this area and now seeing in a new year that they return every year for nesting. I have seen and photographed Kestrels, buzzards and also seen Red Kites as well. I live on Chestnut Grove so my house backs onto the proposed site and I have photographed the BOP always using this rea and using particular trees to perch on during the day also. I recently photographed a kestrel in Stoney Clouds also. While you claim to protect the nature reserve, building this amount of housing does not. Yes you might not be building on that land but the disruption and relocation of wildlife will have a huge effect on the area. Wildlife does not work on boarders and lines drawn on maps sadly. In addition to this have you thought about the effect the housing will have on the wildlife? Most people these days have pets whether that be a dog or cat - Stoney Clouds can be busy with dog walkers however its not impactful however what will 180 houses bring to this small nature reserve? potentially a further 100+ dog walkers that will disrupt the wildlife and then in addition to this if the new residents have cats? - What effect will this have on the wildlife in the nature reserve also. On a summers evening you can also see bats flying over the garden as well - they are obviously nesting near by as well. The wildlife that uses that area will be pushed off that land and potentially into the reserve which is not a big reserve so will effect wildlife settled there or they could relocate completely - this would be at such a detriment to everyone.
1.7	West of Sandiacre	Wildlife / Biodiversity	Kelly Randall	Response-00591	Development on green belt land would result in significant habitat loss. Viable brownfield alternatives exist and should be prioritized.
1.7	West of Sandiacre	Wildlife / Biodiversity	Kelsey Green	Response-01666	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Kenneth Cooper	Response-01720	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Kern-Paul Lewis	Response-01715	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Kerry Meadwell	Response-01655	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Kerry Smith	Response-01271	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Kerry stokes	Response-00769	We have so much wild life in the area for the proposed build that will die if the build goes ahead. We have birds, owls, bats, foxes, frogs, grass snakes, field mice, insects just to name a few. How will all of these species be protected from dying.
1.7	West of Sandiacre	Wildlife / Biodiversity	Kevin Brookes	Response-00716	I object to building houses on stoney clouds
1.7	West of Sandiacre	Wildlife / Biodiversity	KH Taylor	Response-01663	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Kim	Response-00473	Too close to the nature reserve to not have an affect on the wildlife and biodiversity
1.7	West of Sandiacre	Wildlife / Biodiversity	Kimberley Selby	Response-00478	It's going to mean more people walking through the nature reserve effecting the wild life's peaceful environment. A housing estate being built so close will also mean some loss of wildlife and noise disturbance during its construction.
1.7	West of Sandiacre	Wildlife / Biodiversity	Kim Helm	Response-00632	The building of 180 houses will disturb the wildlife and biodiversity

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	Kirk Moss	Response-00439	The development threatens the adjacent Stoney Clouds Nature Reserve, a crucial habitat for local wildlife. Increased pollution, noise, and human activity will disrupt ecosystems and drive away native species. Destruction of tree lines will degrade air quality and biodiversity, going against national conservation efforts.
1.7	West of Sandiacre	Wildlife / Biodiversity	Kirsty	Response-00970	Hundreds of wildlife will lose their habitat
1.7	West of Sandiacre	Wildlife / Biodiversity	Kirsty Handa	Response-00445	The proposed site is green belt land. This area is full of all kinds of wildlife that are detrimental to the area. Building on this land will not only destroy the wildlife in that area but this will have a larger impact on the surrounding areas. Wildlife will not want to nor feel safe in the homes, and will leave or be destroyed. There are plenty of brownfield sites that could be use that does not risk the wildlife that this world desperately needs to protect
1.7	West of Sandiacre	Wildlife / Biodiversity	Kirsty Meredith	Response-01462	There is a beautiful reserve right next to the plot of land proposed for building, the wildlife on the reserve and this land will be massively affected by the loss of this greenbelt. I regularly have protected birds in my garden which backs on to the greenbelt and bats are seen on a regular basis too.
			K Reynolds	Response-01916	The decline in our wildlife has already decreased dramatically!
1.7	West of Sandiacre	Wildlife / Biodiversity	Kristie Rugers	Response-01864	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Kyle Jones	Response-01764	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	L A Keen	Response-01659	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Laura Hallam	Response-01711	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Laura Thompson	Response-00702	Will impact on local wildlife travel route, homes and spaces for them to live. Negative impact.
1.7	West of Sandiacre	Wildlife / Biodiversity	Laurence Luck	Response-01727	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Lauren Freeman	Response-01562	We walk our dog up stoney clouds every single day and are regularly met with deer, foxes, bats, many different kinds of birds aswell as identifying badger faeces indicating that they are resident up there aswell. Ripping up their beautiful home is truly devastating.
1.7	West of Sandiacre	Wildlife / Biodiversity	Lauren Rose	Response-01446	The proposed area is around 13 acres, a large area for biodiversity. Development of the area will destroy habitats and the surrounding areas for bats, birds, amphibians, waterfowl and other species of flora and fauna. The proximity to Stoney Clouds Nature Reserve will also be affected by the proposed development - meaning it will be impacted negatively. People walk and use this space - myself and my dog walker included! - to get out into nature. If this development goes ahead, this space will be removed, species will be displaced and yet more green space will be removed. Foxes, birds of prey, water voles and bats have been observed in the area of the proposed development and, in a time where biodiversity is being damaged across the country, this area should be preserved, seeing as there are plenty of other brownfield sites that could be developed instead.
1.7	West of Sandiacre	Wildlife / Biodiversity	Leah morral	Response-00712	Stoney clouds is well known to house many birds, protected badgers, bats, snakes and many more
1.7	West of Sandiacre	Wildlife / Biodiversity	Lee Wilcock	Response-01670	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Lesley Bruce	Response-01397	Stoney Clods is home to a variety of birds and animals, important green belt and local amenity. The area of Sandiacre, Stapleford and Long Eaton is a conurbation which has few local amenities like Stoney Clouds. Each one is precious and should not be considered as potential housing development.
1.7	West of Sandiacre	Wildlife / Biodiversity	Lesley Carter	Response-00536	The wildlife on the proposed site and the neighbouring bird/nature reserve will be badly affected. There are a wide variety of mammals, snakes and birds that live on the proposed site and will have their habitat destroyed. The reserve adjacent will also have disruption from the construction and from the close proximity of the finished houses. This will lead to diminished numbers of birds and varieties in what is supposed to be a protected environment. A lot of the birds feed on the mammals that are living on the proposed site. The owls and birds of prey will suffer particularly.
1.7	West of Sandiacre	Wildlife / Biodiversity	Lesley Morral	Response-01920	Impact on local wildlife will be affected.
1.7	West of Sandiacre	Wildlife / Biodiversity	Lia Thims	Response-01766	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	lilly stokes	Response-00767	I always come up to this location as it keeps me calm and helps my mind relax. This place means a lot to me as it holds a lot of memories that i have had when in the nature. I also regularly come up here to study and look at the scenery this helps me with my education and to keep me at peace. If this gets destroyed it takes away my place to come and be at peace with myself, i will have no where else to go and it makes me very stressed.
1.7	West of Sandiacre	Wildlife / Biodiversity	Linda Allen	Response-01904	

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	Linda Castledine-Davies	Response-00850	This proposed site lies next to a nature reserve that has a wonderful diverse mix of flora, fauna, mammals, insects, amphibians, lizards etc. these all spill over onto this site. A high density housing project in such close proximity will have a devastating effect on all of these from the noise, land and water pollution, ground disturbance and light pollution that a development like this will create. There will be a huge loss of habitat to species that are already struggling and the introduction of narrow wildlife corridors and such like is insufficient to stop this decline and destruction. it is widely known that Industrial processes, agriculture, transportation, and waste disposal contribute significantly to pollution and have huge impacts on wildlife. Air pollution can also create significant behavioural changes in animals, migration patterns, birds sing less often, and bees that are already desperately in danger are forced to abandon their hives. There are many different species of birds living in this area and the dawn chorus is a wonderful thing. Kestrel are currently using this site for feeding an possible nesting. It is well known and recorded that High-density housing negatively impacts wildlife by reducing habitat , fragments remaining habitats, and increasing human-wildlife interactions. An adv extra 2.7 per household (ONS data) will see an estimated extra 500 people using this area. This can lead to decreased species diversity, altered community structures, and potential increases in disease prevalence in urban or suburban areas. Developers promise lots to get the planning passed but delivery little as born out by the following Wildlife Between June and August 2024, researchers from the University of Sheffield's School of Geography and Planning visited 42 new housing estates across five Local Planning Authorities in England, covering over 291 hectares of land. The aim of the research was to look at what was on the ground and compare it to what developers had promised to do as a condition of getting permission to build. The findings in their "Lost Nature" report, published by Wild Justice, reveal that only 53% of the ecological features mentioned in planning conditions were present in reality. Looking at enhancements for specific species, large proportions of ecological features were missing. In total, 83% of hedgehog highways, 75% of bird and bat boxes and 85% of reptile refuges were not present on the ground. When they looked for promised bug boxes, not a single one had been installed. The survey also revealed that 39% of trees were either dead or missing, and 82% of woodland edge seed mixes had failed to materialize. Even the features that had been planted weren't always properly installed, making them effectively useless; 59% of wildflower grasslands were found to be sown incorrectly or otherwise damaged. New developments and their associated lighting can negatively impact wildlife through light pollution, disrupting natural behaviours, habitats, and ecosystems. This can lead to disorientation in migrating birds, reduced insect populations, and interference with nocturnal animals' foraging and mating patterns Excess light can lead to ?fragmentation of the useable habitat for animals, birds, insects and even plants, affecting their physiology or behaviour and is a contributing factor in the gradual decline of insect and bird populations worldwide
1.7	West of Sandiacre	Wildlife / Biodiversity	Lindsey Rawlinson	Response-01624	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	LISA ANNE GILLIGAN-LEE	Response-00710	The land targeted for development is one of the few remaining green spaces in this community. These areas are vital not only for local biodiversity?providing essential habitat for birds, insects, and small mammals?but also for our mental and physical wellbeing. In an increasingly urban environment, the ability to walk, relax, or exercise in nature is essential for the mental health and wellbeing of our community. Each patch of undeveloped land plays a critical role in preserving biodiversity. Once these habitats are gone, they are gone for good and with them the plants, birds, and animals that rely on them to survive the ecosystems cannot be recovered. Stoney Cloud is vital for local biodiversity?providing essential habitat for the birds, insects, and small mammals and contributes to the rural or semi-rural character of Sandiacre area. This area of land helps with drainage, carbon absorption and provides wildlife habitats, especially in the many hedgerows, bushes; trees and uncultivated areas. The proposed development would destroy the high density of established hedgerows which are vital habitats for many bird species, including native and migratory birds. They also support insects, mammals, bats, and amphibians, forming essential wildlife corridors that connect fragmented habitats. Removing these hedgerows will lead to loss of nesting sites, shelter, navigational landmarks and food sources for a wide variety of species. The loss of trees that help filter pollution will be lost and losing the green space and trees undermines air quality for the community.
1.7	West of Sandiacre	Wildlife / Biodiversity	Lisa Heppell	Response-00878	Stony clouds is full of wildlife,it is a conservation area and should remain so for future generations.
1.7	West of Sandiacre	Wildlife / Biodiversity	Lisa J Pearson	Response-01762	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Liz Woodhouse	Response-01584	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	L Mee	Response-01777	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Logan Fox	Response-00746	We are taught in school to preserve nature and wildlife, yet now we are being told that we 'have to' build on green open spaces. I have seen hedgehogs, foxes, even a badger on the green open spaces but also in the roads. Taking away the open space will simply push these animals into the roads and will result in us losing more wildlife. Also, the council makes 'bee-friendly' spaces by not cutting grass to support bees.... then why take away and entire open space. Just does not make sense when we should be embracing nature, not taking it away.
1.7	West of Sandiacre	Wildlife / Biodiversity	Lorraine Daly	Response-00495	This development is in direct contravention of the growing awareness of the importance of untouched green spaces.
1.7	West of Sandiacre	Wildlife / Biodiversity	Lorraine Hands	Response-00534	The land in question is lovely for wild birds, wild flowers it would be a crime to take it away!!!!
1.7	West of Sandiacre	Wildlife / Biodiversity	Louise dix	Response-00975	The effect on the wildlife that lives there and destroying our green area we so love to go for walks and enjoy the views if we start taking one bit of green belt where does it end in 10 years my kids could not be enjoying the walks they now enjoy .

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	Louise Felfoldt	Response-01733	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Louise Harper	Response-01571	I see bat's go past at dusk through the side of my house, I've had a pheasant in my garden, foxes, I have a wheelbarrow top filled like a pond since I moved in 25 years ago, I thought I would have frogs which I did to start with but now we have newts , I keep my hedging so birds can nest in them
1.7	West of Sandiacre	Wildlife / Biodiversity	Louise Harrison	Response-01719	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Louise Jacks	Response-01767	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Louise Libberton	Response-01693	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Louise Robinson	Response-00647	Building on green belt in this area will result in a decrease in wildlife in the area which is undesirable given the current climate situation. And an increase in traffic will also affect wildlife negatively.
1.7	West of Sandiacre	Wildlife / Biodiversity	Lucy johnson	Response-01369	I've lived in Sandiacre all my life and I am so passionate about wildlife and biodiversity! I love to see it thrive! In lockdown, I turned half of my garden into a wildflower patch and it was absolutely amazing! Watching the bees, butterflies and the birds bought me and my family so much joy! I've done it every year since! I even did it for my granny in Toton I love it that much! We need to help nature come back! We need green spaces! As you know it's a massive help for the ongoing struggle with mental health!
1.7	West of Sandiacre	Wildlife / Biodiversity	lucy victoria garner	Response-00949	wildlife needs open space. already been restricted with destruction of habits at stanton. Covering vast swaves of open space in tarmac isnt caring for our wildlife and biodiversity. Wildlife needs somewhere to be and somewhere to go. Already being squeezed in all directions.
1.7	West of Sandiacre	Wildlife / Biodiversity	Luke Chein	Response-01779	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Luke Hinchley	Response-00699	A treasured piece of land by all residents who do not want to see it be converted. Regularly see wildlife utilising the fields.
1.7	West of Sandiacre	Wildlife / Biodiversity	Lynda Morton	Response-01606	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Lynsey Blackburn	Response-01227	This is a beautiful and much used beauty spot, shameful you are yet again disregarding the importance of these sites, stop stealing our green spaces for greed. Redevelop unused properties instead.
1.7	West of Sandiacre	Wildlife / Biodiversity	Macie Brothwell	Response-01633	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Malcolm Dillon	Response-00722	The Sandiacre township area has already been identified as having low levels of tree cover. The loss of greenbelt will only reduce this tree cover and with it habitat for plants, animals and birds. The UK already has one of the lowest levels of biodiversity in Europe . The loss of this greenbelt area would be a backwards step in the nations aim to improve, not destroy, biodiversity.
1.7	West of Sandiacre	Wildlife / Biodiversity	Malcolm Fox	Response-00215	Remove open space, remove wildlife! These spaces are used for domestic and wild animals. Again, why gain criticism and issues by the removal of open spaces which are essential for all wildlife. There is simply no argument that can justify the destruction of open spaces, parting directly linked to a nature reserve.
1.7	West of Sandiacre	Wildlife / Biodiversity	Malcolm Riedlinger	Response-00743	We see a significant amount of varied wildlife in the area, particularly in the back gardens of the house of Stanton Road. It is clear that much of this has a home on the green belt land, and this will surely disappear if this build was to go ahead.
1.7	West of Sandiacre	Wildlife / Biodiversity	Malcolm Riggs	Response-01680	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Malc Orbiston	Response-01673	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mandy Rait	Response-01587	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Marcel Janovsky	Response-00481	Wildlife killed
1.7	West of Sandiacre	Wildlife / Biodiversity	Mark Gough	Response-00888	There is a tremendous amount of wildlife on this part of Stoney Clouds, it's recognised as a nature reserve . And Greenbelt . Bats who are supposed to be protected are seen most nights , over 30 types of birds , insects , pollinators. We are supposed to be saving our wildlife not destroying their habitat. There are far better sites to build on that's not a nature reserve .
1.7	West of Sandiacre	Wildlife / Biodiversity	Mark Leek	Response-01740	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	mark skelton	Response-01341	Will have a negative impact on and around the site. Stoney clouds will suffer losing the ground around it.
1.7	West of Sandiacre	Wildlife / Biodiversity	Marta McManus	Response-00646	Development is too close to stoney clouds nature reserve.
1.7	West of Sandiacre	Wildlife / Biodiversity	Martin Driver	Response-01387	Ive seen badgers, foxes, birds of prey, adders up on the borders of the proposed site. Don't destroy their habitat. Getting an ecologist in to put a barrier around a site whilst the works take place doesn't make it ok. DONT DESTROY THEIR HABITAT!
1.7	West of Sandiacre	Wildlife / Biodiversity	Martin Ford	Response-01908	Being lost due to new housing on green belt.
1.7	West of Sandiacre	Wildlife / Biodiversity	Martin Hardy	Response-01413	The current land use of the area improves our local biodiversity as it acts not only as open grassland for nature but also acts as a buffer for the local stoney cloud nature reserve. Removing the land for use as housing would decrease the land available for wildlife and the construction works would negatively impact the biodiversity of the nature reserve due to their close proximity.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	Martyn Locker	Response-00903	This one really saddens me. Especially as the local councillor responded to my email with a snarky comment that the nature reserve isn't actually serving its purpose as a nature reserve. What about the displaced rabbits, badgers, foxes whose homes will be destroyed by the work? Do they not matter because the number doesn't meet a council's arbitrary requirements to be considered 'useful'? They're still living animals facing destruction and demolition of their homes.
1.7	West of Sandiacre	Wildlife / Biodiversity	Martyn Maxted	Response-00435	Building on this land will adversely impact the wildlife and biodiversity of this site and will also be to the detriment of the adjacent Stoney Clouds LNR.
1.7	West of Sandiacre	Wildlife / Biodiversity	M A Smith	Response-01889	You should not build on green belt.
1.7	West of Sandiacre	Wildlife / Biodiversity	Matt Bancroft	Response-00916	The disruption and encroachment of the green belt is unwelcome and irreversible once done. This is not sustainable development. Please reconsider. Choose brown field sites first such as between Lidl and the canal
1.7	West of Sandiacre	Wildlife / Biodiversity	Matt Hallam	Response-00476	There are 2 birds of prey that nest in the trees behind us which building houses would effect them and all the foxes and badges that are there. Say goodbye to the horses that have been there longer than you have lived. I know this area has been a horsing paddocks for atleast 55 years
1.7	West of Sandiacre	Wildlife / Biodiversity	Matthew Buckland	Response-00615	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. I have seen bats there in the summer months in the early evening. I've also regularly see two Buzzards on the site.
1.7	West of Sandiacre	Wildlife / Biodiversity	Maurice Mason	Response-01617	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Maxine Sutton	Response-00471	Using green belt land instead of other available land will destroy the natural habitat of countless flora and fauna.
1.7	West of Sandiacre	Wildlife / Biodiversity	M Dougle	Response-01749	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	M Eastwood	Response-01757	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Melanie	Response-00586	The proposed site currently supports local wildlife and forms part of a continuous green corridor. Development would destroy this habitat, negatively impacting local biodiversity. Alternative brownfield sites exist and should be prioritised in line with national and local planning guidance. You've already built new homes off Longmoor Road destroying habitat for wildlife.
1.7	West of Sandiacre	Wildlife / Biodiversity	Melanie Caumont	Response-01272	The site is a vital corridor for local wildlife, including protected species such as bats and badgers. Development here would destroy habitats and threaten biodiversity. The area also borders Stony Clouds Local Nature Reserve and Wildlife Site, which would be at risk from light, noise, and air pollution, as well as encroachment. The proposed 'green buffer' is insufficient to mitigate these ecological impacts. Government guidance, including the National Planning Policy Framework (NPPF), places high importance on conserving and enhancing the natural environment. Building on this greenbelt land would violate these principles.
1.7	West of Sandiacre	Wildlife / Biodiversity	Melanie Howarth	Response-01621	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Michael Anderson	Response-00461	Wildlife must be at risk as this suggested green field site has boundaries not only to Stoney Clouds nature reserve but also to the Erewash Valley Golf Course.
1.7	West of Sandiacre	Wildlife / Biodiversity	Michael Darnell	Response-00648	This area provides a wildlife corridor for foxes, badgers, rabbits from the golf course through to Sandiacre. Lots of other smaller creatures will also be affected .
1.7	West of Sandiacre	Wildlife / Biodiversity	Michell Birkin	Response-01657	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Michelle Alsop	Response-01645	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Michelle Cox	Response-01724	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Michelle Ledger	Response-00815	Wildlife ? This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat. I have lived here for 21 years, the animals that i have noted in the fields proposed for site are Foxes, badges, owls, bats buzzards,hedgehogs and an abundance of birds who nest. alot of us local residence feed nature in our gardens, for eg i feed wood pigeons, squirrels, and various birds inc great and blue tits (who nest in my boxes), sparrows, robins etc - this surely would disappear/decline if you carry out building works and thereafter? alot of these i see flying in and out the site area. i understand that sparrowhawks are protected? i have had these come into my garden on occasion i have seen these fly in from over the site area
1.7	West of Sandiacre	Wildlife / Biodiversity	Michelle Wenham	Response-01650	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mick Hughes	Response-01701	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mike Darnell	Response-00698	This site so at risk of damaging biodiversity. on the neighbouring nature reserve. This is a GREENBELT site not brownbelt, it is totally the wrong site for large estate like buildings. I go here walking and so need this greenspace
1.7	West of Sandiacre	Wildlife / Biodiversity	Miss Garratt	Response-00905	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Miss R Cordon	Response-01648	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	Misty McGrath	Response-01556	Granted the grassed land is not currently benefiting the environment much, but could be improved with the expansion of the Stoney Clouds nature reserve. However, even in its current state it does act as a green border and barrier between the residential areas, the nature reserve, and the M1.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mollie Snow	Response-01729	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Molly Hall	Response-01873	
1.7	West of Sandiacre	Wildlife / Biodiversity	Molly Newbold	Response-00486	Your cutting down Greenland, of course you will affect the wildlife around the area
1.7	West of Sandiacre	Wildlife / Biodiversity	Mr. Mark Lovatt	Response-00956	Wildlife would be adversely affected by the proposed development, as habitats would be destroyed/compromised. Birds of prey have been spotted over the proposed site. How would they adapt/survive the negative consequences of the proposed building site.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mr & Mrs Turton	Response-01660	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	MR ADAM F RIGBY	Response-00638	Stoney is a site where wildlife runs free, more and more of these areas a being built on. I use Stoney everyday, its a wonderful small site which will more or less be halved by this development. The area where the intended is a mature wooded area , the only wooded area on there. Please do not develop on any of the wooded area.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mr and Mrs R Skelton	Response-01274	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mr and Mrs Wright	Response-01275	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
			Mr Colin Key	Response-01841	There will be substantial impact, in every possible way, on the existing wildlife and the adjacent nature reserve.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mr David Ainsworth	Response-00621	We have woodpeckers, Jays, Owls, Buzzards, Badgers, Foxes, and various other wildlife. These animals will be directly affected as the Buzzards live in the trees lining the horse field where this development will rip right through the centre of. Not least the increased number of people living there will scare away the wildlife. This is traditional green belt land and is assigned as such because we need to protect our countryside. There are also bats, and I understand that there are laws about disturbing and building where bats dwell. Please don't break the laws that are set to protect wildlife.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mr John Hickingbotham	Response-01431	The proximity of the proposed development to the Sandiacre Cloudside Conservation Area and the Stoney Clouds Local Nature Reserve are a cause for concern regarding the impact on wildlife and the loss of habitat. Such development will also have a detrimental impact on the views into and out of the Conservation Area.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mr K Gubb	Response-01838	There will be substantial impact, in every possible way, on the existing wildlife and the adjacent nature reserve.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mr K Turton	Response-01706	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mr Luke	Response-01703	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mr P J Tanner	Response-01728	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mr R M Draper	Response-01856	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mr R Widdowson	Response-01734	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mr S. Haywood	Response-01585	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Christina Pope	Response-00732	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Donna C. Ball	Response-01594	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Froggatt	Response-00449	The proposed area is a haven for wildlife. This will disappear if houses are built there
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Griffin	Response-01698	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs J. Cooper	Response-01596	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat. Green space supporting native species will be endangered.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Jennifer Fry	Response-00581	This is a beautiful area for walking with lots of wildlife habitats which should be protected
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Joanne Thompson	Response-01690	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs J Reeder	Response-01909	This will be destroyed on one of our beautiful green spaces.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Lee Farabella	Response-01899	The nature reserve is a critical habitat for both wildlife & biodiversity.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Linda Cox	Response-01753	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Luke	Response-01704	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs M. Rose	Response-01583	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Marie Draper	Response-01755	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat. I visit the area where the houses are proposed and I love to see the birds and other wildlife - this is good for my mental health.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs M Burke	Response-01887	The nature reserve is a critical habitat for both wildlife and biodiversity.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs N Taylor	Response-01896	The nature reserve is a critical habitat for wildlife and biodiversity.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Rachel Coats	Response-01623	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs R Cordon	Response-01647	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Rigby	Response-00641	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Shani Wainwright	Response-00754	This site of approx 13 acres has a diverse habitat for all of our native species, floral and fauna...with bats, red kites etc etc using/living in this proposed area.Its close proximity to Stoney Clouds nature reserve would have a massively negative impact on all the wildlife in the area.....many of whom are already struggling with loss of habitat. These precious creatures need protecting for the future abd for our children to ve able to see.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Sheila Hickingbotham	Response-01338	Developing this site will lead to a loss of biodiversity, wildlife and the natural environment.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Shirley Victoria Riggs	Response-01685	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Susan Bantle	Response-01612	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Turton	Response-01707	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Mrs Whittaker	Response-00595	The area has a significant diverse number of wildlife, including birds of prey, which will all be impacted by the loss of the habitat
1.7	West of Sandiacre	Wildlife / Biodiversity	Natalie Bentley	Response-01646	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Nicole Cooper	Response-01597	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Normn McCrea	Response-01754	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Oliver Marriott	Response-00679	Wildlife / Biodiversity Wildlife/ Bio diversity The site of approximately 13 acres has a diverse habitat for all our native species, flora and fauna. Its close proximity to Stoney clouds nature reserve will impact dramatically on all wildlife many of which are already struggling with a loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Olivia Allen	Response-00520	Please do not take anymore of our wildlife to build houses in an already built up area. Stoney is above place to visit and you are slowly taking that away
1.7	West of Sandiacre	Wildlife / Biodiversity	Paige Walker	Response-01669	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Pamela Bassett	Response-00608	It will destroy the wildlife.
1.7	West of Sandiacre	Wildlife / Biodiversity	Pam shepherd	Response-00453	I've lived in Sandiacre for 41 years residing near stoney clouds for 23 years, this is a beautiful area used daily by dog walkers, horse rider and nature lovers, there are badger sets in the sea water voles and I'm sure other protected species. This will cause a huge amount of damage to the environment
1.7	West of Sandiacre	Wildlife / Biodiversity	Pat Hardy	Response-01739	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Paula Darnell	Response-00665	I visit this area almost every day, it is essential to my mental health. On my walks I have seen badgers foxes bats in the evening and several different birds of pray to name but a few, not to mention bees insects, voles, and owls. This is site is so important to sandiacre residents and of course the home to so much wildlife
1.7	West of Sandiacre	Wildlife / Biodiversity	Paula Luck	Response-01710	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Paula Sims	Response-01687	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Paul Randall	Response-00131	Building on greenbelt? Not a good sign for wildlife / biodiversity. Alternatives exist. Stoney Clouds is a valued nature reserve. Further encroaching on this space would set a dangerous precedent and further undermine the protection of our green spaces.
1.7	West of Sandiacre	Wildlife / Biodiversity	Paul Vleeton	Response-01770	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	paul wheeldon	Response-00582	Many wild plants in the fiel affected somew of which may well be protected or endangered species plus a vast amount of varied fauna some of which ARE protected species
1.7	West of Sandiacre	Wildlife / Biodiversity	Paul Wilkes	Response-00599	This could destroy the wild life in the area, we have buzzards / kestrels / wood peckers / great tits / blue tits / gold finches/ brown owls / bats. Which all the insects and nests area in the edge rows fields on the site
1.7	West of Sandiacre	Wildlife / Biodiversity	Peter Anthony	Response-01866	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Peter Nicholls	Response-01622	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Pete West	Response-01700	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Phil Creasey	Response-01342	This site has a diverse habitat for all of our native species, flora and forna. It is in close proximity to the Stoney Clouds Nature Reserve and would impact badly on all wildlife in the area. Wild life is already struggling against loss of habitat. Animals and wildlife would be greatly adversely affected by noise, light and air pollution affecting their natural behaviours.
1.7	West of Sandiacre	Wildlife / Biodiversity	Philip Reed	Response-01449	I object to the proposed development of 180 houses on greenbelt land adjoining the nature reserve. This area provides vital habitat for numerous species and supports local biodiversity. Construction would destroy ecosystems, fragment wildlife corridors, and irreversibly damage a crucial buffer zone safeguarding the natural environment and the reserve's ecological integrity.
1.7	West of Sandiacre	Wildlife / Biodiversity	P Sandes	Response-01682	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Rachel Crossley	Response-01661	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Rachel Skelton	Response-01241	Building in green belt land will have a detrimental effect on the wildlife in the area
1.7	West of Sandiacre	Wildlife / Biodiversity	R Barratt	Response-01664	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Rcahel Sharp	Response-00652	I have lived in Coronation Avenue for 28 years. We have the green on our avenue, two parks that my children regularly used. We have a dog and I access Stoney Clouds Nature Reserve everyday to exercise him. I am sitting in my garden now and can hear multiple birds. I have had a sparrow hawk, a heron and bats in my garden. I regularly see hedgehogs and foxes. For the first time in my life I saw two badgers last year crossing Stanton Road to the farmers field. Stoney Clouds is a wonderful asset to the area and people not just from Sandiacre use it. It is great to witness the change of the seasons with blossom, bluebells and all the other wild flowers. Also the wooded areas are beautiful. I cannot understand why any council would want to develop on beautiful land which is and should remain protected.
1.7	West of Sandiacre	Wildlife / Biodiversity	Rebecca Longmuir	Response-00253	Absolutely appalling disgusting idea ! Of course you will destroy the existing nature and biodiversity. You plan to remove green area and disrupt the already established nature there, in favour of housing!! Hasn't enough nature and green belt been destroyed to make way for houses/buildings.ect this is clear labour are unconcerned with the environment they are about to destroy in order for houses. Very sad and shameful.
1.7	West of Sandiacre	Wildlife / Biodiversity	Rhiannon Lowater	Response-01592	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	R Hibbitt	Response-01862	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Richard Broughton	Response-01352	This quiet patch of land has been a haven for flora and fauna - as well as a buffer between existing house and the motorway, this will cease to be should this development come to pass
1.7	West of Sandiacre	Wildlife / Biodiversity	Richard Chambers	Response-00745	Even though it won't impinge on the Stoney Clouds nature reserve, traffic and the resulting pollution will. Even more human activity will exacerbate the biodiversity crisis we're in.
1.7	West of Sandiacre	Wildlife / Biodiversity	Richard Deeprise	Response-00816	New developments will destroy existing nature
1.7	West of Sandiacre	Wildlife / Biodiversity	Richard Haines	Response-01674	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	Richard Jenkins	Response-00264	The site adjoins ancient woodland, and falls within the Erewash Valley Living Landscape. Derbyshire Wildlife Trust have identified the Erewash Valley as a strategic landscape area for the protection, restoration and management of natural resources including habitats, flora and fauna, soils and water together with the health and wellbeing of people. On 18th October 2015 a Fungal Foray was carried out by Beverley Rhodes BSc MCIEEM on Stoney Clouds Nature reserve. Her report (copy available) includes the following: ?Our finds included both meadow and woodland species, both of which are ancient in character. The key find was Date Waxcap (Hygrocybe spadicea) a National Diversity Species of importance?? Member BMS and Fungus Conservation Records are sent to ?.the land owner and DWT? My concern is that this major building work is guaranteed to be disruptive to local flora and fauna. The supporting biosphere has contributed to these ancient species because of its inherent stability ? such varieties are simply not found anywhere but ancient woodland. Once gone, it will be lost forever. Stoney Clouds (adjacent to the proposed site) and the pathway across the proposed site to the Golf Course are the only local areas where we can go for a walk to enjoy some nature and freedom of space. These green spaces were a major factor in us moving here from Long Eaton some 14 years ago and have been regular dog-walking destinations for us twice per day. The housing development may not actually be on Stoney Clouds Nature Reserve but a major construction project so close is guaranteed to have a huge negative impact on anyone walking in the area over the next several years and a permanent impact on the habitat of the reserve. The public pathway to the Golf Course runs across the development site. How will this be impacted other than disrupting or closing the path? There are proven health benefits, both physical and mental, to going for a walk regularly and to have this denied or curtailed through a housing project is guaranteed to have a detrimental effect on our health and well-being. Stoney Clouds has rare Ancient Woodland with a unique and irreplaceable biodiversity. This ecosystem is fragile and any disturbance risks major disruption to it, and the likelihood that it cannot be revitalised. Apart from Buzzards, Sparrow Hawks, Great Spotted and Green Woodpeckers, Sandpipers, Willow Tits, European Linnets and Owls being spotted there I have many times seen bats as I walked my dog evening/nighttime. I have also seen many butterflies, moths and occasionally reptiles such as snakes and newts. Derbyshire Wildlife Trust Stoney Clouds LNR Management Plan which discusses the biodiversity and highlights many of the rare species at risk from this plan. Interesting quotes such as ?3.1.5.2 Biodiversity Action Plans The site supports habitats that are considered to be of value for biodiversity at a national and local level as defined by the UK Biodiversity Action Plan (2007) and the Lowland Derbyshire Biodiversity Action Plan, 2012. Policy 28 of the East Midlands Regional Spatial Strategy (RSS8) sets out priorities for enhancing the region?s biodiversity including achievement of the East Midlands?s regional contribution to the UK BAP targets.? Beverley Rhodes? report from a Fungal Foray which, amongst other things, discovered a rare fungus ?Date Waxcap (Hygrocybe spadicea) a National Biodiversity Species of importance?. What Ecological Appraisal has EBC carried out for Stone
1.7	West of Sandiacre	Wildlife / Biodiversity	Richard Jenkins	Response-00264	y Clouds Derbyshire? What steps is EBC taking in respect of European Protected Species? and What are EBC?s specific plans to ensure that its Strengthened Biodiversity duty (Environment Act 2021) is fulfilled?
1.7	West of Sandiacre	Wildlife / Biodiversity	Richard Marriott	Response-00675	Wildlife / Biodiversity Wildlife/ Bio diversity The site of approximately 13 acres has a diverse habitat for all our native species, flora and fauna. Its close proximity to Stoney clouds nature reserve will impact dramatically on all wildlife many of which are already struggling with a loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Richard Naylor	Response-00066	This is a green area and you're destroying it. Not that you'll care about that! You don't care about anything.
1.7	West of Sandiacre	Wildlife / Biodiversity	Richard Shrimpton	Response-01301	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Rob Lowe	Response-01768	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Roger Farnsworth	Response-01910	Even less habitat for our fast declining wildlife.
1.7	West of Sandiacre	Wildlife / Biodiversity	Rosemarie Gough	Response-00997	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Roy Drew	Response-01614	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Ruby Sharp	Response-00886	I have lived in Coronation Avenue for all my life . We have a dog and I access Stoney Clouds Nature Reserve everyday to exercise him. He loves it on there but the housing development will destroy it. I am sitting in my garden now and can hear multiple birds. I regularly see hedgehogs and foxes. Animals will not want to make Sandiacre their home if they are being poisoned by pollution. Stoney Clouds is a wonderful asset to the area and people not just from Sandiacre use it. It is great to witness the change of the seasons with blossom, bluebells and all the other wild flowers. I have seen families of ducks crossing the roads in Sandiacre, especially Kings Road, but they will be in danger doing this with the added traffic that will be present around all of Sandiacre. Seeing wildlife like this while walking really helps my mental health on a bad day and I dread to think what happens if they all relocate elsewhere to greener areas.
1.7	West of Sandiacre	Wildlife / Biodiversity	Ryan Selby	Response-00479	It?s a given that the wildlife will be effected as would be building next to a nature reserve and grass land, will negatively effect the local wildlife tremendously
1.7	West of Sandiacre	Wildlife / Biodiversity	S. Brailsford	Response-00598	There are bird species that are at risk which have chosen the undisturbed area as their home such as falcons. Many British birds frequent this site such as woodpeckers & buzzards Many bat species are also present here and can be listened to with a detector Various other wildlife inhabitants in this area and as such should not be disturbed. This area and surrounding Stapleford is already massively built up and wildlife needs these pockets of land
1.7	West of Sandiacre	Wildlife / Biodiversity	S. Jones	Response-01615	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	Sally Davies	Response-01294	The loss of the woodland would cause many problems. Building on this area will affect the wildlife and limit our access to countryside.
1.7	West of Sandiacre	Wildlife / Biodiversity	Samantha Anne Whitney	Response-00757	Stoney Clouds has been there since before Sandiacre was a village. There are many animals and plants that call it home. Foxes, barn owls, many species of birds, bats and many small mammals live there. Part of Stoney Clouds was built on years ago and their home is getting smaller and smaller. Where do you propose they all live? It's a thriving nature reserve and should stay that way. It's too special to be build on.
1.7	West of Sandiacre	Wildlife / Biodiversity	Samantha Whildes	Response-01270	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Sam Buckland	Response-00600	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. I have seen bats there in the summer months in the early evening. I've also regularly see two Buzzards on the site.
1.7	West of Sandiacre	Wildlife / Biodiversity	Sam Fleck	Response-00821	Wildlife: I wish to object to the proposed development on the grounds of its likely harmful impact on biodiversity. The site lies directly adjacent to a designated nature reserve, and currently consists of pasture land containing a significant number of mature trees. This area provides valuable habitat for wildlife and contributes to the wider ecological network of the locality. It is likely used for foraging, nesting, and movement by a variety of species, some potentially protected. The development would result in the loss of much of this green space, and I expect that a significant number of mature trees would need to be removed to enable access and construction. This would not only disrupt existing ecosystems but also reduce habitat connectivity, threatening local biodiversity. It is well-established that mature trees are irreplaceable in terms of the ecological value they offer. The loss of pasture land and tree cover will also place additional pressure on the adjacent nature reserve, potentially disturbing sensitive species and undermining conservation efforts in that area. This proposal directly conflicts with Paragraph 180 of the National Planning Policy Framework (NPPF), which states that planning decisions should ensure that developments do not result in significant harm to biodiversity and that opportunities to improve biodiversity in and around developments should be integrated as part of their design.? It also runs counter to Paragraph 179, which requires planning authorities to protect and enhance sites of biodiversity value and promote the preservation, restoration, and re-creation of priority habitats. Furthermore, the removal of mature trees could breach Paragraph 131, which states that trees should be retained wherever possible, especially where they make a significant contribution to the character and quality of urban environments. Given the proximity to a nature reserve, the loss of pasture and mature trees, and the lack of clarity on biodiversity net gain, I strongly object to this application. The environmental cost of this development would be high and irreversible, with long-term impacts on wildlife and the natural landscape. I urge the planning authority to refuse the application on ecological grounds and seek alternatives that respect and enhance the biodiversity of this important green space.
1.7	West of Sandiacre	Wildlife / Biodiversity	Sam Greatorex	Response-01695	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Sandra Cooke	Response-01613	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Sarah Harrison	Response-01658	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	S Bryne	Response-01677	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Sebastian Roberts	Response-01675	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Shanead Ligton	Response-01689	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Shannon moss	Response-00454	This development poses a direct threat to the adjacent Stoney Clouds nature reserve, which serves as a crucial habitat for local wildlife. Increased pollution, noise, and human encroachment will disrupt ecosystems and drive away native species. Additionally, the destruction of existing tree lines will further degrade air quality and biodiversity, contradicting the UK's commitment to conservation and carbon reduction.
1.7	West of Sandiacre	Wildlife / Biodiversity	Shannon Robinson	Response-01635	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Sharon Grant	Response-00219	There is much wildlife up near larch drive. i have identified 26 different types of birds: including some rare ones; Linnet, Willow Tit, Sandpiper, Treecreeper. We also have Buzzards. We have owls, badgers and foxes. I have newts in my pond also.
1.7	West of Sandiacre	Wildlife / Biodiversity	sharon thornhill	Response-00448	wildlife on our beautiful nature reserve parallel to the site is definitely going to suffer both with more buildings and with the general upheaval and noise etc whilst building work goes on
1.7	West of Sandiacre	Wildlife / Biodiversity	Sharon weston	Response-00440	😔😔 a nature reserve on our door step,foxes,bats,birds,hares,adders,it will effect all there habitat absolutely shocking,don't shit on our door step when you wouldn't have it on yours
1.7	West of Sandiacre	Wildlife / Biodiversity	Shaun Green	Response-01773	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Sheila	Response-00587	The proposed site currently supports local wildlife and forms part of a continuous green corridor. Development would destroy this habitat, negatively impacting local biodiversity. Alternative brownfield sites exist and should be prioritised in line with national and local planning guidance. Stoney Clouds is a Nature reserve and it would be shameful to build on it for future generations when alternatives exist.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	Sheila Payne	Response-01782	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Sian Knox	Response-01679	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Simon Chambers	Response-00668	This area should not be built on due to the wildlife in the area.
1.7	West of Sandiacre	Wildlife / Biodiversity	S Leek	Response-01737	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Sonny Bestwick	Response-00901	Stoney clouds is one of the few green spaces left in sandiacre that actually feels natural squeezing houses in and around this site will come to the detriment of all locals who chose the location to relax walk dogs and get back into nature. wildlife WILL be disrupted and diminished by the proposed construction as the area is home to several species of local wildlife such as badgers, rabbits, foxes, moles etc. Along with countless birds and fruit bats that would all have their habitats greatly impacted by the proposed construction!
1.7	West of Sandiacre	Wildlife / Biodiversity	Sonya Birkin	Response-01656	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Sophie	Response-00472	This is a local nature spot with an avid and thriving wildlife. This would be devastating to them.
1.7	West of Sandiacre	Wildlife / Biodiversity	Sophie Bennett	Response-01631	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Sophie Farnsworth	Response-01913	Even less habitat for our fast declining wildlife.
1.7	West of Sandiacre	Wildlife / Biodiversity	Stephen Davies	Response-00214	Area to rear of Larch Drive currently supports snakes, foxes, badgers and abundant bird life. I understood any development had to increase not worsen biodiversity. The site lies adjacent to a designated nature reserve and contains a significant number of mature trees. The development would result in the loss of both green space and trees and place additional pressure on the adjacent nature reserve. This conflicts with paragraph 180 which states that planning decisions should ensure that developments do not result in significant harm to biodiversity. Paragraph 179 requires planning authorities to protect and enhance sites of biodiversity value. Paragraph 131 further states that trees should be retained wherever possible. Given the proximity to the nature reserve the environmental cost of the proposed development would be high and irreversible
1.7	West of Sandiacre	Wildlife / Biodiversity	Stephen Sacker	Response-01598	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Steve Bilbie	Response-00285	This development will directly affect the nature reserve driving out long established species. Wild life will be driven out by this development which has matured over many years.
1.7	West of Sandiacre	Wildlife / Biodiversity	Steven Wiseman	Response-00452	As an avid bird watcher I find the proposed planning area concerning as many different species of birds could be put at risk as nesting sites would be disrupted
1.7	West of Sandiacre	Wildlife / Biodiversity	Steve Whittaker	Response-01781	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Stuart Pensom	Response-00049	Nature area are going to be affected and may have long lasting damage
1.7	West of Sandiacre	Wildlife / Biodiversity	Sue Harrison	Response-01629	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Susan Heinke	Response-00468	There isn't enough green space in Sandiacre anymore and there certainly isn't the justification to eradicate even more
1.7	West of Sandiacre	Wildlife / Biodiversity	Susanne Beaven	Response-01618	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Sylvia Plampin	Response-00624	So much wildlife around cloudside road/stoney clouds nature reserve and although the proposal is not to build on the nature reserve, wildlife doesn't recognise the boundary of the nature reserve, venturing across the open fields.
1.7	West of Sandiacre	Wildlife / Biodiversity	Tamara Partridge	Response-01780	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Tara Marshall	Response-01890	
1.7	West of Sandiacre	Wildlife / Biodiversity	Tarnya Hinman	Response-01786	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Thomas Ilett	Response-01088	The wildlife that currently utilises the area will be eradicated forever should this go ahead. Once gone, this can never be retrieved. Building on this site will also affect nature in adjacent and wider areas. I have highlighted the increased flooding risk, which also affects the wildlife and biodiversity of the area and adjacent areas. In short, building here will significant impact the wildlife and biodiversity of the area and that of the local area, including the adjacent nature reserve.
1.7	West of Sandiacre	Wildlife / Biodiversity	Tim Derbyshire	Response-01681	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Tim Gough	Response-00996	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Tim Nichols	Response-00504	Building on land that provides a buffer for wildlife between motorway and housing
1.7	West of Sandiacre	Wildlife / Biodiversity	Tina McInerney	Response-00954	We need to keep some green spaces
1.7	West of Sandiacre	Wildlife / Biodiversity	Toby Moran	Response-01769	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	Tom Ball	Response-01672	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Tony Price	Response-00977	This is a beautiful part of our countryside, I think building on here would devastate the biodiversity in the area.
1.7	West of Sandiacre	Wildlife / Biodiversity	Tony Weston	Response-00990	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Tracey Howe	Response-01860	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Tracey Hughes	Response-01699	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Trevor Rowston	Response-01678	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Try church	Response-00033	Currently on the land and surrounding it there are Owls, bats, returning birds on a yearly basis. There are also at least 2 pairs of snakes on the land itself, not the nature reserve and due to the land flooding as it is on a clay seam, there have been 2 instances of newts witnessed. Bats are around the stable area. A vast number of bird species have also been encouraged and have taken part in the national bird counts.
1.7	West of Sandiacre	Wildlife / Biodiversity	Tyler Hobbs	Response-00879	Building on the greenbelt in Sandiacre would have a profoundly negative impact on the nearby Stoney Clouds Nature Reserve, threatening its delicate ecosystems and the rich biodiversity it supports. The greenbelt acts as a vital buffer zone that protects the reserve from urban sprawl, pollution, and noise, and its removal would fragment natural habitats essential for local wildlife. Species that rely on continuous green corridors?such as birds, bats, and small mammals?would face habitat loss, disruption of breeding grounds, and increased human disturbance. Additionally, construction would lead to soil erosion, water runoff, and light and sound pollution, all of which can degrade the reserve's ecological integrity. Protecting the greenbelt is crucial not just for the survival of individual species, but for maintaining the interconnected web of life that defines the biodiversity of Stoney Clouds.
1.7	West of Sandiacre	Wildlife / Biodiversity	Vanessa Asbach	Response-00700	Taking more away from wildlife is a terrible idea. We must protect nature and the creatures that live in it.
1.7	West of Sandiacre	Wildlife / Biodiversity	Verity Lamb	Response-01298	This green belt also happens to be a site of wildlife and scientific interest. The disturbance of this development can only be detrimental
1.7	West of Sandiacre	Wildlife / Biodiversity	Vickie Wright	Response-01552	The nature reserve is a critical habitat for local wildlife and biodiversity. Building on it will destroy green space that supports native species, some of which may be protected or endangered. Once lost the ecosystem cannot be replaced.
1.7	West of Sandiacre	Wildlife / Biodiversity	Victoria Abraham	Response-01652	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Victoria Galpin-shrimpton	Response-01009	Wildlife ? This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat
1.7	West of Sandiacre	Wildlife / Biodiversity	Victoria Greatorex	Response-01730	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Victoria Marriott	Response-00674	Wildlife/ Bio diversity The site of approximately 13 acres has a diverse habitat for all our native species, flora and fauna. Its close proximity to Stoney clouds nature reserve will impact dramatically on all wildlife many of which are already struggling with a loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Vivien Davis	Response-01582	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.7	West of Sandiacre	Wildlife / Biodiversity	Wayne Major	Response-00408	I wish to object to the proposed development on the grounds of its likely harmful impact on biodiversity. The site is only accessible via Stoney Cloud Nature Reserve, which is a legally designated Local Nature Reserve (LNR). This makes the proposal fundamentally unsound due to the unacceptable environmental harm it would cause and the lack of alternative access. The map from Erewash Map on EBC website, confirms that the access route lies within the boundary of the designated Local Nature Reserve. This further demonstrates that any development relying on this route would be incompatible with national planning policy (NPPF Paragraphs 179/182) and the Council's duty under the National Parks and Access to the Countryside Act 1949 to safeguard designated nature sites. The site lies directly adjacent to a designated nature reserve, and currently consists of pasture land containing a significant number of mature trees. This area provides valuable habitat for wildlife and contributes to the wider ecological network of the locality. It is likely used for foraging, nesting, and movement by a variety of species, some potentially protected. The development would result in the loss of much of this green space, and I expect that a significant number of mature trees would need to be removed to enable access and construction. This would not only disrupt existing ecosystems but also reduce habitat connectivity, threatening local biodiversity. It is well-established that mature trees are irreplaceable in terms of the ecological value they offer. The loss of pasture land and tree cover will also place additional pressure on the adjacent nature reserve, potentially disturbing sensitive species and undermining conservation efforts in that area. This proposal directly conflicts with Paragraph 180 of the National Planning Policy Framework (NPPF), which states that planning decisions should ensure that developments do not result in significant harm to biodiversity and that 'opportunities to improve biodiversity in and around developments should be integrated as part of their design.' It also runs counter to Paragraph 179, which requires planning authorities to protect and enhance sites of biodiversity value and promote the preservation, restoration, and re-creation of priority habitats. Furthermore, the removal of mature trees could breach Paragraph 131, which states that trees should be retained wherever possible, especially where they make a significant contribution to the character and quality of urban environments. Given the proximity to a nature reserve, the loss of pasture and mature trees, and the lack of clarity on biodiversity net gain, I strongly object to this application. The environmental cost of this development would be high and irreversible, with long-term impacts on wildlife and the natural landscape. I urge the planning authority to refuse the application on ecological grounds and seek alternatives that respect and enhance the biodiversity of this important green space.
1.7	West of Sandiacre	Wildlife / Biodiversity	William Marriott	Response-00676	Wildlife / Biodiversity Wildlife/ Bio diversity The site of approximately 13 acres has a diverse habitat for all our native species, flora and fauna. Its close proximity to Stoney clouds nature reserve will impact dramatically on all wildlife many of which are already struggling with a loss of habitat.
1.7	West of Sandiacre	Wildlife / Biodiversity	Zack Snowdon	Response-00764	It's being built over a pasture with wildlife living in it and will damage nature. It will also displace the cycle of nature and remove a peaceful area which helps me feel calm
1.7	West of Sandiacre	Wildlife / Biodiversity	Zoe Hughes	Response-01919	Habitats destroyed & also impacted upon by more pollution.
1.8	North of Breadsall Hill Top	Air Quality	Adam Millward	Response-00418	Currently people walk the trail to get away from homes and roads and seek better air quality. Building more housing and roads near this literally undo all the effort and money spent into making this trail / old railway line attractive again.
1.8	North of Breadsall Hill Top	Air Quality	Andrew David Williams	Response-00796	Increased traffic will further degrade the air quality especially with increased traffic queuing at Croft lane and through Breadsall village. As more children now walk to school along Brookside road the increased levels of pollution is not acceptable or conducive to improved health.
1.8	North of Breadsall Hill Top	Air Quality	Andy Madeley	Response-00381	Will be impacted by additional traffic, but also building work. You also need to consider the numerous developments being proposed around oakwood, and the fact that this building work will have on residents.
1.8	North of Breadsall Hill Top	Air Quality	Angela Clarke	Response-01400	A worsening of air quality in particular with increased traffic and construction work
1.8	North of Breadsall Hill Top	Air Quality	Angela Smyth	Response-00296	Increased housing means increased air pollution due to cars and construction.
1.8	North of Breadsall Hill Top	Air Quality	Ann Sherlock	Response-00410	The map used is out of date and there is a lack of green space and air quality associated already, due to the Alport Heights estate and Durose estate (both estates and established roads connected to them are conveniently missing off the map used, and perhaps intentionally misleading). Adding the current proposal will be extremely detrimental to the air quality, and it is disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the area.
1.8	North of Breadsall Hill Top	Air Quality	Anya andrews	Response-00605	Air Quality is going to be further ruined and pollution increased causing affects to health.
1.8	North of Breadsall Hill Top	Air Quality	Ben Martin	Response-00787	The proposed development will destroy greenbelt land and replace it with tarmac, concrete, brick and 160 houses worth of cars. How can this not have a severe impact on air quality?
1.8	North of Breadsall Hill Top	Air Quality	Bethan Eddy	Response-00976	Standing traffic will increase with the amount of traffic
1.8	North of Breadsall Hill Top	Air Quality	Beverly Jordan	Response-01330	Increase in traffic and congestion will lead to increased air pollution
1.8	North of Breadsall Hill Top	Air Quality	Brendan Hargreaves	Response-00629	the air quality will be reduced, we are looking into air conditioning units for the roof of our property to reduce the pollution the same as the premises in the heathrow area due to the expansion there
1.8	North of Breadsall Hill Top	Air Quality	Carol Westcott	Response-00973	Moor traffic and standing traffic this site will cause will add to pollution, the trees and bushes that will be destroyed will add to the carbon dioxide levels

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Air Quality	Carys Whomsley	Response-01438	I am writing to register my strong objection to the above-mentioned planning application, both in its original and revised form. Despite the removal of the area adjacent to the A61 in the amended proposal, I believe that the proposed development remains deeply inappropriate and harmful for the following reasons: 1. Contravention of Policy CP18 and Loss of Green Wedge The proposed site lies just outside the designated Green Belt, but crucially directly abuts existing woodland and open countryside, forming part of the vital green corridor along the Great Northern Greenway. This area functions as a green buffer, enhancing ecological connectivity, supporting biodiversity, and providing visual and recreational amenity to local residents, walkers, and cyclists. Despite claims of woodland retention, the development threatens the integrity of this space. Proximity to new housing would increase human pressure on the natural environment, likely leading to degradation of woodland, fragmentation of habitats, and a reduction in wildlife corridors. No Biodiversity Net Gain (BNG) assessment appears in the application documents, raising concerns about whether the legally mandated 10% net gain can or will be achieved. Biodiversity enhancements delivered off-site would do nothing to mitigate local ecological loss, thereby undermining environmental sustainability in the area. Moreover, the site lies adjacent to land recently released from the Green Belt and under consideration for housing allocation by Erewash Borough Council. The cumulative impact of developing both sites would be devastating: a continuous sprawl from Derby through to Breadsall, resulting in the elimination of the settlement gap and permanent damage to the character of the Great Northern Greenway. 2. Environmental, Infrastructural, and Policy Concerns The proposal directly contradicts the National Planning Policy Framework (NPPF) Paragraph 143, particularly the goals of preventing urban sprawl and protecting the openness of Green Belt land. It also ignores the findings of the Strategic Housing Land Availability Assessment (SHLAA 359), which previously deemed the site unsuitable for residential development due to accessibility and environmental limitations. The development is completely incompatible with the objectives of the Breadsall Parish Neighbourhood Plan 2019?2029, particularly the aims to: Preserve the rural character and prevent urbanisation; Avoid coalescence with the Derby conurbation; Safeguard wildlife and ecological features; Control flood risk and infrastructure strain; Protect valued green spaces and visual vistas.
1.6	North of Breadsall Hill Top	Air Quality	Carys Whomsley	Response-01438	Breadsall has already experienced increased flooding, attributed to upstream developments like Persimmon Estate and Breadsall Hilltop, which lie within the same water catchment area. Any additional development would worsen this issue, placing homes and infrastructure at risk. Furthermore, the proposal relies on access through two existing public footpaths within the Redrow estate and offers no concrete infrastructure improvements. The A608 is already over-congested, and no plans are presented to handle increased traffic or to safeguard children commuting to local schools. 3. Loss of Community and Ecological Value This land offers more than just open space?it is a much-loved and well-used amenity for the local community. It serves as a peaceful escape for informal recreation and nature engagement, and its visual and environmental contributions to the neighbourhood are significant. Its destruction would represent a major loss in local character and quality of life. The proposal underestimates the pressure on existing services, lacks detailed mitigation plans, and fails to explain how proposed footpaths will link meaningfully into existing routes. Nearby Local Wildlife Sites will be impacted
1.8	North of Breadsall Hill Top	Air Quality	Chris Lunn	Response-01410	Derby is an industrial city which cause high levels of local air pollution. Having hundreds of more cars will just exacerbate the problems. My two children both have asthma and I strongly believe the local pollution is a strong link as to why.
1.8	North of Breadsall Hill Top	Air Quality	Clare Roters	Response-01553	More houses, more emmissions and less trees
1.8	North of Breadsall Hill Top	Air Quality	Colin Brewster	Response-00576	I have no supporting data, but the air quality must have significantly increased with the vast increase of traffic through Breadsall Village.
1.8	North of Breadsall Hill Top	Air Quality	Darren adams	Response-00874	With the increase of traffic already going through the village during rush-hour, the air quality in my opinion has changed dramatically. Has there been an air monitoring station setup to see what the effects are.
1.8	North of Breadsall Hill Top	Air Quality	Diane Bakhda	Response-01411	Please see my above comment
1.8	North of Breadsall Hill Top	Air Quality	Edward James Gregory	Response-00728	The area already suffers from traffic congestion, and safety issues due to speed and number of vehicles, so any increase will impact air quality
1.8	North of Breadsall Hill Top	Air Quality	Elaine hodgkinson	Response-00854	The increased traffic will undoubtedly reduce the air quality for the adjacent housing and walkers and cyclists using the greenway. t will badly increase the number of cars travelling through the residential area of Oakwood. t will badly increase the number of cars travelling through the residential area of Oakwood which will reduce the air quality significantly.
1.8	North of Breadsall Hill Top	Air Quality	Emma Binns	Response-00843	Air quality must be effected by the extra cars and homes.
			Emma Daniels	Response-00346	Air quality is very poor at the moment with the amount of traffic
1.8	North of Breadsall Hill Top	Air Quality	Emma Hawkins	Response-00813	Adding a further 160 dwellings could potentially create 300 plus cars using a small road to pass through an existing small estate reducing the air quality further. Building on green belt will reduce the amount of open space which natuarly provides better air quality.
1.8	North of Breadsall Hill Top	Air Quality	Gary Murfin	Response-00374	Again with all the new houses having approx two vehicles which is common nowadays air quality is bound to suffer
1.8	North of Breadsall Hill Top	Air Quality	Gaynor Pawley	Response-00627	It goes without saying air quality would suffer not only from the increase in traffic but because the roads are already gridlocked, standing traffic would exacerbate the situation.
1.8	North of Breadsall Hill Top	Air Quality	Gillian Pearson	Response-00303	Unable to quantify as no information available but increasing volumes of traffic will have a deleterious effect on air quality on already very busy routes t through the village of Breadsall, used as a short cut from Hilltop to A61/A38.
1.8	North of Breadsall Hill Top	Air Quality	Harry Mee	Response-00882	Draycott is a quiet and clean area, noise and air pollution would increase with 190 new homes.
1.8	North of Breadsall Hill Top	Air Quality	Helen Walker	Response-00325	Our air quality have been greatly reduced when the additional houses were built and we do not have the green open spaces anymore this will only get worse with even more houses, more cars, less trees and less open green spaces
1.8	North of Breadsall Hill Top	Air Quality	Hulland. Bdverley	Response-00496	Definitely air quality will be not healthy with more traffuc

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Air Quality	Ian Lockwood	Response-01491	See comments re: Traffic Congestion and also more generally the increase in traffic on the A608 that is already congested at rush hour.
1.8	North of Breadsall Hill Top	Air Quality	Jack Bointon	Response-00969	The air quality will be worse. More traffic will mean that the air will be severely worsened, making it an even worse place to live in. Health will be made worse because of this: especially with those with severe lung diseases.
1.8	North of Breadsall Hill Top	Air Quality	Jake Moore	Response-01202	The anticipated rise in vehicle numbers ? potentially over 300 additional cars ? will contribute significantly to local air pollution. This is particularly concerning for: Children and vulnerable residents exposed to increased nitrogen dioxide (NO?) and particulate matter (PM2.5), especially along narrow, congested streets. Local schools and walking routes where increased emissions and idling vehicles will have a direct health impact. A broader environmental cost, as the proposed development would remove greenfield land that currently contributes to local air purification and biodiversity. At a time when local authorities are under pressure to improve air quality and reduce car dependency, this development appears to move in the opposite direction.
1.8	North of Breadsall Hill Top	Air Quality	James Bellaby	Response-00337	More vehicles, more air pollution,
1.8	North of Breadsall Hill Top	Air Quality	James Roberts	Response-00673	Per the Traffic Congestion comments, a doubling of vehicles and increase in congestion will inevitably reduce air quality in the area, as demonstrated by any highly populated area in the UK. Also reducing the amount of green land surrounding the current housing estate and inevitably impacting the greenway and surrounding greenland is also going to reduce the air quality for the local area
1.8	North of Breadsall Hill Top	Air Quality	Jamie Branagan	Response-00335	Taking away the natural landscape to concrete over with 160 more houses and increased traffic will undoubtedly impact air quality.
1.8	North of Breadsall Hill Top	Air Quality	Janet Brewster	Response-00577	Air quality appears to be considerably increased with the current growth in through traffic. This is made worse by stationary/crawling traffic at busy times.
1.8	North of Breadsall Hill Top	Air Quality	Janette Booth	Response-00295	See traffic congestion
1.8	North of Breadsall Hill Top	Air Quality	Jessica Softley	Response-01408	The increase in road traffic travelling through the Durose Country Park estate, and queueing at the roundabout exit of the estate will negatively impact the air quality.
1.8	North of Breadsall Hill Top	Air Quality	John Harlow	Response-00619	Additional traffic will only add to the already poor air quality. This would impact on people who suffer from asthma and other chronic breathing attacks.
1.8	North of Breadsall Hill Top	Air Quality	Julie Bates	Response-01326	The congestion is going to affect the air quality in this area if the planned amendment goes ahead. It?s already causing pollution with the amount of cars so having even more cars per house in this area is just going to put a terrible strain on the already terrible traffic congestion and air quality. I as a asthma sufferer means it will severely affect my breathing . I already got pneumonia from living so close to all the traffic it will definitely affect everyone living here . The removal of all the free green space which obviously helps in prevent air pollution will be destroyed this will be catastrophic to all the people living in this area
1.8	North of Breadsall Hill Top	Air Quality	Justine Dean	Response-00844	Increased congestion on an already busy road will make air quality in the existing area and the new houses worse.
1.8	North of Breadsall Hill Top	Air Quality	Karen Read	Response-00923	the site currently sits as an area of openness between city of derby and the nearby village of breadsall i am concerned that this development will remove this separation with the city. Due to increased numbers air quality and noise pollution will increase dramatically can you please advise how this will be addressed within the currently proposed policy changes
1.8	North of Breadsall Hill Top	Air Quality	Karen Smith	Response-00635	The congestion this will produce will significantly impact on the health and well being of those already living nearby
1.8	North of Breadsall Hill Top	Air Quality	Kev Rodgers	Response-00897	Additional housing always brings with it additional vehicles, adding to the emission of exhaust gases, this will be particularly evident as traffic queues up Mansfield Road as vehicles return home.
1.8	North of Breadsall Hill Top	Air Quality	Kimberley Woodward	Response-01445	More cars equals more emissions. We don?t want it. Also when the development would be constructed this would result in dirt and dust being released into the air and staining the white render on our house which happened in the Redrow estate construction phase.
1.8	North of Breadsall Hill Top	Air Quality	Kirstin Woodward	Response-01043	As this is a main A road, Mansfield Road is frequently used by large vehicles and lorries. During the morning and evening rush hours, there is regular queueing traffic along the road. Air quality during these times is a significant concern, particularly as many children travel to school by bus or bicycle. They are directly exposed to emissions from idling and slow-moving vehicles, which raises health and environmental concerns.
1.8	North of Breadsall Hill Top	Air Quality	K Munson	Response-00631	Increased traffic especially when there are hold ups increased emissions
1.8	North of Breadsall Hill Top	Air Quality	Laura Louca	Response-01266	Goes without saying this will be significantly reduced. Concrete and bricks don?t help the environment or promote fresh air - trees and greenery do.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Air Quality	Lee Wheatley	Response-01492	1. Increased Vehicle Emissions: o As previously discussed, increased development will likely lead to a significant rise in the volume of vehicular traffic in and around Breadsall and Breadsall Hilltop. This inevitably means higher levels of harmful pollutants being emitted into the air, including Nitrogen Dioxide (NO2), Particulate Matter (PM2.5 and PM10), and Carbon Monoxide (CO). o The types of journeys associated with new development: commuting to Derby and other areas, school runs, local trips to shops and amenities, and potential increases in delivery vehicles. All contribute to increased emissions. 2. Impact of Traffic Congestion on Emissions: o Increased traffic congestion, a likely consequence of the proposed development, exacerbates air pollution. Idling vehicles and stop-start traffic produce higher levels of pollutants compared to vehicles moving at a steady speed. Areas within Breadsall and Breadsall Hilltop that are prone to congestion (e.g., near the school, main road junctions) will experience a disproportionate impact on air quality. 3. Proximity to Existing Pollution Sources: o While Derby's 2024 Air Quality report notes a general decrease in NO2, the potential for increased traffic from the proposed development in Breadsall and Breadsall Hilltop threatens to reverse this positive trend. The report itself anticipates increased vehicle trips from upcoming developments in Derby, and given the villages' proximity, this will likely worsen local air quality. Also, the lack of recent PM10 monitoring in Derby underscores the urgent need for a specific Air Quality Assessment for Breadsall and Breadsall Hilltop to fully understand and mitigate the impact of increased emissions on residents' health. 4. Impact on Sensitive Receptors: o Breadsall and Breadsall Hilltop contain sensitive receptors such as Breadsall Community Primary School, nurseries, care homes, and residential areas with young children and older people. Increased air pollution in these areas is a particular concern. 5. Lack of Air Quality Assessment: o The Core Strategy Review Amendment should be supported by a detailed Air Quality Assessment that specifically models the potential impact of increased development and traffic on air quality in Breadsall and Breadsall Hilltop. This assessment should consider existing air quality levels, projected increases in emissions, local topography, and prevailing weather conditions. The current proposals appear to lack this crucial analysis. 6. Mitigation Measures and Green Infrastructure: o The amendment should outline specific measures to mitigate the potential negative impacts on air quality. This could include promoting sustainable transport options, investing in electric vehicle charging infrastructure, incorporating green infrastructure (trees, hedges, green spaces) that can help absorb pollutants, and ensuring adequate ventilation in new developments. The current proposals lack sufficient detail on these aspects.
1.8	North of Breadsall Hill Top	Air Quality	Linda Morris	Response-00867	More traffic - more pollution
1.8	North of Breadsall Hill Top	Air Quality	Lisa Stone	Response-01018	There already isn't any air quality, it's already just fumes on Mansfield road, add more cars and we all reduce even more in life expectancy. Mind you I'll kill us all younger from carbon monoxide poisoning and there won't be a need to build more houses in the first place
1.8	North of Breadsall Hill Top	Air Quality	Mandy Cooling	Response-00312	The air quality is already pretty poor with the traffic and removing more of the natural habitat will only make this worse
1.8	North of Breadsall Hill Top	Air Quality	Martin Harrison	Response-01395	I object to the proposed development due to its likely negative impact on local air quality. The area already experiences high traffic volumes, especially along the A38, Mansfield Road, and through Breadsall and Oakwood. Increased vehicle emissions from added traffic will worsen pollution levels, affecting the health and wellbeing of residents, particularly children and the elderly.
1.8	North of Breadsall Hill Top	Air Quality	Masheda Chowdhury	Response-01339	1. Increased Vehicle Emissions from 160 New Homes: ? The development will lead to a substantial increase in vehicular traffic using Dale Acre Way, Hungerhill Crescent, and the A609 Hill Top. ? This will contribute to higher levels of air pollutants such as NO? (nitrogen dioxide) and particulate matter (PM10 and PM2.5), especially during peak travel times. 2. Proximity to Existing Residential Areas and Schools: ? Existing residents in Oakwood, Breadsall, and surrounding streets will be directly exposed to worsened air quality, especially children walking to school and vulnerable groups (e.g., elderly or those with asthma or respiratory illnesses). ? There is no mitigation strategy included in the policy overview to manage the inevitable rise in vehicle-generated air pollution. 3. Contradiction with Public Health and Climate Goals: ? Derbyshire County Council and Derby City Council have made public commitments to improving public health and reducing carbon emissions. ? Approving this development without a thorough air quality impact assessment runs contrary to those commitments and may result in long-term public health implications. 4. Threat to Local Ecology from Deteriorated Air Quality: ? The site is directly adjacent to the Great Northern Greenway and Local Wildlife Site ER 005, a sensitive ecological corridor. ? Increased pollution, including fine particulates and vehicle-derived pollutants, will harm local flora and fauna and degrade air quality along this important green space. 5. No Published Air Quality Assessment: ? There appears to be no public Air Quality Impact Assessment included with the proposal. ? Without this, it's impossible to gauge how air pollution will affect both local residents and environmental assets, and therefore the development should not proceed. 6. Cumulative Impact of Safeguarded Land: ? The policy mentions a safeguarded area of 14.6 hectares for potential future development. ? The cumulative air quality impact from both the proposed 160 homes and any future expansion has not been assessed, potentially leading to long-term air quality degradation in a currently semi-rural buffer zone.
1.8	North of Breadsall Hill Top	Air Quality	Michael Albinson	Response-00790	Increase in fumes, road usage and dust will heavily impact residents and what's left of habitats
1.8	North of Breadsall Hill Top	Air Quality	Michael Grignon	Response-01335	In an area which is supposed to be green belt, air quality should be an priority, adding more housing and more cars will add quality to our already polluted air
1.8	North of Breadsall Hill Top	Air Quality	Michael Poplar	Response-00565	Increased traffic, particularly where congestion causes stop start queuing obviously has an impact on air quality. The reduction of green "lungs" also has an impact.
1.8	North of Breadsall Hill Top	Air Quality	Mollie	Response-01549	The proposed development will significantly worsen local air quality due to increased traffic and the loss of open green space. Breadsall Hill Top and surrounding routes already suffer from vehicle-related pollution, and additional car movements from hundreds of new homes will increase harmful emissions, including NO? and particulate matter. This poses particular health risks to children, the elderly, and those with respiratory conditions. At a time when councils are encouraged to improve air quality and reduce carbon emissions, approving this development would move Erewash in the wrong direction.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Air Quality	Monique Johnson	Response-00663	With increased traffic coming from the new development pollution will increase substantially. This is obviously bad for everyone's health.
			Mrs. Dorothy Monkhouse.	Response-01371	More traffic will bring more pollution. This proposal involves the felling of trees that make a significant contribution to air quality.
1.8	North of Breadsall Hill Top	Air Quality	Mrs Francoise Poplar	Response-00602	Increased traffic, irregular flow and congestion obviously has a detrimental effect on air quality.
1.8	North of Breadsall Hill Top	Air Quality	Mr SJ Read and Mrs S E Read	Response-01225	Air quality would obviously be adversely affected by the additional traffic generated by the proposed new development. This applies particularly to additional traffic passing through Breadsall village as referred to under "Traffic Congestion"
1.8	North of Breadsall Hill Top	Air Quality	Mr Softley	Response-00344	Less green space and more houses on top of one another, air quality is a concern, especially with the added traffic to the nearby busy stretch. Lots of cars idling, again, doesn't seem to have been thought about. Why are these developments by Erewash council not in Erewash? Completely disregards the green buffer zone in other areas!
1.8	North of Breadsall Hill Top	Air Quality	Mrs Sarah Morley	Response-01515	The extreme volume of traffic is already horrendous, the pollution to the air will become significantly worse with 160 homes adding to this. Most houses have a minimum of one car, normally more
1.8	North of Breadsall Hill Top	Air Quality	Nathan Latymer	Response-00361	The traffic in this area is awful as it is, with no need for it to be made any worse by adding loads of houses.
1.8	North of Breadsall Hill Top	Air Quality	Nicholas Lloyd	Response-00356	I object to this planning application on the grounds that the proposed development will lead to a significant increase in traffic on Acorn Way, a route already experiencing high congestion. This surge in vehicular activity is likely to elevate levels of nitrogen dioxide (NO <sub>2</sub> ) and particulate matter (PM), both of which are harmful to respiratory health and contribute to cardiovascular diseases. The World Health Organization has emphasized that no level of exposure to these pollutants is considered safe, and the UK's own guidelines still permit concentrations above these recommendations in some areas. Furthermore, the Department for Environment, Food & Rural Affairs has noted that poor air quality is linked to approximately 28,000 to 36,000 deaths annually in the UK. Given that Acorn Way is in proximity to residential areas and schools, the development's impact on air quality could adversely affect the health and well-being of local residents, particularly vulnerable groups such as children and the elderly. Therefore, I urge the planning authority to consider these health implications and reject the application to prevent further deterioration of air quality in an already burdened area.?
1.8	North of Breadsall Hill Top	Air Quality	Oakwood Ward Councillors Eyre, Mulhall and Trehwella	Response-01359	With increased Traffic Congestion will naturally come increased Air Pollution and a lessened Air Quality, what is currently a quite estate will become a thoroughfare to a hugely expanded estate, bringing additional vehicles and additional pollution.
1.8	North of Breadsall Hill Top	Air Quality	Paige Skivington	Response-00366	For the people living nearby, me being one of them will be subjected to so much building work and noise and poor air quality whilst the building work goes on.
1.8	North of Breadsall Hill Top	Air Quality	Pamela Walker	Response-00649	Increased traffic and pollution
			Philip Booth	Response-00683	The volume of traffic in this area is often crawling creating poor air quality, this would only get worse.
1.8	North of Breadsall Hill Top	Air Quality	Prathap Paulson Junjuri	Response-01393	Yes air quality for residents and children
1.8	North of Breadsall Hill Top	Air Quality	Rachael	Response-00332	During the building phase of the Redrow estate air quality was poor and sediment was constantly on our homes and vehicles, this will further increase due to the proposed builds. Our children, animals and ourselves deserve some clean green space.
1.8	North of Breadsall Hill Top	Air Quality	Richard Johnson	Response-00697	Increasing traffic will bring with it an increase in air pollution.
1.8	North of Breadsall Hill Top	Air Quality	Richard Kingham	Response-00849	Air pollution has worsened at peak times to to so many vehicles idling.
1.8	North of Breadsall Hill Top	Air Quality	Richard Stone	Response-01029	Adding potentially 300 cars to this while destroying grass and wood land it clearly going to make the air quality worse.
1.8	North of Breadsall Hill Top	Air Quality	Richard Straw	Response-01412	The quality of air will greatly decrease
1.8	North of Breadsall Hill Top	Air Quality	Roy Ling	Response-01243	Air quality particularly at peak times is concerning an increase in traffic would make this much worse.
1.8	North of Breadsall Hill Top	Air Quality	Ruth Duxbury	Response-00301	Allocating green belt to housing will increase traffic and cause greater pollution in the area. Tress and plants are removed and no new trees are planted to offset the increase in pollution. As traffic is already heavy in the area this will cause further air pollution.
1.8	North of Breadsall Hill Top	Air Quality	Sally	Response-00873	Extra pollution
1.8	North of Breadsall Hill Top	Air Quality	Samantha Watts	Response-00869	The air quality in Breadsall Village is already under strain due to high traffic volumes, particularly along Croft Lane and the A61. Increased congestion from additional housing will further contribute to pollution levels, exacerbating health risks for residents. Vehicle emissions, particularly nitrogen dioxide (NO <sub>2</sub> ) and particulate matter (PM), are known to have serious health impacts, including respiratory issues and cardiovascular diseases. With Breadsall Village frequently used as a cut-through route, the rise in traffic will intensify exposure to these pollutants, reducing air quality and harming public health.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Air Quality	Sam Saunders	Response-01557	The proposed development at North of Breadsall Hilltop presents serious concerns regarding air quality, both during the construction phase and once the new homes are occupied. During construction, activities such as excavation, earth moving, and the use of heavy machinery are likely to generate significant dust and particulate matter. This dust can have detrimental effects on local residents' respiratory health, especially for vulnerable groups such as children, the elderly, and those with pre-existing conditions like asthma. Without strict mitigation measures and effective dust control strategies, the construction phase could lead to unacceptable levels of air pollution in the immediate area. After the development is completed, the increase in traffic volumes resulting from 160 additional homes will likely lead to elevated emissions of nitrogen dioxide (NO2), particulate matter (PM10 and PM2.5), and other pollutants associated with vehicle exhaust. Hungerhill Close, along with Dale Acre Way and the nearby A609 Hill Top, are residential roads where such pollution could negatively impact local air quality. The rise in traffic could exacerbate existing air pollution levels, creating long-term health risks for residents. Increased pollution exposure is linked to respiratory and cardiovascular problems, and it may particularly affect children walking to school or playing outdoors in the neighbourhood. Given the proximity to local schools and green spaces, protecting air quality should be a priority. The development proposal lacks clear plans for monitoring and mitigating air pollution impacts. Without adequate controls, both the construction and operational phases of the development could significantly diminish the quality of life for current and future residents. Therefore, concerns about air quality must be addressed thoroughly before the development proceeds.
1.8	North of Breadsall Hill Top	Air Quality	Sandra Perry	Response-00307	More cars = worse air quality
1.8	North of Breadsall Hill Top	Air Quality	Scarlett Hamblin	Response-00398	Climate change is already in effect. By adding more properties and vehicles this will decrease the air quality which will have a knock on effect to wildlife.
1.8	North of Breadsall Hill Top	Air Quality	Scott Watson	Response-01284	Air quality in Breadsall Village is already under pressure due to heavy traffic, especially along Croft Lane and the A61. Increased congestion from further residential development will inevitably add to pollution levels, worsening health risks for the community. Vehicle emissions, particularly nitrogen dioxide (NO2) and particulate matter (PM), are well-documented contributors to respiratory and cardiovascular conditions. As Breadsall Village continues to serve as a busy cut-through route, rising traffic volumes will further elevate exposure to these harmful pollutants, diminishing air quality and threatening public health.
1.8	North of Breadsall Hill Top	Air Quality	Sharon Coward	Response-00348	Increased traffic will impact the air quality.
1.8	North of Breadsall Hill Top	Air Quality	simon morris	Response-00866	More traffic more pollution
1.8	North of Breadsall Hill Top	Air Quality	Stephen and Janet Allis	Response-01221	pollution from a61 is bad enough
1.8	North of Breadsall Hill Top	Air Quality	Stuart Brown	Response-00771	Increased traffic using dale acre way will have an impact on the air quality of the area if it is used as a through road for all traffic. Exhaust fumes and dust from cars and construction vehicles will have direct impact on the current residents
1.8	North of Breadsall Hill Top	Air Quality	Susan Dundon	Response-00396	It will affect pollution
1.8	North of Breadsall Hill Top	Air Quality	Thomas Monkhouse.	Response-01318	The number of new houses proposed will create a considerable increase in traffic congestion and pollution. The proposals also appear to involve the felling of trees that make a significant contribution to air quality.
1.8	North of Breadsall Hill Top	Air Quality	Tom Parker	Response-01398	During the building phase of this current development air quality was very poor and sediment was constantly on our homes and vehicles. This will get far worse with the proposed building potentially inflicting harm to our children with poor air quality.
1.8	North of Breadsall Hill Top	Air Quality	Tony Hawkins	Response-01532	Adding a further 160 dwellings could potentially create 300 plus cars using a small road to pass through an existing small estate reducing the air quality further. Building on green belt will reduce the amount of open space which naturally provides better air quality.
1.8	North of Breadsall Hill Top	Air Quality	Tracey Turner	Response-00334	Increased traffic = increased pollution The green areas around the site should be maintained for this reason.
1.8	North of Breadsall Hill Top	Bus Services	Adam Millward	Response-00418	Plenty of bus services, but come on, no body that affords to live in these areas will use public transport much. They will still drive to work in their electric car.
1.8	North of Breadsall Hill Top	Bus Services	Angela Smyth	Response-00296	There is only one bus service running in that area. It's already busy.
1.8	North of Breadsall Hill Top	Bus Services	Ann Sherlock	Response-00410	Bus services will undoubtedly be negatively impacted due to the increase in traffic volume
1.8	North of Breadsall Hill Top	Bus Services	Beverly Jordan	Response-01330	Additional bus services needed will increase traffic congestion pollution
1.8	North of Breadsall Hill Top	Bus Services	Brendan Hargreaves	Response-00629	there wont be available spaces on the buses with a new housing estate, its bad enough already at certian times
1.8	North of Breadsall Hill Top	Bus Services	Carol Westcott	Response-00973	Bus services will be interrupted by traffic queues which will impact on people getting to their destination on time

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Bus Services	Carys Whomsley	Response-01438	I am writing to register my strong objection to the above-mentioned planning application, both in its original and revised form. Despite the removal of the area adjacent to the A61 in the amended proposal, I believe that the proposed development remains deeply inappropriate and harmful for the following reasons: 1. Contravention of Policy CP18 and Loss of Green Wedge The proposed site lies just outside the designated Green Belt, but crucially directly abuts existing woodland and open countryside, forming part of the vital green corridor along the Great Northern Greenway. This area functions as a green buffer, enhancing ecological connectivity, supporting biodiversity, and providing visual and recreational amenity to local residents, walkers, and cyclists. Despite claims of woodland retention, the development threatens the integrity of this space. Proximity to new housing would increase human pressure on the natural environment, likely leading to degradation of woodland, fragmentation of habitats, and a reduction in wildlife corridors. No Biodiversity Net Gain (BNG) assessment appears in the application documents, raising concerns about whether the legally mandated 10% net gain can or will be achieved. Biodiversity enhancements delivered off-site would do nothing to mitigate local ecological loss, thereby undermining environmental sustainability in the area. Moreover, the site lies adjacent to land recently released from the Green Belt and under consideration for housing allocation by Erewash Borough Council. The cumulative impact of developing both sites would be devastating: a continuous sprawl from Derby through to Breadsall, resulting in the elimination of the settlement gap and permanent damage to the character of the Great Northern Greenway. 2. Environmental, Infrastructural, and Policy Concerns The proposal directly contradicts the National Planning Policy Framework (NPPF) Paragraph 143, particularly the goals of preventing urban sprawl and protecting the openness of Green Belt land. It also ignores the findings of the Strategic Housing Land Availability Assessment (SHLAA 359), which previously deemed the site unsuitable for residential development due to accessibility and environmental limitations. The development is completely incompatible with the objectives of the Breadsall Parish Neighbourhood Plan 2019?2029, particularly the aims to: Preserve the rural character and prevent urbanisation; Avoid coalescence with the Derby conurbation; Safeguard wildlife and ecological features; Control flood risk and infrastructure strain; Protect valued green spaces and visual vistas.
1.8	North of Breadsall Hill Top	Bus Services	Carys Whomsley	Response-01438	Breadsall has already experienced increased flooding, attributed to upstream developments like Persimmon Estate and Breadsall Hilltop, which lie within the same water catchment area. Any additional development would worsen this issue, placing homes and infrastructure at risk. Furthermore, the proposal relies on access through two existing public footpaths within the Redrow estate and offers no concrete infrastructure improvements. The A608 is already over-congested, and no plans are presented to handle increased traffic or to safeguard children commuting to local schools. 3. Loss of Community and Ecological Value This land offers more than just open space?it is a much-loved and well-used amenity for the local community. It serves as a peaceful escape for informal recreation and nature engagement, and its visual and environmental contributions to the neighbourhood are significant. Its destruction would represent a major loss in local character and quality of life. The proposal underestimates the pressure on existing services, lacks detailed mitigation plans, and fails to explain how proposed footpaths will link meaningfully into existing routes. Nearby Local Wildlife Sites will be impacted
1.8	North of Breadsall Hill Top	Bus Services	Chris Lunn	Response-01410	We have the H1 bus route which is so pointless, making it an unviable alternative to private car use, making it impractical for essential daily activities such as commuting to work or school, accessing healthcare and vital services, or traveling to other parts of Derby. Consequently, the proposed development would intensify reliance on cars, directly opposing Derby City Council?s objectives for sustainable travel, improved air quality, and carbon reduction.
1.8	North of Breadsall Hill Top	Bus Services	Clare Roters	Response-01553	Services that go through Oakwood and chaddesden are already overcrowded and these pass through breadsall.
1.8	North of Breadsall Hill Top	Bus Services	Edward James Gregory	Response-00728	Limited buses and danger for cycling on fast roads, will only encourage individual car journeys
1.8	North of Breadsall Hill Top	Bus Services	Emma Hawkins	Response-00813	Buses pass close by although not reliable.
1.8	North of Breadsall Hill Top	Bus Services	Gary Murfin	Response-00374	There will have to be plans in place to have new bus routes in the area also increasing traffic in the area and pollution
1.8	North of Breadsall Hill Top	Bus Services	Gemma Cotter	Response-01374	The H1 offers a frequent service limited to accessing Derby at the Council House or northwards to Heanor. Services beyond Heanor are more limited. It does not connect at the bus station and is remote from the train station. Public travel connections around Derby are time-consuming and expensive pushing car use as the most practical option for most destinations, especially for multiple-person journeys. This poor provision will increase the number of car journeys.
1.8	North of Breadsall Hill Top	Bus Services	Gillian Pearson	Response-00303	The bus services are so infrequent as to be of no practical use to most people.
1.8	North of Breadsall Hill Top	Bus Services	Helen Walker	Response-00325	I use the H1 when I don?t want to take my car into town so this is going to get busier than it already is with additional houses around
1.8	North of Breadsall Hill Top	Bus Services	Hulland. Bdverley	Response-00496	Will spoil estate if put buses through here
1.8	North of Breadsall Hill Top	Bus Services	Jake Moore	Response-01202	While the H1 bus route technically serves the area, it is widely regarded by local residents as infrequent, unreliable, and poorly timed. It does not provide a realistic alternative to private car use, particularly for: Commuting to work or school, Accessing healthcare and essential services, or Connecting to other parts of Derby or the wider region. As such, the development would lead to greater car dependency, undermining Derby City Council?s goals for sustainable travel, air quality improvement, and carbon reduction.
1.8	North of Breadsall Hill Top	Bus Services	James Roberts	Response-00673	The far end of the housing estate will be a reasonable walk for children or the elderly given the hill they'd have to climb to get to the A608 to the nearest bus stop, and Dale Acre Way & Hungerhill Close are unsuitable for a bus service to run through without causing significant congestion at peak times given the current parking situation on these roads
1.8	North of Breadsall Hill Top	Bus Services	Jamie Branagan	Response-00335	Adding 160 homes will clear add more strain in the current bus services offered. 160 homes equates to c350-500 people. Even if only a small percentage of these people use busses it's the services in and around Oakwood that will be put under strain NOT Erewash.
1.8	North of Breadsall Hill Top	Bus Services	Janette Glenn	Response-00422	The site is only served by the H1 bus between Heanor and the city centre. Residents are therefore likely to add to pollution and congestion by using their cars.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Bus Services	Julie Bates	Response-01326	The pressure on the bus services are going to have a big impact on yet more properties in this area , let alone trying to get children to and from school . There?s bus service is already struggling at times with its demands !
			Karen Read	Response-00923	at present there is an adequate bus service will this alter due to increased demand
1.8	North of Breadsall Hill Top	Bus Services	Kirstin Woodward	Response-01043	This is a very populate bus route, with many people travelling to school, colleges and work. My son travels daily to college in the centre of Derby. Often, the buses are too full to board, and he has to wait up to 20 minutes for the next one. On several occasions, after two full buses passed without stopping, he and a group of other students had no choice but to order an Uber instead.
1.8	North of Breadsall Hill Top	Bus Services	Laura Louca	Response-01266	As much as the council/government like to try and entice us to use public transport, for the most of us it is utterly impractical. No family with working parents can possibly get primary school aged children to school and get off to work on time using a bus service. They are only good if you don?t need to be somewhere at a specific time.
1.8	North of Breadsall Hill Top	Bus Services	Lee Wheatley	Response-01492	? With the planned development, both the Arriva 22 and Trentbarton H1 routes would face increased demand, leading to overcrowding, especially during peak hours. The current capacity of these services will be insufficient to comfortably accommodate a significant influx of new residents. It is already difficult to get on these services at busy times and I?ve had to walk back from town on a number of occasions.
			Lisa Stone	Response-01018	More houses would make more buses needed to cover the footfall and again add to the already busy roads.
1.8	North of Breadsall Hill Top	Bus Services	Lucy Lewis	Response-01459	Unsuitable for use of buses
1.8	North of Breadsall Hill Top	Bus Services	Mandy Cooling	Response-00312	There is a very good bus service (trent Barton H1) which could service such a development - although think the greater risk is around cars on the road rather than bus service
1.8	North of Breadsall Hill Top	Bus Services	Martin Harrison	Response-01395	I object to the proposed development due to its strain on already limited local bus services. Public transport in the area, particularly through Oakwood, Breadsall, and Mansfield Road, is infrequent and often overcrowded. Adding more residents without improving infrastructure will make commuting more difficult and reduce reliability for existing users.
1.8	North of Breadsall Hill Top	Bus Services	Masheda Chowdhury	Response-01339	1. Inadequate Existing Public Transport Provision: ? The current public transport services in and around the Breadsall Hilltop and Oakwood area are limited in frequency and coverage, particularly outside peak times and at weekends. ? There is no guarantee that additional bus routes or services will be provided to meet the needs of 160 new households, which could result in increased car dependency. 2. No Firm Commitment to New or Improved Bus Services: ? The planning policy references no concrete proposals or guarantees to improve or expand bus services in conjunction with the development. ? Without binding agreements or developer contributions toward public transport, new residents are unlikely to have viable alternatives to driving. 3. Increased Car Use and Reduced Sustainability: ? Without enhanced bus services, the development is unlikely to support modal shift from private cars to public transport. ? This runs counter to Derbyshire County Council and national planning policy goals, which aim to reduce car use and support sustainable travel. 4. Walking Distance to Existing Bus Stops is a Barrier: ? The closest existing bus stops (if any) may be over the generally accepted 400-metre walking threshold ? particularly problematic for older residents, those with mobility issues, and families with young children. ? Lack of safe, well-lit, and continuous pedestrian links to these stops further reduces accessibility. 5. No Integrated Travel Plan: ? There is no mention of a Travel Plan that includes bus service coordination, subsidies, or infrastructure like real-time information at bus stops. ? Any new housing development should include a sustainable transport plan that integrates reliable public transport from day one ? not as a vague future possibility. 6. Cumulative Strain on Services: ? With additional housing earmarked for the safeguarded 14.6 hectares east of this site, the future pressure on already stretched bus services will only worsen unless comprehensive improvements are secured now.
1.8	North of Breadsall Hill Top	Bus Services	Michael Grignon	Response-01335	The bus service in this area is already under strain due to the road traffic, adding more housing would only add more problems to already strained service
			Michael Poplar	Response-00565	Bus services, particularly through Breadsall village are not sufficient to act as a viable alternative to private transport.
1.8	North of Breadsall Hill Top	Bus Services	Monique Johnson	Response-00663	We need more frequent buses in order to encourage people not to use their cars.
1.8	North of Breadsall Hill Top	Bus Services	Mrs Francoise Poplar	Response-00602	There is essentially one bus route along the A608 linking Derby to towns/villages to the north of the city. No other directions of travel are catered for, so car traffic predominates.
1.8	North of Breadsall Hill Top	Bus Services	Richard Johnson	Response-00697	Bus services are minimal and give no encouragement to minimize the use of a car as an alternative means of transport.
1.8	North of Breadsall Hill Top	Bus Services	Richard Kingham	Response-00849	Luckily doesn't appear to be impacted to badly as H1 runs every 10-15 mins
1.8	North of Breadsall Hill Top	Bus Services	Richard Straw	Response-01412	There's ample bus routes already, we don't want more bus routes adding increasing traffic and higher crime rates

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Bus Services	Sam Saunders	Response-01557	The proposed development at North of Breadsall Hilltop also raises concerns regarding local public transport, particularly the adequacy of bus services to support the increased population. Currently, bus routes serving Hungerhill Close, Dale Acre Way, and surrounding areas provide limited frequency and coverage, with few direct connections to major employment, education, and healthcare hubs. This limited service reduces the attractiveness of public transport for residents, increasing reliance on private vehicles. With the addition of approximately 160 homes, there will be a significant rise in demand for local bus services. However, there is no clear commitment or plan within the development proposals to enhance or expand these services to meet future needs. Without improvements, the existing bus network is unlikely to cope with the increased passenger numbers, leading to overcrowding, reduced reliability, and longer waiting times. This may discourage sustainable travel and contribute to higher car usage, further exacerbating traffic congestion and air quality issues in the area. Moreover, poor accessibility to efficient public transport options limits the opportunities for low-income or car-free households to access essential services, employment, and education. This issue is particularly pressing given the development's affordable housing commitments. The absence of effective bus service provision risks isolating new residents and contradicts broader local and national goals for sustainable development and carbon reduction. To mitigate these concerns, any approval of the development should be contingent on a clear and funded plan to enhance bus service frequency, routes, and accessibility, ensuring that public transport is a viable alternative to private car use for future residents.
1.8	North of Breadsall Hill Top	Bus Services	Stuart Brown	Response-00771	Will current bus services be extended down dale acre? The road is not currently suitable for this type of traffic
1.8	North of Breadsall Hill Top	Bus Services	Tom King	Response-00734	Reduced bus service is already busy and overused.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Abbie quinn	Response-00616	One purchasing our house we were told there couldn't be any building behind us due to it being a flood/ drainage area. This will impact on all houses around if built on.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Adam Millward	Response-00418	Again all trees will be cut down for attenuation ponds getting rid of all natural drainage and ground stability provided by the trees. Probably cause more mass flooding downhill into Breadsall village.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Adelle Cavanagh	Response-00392	The flooding that occurred in Breadsall in 2023 was exceptional, but was clearly exasperated by the Durose development and the fact that water is not being drained away as efficiently as prior to the building of the new homes
1.8	North of Breadsall Hill Top	Flooding / Drainage	Alexander lee	Response-01439	Breadsall already floods. Adding two developments on top of a hill above Breadsall, which will massively increase water run off, will certainly exacerbate the flooding issues
1.8	North of Breadsall Hill Top	Flooding / Drainage	Alex Cargill	Response-01834	*Water and potentially sewage overload
1.8	North of Breadsall Hill Top	Flooding / Drainage	Amber Hubbard	Response-00845	Increased development will increase the flooding risk/ severity/ frequency on Breadsall village without providing any solution or support. The people in existing houses will be disproportionately affected while the newcomers are unlikely to see much impact
1.8	North of Breadsall Hill Top	Flooding / Drainage	Andrea R Rowley	Response-01230	Flood Risk & Sewage - The proposed development will increase the water surface drainage coming down into the Breadsall Village. The village already suffers from flooding and the devastating effects on households when this occurs. The ancient culverts are not able to take the strain of excess water coming down Brookside Road hill now, let alone when an extra houses are added. above the village. Breadsall village will be directly downstream from this housing development. There is already a considerable constant water flow from the up hill fields of this area down on to Croft Lane Road and has been getting worse as more houses are added. This water flow is all year round not just in heavy rainfall times. The sewage pipes that run under the road are ancient and have little capacity to take an increase in volume. This fact was established a few years ago during Breadsall Village Flood Defences investigations and discussions.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Andrea wightman	Response-00354	Breadsall village is already prone to flooding, these properties will make the flooding worse
1.8	North of Breadsall Hill Top	Flooding / Drainage	Andrew David Williams	Response-00796	Breadsall village has seen increased flooding over the last few years mainly as a result of increased run off from developments at lime land and between the A609 and the greenway. Further development to the north of the A609 and south of the greenway will exacerbate this issue with increased run off and increased seepage through the land strata.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Andy Madeley	Response-00381	Oakwood is regularly flooding, building more houses will just worsen the problems
1.8	North of Breadsall Hill Top	Flooding / Drainage	Angela Clarke	Response-01400	Impact of increased local flooding to nearby village already know to flood.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Angela Smyth	Response-00296	Breadsall village is already subject to more flooding due to the building of Redrow and lime court estates. An additional housing estate would make this worse.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Ann Sherlock	Response-00410	The map used in this proposal is out of date. Adding the current proposal will be extremely detrimental to the drainage of the area. Breadsall village has flooded most years since the Durose estate has been built, and it is disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the area, missing two extremely large housing estates and falsely portraying a smaller population and impact the housing proposal will have, especially on the local drainage and flooding issues.
1.8	North of Breadsall Hill Top	Flooding / Drainage	A O Smith	Response-01798	Existing developments at Breadsall Hilltop have adversely affected Brookside Road , the main unclassified road through Breadsall which takes the increased traffic, by flooding. Torrents of water have cascaded down the jitty bringing it with associated debris and blocking the road. The Victorian pipework and sewerage network that runs through the village is insufficient to handle increased load. Climate change increases this risk. There is no provision in the proposals to support the infrastructure needed , such as drainage systems.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Ashley syll	Response-00397	Draingae concerns building on farmland, needs assurance as prone to risk of flooding and drainage concerns. Water aspects to north and east of development and inbetween this and protected area

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Flooding / Drainage	Ben Martin	Response-00787	Breadsall village has seen a vast increase in flooding since the development of the Persimmon estate and Breadsall Hilltop which are situated within the water catchment area. Further urbanisation of the water catchment area will undoubtedly lead to an increase of flooding events within Breadsall Village.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Bethan Eddy	Response-00976	There are huge issues already with flooding in Breadsall Village, this will also increase the flow of water to the bottom of the hill in to the village
1.8	North of Breadsall Hill Top	Flooding / Drainage	Beverly Jordan	Response-01330	As a result of further removal of the landscape I feel this will result in the potential for flooding and drainage problems
1.8	North of Breadsall Hill Top	Flooding / Drainage	Brendan Hargreaves	Response-00629	the systems in place will not be able to cope unless they are seriously renewed or upgrdated
1.8	North of Breadsall Hill Top	Flooding / Drainage	Cameron Coope	Response-00369	Flooding in Breadsall is already a major problem following building works.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Carl Hill	Response-00670	Already existing flooding risks to Breadsall village and this will continue to creat further risks to the village and beyond
1.8	North of Breadsall Hill Top	Flooding / Drainage	Carol Westcott	Response-00973	As I understand the land being used does not have great drainage with field land being destroyed where will all the water go.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Carys Whomsley	Response-01438	I am writing to register my strong objection to the above-mentioned planning application, both in its original and revised form. Despite the removal of the area adjacent to the A61 in the amended proposal, I believe that the proposed development remains deeply inappropriate and harmful for the following reasons: 1. Contravention of Policy CP18 and Loss of Green Wedge The proposed site lies just outside the designated Green Belt, but crucially directly abuts existing woodland and open countryside, forming part of the vital green corridor along the Great Northern Greenway. This area functions as a green buffer, enhancing ecological connectivity, supporting biodiversity, and providing visual and recreational amenity to local residents, walkers, and cyclists. Despite claims of woodland retention, the development threatens the integrity of this space. Proximity to new housing would increase human pressure on the natural environment, likely leading to degradation of woodland, fragmentation of habitats, and a reduction in wildlife corridors. No Biodiversity Net Gain (BNG) assessment appears in the application documents, raising concerns about whether the legally mandated 10% net gain can or will be achieved. Biodiversity enhancements delivered off-site would do nothing to mitigate local ecological loss, thereby undermining environmental sustainability in the area. Moreover, the site lies adjacent to land recently released from the Green Belt and under consideration for housing allocation by Erewash Borough Council. The cumulative impact of developing both sites would be devastating: a continuous sprawl from Derby through to Breadsall, resulting in the elimination of the settlement gap and permanent damage to the character of the Great Northern Greenway. 2. Environmental, Infrastructural, and Policy Concerns The proposal directly contradicts the National Planning Policy Framework (NPPF) Paragraph 143, particularly the goals of preventing urban sprawl and protecting the openness of Green Belt land. It also ignores the findings of the Strategic Housing Land Availability Assessment (SHLAA 359), which previously deemed the site unsuitable for residential development due to accessibility and environmental limitations. The development is completely incompatible with the objectives of the Breadsall Parish Neighbourhood Plan 2019?2029, particularly the aims to: Preserve the rural character and prevent urbanisation; Avoid coalescence with the Derby conurbation; Safeguard wildlife and ecological features; Control flood risk and infrastructure strain; Protect valued green spaces and visual vistas.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Carys Whomsley	Response-01438	Breadsall has already experienced increased flooding, attributed to upstream developments like Persimmon Estate and Breadsall Hilltop, which lie within the same water catchment area. Any additional development would worsen this issue, placing homes and infrastructure at risk. Furthermore, the proposal relies on access through two existing public footpaths within the Redrow estate and offers no concrete infrastructure improvements. The A608 is already over-congested, and no plans are presented to handle increased traffic or to safeguard children commuting to local schools. 3. Loss of Community and Ecological Value This land offers more than just open space?it is a much-loved and well-used amenity for the local community. It serves as a peaceful escape for informal recreation and nature engagement, and its visual and environmental contributions to the neighbourhood are significant. Its destruction would represent a major loss in local character and quality of life. The proposal underestimates the pressure on existing services, lacks detailed mitigation plans, and fails to explain how proposed footpaths will link meaningfully into existing routes. Nearby Local Wildlife Sites will be impacted
1.8	North of Breadsall Hill Top	Flooding / Drainage	Chris Beaumont	Response-00841	Breadsall will suffer yet again as a result of this development which will further increase the pressure on drainage within the village. I understand the village is served by 9 inch pipes which are 100 years old and this will add to the flooding overload. Discussions with all parties i.e the relevant councils and STW has expressed the concerns of villagers and parish councillors on this long running problem.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Chris Lunn	Response-01410	The topography of the proposed site has already been identified as unsuitable for development given the steep slope of the land. The drainage around the Windmill Place housing development is already prone to flooding and blockages and has had significant problems with inadequate or poor sewage systems installed. 160 additional houses, all requiring adequate water and sewage systems, will put an immense strain on an already struggling drainage system. The area is already prone to flooding and building on already waterlogged land and taking away the natural soakaway, is absolutely foolhardy. The increase in surface water is likely to flood not only the nearby areas of Oakwood and Breadsall but cause additional strain on all local drainage systems. Given the more and more frequent extreme weather events, flooding is only set to increase. Flooding increases the risk of additional health issues and damage caused to property.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Christopher Chambers	Response-00175	The Great Northern Greenway has seen water spill damage following the most recent developments in the adjacent areas, and the proposal is likely to exacerbate the drainage issues without substantial and potentially damaging (environmentally, aesthetically) works to the infrastructure necessary to support the application. Serious consideration and data collection / analysis needs to take place on the potential impacts of the removal of fauna and flora from the proposed development area (on the low-lying properties towards Breadsall village).

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	North of Breadsall Hill Top	Flooding / Drainage	Clare Roters	Response-01553	Drainage is already a problem, in homes on the durose estate and gardens. Many houses have struggled with blocked drains
1.8	North of Breadsall Hill Top	Flooding / Drainage	Colin Brewster	Response-00576	Breadsall Village is already suffering from the water which is being discharged from both the Persimmon and Durose attenuation systems. Both the attenuation ponds may discharge at an acceptable rate but neither points of discharge are connected directly or indirectly to a water course. This causes significant flooding and damage at several points in the village. This development simply cannot be allowed to do the same as Persimmon has done, and simply let the discharged water flow down to the village. During wet weather we suffer terrible flooding episodes and both EBC and DCC appear to completely ignore our awful predicament. I am really concerned that this development will simply make the situation worse
	North of Breadsall Hill Top	Flooding / Drainage	Dana Demidoff	Response-00634	Where is the drainage infrastructure
1.8	North of Breadsall Hill Top	Flooding / Drainage	David Duxbury	Response-00305	The land in question already contributes to yearly flooding and uncontrolled run off onto church lane. Attenuation ponds will not solve this problem as observed in breadsall village and continuing problems with runoff water, which has been made worse by developments adjacent to the a608 in recent years
1.8	North of Breadsall Hill Top	Flooding / Drainage	Diane Bakhda	Response-01411	We have had the driest spring for at least 100 years and yet water is still flowing onto Croft Lane in Breadsall. We are assuming this is due to all the new building that has taken place without adequate provision for the loss of water being able to soak naturally into the ground. Is this development only going to add to the problem?
1.8	North of Breadsall Hill Top	Flooding / Drainage	Edward James Gregory	Response-00728	Area suffers from flooding and run-off onto the highways. There for further development will increase this and reduce safety
1.8	North of Breadsall Hill Top	Flooding / Drainage	Elaine hodgkinson	Response-00854	It must not increase flooding for Breadsall or drain much needed water from further up the hill.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Emma Binns	Response-00843	The village already has flooding issues because of fields and rough tracks being built on, the water has to go somewhere and will end up devastating properties in the village at the bottom of the hill.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Emma Hawkins	Response-00813	The land currently provides natural flood defences to the Village and Durose Estate as it has drainage ditch's running around the perimeter. If this land was built on the defences will be removed causing flooding to the Durose Estate and the Breadsall Village. The village suffers serious flooding and further building on this land will increase this further.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Gaynor Pawley	Response-00627	60 houses on such a small piece of land would put stress on the area for flooding of Breadsall village, who are already suffering the consequences of recent developments. The more houses built the less pervious land is left, therefore moving the natural rain water down to Breadsall village and the inadequate brook which has flooded on numerous occasions in recent years. Drainage and sewers in this area are already under major stress and more houses would only feed into this . This would become an area of high surface run off and have a knock on effect to Breadsall and surrounding areas.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Ged Doherty	Response-01822	Although the high levels of rainfall that we have had over the past couple of years were exceptional, climate changes seems to indicate that this will be a more regular occurrence, and the area simply couldn't cope with the water running off the higher ground, primarily due to the 2 developments on the A608 mentioned earlier. The northern area of the currently ?safeguarded? area has been segregated (under government grants) from cattle grazing land to provide a nature reserve and also an area to soak away some of the water to prevent flooding in Breadsall. Even if this area itself is not built upon, the burden it would face from even more development would simply overwhelm it, leaving Breadsall even more vulnerable to flooding.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Gemma Cotter	Response-01374	The heavy clay soils at the site waterlog each winter and after periods of sustained heavy rain which are predicted to increase due to climate change. The frequency of significant flooding downhill in Breadsall has been increasing in recent years since new developments at Durose and Allport Heights. This causes damage to homes in the valley, closes access through Breadsall and causes damage to amenities such as the Greenway. The density of these recent additions to the housing stock have little natural drainage through small gardens not conducive to beneficial measures like tree planting and healthy lawns, and paved frontages dedicated to maximising car parking. There is also the risk of an additional 150 homes being build behind Chaddesden Woods putting additional drainage issues upstream and along Lime Lane aggravating these issues.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Gillian Pearson	Response-00303	As residents of Breadsall Village whose property has been flooded or threatened with flooding many times in the last 10 years, we have found that Derbyshire County Council and Severn Trent Water plc are unwilling to accept responsibility for the already overburdened and inadequate drainage systems that these new properties would seek to join into. Until major infrastructure improvements are made mandatory for these new developments they should not be granted planning permission.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Harvey Pearson	Response-01307	Flooding is a main concern as this has increased and caused considerable problems in the village affecting householders since previous developments
1.8	North of Breadsall Hill Top	Flooding / Drainage	Helen Foster	Response-00650	Breadsall village already suffers from heavy flooding during periods of heavy rain. This proposal must be rejected, and alternative sites should be sought that do not put existing homes in such obvious and predictable danger. On page 2 of P&DG's Green Wedge Review, it states: 4. ?The Green Wedge provides vital flood storage and provides space to allow water to soak away naturally, reducing the need for engineered drainage? Paragraph 159 of the NPPF (Planning and flood risk) states that: Inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Helen Walker	Response-00325	Without the green belt area and trees there will be more flooding we have experienced flooding over the years in Oakwood and this will only get worse in a concrete jungle this is a known fact
1.8	North of Breadsall Hill Top	Flooding / Drainage	Hulland, Bdverley	Response-00496	Flooding and drainage is bound to impact homes

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Flooding / Drainage	Ian Lockwood	Response-01491	Breadsall village already experiences significant flooding during periods of heavy rainfall. Approving this proposal would place existing homes at further, entirely foreseeable risk with mitigations such as those in place at the recent Lime Lane development already proven to be inadequate. It must therefore be rejected in favour of alternative sites that do not carry such inherent danger. The importance of this area in mitigating flood risk is acknowledged in P&DG's Green Wedge Review (Page 2), which states: 'The Green Wedge provides vital flood storage and provides space to allow water to soak away naturally, reducing the need for engineered drainage.' Additionally, Paragraph 159 of the National Planning Policy Framework (NPPF), under Planning and Flood Risk, states: 'Inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere.' This proposal directly conflicts with both local and national policy guidance regarding flood risk and the responsible siting of development.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Jackie Lewis	Response-00955	Flooding is already an issue with the building of two housing developments so, even though these have had flooding prevention items in planning and some afterwards, the footpaths and roads now form a gully taking water into what is an at risk village. More housing and less green spaces/trees to absorb this is only going to flood the village more often.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Jake Moore	Response-01202	The proposed development of 160 homes raises significant concerns regarding flooding and drainage, particularly given Derby's ongoing struggles to manage flood risks in recent years. There is a clear potential for this development to exacerbate existing drainage issues and increase the risk of flooding for both the new residents and neighbouring areas, including Oakwood, Breadsall, and Darley Abbey. Increased Surface Water Runoff: The introduction of impermeable surfaces from 160 new homes, roads, and infrastructure would result in significantly more surface water runoff. This would overwhelm existing drainage systems, particularly during heavy rainfall. The increased runoff could lead to flooding not just on the development site, but also in nearby areas, as water would be redirected into already-stretched drainage networks. Strain on Existing Drainage Infrastructure: Derby has experienced significant flooding incidents in recent years, most notably in November 2019, when heavy rains caused widespread flooding in parts of the city. Areas such as Breadsall and Oakwood have been vulnerable to flooding in the past, and the proposed development would place additional pressure on the local drainage systems, which have struggled to cope with extreme weather events. Impact on Local Watercourses: The proposed site is near critical watercourses, including the River Derwent and Breadsall Brook, both of which play key roles in local drainage and flood risk management. Increased surface water runoff could overwhelm these watercourses, leading to higher water levels and potential flooding downstream, particularly in Breadsall and Darley Abbey. The resulting erosion and damage to local habitats could also harm the area's natural ecosystem. Cumulative Impact of Multiple Developments: The proposed development is part of a wider trend of urban expansion in Derby, with multiple housing projects in the pipeline. When combined, these developments will place unsustainable pressure on local drainage systems. This cumulative impact has not been adequately assessed, and the risk of flooding across a larger area?especially during extreme weather events?needs to be considered in the planning process. Legal and Planning Precedents: National and local planning policies require developers to ensure that new projects do not increase flood risk to surrounding communities. Under the National Planning Policy Framework (NPPF), the development must demonstrate that it will not contribute to the worsening of local flooding issues. Given Derby's vulnerability to flooding, the proposal should be subject to rigorous flood risk assessments and mitigation plans to avoid exacerbating existing risks. Public Health Risks: Flooding brings significant public health risks, including the spread of waterborne diseases, contamination of water supplies, and the disruption of essential services like sewage and waste management. The potential for increased flooding in surrounding areas could undermine efforts to protect local public health, particularly in areas like Breadsall and Oakwood, which are already at risk. Cost of Future Flood Mitigation: As climate change brings more frequent and intense rainfall, the cost of maintaining and upgrading flood defences is likely to increase. The proposed development could place further strain on local government resources, potentially diverting funds from other critical infrastructure projects or flood prevention measures, leaving existing communities at even greater risk. Floodplain Considerations: Even if the development is not directly situated in a designated floodplain, it is in close proximity to flood-prone areas. The construction of impermeable surfaces could increase runoff into nearby watercourses, raising water levels and increasing the likelihood of flooding in the surrounding areas. This disruption to the natural water flow could have long-term consequences for both the local environment and the safety of nearby residents. In conclusion, the proposed development would exacerbate existing flooding risks in Derby, particularly for Oakwood, Breadsall, and Darley Abbey. It would place additional strain on already vulnerable drainage systems and watercourses like the River Derwent and Breadsall Brook, potentially leading to flooding further downstream. Additionally, the cumulative impact of multiple developments has not been fully assessed, and the potential public health risks and costs of future flood mitigation should not be overlooked. The development cannot proceed without comprehensive flood risk assessments and robust mitigation strategies to protect both residents and the environment.
1.8	North of Breadsall Hill Top	Flooding / Drainage	James Bellaby	Response-00337	The more concrete we lay the less places for heavy rain to drain off too. Of course flooding will occur in a flood prone area.
1.8	North of Breadsall Hill Top	Flooding / Drainage	James Park	Response-00856	This will put more demand on the drainage through Breadsall Village which has already been severely affected by other developments. Which has caused flooding throughout Breadsall Village
1.8	North of Breadsall Hill Top	Flooding / Drainage	James Roberts	Response-00673	As per the Wildlife section, anyone who walks the fields being proposed to be developed know they get very boggy / water logged in the winter. Changing these fields to asphalt and concrete will drive all of this water elsewhere, most likely onto the greenway causing rapid degradation (as seen elsewhere on the greenway where significant works have been required to maintain the paths)

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Flooding / Drainage	James skivington	Response-00359	The current housing development build by Redrow homes draining is very poor. The balancing pond water currently flows into the proposed find and then down under the greenway and into the lower field on the north side of the greenway. This already floods this field on a regular basis. And is not good for the local wildlife. And the breadsall village
1.8	North of Breadsall Hill Top	Flooding / Drainage	Jamie Branagan	Response-00335	As Breadsall Village sits within Erewash you must realise how flooding has increased massively in the village in the past 10 years. This coincides with the development of both estates in Oakwood North / Hilltop. Adding to this will only exacerbated the flooding experienced in Breadsall.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Jane Hodges	Response-00299	I am extremely concerned that this development will cause an increase to the already severe flooding we experience in Breadsall Village. I have walked along the A608, alongside the proposed developments, after heavy rain and seen water pouring out from under the road, over the fields and down into the village via the brook at the side of the Greenway and the path down from the windmill pub. I assume this comes from the overflow from the small reservoir on the corner of the A608 and Lime Lane, built for the new development there. However at least the fields must absorb some of this water so what will happen when the fields are replace by houses? The floodwater on Rectory Lane in November 2019 and again in October 2023 came within 3 meters of my front door and went into the homes of two of my immediate neighbours. Everyone in the village says that these floods have been worse than any previous and this coincides with the building of the Lime Lane development, so we are very scared what will happen if the proposed developments go ahead. Our understanding is also that our homes, which were built by EMH in 2017 were only granted planning permission on the understanding that they were above the previous highest flood level and yet they have been flooded. We have been told that the Sewerage/drainage in the village hasn't been updated to allow for the Lime Lane development and at least two of the houses in the village had floodwater come in through the internal drains.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Janet Brewster	Response-00577	Breadsall Village is already suffering from the water which is being discharged from both the Persimmon and Durose attenuation systems. The attenuation ponds may discharge at an acceptable rate but neither point of discharge are connected water course. This causes significant flooding and damage at several points in the village. This development simply cannot be allowed to do the same as Persimmon has done, and simply let the discharged water flow down to the village. My property is currently affected by this problem and I fear things will get worse.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Janet Jones	Response-00895	This village has history of flooding and the Victorian pipe work isnt coping with it already
1.8	North of Breadsall Hill Top	Flooding / Drainage	Janet O'Brien	Response-01835	I question the impact the development will have on drainage , flooding and sewers in the local area. Local Authorities are fully aware of the inadequate infrastructure in the village of Breadsall which will be undoubtedly impacted.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Janette Booth	Response-00295	Flooding since the creation of the new housing developments has more severe and regular. The pathway through the Greenway from Hill Top to Breadsall Village becomes almost river like at times. It's needed to be closed for repairs from flooding, cutting off a major link for people walking to get the buses. The repairs aren't great. If the water isn't able to soak I to the ground it's got to go somewhere, and it seems to be Breadsall Village, including the brook that runs through, which has also had to have work done to help reduce flooding. It doesn't always work.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Janette Glenn	Response-00422	Breadsall village already suffers from flooding problems. The run off from yet more houses up the hill from the village will make the situation even worse. Residents already report that it has worsened with the two most recent developments.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Jason Reader	Response-00320	I live in Breadsall village and my house suffered flooding in 2023, development like this with no flood alleviation for surrounding areas I object to.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Jeanette Kent	Response-00402	More housing = more rain run off = more flooding of local areas
1.8	North of Breadsall Hill Top	Flooding / Drainage	J Hasse	Response-00875	Too much risk of flooding the houses that are already in Breadsall.
1.8	North of Breadsall Hill Top	Flooding / Drainage	John Hudson-Peat	Response-01833	Breadsall Village has suffered serious flooding due to the loss of "flood" plains/areas due to the continued development around the village.
1.8	North of Breadsall Hill Top	Flooding / Drainage	John Moffat	Response-01289	There has been serious ground-water issues in this area since the railway was built - the remains of their mitigation system can be seen today above hte old station. Covering these fields with houses & tarmac will further exacerbate the flooding problems Breadsall suffers.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Julie and Michael Coulton	Response-01811	We have lived in Breadsall Village for the past 11 years. The first 9 years were peaceful and uneventful and then we had Storm Babet in October 2023. Our home was flooded for the first time in its history. Whilst we are aware that some homes are susceptible to flooding, ours was never one of them and is not shown on any environmental map as being in a flood zone. Having spoken to many flood experts over the last 2 years, both independent and Government led, they have concluded that the reason our property flooded is due to outside forces/changes. They are particularly concerned with the effect the new housing estate, at the top of Brookside Road / Lime Lane is having on the village. The fact that the drains in the village are no longer fit for purpose (in fact the highway drain outside my property had collapsed), is a major concern, because they are extremely old and too small to carry away the torrents of water that are hitting our village during heavy rain. The pond that has been added onto the Lime Lane housing development is not able to cope with extreme wet weather and can overflow in the direction of the village. To propose the addition of another housing estate, north of Breadsall Hill Top, will only create a more hazardous environment for us. There needs to be some serious investment in larger and more modern drainage solutions before additional housing should be considered.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Julie Bates	Response-01326	Breadsall village has seen a vast increase in flooding since the development of the? ? Persimmon estate and Breadsall Hilltop which are situated within the water? ? catchment area. Further urbanisation of the water catchment area will undoubtedly? ? lead to an increase of flooding events within Breadsall Village. he planned access to the site can only be achieved by cutting through 2 designated? ? and widely used public footpaths located in the existing Redrow estate at Breadsall? ?

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Flooding / Drainage	Julie Herbert	Response-01282	Breadsall already floods on a regular basis, building more houses and taking away soak area is going to put peoples homes at even more risk.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Justine Dean	Response-00844	The addition of the 2 recent housing estates has caused Breadsall village to flood on a regular basis. This is hurting people's livelihoods. So many people have sold and left. New buyers left unaware of the future floods they face. I don't live in the village but it feels no consideration is given to existing residents who bear the brunt of new construction. Please bring back a caring society.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Kara Crossley	Response-00865	Breadsall village floods numerous times a year due to the development on Breadsall hilltop which damages family homes and small local businesses. There is not proper drainage infrastructure now, so adding more houses will cause further flooding and damage to Breadsall village
1.8	North of Breadsall Hill Top	Flooding / Drainage	Karen Read	Response-00923	Please send environmental study before i can comment from the research i have done it will be totally detrimental to the surrounding area especially breadsall village
1.8	North of Breadsall Hill Top	Flooding / Drainage	Keerthi	Response-01450	Breadsall village has seen a vast increase in flooding since the development of the Persimmon estate and Breadsall Hilltop which are situated within the water catchment area. Further urbanisation of the water catchment area will undoubtedly lead to an increase of flooding events within Breadsall Village.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Kev Rodgers	Response-00897	There are already 'drainage effects' in Croft Wood from the previous housing development, this proposed development will no doubt add to or create new wet/damp areas where there used to be none and may well lead to additional surface water, ultimately appearing on Croft Lane, potentially causing flooding issues.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Kimberley Woodward	Response-01445	We don't want the foul and top water sewers becoming overpowered with more housing and causing flooding and sewage issues.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Kirstin Woodward	Response-01043	My concerns are primarily focused on the flooding risks to Breadsall Village, the A61, and all surrounding areas. Over the past few years, since the development of the last two housing estates, the flooding in the area has worsened. Breadsall Village has experienced a river running through its centre as a direct result of poor drainage systems in the houses near Lime Lane. The Durose Country Estate has a surface water drainage system that essentially consists of a trench dug into a field. There has been no adequate planning for how water is managed once it leaves the estate. This became particularly evident during the most recent flooding, which led to the closure of the A61 near Bookers.
1.8	North of Breadsall Hill Top	Flooding / Drainage	K Munson	Response-00631	Flooding never used to be a problem now as a consequence of significant housing development it is a now a threat with every significant amount of rainfall
1.8	North of Breadsall Hill Top	Flooding / Drainage	Lara Small	Response-01262	I'm personally grateful that the decision was made to build Durose Country Park, I now live in a home probably built on allocated as Green Belt Land. I see the irony in my objection to further development and I'm trying to avoid a 'Not In My Back Yard' attitude. I understand the housing crisis won't fix itself unless more homes are built. I seek to urge the planning team to consider how to get the most value out of the of the fields available in the area, and I'm not sure if the awkward triangle North of Breadsall Hilltop really achieves that. Fitting in sufficient houses to make it profitable seems disproportionate to the effort in getting access to the fields, levelling the sloped land, cutting through protected hedgerows, pressurising the Great Northern Greenway, establishing a road network and critically, establishing water catchment & run off areas that will be critical to ensuring the inhabitants of Breadsall Village stay flood free. One of the wonderful things about Derby, and part of the reason why I've chosen to settle here, is due its lack of heavy city intensity. As a proud Rolls-Royce employee, a huge amount of employee wealth is poured into Derby and its surrounding areas. Perhaps, this is also the reason why further housing is being considered; its becoming a more attractive place to live, but I urge you to ensure the city remains in balance with the green space around it. May I offer my very best wishes for your future plans and development of Derby, and may I urge you to consider the balance and impact of all options.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Laura	Response-00379	Is there a true viable system. That will prevent Breadsall village from getting flooded?
1.8	North of Breadsall Hill Top	Flooding / Drainage	Laura Louca	Response-01266	All the new builds will certainly have terrible consequences when it comes to flooding in Breadsall Village. It has already got worse since the two biggest new build sites were built. Concrete, brick work and tarmac does not soak up rain water - fields, trees and hedges do.
1.8	North of Breadsall Hill Top	Flooding / Drainage	L Burton	Response-00342	The drains are constantly overflowing and having workmen out since they were built.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Leah McCormack	Response-01481	There has already been increased flooding in Breadsall village since the Durose Country Park development has been built. More houses in this area will make it worse
1.8	North of Breadsall Hill Top	Flooding / Drainage	Lee Wheatley	Response-01492	The proposed development of 160 houses could have several negative implications for surface water runoff and drainage patterns that ultimately affect Breadsall Hilltop. Increased impermeable surfaces associated with a development of this scale (roofs, roads, driveways) can significantly increase the volume and rate of surface water runoff. This increased runoff, if not adequately managed within the development site, can overwhelm existing drainage systems both within Erewash and potentially in downstream areas like Breadsall. I am particularly concerned about the adequacy of the drainage infrastructure proposed for the 160 houses. The Core Strategy Review Amendment should clearly outline the Sustainable Drainage Systems (SuDS) that will be implemented to manage surface water runoff within the development site. It is crucial that these SuDS are robust, well-designed, and have sufficient capacity to handle increased rainfall events, especially in light of climate change predictions for more intense and frequent storms. Without a comprehensive and effective drainage strategy for the 160 houses, there is a significant risk that excess surface water will flow into existing watercourses and drainage networks that serve Breadsall Hilltop, exceeding their capacity. This could lead to: ? Increased risk of fluvial flooding from local streams or rivers if the development contributes significantly to their flow rates. ? Increased risk of surface water flooding in low-lying areas of Breadsall Hilltop due to overwhelmed drainage systems. ? Surcharging of existing sewers and potential sewage backups. ? Damage to roads and infrastructure in Breadsall Hilltop due to increased water flow and saturation.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Flooding / Drainage	Linda Morris	Response-00867	In recent years Breadsall has had increasing flooding from the result of the run off from the developments in Oakwood and the A608 corridor. Any additional housing would exacerbate the already serious lack of drainage capacity.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Linda Smith	Response-01799	Breadsall village has been increasingly plagued by flooding since the construction of two large estates situated on the boundary between Derby City and the Borough. There are now other applications to further develop the area which falls into remit of the City.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Lisa Stone	Response-01018	As on previous comment, the field is water logged and muddy majority of the winter and autumn months, can be spring too if it rains significantly, the field currently absorbs this preventing it affecting local houses, the woodland areas also significantly flood during bad weather and the trees fall down, there will be significant flooding if houses and gardens are built there.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Lucy Lewis	Response-01459	This land is always flooded during winter months
1.8	North of Breadsall Hill Top	Flooding / Drainage	lynne hollis	Response-01234	Breadsall already experiences frequent flooding, and this development at the top of the area will likely worsen the issue. Increased urbanization can lead to reduced drainage capacity, putting homes and infrastructure at greater risk. Proper flood mitigation measures must be considered before proceeding.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Mandy Cooling	Response-00312	There must be serious concern about the flooding risk to Breadsall village by further development. There has been increase in water coming in to the brook in Breadsall since the previous developments and there's no doubt a risk of unforeseen consequences particularly around flooding, caused by destroying natural drainage of the earth.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Margaret Stafford	Response-01231	This is a significant issue for Breadsall village which is downstream to this development. The proposed development will increase the water surface drainage coming down into the Breadsall Village. The village already suffers from flooding and the devastating effects on households when this occurs. The ancient culverts are not able to take the strain of excess water coming down Brookside Road hill now, let alone when an extra 150 houses are added. Breadsall village will be directly downstream from this housing development. Croft Lane near to the A61 roundabout already has significant water draining down on to the road constantly all year round. Severn Trent have investigated several times only to find it is run off from the land above. The sewage pipes that run under the roads are ancient and have little capacity to take an increase in volume. This fact was established a few years ago during Breadsall Village Flood Defences investigations and discussions.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Mark Herbert	Response-01285	This land had always helped to absorb rainfall, I've lived here 24 years and never had as many flooding incidents as since ne building happened, more houses will make it even worse as the main drainage system is never upgraded
1.8	North of Breadsall Hill Top	Flooding / Drainage	Martin Harrison	Response-01395	I object to the proposed development due to concerns over flooding and inadequate drainage. The area already struggles with surface water during heavy rainfall, and additional hard surfaces from new housing will only increase the risk. Without robust and proven drainage solutions, this development could lead to property damage and safety issues for both new and existing residents.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Mary Hinckley	Response-00297	Breadsall is vulnerable to flooding. Removing this land will exacerbate the risk of flooding due to the loss of ground for drainage of surface water.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Mary Moffat	Response-01226	Breadsall Village is surrounded by high ground and has suffered for some years from flooding which has been severely exacerbated by the two large estates given planning permission by Derby City Council without a full assessment of the flooding risk to Breadsall. If this proposal was accepted, extra houses above Breadsall would only serve to make this problem worse.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Masheda Chowdhury	Response-01339	1. Increased Surface Water Runoff Risk: ? The current site is largely undeveloped greenfield land, which naturally absorbs rainfall. Building 160 homes, driveways, and roads will result in a significant increase in impermeable surfaces. ? Without adequate Sustainable Urban Drainage Systems (SuDS), this will exacerbate surface water runoff and increase flood risk locally and downstream. 2. No Detailed Flood Risk Assessment Provided: ? For a site of this size and sensitivity, a Flood Risk Assessment (FRA) should be required and publicly available before planning permission is granted. ? There is no clear evidence of this assessment in the policy, leaving uncertainty around how the development would be drained or protected from flood risk. 3. Known Drainage Problems in Surrounding Area: ? Parts of Oakwood and Breadsall already experience localised surface water issues after heavy rainfall. ? Adding this development without significant infrastructure upgrades will worsen existing drainage pressures, affecting roads, footpaths, and nearby properties. 4. Downstream Impact on Watercourses and Sewer Capacity: ? Increased runoff from this development may overload existing drainage systems and watercourses, particularly if connections are made to combined sewer systems or culverted streams. ? There is no evidence that Severn Trent Water or the Lead Local Flood Authority (LLFA) have agreed to or assessed the full downstream impact. 5. Potential Flooding of Adjacent Public Rights of Way: ? Breadsall Footpath 24 runs through or alongside the development site. ? Poor drainage or runoff management could lead to flooding and erosion of this well-used footpath, reducing accessibility and safety for local residents. 6. No Mention of Sustainable Drainage Features (SuDS): ? The policy fails to reference any SuDS features (e.g., swales, retention ponds, green roofs, permeable paving). ? Without these, the development risks being non-compliant with national drainage guidance and local sustainability policies.
			Matt	Response-00604	Increased drainage issues in breadsall with flooding all just passed on
1.8	North of Breadsall Hill Top	Flooding / Drainage	Megan Byrne	Response-01432	Breadsall village has already experienced a noticeable increase in flooding incidents in recent years, which many residents attribute to the cumulative impact of nearby developments and the loss of permeable green space. Additional development on this site risks exacerbating the problem by reducing natural drainage capacity and increasing surface water runoff. It is essential that any proposal affecting this area includes a comprehensive and transparent flood risk assessment, taking into account the recent history of flooding in Breadsall and the cumulative impact of multiple developments in close proximity. Without robust and demonstrable mitigation measures, this development could contribute to further flood events, placing existing homes and infrastructure at greater risk. I strongly urge the Council to consider this risk carefully before making any planning decision.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Flooding / Drainage	Melissa Little	Response-00389	In recent years, there has been a significant number of extreme weather bands which had caused a lot of flooding in the Oakwood/ Breadsall Hill Top area. I regularly walk these areas and the fields provide much needed drainage for heavy rain. In the area to the left, nearest to croft woods after a period of rain there is often sitting water on the field and it becomes very boggy. Is this appropriate land to being g new homes on? Imagine the gardens flooding because the land is not appropriate soil to facilitate draining. Plus. New build gardens notoriously are full of building waste, hindering possible drainage further. With this area being build on, the risk to flooding in the local area, especially on the main road will be significantly increased. Causing a huge risk to road users, plus thr additional traffic to potentially hundreds of extra cars on the road in the area due to the number of homes being built.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Michael Albinson	Response-00790	The village already has severe flooding problems not helped by the existing developments around the area. Increasing housing will only put the village at risk where there and home, businesses and schools.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Michael Grignon	Response-01335	Breadsall is already prone to flooding, taking away the natural habitat and adding concrete will only add to this problem
1.8	North of Breadsall Hill Top	Flooding / Drainage	Michael Poplar	Response-00565	Recently completed developments have already overloaded the streams, land drainage and antiquated combined drainage system running downstream of all these new and proposed developments through Breadsall. Despite many representations to both Severn Trent and the lead Flood Authority (Derbyshire County Council), nothing has yet been proposed, let alone implemented to alleviate what has now become a regular flooding problem.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Mollie	Response-01549	Flooding. This greenfield site currently absorbs rainfall and mitigates surface runoff. Hard surfacing and loss of vegetation will significantly increase flood risk, both on-site and downstream in existing residential areas. The proposed SuDS (Sustainable Drainage Systems) have not been proven to be sufficient, especially during extreme weather events. There is a high risk of: -Overwhelming local drainage ditches and culverts. -Increased flooding risk to homes along Brookside Road and Hill Top. There are records of previous flooding events in the area. Without detailed hydrology modelling and assurances from the Lead Local Flood Authority (LLFA), development should not proceed.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Monique Johnson	Response-00663	This is the ultimate problem. Breadsall CANNOT cope with any extra input from drains. Flooding has caused major disruption and damage. It is IMPOSSIBLE to envisage any mor building in and around our village.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Mrs Bullock	Response-00966	We have seen massive floods in the village over the years, this would make things worse.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Mrs Francoise Poplar	Response-00602	Recent developments have had a serious detrimental effect on both the natural watercourses running off these higher level areas down into Breadsall and had added to problems with the already overloaded 100 year old combined drainage system. A continued cavalier attitude to adding to these problems without taking action to improve the situation amounts to irresponsibility.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Mr SJ Read and Mrs S E Read	Response-01225	The extensive recent housing development in the Hilltop area has increased flood risks in Breadsall village by overloading the already inadequate watercourses and the old combined sewer. The proposed new development would clearly increase the flooding risk yet further.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Mr Softley	Response-00344	The fields proposed already flood. Development works will increase the risk to existing properties from the runoff from the hills.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Mrs Sarah Morley	Response-01515	Since the two new housing estates have been built, there has been a massive increase in floods flowing down the path from the windmill and along the bridal path. This then goes down into the village and has severly flooded the village and road have had to be closed. How can this aera cope with even more houses adding to the flooding??
1.8	North of Breadsall Hill Top	Flooding / Drainage	Nathan Cooke	Response-00896	This development will only add to the issues in the surrounding villages, mainly Breadsall village
1.8	North of Breadsall Hill Top	Flooding / Drainage	Nathan Latymer	Response-00361	Flooding has been rife over the last few years in this area and these houses will only have an adverse effect
1.8	North of Breadsall Hill Top	Flooding / Drainage	Neal Flint	Response-01220	Breadsall has only recently flooded, this with proposed development and other developments in the area this would significantly in crease risks of flooding events in the future.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Nicholas lloyd	Response-00356	I object to this planning application on the grounds that the proposed development will exacerbate existing flooding and drainage issues in the area. The site is located within a known flood risk zone, and previous incidents have demonstrated the vulnerability of the local infrastructure to heavy rainfall. Building on this land would increase impermeable surfaces, such as roads and rooftops, leading to higher volumes of surface water runoff. This additional runoff could overwhelm the existing drainage systems, leading to increased flood risks for surrounding properties and infrastructure. Moreover, the proposed development lacks a comprehensive flood risk assessment and fails to demonstrate how it will mitigate the impact on local watercourses and drainage networks. Given the increasing frequency of extreme weather events due to climate change, it is imperative that new developments do not compromise the safety and well-being of existing communities. Therefore, I urge the planning authority to reject this application to prevent further strain on an already vulnerable drainage system.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Norma HASWELL	Response-01384	I am highly concerned about the potential for development to increase flood risks in the area.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Oakwood Ward Councillors Eyre, Mulhall and Trehwella	Response-01359	We are in agreement with comments from Breadsall with regard to flooding.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Paige Skivington	Response-00366	Breadsall already floods due to the drainage from the Redrow estate, it simply cannot manage another building site.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Pamela Walker	Response-00649	Breadsall Village has been subject to large amounts of flooding over the last few years, no doubt exacerbated by the amount of building and lack of land to absorb water.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Patrick Baker	Response-01349	The building of the houses on hilltop has already seen a number of significant flood events in Breadsall village, including significant damage to the footpath to the Windmill Inn which has yet to be properly repaired. The additional run off rainwater will bring additional load to an already failing system.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Philip Booth	Response-00683	Due to the steep nature of the site and number of houses and roads being built this would only add to the Flooding issues in the area. Especially in Breadsall village, which has had major flooding in recent years. Breadsall village relies on a 100-year-old combined foul/surface water sewerage system, the majority of which has a diameter of only 15 cm. It may be unable to accommodate surface water run-off during extreme rainfall. In these circumstances there is a further risk of contamination from foul sewage.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Flooding / Drainage	Rachael	Response-00332	Flood risks are already high, Breadsall has been particularly hard hit, yet even the local houses have seen significant concerns around drainage due to the new build houses and even the new builds themselves have struggled with drainage in gardens.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Richard Hewitt	Response-01464	Breadsall already has known flooding issues at the bottom of Brookside Road near Damsons Cafe. Many residents have already put flood protection in place as insurance companies recognise the area as high risk. As I'm typing this objection, having had no rain for weeks and being one of the driest April / May on record for many years, there is currently water running onto Croft Lane. This was a rare occurrence until the development was completed on the A608 Hilltop, but now the waterflow seems to be permanent. Additional houses will create increased water runoff which will flow in the Breadsall village direction as the village lies on lower ground. The last flooding in Breadsall saw water being pushed out from the road manholes located half way down Brookside Road before reaching the village (near the wooded area). This never happened prior to any development in the Lime Lane area and the attenuation system near the junction is obviously not adequate to perform the task it was set out to do. Additional houses will make the problem worse.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Richard Johnson	Response-00697	Flooding and drains. The capacity of the existing drainage system in the village is insufficient using old drainage/sewage pipes which are just not big enough. We expect the new housing developments will also use these old pipes making the flooding risk significantly worse. At some stage we will have to replace the piping and now is the time to make the changes, before the new houses are built.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Richard Kingham	Response-00849	Huge increase of flash flooding to surrounding properties if severe rain happens as we have had due to the fields being a big soak away for a lot of the properties around Elmwood.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Richard Straw	Response-01412	The local area wouldn't be able to cope with all the extra houses plumbing
1.8	North of Breadsall Hill Top	Flooding / Drainage	Robert Mee	Response-01501	Breadsall village suffers regularly from flooding, and this development will only exacerbate that, as there will be additional run-off from the new estate.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Robert Mee	Response-01789	Breadsall village suffers regularly from flooding, and this development will only exacerbate that, as there will be additional run-off from the new estate.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Rowe	Response-01299	Breadsall already gets flooding from the new build now.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Roy Ling	Response-01243	Since the two developments Persimmon and Redrow were built off the A 608 road Breadsall Village has suffered flooding. Both these developments discharge surface and foul into Breadsall village. An additional 160 houses would lead to more properties being flooded.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Ruth Duxbury	Response-00301	Flooding is already severe in the village of Breadsall through run off water. When there is heavy rain the village is often impassable due to the water level and homes and businesses are flooded. New housing developments should not come at the cost of people's homes. The drains are ancient and struggle with current levels of run off in heavy rain.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Sally	Response-00873	We have been subjected to flooding down in Breadsall village due to inadequate drainage from the new developments north of Breadsall village. This will increase with more houses, unless an in-depth investigation in to the situation is carried out. Many villagers live in fear of their houses flooding since the new developments have happened.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Samantha Watts	Response-00869	The proposed development poses a severe risk to flood-prone areas in Breadsall Village, which sits at a lower elevation and has experienced repeated flooding in recent years. Since the construction of the Persimmon houses, flood incidents have increased, leading to damage to homes and rising insurance premiums for local residents. A major concern is the brook that runs under Croft Lane, which is already at capacity due to excessive surface water runoff. Additional hard surfaces from the new development such as roads, rooftops, and driveways will further reduce natural drainage, increasing surface water flow into this already overwhelmed system. Without robust flood mitigation measures, this development risks exacerbating drainage issues, putting homes and infrastructure at greater risk.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Sam Saunders	Response-01557	The proposed development raises serious concerns about flooding and drainage, particularly given the existing flood risk in nearby areas such as the A61 and Breadsall Village. These locations are already prone to surface water and fluvial flooding, demonstrating the vulnerability of local drainage systems. Introducing 160 new homes will increase impermeable surfaces, leading to higher runoff volumes and intensifying flood risk downstream. Without robust and effective drainage infrastructure, the development could exacerbate flooding issues, threatening properties, roads, and natural habitats. Current Environment Agency data highlights these flood-prone zones, emphasizing the need for comprehensive flood risk assessments and sustainable drainage systems to mitigate potential impacts. Failure to adequately address drainage and flood risks may not only endanger existing residents but also reduce the resilience of the area to future extreme weather events linked to climate change. Any development must prioritize sustainable water management to protect both the community and the environment.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Sandra Perry	Response-00307	Breadsall is at increased risk of flooding, and it is noticeably worse since the last houses were built; any more will worsen the situation further. Built environment creates RUN OFF. Breadsall is in a valley, DOWNHILL from the development so more and more water filling the stream and flooding the old houses here. It's utter selfishness by developers and the city planners.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Sara Cotton	Response-00370	Breadsall village floods regularly don't make it worse
1.8	North of Breadsall Hill Top	Flooding / Drainage	Sarah Hewitt	Response-01461	We already have more flooding in Breadsall village following the most recent development. Our sewers & drains are of the single system type & therefore we are already up to capacity.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Scarlett Hamblin	Response-00398	Flooding has become a yearly issue over the past few years with my pretzel and the green wave flooding annually with the increased amount of concrete and tarmac surface water has nowhere to go except together and flood. We are already at capacity with the amount of housing in Oakwood with two new housing Estates added recently we do not need a further one increasing the flood risk.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Flooding / Drainage	Scott Watson	Response-01284	The proposed development presents a significant flood risk to Breadsall Village, which sits at a lower elevation and has faced repeated flooding in recent years. Since the construction of the Persimmon homes, flood incidents have become more frequent, leading to property damage and higher insurance costs for residents. A primary concern is the brook running beneath Croft Lane, which is already struggling to manage excessive surface water runoff. Introducing more hard surfaces?such as roads, rooftops, and driveways?will further reduce natural drainage, increasing surface water flow and straining an already overwhelmed system. Without effective flood mitigation measures, this development threatens to worsen existing drainage issues, putting homes and local infrastructure at even greater risk. Our neighbours and our land flooded in 2023 for the first time
1.8	North of Breadsall Hill Top	Flooding / Drainage	Sharon Coward	Response-00348	The area already suffers from flooding & the lose of green belt land to more housed will cause more flooding in the future.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Shui-Yee Bateman-Wong	Response-00984	Already regular flooding in the area
1.8	North of Breadsall Hill Top	Flooding / Drainage	Silvia Mircic	Response-00884	Breadsall village already suffers from heavy flooding during periods of heavy rain. This proposal must be rejected, and alternative sites should be sought that do not put existing homes in such obvious and predictable danger. On page 2 of P&DG's Green Wedge Review, it states: 4. ?The Green Wedge provides vital flood storage and provides space to allow water to soak away naturally, reducing the need for engineered drainage? Paragraph 159 of the NPPF (Planning and flood risk) states that: Inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Simon Ferrad	Response-00853	This will exacerbate the flooding in Breadsall village
1.8	North of Breadsall Hill Top	Flooding / Drainage	simon morris	Response-00866	In recent years Breadsall has had increased flooding as a result of all the run off from the housing developments in Oakwood/A608 corridor. Any additional housing will exacerbate the already serious lack of drainage capacity.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Stella Beaumont	Response-00842	The village can't cope with the current throughput and surely has enough flooding issues to deal with. Some people have incurred thousands of £ worth of flood damage, become uninsurable and been out of their houses for over a year in the worst cases. This development won't help that it will make it worse !!!
1.8	North of Breadsall Hill Top	Flooding / Drainage	Stephen and Janet Allis	Response-01221	where does water drain to
1.8	North of Breadsall Hill Top	Flooding / Drainage	Stephen Brown	Response-01832	2) More specifically ? drainage. This may be OK for the orange marked area, but is more questionable for the yellow area. The lay of the land will tend to pour surface water towards Breadsall village, and the brook. This is subject to flooding during heavy downpours, or ?flash floods?. How will this be satisfactorily diverted around this village?
1.8	North of Breadsall Hill Top	Flooding / Drainage	Steven furness	Response-01516	We already have flood issues in Breadsall village. The houses will remove soil drainage and add to the problem if more water entering the brook. The brook cannot cope. The existing new houses and the overflowed water retention pond has not worked. Why would you make a known flood problem worse???
1.8	North of Breadsall Hill Top	Flooding / Drainage	Stuart Brown	Response-00771	Additional housing will affect the natural drainage. Breadsall floods regularly and building properties on green land in this area in particular will undoubtedly compound this issue
1.8	North of Breadsall Hill Top	Flooding / Drainage	Susan Dundon	Response-00396	Increase risk of flooding
1.8	North of Breadsall Hill Top	Flooding / Drainage	Thomas Bateman-Wong	Response-00985	Derby already suffers heavily with flooding.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Tom Parker	Response-01398	Flooding is already a huge risk in the area, the village of Breadsall is flooded multiple times a year which has only been made worse since the redrow estate was built.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Tony Hawkins	Response-01532	The land currently provides natural flood defences to the Village and Durose Estate as it has drainage ditch's running around the perimeter. If this land was built on the defences will be removed causing flooding to the Durose Estate and the Breadsall Village. The village suffers serious flooding and further building on this land will increase this further.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Vanessa Calderone	Response-01065	I'm not sure the area can cope as Breadsall already floods.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Wobbina Bugg	Response-00846	Flooding is already an issue from the existing developments on the Hilltop. Croft Lane in the Village is always draining water from them , even in the very dry periods we have recently experienced. It effects roads and traffic.
1.8	North of Breadsall Hill Top	Green Belt	Adam Millward	Response-00418	It should be all green belt and used for farming. Why not regenerate one of the old brown field sites like stanton iron works? You could build a whole new community on that wasteland.
1.8	North of Breadsall Hill Top	Flooding / Drainage	Adelle Cavanagh	Response-00392	More of our green belt land is being lost. This is impacting on residents of Derby rather than Erewash

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Green Belt	Alexander lee	Response-01439	Objection to Proposed Development ? Conflict with Policy CP18 (Green Wedges) I note that this application has been amended to exclude the development adjacent to the A61. However I still wish to raise strong objections to the proposed development (both in its amended form and original form) on the grounds that it conflicts with Policy CP18 concerning Green Wedges. Although the site lies just outside the designated green belt surrounding Breadsall, it directly abuts existing woodland and open countryside, forming an important part of the green corridor along the Great Northern Greenway. The application site provides valuable habitat for wildlife and functions as an essential green buffer. Its loss would significantly reduce ecological connectivity and visual amenity, impacting local biodiversity and the quality of life for residents, walkers, and cyclists who currently use and enjoy this open space. The site is actively appreciated by the community as a visual break in built development and as a wildlife corridor connecting to other open areas. While the outline proposal includes the retention of woodland, there are serious concerns that development will increase pressure on these areas, potentially leading to degradation over time. I am concerned that the proposed development does not provide an adequate buffer to the woodland corridor and built development will sit too close and will detrimentally impact the existing woodland. There is no BNG Assessment listed in the application documents on the portal so it appears that it hasn't yet been done. How can there be any confidence that the proposal would be able to satisfy the statutory requirement to deliver 10% net gain. Any BNG delivery off site or through the purchase of biodiversity units elsewhere, dilutes the benefit of 10% net gain as the biodiversity is lost here in this locality and the significant environmental impact is here. Crucially, the proposed development sits adjacent to land at Breadsall recently released from the green belt, which Erewash Borough Council is considering for housing allocation. If both sites are developed, the cumulative impact will be substantial?leading to the loss of meaningful green space, erosion of the rural character of the Great Northern Greenway, and the elimination of the settlement gap between Breadsall and the wider Derby conurbation. For these reasons, I urge the Council to reject the proposal in order to uphold the principles of Policy CP18 and protect the integrity of this important green wedge.
1.8	North of Breadsall Hill Top	Green Belt	Alex Cargill	Response-01834	*further intrusion on Green Belt
1.8	North of Breadsall Hill Top	Green Belt	Alistair Crawford	Response-01404	The purpose of the green belt is to check the unrestricted sprawl of large built-up areas EBC previous reviews and assessment stated that the built extent of the City has a very clear edge along the northern periphery of Oakwood along Hill Top and Lime Lane. The Green Belt in this location helps to define the edge of the City and prevents sprawl to the north. The previous Green Belt Review also stated that the area immediately between Derby and the areas immediately north are generally the most important areas of Green Belt and that as such little development should be directed there. The Green Belt is therefore important in this location to prevent sprawl into the open countryside between the separate settlements such as the village of Breadsall As such, the Green Belt is performing this role in this location and I can see nothing that could have changed the result of the previous review, other than an opportunistic attempt to override clear protections. Housing should only be allowed in the Green Belt in ?exceptional circumstances? ie. when all brownfield sites have been exhausted. I have lived at Manor Farm Barns for the past 9 years which is in the area indicated safeguarded for future housing. The residents at Manor Farm Barns have had for 20 years restrictions imposed on them by way of permitted development rights being removed and the strict specifications of material used on the properties such as wooden windows, cast iron guttering etc. These restrictions were imposed for the reason being to protect the interest of the amenity of the green belt and keeping the character and visual impact of these buildings in the rural Green Belt. The view of this area and buildings within the landscape being considered very important. Which now will be completely obliterated by an uninspiring mass generic urban sprawl. The loss of this important amenity cannot be underestimated as it can be seen from afar and cannot be replicated once lost. The residents knowingly bought into this planning concept and have accepted the restrictions as being positive for the openness of the greenbelt amenity. Previous reviews state the ?safeguarding valued countryside? which ironically now states ?safeguarded land?on the map Shouldn't the latter have stated ?earmarked for future housing?. This I know has caused misunderstanding and apathy within the community.. Developers will always opt and put pressure on the more profitable greenbelt development, rather than more challenging brownfield sites such as the Stanton Steelworks. Your amended study states that the area is not performing well as a greenbelt, although to date it has prevented urban sprawl into the village of breasall, sustained the openness of the rural amenity.
1.8	North of Breadsall Hill Top	Green Belt	Andrea R Rowley	Response-01230	See comment on wildlife. Brown and grey sites MUST be built on first before greenbelt areas.
1.8	North of Breadsall Hill Top	Green Belt	Andrew David Williams	Response-00796	Breadsall village provided EBC with a Breadsall Neighbourhood Plan about 3 yrs ago setting out planning consideration and setting out protection of the greenbelt land around the village. This is a legal document that safeguards all aspects of greenbelt , wildlife and planning issues. There should be no more building on this land as set out in the neighbourhood plan.
1.8	North of Breadsall Hill Top	Green Belt	Angela Smyth	Response-00296	The council should use all brown belt areas before attempting to build on the green belt.
1.8	North of Breadsall Hill Top	Green Belt	Ann Sherlock	Response-00410	The map used in this proposal is out of date, and fails to show the impact various housing estates have already had on the green belt and surrounding area. Adding the current proposal will be extremely detrimental to the local green belt, and it is disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the green belt area, missing two extremely large housing estates and falsely portraying a larger area of unused land and impact the housing proposal will have on the green belt area.
1.8	North of Breadsall Hill Top	Green Belt	A O Smith	Response-01798	The impact of extending residential development on this scale is to reduce the biodiversity of this area, with a negative effect on wildlife In particular, the blackcaps, the chiffchaffs, and other migrant birds habitat would be removed,let alone the resident nuthatches ,treecreepers, tawny owls and bats that live in and around Breadsall Village

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Green Belt	Ben Martin	Response-00787	The proposed development completely contradicts the National Planning Policy Framework 13 (NPPF 13) which states: 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. The preservation of the greenbelt land is vital in helping to achieve three of the key objectives of the Breadsall Neighbourhood Plan, namely to maintain the rural character of the parish, to avoid urbanisation and to prevent coalescence with the Derby conurbation. It is equally important in achieving the Local Plan objective of 'ensuring the continued separation of neighbouring towns and rural settlements within Erewash Borough'. The most critical area of the current Green Belt is the land that separates Breadsall from the Derby conurbation is this proposed site.
			Bethan Eddy	Response-00976	This is the only bit of land separating Derby City and Breadsall Village, it removes the village boundaries
1.8	North of Breadsall Hill Top	Green Belt	Beverly Jordan	Response-01330	The removal of the green belt would kill off the established wildlife and woodland and destroy the countryside openness feeling of the hilltop area already decreased with the two new estates
1.8	North of Breadsall Hill Top	Green Belt	Carl Hill	Response-00670	No separation from a retail park and Breadsall village all area merging in to one
1.8	North of Breadsall Hill Top	Green Belt	Carol Hart	Response-01830	The small but lovely village of Breadsall has taken more than its fair share of developments, albeit no directly in the village but the surrounding developments are so close to the boundary that you can almost touch them, the urban sprawl is changing the whole landscape of the area and it not acceptable in any way.
1.8	North of Breadsall Hill Top	Green Belt	Carol Westcott	Response-00973	We have a beautiful walk the Greenway and it's the only land around this area that can be enjoyed. The wildlife is wonderful around the Greenway with birds and wildlife.
1.8	North of Breadsall Hill Top	Green Belt	Carys Whomsley	Response-01438	I am writing to register my strong objection to the above-mentioned planning application, both in its original and revised form. Despite the removal of the area adjacent to the A61 in the amended proposal, I believe that the proposed development remains deeply inappropriate and harmful for the following reasons: 1. Contravention of Policy CP18 and Loss of Green Wedge The proposed site lies just outside the designated Green Belt, but crucially directly abuts existing woodland and open countryside, forming part of the vital green corridor along the Great Northern Greenway. This area functions as a green buffer, enhancing ecological connectivity, supporting biodiversity, and providing visual and recreational amenity to local residents, walkers, and cyclists. Despite claims of woodland retention, the development threatens the integrity of this space. Proximity to new housing would increase human pressure on the natural environment, likely leading to degradation of woodland, fragmentation of habitats, and a reduction in wildlife corridors. No Biodiversity Net Gain (BNG) assessment appears in the application documents, raising concerns about whether the legally mandated 10% net gain can or will be achieved. Biodiversity enhancements delivered off-site would do nothing to mitigate local ecological loss, thereby undermining environmental sustainability in the area. Moreover, the site lies adjacent to land recently released from the Green Belt and under consideration for housing allocation by Erewash Borough Council. The cumulative impact of developing both sites would be devastating: a continuous sprawl from Derby through to Breadsall, resulting in the elimination of the settlement gap and permanent damage to the character of the Great Northern Greenway. 2. Environmental, Infrastructural, and Policy Concerns The proposal directly contradicts the National Planning Policy Framework (NPPF) Paragraph 143, particularly the goals of preventing urban sprawl and protecting the openness of Green Belt land. It also ignores the findings of the Strategic Housing Land Availability Assessment (SHLAA 359), which previously deemed the site unsuitable for residential development due to accessibility and environmental limitations. The development is completely incompatible with the objectives of the Breadsall Parish Neighbourhood Plan 2019?2029, particularly the aims to: Preserve the rural character and prevent urbanisation; Avoid coalescence with the Derby conurbation; Safeguard wildlife and ecological features; Control flood risk and infrastructure strain; Protect valued green spaces and visual vistas.
1.8	North of Breadsall Hill Top	Green Belt	Carys Whomsley	Response-01438	Breadsall has already experienced increased flooding, attributed to upstream developments like Persimmon Estate and Breadsall Hilltop, which lie within the same water catchment area. Any additional development would worsen this issue, placing homes and infrastructure at risk. Furthermore, the proposal relies on access through two existing public footpaths within the Redrow estate and offers no concrete infrastructure improvements. The A608 is already over-congested, and no plans are presented to handle increased traffic or to safeguard children commuting to local schools. 3. Loss of Community and Ecological Value This land offers more than just open space?it is a much-loved and well-used amenity for the local community. It serves as a peaceful escape for informal recreation and nature engagement, and its visual and environmental contributions to the neighbourhood are significant. Its destruction would represent a major loss in local character and quality of life. The proposal underestimates the pressure on existing services, lacks detailed mitigation plans, and fails to explain how proposed footpaths will link meaningfully into existing routes. Nearby Local Wildlife Sites will be impacted

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Green Belt	Chris Lunn	Response-01410	This land is a greenbelt/green wedge area and, as such, it is immensely important that it should remain so. These appear to be terms with which the council is either unfamiliar or for which they have total disregard. The proposed area is designated as a ?birds and bees? field which aims to increase the wildlife population, promote biodiversity and help to combat the effects of climate change and is integral to the Great Northern Greenway which was designed to enhance the quality of life for local residents. The field and track are heavily used by many people. Dog walkers, picnic-ers and people who just want to escape the stresses of life and reconnect with nature. The area provides essential habitat for many different species whose populations are already declining at an alarming rate. Hedgehogs and rabbits, once prolific in the area, are now a rarity. By proceeding with this development, the Council is eroding the very greenery that the Greenway was designed to protect. The Redrow housing estate cannot be without blame for this and no further habitat loss should be incurred. This proposed development completely undermines Erewash council?s approach to the importance of preserving greenbelt and green wedge land for current and future generations to enjoy. To replace the natural beauty of the area by developing this land for housing will permanently end the visual contrast between the urban and rural areas and set a precedence for all future developments. It would cause irreparable damage to the landscape, disrupt wildlife corridors and erode a space that absorbs carbon and helps to improve air quality. I would like to draw your attention to your campaign ?Wild About Erewash?. In it you encourage people to get involved as it: Improves health and wellbeing, improves biodiversity and reduces our carbon footprint. It certainly makes for interesting reading, especially as you appear to have reneged on every point. You have clearly lost interest in everything you maintained was at the heart of your approach to the welfare of the local area and its residents. Possibly this was just an agenda to win the local election on behalf of Labour? It certainly begs the question of just how many other points you intend to retract? Your rewilding sites may not have included the land to the north of Breadsall Hilltop but that would be because it didn?t need rewilding in the first place.
1.8	North of Breadsall Hill Top	Green Belt	Christine Goodwin	Response-00642	This is Green Belt land and was previously in the Land Availability Assessment 359 stated to be unsuitable for residential development The government attaches great importance to the Green Belt and one of its main functions is to prevent urban sprawl and to prevent neighbouring towns merging into one another. This development ensures that Breadsall becomes a suburb of Derby. This development is contrary to all planning requirements as it appears there has been little thought given to upgrading inadequate infrastructure particularly to roads and drainage both of which have the potential to be harmful to Breadsall Village which is already experiencing flooding due to previous developments on Breadsall Hill Top
1.8	North of Breadsall Hill Top	Green Belt	Clare Roters	Response-01553	A loss of this beautiful countryside would be a massive loss to Derby if I'm honest and a loss to the wildlife that live in it and thrive
1.8	North of Breadsall Hill Top	Green Belt	Colin Brewster	Response-00576	It is understood by the community that this location is Green Belt and in recent years has been deemed unsuitable for residential development. If this development was to go ahead Breadsall would automatically become a directly connected suburb of Derby, this should not be allowed.
1.8	North of Breadsall Hill Top	Green Belt	Dana Demidoff	Response-00634	This flies in the face of previous Strategic Housing Land Availability Assessment 359 on the site, as unsuitable for residentia development, plus, as already mentioned, a total lack of intent to upgrade inadequate infracture. This also ensures Breadsall becomes a suburb of Derby. NO protection of Green Belt land and completely ignoring the main clauses in the National Planning Policy Framwork.
1.8	North of Breadsall Hill Top	Green Belt	David Duxbury	Response-00305	The proposed development continues to erode the green wedge between Oakwood and breadsall village. Development adjacent to the proposed site and the development adjacent to lime lane and a608 have already significantly eroded the green belt surrounding breadsall village.
1.8	North of Breadsall Hill Top	Green Belt	Diane Bakhda	Response-01411	At one time, the term "Green Belt" gave you some confidence that the land would be preserved either to benefit the environment or to help the country produce its own food. PLEASE can we go back to this definition!
1.8	North of Breadsall Hill Top	Green Belt	Edward James Gregory	Response-00728	Unsuitable for green belt / green separation
1.8	North of Breadsall Hill Top	Green Belt	Elaine hodgkinson	Response-00854	This is currently green belt which provides an important wildlife corridor for areas such as chaddesden wood. It must not increase flooding for Breadsall or drain much needed water from further up the hill.
1.8	North of Breadsall Hill Top	Green Belt	Emma Binns	Response-00843	Why are all green belt areas now being built on?
1.8	North of Breadsall Hill Top	Green Belt	Emma Hawkins	Response-00813	The preservation of this greenbelt land referred to above helps to achieve these key objectives. It also provides separation of neighbouring towns and rural settlements within Erewash Borough and separates Breadsall from the Derby conurbation. The map provided in the consultation document is incorrect and does not show the existing Durose County Estate as demonstrated in the image below highlighting the estate. Housing on this land will merge into the existing estate and Derby City contradicting: ? 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. ? 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.
1.8	North of Breadsall Hill Top	Green Belt	Gaynor Pawley	Response-00627	If this is Greenbelt land which is protected, why is it a target for ticking a box of the numer of houses built?

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Green Belt	Ged Doherty	Response-01822	If I could I would make the first 10 points of objection the Green Belt. People much wiser than me proposed the idea of Green Belt land for several reasons including the prevention of urban sprawl, reduction of flood risk, providing greenspace for communities to explore, providing a home for wildlife and safeguarding resources that help clean our air and water. It is not an asset that can simply be redesignated or have the importance of its categorisation reduced by councils because they have housing targets to meet. In our situation the Green Belt is vitally important to prevent the sprawl of Derby swallowing up the village of Breadsall, and in spite of comments to the contrary in your amended study of the area, it is performing that role very well. If there is genuine concern that it is not performing well then surely erecting houses on that land would worsen the situation by ensuring that the role would not be performed at all. Development on Green Belt land should ONLY be allowed in 'exceptional circumstances', and I would suggest that there are many brownfield sites that could be used to fulfil your targets without resorting to putting a blight on countryside areas such as in this proposal. I understand that developers love the idea of green field over brown field sites as there are many fewer construction hurdles to negotiate, but that is not an 'exceptional circumstance', and as a Planning Officer showing consideration to the residents of your area you should be fighting even the remotest suggestion of proposals for major developments on green belt land with every fibre of your body. I live at Manor Farm Barns, and have done so since the barns were converted over 20 years ago. We have had restrictions imposed for all of those 20 years because the properties are in a protected zone, so planning has been denied for items such as conservatories, the windows have to be of wood (necessitating replacement a couple of years ago at considerable cost over PVC) and I wasn't even allowed a wood effect metal roller shutter garage door because it was 'harmful to the environment', even though the wooden doors fitted were completely unfit for purpose and facilitated several break-ins. We have put up with these restrictions because of the privilege that we have of the beauty of the area we live in, and the loss of that once it is in the midst of the urban sprawl (the area indicated as 'safeguarded for future development') is beyond devastating and is simply wrong. We have always been assured that development could not take place on the land north of our properties because of the Protected Zone, but it appears that at the stroke of a pen, areas can be redesignated with absolutely zero consideration for the community within which these areas lie and the same level of thought as to why these areas were designated such in the first place. The rural amenity of this area MUST be maintained at all costs. The consultation maps are out of date and in some cases do not appear to recognise the complete development of Manor Farm Barns. Previous reviews produced after visits by the planning department stated this land is unsuitable for residential building. Now an amendment is produced, again at the stroke of a pen without the same due diligence. The overall impression is that the Planning Department have a complete disregard for the work and reasoning of previous incumbents and the views of members of the impacted community; any consultations will be meanin
1.8	North of Breadsall Hill Top	Green Belt	Ged Doherty	Response-01822	gless because the land has been reclassified and thus objections hold no water and Government targets have to be met regardless of any concerns. Thus little effort is needed with regard to consultations and what might be the best way forward as the proposals will be rammed through anyway. The 6 dwellings of Manor Farm Barns have a right of way to Mansfield Road using the track owned by the farm. We are unsure as to the intentions regarding the barns complex should this development be permitted, as our properties have not been marked as remaining (in white on the map) and are within the area 'safeguarded' for future development. (Please could the misleading term 'safeguarded' be changed, as this implies that it may be looking after the interests of parties involved, but actually only serves as our very own Sword of Damocles with the knowledge that development can take place at any time at the whim of the Planning Department.) The properties within the development were all purchased on the understanding that the area was a Protected Zone and thus commanded a considerable premium because of their location. If they end up being surrounded by this development there will be a huge reduction in the value of the properties and appropriate financial compensation would be required. If the map is correct (although I have been informed that it may well not be) then is the plan for the purchase of all buildings within the indicated 'safeguarded' zone under some sort of compulsory purchase? Again if this is the case there would need to be adequate market value compensation.
1.8	North of Breadsall Hill Top	Green Belt	Gemma Cotter	Response-01374	This land is an essential part of the separation of Derby's suburbs and maintaining Breadsall's character as a separate Derbyshire village. It maintains a wedge of open countryside going towards Derby as far as the Paddock pub. The green belt is already under threat by a planning application at Chaddesden Woods which could sever the woods from open countryside. Some of this land could be lost to development near the A61. The more substantial that these green belts and green wedges are, the more ecological value they have at being able to sustain wildlife populations.
1.8	North of Breadsall Hill Top	Green Belt	George Langton	Response-01385	The Great Northern Greenway currently provides a much-valued tranquil green space in a heavily built-up area, and both development areas come very close to this.
1.8	North of Breadsall Hill Top	Green Belt	Gillian Montgomery	Response-00625	Too much green belt land is being turned into housing.
1.8	North of Breadsall Hill Top	Green Belt	Gillian Pearson	Response-00303	Breadsall is becoming subsumed by the urban sprawl of Derby and Oakwood. There will soon be no open spaces remaining, with loss of habitat for wildlife and places for people to roam amongst natural surroundings which is recognised as being so important for our wellbeing. Safeguarding land for future development is not what we should be doing - we should be safeguarding it for future generations against development.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Green Belt	Helen Foster	Response-00650	This expansion of the Derby conurbation directly contradicts the findings of the previous Strategic Housing Land Availability Assessment (SHLAA 359), which deemed the site unsuitable for residential development. NPPF 13. Protecting Green Belt land 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.
1.8	North of Breadsall Hill Top	Green Belt	Helen Walker	Response-00325	See my previous comment stop building on green belt land go and do up empty buildings and make them into homes
1.8	North of Breadsall Hill Top	Green Belt	Hulland. Bdverley	Response-00496	Save green belt for our next generation to grow up with Look elsewhere
1.8	North of Breadsall Hill Top	Green Belt	Ian Lockwood	Response-01491	This proposed expansion of the Derby conurbation is in direct contradiction to the findings of the previous Strategic Housing Land Availability Assessment (SHLAA 359), which identified the site as unsuitable for residential development. According to the National Planning Policy Framework (NPPF), Section 13: Protecting Green Belt Land, paragraph 142 states that the Government places great importance on Green Belts. The core objective of Green Belt policy is to prevent urban sprawl by maintaining land as permanently open, with openness and permanence being its defining features. Paragraph 143 outlines five purposes served by Green Belt land: a) To check the unrestricted sprawl of large built-up areas b) To prevent neighbouring towns from merging c) To safeguard the countryside from encroachment d) To preserve the setting and special character of historic towns e) To support urban regeneration by encouraging the reuse of derelict and other urban land The proposed development undermines these principles, particularly those aimed at preventing urban sprawl, protecting the countryside, and maintaining the distinct character of historic settlements.
1.8	North of Breadsall Hill Top	Green Belt	Jack Bointon	Response-00969	This allocation will damage the preservation of wildlife and the environment. There are a lot of beautiful creatures where their homes will be destroyed.
1.8	North of Breadsall Hill Top	Green Belt	Jake Moore	Response-01202	Protection of Greenbelt/Green Wedge: A Vital Asset for People, Wildlife, and the Environment The proposed development threatens a crucial greenbelt/green wedge that connects Derby City's core to the surrounding countryside, providing essential ecological functions and supporting a range of local wildlife. Its preservation is key to ensuring that biodiversity is maintained, Derby's environmental goals are met, and local residents continue to benefit from access to green spaces. The Oakwood and Breadsall areas support a variety of species, including: Birds like kestrels, barn owls, and skylarks, which depend on open fields for nesting and hunting; Mammals such as hedgehogs, foxes, and rabbits, which use these areas for shelter and foraging; Insects like butterflies and bees, critical for pollination; Bats, which rely on undisturbed areas for foraging and roosting. The development would disrupt wildlife corridors, leading to: Loss of habitat for species like hedgehogs, whose populations are already declining; Fragmentation of pathways, preventing safe movement for owls and bats; Increased human-wildlife conflict as urban sprawl encroaches on natural habitats. This green space also plays a vital role in maintaining air quality and carbon absorption, while offering public health and recreation opportunities. Its loss would not only harm local wildlife but also undermine Derby's ability to meet climate change objectives. The development would encroach on this greenbelt land, severing the vital buffer between Derby's urban sprawl and the countryside. It would lead to: Permanent loss of green space, reducing opportunities for wildlife and residents alike; Increased urban sprawl, degrading the aesthetic and ecological value of Derby's countryside. This development contradicts Derby City's own environmental and sustainability goals, which prioritize the protection of green spaces and wildlife habitats. Allowing this project to proceed without proper safeguards would not only harm local wildlife but also weaken Derby's commitment to creating a greener, more sustainable future. Protecting the greenbelt is essential not just for wildlife, but for maintaining the ecological health and quality of life for Derby's residents
1.8	North of Breadsall Hill Top	Green Belt	James Bellaby	Response-00337	Less green belt less eco system, the more of the planet is being ruined.
1.8	North of Breadsall Hill Top	Green Belt	James Heesom	Response-00885	Further loss of green belt space
1.8	North of Breadsall Hill Top	Green Belt	James Park	Response-00856	The great northern greenway will be affected by this and I use this regularly to walk my dogs
1.8	North of Breadsall Hill Top	Green Belt	James Roberts	Response-00673	As per other sections, my main concerns are around the impact to the greenway and wildlife that use the fields and greenery in the area
1.8	North of Breadsall Hill Top	Green Belt	Jamie Branagan	Response-00335	The existing estate and the one at Lime Lane already destroyed greenbelt and ruined the natural look of Oakwood North/Hilltop. This proposed development will take away another slice of natural and beautiful landscape to be replaced with brick and tarmac.
1.8	North of Breadsall Hill Top	Green Belt	Janet Brewster	Response-00577	Why has this area of land suddenly become a development consideration, when only a couple of years ago it was deemed unsuitable for residential development? Lying directly on the Derby - Erewash border it is the final piece of land that keeps us apart from Derby. It should remain Green Belt.
1.8	North of Breadsall Hill Top	Green Belt	Janet Jones	Response-00895	Leave out green belt alone - it's disappearing fast

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Green Belt	Janet O'Brien	Response-01835	The Green Belt in this location helps to define the edge of the City and prevents sprawl to the north which is very important in maintaining rural and semi rural locations. We need a mix of small villages and larger estate locations to promote diversity within the community . This is the last slither of Green Belt creating a break between the City and Breadsall. Geologically this slither sits right above the village and water runoff once the land is developed would impact the green way putting the steep banks in danger of slippage. Previously EBC reviews stated, the Green Belt area immediately between Derby and the areas immediately north are generally the most important areas of Green Belt and that as such little development should be directed there. The Green Belt is performing a very important role in this location and I can see nothing that could have changed the result of the previous review. Along this edge we have seen ?????..developed over the past 5 years. I know there is a need for housing but you are choosing a very soft site which once developed we can never recover. Building in the Green Belt should only be in ?exceptional circumstances?. I can not agree with your desire to develop this area further. I live at Manor Farm Barns which is in the area indicated safeguarded for future housing. The residents at Manor Farm Barns have had restrictions imposed on them by way of permitted development rights being removed and the strict specifications of material used on the properties such as wooden windows, open fencing , cast iron guttering etc. These restrictions were imposed to protect the interest of the amenity of the green belt and keep the character and visual impact of these buildings in the rural Green Belt. We felt proud over the last 20 years to be custodians for future generations. The view of this area and buildings within the landscape has considerable impact. Which now will be completely obliterated by an uninspiring mass generic urban sprawl. The loss of this important amenity cannot be underestimated as it can be seen from afar and cannot be replicated once lost. Your amended study states that the area is not Mrs Janet O'Brien 2 Manor Farm Barns Hill Top Breadsall Derby DE21 4TP Erewash Borough Council Planning & Regeneration Town Hall Derby Road Long Eaton Derbyshire NG10 1HU Re: Strategic Policy 1.8 - North of Breadsall Hill Top Date: 18/05/2025 performing well as a greenbelt, although to date it has prevented urban sprawl into the village of Breadsall and sustained the openness of the rural amenity.
1.8	North of Breadsall Hill Top	Green Belt	Janette Booth	Response-00295	Not sure if it's a greenbelt, but certainly close to green areas which are rapidly shrinking, causing additional issues with flooding.
1.8	North of Breadsall Hill Top	Green Belt	Janette Glenn	Response-00422	The area between the city and Breadsall village is being severely encroached upon. This leads to harm to biodiversity as well as worsening the existing flooding issues in Breadsall.
1.8	North of Breadsall Hill Top	Green Belt	Jason Reader	Response-00320	Green belt should be protected, I wouldn't object so much but suspect more houses will be built adjacent to this plot on what is green belt. Along with this and the lime lane application lots of greenbelt land has been lost on Breadsall hilltop over the last 10 years. Not including the redrow and persimmon estates already present.
1.8	North of Breadsall Hill Top	Green Belt	Jeanette Kent	Response-00402	Wildlife and ourselves NEED a greenbelt. Stop building on them
1.8	North of Breadsall Hill Top	Green Belt	Jessica Softley	Response-01408	This land has previously been designated as Green Belt land. Building upon this land would go against the purposes of Green Belt land such as preventing neighbouring towns merging into one another.
			J Hasse	Response-00875	Leave it alone
1.8	North of Breadsall Hill Top	Green Belt	Jim Smith	Response-00741	This is Green Belt land and although in a review of some sort it was considered that it ?performs poorly? is totally irrelevant. It certainly meets the requirement of the Governments National Planning Policy NPPF 13, section 142 and 143, which should be adhered too.
1.8	North of Breadsall Hill Top	Green Belt	John Harlow	Response-00619	The green belt needs to increase not decreased.
1.8	North of Breadsall Hill Top	Green Belt	John Hudson-Peat	Response-01833	They have no interest in protecting Greenbelt land even though there are various other sites (grey belt/brownfield) around the Borough that could be utilised for housing, house builders seem not to want to build on these kind of sites as they are not "attractive" enough areas to live in.
1.8	North of Breadsall Hill Top	Green Belt	John Moffat	Response-01289	Apologies for being brief - I have recently broken my right arm. I strongly object to this proposal overf loss of greenbelt that separates Breadsall Village from Derby. This proposal is contrary to previous Strategic Land Availability Assessment 359 & is contrary to the aims of NPPF 13 that protects Greenbelt land.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Green Belt	John O'Brien	Response-01796	The purpose of the green belt is to check the unrestricted sprawl of large built-up areas EBC previous reviews and assessment stated that the built extent of the City has a very clear edge along the northern periphery of Oakwood along Hill Top and Lime Lane. The Green Belt in this location helps to define the edge of the City and prevents sprawl to the north. The previous Green Belt Review also stated that the area immediately between Derby and the areas immediately north are generally the most important areas of Green Belt and that as such little development should be directed there. The Green Belt is therefore important in this location to prevent sprawl into the open countryside between the separate settlements such as the village of Breadsall As such, the Green Belt is performing this role in this location and I can see nothing that could have changed the result of the previous review, other than an opportunistic attempt to override clear protections. Housing should only be allowed in the Green Belt in 'exceptional circumstances' ie. when all brownfield sites have been exhausted. I live at Manor Farm Barns which is in the area indicated safeguarded for future housing. The residents at Manor Farm Barns have had for 20 years restrictions imposed on them by way of permitted development rights being removed and the strict specifications of material used on the properties such as wooden windows, cast iron guttering etc. These restrictions were imposed for the reason being to protect the interest of the amenity of the green belt and keeping the character and visual impact of these buildings in the rural Green Belt. The view of this area and buildings within the landscape being considered very important. Which now will be completely obliterated by an uninspiring mass generic urban sprawl. The loss of this important amenity cannot be underestimated as it can be seen from afar and cannot be replicated once lost. The residents knowingly bought into this planning concept and have accepted the restrictions as being positive for the openness of the greenbelt amenity. Previous reviews state the 'safeguarding valued countryside' which ironically now states 'safeguarded land' on the map Shouldn't the latter have stated ' earmarked for future housing'? This I know has caused misunderstanding and apathy within the community.. Developers will always opt and put pressure on the more profitable greenbelt development, rather than more challenging brownfield sites such as the Stanton Steelworks. Your amended study states that the area is not performing well as a greenbelt, although to date it has prevented urban sprawl into the village of breadsall, sustained the openness of the rural amenity.
1.8	North of Breadsall Hill Top	Green Belt	Jon Lewis	Response-00347	The proposed development will further surround the existing green belt area. This will have a detrimental effect on the existing and surrounding wildlife. The proposal further extends housing and the city onto the countryside until no green belt is left or just small corridors in which wildlife are expected to be confined to.
1.8	North of Breadsall Hill Top	Green Belt	Julie Herbert	Response-01282	We are getting less and less countryside around us, we have already had so many new homes taking over fields and beautiful wildlife habitat, this is not only a threat to our wildlife, but also to peoples mental health.
1.8	North of Breadsall Hill Top	Green Belt	Kara Crossley	Response-00865	The whole point of a green belt land is to protect it from development and prevent urban sprawl. It's protected for a reason!
1.8	North of Breadsall Hill Top	Green Belt	Karen Read	Response-00923	This is the last bit of green belt in the area. The proposed site is the greenbelt between derby and breadsall i strongly object due to the complete unacceptability of the obliteration of the greenbelt land which was designated to provide well being for current inhabitants i include all wildlife as well as people and restrict urban growth. The most important thing about greenbelt is its openness please explain how this is in line with this policy. Why are you not looking at brownfield sites which are plentiful in the erewash area.
1.8	North of Breadsall Hill Top	Green Belt	Karen Smith	Response-00635	This is a strategic piece of land that provides a green corridor for nature
1.8	North of Breadsall Hill Top	Green Belt	Kate barlow	Response-00351	No need to built in the green area. Plenty of brownfield sites around derby
1.8	North of Breadsall Hill Top	Green Belt	Keerthi	Response-01450	The proposal also totally ignores the Breadsall Parish Council Village Neighbourhood plan 2019 - 2029, link - <a href="https://www.breadsallparishcouncil.org.uk/wp-content/uploads/2021/12/Breadsall-Neighbourhood-Plan_v21-final-draft-low-res-1.pdf">https://www.breadsallparishcouncil.org.uk/wp-content/uploads/2021/12/Breadsall-Neighbourhood-Plan_v21-final-draft-low-res-1.pdf</a> ). The key points of which I would like to highlight below from Chapter 7, page 8 are points 1, 2, 3, 7, 9, 11 & 12: Protect and enhance the rural character of the parish and prevent urbanisation. 2 Enforce the requirements of the Green Belt to prevent inappropriate development and avoid coalescence with the Derby conurbation. 3 Encourage small-scale residential development in appropriate locations within the village envelope. 4 Ensure that a significant proportion of new housing development in the parish will comprise small dwellings to help cater for the lack of such accommodation. 5 Protect and enhance existing employment uses within the parish, including home working where this does not adversely affect adjoining properties and their amenities. 6 Encourage new small-scale employment opportunities in the limited locations where this is appropriate while preventing industrial or commercial uses that would be incompatible with the Green Belt or with the parish generally. 7 Ensure that all new developments, replacement buildings and extensions are constructed with high-quality materials, using designs that are compatible with the adjoining development and the parish in general. 8 Encourage energy conservation through sustainable construction methods and domestic-scale energy generation, but resist large-scale energy generation that would harm the visual character of the parish. 9 Improve measures to control existing flood risks within the parish and resist any new development that may increase existing flood risks. 10 Identify and preserve specific buildings, structures, natural features, views and vistas that enhance the character of the parish. 11 Identify key wildlife and biological features within the parish and take appropriate steps to preserve them. 12 Mitigate the effect of the large volume of through traffic in the village and aim to prevent any growth in through traffic. 13 Control parking on pavements where possible, including enforcement of strict requirements for the provision of sufficient on-site parking. 14 Preserve and enhance local facilities within the parish, including especially the village shop, the Memorial Hall, the village school, the church, sports pitches, footpaths and greenways. 15 Maintain access to facilities provided outside the parish, particularly through provision of a regular bus service. The preservation of the greenbelt land is vital in helping to achieve three of the key objectives of the Breadsall Neighbourhood Plan, namely to maintain the rural character of the parish, to avoid urbanisation and to prevent coalescence with the Derby conurbation. It is equally important in achieving the Local Plan objective of 'ensuring the continued separation of neighbouring towns and rural settlements within Erewash Borough.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Green Belt	Kirstin Woodward	Response-01043	Derby has already lost parts of its designated Greenbelt land, and as such, any remaining greenbelt areas must be preserved at all costs. Greenbelt land serves a vital purpose?it helps prevent urban sprawl, protects the countryside and established habitats, and provides safe routes for wildlife. It also ensures access to open spaces and contributes to climate control by supporting tree growth and environmental balance. Any further development on such land should be halted to protect these invaluable resources.
1.8	North of Breadsall Hill Top	Green Belt	K Munson	Response-00631	Green Belt should remain PROTECTED
1.8	North of Breadsall Hill Top	Green Belt	Lara Small	Response-01262	I?m personally grateful that the decision was made to build Durose Country Park, I now live in a home probably built on allocated as Green Belt Land. I see the irony in my objection to further development and I?m trying to avoid a ?Not In My Back Yard? attitude. I understand the housing crisis won?t fix itself unless more homes are built. I seek to urge the planning team to consider how to get the most value out of the of the fields available in the area, and I?m not sure if the awkward triangle North of Breadsall Hilltop really achieves that. Fitting in sufficient houses to make it profitable seems disproportionate to the effort in getting access to the fields, levelling the sloped land, cutting through protected hedgerows, pressurising the Great Northern Greenway, establishing a road network and critically, establishing water catchment & run off areas that will be critical to ensuring the inhabitants of Breadsall Village stay flood free. One of the wonderful things about Derby, and part of the reason why I?ve chosen to settle here, is due its lack of heavy city intensity, As a proud Rolls-Royce employee, a huge amount of employee wealth is poured into Derby and its surrounding areas. Perhaps, this is also the reason why further housing is being considered; its becoming a more attractive place to live, but I urge you to ensure the city remains in balance with the green space around it. May I offer my very best wishes for your future plans and development of Derby, and may I urge you to consider the balance and impact of all options.
1.8	North of Breadsall Hill Top	Green Belt	Laura Louca	Response-01266	Just preserving a slither of land known as the Greenway is not enough - wildlife requires the fields, trees, hedgerows, grasses, shrubs, wild flowers and just an important- peace! If planning permission for all of the houses around this area is granted we will have lost a significant amount of green space in which I have seen rabbits, foxes, badgers, endless species of birds and insects.
1.8	North of Breadsall Hill Top	Green Belt	L Burton	Response-00342	Upon buying the house, we were told the ground opposite was green belt land and could not be built on. It was our primary reason for buying and our house price will be severely impacted with the loss of view which added value to our property and that we paid for. We will lose personal equity with the addition of a house estate to the front on green belt land. The green belt is home to a lot of wildlife including bats which are often seen in the gardens
1.8	North of Breadsall Hill Top	Green Belt	Leah McCormack	Response-01481	Objection to Proposed Development ? Conflict with Policy CP18 (Green Wedges) I note that this application has been amended to exclude the development adjacent to the A61. However I still wish to raise strong objections to the proposed development (both in its amended form and original form) on the grounds that it conflicts with Policy CP18 concerning Green Wedges. Although the site lies just outside the designated green belt surrounding Breadsall, it directly abuts existing woodland and open countryside, forming an important part of the green corridor along the Great Northern Greenway. The application site provides valuable habitat for wildlife and functions as an essential green buffer. Its loss would significantly reduce ecological connectivity and visual amenity, impacting local biodiversity and the quality of life for residents, walkers, and cyclists who currently use and enjoy this open space. The site is actively appreciated by the community as a visual break in built development and as a wildlife corridor connecting to other open areas. While the outline proposal includes the retention of woodland, there are serious concerns that development will increase pressure on these areas, potentially leading to degradation over time. I am concerned that the proposed development does not provide an adequate buffer to the woodland corridor and built development will sit too close and will detrimentally impact the existing woodland. There is no BNG Assessment listed in the application documents on the portal so it appears that it hasn?t yet been done. How can there be any confidence that the proposal would be able to satisfy the statutory requirement to deliver 10% net gain. Any BNG delivery off site or through the purchase of biodiversity units elsewhere, dilutes the benefit of 10% net gain as the biodiversity is lost here in this locality and the significant environmental impact is here. Crucially, the proposed development sits adjacent to land at Breadsall recently released from the green belt, which Erewash Borough Council is considering for housing allocation. If both sites are developed, the cumulative impact will be substantial?leading to the loss of meaningful green space, erosion of the rural character of the Great Northern Greenway, and the elimination of the settlement gap between Breadsall and the wider Derby conurbation. For these reasons, I urge the Council to reject the proposal in order to uphold the principles of Policy CP18 and protect the integrity of this important green wedge.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Green Belt	Lee Wheatley	Response-01492	The Green Belt serves fundamental and long-established purposes, including preventing urban sprawl, maintaining the openness and rural character of the countryside, providing opportunities for recreation, and safeguarding the setting of existing settlements. Building 160 houses on this protected land would represent a direct and unacceptable erosion of these crucial functions. Such a substantial development will inevitably lead to increased pressure on the Green Belt through increased traffic, noise and light pollution, and the potential for future incremental encroachment. The visual amenity of the Green Belt, enjoyed by residents of Breadsall Hilltop and the wider area, would be negatively impacted, diminishing the rural buffer that defines the character of our surroundings. The Green Belt land in the vicinity of the proposed development likely contributes to local biodiversity, wildlife corridors, agricultural land and scenic views enjoyed by Breadsall Hilltop residents and users of the Great Northern Greenway. The loss or degradation of these environmental assets due to the development would be a significant detriment to the ecological health and visual appeal of our region. Allowing a development of this scale on or adjacent to the Green Belt could establish a damaging precedent, potentially opening the door for further unwelcome development on protected land in the future. Beyond the direct impact on the Green Belt, the proposed 160 houses also raise concerns about the strain on existing infrastructure and services relied upon by Breadsall Hilltop residents, as outlined in my previous objections. The cumulative impact of a development of this size, potentially impacting the Green Belt and adding to local service demands, is a serious concern that the Core Strategy Review Amendment appears to have not adequately addressed.
1.8	North of Breadsall Hill Top	Green Belt	Linda Morris	Response-00867	The Green Belt continues to be eroded which leads to a sprawl of Oakwood/Hilltop/Chaddesden. The individual identities of these communities ceases to exist with associated urban behaviour issues arising ie vandalism. Loss of Green Belt will result in the loss of Flora and Fauna which it is important to preserve for future generations.
1.8	North of Breadsall Hill Top	Green Belt	Linda Smith	Response-01799	I am amazed that the Planning Office would consider using Green Belt land for this proposal. There have already been firm objections to the proposed development between Lime Lane and the ancient woodland of Chaddesden Wood. How then is this parcel of land different and does not attract similar objections using the same criteria.
1.8	North of Breadsall Hill Top	Green Belt	Lisa Stone	Response-01018	We live basically in the city centre which is all industrial there is so little green space anywhere nearby and we need this for wellbeing and good mental headspace, it's proven that green and nature is positive for mental health having houses in this one local green space we have that's not made and just naturally occurring will just make people move away from the city not attract them, no one wants to live in a concrete jungle with polluted air
1.8	North of Breadsall Hill Top	Green Belt	Mandy Cooling	Response-00312	This would appear to be a significant development on Green Wedge. It's particularly concerning at a time when there is so much talk about the environmental impact that we are making and it's disappointing that we aren't seeing any innovative proposals to regenerate and redevelop areas rather than destroying even more green spaces and natural habitat for ancient woodland, birds and animals. In effect this development, along with those proposed by Derby City Council, would join up Oakwood, Breadsall Hilltop, Breadsall Village into one mass of suburbia which I'm not sure benefits anyone - certainly not the environment
1.8	North of Breadsall Hill Top	Green Belt	Margaret Stafford	Response-01231	This is a sizeable housing development and will destroy part of the Green Wedge and cause disruption to nature and woodland areas. It is important to preserve these areas as once they are destroyed and built upon, they are never replaced and wildlife habitats are lost. Brown and grey sites should always be considered before green belt areas.
1.8	North of Breadsall Hill Top	Green Belt	marion Morris	Response-00870	The green belt continues to be eroded which leads to a sprawl of Oakwood/Hill top/Chaddesden the individual identities of these communities ceases to exist with associated urban behaviour issues arising i.e. vandalism. Loss of greenbelt will result in the loss of habitat for flora and fauna which it is important to preserve for future generations. If greenbelt ceases to be protected the urban spread will be uncontrollable with no city or county delineation.
1.8	North of Breadsall Hill Top	Green Belt	Martin Harrison	Response-01395	I object to the proposed development as it encroaches on green belt land. These areas are meant to be protected from urban sprawl to preserve natural landscapes, limit overdevelopment, and maintain clear boundaries between communities. Approving this development would set a dangerous precedent and undermine long-standing planning policies.
1.8	North of Breadsall Hill Top	Green Belt	Mary Hinckley	Response-00297	This proposal would lead to Breadsall Village being an extension of Oakwood. To allow Breadsall to remain as a village a green wedge needs to separate the communities of Oakwood and Breadsall Village.
1.8	North of Breadsall Hill Top	Green Belt	Mary Moffat	Response-01226	My principal objection is that if this is approved it would mean a loss of Greenbelt and Breadsall village would become an extension of the Derby conurbation. This would also be contrary to the Strategic Housing Land Availability Assessment 359 which stated that this area was unsuitable for residential development. Erewash's Green Belt Assessment states that this land performs poorly against the main purposes of the Green Belt and this ignores the main clauses of the National Planning Policy Framework NPPF 13. NPPF 13. Protecting Green Belt land 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. Erewash Council appear determined to ignore NPPF 13. This proposed extension of the Derby conurbation contradicts all of the above and would ensure that Breadsall Village becomes a suburb of Derby. We have a right to remain a village and enjoy our surrounding areas of Green Belt.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Green Belt	Masheda Chowdhury	Response-01339	1. Encroachment into the Green Belt and Urban Sprawl: ? The proposed development extends the built-up area northward, reducing the separation between Breadsall village and the urban edge of Oakwood. ? This undermines one of the core purposes of the Green Belt: to prevent towns from merging and to safeguard the countryside from encroachment. 2. Loss of Open, Rural Character: ? The northern boundary of the site lies immediately adjacent to open countryside and Green Belt land, which provides an important visual and environmental buffer between the city and Breadsall. ? Building on this site will degrade the rural setting and diminish the visual transition between Derby?s urban fringe and the countryside, contrary to the aims of Strategic Policy 1. 3. Sets a Dangerous Precedent for Future Green Belt Erosion: ? With 14.6 hectares of safeguarded land identified nearby, approving 160 homes here opens the door to incremental erosion of protected land. ? Safeguarded land is not the same as allocated land and should not be used as justification for large developments encroaching on protected zones. 4. No Exceptional Circumstances Justifying Green Belt Release: ? National Planning Policy Framework (NPPF) paragraph 140 requires that Green Belt boundaries should only be altered in exceptional circumstances, which must be fully evidenced and justified. ? No such exceptional justification has been provided in this case for why development in or adjacent to Green Belt should proceed. 5. Negative Impact on Biodiversity and Landscape Character: ? The Green Belt in this area supports a variety of habitats and is adjacent to the Great Northern Greenway (Local Wildlife Site ER005). ? Development here could fragment habitats and reduce biodiversity connectivity ? going against local and national biodiversity goals. 6. Conflicts with Local Policy Commitments to Preserve Landscape: ? Strategic Policy 1.8 does mention landscaping, but it fails to mitigate the full impact of a major housing block at the edge of the Green Belt. ? This development weakens the landscape protection aims outlined in Derby City and Derbyshire County policies.
1.8	North of Breadsall Hill Top	Green Belt	Matt	Response-00604	Need to keep up to Derbyshires rural setting once you build on the belt can never go back
1.8	North of Breadsall Hill Top	Green Belt	Megan Byrne	Response-01432	Major impact see other comments
1.8	North of Breadsall Hill Top	Green Belt	Michael Grignon	Response-01335	What is the point of having green belt if it is not respected by the powers that be, especially when there are so many brown belt sites ready for development
1.8	North of Breadsall Hill Top	Green Belt	Michael Poplar	Response-00565	This is vandalism of existing Green Belt in direct contravention of current NPPF Green Belt protections given in paragraphs 142 and 143. The unrestricted sprawl would effectively join onto Breadsall merging it with Derby as a mere suburb.
1.8	North of Breadsall Hill Top	Green Belt	Mollie	Response-01549	The site lies within the Derbyshire Green Belt, protected under the Erewash Local Plan (Policy EN1) and NPPF paragraphs 137?138. Developing here would harm openness, create urban sprawl, and set an unwanted precedent for further encroachment. The fields and hedgerows support protected species (hazel dormouse, nesting farmland birds). The ecological surveys in the application are insufficiently robust, and no clear mitigation or long-term management plan is provided. Local footpaths and informal green spaces used daily by residents for walking and mental health will be severed or degraded without any on-site public open space meeting the required 10?ha per 1,000 population standard.
1.8	North of Breadsall Hill Top	Green Belt	Monique Johnson	Response-00663	There are plenty of brown belt sites that could be used rather than encroaching on our green belt which is very precious for all the reasons already given. In Derby city there are brown sites which would be ideal. Re using spaces that have already been used for building. This would also make much better sense as residents there would be closer to work or transport (bus and train stations) to get to work. The city would also benefit from the presence of these people to bring more economic and social activity right there.
1.8	North of Breadsall Hill Top	Green Belt	Mrs Bullock	Response-00966	Please protect our green belt.
1.8	North of Breadsall Hill Top	Green Belt	Mrs Francoise Poplar	Response-00602	This is a primary concern as the proposals would effectively join Derby onto Breadsall contrary to the intention outlined in the current NPPF, which states that Green Belt protection is important to stop neighbouring towns merging into one another, to check unrestricted sprawl of large built up areas and to safeguard the countryside from encroachment.
1.8	North of Breadsall Hill Top	Green Belt	Mr SJ Read and Mrs S E Read	Response-01225	This is the most important objection to the proposed housing development. This land has always fulfilled the key green belt function "to check the unrestricted sprawl of large built up areas" (NPPF Clause 143) and as recently as 2022 the land was agreed to be unsuitable for development (SHLAA 359). The value of the land in fulfilling this basic green belt function has in fact increased in the past few years as development within the Oakwood area has moved closer and closer to the Erewash boundary. The implication of the allocation of this land for housing development is that it has suddenly become perfectly acceptable for Breadsall to become a suburb of Derby. No valid justification has been given for this abrupt change of policy. Erewash Borough Council states that this land "performs poorly" against greenbelt criteria yet, as stated above, it actually fulfils its greenbelt function perfectly. In the consultations for the recent Breadsall Neighbourhood Plan preservation of the green belt was the most frequently mentioned topic. Although the Neighbourhood Plan was not permitted to create a formal policy related to the green belt the consultation process gave a clear indication of the strength of local feeling on this subject.
1.8	North of Breadsall Hill Top	Green Belt	Mr Softley	Response-00344	What green belt? There will be nothing left. Do not kid yourselves into thinking you care about this with the proposals you have made.
1.8	North of Breadsall Hill Top	Green Belt	Mrs Sarah Morley	Response-01515	The whole purpose of Green Belt areas is to stop the unrestricted spawl of large build up areas. If houses are build in this area, then the to areas will run into one. Green Belt areas are very important and we must keep them. I own number 5 Manor Farm Barns, my husband purchased this 20 years ago, when they were first built. As part of living at these Barns we have to follow strict criteria, i.e. we have to only have wooden brown windows. We have to only use certain materials. These were put into place to protect the look of the area. What is the point of this if you are going to try and build 100's of houses on this land. Why when there is so much land in Derby that isn't green belt and protected land, do you have to build land on this area and change the name of it. I DONT THINK YOU HAVE MADE IT CLEAR AT ALL THAT YOU WANT THE LAND TO BE ALLOWED TO BE BUILT ON IN THE FUTURE.
1.8	North of Breadsall Hill Top	Green Belt	Nathan Cooke	Response-00896	Should not be built on!

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Green Belt	Neal Flint	Response-01220	The land earmarked for development and the land safeguarded are the last vital green belt to protect Breadsall as a village, for years developments have encroached on the village and this is the only small section now dividing us from urban sprawl and protecting its rural status and feel. The developments especially the safeguarded land would almost tower of the village due to the elevation of the land and would blight the village visually it is outrageous that it could even be considered for development, it would leave us with hardly any separation from the estates of Oakwood and Chaddesden and almost finish us off as a village settlement it also sets a dangerous precedent for other areas of green belt and protected land.
1.8	North of Breadsall Hill Top	Green Belt	Nicholas Lloyd	Response-00356	I strongly object to this planning application on the grounds that the proposed development constitutes inappropriate development on designated Green Belt land, as defined by the National Planning Policy Framework (NPPF). The primary purpose of Green Belts is to prevent urban sprawl by keeping land permanently open, and this development would undermine that objective. The NPPF stipulates that such development should only be permitted in "very special circumstances," which have not been demonstrated in this case. Allowing this development would set a concerning precedent, potentially leading to further erosion of protected Green Belt areas. Additionally, the loss of this land would negatively impact local biodiversity, disrupt wildlife habitats, and diminish the quality of life for residents who currently benefit from the open, rural character of the area. Therefore, I urge the planning authority to reject this application to preserve the integrity of the Green Belt and maintain the environmental and social benefits it provides.
1.8	North of Breadsall Hill Top	Green Belt	Oakwood Ward Councillors Eyre, Mulhall and Trehwella	Response-01359	We would like to see a report of a full study of the impact of this development.
1.8	North of Breadsall Hill Top	Green Belt	Patrick Baker	Response-01349	The proposed development would make an unbroken housed area joining to the Derby city developments. Breadsall village would effectively be joined to Derby in terms of access for walkers and wildlife
1.8	North of Breadsall Hill Top	Green Belt	Peter John Ball	Response-00705	This site will join the village of Breadsall to the Derby City suburbs. This negates the whole reason for having a Greenbelt which is to restrict the merger of urban areas.
1.8	North of Breadsall Hill Top	Green Belt	Philip Booth	Response-00683	Green belt land is meant to protect against building and preserve the land so the biodiversity is not lost forever. I understand this is a green belt area and is sometimes referred to as Green Wedge, which has constraints.
1.8	North of Breadsall Hill Top	Green Belt	Rachael	Response-00332	It is Green belt land that is being proposed to build on. We need to preserve our Green belt to ensure we have access to clean, fresh air. Wildlife, exercise, a happy and healthy way of life.
1.8	North of Breadsall Hill Top	Green Belt	Richard Hewitt	Response-01464	I have lived in Breadsall village for 34 years and it is a little haven surrounded by fields, walkways and a general feel of living in the countryside while being a short distance from Derby, A38 and A52. Further development will eventually lead to Breadsall being swallowed up into a Derby district. With this planning application and the one for the green belt / woods opposite Morrisons on Sir Frank Whittle Way, the area will become over developed.
1.8	North of Breadsall Hill Top	Green Belt	Richard Johnson	Response-00697	The green belt is supposed to provide a distinction between built up areas and agricultural use of land / countryside. It always seems the green 'belt' suffers the first to be ignored and the land gradually depleted to provide new housing. We need green space for farming and recreation. Let's use existing derelict sites for building and avoid encroaching onto 'Green Belt' land.
1.8	North of Breadsall Hill Top	Green Belt	Richard Stone	Response-01029	The old railway line walk is a popular and great area to walk and is enjoyed by people and animals, not only this it has a historic value all destroyed by houses in this area. It is also a fairly steep hill and not good land for putting houses on anyway.
1.8	North of Breadsall Hill Top	Green Belt	Richard Straw	Response-01412	The green belt would be completely gone and all the wildlife and heritage would disappear
1.8	North of Breadsall Hill Top	Green Belt	Robert Mee	Response-01501	The Core Strategy and this Amendment are developed in order to meet the housing targets allocated to the council by central government. I do not believe that the number of houses required by government constitutes, in itself, the 'exceptional circumstances' which are required under the Framework. This is particularly so in view of there being no published objective basis for the numbers allocated to each authority. The term 'exceptional circumstances' does include 'instances where an authority cannot meet its identified need for homes'. The waiting list for social housing in the general area might suggest that this is the case, but I do not accept that these plans will go far to address this issue. The vast majority of the planned housing allocations are not even for affordable housing, let alone social housing. Additionally, I do not remember seeing evidence that Erewash has specifically quantified local (i.e. Erewash) housing needs. I also do not believe that much, if any, of the Green Belt selected for development would fit the definition of 'Grey Belt'. As a concept, I can support the idea of Grey Belt as originally reported, i.e. pieces of land within the Green Belt which have previously been developed. Indeed, I can think of a few locally, though they are all fairly small. I find the arguments that I have heard over distances between the edge of Derby and the edge of other towns, and how these distances will still be maintained, extremely spurious. The Green Belt in its entirety exists to prevent Nottingham and Derby from merging. While building on any of these sites does not immediately make the two cities any closer to each other, it does reduce the green space between the two cities, which is precisely what the Green Belt was established to prevent. The Green Belt is a regional initiative, covering two counties and several local authorities. With Erewash having such a high proportion of its land earmarked as Green Belt it is incumbent on the region as a whole to find a solution to the housing shortage, rather than to expect our authority to have to sacrifice its green spaces. This site, like that at Acorn Way, has the immediate effect of enlarging Derby, situated as it is next to the recent development within the Derby City boundaries (which doesn't appear to be shown on the map included within the consultation document. This needs to be rectified before anything is submitted to the Planning Inspectorate).

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Green Belt	Robert Mee	Response-01789	My main reason for objecting to these developments is that I do not believe that the criteria set out in the NPPF has been met justifying any encroachment into the Green Belt at this time. The Core Strategy and this Amendment are developed in order to meet the housing targets allocated to the council by central government. I do not believe that the number of houses required by government constitutes, in itself, the ?exceptional circumstances? which are required under the Framework. This is particularly so in view of there being no published objective basis for the numbers allocated to each authority. The term ?exceptional circumstances? does include ?instances where an authority cannot meet its identified need for homes?. The waiting list for social housing in the general area might suggest that this is the case, but I do not accept that these plans will go far to address this issue ? the vast majority of the planned housing allocations are not even for affordable housing, let alone social housing. Additionally, I do not remember seeing evidence that Erewash has specifically quantified local (i.e. Erewash) housing needs. I also do not believe that much, if any, of the Green Belt selected for development would fit the definition of ?Grey Belt?. As a concept, I can support the idea of Grey Belt as originally reported, i.e. pieces of land within the Green Belt which have previously been developed ? indeed, I can think of a few locally, though they are all fairly small. I find the arguments that I have heard over distances between the edge of Derby and the edge of other towns, and how these distances will still be maintained, extremely spurious. The Green Belt in its entirety exists to prevent Nottingham and Derby from merging ? while building on any of these sites does not immediately make the two cities any closer to each other, it does reduce the green space between the two cities, which is precisely what the Green Belt was established to prevent. The Green Belt is a regional initiative, covering two counties and several local authorities. With Erewash having such a high proportion of its land earmarked as Green Belt it is incumbent on the region as a whole to find a solution to the housing shortage, rather than to expect our authority to have to sacrifice its green spaces. This site, like that at Acorn Way, has the immediate effect of enlarging Derby, situated as it is next to the recent development within the Derby City boundaries (which doesn't appear to be shown on the map included within the consultation document ? this needs to be rectified before anything is submitted to the Planning Inspectorate).
1.6	North of Breadsall Hill Top	Green Belt	Roy Ling	Response-01243	This is green belt land and a wedge between Derby City and Breadsall Village. In 2022 this land was deemed unsuitable for residential development, SHLAA 359.
1.6	North of Breadsall Hill Top	Green Belt	Ruth Duxbury	Response-00301	There are already several housing developments in this area and all have no regard to the environment. Often old trees and hedgerows are cut down and not replaced.
1.8	North of Breadsall Hill Top	Green Belt	Samantha Watts	Response-00869	The proposed development threatens protected Green Belt land, which serves as a vital buffer against urban sprawl and preserves the rural character of Breadsall Village. Green Belt areas are designated to prevent uncontrolled expansion, safeguard natural landscapes, and maintain biodiversity. Allowing construction on this land undermines these principles and sets a concerning precedent for future developments. Beyond its environmental value, the Green Belt provides essential recreational space for residents and supports local wildlife. The loss of this land would diminish access to green spaces, negatively impacting community well-being and biodiversity. Furthermore, national and local planning policies emphasize that Green Belt development should only occur in exceptional circumstances. There is no compelling justification for this proposal, especially when alternative brownfield sites could be considered.
1.8	North of Breadsall Hill Top	Green Belt	Sam Saunders	Response-01557	The proposed development involves building on designated Green Belt land, which raises substantial concerns due to the fundamental purpose and protections that Green Belt status provides. Green Belt land is specifically protected under national planning policy to prevent urban sprawl, preserve the openness and character of rural areas, and safeguard the countryside from inappropriate development. Constructing 160 homes on this land would fundamentally undermine these objectives, leading to irreversible environmental and social consequences. Building on Green Belt land results in the permanent loss of open spaces that serve as essential natural buffers between settlements. This erosion of the Green Belt compromises the clear physical distinction between Derby's urban area and the village of Breadsall, threatening the separate identities of communities and increasing the risk of coalescence. The development would encroach on valued landscapes, reduce biodiversity, and disrupt wildlife habitats, particularly given the site's proximity to the Great Northern Greenway and other local wildlife sites. Furthermore, Green Belt land plays a vital role in carbon sequestration, flood mitigation, and maintaining local climate resilience. Development increases impermeable surfaces, exacerbating flood risk and reducing natural drainage. The loss of Green Belt space diminishes opportunities for recreation and mental well-being for local residents, as these green areas provide important informal amenity spaces. Given the national and local importance of protecting Green Belt land, any proposal to develop within it should be subject to the highest scrutiny. Exceptional circumstances must be demonstrated, and all alternatives outside the Green Belt thoroughly exhausted. This proposal fails to justify the harmful impacts of building on protected Green Belt land, and approval would set a concerning precedent for future encroachment into valued open countryside.
1.8	North of Breadsall Hill Top	Green Belt	Sandra Perry	Response-00307	It's a disgrace that there's a proposal to build even more, right up to the city boundary. There is no green belt. Why build in fresh green land instead of brown field. And such poor quality housing with no garden.
1.8	North of Breadsall Hill Top	Green Belt	Sara Cotton	Response-00370	Green belt land is important for our environment
1.8	North of Breadsall Hill Top	Green Belt	Sarah Hewitt	Response-01461	There are plenty of other areas to use. This will bring Breadsall village closer to Oakwood which 50 years ago was not supposed to happen. There should be a green wedge. We have the lovely Greenway. Please leave this beautiful area alone.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Green Belt	Saravan P	Response-01448	I object to the proposed development, in both its original and amended forms, due to its clear contravention of Green Wedge Policy CP18. Even with the A61 area excluded, this application still threatens a crucial green corridor along the Great Northern Greenway, directly bordering existing woodland and open countryside. This site is a valuable wildlife habitat and a vital green buffer, cherished by the community for its ecological significance and as a visual amenity for residents, walkers, and cyclists. Its loss would severely diminish ecological connections and the visual landscape. While some woodland is proposed for retention, I am deeply concerned about the increased pressure and inadequate buffer zones, which will likely lead to its degradation.
1.8	North of Breadsall Hill Top	Green Belt	Scarlett Hamblin	Response-00398	We need to protect our diminishing green belt. We cannot allow for houses to destroy our green areas.
1.8	North of Breadsall Hill Top	Green Belt	Scott Watson	Response-01284	The proposed development puts protected Green Belt land at risk, an area that plays a crucial role in preventing urban sprawl and maintaining the rural character of Breadsall Village. Green Belt designation exists to limit unchecked expansion, protect natural landscapes, and support biodiversity. Permitting construction here would disregard these principles, setting a troubling precedent for future development. Aside from its environmental importance, the Green Belt provides valuable recreational space for the community and serves as a habitat for local wildlife. Losing this land would reduce access to green spaces, negatively affecting both biodiversity and residents' well-being. Furthermore, national and local planning policies make clear that development within the Green Belt should only be permitted under exceptional circumstances. In this case, there is no compelling justification, particularly when suitable brownfield alternatives are available
1.8	North of Breadsall Hill Top	Green Belt	Sharon Coward	Response-00348	The position of the development will negatively affect the people of oakwood & the green belt that surrounds it. A deliberate policy of building on the boundary with oakwood & Breadsall will negatively affect the green belt surround these areas.
1.8	North of Breadsall Hill Top	Green Belt	Silvia Mircic	Response-00884	This expansion of the Derby conurbation directly contradicts the findings of the previous Strategic Housing Land Availability Assessment (SHLAA 359), which deemed the site unsuitable for residential development. NPPF 13. Protecting Green Belt land 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.
1.8	North of Breadsall Hill Top	Green Belt	Simon Ferrad	Response-00853	This will completely remove the green belt between Derby and Breadsall village. The village will essentially become a suburb of Derby.
1.8	North of Breadsall Hill Top	Green Belt	simon morris	Response-00866	The green belt continues to be eroded which leads to a sprawl of Oakwood/Hill top/Chaddesden the individual identities of these communities ceases to exist with associated urban behaviour issues arising i.e. vandalism. Loss of greenbelt will result in the loss of habitat for flora and fauna which it is important to preserve for future generations. If greenbelt ceases to be protected the urban spread will be uncontrollable with no city or county delineation.
1.8	North of Breadsall Hill Top	Green Belt	Siu Lap Lau	Response-00606	Green space is important for everyone. Absolutely needs protect.
1.8	North of Breadsall Hill Top	Green Belt	Stella Beaumont	Response-00842	Green belt ? Is there any left to plunder ? We need to preserve it
1.8	North of Breadsall Hill Top	Green Belt	Stephen and Janet Allis	Response-01221	does it still exist?
1.8	North of Breadsall Hill Top	Green Belt	Stephen Brown	Response-01832	1) Basic amenity ? do we really want to continue extending our developments and housing further into the green belt? This is not in character with this neighbourhood.
1.8	North of Breadsall Hill Top	Green Belt	Steven furness	Response-01516	This will eliminate the green gap between Breadsall village and Derby. Unacceptable.
1.8	North of Breadsall Hill Top	Green Belt	Stuart Brown	Response-00771	Any development on greenbelt is not environmentally acceptable. Directly impacts established biodiversity?s in the area
1.8	North of Breadsall Hill Top	Green Belt	Susan Dundon	Response-00396	It will affect our green belt
1.8	North of Breadsall Hill Top	Green Belt	Thomas Bateman-Wong	Response-00985	Looking at the plans, how is everything greenbelt apart from this specific spot? The whole area should be greenbelt. There are definitely other areas of Derby that would suit that would not take away from the greenbelt. Other rundown buildings and sites that should be rejuvenated rather than just leaving them ruined and moving on to ruin somewhere further.
1.8	North of Breadsall Hill Top	Green Belt	Thomas Monkhouse.	Response-01318	Once again the area proposed for development is Green Belt farming land. Green Belt land should still be protected particularly farmland for the production of food
1.8	North of Breadsall Hill Top	Green Belt	Tom Parker	Response-01398	The land in which the development is being proposed to be built on is in fact green belt, we need to keep our green belt in order to have access to clean, fresh air, wildlife, exercise and a happy healthy way of living
1.8	North of Breadsall Hill Top	Green Belt	Tony Hawkins	Response-01532	The preservation of this greenbelt land referred to above helps to achieve these key objectives. It also provides separation of neighbouring towns and rural settlements within Erewash Borough and separates Breadsall from the Derby conurbation. The map provided in the consultation document is incorrect and does not show the existing Durose County Estate as demonstrated in the image below highlighting the estate. Housing on this land will merge into the existing estate and Derby City contradicting: ? 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. ? 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. The landscape of the countryside for Breadsall/Breadsall Hill Top will disappear and become one big housing estate connecting Breadsall to Derby City
1.8	North of Breadsall Hill Top	Green Belt	Wobbina Bugg	Response-00846	This is Green Belt and an important area for biodiversity
1.8	North of Breadsall Hill Top	Healthcare Facilities	Adam Garner	Response-00613	Already limited in the area are Oakwood and Chadeston are at capacity now. It?s very difficult to get an appointment today, and often need to use the walk in in town or A&E.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Healthcare Facilities	Adam Millward	Response-00418	Again, my parents live in Oakwood and they already can't get in at Oakwood dentist or doctors surgery, they have to travel to city centre to access both if these services. New dentist, gp and health Centre would needed to be included in this project.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Adelle Cavanagh	Response-00392	It is almost impossible to get an appointment with our GP as it is. I cannot contemplate how the current healthcare services can begin to consider taking on more patients
1.8	North of Breadsall Hill Top	Healthcare Facilities	Alexander lee	Response-01439	Practically non existent due to staffing shortages. Again this will make it worse.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Alex Cargill	Response-01834	*GP surgeries .Already overloaded
1.8	North of Breadsall Hill Top	Healthcare Facilities	Alistair Crawford	Response-01404	There is no provision to support the extra housing in terms of schools, dentists, doctors, drainage and sewers. Previous reviews stated this land is unsuitable for residential building and was conducted with due diligence by the planning department and councillors who actually visited the site at the time. This has now been overturned by this latest amendment without the same due diligence or physical visits. The details on the maps published for consultation are incorrect and out of date in respect of access roads and complete development of the Manor Farm Development.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Amber	Response-00329	Cannot get appointment now in Oakwood let alone with two further huge developments!
1.8	North of Breadsall Hill Top	Healthcare Facilities	Amber Hubbard	Response-00845	Local GP practices are beyond capacity with long waits to even get an appointment. Additional development will only make this worse. Same applies to lack of dentist or pharmacy provision
1.8	North of Breadsall Hill Top	Healthcare Facilities	Andrea R Rowley	Response-01230	Existing healthcare facilities are already very over stretched. What plans are in place to increase capacity to accommodate the extra people coming into the area?
1.8	North of Breadsall Hill Top	Healthcare Facilities	Andrea wightman	Response-00354	Where are the healthcare facilities ?? This is an erewash development and it appears the facilities of Oakwood are expected to be used. It is extremely difficult to gwt access to the local doctors in Oakwood, a few hundred more people trying to access an already stretched service is not acceptable. A new doctors, dentist and pharmacy are needed as the existing ones are not able to cope with more demand
1.8	North of Breadsall Hill Top	Healthcare Facilities	Andy Madeley	Response-00381	I am unable to get on to a NHS dentist practice, and it took 30 days to see a nurse at the surgery. Increasing houses will reduce the capacity of local services.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Angela Clarke	Response-01400	Access to already busy Drs, Dentists in the local area , no planning evident for new or extra services becoming available for increased population numbers in local area.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Angela Smyth	Response-00296	The doctor surgery in Oakwood is already at capacity. No new housing should be built in the area until this is sorted. New GP surgeries and dentists are needed for Oakwood and the two additional housing estates already built.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Ann Sherlock	Response-00410	The map used is out of date and the local healthcare facilities are already at capacity. Adding the current proposal will be extremely detrimental to the local healthcare facilities, and it is disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the area, missing two extremely large housing estates and falsely portraying a smaller population and impact the housing proposal will have.
1.8	North of Breadsall Hill Top	Healthcare Facilities	A O Smith	Response-01798	There is no provision in the proposals to support the infrastructure needed , such as doctors surgeries.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Ashley syll	Response-00397	What provision to access healthcare, already oversubscribed for healthcare provision prior to additional 160 houses. Access to emergency services and access routes also limited
1.8	North of Breadsall Hill Top	Healthcare Facilities	Ben Martin	Response-00787	There has been zero improvement to doctor facilities, dentists, public transport, schools, parks etc since the development of the Breadsall Hilltop and Persimmon estates on the already health care stressed area of Oakwood.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Bethany Seivewright	Response-01563	No additional health services being built, doctors are already overcrowded and is almost impossible to get an appointment. The Oakwood surgery also doesn't accept half of Durose estate as out of catchment - never mind additional houses
1.8	North of Breadsall Hill Top	Healthcare Facilities	Beverly Jordan	Response-01330	Two estates have already been built putting pressure in this areas for medical facilities
		Healthcare Facilities	Brendan Hargreaves	Response-00629	the healthcare facilities are already struggling without extra pressure with more people
1.8	North of Breadsall Hill Top	Healthcare Facilities	Bridgette Cussens	Response-00390	The healthcare services are already at full capacity, I struggle to get appointments when needed and adding to that will make it much worse for myself and the current residents of oakwood
1.8	North of Breadsall Hill Top	Healthcare Facilities	Cameron Coope	Response-00369	GP and dentist places are already few and far between
1.8	North of Breadsall Hill Top	Healthcare Facilities	Carl Hill	Response-00670	I cannot get a dentist appointment my GP is in the city centre as I cannot get a spot at the Oakwood surgery who is paying for additional GP?s for the potential 800 residents before factoring in the existing development next door and the one at Lime Lane..
1.8	North of Breadsall Hill Top	Healthcare Facilities	Carol Westcott	Response-00973	We cannot get an appointment at our already full GP practices how are we going to in the future with at least another 320 people needing a Doctor's surgery

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Healthcare Facilities	Carys Whomsley	Response-01438	I am writing to register my strong objection to the above-mentioned planning application, both in its original and revised form. Despite the removal of the area adjacent to the A61 in the amended proposal, I believe that the proposed development remains deeply inappropriate and harmful for the following reasons: 1. Contravention of Policy CP18 and Loss of Green Wedge The proposed site lies just outside the designated Green Belt, but crucially directly abuts existing woodland and open countryside, forming part of the vital green corridor along the Great Northern Greenway. This area functions as a green buffer, enhancing ecological connectivity, supporting biodiversity, and providing visual and recreational amenity to local residents, walkers, and cyclists. Despite claims of woodland retention, the development threatens the integrity of this space. Proximity to new housing would increase human pressure on the natural environment, likely leading to degradation of woodland, fragmentation of habitats, and a reduction in wildlife corridors. No Biodiversity Net Gain (BNG) assessment appears in the application documents, raising concerns about whether the legally mandated 10% net gain can or will be achieved. Biodiversity enhancements delivered off-site would do nothing to mitigate local ecological loss, thereby undermining environmental sustainability in the area. Moreover, the site lies adjacent to land recently released from the Green Belt and under consideration for housing allocation by Erewash Borough Council. The cumulative impact of developing both sites would be devastating: a continuous sprawl from Derby through to Breadsall, resulting in the elimination of the settlement gap and permanent damage to the character of the Great Northern Greenway. 2. Environmental, Infrastructural, and Policy Concerns The proposal directly contradicts the National Planning Policy Framework (NPPF) Paragraph 143, particularly the goals of preventing urban sprawl and protecting the openness of Green Belt land. It also ignores the findings of the Strategic Housing Land Availability Assessment (SHLAA 359), which previously deemed the site unsuitable for residential development due to accessibility and environmental limitations. The development is completely incompatible with the objectives of the Breadsall Parish Neighbourhood Plan 2019?2029, particularly the aims to: Preserve the rural character and prevent urbanisation; Avoid coalescence with the Derby conurbation; Safeguard wildlife and ecological features; Control flood risk and infrastructure strain; Protect valued green spaces and visual vistas.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Carys Whomsley	Response-01439	Breadsall has already experienced increased flooding, attributed to upstream developments like Persimmon Estate and Breadsall Hilltop, which lie within the same water catchment area. Any additional development would worsen this issue, placing homes and infrastructure at risk. Furthermore, the proposal relies on access through two existing public footpaths within the Redrow estate and offers no concrete infrastructure improvements. The A608 is already over-congested, and no plans are presented to handle increased traffic or to safeguard children commuting to local schools. 3. Loss of Community and Ecological Value This land offers more than just open space?it is a much-loved and well-used amenity for the local community. It serves as a peaceful escape for informal recreation and nature engagement, and its visual and environmental contributions to the neighbourhood are significant. Its destruction would represent a major loss in local character and quality of life. The proposal underestimates the pressure on existing services, lacks detailed mitigation plans, and fails to explain how proposed footpaths will link meaningfully into existing routes. Nearby Local Wildlife Sites will be impacted
1.8	North of Breadsall Hill Top	Healthcare Facilities	Charlotte	Response-00458	No local doctors in the area. Currently not taking on patients for local dentists, over capacity issues. Oakwood shops at capacity with car park always full, no other amenities to support more housing.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Chris Harris	Response-01521	Already inadequate doctors surgeries
1.8	North of Breadsall Hill Top	Healthcare Facilities	Chris Hopkinson	Response-01396	Same as school. Added strain to derby city area
1.8	North of Breadsall Hill Top	Healthcare Facilities	Chris Lunn	Response-01410	Local doctors and health services are already stretched far beyond capacity. Clearly this is not a problem confined to Derby but why is it necessary to inflict even more suffering and hardship on an already over populated, over developed area? Getting a doctor?s appointment in a timely manner is virtually impossible which leads to the ?clogging up? of A & E Departments and causing additional strain on hospitals or walk-in clinics. Waiting times for appointments will cause even more delays in getting treatment delivering a poorer quality service. When the Redrow estate was built, again no consideration was given to the additional number of people all requiring doctors and healthcare, hence we now have an overloaded system in the area which cannot cope as it is, without the additional 160 houses being proposed. Mental health issues are likely to rise as stress builds up due to frustration caused by too many people, in too small an area, all trying to access the same places at the same time. This proposed development cannot be allowed to go ahead; this land is vital to the wellbeing of the area, the community and the wildlife.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Clare Roters	Response-01553	Go appointments in the area are massively hard to get and those of us with existing conditions are already suffering with the services already provided in the area
1.8	North of Breadsall Hill Top	Healthcare Facilities	Dana Demidoff	Response-00634	Again no infrastructure
1.8	North of Breadsall Hill Top	Healthcare Facilities	David Byrne	Response-01433	Health care facilities particularly at oakwood precinct is already constrained, often being impossible to get face to face appointments, more residents will worsen this
1.8	North of Breadsall Hill Top	Healthcare Facilities	David Duxbury	Response-00305	This development is on the edge of Erewash and healthcare services will almost certainly be provided by the park medical practise. This practice is already vastly over subscribed. Services have not been expanded and developments adjacent to the proposed development and adjacent to lime lane have already added significantly to demand.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Edward James Gregory	Response-00728	Doctors / Dentists are already at capacity, and Erewash does not provide these services in this area. Erewash should provide developments where it will service the residents, not assume other areas will provide this.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Elaine hodgkinson	Response-00854	Oakwood doctors are already heavily over subscribe with it being impossible to get an appointment for the majority of people. This development will not have any positive affect on funding from developers.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Emma Charlton	Response-01545	The local GP surgery?s are struggling under pressure of being over subscribed

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Healthcare Facilities	Emma Daniels	Response-00346	All the houses keep going up in Oakwood and no additional healthcare facilities to accommodate these people. Cannot get into a dentist or an appointment at the drs when needed as it is, why add extra strain on already overstretched non existent facilities in Oakwood
1.8	North of Breadsall Hill Top	Healthcare Facilities	Emma Hawkins	Response-00813	There are only two doctors in Oakwood which covers a vast catchment area and are full to capacity with appointments very difficult to achieve. There is one dentist in Oakwood whom are not taking on NHS patients this dentist business is more cosmetic. There are not facilities within Breadsall Village under Erewash Borough Council which can services this new proposed development.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Faye Wilkinson	Response-01129	There are no plans to provide or build new healthcare services in this area. Residents of the community already report difficulties obtaining access to GP or dentist services. Again, it is not environmentally conscious to expect residents to have to drive to these services.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Gary Murfin	Response-00374	Park medical and Lister house surgeries already struggle and seem to be at full capacity, it's very hard to get a appointment sometimes, also there aren't enough dentists in the area and no nhs dentists
1.8	North of Breadsall Hill Top	Healthcare Facilities	Gaynor Pawley	Response-00627	After Multiple recent developments it is near on impossible to get an appointment at the doctors. The plans will build on Erewash land but due to the proximity to Oakwood, Derby City facilities would be more favourable without any contribution to improve the services. All the revenue from these houses would end up elsewhere.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Ged Doherty	Response-01822	The area is already stretched beyond the limit for medical facilities and to force through yet more development into such a small area is nonsensical and will have a considerable impact on those already resident.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Gemma Cotter	Response-01374	There is inadequate access to GP services and dentistry around this area of Derby. Lister House frequently has no capacity across its 4 clinics (car ownership essential to accept short notice appointments in Chellaston, Alvaston or Normanton). My family has experienced asthma escalating to 999 calls because timely access to a GP for additional steroids to relieve symptoms was not available. This is a greater overall cost to the NHS. There is no NHS dentistry in Oakwood. Breadsall does not have any medical services locally.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Gillian Pearson	Response-00303	Will there be any additional healthcare provision included in the planning conditions? We are currently waiting several weeks for a non urgent doctor's appointment at our GP practice.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Harry Mee	Response-00882	They do not have the capacity for 190 new houses.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Helen Walker	Response-00325	Don't start on healthcare what healthcare we go to a doctors in Spondon and have done for years again no adequate health provisions for Oakwood and the surrounding area before the last lot of houses were built and even less now, we are Derby City yet it is Erewash who are wanting these houses built but won't be affecting their health facilities as it will be again all the docs etc around here fighting to provide facilities for them.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Hulland, Bdverley	Response-00496	GP - already struggle to get in at GP, more houses just makes even worse than it us
1.8	North of Breadsall Hill Top	Healthcare Facilities	Jake Moore	Response-01202	The addition of 160 new homes will place significant pressure on local healthcare facilities, including GP surgeries, dental practices, and hospitals. These services are already operating at or near full capacity, with long waiting times and limited appointment availability for existing residents. As the development would likely bring several hundred new residents to the area, it will: Exacerbate existing waiting times for GP appointments and other essential health services; Overburden local healthcare professionals, leading to delays in care and reduced service quality; Increase demand for mental health services, particularly with the added stresses that a rapidly growing population can bring; Place pressure on pharmacy services and other local health resources, further limiting access for current residents. There has been no indication that the developer has made provisions for expanding or improving local healthcare infrastructure to meet the needs of the additional residents. The failure to address this will create further health disparities and undermine efforts to ensure accessible healthcare for all.
1.8	North of Breadsall Hill Top	Healthcare Facilities	James Bellaby	Response-00337	The very small doctors is very difficult to get an appointment as it is.
1.8	North of Breadsall Hill Top	Healthcare Facilities	James Roberts	Response-00673	As per School Capacity, the Oakwood GPs are already rejecting patients from the existing estate, stating it is outside of the Oakwood district map, so the current estate has to look to Allestree for GP placements. An extra 160 households will not be manageable with the current GP capacity in Allestree, and will put an increased strain on Derby hospital which regularly gets close to black alert status given the lack of beds and doctors. Again this is commonly overlooked in the general rush to build more houses (which are needed undoubtedly, but not without the infrastructure and support in place first)
1.8	North of Breadsall Hill Top	Healthcare Facilities	James skivington	Response-00359	Very hard to get any local dentist and doctors currently adding to this will only scratch demand
1.8	North of Breadsall Hill Top	Healthcare Facilities	Jamie Branagan	Response-00335	No one living on this proposed new estate will look to Erewash for their health needs. Clearly they will all look to Oakwood and Derby city for doctors, dentists and emergency care. All of which are already overstretched. Most current residents have to travel out of Oakwood for a doctors or dentists appointment.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Janet O'Brien	Response-01835	There is no provision to support the extra housing in terms of dentists and doctors
1.8	North of Breadsall Hill Top	Healthcare Facilities	Janette Glenn	Response-00422	Local GP practices already cannot provide enough appointments to meet local demand. The problem would be exacerbated by adding yet more homes to the edge of Oakwood.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Jared Smyth	Response-00894	The GP in Oakwood is already oversubscribed
1.8	North of Breadsall Hill Top	Healthcare Facilities	Jason Reader	Response-00320	No mention of additional health care provision, both doctors and dentists.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Jeanette Kent	Response-00402	Healthcare facilities are already grossly oversubscribed. Try giving up valuable space for doctors surgeries, dentists etc before even more housing that will again be using Derby City money and resources whilst paying Amber Valley taxes
1.8	North of Breadsall Hill Top	Healthcare Facilities	J Hasse	Response-00875	More houses means more strain on local doctors and dentists.
			Jim Smith	Response-00741	There appears to be no intention to provide any additional social provisions such as GP surgery, which are already over stretched.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Healthcare Facilities	John Harlow	Response-00619	Having just spent over 12 hours in the A&E at Derby royal hospital I can't reassure you that there is no and I repeat NO capacity for any extra patients. GPs are over worked with no room for extra patients. I fear that people at this proposed site would have to come into Oakwood / Chad. hoping for an appointment but there are none, even for the residents that currently live at Oakwood Dentists are also very restricted with very few offering NHS patients
1.8	North of Breadsall Hill Top	Healthcare Facilities	John Hudson-Peat	Response-01833	The lack of infrastructure to service new developments are none existence (GPs etc) just take a look at the recent developments close by.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Jonathan Park	Response-01191	Their is not enough capacity to serve the current populace of the area in regards to doctors and dentists, this will only exacerbate this issue further - no new health care facilities have been proposed.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Jon Lewis	Response-00347	Local doctor's practices are already overloaded. It is virtually impossible to get quick appointments even for children. Which are then having to attend emergency medical centres. The increase in housing and population will only make the above worse.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Julie Bates	Response-01326	As a person who has a chronic illness the affect more houses will have on trying to get drs appointments will be terrible , we already can't get appointments as it is and all the drs in the areas are the same so this will have a massive effect on all of us who live nearby . The chance of getting appointments is already next to impossible. We have to go through 111 and then the walk in centres I don't see how they will cope with more patients coming to live into in this area .
1.8	North of Breadsall Hill Top	Healthcare Facilities	Julie Herbert	Response-01282	Oakwood and Chaddesden doctors can not cope with their current patient load, it is impossible to get an appointment already, this development will make this so much worse, I already live in fear of requiring medical help.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Justine Dean	Response-00844	I am local and have given up on my doctors and dentist. The lack of available healthcare is already a problem. If you build please be kind to new residents and tell them they do so without the chance of getting a doctors or dentist where appointments are available
1.8	North of Breadsall Hill Top	Healthcare Facilities	Kara Crossley	Response-00865	It's already impossible to get into the local GP practices so without more infrastructure like this to go with new housing developments then more pressure is being added to already stretched services
1.8	North of Breadsall Hill Top	Healthcare Facilities	Karen Read	Response-00923	It is almost impossible to get health care in our area so how do you propose to cater for the increased demand for the many services that people require when you are already overwhelmed with the current numbers on the books it is a very alarming situation could you respond to how you will address this situation and where you will build the facilities required to service the community I would also like a survey on the current residents mental health as this obviously causes alarm and distress to people whom will be adversely affected by the destruction of greenbelt land and their homes
1.8	North of Breadsall Hill Top	Healthcare Facilities	Karen Webster	Response-00420	Existing GPs and Dentists are already over subscribed. You cannot get appts now, how will these houses help with that, the bad situation will just become worse. None of the contribution from Erewash helps with this and yet it's the Derby council tax payers that will suffer with worsening healthcare facilities.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Keerthi	Response-01450	To accommodate 160 House new health care facilities should be added. The proposal doesn't take it into account. I personally suffered quite a bit to get a dental appointment with the existing number of houses.i can't agine how it is going to be with 160 more houses.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Kimberley Woodward	Response-01445	You can't get a doctors appointment as it is let alone with more people in the area.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Kirstin Woodward	Response-01043	What healthcare facilities ! My dentist is in Allestree, my doctors is in Derby City Centre. The nearest walk in centre/hospital is 20 mins drive in either direction. My elderly parents-in-law came to live with us and we couldn't get them a local doctor so travel to the opposite side of Derby for care!
1.8	North of Breadsall Hill Top	Healthcare Facilities	K Munson	Response-00631	Already inadequate with a service struggling to cope
1.8	North of Breadsall Hill Top	Healthcare Facilities	Laura Fallows	Response-00339	Already terribly over subscribed doctors surgeries. Appointments never available.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Laura Louca	Response-01266	Same as the school capacity issue - enormous amount of new homes but no new doctors surgeries or dentists (NHS or otherwise)
1.8	North of Breadsall Hill Top	Healthcare Facilities	L Burton	Response-00342	It is impossible to get an appointment in local surgeries. We are at a doctors in Chaddesden as it is slightly better than that local to us, which is still a drive away
1.8	North of Breadsall Hill Top	Healthcare Facilities	Lee Wheatley	Response-01492	The proposed Core Strategy Review Amendment raises concerns about the capacity of schools and healthcare facilities in Breadsall and Breadsall Hilltop to accommodate increased population from planned development. Breadsall CoFE VC Primary School is near capacity, and increased housing will pressure primary and secondary schools across Derby, potentially leading to oversized classes and shortages. Healthcare services, including GP surgeries like Lister House and Park Lane, and Royal Derby Hospital, will face strain, causing longer wait times. The development's impact on local infrastructure, including accessibility to schools and healthcare, and the need for expanded facilities and resources, is a key concern, along with the effect on community resources and local businesses like the Central Co-op and The Windmill Inn.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Lisa Stone	Response-01018	Again all healthcare facilities are full and already cannot see all the patients needing appointments and peoples prescriptions are constantly delayed because of the sheer amount of people needing it already, add even more people to the mix and people will start dying when they cannot get basic healthcare. Again if the land is not big enough to build a everything to accommodate another population of people then it's not the right space
1.8	North of Breadsall Hill Top	Healthcare Facilities	Lucy Lewis	Response-01459	No spaces at local GP's
1.8	North of Breadsall Hill Top	Healthcare Facilities	lynne hollis	Response-01234	I am deeply concerned that the proposed development will place significant strain on local healthcare services. With an increased population, existing facilities will struggle further to accommodate the demand, leading to longer wait times and reduced access to essential medical care.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Mandy Cooling	Response-00312	Any such development must surely need to include plans for critical infrastructure to support the influx of hundreds more residents such as plans for doctors? surgeries (which are already groaning under the weight of thousands of patients), schools etc

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Healthcare Facilities	Margaret Stafford	Response-01231	Existing healthcare resources and facilities are already overstretched. I cannot see any proposal to add additional infrastructure as part of this proposal.
			Mark Herbert	Response-01285	Local surgery can?t cope with current demand let alone more
1.8	North of Breadsall Hill Top	Healthcare Facilities	Martin Harrison	Response-01395	I object to the proposed development due to the additional strain it would place on local healthcare services. GP surgeries, dental practices, and hospitals in the area are already under pressure, with long waiting times and limited appointment availability. Increasing the local population without expanding medical infrastructure will further reduce access to essential care for existing residents.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Mary Hinckley	Response-00297	The continued planning and building of housing under the number that is required to fund the necessary infrastructure to support the increased population means the stretched healthcare provision for the area is put under further pressure.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Masheda Chowdhury	Response-01339	1. Existing GP Surgeries and Clinics Are Already Overstretched: ? GP practices serving Oakwood, Breadsall, and Chaddesden are already facing long waiting times for routine appointments. ? Adding 160 homes could bring an estimated 400+ additional residents, placing unsustainable pressure on already limited resources. 2. No Commitment to Expand Local Healthcare Infrastructure: ? The planning policy contains no mention of contributions toward NHS facilities or local health services (e.g. through Section 106 or CIL funding). ? Without clear agreements or investment, the development will negatively affect both new and existing residents? access to timely care. 3. Impact on Emergency and Specialist Services: ? Local hospitals (e.g. Royal Derby Hospital) and urgent care services are already under strain, with long A&E waiting times. ? Increased population without corresponding healthcare expansion will exacerbate the capacity crisis and reduce the quality of care. 4. No Assessment of Cumulative Impact from Future Development: ? The policy identifies an additional 14.6 hectares of safeguarded land for longer-term housing growth. ? The cumulative effect of future developments will overwhelm services unless healthcare planning is addressed comprehensively now. 5. Mental Health and Community Health Services Also Overloaded: ? Access to mental health support, health visitors, and community nursing is already limited ? and not accounted for in the current plan. ? Vulnerable groups will be further marginalised without planning to expand these critical services alongside population growth. 6. Contradicts Local Public Health and Planning Policies: ? Derbyshire County Council has previously recognised the importance of health-based planning in tackling inequalities. ? Approving developments without healthcare provision goes against this principle and undermines local strategic health objectives. We already struggle to get appointments having to wait 4 to 5 weeks for an appointment.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Matt	Response-00604	Already at a max capacity and a struggle to get any care
1.8	North of Breadsall Hill Top	Healthcare Facilities	Megan Byrne	Response-01432	I would also like to express serious concerns about the impact this proposed development would have on local healthcare services, particularly GP practices. Residents in the area are already experiencing significant difficulty accessing primary care. It is increasingly common to be unable to secure a timely appointment?or even to get through on the phone at all?with local doctors' surgeries. The current level of service is already stretched beyond capacity, and additional housing would further exacerbate this situation. The application does not appear to address how local healthcare infrastructure will be supported or expanded to meet the needs of an increased population. Without clear, funded plans for additional healthcare provision, this development would place undue pressure on already overburdened services, directly impacting the health and well-being of both existing and new residents. I urge the Council to take these healthcare concerns into account and to ensure that any decision made reflects the current limitations of local medical services.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Melissa Little	Response-00389	Doctors surgeries are hugely stretched, increasing the number of people (potentially by hundreds) within the area will only hinder this service even more. Myself and partner use a local surgery, he suffers with Asthma and regularly struggles to get his check up appointments within due to the surgery being so busy. I had an urgent matter to speak to the Drs about and it took me almost 8 hours to get into the hold queue. Imagine additional people being added to mine, or other surgeries, how much longer it could take to speak to a receptionist.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Michael Albinson	Response-00790	Can?t even get a doctors appointment anymore so given up. All the local dentist are full too so have to travel to Ilkeston for a dentist appointment
1.8	North of Breadsall Hill Top	Healthcare Facilities	Michael Grignon	Response-01335	As above
1.8	North of Breadsall Hill Top	Healthcare Facilities	Michael Poplar	Response-00565	All healthcare facilities in the area are already overloaded.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Mollie	Response-01549	Breadsall Hill Surgery and Morley House Surgery have patient lists at 105?110% of ideal, leading to multi?week waits for routine appointments. Derby Royal Hospital A&E is regularly on diversion status. There is no Section 106 or CIL commitment in the application to expand local medical capacity?be it additional GP surgery space, new practitioners, or dental facilities?to serve an extra population of perhaps 500+ people.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Monique Johnson	Response-00663	The same applies for health services. When the development at the top of Brookside road was built there was no provision mad for health services
1.8	North of Breadsall Hill Top	Healthcare Facilities	Mrs. Dorothy Monkhouse.	Response-01371	The recent new development has made the access to a doctor more difficult. A further increase in population would make a bad situation even more critical.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Mrs Francoise Poplar	Response-00602	What few health facilities exist in the vicinity are up to or beyond their capacity.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Mr SJ Read and Mrs S E Read	Response-01225	The new development would obviously place an additional burden on healthcare facilities but there is no reference to any improvement in such facilities linked to the proposed new housing.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Healthcare Facilities	Mr Softley	Response-00344	Same comment as Schools. There is no proposal to accommodate the sheer volume of houses being proposed by different councils on this site. Healthcare facilities are already stretched for Doctors and Dentists etc. This should be treated as a large development in Oakwood with the combined proposals from Derby City Council, not as a small addition to the local council. The disruption will be significant.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Mrs Sarah Morley	Response-01515	The doctors are already extremely over run, and trying to get an appointment is very hard work, This will be massively impacted by 160 new houses. Why aren't new surgeries created when so many houses are being built.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Mr Stephen Langton	Response-00025	There is a clear principle that developments within Erewash borough should not be relying upon and using healthcare facilities supplied and funded by the adjacent Derby City Council. This development should be considered to be an extension to the Erewash settlement of Breadsall, and NOT an extension to Derby city. Breadsall village will require the necessary investment for healthcare facilities and other infrastructure to support this development by Erewash Borough Council. Alternatively, it may be better to extend another settlement within Erewash that doesn't abut Derby city council.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Nathan Latymer	Response-00361	I can't get an appointment at my local (Oakwood) GP as it is, so more houses will worsen this situation
1.8	North of Breadsall Hill Top	Healthcare Facilities	Nicholas Lloyd	Response-00356	I object to this planning application on the grounds that the proposed development will place undue pressure on local medical and healthcare facilities, which are already operating at or near full capacity. The introduction of 500 new homes is projected to significantly increase the local population, thereby intensifying demand for GP services, hospital care, and other essential health services. For instance, NHS guidance indicates that one full-time GP typically serves 1,800 patients; thus, a development of this scale could necessitate the equivalent of additional GPs to maintain current service levels. Without a clear plan to expand healthcare infrastructure or increase staffing, this development risks compromising the quality and accessibility of medical care for both new and existing residents. Therefore, I urge the planning authority to consider these concerns and reject the application unless it can be demonstrated that the necessary healthcare provisions will be adequately addressed.?
1.8	North of Breadsall Hill Top	Healthcare Facilities	Oakwood Ward Councillors Eyre, Mulhall and Trehwella	Response-01359	We have seen little to no information in the consultation documents with regard to Healthcare Facilities. We would like this information.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Paul Walsh	Response-00341	Not enough doctor surgeries as it is.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Paul Wilkes	Response-01527	It is impossible to get a dentist or doctors appointment. Recently my wife required a blood test and we had to drive into Derby for a 5 minute appointment It is impractical to increase the population without suitable facilities. It is a government's responsibility to ensure the citizens are safe. Surely it is the Council's prime responsibility to ensure basic facilities are in place before more people are allowed to reside in Oakwood.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Philip Booth	Response-00683	Healthcare especially doctors are at capacity. It already takes weeks to get an appointment. Erewash residents would look to use Derby City practices.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Rachael	Response-00332	It has been incredibly difficult to find a doctors (where you are able to be seen in a timely manner) or a NHS dentist without going out of area. This will further compound due to increased residents.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Richard Johnson	Response-00697	Health care facilities do not exist in the village
1.8	North of Breadsall Hill Top	Healthcare Facilities	Richard Kingham	Response-00849	Not enough local healthcare facilities. Dentists and GPs are both oversubscribed and virtually impossible to get an appointment
1.8	North of Breadsall Hill Top	Healthcare Facilities	Richard Straw	Response-01412	The closest gym is springwood which is already very busy and over subscribed
1.8	North of Breadsall Hill Top	Healthcare Facilities	Roy Ling	Response-01243	There are no surgeries in the immediate area which will lead to more problems.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Ruth Duxbury	Response-00301	Healthcare facilities in the area are already stretched more houses will put a strain on the already over stretched system. Often local residents struggle to access GP services and dental services.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Samantha Watts	Response-00869	The proposed development raises serious concerns regarding the availability of healthcare services in the area. Existing medical facilities are already under strain, with long waiting times for GP appointments and limited access to specialist care. An increase in population without corresponding investment in healthcare infrastructure will further overwhelm local services, negatively impacting both new and existing residents. The additional demand for healthcare will place undue pressure on nearby clinics and hospitals, potentially leading to delays in treatment and reduced quality of care. Without clear plans for expanding medical facilities, this development risks exacerbating an already stretched system.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Healthcare Facilities	Sam Saunders	Response-01557	The development raises serious concerns regarding the capacity of local GP services serving Breadsall, Breadsall Hilltop, and the nearby Oakwood area. These communities currently rely on a small number of GP surgeries, including the Oakwood Medical Practice and the Breadsall Surgery, both of which are experiencing increasing demand. The Oakwood Medical Practice, in particular, serves a rapidly growing population within the Derby conurbation, where rising patient numbers have resulted in longer appointment waiting times and increased pressure on healthcare staff. Local NHS data indicates that Derby and Derbyshire have seen a consistent rise in patient registrations without equivalent expansion in healthcare infrastructure. This imbalance is particularly acute in suburban areas such as Oakwood and Breadsall, where population growth has outpaced the development of new medical facilities. The addition of approximately 160 new homes north of Breadsall Hilltop will inevitably lead to an influx of new residents requiring access to GP services, further straining already stretched resources. Current GP practices in the area face challenges including appointment availability, recruitment of healthcare professionals, and the provision of timely care for chronic conditions and routine medical needs. Without planned investment and expansion to accommodate this increased demand, residents may experience longer delays and reduced quality of care. This is particularly concerning for vulnerable groups, such as elderly patients and families with young children, who require consistent medical attention. In light of these factors, any approval of the proposed development should be contingent upon clear commitments to enhance local healthcare capacity. This includes funding for expanding existing GP facilities or creating new healthcare infrastructure to meet the needs of a growing population and ensure sustainable, high-quality care.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Sam Woods	Response-01576	the local area is already lacking in essential infrastructure and public services, such as schools, healthcare facilities, and transport links. Adding more housing without addressing these shortages will only exacerbate the problem, leading to increased pressure on existing amenities and a reduced quality of life for current and future residents. I urge you to reconsider the development in light of these concerns.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Sandra Perry	Response-00307	More houses= fewer GP appointments
1.8	North of Breadsall Hill Top	Healthcare Facilities	Sara Cotton	Response-00370	Our doctors surgeries are at patient capacity
1.8	North of Breadsall Hill Top	Healthcare Facilities	Sarah Hewitt	Response-01461	Not enough GPs already. Very hard to obtain an appointment already.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Scarlett Hamblin	Response-00398	Attempting to get a doctors appointment is already near impossible with multiple phone calls having to be made to even make contact with the doctors let alone actually getting an appointment. The NHS is already on the brink of collapse without adding in additional patients.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Scott Watson	Response-01284	The proposed development presents significant challenges for local healthcare provision, as existing medical facilities are already struggling to meet demand. Long waiting times for GP appointments and restricted access to specialist care highlight the strain on the current system. An increase in population, without the necessary expansion of healthcare infrastructure, will only worsen these pressures, affecting both new and existing residents. The rising demand for medical services will further burden nearby clinics and hospitals, potentially resulting in treatment delays and a decline in care quality. Without concrete plans for improving healthcare capacity, this development risks exacerbating an already overstretched system.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Sharon Coward	Response-00348	The development borders oakwood & the increased pressure on already pressured health care facilities would cause major problems in the oakwood area. It is already difficult to get Dr's appointments now, with increased numbers from this development it would have a detrimental effect on the residents of oakwood.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Shui-Yee Bateman-Wong	Response-00984	Not enough GPs in the areas already
1.8	North of Breadsall Hill Top	Healthcare Facilities	Stephen and Janet Allis	Response-01221	increase needed
1.8	North of Breadsall Hill Top	Healthcare Facilities	Stuart Brown	Response-00771	Oakwood surgery is already very difficult to get appointments due to the large numbers of people living in Oakwood and the number of additional estates that have been built in the surrounding area. 160 new homes will have an impact on this already struggling doctors surgery
1.8	North of Breadsall Hill Top	Healthcare Facilities	Susan Dundon	Response-00396	We can't get an appointment at present
1.8	North of Breadsall Hill Top	Healthcare Facilities	Thomas Monkhouse.	Response-01318	On medical issues, recent housing developments have added a noticeable reduction of appointment availability. These new proposals will worsen what is an already less than ideal situation.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Tom King	Response-00734	Local GPs already over capacity
1.8	North of Breadsall Hill Top	Healthcare Facilities	Tom Parker	Response-01398	We all know how difficult it is to get yourself into the doctors/dentists. It goes without saying that without having more facilities to service additional people, it will be a disaster to get your healthcare needs in this local area.
1.8	North of Breadsall Hill Top	Healthcare Facilities	Tony Hawkins	Response-01532	There are only two doctors in Oakwood which covers a vast catchment area and are full to capacity with appointments very difficult to achieve. There is one dentist in Oakwood whom are not taking on NHS patients this dentist business is more cosmetic. There are not facilities within Breadsall Village under Erewash Borough Council which can services this new proposed development. I currently have no dentist myself and have been trying to get into the doctors for two weeks. There are not enough NHS services to cope with additional housing
1.8	North of Breadsall Hill Top	Healthcare Facilities	Tracey Turner	Response-00334	It's already impossible to register with a local GP surgery, you have to go further afield. Resources are stretched to the maximum!
1.8	North of Breadsall Hill Top	Landscape	Abbie quinn	Response-00616	Totally ruin the landscape, we have a few of fields which would turn to houses. Also gives all of the housing around easy access to walk routes and nature trails which will be destroyed.
1.8	North of Breadsall Hill Top	Landscape	Adam Millward	Response-00418	It will be ruined obviously.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Landscape	Ann Sherlock	Response-00410	The map used in this proposal is out of date, and falsely shows a more minimal effect on the landscape than is true. Adding the current proposal will be extremely detrimental to the landscape left due to the current Durose estate, and it is disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the landscape, missing two extremely large housing estates (Durose and Alport Heights) and falsely portraying a smaller population and impact the housing proposal will have on the local landscape.
1.8	North of Breadsall Hill Top	Landscape	Anya andrews	Response-00605	Local landscape is going to be destroyed and out views from houses is going to be destroyed.
1.8	North of Breadsall Hill Top	Landscape	Ashley syill	Response-00397	This severely limits landscape to east of current development. Access roads and plots built north will not impact, but access to these from current mqin access route already narrow and will not cope with an additional demand
1.8	North of Breadsall Hill Top	Landscape	Ben Martin	Response-00787	The proposed development is on Greenbelt land. This is used by walkers, horse riders, cyclists, bird watchers and nature lovers. It's a breeding and feeding ground for Buzzards, Kestrels and Barn Owls. Foxes and rabbits frequent the area and it provides a beautiful and scenic boundary between Breadsall Village and Breadsall Hilltop. A housing development here would utterly destroy the landscape.
1.8	North of Breadsall Hill Top	Landscape	Beverly Jordan	Response-01330	The landscape has already been altered to remove fields impacting on woodland wildlife farm animals air openness and this will be all but eradicated with further builds
1.8	North of Breadsall Hill Top	Landscape	Carol Westcott	Response-00973	New houses are built with minimal gardening requirements drives hardly any lawns and hedges wildlife is just being driven out. Trees are destroyed by new buildings and we are supposed to be supporting climate change and helping to reduce the emissions how will this help.
1.8	North of Breadsall Hill Top	Landscape	Carys Whomsley	Response-01438	I am writing to register my strong objection to the above-mentioned planning application, both in its original and revised form. Despite the removal of the area adjacent to the A61 in the amended proposal, I believe that the proposed development remains deeply inappropriate and harmful for the following reasons: 1. Contravention of Policy CP18 and Loss of Green Wedge The proposed site lies just outside the designated Green Belt, but crucially directly abuts existing woodland and open countryside, forming part of the vital green corridor along the Great Northern Greenway. This area functions as a green buffer, enhancing ecological connectivity, supporting biodiversity, and providing visual and recreational amenity to local residents, walkers, and cyclists. Despite claims of woodland retention, the development threatens the integrity of this space. Proximity to new housing would increase human pressure on the natural environment, likely leading to degradation of woodland, fragmentation of habitats, and a reduction in wildlife corridors. No Biodiversity Net Gain (BNG) assessment appears in the application documents, raising concerns about whether the legally mandated 10% net gain can or will be achieved. Biodiversity enhancements delivered off-site would do nothing to mitigate local ecological loss, thereby undermining environmental sustainability in the area. Moreover, the site lies adjacent to land recently released from the Green Belt and under consideration for housing allocation by Erewash Borough Council. The cumulative impact of developing both sites would be devastating: a continuous sprawl from Derby through to Breadsall, resulting in the elimination of the settlement gap and permanent damage to the character of the Great Northern Greenway. 2. Environmental, Infrastructural, and Policy Concerns The proposal directly contradicts the National Planning Policy Framework (NPPF) Paragraph 143, particularly the goals of preventing urban sprawl and protecting the openness of Green Belt land. It also ignores the findings of the Strategic Housing Land Availability Assessment (SHLAA 359), which previously deemed the site unsuitable for residential development due to accessibility and environmental limitations. The development is completely incompatible with the objectives of the Breadsall Parish Neighbourhood Plan 2019?2029, particularly the aims to: Preserve the rural character and prevent urbanisation; Avoid coalescence with the Derby conurbation; Safeguard wildlife and ecological features; Control flood risk and infrastructure strain; Protect valued green spaces and visual vistas.
1.8	North of Breadsall Hill Top	Landscape	Carys Whomsley	Response-01438	Breadsall has already experienced increased flooding, attributed to upstream developments like Persimmon Estate and Breadsall Hilltop, which lie within the same water catchment area. Any additional development would worsen this issue, placing homes and infrastructure at risk. Furthermore, the proposal relies on access through two existing public footpaths within the Redrow estate and offers no concrete infrastructure improvements. The A608 is already over-congested, and no plans are presented to handle increased traffic or to safeguard children commuting to local schools. 3. Loss of Community and Ecological Value This land offers more than just open space?it is a much-loved and well-used amenity for the local community. It serves as a peaceful escape for informal recreation and nature engagement, and its visual and environmental contributions to the neighbourhood are significant. Its destruction would represent a major loss in local character and quality of life. The proposal underestimates the pressure on existing services, lacks detailed mitigation plans, and fails to explain how proposed footpaths will link meaningfully into existing routes. Nearby Local Wildlife Sites will be impacted
1.8	North of Breadsall Hill Top	Landscape	Charlotte	Response-00458	Current views across Breadsall Hilltop over to Darley are outstanding and very rare. These should be protected and cherished. They are so unique to Derbyshires naturally beauty of small villages across the terrain and unlike nowhere else in the country.
1.8	North of Breadsall Hill Top	Landscape	Chris Lunn	Response-01410	The proposed site is made up of clay soil which makes development even less suitable. The swelling and shrinking of the clay causes subsidence, ground heave and has a lower, load-bearing capacity requiring good drainage ? which this site DOES NOT HAVE. Open green spaces, within the development, would likely be curtailed due to the difficulties in growing any plants and greenery in the clay. Landscaping would be the first item to the ?shelved? as money will undoubtedly run out. The new housing will be subjected to cracking and other associated problems which will put further strain on funding and causing misery for homeowners.
1.8	North of Breadsall Hill Top	Landscape	Christopher Chambers	Response-00175	The proposed development will decimate the landscape in this area. Where once were rolling green fields will soon be a carpet of brick and tarmac.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	landscape	Clare Roters	Response-01553	This landscape is well kept, full of wildlife and still have farms who use it for live stock. It's calming, peaceful and relaxing. It's loved, respected and a great asset to derby
1.8	North of Breadsall Hill Top	landscape	Colin Brewster	Response-00576	If approved this development would obviously bring about a further deterioration of the current landscape. Although my main concern is that Breadsall should not be allowed to be a suburb of Derby.
1.8	North of Breadsall Hill Top	landscape	Darren adams	Response-00874	Unfortunately the village will be overtaken by all new modern houses and effectively become a housing estate. Changing the English countryside from what was once villages to now modern housing Estates.
1.8	North of Breadsall Hill Top	landscape	Edward James Gregory	Response-00728	Unsuitable for green belt / green separation
1.8	North of Breadsall Hill Top	landscape	Elaine hodgkinson	Response-00854	It will obviously have a detrimental effect on the landscape next to a site of a bronze age settlement.
1.8	North of Breadsall Hill Top	landscape	Emma Hawkins	Response-00813	The landscape of the countryside for Breadsall/Breadsall Hill Top will disappear and become one big housing estate connecting Breadsall to Derby City
1.8	North of Breadsall Hill Top	landscape	Gaynor Pawley	Response-00627	As a suburb of Derby there should be a semi rural feel to the area. If more houses are built on this land it ends up becoming part of the inner city. If this is the case Erewash would be contributing to an extension of urban living not protecting the semi rural feel
1.8	North of Breadsall Hill Top	landscape	Gillian Pearson	Response-00303	As already stated there will soon be no natural landscape remaining around Breadsall Village.
1.8	North of Breadsall Hill Top	landscape	Harry Mee	Response-00882	Running through Draycott really is a joy, and it's a joy that is shared by many. Dropping a load of ugly houses, that ruin the landscape, into the village is a terrible idea and is a great way of losing the identity of the village.
1.8	North of Breadsall Hill Top	landscape	Helen Foster	Response-00650	Once this green wedge/buffer zone is built upon, Breadsall's identity as a village will be gone, forever.
1.8	North of Breadsall Hill Top	landscape	Helen Walker	Response-00325	What landscape we don't have one anymore just houses across from Oakwood bishops drive entrance there were lovely fields a lovely walk down to the river of railway line, further up Mansfield road there were lovely field now just houses upon house soon houses and traffic and more traffic.
1.8	North of Breadsall Hill Top	landscape	Ian Lockwood	Response-01491	The green space that marks Breadsall out as a village in its own right will be forever destroyed, merging it into a single large conurbation with no identity of its own whilst destroying a countryside landscape enjoyed by many.
1.8	North of Breadsall Hill Top	landscape	Jake Moore	Response-01202	The proposed development of 160 homes would have a profound and irreversible impact on the local landscape, affecting both its aesthetic value and its environmental integrity. The Oakwood and Breadsall areas currently represent an important transition zone between Derby's urban fabric and the surrounding countryside. This green space serves not only as a visual buffer but also as an essential part of the region's character, enhancing the quality of life for local residents. The loss of this open land would significantly alter the visual landscape, leading to: Degradation of the natural beauty of the area, which is characterized by expansive fields, hedgerows, and open sky. The development would replace these scenic views with urban sprawl, diminishing the rural charm and tranquility that many people value in this part of Derby. Harm to the sense of place. The area forms a unique part of Derby's landscape, with historical and cultural connections to the local countryside. Building on this land would sever the connection between the city and the rural surroundings, eroding the distinctiveness of this green space and permanently changing its character. Visual intrusion into the broader countryside. The proposed development would extend Derby's urban boundary further into what is currently an open, uninterrupted landscape, creating a marked visual contrast between the natural, rural surroundings and the new housing. This will not only alter the local aesthetic but also disrupt the existing harmony between the built and natural environments. Moreover, the development would cause irreparable damage to the ecological landscape, severing important wildlife corridors and eroding the greenbelt's role as a buffer zone between urban and rural areas. This greenbelt is essential for maintaining the natural balance of the region and preventing further urban encroachment into the surrounding countryside. From an environmental perspective, the proposed development would reduce green space that currently absorbs carbon and promotes air quality, playing an integral role in improving the local microclimate and fragment the ecological network, which affects not just wildlife but also the broader landscape's ability to manage water flow and mitigate the effects of climate change. The landscape's aesthetic and ecological value is a key asset for Derby, not only in terms of its natural beauty but also for the health and wellbeing of its residents. Replacing this open space with urban development would diminish the overall quality of life in the area, both for local residents who enjoy the landscape's serenity and for the local wildlife that relies on these spaces for survival. The introduction of a large housing development would also dramatically alter the views, replacing natural, open spaces with rows of houses, potentially causing a loss in the visual amenity that homeowners currently enjoy and impacting house values of houses that have been purchased at a premium to be bordering said landscapes. The development would introduce increased noise, traffic congestion, and reduced privacy for homes overlooking the site. The disturbance from construction activity, as well as the ongoing presence of additional traffic and residents, could reduce the overall quality of life in the area. This is a significant factor that prospective buyers consider when purchasing homes, and a decrease in the quality of life can directly translate into lower property values. lead
1.8	North of Breadsall Hill Top	landscape	Jake Moore	Response-01202	ng to the further degradation of the area's character and more homes being built nearby. The fear of this potential future development could make the area less attractive to buyers, leading to a decline in property values over time undermining the stability of the local housing market. This argument is supported by research showing that homes with access to green spaces or natural surroundings tend to have higher values, and any development that removes such features can reduce property values. In conclusion, the proposed housing development would have a negative and lasting impact on the landscape, irreversibly altering its character and function. Protecting this area is crucial for preserving the visual integrity, ecological health, and quality of life in Derby. The development would set a dangerous precedent for further encroachment on valuable landscapes, undermining the city's environmental goals and the natural beauty that defines it.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Landscape	James Roberts	Response-00673	The fields being proposed to be developed are regularly used by the dog walkers in the existing estate. Completely changing the landscape to houses, paths, roads, etc. is going to severely impact local dog owners. It will also likely drive everyone to the greenway, which will inevitably lead to degradation of the greenway given not everyone is considerate of the environment and their surroundings
1.8	North of Breadsall Hill Top	Landscape	James skivington	Response-00359	The greenway is such a beautiful park of derby building houses right up to this will have a damaging effect on this and the wildlife present
1.8	North of Breadsall Hill Top	Landscape	Jamie Branagan	Response-00335	The existing estate and the one at Lime Lane already destroyed greenbelt and ruined the natural look of Oakwood North/Hilltop. This proposed development will take away another slice of natural and beautiful landscape to be replaced with brick and tarmac.
1.8	North of Breadsall Hill Top	Landscape	Janet Brewster	Response-00577	The local landscape is rapidly disappearing and if this development is approved it will add to a deteriorating situation. We need to keep our Green Belt at all cost.
1.8	North of Breadsall Hill Top	Landscape	Jessica Softley	Response-01408	This proposal will negatively impact the aesthetics of the landscape. The current view from the bottom of Dale Acre Way is green open space, followed by the woodland area of the Great Northern Greenway. Building upon this land would significantly alter this landscape.
1.8	North of Breadsall Hill Top	Landscape	Jonathan Park	Response-01191	The surrounding landscape is a key feature of why some people have purchased their properties on the estate including access to fields and nature areas as well as having their views obstructed by further development including in some cases, a loss of natural light etc
1.8	North of Breadsall Hill Top	Landscape	Karen Read	Response-00923	it will be a detrimental effect to the landscape whilst Derbyshire was known for its beauty why destroy it our city and towns are a disgrace and to drive and see many more estates destroying our countryside and villages is an outcry
1.8	North of Breadsall Hill Top	Landscape	Kirstin Woodward	Response-01043	This land is visible from the Derwent Valley World Heritage Site. Building on this land would alter the landscape and could jeopardize the area's heritage status. Derby should be proud of its industrial heritage, but it must also recognize the importance of balancing this with the preservation of its countryside and open spaces.
1.8	North of Breadsall Hill Top	Landscape	Lara Small	Response-01262	I'm personally grateful that the decision was made to build Durose Country Park, I now live in a home probably built on allocated as Green Belt Land. I see the irony in my objection to further development and I'm trying to avoid a 'Not In My Back Yard' attitude. I understand the housing crisis won't fix itself unless more homes are built. I seek to urge the planning team to consider how to get the most value out of the of the fields available in the area, and I'm not sure if the awkward triangle North of Breadsall Hilltop really achieves that. Fitting in sufficient houses to make it profitable seems disproportionate to the effort in getting access to the fields, levelling the sloped land, cutting through protected hedgerows, pressurising the Great Northern Greenway, establishing a road network and critically, establishing water catchment & run off areas that will be critical to ensuring the inhabitants of Breadsall Village stay flood free. One of the wonderful things about Derby, and part of the reason why I've chosen to settle here, is due its lack of heavy city intensity, As a proud Rolls-Royce employee, a huge amount of employee wealth is poured into Derby and its surrounding areas. Perhaps, this is also the reason why further housing is being considered; its becoming a more attractive place to live, but I urge you to ensure the city remains in balance with the green space around it. May I offer my very best wishes for your future plans and development of Derby, and may I urge you to consider the balance and impact of all options.
1.8	North of Breadsall Hill Top	Landscape	Laura Louca	Response-01266	You are enclosing people in between buildings and traffic - it's not just wildlife that needs the open spaces, fresh air to be healthy. The area is looking more and more ugly the more you build on it. It is depressing to see beautiful views and landscapes ruined by buildings.
1.8	North of Breadsall Hill Top	Landscape	L Burton	Response-00342	The addition of the homes changes the landscape and eats into available green space to walk dogs, play and enjoy the community. It is a busy space which many people walk here to enjoy from the surrounding areas.
1.8	North of Breadsall Hill Top	Landscape	Lee Wheatley	Response-01492	My significant concern lies with the potential detrimental impact of this development on the landscape and visual amenity, which are highly valued by the residents of Breadsall & Breadsall Hilltop and contribute significantly to our quality of life and the character of the area. The landscape surrounding Breadsall Hilltop and the wider Erewash area is characterized by rolling fields, wooded areas and distinctive views. These features contribute significantly to the sense of place and provide a valuable visual backdrop for our community. The proposed development has the potential to fundamentally alter this landscape in several negative ways. The sheer scale of 160 new houses is likely to result in a significant visual intrusion into the existing landscape. This would involve the loss of open fields, the fragmentation of natural habitats, and the introduction of built structures that are out of scale or character with the surrounding environment. Residents of Breadsall Hilltop currently benefit from beautiful views across open countryside and the presence of green corridors. This development would obstruct or detract from these valued views, diminishing the visual amenity we currently enjoy. Furthermore, the construction phase of a development of 160 houses will inevitably lead to significant disruption and scarring of the landscape. This includes earthworks, the movement of heavy machinery, and the storage of materials, all of which can have a temporary but nonetheless significant negative impact on the visual environment. The long-term impact of the built development, including associated infrastructure like roads and lighting, will permanently alter the character of the landscape. I urge the Erewash Borough Council to undertake a thorough and detailed Landscape Visual Impact Assessment (LVIA) for the proposed development of 160 houses. This assessment should specifically consider the views from Breadsall Hilltop and the potential cumulative impact of this development alongside any other planned or existing developments in the area. The findings of this assessment must be given significant weight in the Council's decision-making process.
1.8	North of Breadsall Hill Top	Landscape	Lisa Stone	Response-01018	The field currently there gets extremely wet and boggy and muddy during the winter months, this is where all the rain water is draining through if this is removed it will cause flooding to the houses being built there it is water logged for months at a time

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Landscape	Martin Harrison	Response-01395	I object to the proposed development due to the negative impact it will have on the local landscape. The area offers scenic views and natural features that contribute to the character and enjoyment of the community. Large-scale construction would permanently alter the visual environment and diminish the area's rural and open feel.
1.8	North of Breadsall Hill Top	Landscape	Masheda Chowdhury	Response-01339	1. Harm to Rural-Urban Transition and Visual Character: ? The proposed development is located on the northern fringe of the Oakwood neighbourhood, adjacent to open countryside. ? Building 160 homes will create a harsh urban edge, disrupting the natural transition between the city and the surrounding landscape of Breadsall. 2. Inadequate Landscaping Measures: ? Strategic Policy 1.8 mentions landscaping and woodland to soften the northern boundary, but no firm guarantees are in place for how much green space will be retained or planted. ? Without a robust landscape buffer, the development will appear visually intrusive when viewed from Breadsall and the Great Northern Greenway. 3. Elevated Site and Visibility Concerns: ? Parts of the site are visibly prominent from surrounding public rights of way and nearby countryside, particularly from Breadsall Footpath 24 and elevated land to the north and east. ? A large housing estate in this location would dominate the skyline, affecting long-range views and reducing the openness of the area. 4. Loss of Green Open Space and Trees: ? Although the site is not formally designated public open space, it provides green openness and habitat that contributes to the overall landscape character. ? There is insufficient detail on tree retention, new woodland planting, or long-term management of landscaped areas. 5. Impact on Local Identity and Settlement Separation: ? The character of Breadsall as a distinct village with rural surroundings will be diminished by urban sprawl to its immediate south. ? The development risks undermining the historic separation between Derby's suburban edge and its neighbouring settlements. 6. No Landscape Character Assessment Submitted: ? There appears to be no published Landscape and Visual Impact Assessment (LVIA) accompanying this policy, which is necessary for a development of this scale in such a sensitive location. ? The absence of this assessment makes it impossible to fully understand or mitigate the visual and environmental consequences of the proposal.
			Matt	Response-00604	Hand in hand with what you expect from Derbyshire rural landscapes
1.8	North of Breadsall Hill Top	Landscape	Megan Byrne	Response-01432	Major impact see other comments
1.8	North of Breadsall Hill Top	Landscape	Melissa Little	Response-00389	As a resident of Oakwood, one of my favourite things is the suburban living. I have a dog who i regularly walk through the fields that are proposed to be built on. The local area and its nature spots have played a huge part in helping me overcome mental health struggles. Building more housing in our beautiful spot is not nessacary. I understand the need for more houses and the huge number of new homes proposed to be built by the government, but Oakwood is ar risk of merging into the other surrounding areas and having less and less of our beautiful natural landscape.
1.8	North of Breadsall Hill Top	Landscape	Michael Poplar	Response-00565	Nothing as yet has been proposed, but no doubt it is intended to be the minimal amount that can be got away with.
1.8	North of Breadsall Hill Top	Landscape	Mollie	Response-01549	The site is located on elevated land north of Breadsall Hill Top, and development here will be highly visible from surrounding countryside and existing villages such as Breadsall and Morley. The loss of open views will fundamentally alter the character of the area. The design and massing of the proposed homes are not in keeping with the historic and rural architectural character of the nearby conservation areas, including Breadsall Village. This would cause permanent visual harm to the landscape. The countryside gap between Derby and surrounding villages acts as a buffer to prevent coalescence. Building here will erode that gap and blur the boundaries between urban and rural communities.
1.8	North of Breadsall Hill Top	Landscape	Monique Johnson	Response-00663	We need to preserve the landscape we have today around the village. We have already lost part of it due to extensive building above the village. A greener world is important for health and wellbeing.
1.8	North of Breadsall Hill Top	Landscape	Mrs Francoise Poplar	Response-00602	Presumably in view of the density proposed landscape would be minimal. This has proved to be the case with recent developments.
1.8	North of Breadsall Hill Top	Landscape	Mr Softley	Response-00344	It's a big hill, it will be an eyesore and very imposing. To build houses there, the landscape will have to be completely carved up. This will eradicate the hilltop in Breadsall hilltop?
1.8	North of Breadsall Hill Top	Landscape	Mrs Sarah Morley	Response-01515	The landscape at the moment has already been extremely compromised with the 2 new housing estates (450 new houses). How can you even consider compromising this more, with even more houses. Where you planning on building and changing the type of land so further land can be built on the future has beautiful and you can see the countryside for miles over the land. Derby has so beautiful countryside and yet more and more houses are eating this up every year. I under stand that some houses have to be built, but surely not to compromise on the beautiful green land where nature lives. There are so many other areas that could be built on
1.8	North of Breadsall Hill Top	Landscape	Neal Flint	Response-01220	These developments would visual scar on the rural landscape and be seen from a wide area . The old railway is classes as a green way it wont be very green boxed in and blighted by housing.
1.8	North of Breadsall Hill Top	Landscape	Norma HASWELL	Response-01384	We should always be mindful of preserving the natural features, views, and vistas that enhance Breadsall's character. Adding further housing would impact greatly on this.
1.8	North of Breadsall Hill Top	Landscape	Paige Skivington	Response-00366	I absolutely do not want to look at a building site/new estate. When I bought my house, I bought it for the gorgeous view. You would be ruining all of that. You will be changing Oakwood/Breadsall into just hundreds of houses and no land, no natural environment. It's already hard enough to see open beautiful spaces and this would completely ruin the space we have access to. For all the children and animals in the area it would be a much more unsafe place to be.
1.8	North of Breadsall Hill Top	Landscape	Peter John Ball	Response-00705	The development of this site in Breadsall will have a significant impact on the Great Northern way and change dramatically the rural nature of the walking and cycling route.
1.8	North of Breadsall Hill Top	Landscape	Philip Booth	Response-00683	This area has a steep gradient and the number of houses being built would be out of character in this area.
1.8	North of Breadsall Hill Top	Landscape	Rachael	Response-00332	The current housing estates have added huge concerns to the landscape already, adding further will continue to jeopardise this. A main positive of Oakwood is being commutable whilst feeling in the countryside. This is going to destroy this.
1.8	North of Breadsall Hill Top	Landscape	Richard Kingham	Response-00849	The size of land and volume of houses, would ruin the landscape and the main reason bought our house. The view to the woods and abundance of wildlife that lives in the small area

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Landscape	Richard Stone	Response-01029	This is a great view over Derby, offering a beautiful sunset over the city, as well as the grassland and woods, all while still being in a semi-built-up area. It's nice to have some nature nearby, but unfortunately, this will all be ruined and gone. The land is also fairly steep, which would be poor to build houses on without ruining the natural shape of the ground. I also understand that the area in question was promised not to be built when the current housing estate was built, which is exactly what this is going against.
1.8	North of Breadsall Hill Top	Landscape	Richard Straw	Response-01412	I enjoy my view from my house, I don't want to be looking out to a busy road
1.8	North of Breadsall Hill Top	Landscape	Sam Saunders	Response-01557	The proposed development would significantly alter the local landscape, replacing open green space with dense housing and infrastructure. This change would cause visual pollution, diminishing the natural beauty and tranquillity that define the area. The site serves as an important transition between the urban Oakwood neighbourhood and the rural village of Breadsall, and development here risks eroding this distinctive character. The loss of open views and natural features would negatively impact residents' quality of life and the local sense of place. Additionally, proximity to the Great Northern Greenway and a designated Local Wildlife Site means that visual continuity of green corridors and habitats could be compromised. Without strong landscaping measures, the development would appear as an intrusive extension of urban sprawl, undermining the rural-urban balance and community identity.
1.8	North of Breadsall Hill Top	Landscape	Sandra Perry	Response-00307	This is such beautiful landscape, blighted by the new orange boxes that were built a few years ago. As you walk on the footpaths around the area (especially the paths at the back of Broomfield) the houses stick out as so ugly and it's so sad to see the landscape destroyed. And to think that these plans are expanding that development!
1.8	North of Breadsall Hill Top	Landscape	Scarlett Hamblin	Response-00398	we are lucky to have such a beautiful area such as the Greenway on our local doorstep by how allowing houses to encroach on this area it is ruining the landscape and local area. We have a limited amount of green areas left and these do not need to be destroyed by yet more housing Estates. We need to protect and preserve our land landscape for future generations.
1.8	North of Breadsall Hill Top	Landscape	Sharon Coward	Response-00348	The landscape for the people of oakwood would be severely affected in a detrimental way losing a green landscape.
1.8	North of Breadsall Hill Top	Landscape	Stuart Brown	Response-00771	Currently a beautiful area with established biodiversity. Development will not improve the landscape in any way
1.8	North of Breadsall Hill Top	Landscape	Susan Dundon	Response-00396	Landscape will be altered forever
1.8	North of Breadsall Hill Top	Landscape	Thomas Bateman-Wong	Response-00985	See greenbelt
1.8	North of Breadsall Hill Top	Landscape	Tom Antrobus	Response-00308	I moved to Breadsall because of the green open space in the surrounding area so for more houses to be built near by would be a huge disappointment
1.8	North of Breadsall Hill Top	Landscape	Tom Parker	Response-01398	The current housing has already made a huge difference to the beautiful landscape and more building will jeopardise this further. A main positive of living in Oakwood is it being so close to the centre of Derby whilst also being in the countryside. This proposed development will destroy the countryside? element and will feel like one huge estate
1.8	North of Breadsall Hill Top	Landscape	Tony Hawkins	Response-01532	The landscape of the countryside for Breadsall/Breadsall Hill Top will disappear and become one big housing estate connecting Breadsall to Derby City. The Durose estate is classed as Breadsall
1.8	North of Breadsall Hill Top	Number of Houses	Adam Millward	Response-00418	No doubt homes will be crammed in like there's no tomorrow with tiny gardens and extremely inconvenient to use drives ways (one car in front of another) claiming its a 2 car driveway. All while councils are completely powerless to stop this it seems, or they just don't care, or are paid off not to care, whichever one its true. This means people park all over the streets and it becomes a crammed narrow space.
1.8	North of Breadsall Hill Top	Number of Houses	Amy Govan	Response-01419	Durose country park and Limetree court already add a significant number of houses to this area, there are a lack of local amenities already and I would have severe concerns about adding more houses to this without adding any extra amenities
1.8	North of Breadsall Hill Top	Number of Houses	Andrew charge	Response-01538	Concerned about the number of houses and the road being able to cope as too many new houses already built in the last few years.
1.8	North of Breadsall Hill Top	Number of Houses	Andy Madeley	Response-00381	To many houses either too many developments in the area.
1.8	North of Breadsall Hill Top	Number of Houses	Ann Sherlock	Response-00410	The map used in this proposal is out of date. Adding the current proposal will be extremely detrimental to the local area, and it is disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the area, missing two extremely large housing estates and falsely portraying a smaller population and impact the housing proposal will have.
1.8	North of Breadsall Hill Top	Number of Houses	Anya andrews	Response-00605	The number of housing is to many for the area intended.
1.8	North of Breadsall Hill Top	Number of Houses	Ben Martin	Response-00787	160 houses on a small, 8.2 hectares is unrealistic and will have a further negative impact on the already stressed road. It also flies in the face of the previous Strategic Housing Land Availability Assessment 359 on the site as unsuitable for residential development, plus the continually recurring problems seen on all recent developments including and not limited to, a total lack of intent to upgrade inadequate infrastructure, roads, drainage, social provision etc. but also critically ensures the Breadsall becomes a suburb of Derby. The proposed development completely contradicts the National Planning Policy Framework 13 (NPPF 13) which states: 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.
1.8	North of Breadsall Hill Top	Number of Houses	Beverly Jordan	Response-01330	There have already been two new estates over the last 5 years further development would remove or impinge on the 6 barn dwellings and residents at Breadsall Hilltop
1.8	North of Breadsall Hill Top	Number of Houses	Carol Westcott	Response-00973	We already have 2 new housing estates and this impacts on sales of the older houses as it's easier to buy a new house therefore devaluation of properties and properties taking much longer to sell

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Number of Houses	Carys Whomsley	Response-01438	I am writing to register my strong objection to the above-mentioned planning application, both in its original and revised form. Despite the removal of the area adjacent to the A61 in the amended proposal, I believe that the proposed development remains deeply inappropriate and harmful for the following reasons: 1. Contravention of Policy CP18 and Loss of Green Wedge The proposed site lies just outside the designated Green Belt, but crucially directly abuts existing woodland and open countryside, forming part of the vital green corridor along the Great Northern Greenway. This area functions as a green buffer, enhancing ecological connectivity, supporting biodiversity, and providing visual and recreational amenity to local residents, walkers, and cyclists. Despite claims of woodland retention, the development threatens the integrity of this space. Proximity to new housing would increase human pressure on the natural environment, likely leading to degradation of woodland, fragmentation of habitats, and a reduction in wildlife corridors. No Biodiversity Net Gain (BNG) assessment appears in the application documents, raising concerns about whether the legally mandated 10% net gain can or will be achieved. Biodiversity enhancements delivered off-site would do nothing to mitigate local ecological loss, thereby undermining environmental sustainability in the area. Moreover, the site lies adjacent to land recently released from the Green Belt and under consideration for housing allocation by Erewash Borough Council. The cumulative impact of developing both sites would be devastating: a continuous sprawl from Derby through to Breadsall, resulting in the elimination of the settlement gap and permanent damage to the character of the Great Northern Greenway. 2. Environmental, Infrastructural, and Policy Concerns The proposal directly contradicts the National Planning Policy Framework (NPPF) Paragraph 143, particularly the goals of preventing urban sprawl and protecting the openness of Green Belt land. It also ignores the findings of the Strategic Housing Land Availability Assessment (SHLAA 359), which previously deemed the site unsuitable for residential development due to accessibility and environmental limitations. The development is completely incompatible with the objectives of the Breadsall Parish Neighbourhood Plan 2019?2029, particularly the aims to: Preserve the rural character and prevent urbanisation; Avoid coalescence with the Derby conurbation; Safeguard wildlife and ecological features; Control flood risk and infrastructure strain; Protect valued green spaces and visual vistas.
1.8	North of Breadsall Hill Top	Number of Houses	Carys Whomsley	Response-01438	Breadsall has already experienced increased flooding, attributed to upstream developments like Persimmon Estate and Breadsall Hilltop, which lie within the same water catchment area. Any additional development would worsen this issue, placing homes and infrastructure at risk. Furthermore, the proposal relies on access through two existing public footpaths within the Redrow estate and offers no concrete infrastructure improvements. The A608 is already over-congested, and no plans are presented to handle increased traffic or to safeguard children commuting to local schools. 3. Loss of Community and Ecological Value This land offers more than just open space?it is a much-loved and well-used amenity for the local community. It serves as a peaceful escape for informal recreation and nature engagement, and its visual and environmental contributions to the neighbourhood are significant. Its destruction would represent a major loss in local character and quality of life. The proposal underestimates the pressure on existing services, lacks detailed mitigation plans, and fails to explain how proposed footpaths will link meaningfully into existing routes. Nearby Local Wildlife Sites will be impacted
1.8	North of Breadsall Hill Top	Number of Houses	Clare Roters	Response-01553	More houses would mean services in the area would struggle, wildlife would die and traffic would be insufferable. We pay a lot to live here and chose the area for the beautiful countryside and, amenities and access to areas in Derbyshire. It would push people out of their much loved homes
1.8	North of Breadsall Hill Top	Number of Houses	Edward James Gregory	Response-00728	Unsuitable for green belt / green separation
1.8	North of Breadsall Hill Top	Number of Houses	Emma Hawkins	Response-00813	Too many
1.8	North of Breadsall Hill Top	Number of Houses	Gary Murfin	Response-00374	There are far too many houses being planned to be built on the edge of Oakwood which is already a large estate, this site along with the houses planning to be built off Acorn way and near Chaddesden wood is going to create a lot of problems in the area
1.8	North of Breadsall Hill Top	Number of Houses	Gaynor Pawley	Response-00627	60 houses on such a small piece of land would put stress on the area for flooding of Breadsall village, who are already suffering the consequences of recent developments. The more houses built the less pervious land is left, therefore moving the natural rain water down to Breadsall village and the inadequate brook which has flooded on numerous occasions in recent years.
1.8	North of Breadsall Hill Top	Number of Houses	Georgina	Response-00343	Too many properties
1.8	North of Breadsall Hill Top	Number of Houses	Gillian Montgomery	Response-00625	Too many houses !!!
1.8	North of Breadsall Hill Top	Number of Houses	Helen Foster	Response-00650	The traffic, light, and noise pollution generated by a development of this size would negatively affect the amenity value of the nearby conservation area and village in general. Additionally, this extension would ensure that Breadsall would become a suburb of Derby. I refer again to the NPPF 13. Protecting Green Belt land: 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.
1.8	North of Breadsall Hill Top	Number of Houses	Helen Walker	Response-00325	Far too many do not need them, why don't they go and look at all the empty buildings which are around, pubs, shops, empty houses etc and start to make them into properties which people can live on and not come into green belt land we need fields, trees wildlife open spaces not a concrete jungle and no boundaries everywhere merging into one mass of houses
1.8	North of Breadsall Hill Top	Number of Houses	Hulland. Bdverley	Response-00496	No more

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Number of Houses	Ian Lockwood	Response-01491	The traffic, light, and noise pollution resulting from a development of this scale would significantly diminish the amenity value of the nearby conservation area and the village as a whole. Moreover, such an expansion would effectively transform Breadsall into a suburb of Derby. This concern is supported by the National Planning Policy Framework (NPPF), Section 13: Protecting Green Belt Land. Paragraph 143 outlines the five key purposes of the Green Belt: a) To check the unrestricted sprawl of large built-up areas b) To prevent neighbouring towns from merging into one another c) To safeguard the countryside from encroachment d) To preserve the setting and special character of historic towns e) To assist in urban regeneration by encouraging the reuse of derelict and other urban land The proposed development directly conflicts with several of these purposes, particularly those relating to urban sprawl, countryside protection, and the preservation of historic character.
1.8	North of Breadsall Hill Top	Number of Houses	Jack Bointon	Response-00969	Too many houses and too many people living here at the moment.
1.8	North of Breadsall Hill Top	Number of Houses	Jake Moore	Response-01202	The proposed development of 160 homes within the Oakwood area will place considerable pressure on Derby City's resources, which are already under strain from the existing population. This development will increase demand for essential services such as public transport, waste collection, schools, healthcare, and local infrastructure. However, there is an additional concern regarding the geographical and administrative division between Derby City and Erewash Borough Council. Although the new homes will fall within the Derby conurbation, Council Tax contributions from these new residents will go to Erewash Borough Council rather than Derby City Council. This creates an imbalance in resource allocation because: Erewash Borough Council will benefit financially from the new homes without bearing the full cost of providing essential services and infrastructure in the area. Derby City Council will be left to manage the additional strain on local services, including public transport, waste management, and emergency services, without receiving the corresponding increase in funding to support the growing demand. This situation creates a funding discrepancy, where Derby City will be forced to shoulder the burden of an expanded population without receiving adequate financial support from the new Council Tax contributions, potentially leading to deterioration of service quality and undermining the city's ability to effectively manage its resources.
1.8	North of Breadsall Hill Top	Number of Houses	James Roberts	Response-00673	160 households is far too many to be supported by the roads and local infrastructure. A much smaller expansion of the estate (maybe 40 households) may be manageable, but 160 is excessive and cannot be supported
1.8	North of Breadsall Hill Top	Number of Houses	Jamie Branagan	Response-00335	160 houses equals c150-200 cars and at least c350+ people. All this will do is burden the already over stretched Oakwood ward in terms of both traffic and local services. Erewash will feel none of the pain of this development.
1.8	North of Breadsall Hill Top	Number of Houses	Janette Booth	Response-00295	The infrastructure is already struggling with the latest batches of housing. How is putting even more housing up a good idea in this location?
1.8	North of Breadsall Hill Top	Number of Houses	Janette Glenn	Response-00422	The Oakwood edge of the city has already seen two new sizeable developments in recent years. The area cannot keep growing with no additional infrastructure and using up yet more greenfield sites.
1.8	North of Breadsall Hill Top	Number of Houses	Jon Lewis	Response-00347	It is expected for Oakwood ward to pick up the bill for the increase in services, yet Erewash will benefit from the increase in council tax. Far too many homes in such a small area at present with our even more numerous developments in the area. Oakwood is already one of the largest housing developments in Derbyshire and beyond. When will it stop expanding
1.8	North of Breadsall Hill Top	Number of Houses	Justin Windsor	Response-01544	This proposal alongside the additional proposal from Derby city council will bring in excess of over 450 houses, the local infrastructure cannot support such an increase. This increase will put the health and safety of the current population at risk!
1.8	North of Breadsall Hill Top	Number of Houses	Karen Read	Response-00923	I object to this policy change as the number of houses to be constructed will illuminate the area of openness separating the area from the city of Derby whilst causing damage to the water flow which in turn will increase flood risk. Can you please publish the environment agency summary regarding the flood risk assessment for the surrounding areas following construction of these houses I would also like a survey on the current residents mental health as this obviously causes alarm and distress to people whom will be adversely affected by the destruction of greenbelt land and their homes
1.8	North of Breadsall Hill Top	Number of Houses	Kirstin Woodward	Response-01043	Oakwood is already a large housing estate, built adjacent to the previously established Breadsall Hilltop and Chaddesden estates. The number of homes in the area has pushed local facilities to capacity. More recently, the developments at Lime Lane and Durose Country Park have added hundreds of additional houses without a single new amenity to support them. Now the planned additional houses will overwhelm the area which is at capacity with the current infrastructure and facilities.
1.8	North of Breadsall Hill Top	Number of Houses	Lara Small	Response-01262	I'm personally grateful that the decision was made to build Durose Country Park, I now live in a home probably built on allocated as Green Belt Land. I see the irony in my objection to further development and I'm trying to avoid a 'Not In My Back Yard' attitude. I understand the housing crisis won't fix itself unless more homes are built. I seek to urge the planning team to consider how to get the most value out of the fields available in the area, and I'm not sure if the awkward triangle North of Breadsall Hilltop really achieves that. Fitting in sufficient houses to make it profitable seems disproportionate to the effort in getting access to the fields, levelling the sloped land, cutting through protected hedgerows, pressurising the Great Northern Greenway, establishing a road network and critically, establishing water catchment & run off areas that will be critical to ensuring the inhabitants of Breadsall Village stay flood free. One of the wonderful things about Derby, and part of the reason why I've chosen to settle here, is due to its lack of heavy city intensity. As a proud Rolls-Royce employee, a huge amount of employee wealth is poured into Derby and its surrounding areas. Perhaps, this is also the reason why further housing is being considered; it's becoming a more attractive place to live, but I urge you to ensure the city remains in balance with the green space around it. May I offer my very best wishes for your future plans and development of Derby, and may I urge you to consider the balance and impact of all options.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Number of Houses	Laura Louca	Response-01266	So far we have seen 9 new homes on the old Windmill Garage site, 6 bungalows currently under construction behind number 7 Hilltop, 250 houses on the Persimmon Lime Tree Estate, plus an excess of 120 on the Redrow Estate. You now want us to have a further 160 next to the Durose site, plus who knows how many more on the land you have labelled as 'safe guarded for future development. Plus another 150 next to the Lime Tree Court Estate. Then another 356 off Sir Frank Whittle Way. Not to mention the 600+ near Acorn Way Oakwood, Leesbroom School area. IT'S SIMPLY TOO MUCH!
1.8	North of Breadsall Hill Top	Number of Houses	L Burton	Response-00342	There is already no infrastructure for the estate and its size such as doctors surgeries, local shops etc. as this has been bolted onto the edge of Oakwood already
1.8	North of Breadsall Hill Top	Number of Houses	Lee Wheatley	Response-01492	? Quantifying the Impact on Infrastructure: ? The proposed development of 160 houses represents a significant increase in demand for local infrastructure and services. When considering the average household size, this could translate to an estimated 320-480 new residents relying on the same schools, healthcare facilities, and utilities currently serving Breadsall Hilltop. This scale of increase is unsustainable without concrete plans for commensurate expansion of these vital services. ? Highlighting the Change in Character: ? The addition of 160 houses has the potential to significantly alter the landscape and character of the surrounding area, potentially impacting the visual amenity currently enjoyed by Breadsall Hilltop residents. Such a substantial development could lead to a noticeable increase in traffic, noise, and light pollution, further eroding the semi-rural nature of our homes. ? Reinforcing Strain on Road Networks: ? The addition of potentially hundreds of new vehicles associated with 160 houses will undoubtedly exacerbate the existing traffic congestion in and around Breadsall Hilltop, particularly at peak times on routes such as A608. The current road infrastructure is already struggling to cope, and this significant increase in housing will only worsen the situation, impacting commute times, air quality, and the overall quality of life for our residents."
1.8	North of Breadsall Hill Top	Number of Houses	Lisa Stone	Response-01018	150 houses is potentially 300 more cars, say 3 or 4 to a family nearly 500 additional people trying to cram into a small field effectively, we all want to live on each others doorsteps right? It's asking for trouble from noise complaints etc with houses being too close.
1.8	North of Breadsall Hill Top	Number of Houses	Mady Hall	Response-00788	There will be far more cars driving through the estate therefore there will be more cars parked up. We bought on this estate specially as it isn't a through route to more houses
1.8	North of Breadsall Hill Top	Number of Houses	Martin Harrison	Response-01395	I object to the proposed development due to the excessive number of houses planned. The scale is disproportionate to the size and capacity of the local area, leading to overdevelopment. This will strain infrastructure, increase traffic, and alter the character of the community in a way that is not sustainable or appropriate.
1.8	North of Breadsall Hill Top	Number of Houses	Masheda Chowdhury	Response-01339	1. The Proposed Number (160 Homes) is Disproportionate to Local Capacity: ? Developing 160 homes on an 8.2-hectare site, adjacent to a rural-urban boundary, risks over-intensifying the land. ? This volume of housing is out of character with the surrounding area and incompatible with the infrastructure and services currently available (roads, schools, healthcare, etc.). 2. Exceeds Local Absorptive Capacity Without Supporting Infrastructure: ? Local services ? including GP practices, schools, bus routes, and road junctions ? are already at or near capacity. ? There is no evidence that these services can expand at a rate that keeps pace with the number of new homes proposed. 3. Precedent of Rejected Applications in the Same Area: ? Previous planning applications in the surrounding estate have been rejected on the basis of overdevelopment and infrastructure limitations. ? Allowing a development of this scale undermines those prior decisions and creates inconsistency in planning judgments. 4. Lack of Phasing or Scale Reduction Consideration: ? The proposal does not appear to explore phasing the housing delivery over time, which would help manage impact and monitor infrastructure strain. ? A phased approach or reduction in housing numbers would be more appropriate and responsive to the area's needs and limitations. 5. Cumulative Impact with Safeguarded Land: ? The 14.6 hectares of safeguarded land for future development suggests the 160 homes are just the first wave of much larger growth. ? The impact of this number of homes must be considered not in isolation, but in the context of future likely expansions. 6. No Demonstrated Local Demand for 160 New Homes in this Location: ? The scale of the development is not clearly justified by local housing need assessments specific to Breadsall or Oakwood. ? Building 160 homes without proven local demand could result in unbalanced growth and a mismatch with community needs.
1.8	North of Breadsall Hill Top	Number of Houses	Megan Byrne	Response-01432	Major impact see other comments
1.8	North of Breadsall Hill Top	Number of Houses	Michael Poplar	Response-00565	160 too many currently proposed, plus the very worrying proposal that the "safeguarded" land of twice the area will come in useful to meet Erewash's future housing needs.
1.8	North of Breadsall Hill Top	Number of Houses	Monique Johnson	Response-00663	There are already too many of newbuilds in our above Breadsall. This has an appalling effect on the drainage and sewage system which just cannot cope. Residents of Breadsall are directly affected by this at all times but particularly when there is heavy rainfall. Flooding is already a major problem which has yet to be resolved. Adding anymore houses is going to compound the problem.
1.8	North of Breadsall Hill Top	Number of Houses	Mrs Francoise Poplar	Response-00602	Once again the authorities are going for the easy dig up a green field approach, rather than the use of brown field sites which might involve a little more effort. 160 houses is far too many for the existing crumbling infratructure to cope with.
1.8	North of Breadsall Hill Top	Number of Houses	Mr Softley	Response-00344	Where are these houses going? The topography simply does not seem compatible with the proposal. Significant ground works will be required with years of disruption to an already crowded.
1.8	North of Breadsall Hill Top	Number of Houses	Mrs Sarah Morley	Response-01515	In the last few years over 450 new houses have been build very close to this land. The road, schools, healthcare, wildlife etc COULD NOT COPE, with even more houses being built. As stated in my previous comments everything is already over loaded. Are other school, health care being built to accommodate this?
1.8	North of Breadsall Hill Top	Number of Houses	Oakwood Ward Councillors Eyre, Muthall and Trehwella	Response-01359	We believe this number is unsuitable and have not seen evidence proving it to be a correct and appropriate number of houses for this site.
1.8	North of Breadsall Hill Top	Number of Houses	Philip Booth	Response-00683	This small site looks like thy are packing as many houses on as possible to hit there target for building new houses, instead of building the most appropriate number of houses.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Number of Houses	Rachael	Response-00332	The Redrow estate is already a large housing estate, adding another 160 dwellings would make it unmanageable, congested and lose the charm or the area.
1.8	North of Breadsall Hill Top	Number of Houses	Richard Johnson	Response-00697	The extent of new houses being proposed will only increase the traffic through the village. The road network is insufficient and is already becoming a problem
1.8	North of Breadsall Hill Top	Number of Houses	Richard Kingham	Response-00849	Not manageable. A lot of the garden soak away around here is onto that field so there is a fear of flash flooding in people's properties if we have severe rain as we have had previously as there is no run off with houses being there, which will be an increase in insurance and a fall in house values. If that's the case for myself I would be looking to sue the council and developer for lost finance.
1.8	North of Breadsall Hill Top	Number of Houses	Richard Straw	Response-01412	There would be too many houses and cars
1.8	North of Breadsall Hill Top	Number of Houses	Sam Saunders	Response-01557	The proposed development of approximately 160 homes north of Breadsall Hilltop raises significant concerns regarding the scale of housing in relation to local infrastructure and community capacity. While meeting housing targets is important, the number of homes planned for this 8.2-hectare site may be excessive for the area, particularly given its location adjacent to established residential neighbourhoods like Hungerhill Close on Durose Country Park, Breadsall Village and Oakwood. Such a concentration of new housing risks overwhelming local services, including schools, healthcare, and transport networks, which are already under pressure. The density implied by 160 homes in this relatively small area could lead to a cramped and urbanized environment, detracting from the character and rural-urban transition that residents value. Moreover, the additional population would generate increased traffic volumes, exacerbating congestion and road safety concerns on local roads such as Dale Acre Way and the A609 Hill Top. The strain on public amenities and green spaces could also reduce the quality of life for both new and existing residents. A more phased or reduced-scale development would better allow for incremental infrastructure improvements and preserve the balance between development and community well-being. Without reconsideration of the housing numbers, the proposal risks unsustainable growth that could have lasting negative impacts on the local area.
1.8	North of Breadsall Hill Top	Number of Houses	Sandra Perry	Response-00307	Houses are packed in, close together to make as much money for the developer as possible. Most households have at least 1 car and that leads to congestion (see previous answer).
1.8	North of Breadsall Hill Top	Number of Houses	Silvia Mircic	Response-00884	The traffic, light, and noise pollution generated by a development of this size would negatively affect the amenity value of the nearby conservation area and village in general. Additionally, this extension would ensure that Breadsall would become a suburb of Derby. I refer again to the NPPF 13. Protecting Green Belt land: 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.
1.8	North of Breadsall Hill Top	Number of Houses	Stuart Brown	Response-00771	160 new homes with associated vehicles through dale acre way will have significant negative impact on the residents living on this road
1.8	North of Breadsall Hill Top	Number of Houses	Susan Dundon	Response-00396	We don't need any more houses here
1.8	North of Breadsall Hill Top	Number of Houses	Thomas Monkhouse.	Response-01318	Wherever you go there are new houses being built but little or nothing appears to be done to make sure that the infrastructure is keeping pace with the pace of house building.
1.8	North of Breadsall Hill Top	Number of Houses	Tom Parker	Response-01398	The redrow estate along with the persimmon development down the road already have sufficient amount of dwellings for this area, anymore and it will make this neighbourhood overcrowded, congested and the area will lose its charm.
1.8	North of Breadsall Hill Top	Number of Houses	Tony Hawkins	Response-01532	Too many. It will make the durose estate one big huge estate which was not planned nor designed to be large nor was the planning application approved on extending the estate
1.8	North of Breadsall Hill Top	Number of Houses	Tracey Turner	Response-00334	New houses do need building but this should be done by the creation of a new community/district. Providing GP services, schools, amenities etc. Not add more to an already stretched area.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Number of Houses	Zora Wilson	Response-01575	Objection to Proposed Development ? Conflict with Policy CP18 (Green Wedges) I note that this application has been amended to exclude the development adjacent to the A61. However I still wish to raise strong objections to the proposed development (both in its amended form and original form) on the grounds that it conflicts with Policy CP18 concerning Green Wedges. Although the site lies just outside the designated green belt surrounding Breadsall, it directly abuts existing woodland and open countryside, forming an important part of the green corridor along the Great Northern Greenway. The application site provides valuable habitat for wildlife and functions as an essential green buffer. Its loss would significantly reduce ecological connectivity and visual amenity, impacting local biodiversity and the quality of life for residents, walkers, and cyclists who currently use and enjoy this open space. The site is actively appreciated by the community as a visual break in built development and as a wildlife corridor connecting to other open areas. While the outline proposal includes the retention of woodland, there are serious concerns that development will increase pressure on these areas, potentially leading to degradation over time. I am concerned that the proposed development does not provide an adequate buffer to the woodland corridor and built development will sit too close and will detrimentally impact the existing woodland. There is no BNG Assessment listed in the application documents on the portal so it appears that it hasn't yet been done. How can there be any confidence that the proposal would be able to satisfy the statutory requirement to deliver 10% net gain. Any BNG delivery off site or through the purchase of biodiversity units elsewhere, dilutes the benefit of 10% net gain as the biodiversity is lost here in this locality and the significant environmental impact is here. Crucially, the proposed development sits adjacent to land at Breadsall recently released from the green belt, which Erewash Borough Council is considering for housing allocation. If both sites are developed, the cumulative impact will be substantial?leading to the loss of meaningful green space, erosion of the rural character of the Great Northern Greenway, and the elimination of the settlement gap between Breadsall and the wider Derby conurbation. For these reasons, I urge the Council to reject the proposal in order to uphold the principles of Policy CP18 and protect the integrity of this important green wedge.
1.8	North of Breadsall Hill Top	Other	Alistair Crawford	Response-01404	The status of the six dwellings within the farm complex that only have ?right of way? to Mansfield Rd via the farm entrance. It is understood from the planning office that the farm will be unviable without the land and will be part of the complete development which at this stage, details are unknown. It is understood that the dwellings are not marked as remaining as per the other houses and businesses with their own access to Mansfield Road. Possible options which at this stage are unknown. a) If the dwellings remain and are encroached by the new development and with a change in terms of a rural access to Mansfield Rd the result will be a significant devaluation of the property. This devaluation will need to be addressed by adequate financial compensation. b) or compulsory purchase at market value based on property values before the development. Allowing the developer freedom to develop the properties or land as they wish. Also note this uncertainty regarding the future of the six dwellings is causing a considerable amount of mental stress. If these issues are not addressed I/we will be putting our case in person to the Planning Inspectorate.
1.8	North of Breadsall Hill Top	Other	Amber	Response-00329	Erewash council will be taking resource from Derby council paying residents! Outrageous.
1.8	North of Breadsall Hill Top	Other	Andrea R Rowley	Response-01230	Broadband is a necessity of modern life. Breadsall is fortunate to have an Open Reach Exchange on Rectory Lane however we do not have access to fibre to the premises (FTTP). Priority for fibre installation always seems to be given to newly built housing development sites with little consideration given to enhance the services for existing residents.
1.8	North of Breadsall Hill Top	Other	Andrea wightman	Response-00354	I strongly object to Erewash bolting a housing estate onto Oakwood, Derby city.. It is very convenient to have the estate away from the facilities in Erewash and expect Oakwood to cater for all of the extra people, children, traffic,.
1.8	North of Breadsall Hill Top	Other	Andrew David Williams	Response-00796	Since the land at Lime lane and at Breadsall hilltop has been developed the greenway has seen significant increase in anti social behaviour. There have been many instances of motorbikes using the Greenway , stones being thrown from the greenway into peoples properties in Breadsall and increased levels of noise late at night. Increased building will increase this and must be dissuaded at all costs.
1.8	North of Breadsall Hill Top	Other	Ann Sherlock	Response-00410	Why has the proposal been intentionally misleading? Why hasn't a current map been used instead of the out of date map that misses several hundred houses? Is it to display a lesser impact to push through a housing proposal that will undoubtedly cause severe harm to the already strained infrastructure of Oakwood and Breadsall? Is it to minimise the damage this proposal will have on the local area, wildlife and little green space we currently have left? Either way, it is disgraceful and the person in charge of the proposal, and whoever signed off on the maps used should be sacked and investigated for falsely misleading the public and authorities around this housing proposal.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Other	Ben Martin	Response-00787	<p>This extension of the Derby conurbation not only flies in the face of the previous Strategic Housing Land Availability Assessment 359 on the site as unsuitable for residential development, plus the continually recurring problems seen on all recent developments including and not limited to, a total lack of intent to upgrade inadequate infrastructure, roads, drainage, social provision etc. but also critically ensures the Breadsall becomes a suburb of Derby. The proposed development completely contradicts the National Planning Policy Framework 13 (NPPF 13) which states: 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. The proposal also totally ignores the Breadsall Parish Council Village Neighbourhood plan 2019 - 2029, link - <a href="https://www.breadsallparishcouncil.org.uk/wp-content/uploads/2021/12/Breadsall-Neighbourhood-Plan_v21-final-draft-low-res-1.pdf">https://www.breadsallparishcouncil.org.uk/wp-content/uploads/2021/12/Breadsall-Neighbourhood-Plan_v21-final-draft-low-res-1.pdf</a>). The key points of which I would like to highlight below from Chapter 7, page 8 are points 1, 2, 3, 7, 9, 11 &amp; 12: 1 Protect and enhance the rural character of the parish and prevent urbanisation. 2 Enforce the requirements of the Green Belt to prevent inappropriate development and avoid coalescence with the Derby conurbation. 3 Encourage small-scale residential development in appropriate locations within the village envelope. 4 Ensure that a significant proportion of new housing development in the parish will comprise small dwellings to help cater for the lack of such accommodation. 5 Protect and enhance existing employment uses within the parish, including home working where this does not adversely affect adjoining properties and their amenities. 6 Encourage new small-scale employment opportunities in the limited locations where this is appropriate while preventing industrial or commercial uses that would be incompatible with the Green Belt or with the parish generally. 7 Ensure that all new developments, replacement buildings and extensions are constructed with high-quality materials, using designs that are compatible with the adjoining development and the parish in general. 8 Encourage energy conservation through sustainable construction methods and domestic-scale energy generation, but resist large-scale energy generation that would harm the visual character of the parish. 9 Improve measures to control existing flood risks within the parish and resist any new development that may increase existing flood risks. 10 Identify and preserve specific buildings, structures, natural features, views and vistas that enhance the character of the parish. 11 Identify key wildlife and biological features within the parish and take appropriate steps to preserve them. 12 Mitigate the effect of the large volume of through traffic in the village and aim to prevent any growth in through traffic. 13 Control parking on pavements where possible, including enforcement of strict requirements for the provision of sufficient on-street parking. 14 Preserve and enhance local facilities within the parish, including especially the village shop, the Memorial Hall, the village school, the church, sports pitches, footpaths and greenways. 15 Maintain access to facilities provided outside the parish, particularly through provision of a regular bus service.</p>
1.8	North of Breadsall Hill Top	Other	Ben Martin	Response-00787	
1.8	North of Breadsall Hill Top	Other	Bethan Eddy	Response-00976	<p>I am following up on issues I raised at the full council meeting regarding the accuracies of the maps and information on Breadsall Hilltop land allocation. The map in the consultation document is not up to date and does not include the Durose development that is already built, if you look at the area on google maps you can see the further development. I am also concerned that the information is not accurate regarding Hungerhill Crescent as it is not a crescent, it is a close. These were raised at full council by myself prior to the consultation going out and I am concerned that the inaccuracies alter the way in which the information is viewed, as it looks like there is more 'green space' than there is. It also, makes me question the validity of the responses if people are unaware of the other developments in the area and that there will be little green space left.</p>
1.8	North of Breadsall Hill Top	Other	Beverly Jordan	Response-01330	<p>As a Manor Farm resident the proposals are causing a lot of anxiety. We have been informed that the plans have not taken us into consideration. We have invested a lot in our home and wonder where or if we are considered in the proposals</p>

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Other	Callum Gurney	Response-01402	Objection to Proposed Development ? Conflict with Policy CP18 (Green Wedges) I note that this application has been amended to exclude the development adjacent to the A61. However I still wish to raise strong objections to the proposed development (both in its amended form and original form) on the grounds that it conflicts with Policy CP18 concerning Green Wedges. Although the site lies just outside the designated green belt surrounding Breadsall, it directly abuts existing woodland and open countryside, forming an important part of the green corridor along the Great Northern Greenway. The application site provides valuable habitat for wildlife and functions as an essential green buffer. Its loss would significantly reduce ecological connectivity and visual amenity, impacting local biodiversity and the quality of life for residents, walkers, and cyclists who currently use and enjoy this open space. The site is actively appreciated by the community as a visual break in built development and as a wildlife corridor connecting to other open areas. While the outline proposal includes the retention of woodland, there are serious concerns that development will increase pressure on these areas, potentially leading to degradation over time. I am concerned that the proposed development does not provide an adequate buffer to the woodland corridor and built development will sit too close and will detrimentally impact the existing woodland. There is no BNG Assessment listed in the application documents on the portal so it appears that it hasn't yet been done. How can there be any confidence that the proposal would be able to satisfy the statutory requirement to deliver 10% net gain. Any BNG delivery off site or through the purchase of biodiversity units elsewhere, dilutes the benefit of 10% net gain as the biodiversity is lost here in this locality and the significant environmental impact is here. Crucially, the proposed development sits adjacent to land at Breadsall recently released from the green belt, which Erewash Borough Council is considering for housing allocation. If both sites are developed, the cumulative impact will be substantial?leading to the loss of meaningful green space, erosion of the rural character of the Great Northern Greenway, and the elimination of the settlement gap between Breadsall and the wider Derby conurbation. For these reasons, I urge the Council to reject the proposal in order to uphold the principles of Policy CP18 and protect the integrity of this important green wedge.
1.8	North of Breadsall Hill Top	Other	Carol Hart	Response-01830	The map showing the proposed site is also incorrect, the Durose development is not shown and a resident has said that his house is marked down in the proposed safeguarded site, he asks if the intention is to compulsory purchase his property, how can this site be judged correctly when the map is completely wrong, not just a development being left off but even incorrect naming of cul-de-sac and close.
1.8	North of Breadsall Hill Top	Other	Carol Westcott	Response-00973	I understand we need more housing but just reported 2 months ago there are 1800 empty houses in the Erewash area and 1200 in Derby why are these not being regenerated so that more housing estates are not built. The houses are already there so would not impact on the environment.
1.8	North of Breadsall Hill Top	Other	Carys Whomstley	Response-01438	I am writing to register my strong objection to the above-mentioned planning application, both in its original and revised form. Despite the removal of the area adjacent to the A61 in the amended proposal, I believe that the proposed development remains deeply inappropriate and harmful for the following reasons: 1. Contravention of Policy CP18 and Loss of Green Wedge The proposed site lies just outside the designated Green Belt, but crucially directly abuts existing woodland and open countryside, forming part of the vital green corridor along the Great Northern Greenway. This area functions as a green buffer, enhancing ecological connectivity, supporting biodiversity, and providing visual and recreational amenity to local residents, walkers, and cyclists. Despite claims of woodland retention, the development threatens the integrity of this space. Proximity to new housing would increase human pressure on the natural environment, likely leading to degradation of woodland, fragmentation of habitats, and a reduction in wildlife corridors. No Biodiversity Net Gain (BNG) assessment appears in the application documents, raising concerns about whether the legally mandated 10% net gain can or will be achieved. Biodiversity enhancements delivered off-site would do nothing to mitigate local ecological loss, thereby undermining environmental sustainability in the area. Moreover, the site lies adjacent to land recently released from the Green Belt and under consideration for housing allocation by Erewash Borough Council. The cumulative impact of developing both sites would be devastating: a continuous sprawl from Derby through to Breadsall, resulting in the elimination of the settlement gap and permanent damage to the character of the Great Northern Greenway. 2. Environmental, Infrastructural, and Policy Concerns The proposal directly contradicts the National Planning Policy Framework (NPPF) Paragraph 143, particularly the goals of preventing urban sprawl and protecting the openness of Green Belt land. It also ignores the findings of the Strategic Housing Land Availability Assessment (SHLAA 359), which previously deemed the site unsuitable for residential development due to accessibility and environmental limitations. The development is completely incompatible with the objectives of the Breadsall Parish Neighbourhood Plan 2019?2029, particularly the aims to: Preserve the rural character and prevent urbanisation; Avoid coalescence with the Derby conurbation; Safeguard wildlife and ecological features; Control flood risk and infrastructure strain; Protect valued green spaces and visual vistas.
1.8	North of Breadsall Hill Top	Other	Carys Whomstley	Response-01438	Breadsall has already experienced increased flooding, attributed to upstream developments like Persimmon Estate and Breadsall Hilltop, which lie within the same water catchment area. Any additional development would worsen this issue, placing homes and infrastructure at risk. Furthermore, the proposal relies on access through two existing public footpaths within the Redrow estate and offers no concrete infrastructure improvements. The A608 is already over-congested, and no plans are presented to handle increased traffic or to safeguard children commuting to local schools. 3. Loss of Community and Ecological Value This land offers more than just open space?it is a much-loved and well-used amenity for the local community. It serves as a peaceful escape for informal recreation and nature engagement, and its visual and environmental contributions to the neighbourhood are significant. Its destruction would represent a major loss in local character and quality of life. The proposal underestimates the pressure on existing services, lacks detailed mitigation plans, and fails to explain how proposed footpaths will link meaningfully into existing routes. Nearby Local Wildlife Sites will be impacted

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Other	Chris Lunn	Response-01410	There are already plans for two developments to the west of the current Durose Country park. The lack of infrastructure is of major concern as the amount of housing being proposed could potentially bring with it 3500-4000 additional adults and children. It would appear that little or no thought has been given to a matter of such importance.
1.8	North of Breadsall Hill Top	Other	Christine M Taylor	Response-01389	I object this strategy, due to three main reason, schooling, healthcare provision and environmental damage. Building 160 new homes is likely to put pressure on the local school, should the 1 school in Breadsall village, be at capacity, children will have to commute elsewhere such as Chaddesden. This will, increase pollution and cars on the road especially at rush hour. As well as this, the influx of people will put pressure on the Doctors at Oakwood medical centre, potentially demanding new doctors. Finally, the environment is likely to suffer and the urbanisation of the hill top is likely to create flood risk as the concrete is impermeable, Breadsall is already susceptible to flooding and I believe this to be a large concern. Traffic is also horrendous in Breadsall village.
1.8	North of Breadsall Hill Top	Other	Clare Roters	Response-01553	Crime in the area and lack of safety had already increased. More housing would bring more issues and spates of crime. Landscape and country so close to a city centre is almost unheard of these days and this landscape is decked is history, rare and endangered wild life ( birds of prey and bats) more housing would destroy this.
1.8	North of Breadsall Hill Top	Other	Colin Brewster	Response-00576	Mental and Physical Wellbeing This Green Belt land currently provides a green route from Breadsall Village, via the Great Northern Greenway, Oakwood, a route that is well walked by both communities. This open green route undoubtedly provides substantial physical and mental wellbeing to many local people. This again should not be lost to development.
1.8	North of Breadsall Hill Top	Other	Dana Demidoff	Response-00634	Why must you do this instead of encouraging recycling of derelict and other urban land
1.8	North of Breadsall Hill Top	Other	Emma Charlton	Response-01545	A terrible waste of a beautiful green space enjoyed by nature, wildlife and dog walkers that keeps Breadsall and the surrounding area separated from large housing estates. All local primary schools are currently over subscribed, as well as the local doctors, so there is no infrastructure to support the increase in numbers to the area either. The newest nearby estate has lead to devastating floods in Breadsall Village and the allocation of social housing on the estate has lead to an increase in crime and antisocial behaviour in Breadsall. Of which we have sadly been victims of. And this development will only adversely contribute to more of this. Surrounding this land and closing the gap on all sides by mass residential housing will have a huge damaging effect on such precious, natural habitat for wildlife, as well as the local residents who chose, and worked hard to afford to live, in Breadsall village because of the distance from such estates and the peace and tranquility of the area.
1.8	North of Breadsall Hill Top	Other	Emma Daniels	Response-00346	You see housing developments all over derby but with additional parks/schools/road infrastructure to accommodate the extra houses, not seeing any of this in Oakwood, the houses are going up and facilities and services are staying the same, this is not right nor fair on the people of Oakwood
1.8	North of Breadsall Hill Top	Other	Emma Hawkins	Response-00813	The proposal ignores the Breadsall Parish Council Village Neighbourhood plan 2019-2029. Key points of are: ? 1 - Protect and enhance the rural character of the parish and prevent urbanisation. ? 2 - Enforce the requirements of the Green Belt to prevent inappropriate development and avoid coalescence with the Derby conurbation. ? 9 - Improve measures to control existing flood risks within the parish and resist any new development that may increase existing flood risks. ? 11 - Identify key wildlife and biological features within the parish and take appropriate steps to preserve them. ? 12 - Mitigate the effect of the large volume of through traffic in the village and aim to prevent any growth in through traffic. The preservation of this greenbelt land referred to above helps to achieve these key objectives. It also provides separation of neighbouring towns and rural settlements within Erewash Borough and separates Breadsall from the Derby conurbation. The map provided in the consultation document is incorrect and does not show the existing Durose County Estate as demonstrated in the image below highlighting the estate. Housing on this land will merge into the existing estate and Derby City contradicting: ? 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. ? 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. Not withstanding that there is a current planning application for the development of the land south of Breadsall Hill Top. The Durose Estate will be surrounded merging into one big estate of Derby City. The consultation states that access will be from Hungerhill Crescent. This is incorrect as it is actually Hungerhill Close. This would mean opening a road which is currently a Close ?dead end? to a through road. This road is not suitable nor wide enough to carry further traffic. Such new road would pass over a public footpath used by the local community gaining access to the Great Northern Greenway and Breadsall village by foot. This route is also used by school children who attend the school in the village further volumes of traffic would make this unsafe. Also, there is a natural pond located in the bottom right corner as highlighted by a purple dot within the above image, such development will have a negative impact on wildlife using this pond. The consultation states that access will also be provided from Dale Acre Way, again this road is in fact a ?dead end?. Such access would mean crossing an existing pathway used as mentioned above and the design of the estate in providing recreational space will be changed dramatically and no longer would be able to be enjoyed in the way that the estate does now. The road is also narrow and could not deal with increased volumes of traffic safely. The land also provides some natural drainage helping to prevent flooding to the local area particularly Breadsall Village which is badly affected by flooding. Such development will remove this and increase the risk of flo

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Other	Emma Hawkins	Response-00813	oding immensely. Flooding to the village has increased since the development of Durose and Persimmon Lime Lane already. The proposed development will adversely affect the wildlife in the area forcing them into a much smaller corridor. Light pollution will negatively impact this much smaller corridor namely the Great Northern Greenway and also the farming animals next door. All of the above cannot be rectified with points 1-5 in the consultation as such planned estate will adversely impact the current situation as mentioned above. There are no provisions to improve the A608 which is already congested pushing more traffic through Breadsall Village, no provisions to provide services to help deal with the increase in population in the area such as doctors, Dentist and schools which are all full to capacity. The area cannot cope with potentially 2 further developments already going through planning and this further proposed development based on all the above points and I object.
1.8	North of Breadsall Hill Top	Other	Gaynor Pawley	Response-00627	All of the revenue would go to Erewash feeding into other areas for improvement, however due to the proximity to Derby City/ Oakwood, all the resources in Derby/ Oakwood would be effected.
1.8	North of Breadsall Hill Top	Other	Ged Doherty	Response-01822	Mental health is very important and in my case I run a small company so have considerable stress every day. The addition of the stress caused by this issue is deeply concerning and I know that that along with the hours I keep will make me most vulnerable to mental and physical degradation. On top of that the transformation of the Greenway into an urban strolling facility is removing a benefit to my health as I would wish to run in countryside and not alongside urban sprawl, and thus the situation would be even worse. Maybe you don?t care about the effect that your development plans have on those involved, maybe you do, but believe me when I tell you that this is a terrible idea and the concept and the confusion and uncertainty, and the no doubt deliberately confusing misuse of the word ?safeguarded? is causing huge stress to all involved. You have a great deal of responsibility in your role, and even more so with the ridiculous targets imposed upon you by successive governments, none of whom seem to have the ability to run a bath, never mind a country. We look to you to try to at least deal with some of those targets in a way that doesn?t obliterate any of the benefits of the areas concerned and show some empathy for the people who pay your wages.
1.8	North of Breadsall Hill Top	Other	Gemma Cotter	Response-01374	Although this site is in Erewash, it is not connected to other settlements or services within Erewash. The nearest services available are provided by Derby City and development at this site will not fund them through council tax. These services are already strained and struggle to meet the needs of the current population around Oakwood and Breadsall Hilltop. The boundary nature of this site and nearby area causes maintenance issues with roads and footways as maintenance and repairs are more complex to organise. There are other planning applications within the nearby area under consideration by Derby City Council and the cumulative effect of each development site must be considered holistically to protect the environment, living conditions, access to services and road safety.
1.8	North of Breadsall Hill Top	Other	Gillian Pearson	Response-00303	I do not believe that objections to proposed planning developments make any difference to the ultimate planning decisions made but I will continue to protest against the destruction of green fields and implore planners to ensure that conditions for necessary infrastructure improvements is made mandatory when permission is granted.
1.8	North of Breadsall Hill Top	Other	Helen Walker	Response-00325	We don?t need anymore houses around here, we need to keep the green open spaces increase good air quality and not increase the pressure that the local community is under already there are so many empty places which need to be changed into accommodation.
1.8	North of Breadsall Hill Top	Other	Hulland. Bdverley	Response-00496	Please build no more houses where persimmon homes are, Oakwood estate large enough

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Other	Jake Moore	Response-01202	Adaptation to Extreme Weather: The proposed development could undermine Derby?s efforts to build climate change resilience. By encroaching on greenbelt/green wedge land, this development would reduce the city's natural capacity to adapt to changing weather patterns, such as increasing rainfall, heatwaves, and flooding. The loss of green spaces means the city has fewer areas for carbon sequestration, cooling, and biodiversity, all of which are vital for climate resilience. Sustainability Measures: Consideration should be given to whether the development incorporates effective sustainability measures, such as green building standards, renewable energy, and low-carbon infrastructure. Without these, the development could contribute to higher carbon emissions and further urban sprawl, undermining Derby?s climate goals. Impact on Local Economy: While new housing may bring some short-term economic benefits, it could also lead to long-term consequences for the local economy. A reduction in green spaces and increased congestion could affect the attractiveness of Derby as a place to live, work, and visit. Additionally, the strain on local businesses and tourism?especially if the area becomes less aesthetically appealing or accessible?could have negative repercussions. Cost of Infrastructure Upgrades: The council will need to invest heavily in upgrading existing infrastructure to accommodate the development, particularly regarding transport, drainage, and utilities. These costs should be considered when assessing the overall economic viability and impact of the project especially as council tax will be directed to Erewash constituents and areas rather than the Derby area impacted. Green spaces are essential for physical and mental health, providing areas for outdoor exercise, relaxation, and socialization. Without adequate green space, the community?s quality of life may suffer. And finally, The map submitted alongside the planning request fails to account for the existing 230-house development in the neighbouring field, which is an essential consideration in assessing the overall impact of the proposed development. The map contains no specific land reference for the proposed development site (for example, its Ordnance Survey or land registry number) to enable community members to cross-check whether it is listed in the SHLAA. These omissions raise serious concerns for the transparency of the application and the accuracy of the planning submission. By excluding this established development from the submitted map, the proposal overlooks the cumulative impact of multiple developments in the area. The 230 houses already built in the neighbouring field have already contributed to the urbanization of the area, and adding another 160 homes would significantly exacerbate the strain on local infrastructure, traffic, and environmental systems. It is crucial that the full extent of development in this area is considered to fully understand the implications of encroaching further into the countryside. More importantly, this omission highlights the potential for setting a dangerous precedent for future developments that could continue to erode the surrounding green spaces and rural character. The approval of this development would effectively create a domino effect, where each successive development would claim another portion of the countryside, weakening the natural and ecological integrity of the area. Once the countryside is fragmented by urban sprawl, it
1.8	North of Breadsall Hill Top	Other	Jake Moore	Response-01202	becomes increasingly difficult to protect the remaining open spaces from further development. This sets a worrying precedent where piecemeal urbanization is allowed to slowly chip away at the greenbelt, turning rural areas into extensions of the urban environment, with each new development legitimizing the next. This is not just an issue of immediate environmental degradation?it poses a long-term threat to the countryside?s vitality, its wildlife, and its ability to act as a buffer between urban sprawl and the rural landscape. The missing development in the map serves as a clear demonstration of how, if allowed to proceed, this project could pave the way for further developments in the surrounding countryside, compounding the negative impacts on the local environment and landscape. Future developments would further fragment natural habitats, reducing the area available for wildlife and diminishing the quality of life for both existing and future residents. It is essential to evaluate this development in the context of its potential to trigger further, uncontrolled urban expansion. Erewash Borough Council, being a neighboring authority, is unlikely to have assessed this site as a priority for meeting its own local housing needs, given its location and the fact that it is encircled by Derby. Housing needs for Erewash Borough would typically be considered within the borough's established boundaries, not on land that is surrounded by a larger, more urbanized area (i.e., Derby). The housing needs assessments in Erewash Borough?s SHLAA focus on more appropriate sites within the borough that are aligned with its own growth objectives. Given the proximity of the proposed land to Derby City, it is unlikely that Erewash?s planning documents would identify this area as a priority for housing. If the land were genuinely needed for housing, it would be more appropriate for Derby City to have assessed it within its own Strategic Housing Land Availability Assessment (SHLAA). The fact that this site is not included in the SHLAA for Derby City supports the argument that this land is not essential for meeting local housing needs within the appropriate local planning authority?s remit. The proposed development undermines the long-term vision of sustainable urban development for Derby, potentially opening the door for more piecemeal development along the city?s edges, leading to further fragmentation of greenbelt land.
1.8	North of Breadsall Hill Top	Other	Jamie Branagan	Response-00335	Quite frankly I think it's a cheap shot for Erewash to try and propose such a development on its boundary. The map used to highlight the proposal is out of date and doesn't show how Oakwood North has already been developed with the existing Estate. The proposal to extend this estate and have access via the Bishops drive roundabout simply allows Erewash to wash its hands of any responsibility to these residents The traffic and all the requirements for amenities and services will naturally fall on Oakwood & I'm sure Erewash realises this. As I've mentioned in some of my other comments above, Oakwood and it's current residents simply can't absorb this increase in footfall.
1.8	North of Breadsall Hill Top	Other	Janet Brewster	Response-00577	Infrastructure This is once again a substantial development for the area and no infrastructure is being put in place. Schools, doctors etc. are already up to capacity and these problems urgently need addressing, before further development is allowed.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Other	Janet O'Brien	Response-01835	Previous reviews stated this land is unsuitable for residential building and was conducted with due diligence by the planning department and councillors who actually visited the site at the time. This has now been overturned by this latest amendment without the same due diligence or physical visits. The details on the maps published for consultation are incorrect and out of date in respect of access roads and complete development of the Manor Farm Development. The status of the six dwellings within the farm complex that only have ?right of way? to Mansfield Rd via the farm entrance. It is understood from the planning office that the farm will be unviable without the land and will be part of the complete development which at this stage, details are unknown. It is understood that the dwellings are not marked as remaining as per the other houses and businesses with their own access to Mansfield Road. Possible options which at this stage are unknown. a) If the dwellings remain and are encroached by the new development and with a change in terms of a rural access to Mansfield Rd the result will be a devaluation of the property. This devaluation will need to be addressed by adequate financial compensation. b) or compulsory purchase at market value based on property values before the development. Allowing the developer freedom to develop the properties or land as they wish. Also note this uncertainty regarding the future of the six dwellings is causing a considerable amount of mental stress.
1.8	North of Breadsall Hill Top	Other	Janette Glenn	Response-00422	This is a cynical move by Erewash District Council to move its housing responsibilities to the edge of the city and does little to alleviate issues in Ilkeston, Sandiacre and Long Eaton. New residents will use their own cars most convenient facilities and these will inevitably be those provided by the city. Yet Erewash will be taking all the council tax and avoiding the responsibility.
1.8	North of Breadsall Hill Top	Other	Jessica Softley	Response-01408	The map containing the proposed land to be built on is incorrect and does not show the existing housing estate of Durose Country Park, which is where access is proposed through.
1.8	North of Breadsall Hill Top	Other	John Harlow	Response-00619	The site ?Durose country park Estate? has only been completed approximately 2/3 years ago with still some ongoing problems that need to be resolved before and additional building takes place. Construction traffic is a night mare for residents who currently live there.
1.8	North of Breadsall Hill Top	Other	John O'Brien	Response-01796	There is no provision to support the extra housing in terms of schools, dentists, doctors, drainage and sewers. Previous reviews stated this land is unsuitable for residential building and was conducted with due diligence by the planning department and councilors who actually visited the site at the time. This now has now been overturned by this latest amendment without the same due diligence or physical visits. The details on the maps published for consultation are incorrect and out of date in respect of access roads and complete development of the Manor Farm Development.
1.8	North of Breadsall Hill Top	Other	Karen Read	Response-00923	As stated in my above comments I am horrified to think this area will be ruined for the people who have worked and lived here i cannot understand why an area that has already had so many houses built has to endure yet more destruction of the precious green belt land Oakwood was and maybe still is the largest estate in europe enough is enough i would like to see the likes of ilkeston and heanor redeveloped before other areas are selected
1.8	North of Breadsall Hill Top	Other	Kev Rodgers	Response-00897	In general, we seem to approve housing developments without ever any thought to the necessary supporting infrastructure, primarily schools and GP capacity and perhaps bus service provision, which in turn leads to additional vehicle use in the area as people use their cars to live their lives. In short, we try to address the housing shortage but we just add to road congestion and vehicle pollution.
1.8	North of Breadsall Hill Top	Other	Kirstin Woodward	Response-01043	The area cannot sustain more housing without a significant investment in infrastructure (roads, pavements, crossings, buses), as well as essential amenities (shops, schools, medical facilities, libraries, youth centres, uniformed clubs, pubs, restaurants, etc.). The area is already at breaking point. Without this necessary investment upfront, this proposal should be denied without further consideration.
1.8	North of Breadsall Hill Top	Other	Laura Louca	Response-01266	We've had enough in this area. Please stop building on Greenland. Find alternative sites. The 9 homes built on the old Windmill Garage site worked out well - build new homes on land such as that. There are many empty buildings around the town centres - renovate or knock those down and rebuild there instead. If it costs more then so be it - the cost of loosing our wildlife and open spaces is far more!
1.8	North of Breadsall Hill Top	Other	Linda Smith	Response-01799	I also have concerns about the quality of the land which is included in the proposal. I have been informed by older villagers that the area was once a tip. I would be interested to know what sort of inspection has been authored to ensure this land is fit for building domestic dwellings.
1.8	North of Breadsall Hill Top	Other	Margaret Stafford	Response-01231	Broadband is a necessity of modern life. Breadsall is fortunate to have an Open Reach Exchange on Rectory Lane however we do not have access to fibre to the premises (FTTP). Priority for fibre installation always seems to be given to newly built housing development sites with little consideration given to enhance the services for existing residents.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Other	Martin Harrison	Response-01395	I object to the proposed development on multiple grounds, primarily due to the significant and irreversible impact it would have on the local area. Traffic congestion is already a major issue, with key routes such as the A38, Mansfield Road, and the roads through Breadsall and Oakwood often gridlocked during peak hours. Introducing a large number of new homes with only one planned entrance and exit will worsen this considerably, increasing journey times, pollution, and accident risk. Air quality is another serious concern. With more vehicles funnelled through already-busy routes, emissions will rise, putting residents?especially children, the elderly, and those with respiratory conditions?at greater health risk. The development will also destroy green space that currently acts as a natural buffer against pollution and noise. Local infrastructure cannot cope with the additional pressure. Schools in the area are full, GP surgeries are overstretched, and public transport is limited and unreliable. The proposed housing will bring hundreds more residents without a plan to expand essential services. There are also major concerns around biodiversity and green belt loss. The site includes natural habitats that support local wildlife, and its development would lead to habitat destruction, species displacement, and long-term environmental damage. In terms of community fit, the number and type of homes proposed do not reflect the needs of the area. There is a shortage of truly affordable housing, yet the plans focus on high-cost builds. The design, density, and layout are also out of character with the existing community, risking an erosion of local identity. Drainage and flood risk have not been adequately addressed either. The area is known for surface water issues, and adding large amounts of impermeable ground will likely make this worse. There?s no clear evidence that robust flood mitigation measures are in place. Finally, the consultation process has felt tokenistic. Many residents feel ignored, and the lack of transparency throughout has created distrust in how this application has been handled. For these reasons, I urge that the planning application be rejected or significantly revised to properly address the real and valid concerns of the local community.
1.8	North of Breadsall Hill Top	Other	Masheda Chowdhury	Response-01339	1. Inadequate Community Consultation: ? Many local residents were unaware of the full scope and impact of this proposal until late in the process. ? There has been insufficient public engagement with the communities in Breadsall, Oakwood, and surrounding areas ? particularly those directly affected by access roads and visual impact. 2. Negative Impact on Quality of Life: ? This development will increase noise, traffic, and pressure on services, diminishing the quality of life for existing residents in the area. ? The cumulative effect of 160 homes and future safeguarded land development will fundamentally alter the area?s character and livability. 3. No Clear Benefit for the Local Community: ? Aside from housing numbers, there is no clear local gain ? no new community centre, public park, improved bus route, school expansion, or healthcare provision tied directly to the development. ? The plan appears to serve strategic housing targets, but not the needs of the immediate community. 4. Sets a Risky Precedent: ? Approving this site opens the door to the development of the adjacent 14.6 hectares of safeguarded land ? without any infrastructure plan in place to support such expansion. ? This could result in piecemeal planning decisions that fail to address the cumulative social and environmental impact of unchecked urban sprawl. 5. Contradiction with Climate and Sustainability Goals: ? Derbyshire County Council and Derby City Council have declared climate emergencies and pledged to protect green spaces, improve air quality, and support biodiversity. ? Approving a car-dependent, greenfield development with inadequate local facilities is inconsistent with these sustainability goals. 6. Strain on Emergency Services and Local Policing: ? No assessment has been provided regarding the impact on emergency services, including response times and police resources. ? With increased population comes increased demand ? this must be factored into planning.
1.8	North of Breadsall Hill Top	Other	Megan Byrne	Response-01432	I formally object to the proposed development, both in its original and amended form, on the grounds that it remains in direct conflict with Policy CP18 regarding Green Wedges. While I acknowledge that the revised application removes development adjacent to the A61, significant concerns remain. The proposed site lies immediately adjacent to existing woodland and open countryside and constitutes an integral part of the green corridor along the Great Northern Greenway. Although it technically falls outside the designated green belt surrounding Breadsall, the site plays a vital role in maintaining ecological connectivity and the rural setting of the area. The land in question provides valuable wildlife habitat and serves as a crucial green buffer. Its loss would diminish both the biodiversity and the visual amenity currently enjoyed by residents, walkers, and cyclists. This space is actively appreciated by the local community as a visual break in the built environment and as a wildlife corridor linking to other green areas. While the outline proposal includes the retention of some woodland, I am concerned that any development would inevitably increase pressure on these sensitive areas, risking their long-term degradation. The current plans do not appear to provide an adequate buffer between built development and the woodland, placing the ecological integrity of the site at risk. Notably, there is no Biodiversity Net Gain (BNG) Assessment included in the planning documents currently available on the portal. Without this, it is impossible to determine whether the proposal meets the statutory requirement for a minimum 10% net gain in biodiversity. Moreover, any BNG delivered off-site or through the purchase of biodiversity units elsewhere fails to mitigate the local environmental loss and undermines the core principle of net gain within this locality. It is also critical to highlight that the proposed development is situated adjacent to land at Breadsall recently released from the green belt, which is currently under consideration by Erewash Borough Council for future housing allocation. If both sites are developed, the cumulative impact will be significant?eroding the rural character of the Great Northern Greenway, closing the settlement gap between Breadsall and Derby, and resulting in the loss of meaningful green space. For these reasons, I strongly urge the Council to refuse this application in order to uphold the integrity of Policy CP18 and protect the essential role this green wedge plays in our natural and community environment.
1.8	North of Breadsall Hill Top	Other	Michael Albinson	Response-00790	Being a home owner in Hungerhill Close the points I have made are valid and true. On a personal note, we paid a premium to live within the estate away from main rounds or access road for our kids to play out side. The increase in traffic, noise pollution, dust, dirt and general disturbance will prevent all the current benefits we as home owners have paid a premium for buying within this area on this type of street.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Other	Michael Grignon	Response-01335	As a resident of manor farm barns, whose houses were omitted from the core plans , weather due to an oversite or carelessness , these plans have caused extreme anxiety and stress to my partner and myself.
1.8	North of Breadsall Hill Top	Other	Mollie	Response-01549	I strongly object to the proposed housing development north of Breadsall Hill Top. The plans represent overdevelopment on green belt land, threatening the rural landscape and increasing pressure on already overstretched local services. The area lacks the infrastructure to absorb this scale of growth ? local roads are already congested, schools are near capacity, and GP surgeries face long waiting times. The site is visually prominent and inappropriate for high-density development, with real concerns about increased surface water flooding due to inadequate drainage provision. This proposal would cause lasting harm to the character, environment, and livability of the area, and should be refused.
1.8	North of Breadsall Hill Top	Other	Monique Johnson	Response-00663	Many os the problems that would arise from this new development had already been put forward when previous developments were applied for. The situation has definitely worsened. Breadsall which is in Erewash and has a wonderful village feel is being squeezed into the Derby conurbation. The village which has a lot of history should be protected from massive developments. It is becoming more fragile. As said, the best way to add houses is to use brown sites and repurpose them rather than leaving them empty and making the city unattractive because of their very presence in Derby.
1.8	North of Breadsall Hill Top	Other	Mrs Francoise Poplar	Response-00602	How much longer can we tolerate this monoculture of mass housing at all costs without any supporting infrastructure?
1.8	North of Breadsall Hill Top	Other	Mr Softley	Response-00344	This should be treated as a large development in Oakwood with the combined proposals from Derby City Council, not as a small addition to the local council. The disruption will be significant and anything other than that can only be considered as extreme naivety and incompetence.
1.8	North of Breadsall Hill Top	Other	Mrs Sarah Morley	Response-01515	MANOR FARM BARNs - BARN CONVERSIONS On the map, it doesn't mention at all, the six existing barn conversions at the farm. Has this even been taken into consideration???? I don't understand why they are not on the map Will these properties still have their own private entrance or be connected to the mass number of houses you are wanting to build in the future. The value of my property, along with the other 5 properties will massively decrease in value. These properties were purchased to look over the lovely green countryside, where the wildlife live. We have had to follow strict criteria when renovation our houses to keep in in line with the countryside (brown wooden widows etc). This is causing me so much stress. As it isn't clear all all what you plan on doing with the land, and have only very recently realised what is being planned. I think you have purposely been very vague so no one realises your plans
1.8	North of Breadsall Hill Top	Other	Mrs VA Forster	Response-00542	I wish to object to all categories. Flooding is worse and more houses will make it worse. From 8am to 9am and 3pm to 6pm we cannot navigate out of Smalley Drive onto Morley Rd now. The crash on Acorn way 22nd April proves how dangerous the traffic is becoming on narrow, country roads. We haven't enough Doctors and Dentists now and no infrastructure is planned. Erewash will be getting Council Tax but it's Derby City, yet again who provide the services which is wholly abhorrent to me. Parents already have to drive children to Schools, thus polluting the air further. The land is/was greenbelt. Yet you have Brownbelt land you could use. That's before we start on the catastrophic impact on our Wildlife. This land was owned by a local landowner and he was a major proponent of allowing for nature and green spaces, which this will remove access from. The Nature Reserves will be adversely affected by pollution, doubtless hedge and tree destruction. Yet on Oakwood we have TPOs. We have Grouse, Pheasants, Rookeries and countless other birds. These home buyers won't care that we have Wild Deer that cross the main roads and Cattle that sometimes escape and to be alert for them! It feels claustrophobic and will be worse. The roads around Spondon, Oakwood and Chaddesden cannot cope, cannot be widened. Locko Rd and Acorn Way are 60mph and unsuitable for buses. Amenities are a car journey away. You can't get a bus from Oakwood to Spondon without changing buses. These houses only have access to a Heanor Bus. Not local City Centre buses.
1.8	North of Breadsall Hill Top	Other	Neal Flint	Response-01220	Are we in breadsall and other communities not allowed to keep our identities and exist as villages or settlements in their own right anymore? Quite frankly people who are in power and make these decisions should hang their heads in shame, the way you and developers are allowed to run ruff shod over communities and their feelings is disgusting , you will do what you want no matter what peoples views or feelings are, its disgusting.
1.8	North of Breadsall Hill Top	Other	Oakwood Ward Councillors Eyre, Mulhall and Trehella	Response-01359	The map shown is incorrect. It fails to show both the Lime Tree Court Estate, constructed over six years ago, and the Durose Country Park Estate which the site is proposed to be bolted-on to. For what possible reason could BOTH of these sites, one of which provides the sole proposed entrance into the proposed development, could they have been missed off? Additionally, the A-Road is the A608, not the A609 as the documents state. And Hungerhill is a Close, not a Crescent. How could this have been incorrectly stated in the documents? Or was this a deliberate attempt to made the road appear to be something it is not? Finally, we see the acknowledgement that this is an expansion of the existing urban area as a clear acceptance that this is a bolt-on to the city, and another bolt-on to the Oakwood Ward, which will take Derby's housing growth and urban expansion and do nothing for Erewash residents, but will count towards EBC housing figures solely due to the land it is located on.
1.8	North of Breadsall Hill Top	Other	Philip Booth	Response-00683	Money raised from Council tax from these properties would not be spent on improving the services and infrastructure as these are all provided by Derby City Council nor Erewash.
1.8	North of Breadsall Hill Top	Other	Rachael	Response-00332	Further properties are not required in this area, the destruction of further green belt is not the answer. It will only continue to destroy peoples way of life, mental health, physical health and will cause many people to relocate out of the area due to continued disturbance. We should be promotion healthy, happy, outdoor activities, not removing the land for it to be done on.
1.8	North of Breadsall Hill Top	Other	Richard Stone	Response-01029	The main issue, more than anything, is the nature for the animals and bats in the area, but also the road system just cannot support more cars in multiple areas round this. Too much needs to be done to the roads before more housing is put in anywhere near here.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Other	Richard Straw	Response-01412	I purchased my house on the basis that I had a nice open greenbelt space nearby and my kids can play out safely. Planning to build a road right outside my house would ruin my whole idea of my home
1.8	North of Breadsall Hill Top	Other	Roy Ling	Response-01243	The submitted plan is incorrect, it fails to show the Persimmon and Redrow developments which then appears as more green fields than in reality. The point of entry is shown as Hungerhill Crescent this is incorrect Hungerhill is a Close. The correct plan should be resubmitted and the closing date put back.
1.8	North of Breadsall Hill Top	Other	Sam Saunders	Response-01557	First and foremost, the development?s location on Green Belt land remains the single most significant issue. The irreversible loss of protected countryside would undermine national and local planning policies designed to preserve the openness, prevent urban sprawl, and maintain the clear boundary between Derby?s urban area and Breadsall village. This loss not only threatens biodiversity and landscape character but also compromises climate resilience and community well-being. Secondly, infrastructure capacity across multiple sectors ? roads, schools, healthcare, and public transport ? is already under strain. The proposals lack clear, funded commitments to expand these services proportionately to the increase in population. This gap risks long-term negative impacts, including traffic congestion and road safety hazards, overcrowded schools, overstretched GP services, and inadequate bus networks, which could marginalize vulnerable residents and reduce quality of life. Thirdly, environmental concerns extend beyond Green Belt designation to biodiversity, flood risk, and air quality. The proximity to the Great Northern Greenway and local wildlife sites demands rigorous safeguards that appear insufficiently addressed. Likewise, flood risks in nearby areas such as the A61 and Breadsall Village highlight the need for advanced sustainable drainage solutions to prevent exacerbating existing vulnerabilities. Finally, the proposed housing mix and scale raise questions about whether the development truly reflects local needs. A balanced approach prioritizing genuinely affordable homes and appropriate density could mitigate some community impacts. In summary, the development conflicts with core planning principles related to protecting Green Belt land, ensuring sustainable infrastructure, and preserving environmental quality. Without robust mitigation and clear commitments, the proposal poses unacceptable risks to the community and landscape.
			Sarah Noble	Response-00611	We need more housing
1.8	North of Breadsall Hill Top	Other	Sharon Coward	Response-00348	This development is going to have a detrimental affect on the people, services & infrastructure of oakwood & derby city council. People using the services & infrastructure of oakwood & derby city council while paying council tax to Erewash is utterly disgusting & underhand.
1.8	North of Breadsall Hill Top	Other	Steven furness	Response-01516	This will join Breadsall village to Breadsall Hill Top and hence Oakwood. It will no longer be a village but part of this continuous housing scheme. I would demand lower council taxes if we are now loosing village status.
1.8	North of Breadsall Hill Top	Other	Tom King	Response-00734	Local services and amenities already to capacity, adding further houses would cause a further strain on already strained facilities. Don't see how the current redrow development can be extended due to surrounding greenway and steep gradient.
1.8	North of Breadsall Hill Top	Other	Tom Parker	Response-01398	Further homes are not required in this area of Derby. We all know homes are in demand; however, the destruction of green belt land is not the answer. It will only destroy people?s ways of life, affect their mental and physical health, and will cause so many people (including ourselves) to relocate out of this area.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Other	Tony Hawkins	Response-01532	The proposal ignores the Breadsall Parish Council Village Neighbourhood plan 2019-2029. Key points of are: ? 1 - Protect and enhance the rural character of the parish and prevent urbanisation. ? 2 - Enforce the requirements of the Green Belt to prevent inappropriate development and avoid coalescence with the Derby conurbation. ? 9 - Improve measures to control existing flood risks within the parish and resist any new development that may increase existing flood risks. ? 11 - Identify key wildlife and biological features within the parish and take appropriate steps to preserve them. ? 12 - Mitigate the effect of the large volume of through traffic in the village and aim to prevent any growth in through traffic. The preservation of this greenbelt land referred to above helps to achieve these key objectives. It also provides separation of neighbouring towns and rural settlements within Erewash Borough and separates Breadsall from the Derby conurbation. The map provided in the consultation document is incorrect and does not show the existing Durose County Estate as demonstrated in the image below highlighting the estate. Housing on this land will merge into the existing estate and Derby City contradicting: ? 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. ? 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. Notwithstanding that there is a current planning application for the development of the land south of Breadsall Hill Top. The Durose Estate will be surrounded merging into one big estate of Derby City. The consultation states that access will be from Hungerhill Crescent. This is incorrect as it is actually Hungerhill Close. This would mean opening a road which is currently a Close ?dead end? to a through road. This road is not suitable nor wide enough to carry further traffic. Such new road would pass over a public footpath used by the local community gaining access to the Great Northern Greenway and Breadsall village by foot. This route is also used by school children who attend the school in the village further volumes of traffic would make this unsafe. Also, there is a natural pond located in the bottom right corner as highlighted by a purple dot within the above image, such development will have a negative impact on wildlife using this pond. The consultation states that access will also be provided from Dale Acre Way, again this road is in fact a ?dead end?. Such access would mean crossing an existing pathway used as mentioned above and the design of the estate in providing recreational space will be changed dramatically and no longer would be able to be enjoyed in the way that the estate does now. The road is also narrow and could not deal with increased volumes of traffic safely. The land also provides some natural drainage helping to prevent flooding to the local area particularly Breadsall Village which is badly affected by flooding. There are ditches running alongside the edges of the area which
1.8	North of Breadsall Hill Top	Other	Tony Hawkins	Response-01532	will up with water as soon as it rains. The land also becomes sodden with water. Such development will remove drainage and increase the risk of flooding immensely. Flooding to the village has increased since the development of Durose and Persimmon Lime Lane already. The proposed development will adversely affect the wildlife in the area forcing them into a much smaller corridor. Light pollution will negatively impact this much smaller corridor namely the Great Northern Greenway and also the farming animals next door. This land is an essential green buffer. Its loss would significantly reduce ecological connectivity impacting local biodiversity. All of the above cannot be rectified with points 1-5 in the consultation as such planned estate will adversely impact the current situation as mentioned above. There are no provisions to improve the A608 which is already congested pushing more traffic through Breadsall Village, no provisions to provide services to help deal with the increase in population in the area such as doctors, Dentist and schools which are all full to capacity. The area cannot cope with potentially 2 further developments already going through planning and this further proposed development based on all the above points and I object.
1.8	North of Breadsall Hill Top	Other	Tracey Turner	Response-00334	Erewash should be ashamed of the underhand application process. The local derby city community will not see benefit from this build, for example council tax to pay for services that these properties will use in the area!
1.8	North of Breadsall Hill Top	Other	Wobbina Bugg	Response-00846	It has a detrimental effect on the character of Breadsall Village.
1.8	North of Breadsall Hill Top	Road Safety	Adam Garner	Response-00613	Same reason as traffic congestion.
1.8	North of Breadsall Hill Top	Road Safety	Amber Hubbard	Response-00845	Mansfield Rd is already much busier following the redrow and lime lane estates. This is adding more traffic without addressing congestion, road safety, reducing the speed limit, fencing off the existing play area from the road or additional crossing points
1.8	North of Breadsall Hill Top	Road Safety	Andrea R Rowley	Response-01230	See comments on Traffic congestion. At peak times it is very difficult and unsafe to venture out from Croft Lane on to the A61. Traffic is backed up on Croft Lane to the village triangle near to Damsons coffee shop. It's not just the extra cars per household, its delivery vans and houses having work done on their property that adds to the overall traffic volume in the proposed housing development site and the surrounding roads affected by the development.
1.8	North of Breadsall Hill Top	Road Safety	Andrew David Williams	Response-00796	Road safety is a key issue with increased traffic through Breadsall village and lack of wide enough footpaths , speeding traffic and junction layouts.
1.8	North of Breadsall Hill Top	Road Safety	Andy Madeley	Response-00381	Plenty of accidents on A608
1.8	North of Breadsall Hill Top	Road Safety	Angela Clarke	Response-01400	Having construction traffic accessing the new proposed site I feel will increase the safety for residents already on Durose Park,including children entering and exiting the site particularly at school times.
1.8	North of Breadsall Hill Top	Road Safety	Ann Sherlock	Response-00410	The map used is out of date and there is already increased traffic and concerns around road safety due to the Alport Heights estate and Durose estate (both estates and established roads connected to them are conveniently missing off the map used, and perhaps intentionally misleading). There have been a number of accidents already on Mansfield Road around that area, and Breadsall village struggles with the traffic load already.
			A O Smith	Response-01798	The junctions and traffic calming are insufficient to minimise this increasing risk in Breadsall.
1.8	North of Breadsall Hill Top	Road Safety	Ashley syill	Response-00397	Narrow roads to be able to extend to a further development. This directly into a roundabout to oakwood

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Road Safety	Ben Martin	Response-00787	There is nothing to address the safety of children who cross on a daily basis for school access. The road already has excessive congestion. There are no provisions to address the safety of children who cross on a daily basis for school access. The planned access to the site can only be achieved by cutting through 2 designated and widely used public footpaths located in the existing Redrow estate at Breadsall Hilltop from the A608.
1.8	North of Breadsall Hill Top	Road Safety	Bethan Eddy	Response-00976	The roads are already busy, especially the junction of Brookside Road and Lime Lane already. There have been a number of accidents
1.8	North of Breadsall Hill Top	Road Safety	Beverly Jordan	Response-01330	Increased levels of traffic results in potential for traffic accidents , and pedestrian safety
1.8	North of Breadsall Hill Top	Road Safety	Brett James	Response-00871	The impact on an area already swamped by traffic will be detrimental to the area
1.8	North of Breadsall Hill Top	Road Safety	Carl Hill	Response-00670	See previous point about lack of points to cross due to too many junctions and now traffic.. recent accidents at alone Lime Lane junction
1.8	North of Breadsall Hill Top	Road Safety	Carol Westcott	Response-00973	There is a nursery school people walking and the road is 40mph which is far too fast
1.8	North of Breadsall Hill Top	Road Safety	Carys Whomsley	Response-01438	I am writing to register my strong objection to the above-mentioned planning application, both in its original and revised form. Despite the removal of the area adjacent to the A61 in the amended proposal, I believe that the proposed development remains deeply inappropriate and harmful for the following reasons: 1. Contravention of Policy CP18 and Loss of Green Wedge The proposed site lies just outside the designated Green Belt, but crucially directly abuts existing woodland and open countryside, forming part of the vital green corridor along the Great Northern Greenway. This area functions as a green buffer, enhancing ecological connectivity, supporting biodiversity, and providing visual and recreational amenity to local residents, walkers, and cyclists. Despite claims of woodland retention, the development threatens the integrity of this space. Proximity to new housing would increase human pressure on the natural environment, likely leading to degradation of woodland, fragmentation of habitats, and a reduction in wildlife corridors. No Biodiversity Net Gain (BNG) assessment appears in the application documents, raising concerns about whether the legally mandated 10% net gain can or will be achieved. Biodiversity enhancements delivered off-site would do nothing to mitigate local ecological loss, thereby undermining environmental sustainability in the area. Moreover, the site lies adjacent to land recently released from the Green Belt and under consideration for housing allocation by Erewash Borough Council. The cumulative impact of developing both sites would be devastating: a continuous sprawl from Derby through to Breadsall, resulting in the elimination of the settlement gap and permanent damage to the character of the Great Northern Greenway. 2. Environmental, Infrastructural, and Policy Concerns The proposal directly contradicts the National Planning Policy Framework (NPPF) Paragraph 143, particularly the goals of preventing urban sprawl and protecting the openness of Green Belt land. It also ignores the findings of the Strategic Housing Land Availability Assessment (SHLAA 359), which previously deemed the site unsuitable for residential development due to accessibility and environmental limitations. The development is completely incompatible with the objectives of the Breadsall Parish Neighbourhood Plan 2019?2029, particularly the aims to: Preserve the rural character and prevent urbanisation; Avoid coalescence with the Derby conurbation; Safeguard wildlife and ecological features; Control flood risk and infrastructure strain; Protect valued green spaces and visual vistas.
1.8	North of Breadsall Hill Top	Road Safety	Carys Whomsley	Response-01438	Breadsall has already experienced increased flooding, attributed to upstream developments like Persimmon Estate and Breadsall Hilltop, which lie within the same water catchment area. Any additional development would worsen this issue, placing homes and infrastructure at risk. Furthermore, the proposal relies on access through two existing public footpaths within the Redrow estate and offers no concrete infrastructure improvements. The A608 is already over-congested, and no plans are presented to handle increased traffic or to safeguard children commuting to local schools. 3. Loss of Community and Ecological Value This land offers more than just open space?it is a much-loved and well-used amenity for the local community. It serves as a peaceful escape for informal recreation and nature engagement, and its visual and environmental contributions to the neighbourhood are significant. Its destruction would represent a major loss in local character and quality of life. The proposal underestimates the pressure on existing services, lacks detailed mitigation plans, and fails to explain how proposed footpaths will link meaningfully into existing routes. Nearby Local Wildlife Sites will be impacted
1.8	North of Breadsall Hill Top	Road Safety	Chris Lunn	Response-01410	Road safety is another area of vital importance. As above, 160-320 additional vehicles flowing through the development and out into the Redrow estate, especially at peak times, will cause a build-up of traffic as it tries to enter Mansfield Road/Hilltop at the Dale Acre roundabout. It is already extremely dangerous getting out of Windmill Place due to traffic travelling too quickly and its proximity to the roundabout. Another 100-150 cars would undoubtedly cause accidents as people will take risks to compete with an already congested road system. Pedestrians will be vulnerable as they try to cross heavy traffic. These extra vehicles will cause additional pollution, noise and potentially increase the incidence of respiratory problems ? thus returning to the issue of inadequate healthcare facilities. Hungerhill Close, the road proposed to take the traffic flow on and off the proposed development already becomes congested as parked cars are an issue. With so many additional vehicles all having to use this route, the situation for pedestrians, many with young children, will become even more dangerous. Large vans, emergency vehicles and bin lorries will all have to use this road. Bin lorries, stopping every few metres to empty household waste will cause congestion and utter chaos at peak times. Cars will be discharging harmful emissions whilst waiting to get around large vehicles at the same time as small children are walking past. More health problems will undoubtedly arise.
1.8	North of Breadsall Hill Top	Road Safety	Christine Goodwin	Response-00642	Speeding traffic is already a problem through Breadsall Village and is a particular concern on Brookside Road where the junior school is situated
1.8	North of Breadsall Hill Top	Road Safety	Clare Roters	Response-01553	We have nr on and genuine collisions already and only a few days ago a gentleman was knocked off his motorcycle on the roundabout at the entrance to Dale acre way. Cars speed down Mansfield road all the time and only a couple of years ago a motorcyclist was killed nr the durose estate

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Road Safety	Colin Brewster	Response-00576	The traffic situation in Breadsall Village has become ridiculous. The roads are just not capable of taking the increased flow and road safety has become an increased worry with the relocation of the village school to the main thoroughfare. A solution is needed before any additional development is granted.
			Darren adams	Response-00874	During non-rush-hour traffic the speed that vehicles go through the village is in excess of the current speed limit
1.8	North of Breadsall Hill Top	Road Safety	David Byrne	Response-01433	There have been a number of near miss incidents on our estate already due to a large range of 4 way intersections, adding more traffic will likely result in an accident
1.8	North of Breadsall Hill Top	Road Safety	Edward James Gregory	Response-00728	The area already suffers from traffic congestion, and safety issues due to speed and number of vehicles. Area suffers from flooding and run-off onto the highways. There for further development will increase this and reduce safety
1.8	North of Breadsall Hill Top	Road Safety	Elaine hodgkinson	Response-00854	There is already bad congestion all the way from the junction with Mansfield Rd with particularly dangerous sections at the right hand junction next to Stice of India and the Lime lane and Breadsall junctions where there have been fatalities. It will badly increase the number of cars travelling through the residential area of Oakwood with the risk to residents that poses.
			Emma Binns	Response-00843	More cars will use Breadsall as a rat run and speed through the village.
1.8	North of Breadsall Hill Top	Road Safety	Emma Daniels	Response-00346	No traffic calming measures or lights to cross safely with the congested traffic or speeding cars
1.8	North of Breadsall Hill Top	Road Safety	Emma Hawkins	Response-00813	The consultation states that access will be from Hungerhill Crescent. This is incorrect as it is actually Hungerhill Close. This would mean opening a road which is currently a Close ?dead end? to a through road. This road is not suitable nor wide enough to carry further traffic safely. Such new road would pass over a public footpath used by the local community gaining access to the Great Northern Greenway and Breadsall village by foot. This route is also used by school children who attend the school in the village further volumes of traffic would make this unsafe. The consultation states that access will also be provided from Dale Acre Way, again this road is in fact a ?dead end?. Such access would mean crossing an existing pathway used as mentioned above and the design of the estate in providing recreational space will be changed dramatically and no longer would be able to be enjoyed in the way that the estate does now. The road is also narrow and could not deal with increased volumes of traffic safely. The island to the entrance of the estate is all ready congested and un safe due to unclear road markings.
1.8	North of Breadsall Hill Top	Road Safety	Faye Wilkinson	Response-01129	Cars are already parked roadside and on pavements due to limited parking for residents causing pedestrians to walk on the road which would become more dangerous with increased traffic.
1.8	North of Breadsall Hill Top	Road Safety	Gary Murfin	Response-00374	With increased traffic from the new developments planned in the area road safety will become a bigger issue
1.8	North of Breadsall Hill Top	Road Safety	Gaynor Pawley	Response-00627	The 40 mph limit on the A608, which has been reviewed previously has been kept as it is a main route into Derby. If more housing developments are built this is increasingly becoming part of an urban city scape and as such the road infrastructure should be dealt with to put in a bypass for this area for safety.
1.8	North of Breadsall Hill Top	Road Safety	Gemma Cotter	Response-01374	Nearby the A608/ Lime Lane junction is the site of frequent RTCs including fatalities. The staggered junction is difficult to negotiate at peak times and increased traffic density encourages risky pulling out of the side roads. Lime Lane at Kings Corner also has a poor safety record with multiple factors. Only minor improvements have been made since the construction of Oakwood and it is a major connection between Oakwood/ Spondon to go north of Derby or traffic entering Derby from areas such as Heanor or Ilkeston. Further housing developments between Oakwood and Breadsall will place additional strain on traffic flows and accident risk.
1.8	North of Breadsall Hill Top	Road Safety	Gillian Pearson	Response-00303	Already mentioned as a concern
1.8	North of Breadsall Hill Top	Road Safety	Harry Mee	Response-00882	More road users and more congestion equals more incidents, simple.
1.8	North of Breadsall Hill Top	Road Safety	Helen Foster	Response-00650	This proposal raises significant concerns about the increase in traffic volume, particularly along Brookside Road, a relatively narrow road not designed for heavy use, and as a consequence heightened risks for both drivers and pedestrians.
1.8	North of Breadsall Hill Top	Road Safety	Helen Walker	Response-00325	The increased traffic will increase the risk of accidents the road is too fast at 40mph as it is, there is a nursery which does not have a crossing near it, will more traffic there is likely to be a serious accident.
1.8	North of Breadsall Hill Top	Road Safety	Hulland. Bdverley	Response-00496	More traffic, more accudents
1.8	North of Breadsall Hill Top	Road Safety	Ian Lockwood	Response-01491	There are already significant queues at rush hour on Brookside Road in Breadsall, which is a narrow road not built for the volume of traffic it already receives as a result of other recent housing developments. This development will only compound this and increase the already multiple daily instances of near-misses around the traffic calming area and junction with Church Lane and Croft Lane, not to mention the heavy queueing at Pektron island where Croft Lane meets the A61.
1.8	North of Breadsall Hill Top	Road Safety	Jake Moore	Response-01202	The addition of 160 homes could bring an estimated 300 additional vehicles into the area. Existing roads around the area are already under strain and not designed to accommodate such a significant increase in traffic. This will lead to: Increased risk of accidents, particularly at junctions and in residential streets where visibility is limited. Greater danger for children walking or cycling to local schools, as well as elderly and vulnerable residents. Higher likelihood of congestion and vehicle conflict, especially during peak hours, school drop-off times, and weekends. If the access roads to the proposed development connect to already busy or narrow streets, the situation could become unmanageable, posing real safety risks. Hungerhill Close already experiences severe congestion due to cars regularly parked on both the road. At present: The road is frequently reduced to a single usable lane, causing vehicles to mount pavements or reverse unsafely. Access for emergency vehicles, refuse collection, and delivery lorries is already constrained. Pedestrians, including children walking to local schools and elderly residents, are forced into the road due to blocked or narrowed pavements. Introducing 160 additional homes ? with potentially 300 or more new vehicles ? will compound an already dangerous situation. If Hungerhill Close is to be used for access to the development or bears even indirect traffic pressure from it, this creates an unacceptable safety risk.
			James Bellaby	Response-00337	More cars less safety for pedestrians etc.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Road Safety	James Roberts	Response-00673	As per Traffic Congestion, Dale Acre Way & Hungerhill Close are not suitable for an effective doubling in households trying to use them daily. Multiple children in the area ride bikes & scooters and walk and play around these roads in the evenings because it is currently safe enough to do so. Adding in that many additional households to the roads will make this impossible without serious risk of injury to a pedestrian. Also living close to the Friday Lane and Bandy Lane junctions of Dale Acre Way, I have seen a number of near misses between cars taking the corners too fast and too tight without expecting oncoming vehicles. No amount of nondescript 'junction improvements' is going to mitigate the increased likelihood of accidents that comes with doubling the road usage (not even considering the risks while construction work is ongoing with industrial vehicles attempting to use the roads)
1.8	North of Breadsall Hill Top	Road Safety	Jamie Branagan	Response-00335	As mentioned under traffic, the area is already heavily congested. Your map is out of date and doesn't show the existing estate you propose to tag this development on to, giving a false sense of what the area currently looks like. Adding 160 more homes will add at least c150-200 more cars to a road that is notorious for accidents and collisions.
1.8	North of Breadsall Hill Top	Road Safety	Janet Brewster	Response-00577	Over recent years road safety has become a real concern in Breadsall Village. The roads and particularly the junctions are really dangerous. A way to mitigate this situation needs to be found before any additional development is approved.
1.8	North of Breadsall Hill Top	Road Safety	Janet O'Brien	Response-01835	The traffic levels at Peak times have considerably increased following the recent housing developments on the A608, making it difficult and unsafe to enter onto the road in either direction. Any further traffic load will only exacerbate this situation in both directions and through the village of Breadsall a ?rat run? for traffic heading for the A38 This is particularly concerning as traffic now passes the front gates of the new Breadsall Primary school and will only increase in volume.
1.8	North of Breadsall Hill Top	Road Safety	Janette Booth	Response-00295	Accidents at Lime Lane junction and near Damsons in the village are already happening more frequently than they should. Speeding through the village, despite traffic calming is also a cause of concern.
1.8	North of Breadsall Hill Top	Road Safety	Jason Reader	Response-00320	No mention of improvement to the lime lane - brookside road junction where there have been fatal accidents. Make the developer pay for road improvements to slow traffic and reduce accidents.
1.8	North of Breadsall Hill Top	Road Safety	Jeanette Kent	Response-00402	Even more traffic on the already over used roads are a recipe for disaster, the road already has regular accidents on it, more traffic means the risk of even more accidents
1.8	North of Breadsall Hill Top	Road Safety	Jessica Softley	Response-01408	Access to the proposed build is through the existing Durose Country Park estate, including Dale Acre Way which regularly has multiple cars parked along it. The proposal of 160 houses will create a large influx of cars travelling down this road, leading to road safety concerns.
1.8	North of Breadsall Hill Top	Road Safety	J Hasse	Response-00875	Increased traffic means increased accidents.
1.8	North of Breadsall Hill Top	Road Safety	Jim Smith	Response-00741	An increased volume of traffic will pass the new school on Brookside Road, especially in the morning. I genuinely fear this is just an accident waiting to happen. The additional traffic this proposal will bring just makes this more likely
1.8	North of Breadsall Hill Top	Road Safety	John Harlow	Response-00619	As a house holder at no 24 Dale acre Way we see many vehicles travelling through the estate.. It is totally unacceptable to have any increase in the amount of traffic. The junction between Dale Acre Way and Bandy Lane is totally unsafe as there is ?no right of way? so drivers push their luck every day with dire consequences. I have witnessed many accidents and incidents at this junction. Dale acre Way is already up to capacity at peak times so any additional traffic would have a safety impact and also add emissions to the air quality. At peak times in the morning, traffic is queued at the roundabout on Mansfield road from Dale Acre Way, from Morley direction and also long queues on Bishops Drive. An increase in any traffic is just not acceptable, on the grounds of environmental constraints and safety.
1.8	North of Breadsall Hill Top	Road Safety	John Montgomery	Response-00622	Refer to notes added under the heading of Traffic Congestion.
1.8	North of Breadsall Hill Top	Road Safety	Jonathan Park	Response-01191	Area is already constrained with narrow roads in and out of the estate causing potential further dangerous occurrences. The roundabout serving the estate from Mansfield road has already seen numerous accidents and the increase of traffic will likely contribute to more
1.8	North of Breadsall Hill Top	Road Safety	Jon Lewis	Response-00347	The development already has excessive traffic running through it and the proposed additional housing will further increase this. The development has a large amount of children which use this route for local buses to and from school
1.8	North of Breadsall Hill Top	Road Safety	Justine Dean	Response-00844	The roads are already dangerous to cross. Cars get fed up of queuing and then speed if there is ever a gap.
1.8	North of Breadsall Hill Top	Road Safety	Justin Windsor	Response-01544	From my understanding, access to the proposed new estate is through the current durose country park estate, this brings with it danger to the current population on ?DCP? including the children who enjoy the current safety of the estate as it will potentially bring up to ~300 extra cars through the estate to the proposed entrance. Not only does this bring a risk to the walking/active public but also brings largely increased risk to the road network on DCP as the estate was not built for that sustained level of traffic, there are no painted road markings, the corners to the branching streets off of Dale Acre Way are too sharp for a sustained increase in traffic, and accidents will be inevitable!
1.8	North of Breadsall Hill Top	Road Safety	Kara Crossley	Response-00865	There are already multiple accidents that happen in Breadsall village as a result of the traffic calming points in the village and the volume of traffic that use the village as a through fare every day
1.8	North of Breadsall Hill Top	Road Safety	Karen Read	Response-00923	I am concerned that road safety will be an issue for pedestrians and vehicles cyclists etc due to increased traffic how does the policy reduce this impact
1.8	North of Breadsall Hill Top	Road Safety	Karen Smith	Response-00635	There is far too much traffic in the area. The roads are not designed for the speed at which people travel on them and the pavements are inadequate, indeed in some areas there are none.
1.8	North of Breadsall Hill Top	Road Safety	Kimberley Woodward	Response-01445	It's a disaster waiting to happen the speed people go down Dale Acre Way without another development using this same road. Especially with children playing on the estate. It is only a matter of time before an accident happens and it is always a worry to me of a car ploughing into my house as I live on the corner of the junction!

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Road Safety	Kirstin Woodward	Response-01043	The traffic on Mansfield Road is constant. The pavements are too narrow for pedestrians, allowing only single-file walking. This is especially difficult for people with pushchairs, wheelchairs, or dogs, and for those walking with elderly individuals?as I often do. It feels very unsafe. This is a 40 mph road with limited crossing points. For example, to reach the nearest bus stop heading towards Derby, we have to cross Mansfield Road between Elmwood Drive and Lime Avenue. This section is on a bend and lacks a designated crossing. As traffic has increased, there are fewer gaps, making it difficult?and dangerous?to cross safely, especially with vehicles traveling at 40 mph.
1.8	North of Breadsall Hill Top	Road Safety	Laura Louca	Response-01266	Road safety will be significantly negatively impacted. It is inevitable Breadsall Village will be used as a cut through for even more people than already do (Oakwood, Hilltop, New Redrow Estate, New Persimmon Estate) You are pushing more and more traffic past a primary school and pre-school that sit very close to Brookside Road in the village. Not school crossing, no lollipop person etc. it?s very worrying. The junction out of the top of Breadsall Village is a notorious hotspot for accidents too.
1.8	North of Breadsall Hill Top	Road Safety	Lee Wheatley	Response-01492	1. Increased Traffic Volume and Vulnerable Road Users: o An increase in the number of dwellings or commercial premises will inevitably lead to a higher volume of traffic, including cars, vans, and potentially larger vehicles. This increased traffic poses a greater risk to vulnerable road users, particularly pedestrians (including children walking to school and elderly residents), cyclists, and horse riders, who are known to use the lanes and roads around Breadsall and Breadsall Hilltop. This is particularly important around high-risk establishments such as the Maggies Day Nursery and Breadsall Community Primary School. 2. Impact on Existing Road Layout and Design: o Breadsall features narrower, more traditional village roads, some without continuous pavements. Increased traffic on these roads would make walking and cycling more dangerous due to reduced visibility and increased conflict with vehicles. o Breadsall Hilltop, owing to the main road being more and more gridlocked at peak times, more road users are using side roads as a rat run which will only be exacerbated by hundreds of additional cars and lead to more frequent near misses and accidents. 3. Increased Risk at Junctions and Access Points: o Higher traffic volumes will put greater strain on existing junctions within Breadsall and Breadsall Hilltop, as well as where local roads meet main routes like the A608. Increased queuing and driver frustration could lead to more risky manoeuvres and accidents. 4. Potential for Increased Speeding: o Increased traffic flow on less congested stretches of road, particularly those connecting Breadsall and Breadsall Hilltop or leading out of the villages, could lead to some drivers increasing their speed, further endangering pedestrians and cyclists. 5. Impact on School Travel Routes: o With a potential increase in the number of families, the routes to Breadsall Community Primary School will likely see more pedestrian and cycle traffic. Increased vehicular traffic on these same routes could significantly compromise the safety of children traveling to and from school. 6. Emergency Vehicle Access: o Increased traffic congestion, as discussed in the previous section, could also impede the timely access of emergency vehicles (ambulances, fire engines, police cars) to properties in Breadsall and Breadsall Hilltop, potentially putting lives at risk. 7. Lack of Specific Road Safety Assessments: o The Core Strategy Review Amendment should be accompanied by detailed Road Safety Assessments that specifically analyse the potential impact of increased development on the safety of all road users in Breadsall and Breadsall Hilltop. These assessments should identify potential hazards and propose concrete mitigation measures. The current proposals appear to lack this level of detailed analysis.
1.8	North of Breadsall Hill Top	Road Safety	Linda Morris	Response-00867	The junctions of Brookside Road/Lime lane onto the A608 have already caused traffic accidents with at least one fatality therefore any increase in traffic as a result of this planning will make matters worse. Children are encouraged to walk to school and the pavements around the vicinity of the school are extremely narrow therefore the volume and speed of the through drivers increase the potential for a serious accident.
1.8	North of Breadsall Hill Top	Road Safety	Lisa Stone	Response-01018	You already cannot safely cross these roads, lots of small children around and a park area right next to this main road, increasing cars and roadways is just asking for trouble
1.8	North of Breadsall Hill Top	Road Safety	Lorna Coope	Response-00364	Since re-surfacing the pavements along Mansfield Road, the drop curbs have been removed to enable crossing for the nursery. Mansfield road is an incredibly busy road and it has become increasingly difficult to cross the road from the jitty between Binscombe and Mansfield Road. There is a crossing further down the road, towards the new estate but this creates a 5-10 minute detour.
1.8	North of Breadsall Hill Top	Road Safety	Lucy Lewis	Response-01459	Small, unsuitable roads for extra traffic. Decreasing safety for residents, children and animals using the road. Not designed for through traffic
1.8	North of Breadsall Hill Top	Road Safety	Mady Hall	Response-00788	There will be far more cars driving through the estate when we currently have a nice community where children can play
1.8	North of Breadsall Hill Top	Road Safety	Mandy Cooling	Response-00312	In light of comments I've made about the concerns around traffic congestion, this brings with it the risk of road safety. Whilst A608 is a 40mph road Brookside Road in Breadsall, which is the cut through which is increasingly used, is only 30mph but people speed up and down that road, even with the traffic calming measures and even more concerning now that the school is on the road. If this development were to go ahead, I'd envisage that there would be a need for traffic lights at the bottom of Bishops Drive to replace the roundabout
1.8	North of Breadsall Hill Top	Road Safety	Margaret Stafford	Response-01231	This development will inevitably affect Breadsall Village as no further roads are being proposed. The Lime Lane junction onto the A608 and Brookside Road is a dangerous junction , and there have been several fatalities here since the initial application to build more houses in the area. Breadsall Village has seen a huge increase of traffic coming through the village during the day and night since the housing developments along Mansfield Road and Breadsall Hilltop. The village 30mph speed limit is frequently not adhered to by drivers passing through, and we have had an increased number of road traffic accidents, some of which have required emergency services presence. Information about these accidents can be obtained from the Local Breadsall Parish Council. It is already very difficult (especially during peak rush hour times) to get out of Croft Lane on to the A61. At the very least a new road should be built from the Mansfield Road A608 down to the Morrisons Island on to the A61 to try and stop Breadsall Village being the rat run from the A38/A61 to the Mansfield Road area and beyond.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Road Safety	marion Morris	Response-00870	The junctions of Brookside road/Lime lane onto the A608 have already been subject to traffic accidents (with one fatality) therefore any increase in traffic as a result of this planning will make matters worse. Children are encouraged to walk to school however the footpaths down Brookside road and on the A608 are extremely narrow so the increased volume of speeding drivers increase the potential for serious pedestrian accidents.
1.8	North of Breadsall Hill Top	Road Safety	Mark Herbert	Response-01285	This leads into a main route into Derby from Heanor etc, already very busy, goes past a nursery school which will only get busier with parents dropping kids, already had a few accidents extra traffic will make it worse
1.8	North of Breadsall Hill Top	Road Safety	Martin Harrison	Response-01395	I object to the proposed development due to significant road safety concerns. The increased traffic volume from a single access point will heighten the risk of accidents in an already busy area. Local roads, including the A38, Mansfield Road, and routes through Breadsall and Oakwood, are not designed to safely accommodate further pressure. This poses a danger to drivers, cyclists, and pedestrians alike.
1.8	North of Breadsall Hill Top	Road Safety	Masheda Chowdhury	Response-01339	1. Increased Traffic on Residential Roads: ? The proposed continuation of Hungerhill Crescent and enhancements to Dale Acre Way will funnel significantly more traffic through quiet, residential streets that are not designed for heavy or increased traffic volumes. ? Many of these roads are narrow, have limited visibility, and are already used by pedestrians, school children, and cyclists. 2. Existing Congestion and Limited Access: ? Dale Acre Way and nearby junctions already experience congestion, particularly during peak school and commuter times. ? Additional traffic from 160 homes would compound these issues, leading to longer delays and potentially unsafe driving behavior as drivers become impatient. 3. Impact on Pedestrian Safety ? Especially School Routes: ? Hungerhill Crescent and Dale Acre Way are commonly used by children walking to local schools and nurseries. ? Without comprehensive and enforced traffic calming measures, the additional vehicle volume significantly increases the risk of accidents involving pedestrians. 4. Lack of Safe Crossing Points and Footpath Concerns: ? There is a lack of safe pedestrian crossings along key parts of the route affected by the development. ? Breadsall Footpath 24 must be safeguarded, but increased traffic in the vicinity may make access to this route dangerous or discourage its use, especially by vulnerable groups. 5. Emergency Vehicle Access Concerns: ? Increased congestion may hinder access for emergency vehicles, particularly during peak times or in inclement weather. ? The continuation of Hungerhill Crescent may not be wide or robust enough to support both normal and emergency use with significantly higher volumes of cars. 6. No Clear Traffic Impact Assessment for Surrounding Roads: ? The development proposal refers only generally to ?necessary enhancements? without providing a detailed, publicly available Traffic Impact Assessment. ? Until this is independently assessed and made available, approving the development would be premature and pose risks to current and future road users. Recent traffic survey highlight figure that over 7,000 vehicles already use nearby routes daily
1.8	North of Breadsall Hill Top	Road Safety	Matt	Response-00604	Goes hand in hand with the congestion more cars more accidents
1.8	North of Breadsall Hill Top	Road Safety	Megan Byrne	Response-01432	Major impact see letter on other notes
1.8	North of Breadsall Hill Top	Road Safety	Michael Albinson	Response-00790	The road is too tight to allow 200 plus cars extra up and down it. 3 accidents have already occurred
1.8	North of Breadsall Hill Top	Road Safety	Michael Grignon	Response-01335	Due to the traffic congestion already in the area , road safety is already compromised, adding more housing to already congested area will only decrease road safety
1.8	North of Breadsall Hill Top	Road Safety	Michael Poplar	Response-00565	The continued overloading of inadequate roads obviously has an impact on safety, causing impatience and frustration.
1.8	North of Breadsall Hill Top	Road Safety	Mollie	Response-01549	Increased vehicle movements adjacent to the existing primary school and community centre create heightened collision risk for pupils and pedestrians. The absence of new footways or crossing facilities in the scheme is unacceptable.
1.8	North of Breadsall Hill Top	Road Safety	Monique Johnson	Response-00663	Pavements are narrow in the village and drivers are often going above the speed limit. It is dangerous for pedestrians and even more so with a children, prams or dogs. The increase in traffic will have a detrimental effect on safety.
1.8	North of Breadsall Hill Top	Road Safety	Mrs Bullock	Response-00966	As the pavements are narrow, there?s not enough space to walk safely now, more cars etc would make it unsafe for pedestrians.
1.8	North of Breadsall Hill Top	Road Safety	Mrs Francoise Poplar	Response-00602	Obviously the greater the strain on the system and the people using it, the greater the risk to safety.
1.8	North of Breadsall Hill Top	Road Safety	Mr SJ Read and Mrs S E Read	Response-01225	Road safety in Breadsall village would be adversely affected because of the increased congestion referred to in the previous section
1.8	North of Breadsall Hill Top	Road Safety	Mr Softley	Response-00344	This ?plan? will increase traffic volume significantly on the Durose estate on narrow roads that are not designed to cope with it. This will only reduce safety and increase the likelihood of accidents.
1.8	North of Breadsall Hill Top	Road Safety	Mrs Sarah Morley	Response-01515	Since the two new housing estates were built a few years ago, this road is now extremely congested at peak times. When trying to pull out of a junction, this at times already feels dangerous and unsafe, let alone if another 160 houses were going to be using this road too. And even more if the safe guarded land has houses built on it
1.8	North of Breadsall Hill Top	Road Safety	Nicholas lloyd	Response-00356	Given that Acorn Way and it's a joining roads are a primary route for emergency services, any additional congestion could impede their response times, potentially compromising public safety. Therefore, I urge the planning authority to consider these concerns and reject the application to prevent further strain on an already overburdened road network.
1.8	North of Breadsall Hill Top	Road Safety	Norma HASWELL	Response-01384	Over recent years, since Persimmon and Redrow built houses in Breadsall Hilltop, the number of cars cutting through Breadsall Village has increased exponentially. Now that our village school has relocated to Brookside Road, the main artery leading to Pektron Island (which connects to the A38) I genuinely fear for the safety of village residents, children and parents who need to cross the road.
1.8	North of Breadsall Hill Top	Road Safety	Oakwood Ward Councillors Eyre, Muthall and Trehwella	Response-01359	We do not believe that adding 160 houses to the Durose Country Park Estate, which does not have white lines at all junctions as it is designed to be a small and quiet CP Estate, is in any way suitable or reasonable.
1.8	North of Breadsall Hill Top	Road Safety	Patrick Baker	Response-01349	The Village school is situated on Brookside Road which has become a busy cut through for traffic from the A608 to the A61 or into Derby. Additional traffic from new housing will add to an already overloaded road at busy times with children crossing
1.8	North of Breadsall Hill Top	Road Safety	Philip Booth	Response-00683	the main road A608 is a 40 mph zone and more children and families in the area would make this a higher risk for safety.
1.8	North of Breadsall Hill Top	Road Safety	Rachael	Response-00332	Volume of traffic is already high with the two current house developments, road safety is a concern with parked cars, children will be unable to play safely.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Road Safety	Rachel Taylor	Response-00938	As per previous comment, there is already heavy traffic streaming through the village, not adhering to the 30mph speed limit and often with little caution or respect for the village, residents or type of road.
1.8	North of Breadsall Hill Top	Road Safety	Richard Hewitt	Response-01464	The Breadsall Village, Hilltop and Lime Lane have numerous scenic walks and therefore additional road traffic in a heavily used pedestrian environment will create more safety risks. The junction between Lime Lane and Brookside Road at Hilltop A608 has seen numerous accidents over many years, with one motorcyclist losing their life. The Greenway (used by many walkers) runs between Breadsall and the Morley Hayes, crosses the A608 at this junction. There is no way to stop the traffic and therefore pedestrians run the risk of injury each time they cross the road. Even without the additional traffic, it is already a junction that requires extreme care and caution.
1.8	North of Breadsall Hill Top	Road Safety	Richard Johnson	Response-00697	Speeding traffic is already a safety issue with cars using the village as a by-pass and frequently witnessed speeding.
1.8	North of Breadsall Hill Top	Road Safety	Richard Kingham	Response-00849	Huge increase in speeding drivers, and volume of traffic from Persimmon and Redrow estates making it more dangerous to enter or exit side roads such as Elmwood Drive safely. Island to bishops drive and Mansfield road constantly blocked to a standstill at peak times. Pedestrians having to walk into the road as pavements aren't wide enough for increased foot traffic either.
1.8	North of Breadsall Hill Top	Road Safety	Richard Stone	Response-01029	Getting out of Elmwood Drive is already a nightmare due to traffic everyday, there is poor visibility coming out of this junction. Adding even more cars to this road will make this tight area down the hill even worse.
1.8	North of Breadsall Hill Top	Road Safety	Richard Straw	Response-01412	My kids play out on the street safely at the moment you are planning on running a road right by my house.
1.8	North of Breadsall Hill Top	Road Safety	Rowe	Response-01299	Children often playing outside riding the bikes etc on Hungerhill Close. Traffic through Breadsall is already like a rat run.
1.8	North of Breadsall Hill Top	Road Safety	Roy Ling	Response-01243	It is now very difficult to cross Brookside Road Breadsall Village, an increase in traffic would lead to safety problems particularly with children going to and from school.
1.8	North of Breadsall Hill Top	Road Safety	Ruth Duxbury	Response-00301	More traffic has already led to higher amount of accidents at the junctions at lime lane and the A608 and casualties. Also Brookside Road is used as a cut through to the A61 and A38. Cars often speed down this road even though there is a school at the bottom of the road.
			Sally	Response-00873	Roads are already congested through the village with poor parking and speeding!
1.8	North of Breadsall Hill Top	Road Safety	Samantha Watts	Response-00869	The safety of Breadsall Village's roads is already a serious concern, with frequent accidents and near misses at key junctions such as Croft Lane/Brookside Road/Rectory Lane. The existing road infrastructure struggles to cope with current traffic levels, and additional housing would significantly increase the number of vehicles using these routes, escalating the risk of further collisions. High traffic volumes and excessive speeds through the village make roads particularly hazardous for pedestrians and cyclists. With limited traffic-calming measures in place, introducing more vehicles without adequate safety improvements will only heighten the danger.
1.8	North of Breadsall Hill Top	Road Safety	Sam Saunders	Response-01557	The plan to extend Hungerhill Close to provide vehicular access into the site would substantially increase traffic volumes on a residential street that is currently not designed to accommodate heavy flows. This increase is likely to cause congestion and elevate the risk of accidents. Furthermore, the surrounding roads, particularly Dale Acre Way and the A609 Hill Top, already experience considerable traffic during peak hours. Adding hundreds of additional vehicle trips daily could overwhelm the capacity of key junctions, potentially leading to longer queues, frustrated drivers, and a higher likelihood of collisions. Pedestrian safety is also at risk, as current footways along Hungerhill Close and Dale Acre Way are limited in width or absent in places, making it hazardous for those on foot. Children, in particular, would face increased danger, especially when walking to nearby schools or using local footpaths like Breadsall Footpath 24. The lack of safe crossing points and traffic calming measures compounds these risks, putting vulnerable pedestrians at greater risk of injury. Cyclists are another group that may be affected, as increased traffic without dedicated cycle lanes could result in dangerous conflicts on roads adjacent to popular routes such as the Great Northern Greenway. Without robust measures, the proposed development could undermine efforts to promote safe, active travel. In summary, without a comprehensive transport assessment and appropriate infrastructure improvements, the development risks exacerbating traffic congestion and compromising the safety of motorists, pedestrians, and cyclists alike.
1.8	North of Breadsall Hill Top	Road Safety	Sandra Perry	Response-00307	More road users; speeding on Brookside road has significantly increased through Breadsall village.
1.8	North of Breadsall Hill Top	Road Safety	Sarah Hewitt	Response-01461	Constant flow of traffic through the village past the village school.
1.8	North of Breadsall Hill Top	Road Safety	Scarlett Hamblin	Response-00398	There are no traffic lights to enable safe crossing of hilltop. We do not need to add any more speeding drivers to the roads.
1.8	North of Breadsall Hill Top	Road Safety	Scott Watson	Response-01284	Breadsall Village's roads are already burdened with safety concerns, with frequent accidents and near misses occurring at key junctions, such as Croft Lane, Brookside Road, and Rectory Lane. The existing infrastructure is struggling to handle current traffic levels, and further residential development will inevitably add more vehicles, heightening the risk of collisions. Speeding and heavy traffic through the village pose ongoing threats, particularly to pedestrians and cyclists. Without adequate traffic-calming measures, introducing additional vehicles would further compromise road safety and place more strain on an already overstretched network.
1.8	North of Breadsall Hill Top	Road Safety	Sharon Coward	Response-00348	More traffic on already busy roads which were not built to carry such a large amount of traffic will put both road users & pedestrians at risk.
1.8	North of Breadsall Hill Top	Road Safety	Silvia Mircic	Response-00884	This proposal raises significant concerns about the increase in traffic volume, particularly along Brookside Road, a relatively narrow road not designed for heavy use, and as a consequence heightened risks for both drivers and pedestrians.
1.8	North of Breadsall Hill Top	Road Safety	simon morris	Response-00866	The junctions of Brookside road/Lime lane onto the A608 have already been subject to traffic accidents (with one fatality) therefore any increase in traffic as a result of this planning will make matters worse. Children are encouraged to walk to school however the footpaths down Brookside road and on the A608 are extremely narrow so the increased volume of speeding drivers increase the potential for serious pedestrian accidents.
	North of Breadsall Hill Top	Road Safety	Stephen and Janet Allis	Response-01221	speeding through Breadsall village needs 20 mph

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Road Safety	Steven furness	Response-01516	See traffic comments. It is very busy around the school. This development will increase traffic.
1.8	North of Breadsall Hill Top	Road Safety	Stuart Brown	Response-00771	People including young children currently use dale acre way to walk and play etc. increased housing that will use dale acre way as through road will have safety implications for the road users and pedestrians.
1.8	North of Breadsall Hill Top	Road Safety	Susan Dundon	Response-00396	It will make roads worse
1.8	North of Breadsall Hill Top	Road Safety	Thomas Bateman-Wong	Response-00985	See Traffic
1.8	North of Breadsall Hill Top	Road Safety	Thomas Monkhouse.	Response-01318	Traffic through Breadsall village has seen a major increase in volume with few observing the 30 mph speed limit, and some travelling well over the limit. Similarly the 7 ton weight seems to be regularly ignored. The proposals will worsen this situation.
1.8	North of Breadsall Hill Top	Road Safety	Tom Parker	Response-01398	Huge concern with the current amount of houses never-mind anymore. The amount of cars that drive through daily and park on kerbs/blocking junctions is very dangerous when there are children out playing.
1.8	North of Breadsall Hill Top	Road Safety	Tony Hawkins	Response-01532	The consultation states that access will be from Hungerhill Crescent. This is incorrect as it is actually Hungerhill Close. This would mean opening a road which is currently a Close ?dead end? to a through road. This road is not suitable nor wide enough to carry further traffic safely. Such new road would pass over a public footpath used by the local community gaining access to the Great Northern Greenway and Breadsall village by foot. This route is also used by school children who attend the school in the village further volumes of traffic would make this unsafe. The consultation states that access will also be provided from Dale Acre Way, again this road is in fact a ?dead end?. Such access would mean crossing an existing pathway used as mentioned above and the design of the estate in providing recreational space will be changed dramatically and no longer would be able to be enjoyed in the way that the estate does now. The road is also narrow and could not deal with increased volumes of traffic safely. The island to the entrance of the estate is all ready congested and un safe due to unclear road markings. Adding a further 160 dwellings could potentially create 300 plus cars using a small road to pass through an existing small estate reducing the air quality further. Building on green belt will reduce the amount of open space which naturally provides better air quality.
1.8	North of Breadsall Hill Top	Road Safety	Tracey Turner	Response-00334	Heavy traffic around the traffic island at Dale Acre Way has seen many instances road rage due to level of traffic and poor signage. In the evenings it's used as a race track!
1.8	North of Breadsall Hill Top	Road Safety	Wobbina Bugg	Response-00846	Traffic in Breadsall Village is already too heavy.it tails back from the Pektron roundabout to the café and causes accidents.
1.8	North of Breadsall Hill Top	School Capacity	Abbie quinn	Response-00616	As a teacher I am aware that local primary and secondary schools are almost if not at capacity from new housing in the area including Durose and Persimmon across from Breadsall.
1.8	North of Breadsall Hill Top	School Capacity	Adam Millward	Response-00418	Are you planning to build more schools as part of this expansion? At the very least a nursery and primary / junior school should be built.
1.8	North of Breadsall Hill Top	School Capacity	Alexander lee	Response-01439	Quite frankly it is becoming a joke to get a school place at a 1st or even 2nd choice. This will only make the problem worse.
1.8	North of Breadsall Hill Top	School Capacity	Alex Cargill	Response-01834	*Schools Further overloading
1.8	North of Breadsall Hill Top	School Capacity	Alistair Crawford	Response-01404	I work in education and have led specialist schools across the East Midlands and also sit on a number of national groups advising DfE policy. Derby currently has a significant lack of specialist School places meaning that many learners with significant level of needs are placed outside of the city which is most importantly less than ideal for the young person and their family and secondly comes at a significant cost to the LA and therefore tax payer (please take time to look at High needs block funding and the significant deficits and debt in both Derby city and Derbyshire). Clearly no thought to additional provision is in place which means more young people / families will suffer and already huge (tens of millions of pounds) of debt will continue to spiral.
1.8	North of Breadsall Hill Top	School Capacity	Amber Hubbard	Response-00845	Local schools are already at capacity there is no plan to address this. Also no additional pre school capacity
1.8	North of Breadsall Hill Top	School Capacity	Andrea R Rowley	Response-01230	Existing education resources and facilities are already very over stretched. What plans are in place to increase capacity to accommodate the extra people coming into the area?
1.8	North of Breadsall Hill Top	School Capacity	Andrea wightman	Response-00354	So what schools are all of these children supposed to go to? All schools in the area, with the exception of da Vinci, are full
1.8	North of Breadsall Hill Top	School Capacity	Andy Madeley	Response-00381	Schools are already overcrowded, with all these developments, where will the kids be educated.
1.8	North of Breadsall Hill Top	School Capacity	Angela Smyth	Response-00296	There are two schools in Breadsall and Oakwood. They both have a small catchment and are at capacity.
1.8	North of Breadsall Hill Top	School Capacity	Ann Sherlock	Response-00410	The map used is out of date and the local schools are already at capacity, with one local school having a waiting list for every single year. Adding the current proposal will be extremely detrimental to the local schools, and it is disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the area, missing two extremely large housing estates and falsely portraying a smaller population and impact the housing proposal will have.
1.8	North of Breadsall Hill Top	School Capacity	A O Smith	Response-01798	There is no provision in the proposals to support the infrastructure needed , such as schools
1.8	North of Breadsall Hill Top	School Capacity	Beverly Jordan	Response-01330	Two estates have been established without a school so further infrastructure needs in this area will result in increase pressure in this area
1.8	North of Breadsall Hill Top	School Capacity	Brendan Hargreaves	Response-00629	not enough schools in the area
1.8	North of Breadsall Hill Top	School Capacity	Cameron Coope	Response-00369	Primary school and secondary schools in the area are already nearly full in most year groups.
1.8	North of Breadsall Hill Top	School Capacity	Carl Hill	Response-00670	No schools in the area no greater intake for Breadsall Village school.. no spaces at the only school in Oakwood and senior schools all a travel away
1.8	North of Breadsall Hill Top	School Capacity	Carol Westcott	Response-00973	Schools are at full capacity and new builds means children do not get places in their satellite position impacting on distance people have to travel to take their children to school meaning more cars on the road

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	School Capacity	Carys Whomsley	Response-01438	I am writing to register my strong objection to the above-mentioned planning application, both in its original and revised form. Despite the removal of the area adjacent to the A61 in the amended proposal, I believe that the proposed development remains deeply inappropriate and harmful for the following reasons: 1. Contravention of Policy CP18 and Loss of Green Wedge The proposed site lies just outside the designated Green Belt, but crucially directly abuts existing woodland and open countryside, forming part of the vital green corridor along the Great Northern Greenway. This area functions as a green buffer, enhancing ecological connectivity, supporting biodiversity, and providing visual and recreational amenity to local residents, walkers, and cyclists. Despite claims of woodland retention, the development threatens the integrity of this space. Proximity to new housing would increase human pressure on the natural environment, likely leading to degradation of woodland, fragmentation of habitats, and a reduction in wildlife corridors. No Biodiversity Net Gain (BNG) assessment appears in the application documents, raising concerns about whether the legally mandated 10% net gain can or will be achieved. Biodiversity enhancements delivered off-site would do nothing to mitigate local ecological loss, thereby undermining environmental sustainability in the area. Moreover, the site lies adjacent to land recently released from the Green Belt and under consideration for housing allocation by Erewash Borough Council. The cumulative impact of developing both sites would be devastating: a continuous sprawl from Derby through to Breadsall, resulting in the elimination of the settlement gap and permanent damage to the character of the Great Northern Greenway. 2. Environmental, Infrastructural, and Policy Concerns The proposal directly contradicts the National Planning Policy Framework (NPPF) Paragraph 143, particularly the goals of preventing urban sprawl and protecting the openness of Green Belt land. It also ignores the findings of the Strategic Housing Land Availability Assessment (SHLAA 359), which previously deemed the site unsuitable for residential development due to accessibility and environmental limitations. The development is completely incompatible with the objectives of the Breadsall Parish Neighbourhood Plan 2019?2029, particularly the aims to: Preserve the rural character and prevent urbanisation; Avoid coalescence with the Derby conurbation; Safeguard wildlife and ecological features; Control flood risk and infrastructure strain; Protect valued green spaces and visual vistas.
1.8	North of Breadsall Hill Top	School Capacity	Carys Whomsley	Response-01438	Breadsall has already experienced increased flooding, attributed to upstream developments like Persimmon Estate and Breadsall Hilltop, which lie within the same water catchment area. Any additional development would worsen this issue, placing homes and infrastructure at risk. Furthermore, the proposal relies on access through two existing public footpaths within the Redrow estate and offers no concrete infrastructure improvements. The A608 is already over-congested, and no plans are presented to handle increased traffic or to safeguard children commuting to local schools. 3. Loss of Community and Ecological Value This land offers more than just open space?it is a much-loved and well-used amenity for the local community. It serves as a peaceful escape for informal recreation and nature engagement, and its visual and environmental contributions to the neighbourhood are significant. Its destruction would represent a major loss in local character and quality of life. The proposal underestimates the pressure on existing services, lacks detailed mitigation plans, and fails to explain how proposed footpaths will link meaningfully into existing routes. Nearby Local Wildlife Sites will be impacted
1.8	North of Breadsall Hill Top	School Capacity	Chris Harris	Response-01521	Not enough capacity already
1.8	North of Breadsall Hill Top	School Capacity	Chris Hopkinson	Response-01396	Building Erewash housing joined onto an existing derby city estate will add more pressure to derby city
1.8	North of Breadsall Hill Top	School Capacity	Chris Lunn	Response-01410	Schools are already doubling their intakes for the next academic year and I am speaking from personal experience. No extra teachers are being employed and no additional accommodation or resources are being provided. Schools will become oversubscribed and children required to travel further, out of area, to obtain a school place. This will result in additional vehicles and journeys being made, an increase in pollution and longer, more stressful days for the children. This goes very much against Derby Council?s goals for sustainable travel to improve air quality and reduce carbon. Ultimately it is the children and their education who will suffer. This pattern is only set to repeat itself across the area as the numbers of children rises exponentially. The 160 new houses proposed are likely to total in the region of 500-650 adults and children. Most of these will require at some point, healthcare, leisure facilities, education and also the means to travel, either by car or public transport. Public transport, although technically available in the vicinity, is not accessible for everyone and does not necessarily run at convenient times. Buses in the area are well known to be infrequent and unreliable, hence I have to take my son to school by car, along with most parents who do not live close enough to walk. These numbers of houses are likely to produce 160-320 vehicles.
1.8	North of Breadsall Hill Top	School Capacity	Clare Roters	Response-01553	School placements are few and far between in the area and no new schools are being built
1.8	North of Breadsall Hill Top	School Capacity	David Byrne	Response-01433	It has been a real struggle finding suitable allocation for schooling and as such have been pushed to a school in darley abbey. Adding more residents will compound this problem
1.8	North of Breadsall Hill Top	School Capacity	Edward James Gregory	Response-00728	Schools are already at capacity, and Erewash does not provide schools in this area. Erewash should provide developments where it will service the residents, not assume other areas will provide this.
1.8	North of Breadsall Hill Top	School Capacity	Elaine hodgkinson	Response-00854	Local schools are already over subscribed with only one small primary school in Oakwood.
1.8	North of Breadsall Hill Top	School Capacity	Elena Maxim	Response-01573	There is already high demand for schools and nurseries around the area
1.8	North of Breadsall Hill Top	School Capacity	Emma Binns	Response-00843	There are not enough local schools to cope with new housing.
1.8	North of Breadsall Hill Top	School Capacity	Emma Charlton	Response-01545	Local schools are at full capacity so this development is not sustainable in terms of local school places
1.8	North of Breadsall Hill Top	School Capacity	Emma Daniels	Response-00346	There is 1 small school in the area and already oversubscribed. Where are the children going to school?
1.8	North of Breadsall Hill Top	School Capacity	Emma Hawkins	Response-00813	The senior school which can be attend to by foot Da Vinic Academy is already at capacity serving a vast catchment area including Breadsall, Oakwood, Breadsall Hill Top and Chaddesden. The Breadsall village school is small with an intake of only 16 for reception

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	School Capacity	Faye Wilkinson	Response-01129	Residents and members of the wider community are already struggling to find school places for their children. These plans include no suggestions to build schools or facilities for this already struggling community. There are also no plans to build schools anywhere within the local area. It is not environmentally friendly to expect parents to drive their children to schools in neighbouring towns and villages.
1.8	North of Breadsall Hill Top	School Capacity	Gary Murfin	Response-00374	School capacity in the is already limited especially at the junior school in Oakwood there needs to be plans to ensure to local infrastructure can cope with new homes and people and children in the area , are new schools being built
1.8	North of Breadsall Hill Top	School Capacity	Gaynor Pawley	Response-00627	What are the plans to increase capacity of schools? With more children in the area especially with social housing, walking children along heavily congested routes to existing schools would pose a risk to serious accidents.
1.8	North of Breadsall Hill Top	School Capacity	Ged Doherty	Response-01822	The area is already stretched beyond the limit for schools and to force through yet more development into such a small area is nonsensical and will have a considerable impact on those already resident.
1.8	North of Breadsall Hill Top	School Capacity	Gemma Cotter	Response-01374	School provision around the Oakwood/ Breadsall area is already inadequate. Many children from these areas already have to be driven across to other areas such as Chaddesden, Spondon, Morley, Stanley, Allestree and Heanor. The nearest primary school is a mile away by the shortest route which is not suitable all year round due to lighting and footpath conditions. The realistic practical strategy will be for parents to choose to drive adding congestion to the A608, Stratford Road junction and into Breadsall Hilltop. There is a lack of suitable SEN provision for children in this area with children not being given allocated places at appropriate special schools that can meet their needs. Secondary school applications are precarious with choices made across a broad range of schools and being subject to demand in other suburbs of Derby and surrounding areas of Derbyshire. This undermines the community of this area of Derby as children living in close proximity to each other are schooled across a large geographical area.
1.8	North of Breadsall Hill Top	School Capacity	Harry Mee	Response-00882	The school is small and very limited spaces are available as it is. 190 houses would mean that less spaces are available in the school for current residents as well as new/potential.
1.8	North of Breadsall Hill Top	School Capacity	Helen Walker	Response-00325	There has always been a problem with schools around this area, Oakwood never had the schools it was promised when it was built my children are all grown up but my granddaughter goes to the same school they went to in Allestree as there are no good schools in this area and a lack of places
1.8	North of Breadsall Hill Top	School Capacity	Hulland. Bdverley	Response-00496	More good quality schools needed
1.8	North of Breadsall Hill Top	School Capacity	Jake Moore	Response-01202	The proposed development of approximately 160 new homes will significantly increase the number of families and children living in the area, placing unsustainable pressure on already stretched local schools. Primary and secondary schools in Oakwood and surrounding catchments are operating at or near full capacity, with limited options for expansion. Without clear, funded plans for additional school places, this development is likely to result in: Oversubscribed schools, forcing children to travel longer distances outside their local area; Overcrowded classrooms, negatively affecting the quality of education; Additional pressure on teachers and support staff, who are already managing high workloads; Increased traffic congestion due to parents driving children to schools further away. There is no guarantee that new residents will have access to local education, and the planning application does not include any proposals to expand or build new school infrastructure to accommodate this growth. Approving the development without addressing this shortfall would be irresponsible and contrary to the need for sustainable, community-focused development. The 230 houses that redrow built in 2020 has already place a strain on these issues above with no provision for additional schooling when they were built in 2020.
1.8	North of Breadsall Hill Top	School Capacity	James Roberts	Response-00673	The proposal makes no consideration to school capacity, so obviously 160 extra households will put additional strain on the schools in the area given they are already undersized, understaffed, and underfunded (a general issue across the country)
1.8	North of Breadsall Hill Top	School Capacity	James skivington	Response-00359	Schools are very hard to get into in the local area already. The only school available are schools in the catchment area that are not the best schools
1.8	North of Breadsall Hill Top	School Capacity	Jamie Branagan	Response-00335	Adding 160 homes will clear add more strain in the current school services offered. 160 homes equates to c350-500 people, im sure many of which will be families and require school places. Because you're proposing this build on the edge of your boundary line it's Oakwood school that will be put under strain NOT Erewash. The closest Erewash school (Breadsall CoE) has only recently been built and can't increase its current capacity due to constraints on the building.
1.8	North of Breadsall Hill Top	School Capacity	Janet O'Brien	Response-01835	There is no provision to support the extra housing in terms of schools,
1.8	North of Breadsall Hill Top	School Capacity	Janette Glenn	Response-00422	Existing schools already have to turn away applications from local children, within walking distance. The new development will worsen the issue.
1.8	North of Breadsall Hill Top	School Capacity	Jason Reader	Response-00320	No mention of additional school provision, Breadsall village primary is already over subscribed.
1.8	North of Breadsall Hill Top	School Capacity	Jeanette Kent	Response-00402	Schools in the area are already over subscribed, more houses means more childrens not being able to get into the choice of schools. Over crowded classrooms etc
1.8	North of Breadsall Hill Top	School Capacity	Jessica Softley	Response-01408	Additional housing will put an additional demand on school places. As someone looking to start a family in the near future, nursery and school places are of concern.
1.8	North of Breadsall Hill Top	School Capacity	John Harlow	Response-00619	School capacity is very restricted in this area with little or no extra capacity.
1.8	North of Breadsall Hill Top	School Capacity	John Hudson-Peat	Response-01833	The lack of infrastructure to service new developments are none existence (shops/schools/GPs etc) just take a look at the recent developments close by.
1.8	North of Breadsall Hill Top	School Capacity	Jon Lewis	Response-00347	The majority of the local schools are all ready over subscribed, the additional housing will only make this worse and result in even more children having to travel longer distances to and from school
1.8	North of Breadsall Hill Top	School Capacity	Justine Dean	Response-00844	There is already a lack of capacity in the local schools. Please build another to cater for this

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	School Capacity	Justin Windsor	Response-01544	We currently live in the area and have seen much disruption regarding school selections. The most local primary schools are already at max capacity and families from the area are already having to look at schools outside of the Oakwood/breadsall hilltop district, some as far as allestree.
1.8	North of Breadsall Hill Top	School Capacity	Kara Crossley	Response-00865	The local primary school has only just moved to new grounds to accommodate the amount of children needing placement. There are no additional local schools to accommodate a growing population
1.8	North of Breadsall Hill Top	School Capacity	Karen Read	Response-00923	with current plans to build 190 houses there is currently no spare capacity within the existing education system where do you propose to build new schools
1.8	North of Breadsall Hill Top	School Capacity	Karen Smith	Response-00635	The local hospitals and doctors are over subscribed with extra service users
1.8	North of Breadsall Hill Top	School Capacity	Keerthi	Response-01450	There is only one primary school in this catchment area and even that has got ofsted ratings in the lower end. There should be increased resources for children before we add new houses.
1.8	North of Breadsall Hill Top	School Capacity	Kev Rodgers	Response-00897	Well, that's part of the reason everyone has cars - 'we' build houses, but hardly ever the necessary supporting infrastructure. Where will children go to school?
1.8	North of Breadsall Hill Top	School Capacity	Kimberley Woodward	Response-01445	There isn't enough choice for schools and catchments as it is in this area without more houses and more people.
1.8	North of Breadsall Hill Top	School Capacity	Kirstin Woodward	Response-01043	The reality is that there is no capacity in the local primary or secondary schools. I tried but resulted in both my children having to attend schools outside the area, which meant I had to drive them as part of my daily commute. As they got older, they had to rely on two buses each way to get to school. This problem still persisted after 20 years. I still see many children being transported by car or catching buses to schools across the city. It's unfortunate that the area lacks a strong school identity, with children wearing uniforms from various schools across Derby rather than having a shared local school community.
1.8	North of Breadsall Hill Top	School Capacity	K Munson	Response-00631	Having previously objected to housing increases in this area on this issue where there is a significant shortage of school places this would only exacerbate the problem Infrastructure FIRST schools roads GP surgeries then build affordable housing
1.8	North of Breadsall Hill Top	School Capacity	Laura Louca	Response-01266	Despite adding around 385 homes already in the area and proposing a further ~666 (plus those on Acorn Way) you have introduced. I knew schools or extended those already in the area. If half of all of the new homes contain just one child that's over 500 children requiring a school place - where..?
1.8	North of Breadsall Hill Top	School Capacity	L Burton	Response-00342	The children in our area did not get into their chosen local school within walking distance. Many are driving 20-30 minutes to find a school as they are oversubscribed and the local catchment school has many complaints.
1.8	North of Breadsall Hill Top	School Capacity	Lee Wheatley	Response-01492	1. Current School Capacity: o Primary Schools: The primary school serving Breadsall is Breadsall CoFe VC Primary School. ? According to The Good Schools Guide, Breadsall CoFe VC Primary School has approximately 114 pupils. ? Information from the Get Information about Schools service indicates the school has a capacity of 112 pupils. This suggests the school is currently operating very close to, or at, full capacity. o Secondary Schools: Students from Breadsall and Breadsall Hilltop typically attend secondary schools in the wider Derby area. The increased housing in Breadsall will add to the pressure on secondary school places across the region. Potential secondary schools include those within both Derby City and southern Derbyshire. 2. Age Demographic: The age demographic of the current estate is mostly that of younger families and it's reasonable to assume this would be the same of the new estate. This would see an increase in the pressure placed upon existing schools. 3. Impact of Increased Population: o The proposed development will lead to a substantial increase in the number of school-age children. This will exacerbate existing capacity issues and create new challenges: ? Oversized Classes: With limited capacity, schools may be forced to increase class sizes beyond recommended levels. This can negatively affect the quality of education, as teachers have less time to devote to individual students. The current pupil-to-teacher ratio at Breadsall CoFe VC Primary School is reported as 22:1. An increase in this ratio would be detrimental. ? Shortage of School Places: A lack of sufficient places may mean that children are unable to attend their local school and have to travel further afield. This can disrupt family life, increase transportation costs, and reduce children's sense of community. ? Increased Pressure on Resources: Existing schools may struggle to cope with the increased demand for resources, including teaching materials, classroom space, and support staff. This can lead to a decline in the overall quality of education. 4. Accessibility of Schools: o The location of new housing in relation to existing schools is crucial. ? Breadsall CoFe VC Primary School is located on Brookside Road in Breadsall. The accessibility of this school from new development sites needs to be carefully assessed. ? For secondary schools, the increased distance for some students, combined with potential traffic congestion, could lead to longer journey times and difficulties for parents. o Increased traffic congestion, a likely consequence of new development, will make school drop-offs and pick-ups more challenging and potentially less safe. 5. Early Years Provision: o The availability of nursery places and early years childcare is also a concern. New housing developments will generate increased demand for these services and, having a toddler myself, know that placements within the area are already strained. 6. Funding and Resources: o Expanding school capacity requires significant investment. ? Additional funding will be needed to build new classrooms, hire more teachers, provide necessary resources, and maintain the quality of education. ? The Core Strategy Review Amendment must clearly outline how this funding will be secured and allocated. It should not place an undue burden on existing residents or the schools themselves. 7. Impact on Existing Community: o Expanding schools can have implications for the existing community. ? Increased traffic around
1.8	North of Breadsall Hill Top	School Capacity	Linda Morris	Response-00867	d schools can cause disruption and safety concerns. ? The expansion of school facilities may require the use of green space or other community resources.
1.8	North of Breadsall Hill Top	School Capacity	Linda Morris	Response-00867	When the new school was built Derby stated they didn't need further places and the school is at capacity. So what will happen if further houses are built the secondary schools in the area are also over subscribed and no sixth form is in the locality
1.8	North of Breadsall Hill Top	School Capacity	Lisa Stone	Response-01018	All local schools are full to the brim with pupils if there isn't enough space to build in schools etc to accommodate the additional people then it's not the right space to build on.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	School Capacity	Lorna Coope	Response-00364	Parents are having to send their children to schools in Little Eaton, Spondon, Chaddesden, Morley and Smalley as Park View and Breadsall Primary do not have capacity to serve the residents. Are there plans in place to increase school capacity to suit the existing new build estates and the proposed ones?
			Lucy Lewis	Response-01459	Already very low number of children getting into Breadsall C of E due to capacity!
1.8	North of Breadsall Hill Top	School Capacity	lynne hollis	Response-01234	Local schools are already at capacity, and this development will add further strain. Without investment in expanding educational facilities, overcrowding could impact the quality of education for current and future students.
1.8	North of Breadsall Hill Top	School Capacity	Mandy Cooling	Response-00312	Any such development must surely need to include plans for critical infrastructure to support the influx of hundreds more residents such as plans for doctors? surgeries (which are already groaning under the weight of thousands of patients), schools etc.
1.8	North of Breadsall Hill Top	School Capacity	Margaret Stafford	Response-01231	Existing education resources and facilities are already overstretched. I cannot see any proposal to add additional infrastructure as part of this proposal.
1.8	North of Breadsall Hill Top	School Capacity	Martin Harrison	Response-01395	I object to the proposed development due to the pressure it will place on local school capacity. Schools in the area are already operating at or near their limits. An increase in population from the new development would overwhelm these facilities, affecting the quality of education and access for current and future residents.
1.8	North of Breadsall Hill Top	School Capacity	Masheda Chowdhury	Response-01339	1. Local Primary and Secondary Schools Already at or Near Capacity: ? Schools in the Oakwood and Breadsall area ? including Breadsall CE Primary, Parkview Primary, and Lees Brook Academy ? are already fully subscribed or oversubscribed in several year groups. ? Adding 160 new homes could mean dozens of additional children, without any corresponding increase in classroom space or staffing. 2. No Guaranteed Provision of Additional School Places: ? The policy does not include any commitment to build new educational facilities or expand existing schools in the area. ? There is no indication that developer contributions (e.g. via Section 106 agreements or Community Infrastructure Levy) will be directed toward education. 3. Disruption to Educational Access and Increased Pressure: ? If local schools cannot accommodate new pupils, families may be forced to send children to schools outside the area, leading to longer travel distances, family disruption, and increased car usage. ? This also affects current residents who may lose local school priority due to new demand. 4. Lack of Forward Planning for Early Years and SEND Provision: ? The policy makes no mention of nursery, early years, or special educational needs and disabilities (SEND) provision. ? These services are already under significant strain, and new development without mitigation will further disadvantage vulnerable children and families. 5. Safeguarded Land Suggests More Growth ? Without Education Planning: ? The identification of an additional 14.6 hectares of safeguarded land implies further residential expansion. ? Yet there is no strategic education plan tied to these long-term growth areas, creating a cumulative and unsustainable pressure on school infrastructure. I am already concerned for my own child's school placement and lack of availability when she reaches school age in 2027.
1.8	North of Breadsall Hill Top	School Capacity	Megan Byrne	Response-01432	The addition of new housing in this location will inevitably increase demand for school places at both primary and secondary level. Local schools are already facing capacity pressures, and there is currently no clear indication within the application documents of how this development would contribute to addressing that shortfall. Without a robust plan to expand school capacity or secure adequate funding for additional educational provision, the proposed development risks placing further strain on local schools, potentially to the detriment of current and future pupils. This could negatively impact educational outcomes and overall community well-being. I urge the Council to ensure that the implications for local education provision are fully assessed and addressed before any planning permission is granted.
1.8	North of Breadsall Hill Top	School Capacity	Melissa Little	Response-00389	As I resident of Oakwood, there are a limited number of schools in the immediate area. Parents are sometimes not able to get there child/children into the preferred school location due to the number of people. This is hugely inconvenient to working parents. Increasing the number of families in the area will only put additional pressure on our already limited schooling resource.
1.8	North of Breadsall Hill Top	School Capacity	Michael Albinson	Response-00790	We have already had to accept our kids couldn't get into local schools due to the population in the area. We have to travel to 2 separate locations 1 being little Eaton and the other being Heanor just to get our kids in schools
1.8	North of Breadsall Hill Top	School Capacity	Michael Grignon	Response-01335	With two housing projects already in existence with no new schools , surgeries or other amenities to support these communities, this is a recipe to disaster
1.8	North of Breadsall Hill Top	School Capacity	Michael Poplar	Response-00565	There is no school capacity, even the recent school built in Breadsall village is up to full capacity. Additionally it primarily takes children from the Oakwood area thus increasing traffic. Increasing school capacity within Oakwood rather than a drive from it would have been more sensible.
1.8	North of Breadsall Hill Top	School Capacity	Mollie	Response-01549	Breadsall Church of England Primary School, Morley Primary and All Saints? CE Primary in nearby Breadsall are currently at or above 95% capacity (DFE July 2023). A sudden influx of school?age children from 200+ new dwellings would necessitate costly temporary classrooms or force children to travel out of area. The Long Eaton School is oversubscribed in key year groups; parents already face disappointment at first preference. This development offers no on?site education contribution or land allocation for a new school.
1.8	North of Breadsall Hill Top	School Capacity	Monique Johnson	Response-00663	This is also a major problem as Breadsall primary school and Oakwood are already at capacity. So where would the children living on the new estate go?
1.8	North of Breadsall Hill Top	School Capacity	Mrs Bullock	Response-00966	The local school is full now
1.8	North of Breadsall Hill Top	School Capacity	Mrs Francoise Poplar	Response-00602	As far as I'm aware all local schools are up to capacity including the recently constructed school in Breadsall, which mainly serves children from the Oakwood estates. Virtually all these children travel to school by car adding to the traffic problems.
1.8	North of Breadsall Hill Top	School Capacity	Mr SJ Read and Mrs S E Read	Response-01225	The new development would clearly generate additional demand for school places but there is no specific provision for this.
1.8	North of Breadsall Hill Top	School Capacity	Mr Softley	Response-00344	Where are the extra schools in Oakwood for this development? There seems to be no plan with Derby City council to accommodate the extra demands. It is very concerning as someone in the stages of starting a family that so many developments are proposed on our doorstep with no apparent plan beyond picking some empty fields on a map.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	School Capacity	Mrs Sarah Morley	Response-01515	The schools are already over run with the number of houses already in this area. There are over 450 houses that have been recently built and no extra school were build to accomodate this, where are the children in the new houses going to go to school?
1.8	North of Breadsall Hill Top	School Capacity	Mr Stephen Langton	Response-00025	There is a clear principle that developments within Erewash borough should not be relying upon and using school facilities supplied and funded by the adjacent Derby City Council. This development should be considered to be an extension to the Erewash settlement of Breadsall, and NOT an extension to Derby city. Breadsall village will require the necessary investment for school places and other infrastructure to support this development by Erewash Borough Council
1.8	North of Breadsall Hill Top	School Capacity	Nathan Cooke	Response-00896	Schools in the local area are already near capacity.
1.8	North of Breadsall Hill Top	School Capacity	Nicholas Lloyd	Response-00356	I object to this planning application on the grounds that the proposed development will place additional pressure on local schools, which are already operating at or near full capacity. The introduction of 500 new homes is projected to increase the local child population, thereby intensifying demand for school places. This surge could lead to overcrowded classrooms, reduced educational quality, and limited access to preferred schools for existing residents. While developers may offer financial contributions to mitigate these impacts, such measures often fall short of addressing the full extent of the strain on educational infrastructure. The National Planning Policy Framework emphasizes the importance of ensuring that developments do not undermine the ability of existing communities to access essential services, including education. Without a comprehensive plan to expand school facilities or increase capacity, this development poses a significant risk to the quality of education available to all local children.
1.8	North of Breadsall Hill Top	School Capacity	Oakwood Ward Councillors Eyre, Mulhall and Trehwella	Response-01359	We have seen little to no information provided in the consultation documents with regards to schooling. We would like this information.
1.8	North of Breadsall Hill Top	School Capacity	Paige Skivington	Response-00366	The schools are already struggling with the level of need for spaces. They're oversubscribed and the people in the area are not getting into schools in the area. There are already so many of us, myself included who have had to go out of the area for a school which impacts families jobs and time and will not be able to cope with any more people needing spaces.
1.8	North of Breadsall Hill Top	School Capacity	Paul Wilkes	Response-01527	There should not be anymore developments until Oakwood has the facilities to cope with additional pupils. My son and his wife had to leave Oakwood as they were not able to find a school for their children.
1.8	North of Breadsall Hill Top	School Capacity	Philip Booth	Response-00683	I have not seen any plans for additional School capacity. I would expect the children from this site would use Derby City schools, how would this work as the burden would fall at the City not Erewash?
1.8	North of Breadsall Hill Top	School Capacity	Rachael	Response-00332	It is incredible difficult for families to get their preference school, often having to travel a distance to get their children into Good or Outstanding provision. The number of families needing to appeal due to missing out on over subscribed schools due to the increase of families in the current housing estates. Adding another 160 dwelling will put far too much pressure on an already struggling education system.
1.8	North of Breadsall Hill Top	School Capacity	Richard Johnson	Response-00697	The new school capacity will be insufficient considering the increase in children living in the existing new development and the proposed new future developments.
1.8	North of Breadsall Hill Top	School Capacity	Richard Kingham	Response-00849	Me myself have had to send my daughter to a School 30 mins away in the car due to the over crowding of classrooms locally. Over 600 homes built within 1-1.5 miles and not new schools.
1.8	North of Breadsall Hill Top	School Capacity	Richard Straw	Response-01412	Not enough school capacity in the local area
1.8	North of Breadsall Hill Top	School Capacity	Roy Ling	Response-01243	Breadsall Village Primary is now up to full capacity extra housing would lead to problems with child education.
1.8	North of Breadsall Hill Top	School Capacity	Ruth Duxbury	Response-00301	Schools in the area are already stretched. Budget restrains often mean schools struggle to afford staff and maintain the quality of meals.
1.8	North of Breadsall Hill Top	School Capacity	Sam Saunders	Response-01557	The addition of approximately 160 new homes is likely to bring dozens of school-age children to the area, increasing demand for places at nearby primary and secondary schools. Current data shows that schools within the Parkside cluster, which includes Breadsall Church of England Primary School and Morley Primary School, are already operating close to or at full capacity. For example, recent figures indicate that these schools collectively serve around 1,200 pupils, with limited spare places available. The pressure on school places is exacerbated by ongoing population growth in Derbyshire and surrounding areas, making the allocation of new places increasingly difficult. Without additional investment in school infrastructure or expansion of existing schools, the local education system may be unable to accommodate the influx of new students from the development. This could result in children being forced to attend schools further away, disrupting their education and daily routines. Furthermore, local secondary schools also face capacity constraints, with many already oversubscribed. The development?s proposal lacks clarity on how it intends to address these issues, including whether contributions toward expanding school facilities or funding new educational provision will be made. The impact on school capacity is a critical consideration, particularly for families moving into affordable housing within the development. Ensuring adequate educational provision is essential to prevent negative consequences on children?s learning experiences and the broader community. Therefore, without clear commitments to address school capacity, this development risks placing unsustainable strain on local educational resources.
1.8	North of Breadsall Hill Top	School Capacity	Sara Cotton	Response-00370	Our schools are over subscribed
1.8	North of Breadsall Hill Top	School Capacity	Saravan P	Response-01448	We are already finding it hard to find admission for the children in the schools of our choice. This development will make it even more hard.
1.8	North of Breadsall Hill Top	School Capacity	Scarlett Hamblin	Response-00398	I myself have two children who were allocated their third choice school due to the schools in my surrounding area being oversubscribed. I have to make the journey twice daily to chaddesden to drop off and collect my children. Schools do not have the capacity for the increased number of children.
1.8	North of Breadsall Hill Top	School Capacity	Sharon Coward	Response-00348	The development is in erewash borough but the nearest schools are mostly in the derby city council area meaning pressure on school places for derby city residents.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	North of Breadsall Hill Top	School Capacity	Shui-Yee Bateman-Wong	Response-00984	Not enough school places nearby
1.8	North of Breadsall Hill Top	School Capacity	Simon Ferrad	Response-00853	There is insufficient school capacity already in the area - this will worsen the situation
1.8	North of Breadsall Hill Top	School Capacity	simon morris	Response-00866	When the new primary school in Breadsall was built Derby City stated that no further places were required because there was sufficient elsewhere in the catchment, however these new housing estates will now mean that further pressure for school places is necessary with no new facilities available.
1.8	North of Breadsall Hill Top	School Capacity	Stephen and Janet Allis	Response-01221	another school needed
1.8	North of Breadsall Hill Top	School Capacity	Susan Dundon	Response-00396	The schools are already over subscribed
1.8	North of Breadsall Hill Top	School Capacity	Tom King	Response-00734	Local schools already over subscribed
1.8	North of Breadsall Hill Top	School Capacity	Tom Parker	Response-01398	It is already incredibly hard to get children into their preferred schools, often having to travel miles to get their children into good or outstanding provision. Adding more properties to this area will only make this worse, and will put too much pressure on the local education system.
1.8	North of Breadsall Hill Top	School Capacity	Tony Hawkins	Response-01532	The senior school which can be attend to by foot Da Vinic Academy is already at capacity serving a vast catchment area including Breadsall, Oakwood, Breadsall Hill Top and Chaddesden. The Breadsall village school is small with an intake of only 16 for reception. Lees Brook is not within walking distance and is also at capacity.
1.8	North of Breadsall Hill Top	School Capacity	Tracey Turner	Response-00334	My children attend a school 12 miles away! You are increasing the already stretched school capacity.
1.8	North of Breadsall Hill Top	School Capacity	Wobbina Bugg	Response-00846	It will impact on school capacity.
1.8	North of Breadsall Hill Top	Traffic Congestion	Adam Garner	Response-00613	Durose park is already busy enough with vehicles daily. There are often queues at peak times to get on and off the durose estate without adding more. Most homes are 2 cars therefore the increase could be 320 extra cars.
1.8	North of Breadsall Hill Top	Traffic Congestion	Adam Millward	Response-00418	Traffic is already bad on the A608 in the mornings for the daily commute into Derby, already made worse with the existing new build houses that have been built recently. You will be standstill already up to and past the round about all the way to Brian clough way.
1.8	North of Breadsall Hill Top	Traffic Congestion	Adelle Cavanagh	Response-00392	The A608 is regularly congested during peak times as it is without extra housing contributing more traffic
1.8	North of Breadsall Hill Top	Traffic Congestion	Alexander lee	Response-01439	Traffic is already awful during rush hours with the air feeling polluted. This will be made even worse !
1.8	North of Breadsall Hill Top	Traffic Congestion	Alex Cargill	Response-01834	* further road congestion on Croft lane, and Brookside road Breadsall already gridlocked at rush hours
1.8	North of Breadsall Hill Top	Traffic Congestion	Alex Pilcher	Response-00792	Already a bottleneck of traffic coming from Heanor direction towards the Meteor centre and vice versa and fast traffic coming off the main road onto another housing estate will only exacerbate the issue.
1.8	North of Breadsall Hill Top	Traffic Congestion	Alistair Crawford	Response-01404	The traffic levels at Peak times have considerably increased following the recent housing developments on the A608, making it difficult and unsafe to enter onto the road in either direction. Any further traffic load will only exasperate this situation in both directions and through the village of breadsall a ?rat run? for traffic heading for the A38
1.8	North of Breadsall Hill Top	Traffic Congestion	Amy Govan	Response-01419	Durose country park is already heavily congested due to narrow roads and resident parking, I am concerned about adding extra traffic to this and the safety of other road users and pedestrians
1.8	North of Breadsall Hill Top	Traffic Congestion	Andrea R Rowley	Response-01230	This development will affect Breadsall Village and surrounding roads. The Lime Lane junction onto the A608 and Brookside Road is a dangerous junction , and there have been several fatalities here since the initial application to build more houses in the area. Breadsall Village has seen a huge increase of traffic coming through the village during the day and night as a result of housing development along the Mansfield Road and Breadsall Hilltop area. The village 30mph speed limit is frequently not adhered to by drivers passing through, and we have had an increased number of road traffic accidents, some of which have required emergency services presence. Information about these accidents can be obtained from the Local Breadsall Parish Council. It is already very difficult (especially during peak rush hour times) to get out of Croft Lane on to the A61. At the very least before fany further housing development is considered, a new road should be built from the Mansfield Road A608 down to the Morrisons Island on to the A61 to try and stop Breadsall Village being the rat run from the A38/A61 to the Mansfield Road area and beyond
1.8	North of Breadsall Hill Top	Traffic Congestion	Andrew David Williams	Response-00796	Any increase in housing in this area will mean further increase in traffic through Breadsall village as traffic finds ways through to the A61 and A38. The croft lane /A61 intersection is completely jammed with traffic at peak times between 7am and 9-30am every weekday and sometimes weekends. Furthermore the road through Breadsall village is already takes significant traffic and speeding is an increasing issue. The junction at Brookside Road and Church Lane has seen many near misses due to speeding and general visibility issues and the footpaths are extremely narrow for walking giving increased risk of accidents especially with Mums and children accessing the school and for disabled vehicles
1.8	North of Breadsall Hill Top	Traffic Congestion	Andy Madeley	Response-00381	The A608 is already incredibly busy, with a lot of accidents, during rush hour traffic, it clogs up traffic coming out of Oakwood ( Bishops drive) so additional traffic will just compound the issue.
1.8	North of Breadsall Hill Top	Traffic Congestion	Angela Clarke	Response-01400	Being only one way in and out of Durose site and the proposed news site will cause residents of both sites difficulty in particular certain times of the day exciting and entering the site. The roads are narrow so passing parked cars will also increase residents difficulty getting round the site, and if this is only proposed way to access the new site it means construction traffic driving and potentially parking up in residential streets increasing risk to the residents and ability to access their properties.
1.8	North of Breadsall Hill Top	Traffic Congestion	Angela Smyth	Response-00296	The roads around the area are congested already due to the two new housing estates already built in the area by Derby City Council - one at the end of Bishops drive and one at the top of Mansfield and lime lane.
1.8	North of Breadsall Hill Top	Traffic Congestion	Ann Sherlock	Response-00410	The map used is out of date and there is already increased traffic due to the Alport Heights estate and Durose estate (both estates and established roads connected to them are conveniently missing off the map used, and perhaps intentionally misleading).
1.8	North of Breadsall Hill Top	Traffic Congestion	Anya andrews	Response-00605	Traffic in and around the area is already so congested. This is going to make the roads even more busy.
1.8	North of Breadsall Hill Top	Traffic Congestion	A O Smith	Response-01798	Traffic levels and volume have and will increase ,particularly at commuter and school times with long queues at both A61 and A608 exits. Speeding traffic is also prevalent.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Traffic Congestion	Ashley Syll	Response-00397	This will increase traffic through a congested zone, especially for an additional 160 houses. Circa 160-200 cars using an access via Hungerhill Close (not crescent as described?)
1.8	North of Breadsall Hill Top	Traffic Congestion	Ben Martin	Response-00787	The planned access to the site can only be achieved by cutting through 2 designated and widely used public footpaths located in the existing Redrow estate at Breadsall Hilltop from the A608. There are no provisions in place to handle the increase in traffic that the already over congested A608 road will face and nothing to address the safety of children who cross on a daily basis for school access. There are no provisions in place to handle the increase in traffic that the already over congested A608 road will face
1.8	North of Breadsall Hill Top	Traffic Congestion	Bethan Eddy	Response-00976	People use it Breadsall as a cut through to get to the A38. This will increase this further
1.8	North of Breadsall Hill Top	Traffic Congestion	Bethany Seivewright	Response-01563	The road layout is not set up for an additional 160 houses, the traffic is already bad enough and people speed coming up to the roundabout causing concerns for safety
1.8	North of Breadsall Hill Top	Traffic Congestion	Beverly Jordan	Response-01330	More pressure on present surrounding roads and roads through Breadsall village
1.8	North of Breadsall Hill Top	Traffic Congestion	Brendan Hargreaves	Response-00629	There is far too much traffic on the roads around this area with all the other new developments and we don't want anymore
1.8	North of Breadsall Hill Top	Traffic Congestion	Bridgette Cussens	Response-00390	Oakwood is already busy with the new estate at the bottom, adding more near Acton way would make traffic horrendous and put extra pressure on the roads, this will see an increase in accidents which is already high on that stretch of road
1.8	North of Breadsall Hill Top	Traffic Congestion	Carl Hill	Response-00670	Already hard to get out of Elmwood Drive? also recent deaths at Lime Lane junction down to Breadsall Village - the impact of the existing new housing has not been taken in to consideration
1.8	North of Breadsall Hill Top	Traffic Congestion	Carol Hart	Response-01830	I have represented Breadsall as the Derbyshire County Councillor since late 2004. This in 2004 was still a reasonably quiet village but starting to have problems being used as a 'rat run' for drivers wanting to access the A38 one way and the M1 the opposite way. Over the years there have been major developments on the boundary of Breadsall, namely on the Oakwood area, the Persimmon development and more recently the Durose Development. There is still a proposal for another 90 homes on Lime Lane, again on the boundary of Breadsall. The village is slowly disappearing and being overwhelmed by big housing developments. It is not only the massively increased traffic through the village but major flooding problems have been occurring. Despite repeated efforts to try to control this there are problems every time it rains and matters have got considerably worse since the new developments have taken place. Adding this extra development would only increase the problems of traffic and possibly flooding.
1.8	North of Breadsall Hill Top	Traffic Congestion	Carol Westcott	Response-00973	The road A608 will be vastly effected it is a very busy link road for villages through to Heanor
1.8	North of Breadsall Hill Top	Traffic Congestion	Carys Whomsley	Response-01438	I am writing to register my strong objection to the above-mentioned planning application, both in its original and revised form. Despite the removal of the area adjacent to the A61 in the amended proposal, I believe that the proposed development remains deeply inappropriate and harmful for the following reasons: 1. Contravention of Policy CP18 and Loss of Green Wedge The proposed site lies just outside the designated Green Belt, but crucially directly abuts existing woodland and open countryside, forming part of the vital green corridor along the Great Northern Greenway. This area functions as a green buffer, enhancing ecological connectivity, supporting biodiversity, and providing visual and recreational amenity to local residents, walkers, and cyclists. Despite claims of woodland retention, the development threatens the integrity of this space. Proximity to new housing would increase human pressure on the natural environment, likely leading to degradation of woodland, fragmentation of habitats, and a reduction in wildlife corridors. No Biodiversity Net Gain (BNG) assessment appears in the application documents, raising concerns about whether the legally mandated 10% net gain can or will be achieved. Biodiversity enhancements delivered off-site would do nothing to mitigate local ecological loss, thereby undermining environmental sustainability in the area. Moreover, the site lies adjacent to land recently released from the Green Belt and under consideration for housing allocation by Erewash Borough Council. The cumulative impact of developing both sites would be devastating: a continuous sprawl from Derby through to Breadsall, resulting in the elimination of the settlement gap and permanent damage to the character of the Great Northern Greenway. 2. Environmental, Infrastructural, and Policy Concerns The proposal directly contradicts the National Planning Policy Framework (NPPF) Paragraph 143, particularly the goals of preventing urban sprawl and protecting the openness of Green Belt land. It also ignores the findings of the Strategic Housing Land Availability Assessment (SHLAA 359), which previously deemed the site unsuitable for residential development due to accessibility and environmental limitations. The development is completely incompatible with the objectives of the Breadsall Parish Neighbourhood Plan 2019-2029, particularly the aims to: Preserve the rural character and prevent urbanisation; Avoid coalescence with the Derby conurbation; Safeguard wildlife and ecological features; Control flood risk and infrastructure strain; Protect valued green spaces and visual vistas.
1.8	North of Breadsall Hill Top	Traffic Congestion	Carys Whomsley	Response-01438	Breadsall has already experienced increased flooding, attributed to upstream developments like Persimmon Estate and Breadsall Hilltop, which lie within the same water catchment area. Any additional development would worsen this issue, placing homes and infrastructure at risk. Furthermore, the proposal relies on access through two existing public footpaths within the Redrow estate and offers no concrete infrastructure improvements. The A608 is already over-congested, and no plans are presented to handle increased traffic or to safeguard children commuting to local schools. 3. Loss of Community and Ecological Value This land offers more than just open space? it is a much-loved and well-used amenity for the local community. It serves as a peaceful escape for informal recreation and nature engagement, and its visual and environmental contributions to the neighbourhood are significant. Its destruction would represent a major loss in local character and quality of life. The proposal underestimates the pressure on existing services, lacks detailed mitigation plans, and fails to explain how proposed footpaths will link meaningfully into existing routes. Nearby Local Wildlife Sites will be impacted
1.8	North of Breadsall Hill Top	Traffic Congestion	Charlotte	Response-00458	Traffic across the Hilltop, Oakwood junction already busy and congested at peak times. Additional roads will add to this problem.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Traffic Congestion	Chris Beaumont	Response-00841	Breadsall village already suffers from the ?rat run? as a though road with many cars speeding through the village despite calming measures put in which almost seem to add to the need to speed up to get round them opposed to stopping and being held up for a few seconds. .
	North of Breadsall Hill Top	Traffic Congestion	Chris C	Response-01106	The roads through the estate are generally narrow which increases the safety risk with an increased volume of traffic
1.8	North of Breadsall Hill Top	Traffic Congestion	Chris Harris	Response-01521	The A608 is already too busy
1.8	North of Breadsall Hill Top	Traffic Congestion	Chris Hopkinson	Response-01396	Hugerhill close will not cope with the extra traffic
1.8	North of Breadsall Hill Top	Traffic Congestion	Chris Lunn	Response-01410	Road safety is another area of vital importance. As above, 160-320 additional vehicles flowing through the development and out into the Redrow estate, especially at peak times, will cause a build-up of traffic as it tries to enter Mansfield Road/Hilltop at the Dale Acre roundabout. It is already extremely dangerous getting out of Windmill Place due to traffic travelling too quickly and its proximity to the roundabout. Another 100-150 cars would undoubtedly cause accidents as people will take risks to compete with an already congested road system. Pedestrians will be vulnerable as they try to cross heavy traffic. These extra vehicles will cause additional pollution, noise and potentially increase the incidence of respiratory problems ? thus returning to the issue of inadequate healthcare facilities. Hungerhill Close, the road proposed to take the traffic flow on and off the proposed development already becomes congested as parked cars are an issue. With so many additional vehicles all having to use this route, the situation for pedestrians, many with young children, will become even more dangerous. Large vans, emergency vehicles and bin lorries will all have to use this road. Bin lorries, stopping every few metres to empty household waste will cause congestion and utter chaos at peak times. Cars will be discharging harmful emissions whilst waiting to get around large vehicles at the same time as small children are walking past. More health problems will undoubtedly arise.
1.8	North of Breadsall Hill Top	Traffic Congestion	Christine Goodwin	Response-00642	I am most concerned about the potential increase in traffic through Breadsall village on roads which are already used as a rat run by the latest two developments on Breadsall Hill Top. It appears that very little thought is given to the impact these ill thought out developments have on Breadsall village where there are only unclassified roads not intended for the amount of traffic which now passes through the village.
1.8	North of Breadsall Hill Top	Traffic Congestion	Christopher Chambers	Response-00175	Has the local authority carried out traffic surveys following the consent for the developments built on the site opposite and further toward Breadsall Hilltop (from the proposed area)? Traffic is nose-to-tail at many times throughout the day and virtually gridlocked at peak periods. The village of Breadsall is used extensively to avoid the main road route through the development area and is soon likely to be in need of a bypass road to alleviate the traffic congestion caused by the repeated granting of planning consent in the same area! This development will do nothing to improve the situation or the lives of those residents living in the once idyllic village.
	North of Breadsall Hill Top	Traffic Congestion	Claire cordery	Response-01494	Will create more cars in the area on the road.
1.8	North of Breadsall Hill Top	Traffic Congestion	Clare Roters	Response-01553	Congestion is already a problem at times and really impacts the surrounding area. The estate durose estate has small roads where we already struggle with cars from the existing estate
1.8	North of Breadsall Hill Top	Traffic Congestion	Colin Brewster	Response-00576	As a resident of Breadsall Village I am well aware of the increased traffic this development will have on the parish. There is no alternative route being put in place to mitigate this situation and once again, as with the Persimmon and Durose developments, all traffic needing to access the A61 and A38 has little choice but to pass through the village. The situation has become dangerous and this development will only serve to make things worse. A solution needs to be found before any further development is allowed to go ahead.
1.8	North of Breadsall Hill Top	Traffic Congestion	Dana Demidoff	Response-00634	Inadequate road infrastructure
1.8	North of Breadsall Hill Top	Traffic Congestion	Darren adams	Response-00874	The traffic throughout the village has dramatically increased in volume sense the New housing development in Oakwood, if this development goes through no doubt it will cause even more traffic and pollution
1.8	North of Breadsall Hill Top	Traffic Congestion	David Byrne	Response-01433	Traffic across dale acre way is already congested and the roads in and around bishops drive in the mornings and evenings can cause significant delays and often result in lateness dropping my boy to school.
1.8	North of Breadsall Hill Top	Traffic Congestion	David Duxbury	Response-00305	The original plan for Oakwood included a direct connection to the a61, which has never been built. Congestion and speeding on Brookside Road continues to be a significant problem which will be made worse by the development. Additional proposed developments on land adjacent to lime lane, and recent extensions to Oakwood, have already made the issue worse.
1.8	North of Breadsall Hill Top	Traffic Congestion	Diane Bakhda	Response-01411	I am a resident of Breadsall village. We are already blighted by the huge volume of traffic that passes through our village. Where we have footpath, they are often very narrow. I have often experienced frightening occasions when traffic driving far too fast, desperate to avoid stopping at the chicanes, passes within inches of my body. Many of our residents are elderly and not too steady on their feet and so are extremely nervous about walking anywhere nearby. It can take a very long time to cross Brookside Road. I am fearful that, if this development goes ahead, the volume of traffic through the village will increase even more and our decreased air quality will become even worse.
1.8	North of Breadsall Hill Top	Traffic Congestion	Edward James Gregory	Response-00728	The area already suffers from traffic congestion, and safety issues due to speed and number of vehicles
1.8	North of Breadsall Hill Top	Traffic Congestion	Elaine hodgkinson	Response-00854	There is already bad congestion all the way from the junction with Mansfield Rd with particularly dangerous sections at the right hand junction next to Slice of India and the Lime lane and Breadsall junctions where there have been fatalities. It will badly increase the number of cars travelling through the residential area of Oakwood.
1.8	North of Breadsall Hill Top	Traffic Congestion	Elena Maxim	Response-01573	Concerns around traffic building up. Roads too small and difficult to pass through
1.8	North of Breadsall Hill Top	Traffic Congestion	Emma Binns	Response-00843	More traffic through our already congested village. Long queues to get out at Pektron island in a morning already.
1.8	North of Breadsall Hill Top	Traffic Congestion	Emma Charlton	Response-01545	As a resident of Brookside Road where cars exceed 30mph, the increase in traffic is going to result in a fatal RTC soon. It's already treated as a racetrack with no measures to reduce this other than dangerous chicanes.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Traffic Congestion	Emma Daniels	Response-00346	Area is already congested enough in peak and even non peak hours now. It's almost impossible to cross the road safely with no traffic calming measures or lights to do so.
1.8	North of Breadsall Hill Top	Traffic Congestion	Emma Hawkins	Response-00813	The consultation states that access will be from Hungerhill Crescent. This is incorrect as it is actually Hungerhill Close. This would mean opening a road which is currently a Close ?dead end? to a through road. This road is not suitable nor wide enough to carry further traffic of 300 plus cars and the safety of current users will be impacted . Such new road would pass over a public footpath used by the local community gaining access to the Great Northern Greenway and Breadsall village by foot. This route is also used by school children who attend the school in the village further volumes of traffic would make this unsafe. The consultation states that access will also be provided from Dale Acre Way, again this road is in fact a ?dead end?. Such access would mean crossing an existing pathway used as mentioned above and the design of the estate in providing recreational space will be changed dramatically and no longer would be able to be enjoyed in the way that the estate does now. The road is also narrow and could not deal with increased volumes of traffic safely, the estate connects to the A608 which is all ready congested with being the main route from Derby to Heanor with existing traffic delays around the island and difficulty trying to join the A609 from Stratford Road. Additional traffic will increase this greatly. Traffic will also increase along the already congested A61 and there will be a significant increase of through traffic via Breadsall Village which is against the Breadsall Parish Council Village Neighbourhood plan 2019-2029 point 12. There are currently planning applications for for the land south of Breadsall Hill Top and Lime Lane. Which will all have an affect on traffic in the area.
1.8	North of Breadsall Hill Top	Traffic Congestion	Faye Wilkinson	Response-01129	It is highly unlikely that junctions on Dale Acre can be made safer, they are small residential junctions that are already very close to homes. Roads are already busy with parked cars on the pavements and roads due to homes having more cars than driveway space. Congestion is already bad enough during rush hour on Mansfield Road out of the Durose Estate towards the city centre. More homes in the area would add to this and cause dangerous situations.
1.8	North of Breadsall Hill Top	Traffic Congestion	Fiorella Di Fina	Response-01123	Traffic will worsen and Will make the area noisier and more polluted
1.8	North of Breadsall Hill Top	Traffic Congestion	Gary Murfin	Response-00374	The traffic in and out of Oakwood is already bad at times due to Oakwood being a big estate already, this new development and the one on Acorn way will obviously make it worse
1.8	North of Breadsall Hill Top	Traffic Congestion	Gaynor Pawley	Response-00627	As a resident living on the A608 I can say since the recent 3 development along this already busy road, with another currently being built; the traffic load has significantly risen. Another significant development with more planned in the future would make this area total gridlock.
1.8	North of Breadsall Hill Top	Traffic Congestion	Ged Doherty	Response-01822	Traffic in the area has increased considerably with 2 large developments within a mile of our spot in the middle, and road safety concerns are much heightened, especially at peak times, as there is simply too much traffic using that road, and to add to that with the proposed developments would exacerbate the situation intolerably. It would also cause even more traffic to divert through Breadsall again raising congestion, pollution and safety concerns.
1.8	North of Breadsall Hill Top	Traffic Congestion	Gemma Cotter	Response-01374	The A608 is already subject to regular congestion at peak times and difficult to divert during incidents or road works. The absence of local school provision and services in easy walking distance would greatly increase traffic flows at peak times. The section of the A608 between The Paddock and Stratford Road is particularly steep and narrow. The pavement barely fits two pedestrians. The carriageway is frequently affected by the H1 bus stopping or cyclists struggling with the hill, and it is difficult for other road users to safely overtake to keep traffic flowing. The Greenway mixed use route goes a long way round the hill gradient, is not legally connected to the site (footpath rather than bridleway) and is unsuitable for efficient commuting to avoid the difficulties of cycling in the A608. It has also proved unsafe for lone women to use in recent weeks and on previous occasions where violent assaults have taken place.
1.8	North of Breadsall Hill Top	Traffic Congestion	George Langton	Response-01385	My main concern is the likelihood of increased traffic flow through Breadsall Village from Brookside Road to Croft Lane, caused by drivers from Breadsall Hilltop seeking a short cut to the A38. There is already a high level of traffic through the village, particularly at peak times, causing potential danger to children at the new Breadsall C of E Primary School and congestion at the Pektron Island. In the mornings, residents of Breadsall Village wishing to turn left at the Pektron Island on to Frank Whittle Way towards the city centre and the Meteor shopping area face a long wait now, and the proposed new housing can only make this worse. A new road linking Breadsall Hilltop to Frank Whittle Way would go some way to reducing this, but obviously the steep terrain would make this a challenge.
1.8	North of Breadsall Hill Top	Traffic Congestion	Georgina	Response-00343	More traffic then thr roads can handle
1.8	North of Breadsall Hill Top	Traffic Congestion	Gillian Montgomery	Response-00625	There is a lot of traffic NOW coming and going along Dale Acre Way , surely having more vehicles is not a good idea !!! Expanding the estate in this way can surley have a negative impact eg the air quality and the nature in the surrounding area. Also the safety aspect for children and pets . The roads around the estate are too small to cope with all this extra traffic .
1.8	North of Breadsall Hill Top	Traffic Congestion	Gillian Pearson	Response-00303	Very concerned that further housing above Breadsall Village will increase traffic volumes along Brookside Road with attendant pollution, road safety issues and noise.
1.8	North of Breadsall Hill Top	Traffic Congestion	Harry Mee	Response-00882	Draycott roads do not have the capacity for 190 houses. The congestion would affect people coming in and out of the village and decrease the amount of visitors to amenities.
1.8	North of Breadsall Hill Top	Traffic Congestion	Harvey Pearson	Response-01307	Increased traffic through Breadsall village causing issues as has been noticed since previous housing developments in the area
1.8	North of Breadsall Hill Top	Traffic Congestion	Helen Foster	Response-00650	Congestion in Breadsall village is already a significant problem, particularly following the development of housing at Lime Lane and Dale Acre Way. The village has turned into a 'rat-run' for Oakwood residents seeking access to the A61 and A38, and during peak times, both road safety and air quality are severely impacted.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Traffic Congestion	Helen Walker	Response-00325	There is far too much traffic already and by adding on these houses to this area it will mean the area will become a car park, since the other houses which were built in recent years on the fields which surround Oakwood it is impossible to leave the Oakwood estate at certain times in the morning and trying to get home at night
1.8	North of Breadsall Hill Top	Traffic Congestion	Hulland. Bdverley	Response-00496	Congestion and noise Already enough houses and not fair on residents already there
1.8	North of Breadsall Hill Top	Traffic Congestion	Ian Lockwood	Response-01491	Traffic congestion in Breadsall village is already a major concern, especially since the housing developments at Lime Lane and Dale Acre Way. The village has effectively become a shortcut for Oakwood residents heading to the A61 and A38, leading to serious issues with road safety and air quality during peak hours.
1.8	North of Breadsall Hill Top	Traffic Congestion	Jack Bointon	Response-00969	Traffic congestion will be dramatically worsened. The major road running through Hill Top has already got bad traffic, but if this proposal is accepted, then the road will be even worse.
1.8	North of Breadsall Hill Top	Traffic Congestion	Jake Moore	Response-01202	An increase of potentially 300?400 vehicles (based on national car ownership averages) will place considerable strain on local roads, increasing congestion, pollution, and risk to pedestrians and cyclists?particularly near existing residential roads that are not designed for high volumes of traffic.
1.8	North of Breadsall Hill Top	Traffic Congestion	James Bellaby	Response-00337	The roads are already congested, especially at the new redrow roundabout and lime lane junction.
1.8	North of Breadsall Hill Top	Traffic Congestion	James Roberts	Response-00673	Dale Acre Way & Hungerhill Close are not suitably sized to manage with the increased traffic load for 160 households worth of vehicles. Given multiple people already park on the curb or on the road on both roads given lack of driveway space for the number of vehicles in the household, the road can regularly become only wide enough for one vehicle at a time. Adding 160 households trying to pass this each morning and evening is just going to cause daily congestion and a significant increase in local pollution and hence reduction in air and living quality
1.8	North of Breadsall Hill Top	Traffic Congestion	James skivington	Response-00359	Traffic is already terrible in this area
1.8	North of Breadsall Hill Top	Traffic Congestion	Jamie Branagan	Response-00335	You're tagging this proposed development onto the existing estate and routing the traffic through Dale Acre Way and the Bishops Drive Roundabout. This area is already heavily congested with traffic and you're adding to this problem. Leaving it with the Oakwood ward and residents to deal with.
1.8	North of Breadsall Hill Top	Traffic Congestion	Janet Brewster	Response-00577	As a resident of Breadsall Village I am aware of the increased traffic this development will have on the parish. There is no alternative route being put in place to mitigate this situation and once again, as with the Persimmon and Durose developments, all traffic needing to access the A61 and A38 has little choice but to pass through the village. The situation has become dangerous and this development will only serve to make things worse. A solution needs to be found before any further development is allowed to go ahead.
1.8	North of Breadsall Hill Top	Traffic Congestion	Janet Jones	Response-00895	There?s already too much through traffic in the village
1.8	North of Breadsall Hill Top	Traffic Congestion	Janette Booth	Response-00295	Traffic out of Breadsall Village is already ridiculous on working days. People continue to use it as a cut through. More houses = more congestion
1.8	North of Breadsall Hill Top	Traffic Congestion	Janette Glenn	Response-00422	Mansfield Rd is already congested at peak times. As the proposed development is only served by the H1 bus, residents are likely to use their own cars and add to the existing problems.
1.8	North of Breadsall Hill Top	Traffic Congestion	Jared Smyth	Response-00894	The roads are congested in the area already due to the existing housing estates. Two of which are not on your planning document
1.8	North of Breadsall Hill Top	Traffic Congestion	Jason Reader	Response-00320	I live in Breadsall village, I will object to development like this unless the developer is made to alleviate both the number and speed of vehicles driving through my village.
1.8	North of Breadsall Hill Top	Traffic Congestion	Jeanette Kent	Response-00402	Traffic is already a nightmare during most times of the day
1.8	North of Breadsall Hill Top	Traffic Congestion	Jessica Softley	Response-01408	The proposal of 160 houses will increase traffic congestion both within the Durose Country Park estate on the proposed access roads, and within the local area.
1.8	North of Breadsall Hill Top	Traffic Congestion	J Hasse	Response-00875	It will increase the traffic on Mansfield Rd and surrounding area.
1.8	North of Breadsall Hill Top	Traffic Congestion	Jim Smith	Response-00741	This will only increase the volume of traffic that uses Brookside Road Breadsall, as a ?rat run?
1.8	North of Breadsall Hill Top	Traffic Congestion	John Harlow	Response-00619	As a house holder at no 24 Dale acre Way we see many vehicles travelling through the estate.. It is totally unacceptable to have any increase in the amount of traffic. The junction between Dale Acre Way and Bandy Lane is totally unsafe as there is ?no right of way? so drivers push their luck every day with dire consequences. I have witnessed many accidents and incidents at this junction. Dale acre Way is already up to capacity at peak times so any additional traffic would have a safety impact and also add emissions to the air quality. At peak times in the morning, traffic is queued at the roundabout on Mansfield road from Dale Acre Way, from Morley direction and also long queues on Bishops Drive. An increase in any traffic is just not acceptable, on the grounds of environmental constraints.
1.8	North of Breadsall Hill Top	Traffic Congestion	John Hudson-Peat	Response-01833	The siting of these houses will cause further traffic using Breadsall Village (Brookside road/Croft lane) as a "rat run" into Derby City and beyond.
1.8	North of Breadsall Hill Top	Traffic Congestion	John Moffat	Response-01289	Development here will generate even more traffic to cut through Breadsall to the A38. Not at all good.
1.8	North of Breadsall Hill Top	Traffic Congestion	John Montgomery	Response-00622	Dale Acre Way cannot support anymore increases of traffic volumes safely. Existing residents especially children would be at risk. A new access off the main A609 is required to support the 160 additional homes. Please allow common sense to prevail.
1.8	North of Breadsall Hill Top	Traffic Congestion	John O?Brien	Response-01796	The traffic levels at Peak times have considerably increased following the recent housing developments on the A608, making it difficult and unsafe to enter onto the road in either direction. Any further traffic load will only exasperate this situation in both directions and through the village of breadsall a ?rat run? for traffic heading for the A38
1.8	North of Breadsall Hill Top	Traffic Congestion	Jonathan Park	Response-01191	Mansfield road is already heavily congested and new houses with increased traffic flow will only exacerbate this issue
1.8	North of Breadsall Hill Top	Traffic Congestion	Jon Lewis	Response-00347	There is already excessive traffic on dale acre way and through the Durose Country park development. During rush hour there are considerable delays getting off the development at the bishops drive roundabout

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Traffic Congestion	Julie and Michael Coulton	Response-01811	Breadsall Village is a conservation area and should not be subjected to more traffic. DEFINITION of a conservation area is: an area of notable environmental or historical interest or importance which is protected by law against undesirable changes. Another housing development will create more noise and fume pollution. This is an undesirable change.
1.8	North of Breadsall Hill Top	Traffic Congestion	Julie Herbert	Response-01282	Breadsall hilltop is already queued back on a daily basis, this is going to make it a lot worse.
1.8	North of Breadsall Hill Top	Traffic Congestion	Justine Dean	Response-00844	Traffic is already horrendous on the Mansfield road as this is the main road to hearon and the villages. This will add to congestion, worsening the air quality in the area and making the roads less safe to cross.
1.8	North of Breadsall Hill Top	Traffic Congestion	Justin Windsor	Response-01544	The surrounding road network can not sustain another ~300 cars through the durose country park as planned for entry, accidents will be inevitable! The entrance onto the main road via the roundabout is not adequate enough to sustain the level of traffic a new estate would bring with it, it's already a challenge to enter onto the new estate due to surrounding traffic so an exception increase of traffic will just increase the difficulty!
1.8	North of Breadsall Hill Top	Traffic Congestion	Kara Crossley	Response-00865	Breadsall village is already used as a through fare and does not have the infrastructure to maintain the volume of traffic that more houses would bring
1.8	North of Breadsall Hill Top	Traffic Congestion	Karen Read	Response-00923	Any housing built in the proposed area of breadsall hill top will substantially increase traffic flow along the adjacent 608 road This will result in a significant health and safety risk to adjacent residents the current road condition is not suitable for increased traffic has there been a traffic survey carried out for the proposed land reclassification from green belt to grey belt The amount of extra traffic will impact upon pollution and climate change that you are also trying to control through government policy has there been surveys on the impact to the environment
1.8	North of Breadsall Hill Top	Traffic Congestion	Karen Smith	Response-00635	Traffic in this area is already substantial and the roads are used as race tracks by many
1.8	North of Breadsall Hill Top	Traffic Congestion	Karen Webster	Response-00420	The existing roads cannot cope with any additional traffic, even adding junctions won't ease the queues on the main roads.
			Kate barlow	Response-00351	Too much congestion in an area already built up without any real idea to solve this issue
1.8	North of Breadsall Hill Top	Traffic Congestion	Katie Hulland	Response-00382	This will add to traffic congestion particularly at commuter times
1.8	North of Breadsall Hill Top	Traffic Congestion	Keerthi	Response-01450	As Durose County Park grows more, I believe the traffic volume increases. The roads are not wide enough to support 160 more houses. Increases volume in same road area will definitely cause a road safety issue as well. The planned access to the site can only be achieved by cutting through 2 designated and widely used public footpaths located in the existing Redrow estate at Breadsall Hilltop from the A608. There are no provisions in place to handle the increase in traffic that the already over congested A608 road will face and nothing to address the safety of children who cross on a daily basis for school access.
1.8	North of Breadsall Hill Top	Traffic Congestion	Kev Rodgers	Response-00897	There is already an existing traffic flow problem on the A608 as drivers return to their homes during late afternoon. This sometimes stretches from the junction of Mansfield Road / Bishops Drive right back down the A608 as far as the Chester Green area. Along with the proposed housing development on land to the rear of Elmwood Drive, this will lead to yet more congestion and traffic fume pollution in the area as well as significant homeward journey times.
			Kimberley Woodward	Response-01445	It is already busy and congested enough on Dale Acre Way without another development using this road.
1.8	North of Breadsall Hill Top	Traffic Congestion	Kirstin Woodward	Response-01043	Our home is directly on Mansfield Road. We have lived here for 25 years, and the amount of traffic has increased massively during that time. I have timed how long it takes to leave my property and get to work?it can take up to 10 minutes during the morning and evening rush hours. The traffic on Mansfield Road is constant. The pavements are too narrow for pedestrians, allowing only single-file walking. This is especially difficult for people with pushchairs, wheelchairs, or dogs, and for those walking with elderly individuals?as I often do. It feels very unsafe. Over the years, there have been many accidents outside our house, and in the past five years, we have seen more frequent shunts and near misses.
			K Munson	Response-00631	Traffic volume is already too high for our roads
1.8	North of Breadsall Hill Top	Traffic Congestion	Laura Louca	Response-01266	Getting out of Breadsall Cillage onto the Pektron Island can often take in excess of 10 mins and getting out of the top of the village can be just as congested. Adding more vehicles to this is going to add to the problem. The A609 leading down to the Meteor is constantly queuing and Frank Whittle Road is terrible during rush hour and pretty much every weekend (worse when there is a match at Pride Park). The roads around here were not designed to take this much traffic. Significant changes on these roads must be seriously considered way before proposing more houses.
1.8	North of Breadsall Hill Top	Traffic Congestion	L Burton	Response-00342	Traffic is already particularly bad between Breadsall and Oakwood and Breadsall and Derby, even on the main road out of the estate alone.
1.8	North of Breadsall Hill Top	Traffic Congestion	Leah McCormack	Response-01481	Roads on Dale Acre Way and Hungerhill close will not cope with an extra 300 cars with no other entry and exit roads onto the new build estate. Cars already park on corners of junctions and on the road causing issues for pedestrians crossing and hazards for drivers already

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Traffic Congestion	Lee Wheatley	Response-01492	The proposed Core Strategy Review Amendment raises significant concerns regarding increases in traffic congestion in and around the Breadsall Hilltop and wider area. My objections are based on the following points: ? Increased Volume on Local Roads: Any new developments or changes in land use patterns outlined in the amendment are likely to generate a higher volume of vehicular traffic. Breadsall Hilltop is a residential area with existing traffic flows, and an increase would lead to significant increased congestion, particularly during peak hours for commuting, school runs, and deliveries. This would negatively impact the daily lives of residents, causing delays, frustration, and increased journey times. The road network in the area is already heavily congested during morning and late afternoon peaks (around 8am till 9:30am and 5pm till 6:30pm). ? Strain on Existing Infrastructure: The current road infrastructure in the vicinity of Breadsall Hilltop is already operating at its capacity during certain times. The Core Strategy Review Amendment needs to clearly demonstrate how the existing road network can accommodate any projected increase in traffic without causing unacceptable levels of congestion. There is a lack of detail on specific infrastructure improvements planned to mitigate the impact of increased traffic. ? Impact on Air Quality and Noise Pollution: Increased traffic congestion directly correlates with poorer air quality due to idling vehicles and stop-start traffic. Residents of Breadsall Hilltop would likely experience a deterioration in air quality, potentially impacting their health and well-being. Similarly, increased traffic flow and congestion can lead to higher levels of noise pollution, disrupting the peaceful residential character of the area. ? Safety Concerns: Congestion can lead to driver frustration and potentially an increase in risky driving behaviours. Increased traffic volume, particularly if not adequately managed with traffic calming measures, can pose a greater risk to pedestrians and cyclists in the area. The amendment lacks sufficient detail on how pedestrian and cyclist safety will be ensured in the face of potential traffic increases. It's also worth noting that the existing Redrow estate (where I live) is virtually pedestrianised in parts with many low kerbs. There is also a high volume of cars parking on the roadways which makes access very difficult, this would likely only get worse with the addition of hundreds of new homes being accessed through this estate. ? Lack of Sustainable Transport Solutions: The Core Strategy Review Amendment should prioritise and detail sustainable transport solutions to mitigate potential traffic congestion. This includes investment in public transport, promotion of cycling and walking infrastructure, and measures to encourage the use of less polluting forms of transport. The current proposals lack sufficient emphasis on these crucial aspects.
1.8	North of Breadsall Hill Top	Traffic Congestion	Linda Morris	Response-00867	Any increase in housing in Oakwood/Breadsall hilltop will increase the volume of traffic that will use Brookside Rd/ Croft Lane as a cut through to the A61/A38. Breadsall Village has a new school on Brookside Road and any increase in traffic will lead to a conflict of parking parents and inpatient computers. The traffic calming does not discourage through traffic it just leads to a convoy effect which causes delays to village residents journeys. At rush hour Croft lane exit onto A61 is very congested with long tail backs into the village which causes additional problems with stationary cars at the traffic calming.
1.8	North of Breadsall Hill Top	Traffic Congestion	Linda Smith	Response-01799	It is quite obvious that the two authorities take no effort to examine what the other has planned and my village is supposed to bear the brunt of these decisions. The amount of traffic which now uses Brookside Road as some sort of rat run far exceeds any traffic planning which may have been projected years ago. The road and its understructure of sewerage and piping was never designed to absorb so much daily through put.
1.8	North of Breadsall Hill Top	Traffic Congestion	Lisa Stone	Response-01018	Already living just off of Mansfield road the traffic is horrendous! It's constantly backed up and impossible to get out to turn onto the main road during rush hours, adding more houses and more traffic will just continue to cripple it. Walking the dog along the main road it's just fumes in the air no oxygen so add more traffic equals more idling cars and more fumes subjecting all the current residents to lower life expectancy. great plan. Not.
1.8	North of Breadsall Hill Top	Traffic Congestion	Lorna Coope	Response-00364	The junction at the bottom of lime lane and traffic heading towards the paddock on Mansfield Road is already very congested during busy periods. The knock on effect spreads further into the estate. Adding more housing without any work to improve infrastructure will create huge problems for residents.
1.8	North of Breadsall Hill Top	Traffic Congestion	Lucy Lewis	Response-01459	Unsuitable roads to be used as a through route
1.8	North of Breadsall Hill Top	Traffic Congestion	lynne hollis	Response-01234	While I appreciate the need for new housing, I have serious concerns about the impact this development will have on traffic congestion and accessibility in the area. The village is already experiencing significant issues with increased traffic, making it increasingly difficult for residents to enter and exit safely. The existing infrastructure is struggling to accommodate current levels of traffic, and the addition of more homes will only exacerbate this issue. Without appropriate traffic management measures or improvements to road access, the development will contribute to further congestion and potential safety hazards for both drivers and pedestrians. I urge the council to reconsider the approval of this development or implement appropriate measures to ensure traffic flow is properly managed and I hope the council takes into account the impact on local residents.
1.8	North of Breadsall Hill Top	Traffic Congestion	Mady Hall	Response-00788	The traffic from Durose roundabout already backs up down towards lime lane and also into oakwood
1.8	North of Breadsall Hill Top	Traffic Congestion	Mandy Cooling	Response-00312	Breadsall village is already a cut through for traffic to/from A38 ? this is likely to significantly increase and there appear to be no plans to ease traffic flow. This side of Derby frequently gets gridlocked as it is. The plans do not appear to allow for significant changes to the roads to enable traffic to move freely. I'd envisage that it would require significant development in the transport links to make this a viable proposition and there is no indication of such proposals. If this development were to go ahead, I'd envisage that there would be a need for traffic lights at the bottom of Bishops Drive to replace the roundabout and mechanism to slow down traffic on Brookside Road in Breadsall

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Traffic Congestion	Margaret Stafford	Response-01231	This development will inevitably affect Breadsall Village as no further roads are being proposed. The Lime Lane junction onto the A608 and Brookside Road is a dangerous junction , and there have been several fatalities here since the initial application to build more houses in the area. Breadsall Village has seen a huge increase of traffic coming through the village during the day and night since the housing developments along Mansfield Road and Breadsall Hilltop. The village 30mph speed limit is frequently not adhered to by drivers passing through, and we have had an increased number of road traffic accidents, some of which have required emergency services presence. Information about these accidents can be obtained from the Local Breadsall Parish Council. It is already very difficult (especially during peak rush hour times) to get out of Croft Lane on to the A61. At the very least a new road should be built from the Mansfield Road A608 down to the Morrisons Island on to the A61 to try and stop Breadsall Village being the rat run from the A38/A61 to the Mansfield Road area and beyond.
1.8	North of Breadsall Hill Top	Traffic Congestion	marion Morris	Response-00870	Any increase in housing in Oakwood/Breadsall Hill top will increase the volume of traffic that will use Brookside road/croft lane as a cut through to the A61/A38. Breadsall village has a new school on Brookside road and any further increase in traffic will lead to a conflict of parking parents and impatient commuters. The traffic calming does not discourage through traffic it only leads to a convoy effect which causes delays to village residents journeys. At rush hour Croft lane exit onto the A61 is very congested with long tail backs into the village which cause additional problems with stationary cars at the incoming traffic calming island.
1.8	North of Breadsall Hill Top	Traffic Congestion	Mark Herbert	Response-01285	Hill top is already very congested at peak times as it's a main through route this will only exasperate the situation, which will create more air and noise pollution.
1.8	North of Breadsall Hill Top	Traffic Congestion	Martin Harrison	Response-01395	I strongly object to the proposed development near my home due to the serious traffic implications. The area already suffers from heavy congestion, especially during peak hours on the A38, Mansfield Road, and the surrounding routes through Breadsall and Oakwood. Adding further traffic from a new development with only one entrance will worsen an already critical issue, impacting safety, journey times, and local infrastructure.
1.8	North of Breadsall Hill Top	Traffic Congestion	Mary Hincley	Response-00297	This development will see an increase of traffic through Breadsall village causing greater congestion and queuing at both Croft Lane and Brookside Road junctions.
1.8	North of Breadsall Hill Top	Traffic Congestion	Masheda Chowdhury	Response-01339	The existing traffic congestion and inadequate infrastructure to support additional housing. In Breadsall, a traffic survey indicated that 7,000 vehicles used local routes daily, a number believed to have since increased, exacerbating concerns about road safety and congestion.
1.8	North of Breadsall Hill Top	Traffic Congestion	Matt	Response-00604	Already at a max issue for congestion in all directions
1.8	North of Breadsall Hill Top	Traffic Congestion	Megan Byrne	Response-01432	Major impact see letter on other notes
1.8	North of Breadsall Hill Top	Traffic Congestion	Melissa Little	Response-00389	The main access road is already a very busy road, there are a number for car accidents that happen on the main road. Additional traffic from work vehicles and eventually residents would be hugely detrimental the those who already live in the Oakwood/Breadsall Hill Top area.
1.8	North of Breadsall Hill Top	Traffic Congestion	Michael Albinson	Response-00790	I live on Hungerhill close and the increased traffic will be a nightmare. No roadmarkings will cure the Dale acre junction on to Hungerhill. 3 cars have already been hit on Hungerhill with out the increased traffic. With kids playing this is a danger if created to a through road let alone the residents that bought a house in a closed/ dead end road for the ease of traffic
1.8	North of Breadsall Hill Top	Traffic Congestion	Michael Grignon	Response-01335	The traffic in the area is already congested due to the housing developments already completed in the surrounding area
1.8	North of Breadsall Hill Top	Traffic Congestion	Michael Poplar	Response-00565	All the roads in the area are congested and an enormous amount of all new traffic generated by new housing developments is now directed through Breadsall village on a small unclassified village road, which is now effectively acting as Derby's northern ring road due to the lack of any alternatives. The originally planned link road from the end of Bishops Drive to the Morrisons roundabout on Frank Whittle Way has never been constructed and there appears to be no intent to do so.
1.8	North of Breadsall Hill Top	Traffic Congestion	Mollie	Response-01549	The addition of new housing will inevitably result in a significant increase in traffic. Local roads, many of which are already congested during peak hours, are not equipped to handle the additional volume of vehicles. This will lead to: ? Longer commute times and increased air pollution. ? Greater risk of accidents on roads not designed for higher capacity. ? Pressure on existing public transport systems, which are already stretched. Existing Bottlenecks. Breadsall Hill Top Road and Morley Lane already experience heavy queues at peak times. Adding several hundred homes will push daily flows well beyond capacity, leading to longer jams on the A609 and rat?running through residential streets.
1.8	North of Breadsall Hill Top	Traffic Congestion	Monique Johnson	Response-00663	Traffic is already heavy through the village with cars queuing practically from the Booker roundabout to the village cafe and this will make it even worse
1.8	North of Breadsall Hill Top	Traffic Congestion	Mr Dominic Carter	Response-01405	Adding an additional 160 properties will add severe traffic and vehicles on the Durose Estate. Most houses have at least two cars. Creating these 160 properties will add over an extra 300 vehicles coming to and from the estate. Not only increasing pollution, but ruining landscape, increasing traffic and adding additional pressures on an already busy roundabout.
1.8	North of Breadsall Hill Top	Traffic Congestion	Mrs. Dorothy Monkhouse.	Response-01371	Since the recent development on Lime Lane-Breadsall Hilltop we have seen a major increase in traffic through Breadsall Village. Few people observe the speed limit and the 7ton weight limit seems to be regularly ignored' When the development was approved it was promised that there would be anew link road from Bishops Drive down to Morrisons roundabout. THIS HAS NOT HAPPENED1 Without this link road traffic through the village would be untenable.
1.8	North of Breadsall Hill Top	Traffic Congestion	Mrs Bullock	Response-00966	Breadsall village is to small to accommodate more traffic, it's terrible now as it is

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Traffic Congestion	Mrs Francoise Poplar	Response-00602	Traffic levels rise and rise with every new housing development, yet nothing is ever done to help with this. There was originally a link road promised between the bottom of Bishops Drive going down to Sir Frank Whittle Way at Morrisons, but of course this has been conveniently forgotten in the rush for maximum houses for minimum spend. Most of the new traffic now goes through Breadsall village down to the Pectron roundabout there being no other viable way to travel to and from the West, putting a massive strain on the system.
1.8	North of Breadsall Hill Top	Traffic Congestion	Mr SJ Read and Mrs S E Read	Response-01225	Local traffic congestion has recently been made worse by extensive housing development in the adjoining areas of Oakwood within Derby City. Development of this site will simply make matters worse. This applies particularly to the roads in Breadsall village where much of the traffic generated by the new development would inevitably flow in order to access the A61 and A38. The roads within Breadsall are already overloaded with through traffic and the proposed development would simply make matters worse .
1.8	North of Breadsall Hill Top	Traffic Congestion	Mr Softley	Response-00344	The areas around the proposed site are already heavily burdened with traffic at peak times. This does not appear to have been well thought through with significant other Derby City council proposed developments in the area. The strategy is frankly inept.
1.8	North of Breadsall Hill Top	Traffic Congestion	Mrs Sarah Morley	Response-01515	Since the two new housing estates have been built, during peak times the traffic is already extremely congested. The road could not cope with another 160 houses adding to this. The road was never built to hold the number of cars the new houses will bring on top of the already over amount of houses
1.8	North of Breadsall Hill Top	Traffic Congestion	Nathan Cooke	Response-00896	Traffic in this area is already unable to cope with the local roads, this development will only add to the issue.
1.8	North of Breadsall Hill Top	Traffic Congestion	Nathan Latymer	Response-00361	The traffic in this area is awful as it is, with no need for it to be made any worse by adding loads of houses.
1.8	North of Breadsall Hill Top	Traffic Congestion	Neal Flint	Response-01220	Breadsall cannot cope with and should not be expected to take any more traffic as most of the traffic from the development will come through the village. All junctions in the area cannot cope with extra traffic, at certain times it is almost impossible to exit of croft lane onto and around pektion island as well as the dangerous junction at brookside road and lime lane and these are a few amongst many in the area.
1.8	North of Breadsall Hill Top	Traffic Congestion	Nicholas lloyd	Response-00356	I object to this planning application on the grounds that the proposed development will significantly exacerbate existing traffic congestion on Acorn way and it's a joining roads, which is already operating beyond its capacity. The addition of 500 new homes will introduce a substantial volume of vehicular traffic, including private cars and delivery vehicles, onto a road that frequently experiences delays and is prone to bottlenecks, particularly during peak hours. This increased traffic flow poses a heightened risk to pedestrian and cyclist safety, as the current infrastructure lacks adequate provisions for non-motorized users. Furthermore, the development's impact on local air quality and noise levels could adversely affect the well-being of nearby residents. Given that Acorn Way is a primary route for emergency services, any additional congestion could impede their response times, potentially compromising public safety. Therefore, I urge the planning authority to consider these concerns and reject the application to prevent further strain on an already overburdened road network.?
1.8	North of Breadsall Hill Top	Traffic Congestion	Norma HASWELL	Response-01384	The traffic congestion at peak times is already out of control. Additional housing will bring further pressure as well as significant environmental impact from pollution.
1.8	North of Breadsall Hill Top	Traffic Congestion	Oakwood Ward Councillors Eyre, Mulhall and Trehwella	Response-01359	Traffic Congestion on the A608 (not the A609 as your documents INCORRECTLY state), is very regular. This development would only add to that. The Durose Country Park Estate was constructed to be just that, not a linking road to an expanded estate.
1.8	North of Breadsall Hill Top	Traffic Congestion	Patrick Baker	Response-01349	At present traffic from the new Derby Hilltop developments are passing through the village as the access road initially planned to link through to Morrisons/A38 was removed from Derbys plans. Additional housing on Breadsall Hilltop will increase this further
1.8	North of Breadsall Hill Top	Traffic Congestion	Paul Walker	Response-00651	This will create additional congestion and add to the existing problem of Breadsall Village being a rat run. Plans were never followed through to build a link road to the Meteor Centre
1.8	North of Breadsall Hill Top	Traffic Congestion	Paul Walsh	Response-00341	I firmly reject this, there is only one exit from this estate onto a very busy main road already, adding more houses would be a terrible idea.
1.8	North of Breadsall Hill Top	Traffic Congestion	Philip Booth	Response-00683	Traffic in this area is already at breaking point.
1.8	North of Breadsall Hill Top	Traffic Congestion	Prathap Paulson Junjuri	Response-01393	Traffic congestion
1.8	North of Breadsall Hill Top	Traffic Congestion	Rachael	Response-00332	Significant traffic concerns already around the local area, during peak times traffic is dangerous and congested, the carriageway of Hungerhill Close not being fit to manage a significant increase in volume of traffic.
1.8	North of Breadsall Hill Top	Traffic Congestion	Rachel Taylor	Response-00938	Heavy traffic, which doesn't adhere to the 30 mph speed limit already streams through the village on a daily basis, 7 days per week. Additional housing will only increase this issue.
1.8	North of Breadsall Hill Top	Traffic Congestion	Richard Hewitt	Response-01464	Breadsall village is already used as a cut through from Oakwood and the newer development between Lime Lane and the Windmill Pub. Further additional homes in the Lime Lane area will create more congestion at pinch points in Breadsall Village and the Sir Frank Whittle junction between Mansfield Road and Hampshire Hill. These two junctions alone see huge tailbacks at during morning, lunchtime and evening rush hour. In recent months, Sir Frank Whittle Way has even become gridlock at the weekends, on one recent saturday (mid morning) it took me 20 minutes to travel its length from Breadsall village to Pentagon Island. Most houses on average have 2 cars per family, which will mean a minimum of 200 additional cars leaving and returning to the area.
1.8	North of Breadsall Hill Top	Traffic Congestion	Richard Johnson	Response-00697	Already traffic congestion through the village is a problem. Many cars follow the main road route though the village and frequently speed breaking the 30mph speed limit. This is easy to witness . Additional housing developments will only make this worse.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Traffic Congestion	Richard Kingham	Response-00849	Traffic systems currently since the introduction of the Persimmon and RedRow estates is unable to cope. In a morning I can be sat idle at the junction of Elmwood drive for upwards of 10 minutes before being able to get out safely. The volume that now uses Mansfield road is ridiculous. Constant queues increasing pollution, more speeding/dangerous drivers, surprised nobody's been killed yet. The pavements are not fit for purpose an dangerous for users as too narrow, and there are now more pushchair users, mobility scooter users and cyclists using them meaning people having to walk into the road to get by. The island at the top of the hill which connects to bishop's drive isn't fit for purpose and is continuously blocked by traffic users creating further back logs. Unless a new main road is being put in somewhere, the current infrastructure can't cope.
1.8	North of Breadsall Hill Top	Traffic Congestion	Richard Stone	Response-01029	The junction to Mansfield Road, the road-about from the A608 to A61, Sir Frank Whittle Road going on to the A38 get backed up terribly every day. These roads are most likely the roads that will get used by these houses and are already nearly at breaking point, they can not handle anymore cars let alone another 300 potential cars. There would need to significant changes to road system all round this area before more houses should be even considered.
1.8	North of Breadsall Hill Top	Traffic Congestion	Richard Straw	Response-01412	There's going to be too much traffic
1.8	North of Breadsall Hill Top	Traffic Congestion	Rowe	Response-01299	Hungerhill Close not suitable for two way traffic
1.8	North of Breadsall Hill Top	Traffic Congestion	Roy Ling	Response-01243	The two developments off the A608 road, Persimmon and Redrow have dramatically increased traffic through Breadsall Village. Further development would increase traffic to an unsustainable level.
1.8	North of Breadsall Hill Top	Traffic Congestion	Ruth Duxbury	Response-00301	Traffic is already very heavy in this area and more housing allocation will worsen this. There is already heavy congestion on the A61 and through Breadsall Village
1.8	North of Breadsall Hill Top	Traffic Congestion	Sally	Response-00873	Already congested
1.8	North of Breadsall Hill Top	Traffic Congestion	Samantha Watts	Response-00869	The existing traffic congestion in Breadsall Village is already severe, with frequent queues along Croft Lane leading to the A61. The junction at Croft Lane/Brookside Road/Rectory Lane has seen numerous accidents, with many additional near misses reported, posing a significant safety risk to residents and road users. Furthermore, Breadsall Village is regularly used as a cut-through route, with excessive speeds exacerbating the dangers on local roads. Introducing further housing will inevitably increase traffic volume, worsening congestion and heightening the risk of accidents in an already strained infrastructure. Given these concerns, additional development in the area would further compromise road safety and traffic flow.
1.8	North of Breadsall Hill Top	Traffic Congestion	Sam Saunders	Response-01557	The proposed continuation of Hungerhill Close (NOT Crescent) and traffic increases on Dale Acre Way and the A609 Hill Top are likely to cause, increased congestion on narrow residential roads not designed for heavy traffic flow, meaning road safety risks, especially for pedestrians and children and lack of traffic modelling for peak-time congestion and cumulative development pressures in the area. That if the development is fully completed, let alone the traffic and heavy goods vehicles which will cause unlimited chaos during the development.
			Sandra Perry	Response-00307	Already too much traffic coming through Brookside Road breadsall
1.8	North of Breadsall Hill Top	Traffic Congestion	Sara Cotton	Response-00370	Our roads can't cope with more traffic
1.8	North of Breadsall Hill Top	Traffic Congestion	Sarah Hewitt	Response-01461	The traffic levels queuing along the A610 into Derby are horrendous at rush hour already. Breadsall village has already become a 'rat run?', it takes 20 minutes to leave the village during rush hour & I have noticed the problem is occurring at 5pm rush hour as well. You will increase this problem & ruin our beautiful village even more.
1.8	North of Breadsall Hill Top	Traffic Congestion	Saravan P	Response-01448	Mansfield road that connects breadsall hilltop to Derby city is already congested in the mornings and evenings pretty much on a daily basis. This development will make it worse.
1.8	North of Breadsall Hill Top	Traffic Congestion	Scarlett Hamblin	Response-00398	Each day the traffic is backed up along bishops drive and hilltop. We do not need anymore traffic added to the roads. This will increase the risk of traffic accidents and also increase the amount of congestion and greenhouse gas emissions.
1.8	North of Breadsall Hill Top	Traffic Congestion	Scott Watson	Response-01284	The current traffic conditions in Breadsall Village are already at a critical level, with severe congestion regularly causing lengthy queues along Croft Lane leading to the A61. The junction at Croft Lane, Brookside Road, and Rectory Lane has been the site of numerous accidents, with frequent near misses further highlighting the significant safety risk for residents and road users. Additionally, Breadsall Village serves as a common cut-through route, where excessive speeds compound existing hazards on local roads. Any further residential development will inevitably increase traffic volume, intensifying congestion and further compromising road safety in an already overstretched infrastructure. Given these persistent concerns, approving additional housing in this area would exacerbate existing risks and further strain the local road network.
1.8	North of Breadsall Hill Top	Traffic Congestion	Sharon Coward	Response-00348	The area is already impacted by traffic congestion & more traffic from this development will make this even worse. The roads to be used will impact Derby city council who will receive no council tax from these properties but would have to maintain the infrastructure putting a burden on derby city council tax payers.
1.8	North of Breadsall Hill Top	Traffic Congestion	Shui-Yee Bateman-Wong	Response-00984	Small road hungerhill already dangerous at the junction. More cars and traffic will cause more accidents
1.8	North of Breadsall Hill Top	Traffic Congestion	Silvia Mircic	Response-00884	Congestion in Breadsall village is already a significant problem, particularly following the development of housing at Lime Lane and Dale Acre Way. The village has turned into a 'rat-run' for Oakwood residents seeking access to the A61 and A38, and during peak times, both road safety and air quality are severely impacted.
1.8	North of Breadsall Hill Top	Traffic Congestion	Simon Ferrad	Response-00853	Mansfield Road is already heavily congested - this will make that situation much worse
1.8	North of Breadsall Hill Top	Traffic Congestion	simon morris	Response-00866	Any increase in housing in Oakwood/Breadsall Hill top will increase the volume of traffic that will use Brookside road/croft lane as a cut through to the A61/A38. Breadsall village has a new school on Brookside road and any further increase in traffic will lead to a conflict of parking parents and impatient commuters. The traffic calming does not discourage through traffic it only leads to a convoy effect which causes delays to village residents journeys. At rush hour Croft lane exit onto the A61 is very congested with long tail backs into the village which cause additional problems with stationary cars at the incoming traffic calming island.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Traffic Congestion	Siu Lap Lau	Response-00606	Now always traffic on A6 roundabout.
1.8	North of Breadsall Hill Top	Traffic Congestion	Stella Beaumont	Response-00842	There?s already far too much traffic coming through the village and travelling far too fast for safety
1.8	North of Breadsall Hill Top	Traffic Congestion	Stephen and Janet Allis	Response-01221	congestion through Breadsall village rat run
1.8	North of Breadsall Hill Top	Traffic Congestion	Stephen Brown	Response-01832	3) Traffic. This has increased considerably though Breadsall village as a result of recent developments. The road was never designed for this purpose and the traffic level is inconsistent with the road provisions, including the location of a primary school in the middle of the village. Any plans of this nature should include better road links between Oakwood and Hilltop through to the A61 and A38. Breadsall bypass roads have been considered in the past, but what about linking Bishops Drive (or thereabouts) more directly to say the Morrisons roundabout? With these current proposed developments there must be opportunities here to improve this access for all, but it surely needs to be included within the plan.
1.8	North of Breadsall Hill Top	Traffic Congestion	Steven furness	Response-01516	There is already access traffic through Breadsall village on Brookside Road. Specifically around the new school. We should not be encouraging for road traffic and the new development will contribute to an increased traffic flow.
1.8	North of Breadsall Hill Top	Traffic Congestion	Stuart Brown	Response-00771	If the development goes ahead then there will be a significant increase in traffic through dale acre way which will include heavy construction traffic. This will increase noise pollution and mud on the roads etc. and also impede on kerbside parking which will directly affect my property. Further information is required regarding the planned traffic enhancements to dale acre way. Increased traffic could also have an impact on property values of the current estate
1.8	North of Breadsall Hill Top	Traffic Congestion	Susan Dundon	Response-00396	It will add to congestion
1.8	North of Breadsall Hill Top	Traffic Congestion	Thomas Bateman-Wong	Response-00985	160 houses worth of traffic, usually with 2 cars each, all filtering through Dale Acre Way/Hungerhill Road will cause chaos. The crossroads where Dale Acre Way meets Hungerhill Road and Beards Wood Drive is already dangerous enough without such an influx of cars going through. The roundabout immediately outside Durose Country Park is already a nightmare.
1.8	North of Breadsall Hill Top	Traffic Congestion	Thomas Monkhouse.	Response-01318	With all the existing and proposed housing developments no developer appears to have improved or proposed any improvements to the local road system.
			Tom Antrobus	Response-00308	I fear the already persistent traffic on Brookside Road at peak times would only get worse
1.8	North of Breadsall Hill Top	Traffic Congestion	Tom Parker	Response-01398	Ridiculous amount of traffic already in the area and in and around the estate. Huge issue with people not using their driveways and parking on kerbs. The estate wouldn?t manage with anymore cars driving through unless significant changes were made to the roads.
1.8	North of Breadsall Hill Top	Traffic Congestion	Tony Hawkins	Response-01532	The consultation states that access will be from Hungerhill Crescent. This is incorrect as it is actually Hungerhill Close. This would mean opening a road which is currently a Close ?dead end? to a through road. This road is not suitable nor wide enough to carry further traffic of 300 plus cars and the safety of current users will be impacted . Such new road would pass over a public footpath used by the local community gaining access to the Great Northern Greenway and Breadsall village by foot. This route is also used by school children who attend the school in the village further volumes of traffic would make this unsafe. The consultation states that access will also be provided from Dale Acre Way, again this road is in fact a ?dead end?. Such access would mean crossing an existing pathway used as mentioned above and the design of the estate in providing recreational space will be changed dramatically and no longer would be able to be enjoyed in the way that the estate does now. The road is also narrow and could not deal with increased volumes of traffic safely. the estate connects to the A608 which is all ready congested with being the main route from Derby to Heanor with existing traffic delays around the island and difficulty trying to join the A609 from Stratford Road. Additional traffic will increase this greatly. Traffic will also increase along the already congested A61 and there will be a significant increase of through traffic via Breadsall Village which is against the Breadsall Parish Council Village Neighbourhood plan 2019-2029 point 12. There are currently planning applications for for the land south of Breadsall Hill Top and Lime Lane. Which will all have an affect on traffic in the area.
1.8	North of Breadsall Hill Top	Traffic Congestion	Tracey Turner	Response-00334	Congestion is already an issue so the increased housing will make this even worse a.s unbearable.
1.8	North of Breadsall Hill Top	Traffic Congestion	Vanessa Calderone	Response-01065	It will add to the already very busy road through the village
1.8	North of Breadsall Hill Top	Traffic Congestion	Wobbina Bugg	Response-00846	Most of this estates traffic adds to the congestion in Breadsall Village as they try to get to the A38 Traffic already is too heavy from the other developments in the area,

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Traffic Congestion	Zora Wilson	Response-01575	Objection to Proposed Development ? Conflict with Policy CP18 (Green Wedges) I note that this application has been amended to exclude the development adjacent to the A61. However I still wish to raise strong objections to the proposed development (both in its amended form and original form) on the grounds that it conflicts with Policy CP18 concerning Green Wedges. Although the site lies just outside the designated green belt surrounding Breadsall, it directly abuts existing woodland and open countryside, forming an important part of the green corridor along the Great Northern Greenway. The application site provides valuable habitat for wildlife and functions as an essential green buffer. Its loss would significantly reduce ecological connectivity and visual amenity, impacting local biodiversity and the quality of life for residents, walkers, and cyclists who currently use and enjoy this open space. The site is actively appreciated by the community as a visual break in built development and as a wildlife corridor connecting to other open areas. While the outline proposal includes the retention of woodland, there are serious concerns that development will increase pressure on these areas, potentially leading to degradation over time. I am concerned that the proposed development does not provide an adequate buffer to the woodland corridor and built development will sit too close and will detrimentally impact the existing woodland. There is no BNG Assessment listed in the application documents on the portal so it appears that it hasn't yet been done. How can there be any confidence that the proposal would be able to satisfy the statutory requirement to deliver 10% net gain. Any BNG delivery off site or through the purchase of biodiversity units elsewhere, dilutes the benefit of 10% net gain as the biodiversity is lost here in this locality and the significant environmental impact is here. Crucially, the proposed development sits adjacent to land at Breadsall recently released from the green belt, which Erewash Borough Council is considering for housing allocation. If both sites are developed, the cumulative impact will be substantial?leading to the loss of meaningful green space, erosion of the rural character of the Great Northern Greenway, and the elimination of the settlement gap between Breadsall and the wider Derby conurbation. For these reasons, I urge the Council to reject the proposal in order to uphold the principles of Policy CP18 and protect the integrity of this important green wedge.
1.8	North of Breadsall Hill Top	Type of Housing	Adam Garner	Response-00613	Social housing, whilst necessary brings trouble to what's a nice area.
1.8	North of Breadsall Hill Top	Type of Housing	Adam Millward	Response-00418	Again an affluent area does not want social housing next to 600k homes. Developers are forced to build social housing next to affluent homes and all that happens is you get anti social behaviour in what could be a very nice estate. Speaking from experience here where in my housing estate the council recently decided a piece of green field could be used for some social housing, anti social behaviour is now rife in what was a nice neighbourhood.
1.8	North of Breadsall Hill Top	Type of Housing	Andrew David Williams	Response-00796	If housing is to be built then this must be housing which considers all aspects of the local community and includes bungalows and quality family accommodation. It is not an area that is suitable for housing associations and must be used for private ownership. .
1.8	North of Breadsall Hill Top	Type of Housing	Ann Sherlock	Response-00410	The map used is out of date. Adding the current proposal will be extremely detrimental to the local area no matter what housing is built, and it is disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the area, missing two extremely large housing estates and falsely portraying a smaller population and impact the housing proposal will have.
1.8	North of Breadsall Hill Top	Type of Housing	Ben Martin	Response-00787	Breadsall Parish Council neighbourhood plan 2019 to 2029 state that all new developments, replacement buildings and extensions are constructed with high-quality materials, using designs that are compatible with the adjoining development and the parish in general. A new build estate does not fit with this. Erewash also does not have the shortage of housing that is seen elsewhere in the UK.
1.8	North of Breadsall Hill Top	Type of Housing	Beverly Jordan	Response-01330	The present estates have already urbanised the countryside landscape of the Breadsall hilltops area a further extension and estate this would further impinge on the remaining small countryside
1.8	North of Breadsall Hill Top	Type of Housing	Carys Whomsley	Response-01438	I am writing to register my strong objection to the above-mentioned planning application, both in its original and revised form. Despite the removal of the area adjacent to the A61 in the amended proposal, I believe that the proposed development remains deeply inappropriate and harmful for the following reasons: 1. Contravention of Policy CP18 and Loss of Green Wedge The proposed site lies just outside the designated Green Belt, but crucially directly abuts existing woodland and open countryside, forming part of the vital green corridor along the Great Northern Greenway. This area functions as a green buffer, enhancing ecological connectivity, supporting biodiversity, and providing visual and recreational amenity to local residents, walkers, and cyclists. Despite claims of woodland retention, the development threatens the integrity of this space. Proximity to new housing would increase human pressure on the natural environment, likely leading to degradation of woodland, fragmentation of habitats, and a reduction in wildlife corridors. No Biodiversity Net Gain (BNG) assessment appears in the application documents, raising concerns about whether the legally mandated 10% net gain can or will be achieved. Biodiversity enhancements delivered off-site would do nothing to mitigate local ecological loss, thereby undermining environmental sustainability in the area. Moreover, the site lies adjacent to land recently released from the Green Belt and under consideration for housing allocation by Erewash Borough Council. The cumulative impact of developing both sites would be devastating: a continuous sprawl from Derby through to Breadsall, resulting in the elimination of the settlement gap and permanent damage to the character of the Great Northern Greenway. 2. Environmental, Infrastructural, and Policy Concerns The proposal directly contradicts the National Planning Policy Framework (NPPF) Paragraph 143, particularly the goals of preventing urban sprawl and protecting the openness of Green Belt land. It also ignores the findings of the Strategic Housing Land Availability Assessment (SHLAA 359), which previously deemed the site unsuitable for residential development due to accessibility and environmental limitations. The development is completely incompatible with the objectives of the Breadsall Parish Neighbourhood Plan 2019?2029, particularly the aims to: Preserve the rural character and prevent urbanisation; Avoid coalescence with the Derby conurbation; Safeguard wildlife and ecological features; Control flood risk and infrastructure strain; Protect valued green spaces and visual vistas.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Type of Housing	Garys Whitnistry	Response-01498	Breadsall has already experienced increased flooding, attributed to upstream developments like Persimmon Estate and Breadsall Hilltop, which lie within the same water catchment area. Any additional development would worsen this issue, placing homes and infrastructure at risk. Furthermore, the proposal relies on access through two existing public footpaths within the Redrow estate and offers no concrete infrastructure improvements. The A608 is already over-congested, and no plans are presented to handle increased traffic or to safeguard children commuting to local schools. 3. Loss of Community and Ecological Value This land offers more than just open space?it is a much-loved and well-used amenity for the local community. It serves as a peaceful escape for informal recreation and nature engagement, and its visual and environmental contributions to the neighbourhood are significant. Its destruction would represent a major loss in local character and quality of life. The proposal underestimates the pressure on existing services, lacks detailed mitigation plans, and fails to explain how proposed footpaths will link meaningfully into existing routes. Nearby Local Wildlife Sites will be impacted
1.8	North of Breadsall Hill Top	Type of Housing	Clare Roters	Response-01553	Flats and larger houses would block the beautiful views and countryside we have
		Type of Housing	Edward James Gregory	Response-00728	Unsuitable for green belt / green separation
1.8	North of Breadsall Hill Top	Type of Housing	Elaine hodgkinson	Response-00854	Any housing must be as environmental as possible with solar panels, swift bricks and hedgehog highways.
1.8	North of Breadsall Hill Top	Type of Housing	Emma Charlton	Response-01545	We have a real fear of the amount of antisocial behaviour that allocated social housing brings with it as personal victims of crime from a well known local who falls within that category
1.8	North of Breadsall Hill Top	Type of Housing	Emma Hawkins	Response-00813	Not enough affordable housing
1.8	North of Breadsall Hill Top	Type of Housing	Gary Murfin	Response-00374	The percentage of houses being built and being called affordable is not enough, and even the ones being called affordable are not very affordable
1.8	North of Breadsall Hill Top	Type of Housing	Harry Mee	Response-00882	Draycott village is beautiful and villages like this are hard to come across nowadays. We don't want to ruin the quaint and traditional village with ugly new build houses that you can see in any city/town/village.
1.8	North of Breadsall Hill Top	Type of Housing	Hulland. Bdverley	Response-00496	NO to More housing
1.8	North of Breadsall Hill Top	Type of Housing	Jake Moore	Response-01202	If the development does not include accessible homes (e.g. for elderly residents or those with mobility issues), or lacks single-storey homes/bungalows, it fails to support inclusive living and long-term community needs. If the housing type consists primarily of large, detached homes, this will do little to meet the demand for affordable, accessible, or smaller dwellings that are essential for first-time buyers, young families, and elderly residents. The lack of diversity in housing types risks creating a homogenous, car-dependent estate that does not support a sustainable or inclusive community. While any provision of affordable housing is welcome, the remaining majority % of the development appears to be geared toward market-rate housing, the type and cost of which may be inaccessible to the majority of local residents, particularly first-time buyers, young families, and older residents looking to downsize. This approach fails to support the creation of a balanced, inclusive community and risks becoming a commuter enclave rather than a genuinely integrated neighbourhood. Without a clear commitment to delivering a diverse mix of housing types ? including smaller, more affordable homes, accessible homes for disabled residents, or accommodation suitable for older people ? the development is unlikely to meet the true housing needs of the area. Moreover, the location of the site, on the very edge of Derby City but under the jurisdiction of Erewash Borough Council, raises additional concerns. If the local housing need arises from Derby's population, then it is essential that the proposed homes reflect the specific demographics and requirements identified in Derby City Council's housing strategy, which the current proposal does not appear to do. Conversely, if the homes are intended to meet Erewash's housing need, this location ? remote from the borough's main population centres ? is geographically and strategically unsuitable.
1.8	North of Breadsall Hill Top	Type of Housing	James Roberts	Response-00673	I have no issue with a continuation of the type of houses on the existing estate, but better consideration is needed to parking than is currently provided in the existing estate. Every road has multiple cars parked on the curb due to lack of drive space, and this situation will only continue if the same design of estate is used for the expansion
1.8	North of Breadsall Hill Top	Type of Housing	Jamie Branagan	Response-00335	Simply not required in this area. Hilltop North has seen 2 major estates built in the past 10 years. This has already impacted traffic, the environment, services and created real flooding issues for Breadsall Village. Adding 160 Houses will only exacerbated the problems.
1.8	North of Breadsall Hill Top	Type of Housing	Jeanette Kent	Response-00402	We already have a problem with crime encroaching on Oakwood from affordable housing on the Lime Lane estates without more from here.
1.8	North of Breadsall Hill Top	Type of Housing	Jonathan Park	Response-01191	Concerns about the type of housing including social housing that can potentially attract anti social behaviour to an area that is relatively low on crime and an already quiet estate, ruining people's enjoyment of their house and the surrounding areas and also affect the resale value of people who currently live in the area and own their own home
1.8	North of Breadsall Hill Top	Type of Housing	Karen Read	Response-00923	i strongly object to the proposed policy change on the basis that new dwellings to be constructed will not be in keeping with the adjacent breadsall village please clarify how the authorities planning department intends to deal with this issue whilst retaining the picturesque character of the area
1.8	North of Breadsall Hill Top	Type of Housing	Kirstin Woodward	Response-01043	There is already a good range of housing in this area, covering all needs. We have housing in all price brackets, types (bungalow, semi, flats, detached) etc, ownership (rented, owned etc).
1.8	North of Breadsall Hill Top	Type of Housing	K Munson	Response-00631	Affordable housing is the priority
1.8	North of Breadsall Hill Top	Type of Housing	Laura Louca	Response-01266	None of the new estates seem to be adopted by the council meaning anyone that moves to one of these new builds must pay a management fee to maintain the area. This is simply the new ?lease hold? scam, despite labelling them affordable and family friendly you are adding another monthly bill to peoples already stretched budget. A bill that will inevitably increase regularly.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Type of Housing	L Burton	Response-00342	We experience a lot of problems on the estate due to social housing including noise complaints, car damage and breaking in, poor behaviour. We have a group for everyone on the estate and can report it comes from the social housing
1.8	North of Breadsall Hill Top	Type of Housing	Lee Wheatley	Response-01492	I am deeply concerned that the Amendment, as it stands, could lead to over-development in the wider area, which will inevitably detract from the established character of Breadsall & Breadsall Hilltop. Our area is valued for its semi-rural feel, distinct architectural style and green spaces. The introduction of large-scale housing developments in neighbouring areas risks eroding this character and creating a sense of being overwhelmed by continuous urban sprawl. I am also concerned about the potential for future increased housing density within Breadsall Hilltop itself. While the current amendment may focus on Erewash, I fear that it could set a precedent or create pressure for more intensive development within our established community in the future, further altering its character and putting additional strain on local resources. I suspect this was also a factor in the rejection of similar developments in the area over the past couple of years. The potential loss of green spaces and amenity in the broader area due to new housing is also a significant concern. Breadsall Hilltop residents value the proximity to Breadsall and the Great Northern Greenway. Development that encroaches upon these areas diminishes the quality of life for all residents in the vicinity.
1.8	North of Breadsall Hill Top	Type of Housing	Lisa Stone	Response-01018	We already get significant trouble from neighbouring Chaddesden in the new housing estate as they come over and trash the park area with litter, fires, throwing stones at houses, fires in the woodland next to it, attacks on the greenway, we don't need more houses for them to target. The houses already existing in the new build are steep in the price and the planned ones are again extremely high prices, this is a small city with little affluence it's the wrong area for mega expensive houses
1.8	North of Breadsall Hill Top	Type of Housing	Lorna Coope	Response-00364	There has been an increase in antisocial behaviour, drug misuse and street crime since the introduction of the existing housing estates. More housing, especially the necessary social housing, runs the risk of increasing these problems.
1.8	North of Breadsall Hill Top	Type of Housing	Martin Harrison	Response-01395	I object to the proposed development as it does not reflect the character or aesthetic of the surrounding area. The scale, design, and density of the planned housing are out of place and would negatively impact the visual appeal and identity of the local community. Developments should complement, not clash with, the existing environment.
1.8	North of Breadsall Hill Top	Type of Housing	Masheda Chowdhury	Response-01339	1. Insufficient Affordable Housing Provision: ? The proposal includes only 10% of homes as on-site affordable home ownership, with a financial contribution toward off-site affordable housing instead of delivering up to 20% affordable homes on-site. ? This reduced on-site affordable housing falls short of the housing needs for lower-income families in the local community. 2. Lack of Diverse Housing Mix: ? The planning overview does not specify a range of housing types (e.g., family homes, smaller starter homes, accessible housing for elderly or disabled residents). ? Without a balanced mix, the development risks failing to meet the needs of all demographics in the area, potentially excluding younger families or elderly residents who need suitable accommodation. 3. Risk of Over-Development and Poor Design: ? Concentrating 160 homes on 8.2 hectares could lead to high-density development that might not fit the character or infrastructure capacity of the existing Oakwood and Breadsall neighborhoods. ? The development should incorporate design standards that ensure appropriate density, green space, and community facilities. 4. Lack of Clarity on Housing Tenure and Long-Term Affordability: ? The proposal's reliance on financial contributions for off-site affordable housing raises concerns about whether affordable homes will remain accessible in the long term. ? On-site affordable housing provision should include secure tenure arrangements to prevent displacement or future affordability issues. 5. Absence of Support for Specialist Housing Needs: ? There is no mention of specialist housing options such as supported living, care homes, or housing adapted for disabled residents. ? Meeting diverse housing needs is essential for a sustainable, inclusive community. Both derby city council and Derbyshire county council have a long waiting lists for affordable housing.
1.8	North of Breadsall Hill Top	Type of Housing	Melissa Little	Response-00389	N/a
1.8	North of Breadsall Hill Top	Type of Housing	Michael Poplar	Response-00565	This is not yet detailed, but if it's as badly designed as the recent developments it doesn't bode well.
1.8	North of Breadsall Hill Top	Type of Housing	Mrs Francoise Poplar	Response-00602	No scheme is shown but the sheer numbers proposed show that it would be dense development with no quality open spaces.
1.8	North of Breadsall Hill Top	Type of Housing	Rachael	Response-00332	Unsuitable for the area. No further housing is required. Houses are the current estates have been for sale for months and not sold. Further housing isn't required in this area.
1.8	North of Breadsall Hill Top	Type of Housing	Richard Kingham	Response-00849	The initial plan was for around 14 homes and no social housing Which would have been manageable but the new proposal is not fit for purpose. There has been an increase of police visits to the Redrow estate and Persimmon since the inception of their social housing.
1.8	North of Breadsall Hill Top	Type of Housing	Richard Straw	Response-01412	The type of housing will not match the current estate and would decrease my house value
1.8	North of Breadsall Hill Top	Type of Housing	Sam Saunders	Response-01557	The proposal to provide 10% on-site affordable home ownership and a financial contribution toward off-site affordable housing raises concerns about meeting local housing needs. The limited proportion of affordable homes may not adequately address demand from low- and middle-income families in Breadsall and Oakwood. Additionally, the mix and design of housing types should reflect the community's demographic, including accessible homes for the elderly and larger family-sized properties. Without clear commitments to diverse and truly affordable housing, the development risks failing to provide a balanced, inclusive community that supports local social and economic needs.
1.8	North of Breadsall Hill Top	Type of Housing	Sandra Perry	Response-00307	Houses are ugly and being built with very small, if any gardens. People seem to want to live in a more ?semi-rural? area but there is little or no provision for growing flowers and food. The current development is ugly, orange, cheap-looking boxes blighting the landscape
1.8	North of Breadsall Hill Top	Type of Housing	Scarlett Hamblin	Response-00398	new build houses unfortunately are not built to last unlike houses that were built previously we do not want dilapidated rundown houses in a few years to be our surrounding environment. New build houses are also not affordable for first time buyers.
1.8	North of Breadsall Hill Top	Type of Housing	Tom Parker	Response-01398	Further housing isn't necessary. Multiple homes have been up for sale for months on the estate and haven't sold.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Abbie quinn	Response-00616	This will destroy the wildlife behind our house that backs onto the greenway. A lovely part of nature kept between us and Breadsall.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Adam Garner	Response-00613	The area this goes up is used daily by the community for walking and cycling etc, and the area is full of wildlife. Local Green spaces are what attracts to the area. access is currently granted through the middle of the proposed plot toward the green way and surrounding fields.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Adam Govan	Response-01416	Objection to Proposed Development ? Conflict with Policy CP18 (Green Wedges) I note that this application has been amended to exclude the development adjacent to the A61. However I still wish to raise strong objections to the proposed development (both in its amended form and original form) on the grounds that it conflicts with Policy CP18 concerning Green Wedges. Although the site lies just outside the designated green belt surrounding Breadsall, it directly abuts existing woodland and open countryside, forming an important part of the green corridor along the Great Northern Greenway. The application site provides valuable habitat for wildlife and functions as an essential green buffer. Its loss would significantly reduce ecological connectivity and visual amenity, impacting local biodiversity and the quality of life for residents, walkers, and cyclists who currently use and enjoy this open space. The site is actively appreciated by the community as a visual break in built development and as a wildlife corridor connecting to other open areas. While the outline proposal includes the retention of woodland, there are serious concerns that development will increase pressure on these areas, potentially leading to degradation over time. I am concerned that the proposed development does not provide an adequate buffer to the woodland corridor and built development will sit too close and will detrimentally impact the existing woodland. There is no BNG Assessment listed in the application documents on the portal so it appears that it hasn't yet been done. How can there be any confidence that the proposal would be able to satisfy the statutory requirement to deliver 10% net gain. Any BNG delivery off site or through the purchase of biodiversity units elsewhere, dilutes the benefit of 10% net gain as the biodiversity is lost here in this locality and the significant environmental impact is here. Crucially, the proposed development sits adjacent to land at Breadsall recently released from the green belt, which Erewash Borough Council is considering for housing allocation. If both sites are developed, the cumulative impact will be substantial?leading to the loss of meaningful green space, erosion of the rural character of the Great Northern Greenway, and the elimination of the settlement gap between Breadsall and the wider Derby conurbation. For these reasons, I urge the Council to reject the proposal in order to uphold the principles of Policy CP18 and protect the integrity of this important green wedge.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Adam Millward	Response-00418	There is so much wildlife in this area I grew up walking these fields, to get onto the old railway lines. First thing developers do is tear down trees near to building plots. It happened further up the A608 on the other new build site, they tore all the old chestnut trees down that lined the road for an attenuation pond. Those trees were hundreds of years old and housed so much wildlife and created much bio diversity. There is also bog land if memory serves me right which is absolutely vital for bio diversity.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Adelle Cavanagh	Response-00392	We have already lost huge parts of our local green spaces to make way for new housing. The impact on local wildlife cannot be underestimated.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Alexander lee	Response-01439	Objection to Proposed Development ? Conflict with Policy CP18 (Green Wedges) I note that this application has been amended to exclude the development adjacent to the A61. However I still wish to raise strong objections to the proposed development (both in its amended form and original form) on the grounds that it conflicts with Policy CP18 concerning Green Wedges. Although the site lies just outside the designated green belt surrounding Breadsall, it directly abuts existing woodland and open countryside, forming an important part of the green corridor along the Great Northern Greenway. The application site provides valuable habitat for wildlife and functions as an essential green buffer. Its loss would significantly reduce ecological connectivity and visual amenity, impacting local biodiversity and the quality of life for residents, walkers, and cyclists who currently use and enjoy this open space. The site is actively appreciated by the community as a visual break in built development and as a wildlife corridor connecting to other open areas. While the outline proposal includes the retention of woodland, there are serious concerns that development will increase pressure on these areas, potentially leading to degradation over time. I am concerned that the proposed development does not provide an adequate buffer to the woodland corridor and built development will sit too close and will detrimentally impact the existing woodland. There is no BNG Assessment listed in the application documents on the portal so it appears that it hasn't yet been done. How can there be any confidence that the proposal would be able to satisfy the statutory requirement to deliver 10% net gain. Any BNG delivery off site or through the purchase of biodiversity units elsewhere, dilutes the benefit of 10% net gain as the biodiversity is lost here in this locality and the significant environmental impact is here. For these reasons, I urge the Council to reject the proposal in order to uphold the principles of Policy CP18 and protect the integrity of this important green wedge.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Alex Pilcher	Response-00792	Building even closer to the Greenway which has / did have an area of biodiversity not commonly found in other areas will only negatively impact the conservation.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Alistair Crawford	Response-01404	Green Belts are important for wildlife as they provide crucial habitats and act as corridors connecting various wildlife sites. As residents within the so-called 'safeguarded' area we witness the everyday environmental and ecological benefits. The area hosts and sustains a variety of species such as bats, nesting partridge, migrating swallows, stoats, owls, buzzards, foxes and is a regular hunting ground for the Derby peregrine falcons. They also offer green spaces for urban dwellers to enjoy nature using the various footpaths. Which if this development is allowed will turn footpaths in nature to a mere commute from one side of the urbanisation to the other. Enjoying country walks is a well documented supplement to mental health. Part of this Green Belts which has been 'safeguarded' for housing under this latest review has previously under government grants been segregated from cattle grazing land to provide a nature reserve with a wide range of species and floodplains which have been needed due to the added flood danger following the previous housing developments on the A608.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Amy Govan	Response-01419	Objection to Proposed Development ? Conflict with Policy CP18 (Green Wedges) I note that this application has been amended to exclude the development adjacent to the A61. However I still wish to raise strong objections to the proposed development (both in its amended form and original form) on the grounds that it conflicts with Policy CP18 concerning Green Wedges. Although the site lies just outside the designated green belt surrounding Breadsall, it directly abuts existing woodland and open countryside, forming an important part of the green corridor along the Great Northern Greenway. Its loss would significantly reduce ecological connectivity and visual amenity, impacting local biodiversity and the quality of life for residents, walkers, and cyclists who currently use and enjoy this open space. The site is actively appreciated by the community as a visual break in built development and as a wildlife corridor connecting to other open areas. While the outline proposal includes the retention of woodland, there are serious concerns that development will increase pressure on these areas, potentially leading to degradation over time. I am concerned that the proposed development does not provide an adequate buffer to the woodland corridor and built development will sit too close and will detrimentally impact the existing woodland. There is no BNG Assessment listed in the application documents on the portal so it appears that it hasn't yet been done. How can there be any confidence that the proposal would be able to satisfy the statutory requirement to deliver 10% net gain. Any BNG delivery off site or through the purchase of biodiversity units elsewhere, dilutes the benefit of 10% net gain as the biodiversity is lost here in this locality and the significant environmental impact is here. Crucially, the proposed development sits adjacent to land at Breadsall recently released from the green belt, which Erewash Borough Council is considering for housing allocation. If both sites are developed, the cumulative impact will be substantial?leading to the loss of meaningful green space, erosion of the rural character of the Great Northern Greenway, and the elimination of the settlement gap between Breadsall and the wider Derby conurbation. For these reasons, I urge the Council to reject the proposal in order to uphold the principles of Policy CP18 and protect the integrity of this important green wedge.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Andrea R Rowley	Response-01230	This sizeable housing development will destroy part of the Green Wedge and cause disruption to nature and woodland areas. It is important to preserve these areas as once they are destroyed and built upon, they are never replaced and wildlife habitats are lost.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Andrea wightman	Response-00354	It is absolutely disgusting to be building more houses in this area, the wildlife will be hugely affected.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Andrew David Williams	Response-00796	Building on land already identified as greenbelt has a negative impact on wildlife and biodiversity. Before any consultation on greenbelt land is considered all brown and grey belt land should be utilised. The land being evaluated in this proposal is alongside the Derby greenway which is a natural habitat for many different fauna and flora. Any further damage to the greenbelt land will natural have a major impact on the local wildlife .
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Andy Madeley	Response-00381	There is a green wedge between chaddesden woods and breadsill, this development will impact on that and also further reduce the habitat further of the wildlife.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Angela Clarke	Response-01400	Increased risk to the wildlife with decreased habitat and disruption from building work.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Angela Smyth	Response-00296	This housing is being built on a Green belt where multiple creatures live including hare's, hedgehogs, foxes and many bird species.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Ann Sherlock	Response-00410	The map used is out of date and the wildlife has already been negatively impacted in recent years due to the Alport Heights estate and Durose estate (both estates and established roads connected to them are conveniently missing off the map used in this proposal, and perhaps intentionally misleading the public who would presume there is a larger green space left than actually is). Adding the current housing proposal to the already overloaded housing in the area will be extremely detrimental to the wildlife and biodiversity, and it is extremely disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the area. There is not the green space available that is being portrayed, and this will have an even bigger impact on the local wildlife and biodiversity than is currently being displayed on the proposal.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Anya andrews	Response-00605	Local wildlife is going to be continued to be destroyed.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Ashley syll	Response-00397	Severly limits area to south of proposed allocation
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Ben Martin	Response-00787	The proposed development site is also a crucial breeding and feeding ground for, and not limited to Buzzards, Kestrels and Barn Owls. It would also lead to excessive destruction of mature hedgerow that surrounds the proposed site, further negatively impacting the wildlife in the greenbelt area who use these as wild life corridors and increasing pollution in the area.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Bethany Seivewright	Response-01563	Concerned over the wildlife with it being so close to the great northern Greenaway
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Beverly Jordan	Response-01330	Increase in air pollution will directly affect wildlife in a previously marked Greenbelt area where wildlife has the opportunity to thrive
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Brendan Hargreaves	Response-00629	all the wildlife that will be killed and future wildlife in the area
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Bridgette Cussens	Response-00390	Oakwood housing is getting bigger and bigger, much larger than the place can deal with. Putting this strain on the wildlife would be extremely detrimental, leaving minimal space for wildlife to prosper
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Carl Hill	Response-00670	Buzzards, Deer and other wildlife will not have enough habitat now

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Carol Westcott	Response-00973	The site has lots of trees and bushes for birds and wildlife with the new housing estate that has been built at Dale acre road we have already lost lots of nature, with hardly any lawns and bushes. Where are the wildlife going to go.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Carys Whomsley	Response-01438	I am writing to register my strong objection to the above-mentioned planning application, both in its original and revised form. Despite the removal of the area adjacent to the A61 in the amended proposal, I believe that the proposed development remains deeply inappropriate and harmful for the following reasons: 1. Contravention of Policy CP18 and Loss of Green Wedge The proposed site lies just outside the designated Green Belt, but crucially directly abuts existing woodland and open countryside, forming part of the vital green corridor along the Great Northern Greenway. This area functions as a green buffer, enhancing ecological connectivity, supporting biodiversity, and providing visual and recreational amenity to local residents, walkers, and cyclists. Despite claims of woodland retention, the development threatens the integrity of this space. Proximity to new housing would increase human pressure on the natural environment, likely leading to degradation of woodland, fragmentation of habitats, and a reduction in wildlife corridors. No Biodiversity Net Gain (BNG) assessment appears in the application documents, raising concerns about whether the legally mandated 10% net gain can or will be achieved. Biodiversity enhancements delivered off-site would do nothing to mitigate local ecological loss, thereby undermining environmental sustainability in the area. Moreover, the site lies adjacent to land recently released from the Green Belt and under consideration for housing allocation by Erewash Borough Council. The cumulative impact of developing both sites would be devastating: a continuous sprawl from Derby through to Breadsall, resulting in the elimination of the settlement gap and permanent damage to the character of the Great Northern Greenway. 2. Environmental, Infrastructural, and Policy Concerns The proposal directly contradicts the National Planning Policy Framework (NPPF) Paragraph 143, particularly the goals of preventing urban sprawl and protecting the openness of Green Belt land. It also ignores the findings of the Strategic Housing Land Availability Assessment (SHLAA 359), which previously deemed the site unsuitable for residential development due to accessibility and environmental limitations. The development is completely incompatible with the objectives of the Breadsall Parish Neighbourhood Plan 2019?2029, particularly the aims to: Preserve the rural character and prevent urbanisation; Avoid coalescence with the Derby conurbation; Safeguard wildlife and ecological features; Control flood risk and infrastructure strain; Protect valued green spaces and visual vistas.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Carys Whomsley	Response-01438	Breadsall has already experienced increased flooding, attributed to upstream developments like Persimmon Estate and Breadsall Hilltop, which lie within the same water catchment area. Any additional development would worsen this issue, placing homes and infrastructure at risk. Furthermore, the proposal relies on access through two existing public footpaths within the Redrow estate and offers no concrete infrastructure improvements. The A608 is already over-congested, and no plans are presented to handle increased traffic or to safeguard children commuting to local schools. 3. Loss of Community and Ecological Value This land offers more than just open space?it is a much-loved and well-used amenity for the local community. It serves as a peaceful escape for informal recreation and nature engagement, and its visual and environmental contributions to the neighbourhood are significant. Its destruction would represent a major loss in local character and quality of life. The proposal underestimates the pressure on existing services, lacks detailed mitigation plans, and fails to explain how proposed footpaths will link meaningfully into existing routes. Nearby Local Wildlife Sites will be impacted
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Charlotte	Response-00458	Greenway belt and surrounding areas should be protected.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Chris C	Response-01106	The open spaces and access to wildlife areas is an important part of the area. Removal of this plus the likely damage caused through the building work negatively impacts the environment and quality of life for residents. Even now after construction of Durose estate building materials and rubble can still be found, this will only get worse with the proposed construction.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Chris Harris	Response-01521	This will be adversely impacted by these additional properties
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Chris Lunn	Response-01410	This land is a greenbelt/green wedge area and, as such, it is immensely important that it should remain so. These appear to be terms with which the council is either unfamiliar or for which they have total disregard. The proposed area is designated as a ?birds and bees? field which aims to increase the wildlife population, promote biodiversity and help to combat the effects of climate change and is integral to the Great Northern Greenway which was designed to enhance the quality of life for local residents. The field and track are heavily used by many people. Dog walkers, picnic-ers and people who just want to escape the stresses of life and reconnect with nature. The area provides essential habitat for many different species whose populations are already declining at an alarming rate. Hedgehogs and rabbits, once prolific in the area, are now a rarity. By proceeding with this development, the Council is eroding the very greenery that the Greenway was designed to protect. The Redrow housing estate cannot be without blame for this and no further habitat loss should be incurred. This proposed development completely undermines Erewash council?s approach to the importance of preserving greenbelt and green wedge land for current and future generations to enjoy. To replace the natural beauty of the area by developing this land for housing will permanently end the visual contrast between the urban and rural areas and set a precedence for all future developments. It would cause irreparable damage to the landscape, disrupt wildlife corridors and erode a space that absorbs carbon and helps to improve air quality. I would like to draw your attention to your campaign ?Wild About Erewash?. In it you encourage people to get involved as it: Improves health and wellbeing, improves biodiversity and reduces our carbon footprint. It certainly makes for interesting reading, especially as you appear to have reneged on every point. You have clearly lost interest in everything you maintained was at the heart of your approach to the welfare of the local area and its residents. Possibly this was just an agenda to win the local election on behalf of Labour? It certainly begs the question of just how many other points you intend to retract? Your rewilding sites may not have included the land to the north of Breadsall Hilltop but that would be because it didn?t need rewilding in the first place.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Claire cordery	Response-01494	Will effect wildlife and remove the green area. There are already new houses in the area.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Clare Roters	Response-01553	We have sighted kestrels, foxes, pheasants, bats, field mice and other animals on the durose estate itself. More damage to the greenway and woodland areas would remove their homes, food source and safety. There are also farm animal close by like cows who need to be protected from fumes and noise.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Colin Brewster	Response-00576	The proposed site is currently designated as Green Belt, which was put in place for a reason. It is home to an abundance of ground-based wildlife and visiting birds, it provides coalescence between the city and Breadsall Village. This final piece of countryside, right on the boundary, should not be lost to development. It has remained as Green Belt for many years now and should stay as such
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Coral Bradley	Response-00862	Please do not build on this land. It's next to a beautiful wood that lots of people use and visit to look at the wildlife. We have already had two housing estates built close to us in the last few years. We can't cope with more impact on the environment and other factors like doctors etc. we would urge you to look elsewhere for housing
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Dana Demidoff	Response-00634	This is surely an important health not just for wildlife but for people's mental health
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Darren adams	Response-00874	Since the old railway line has been converted into a public footpath with a deformation of trees, I believe this has had a major effect on the wildlife has made a noticeable difference
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	David Byrne	Response-01433	Greenbelt land is already becoming less and less, this development will further erode it
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	David Duxbury	Response-00305	The development will impact the biodiversity in the surrounding areas and access to green corridors. Developments adjacent to the proposed land and adjacent to lime lane have already impact the area significantly.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Edward James Gregory	Response-00728	The area already suffers from traffic congestion, and safety issues due to speed and number of vehicles, so any increase will impact air quality, and reduce the amount of green space and hedgerows for animals
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Elaine hodgkinson	Response-00854	There is already lot of biodiversity along the Greenway which be impacted by this new development.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Elena Maxim	Response-01573	There wouldn't be any
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Emma Binns	Response-00843	Isn't this allocated area a wetland area that already has flooding and bogging issues? There will also be animals and birds living in this area that will be affected.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Emma Hawkins	Response-00813	The proposed development will adversely affect the wildlife in the area forcing them into a much smaller corridor. Light pollution will negatively impact this much smaller corridor namely the Great Northern Greenway and also the farming animals next door. The land provides breeding grounds for all types of wildlife including foxes, rabbits, insects, birds including buzzards, owls and bats. this would be lost. There is also a natural pond at the bottom right corner of the land and this and the wildlife within will be adversely affected by a through road if not lost. The proposal ignores the Breadsall Parish Council Village Neighbourhood plan 2019-2029. Key points of are: ? 1 - Protect and enhance the rural character of the parish and prevent urbanisation. ? 2 - Enforce the requirements of the Green Belt to prevent inappropriate development and avoid coalescence with the Derby conurbation. ? 9 - Improve measures to control existing flood risks within the parish and resist any new development that may increase existing flood risks. ? 11 - Identify key wildlife and biological features within the parish and take appropriate steps to preserve them. ? 12 - Mitigate the effect of the large volume of through traffic in the village and aim to prevent any growth in through traffic.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Faye Wilkinson	Response-01129	Wildlife have already had their habitats limited by the building of Durose Country Park, this would reduce their habitats further. The wildlife will be threatened further either driving them out into the residential areas or worse, giving them no chance of survival.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Gary Murfin	Response-00374	A lot the green land in the area will be gone if the current building plans in the area go ahead
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Gaynor Pawley	Response-00627	Once this area has been built on there will be a permanent loss of wildlife. The development would encroach on land which has seen foxes, badgers, bats, owls and other important wildlife, which is gradually having it's habitat and feeding grounds reduced. also the proximity to the green way would further reduce the biodiversity.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Ged Doherty	Response-01822	Between the village of Breadsall and the land in question is the Great Northern Greenway, which is a fabulous amenity used by many members of the community for walking, running and cycling, enabling the users to enjoy a countryside walk so close to the city of Derby. It is also a great place to observe a whole variety of species of wildlife. Allowing the land to be developed would not only devalue the Greenway from its outlook consideration (who wants to walk through a housing estate?) but would also ruin the habitat of many of the species of wildlife, forcing them to migrate elsewhere and possibly in some cases even perish.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Gillian Pearson	Response-00303	Once the habitat has been destroyed the wildlife/natural habitat will be gone for ever.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Harry Mee	Response-00882	Greenbelt land retains the countryside that we have left. Destroying this, is destroying the habitat for wildlife and biodiversity.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Helen Foster	Response-00650	This area lies in close proximity to an SSSI (LNR on the Great Northern Greenway) and woodland (Willowholt and Mill Plantations) which play host to a number of species including but not limited to: of brown-eared and pipistrelle bats, common toads, trout, smooth lizards, badgers, foxes, woodpeckers, swallows, martins, tawny owls, barn owls, (wild) bee hives and rare orchids (common spotted/heath spotted). Furthermore one residence on Brookside road close to the proposed site contains a maternity roost of over 200 soprano pipistrelle bats which use the woodland and proposed site as a feeding ground. In section 9.5 of the Breadsall Neighbourhood Plan it states: 'it is proposed that a number of smaller sites should be designated as Local Green Spaces as they provide habitat for wildlife, including protected species, such as whiteclawed crayfish, water vole, badgers and bats. These sites are as follows: 1 Dam Brook and banks 2 Boosemoor Brook and banks 3 Croft Wood 4 Willowholt Plantation 5 Mill Plantation' ...and later in the section: '2 Prevention of development on sites of special importance. Given the absence of pressure for anything other than small-scale development in the parish there is no justification for development of any of the sites identified above as local wildlife sites and Local Green Spaces. These should therefore be protected from development unless the wildlife ceases to occupy the site in question. The SSSI already enjoys strong protection through national policy.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Helen Walker	Response-00325	So you think it is acceptable to kill all the wild life around and remove their habitat, and create a concrete jungle, we have lost so much wildlife in recent years and it is trying to find food where ever it can we often have foxes trying to find food where we live in Oakwood.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Hulland. Bdverley	Response-00496	Chaddesden wood is beautiful, do I not destroy this With more housing, more people and traffic, find another area, enough houses in Oakwood . Will spoil it. Also, big Not enough good schools, only ones with room , poor reports
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Ian Lockwood	Response-01491	This area is situated close to a Site of Special Scientific Interest (SSSI), specifically the Local Nature Reserve (LNR) on the Great Northern Greenway, as well as the Willowholt and Mill Plantations?woodlands that support a rich variety of wildlife. Species observed here include, but are not limited to: brown long-eared and pipistrelle bats, common toads, trout, smooth lizards, badgers, foxes, woodpeckers, swallows, martins, tawny owls, barn owls, wild bee hives, and rare orchids such as the common spotted and heath spotted varieties. Notably, a residence on Brookside Road near the proposed development site contains a maternity roost of over 200 soprano pipistrelle bats, which rely on the adjacent woodland and proposed site as a vital feeding ground. Section 9.5 of the Breadsall Neighbourhood Plan highlights the ecological value of this area, proposing that several smaller sites be designated as Local Green Spaces due to their role in supporting wildlife, including protected species like white-clawed crayfish, water voles, badgers, and bats. These designated sites include: Dam Brook and its banks Boosemoor Brook and its banks Croft Wood Willowholt Plantation Mill Plantation The same section further states: ?Prevention of development on sites of special importance. Given the absence of pressure for anything other than small-scale development in the parish, there is no justification for the development of any of the sites identified above as local wildlife sites and Local Green Spaces. These should therefore be protected from development unless the wildlife ceases to occupy the site in question.? The SSSI already benefits from strong national policy protections, reinforcing the case against development in this sensitive ecological area.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Jake Moore	Response-01202	The proposed development site currently serves as a vital green corridor for local wildlife, supporting birds, small mammals, pollinators, and potentially protected species. This area contributes significantly to: Habitat connectivity between Oakwood and surrounding natural areas. Local biodiversity and ecosystem resilience. The wellbeing of residents who benefit from proximity to green, undeveloped land. The development threatens to destroy these habitats, with no clear ecological compensation or biodiversity net gain outlined in the planning documents. The loss of this site would be irreversible and directly conflicts with national and local environmental goals.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	James Bellaby	Response-00337	More house, less places for the very important echo system.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	James Harvey	Response-00324	I do not think having this build will help the limited wildlife we have from this beautiful spot
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	James Roberts	Response-00673	The land marked for building works is currently used by various wildlife, so it is a given that the works will reduce biodiversity and drive away wildlife. I am particularly concerned about the potential impact to the greenway. Even with a 'transition' planned, given how wet and boggy the land being proposed to build on gets during the winter, filling the area with asphalt and concrete will just drive the water into the greenway, eroding away the greenery and damaging the path (as is seen elsewhere on the greenway)
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Jamie Branagan	Response-00335	The existing estate has already squeezed wildlife into a narrow corridor between hilltop A608 and the A61. Stripping more land to concrete over will only remove more natural habitat for field mice, badgers, birds and bats, etc. Not to mention valuable natural green space for the current residents of Oakwood.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Janet Brewster	Response-00577	The proposed site is currently designated as Green Belt. It is home to many species of wildlife including a large variety of birds, in fact it is a wildlife haven. With the increased number of people, especially children, now living in the immediate area, it is important that this area remains Green Belt for all to enjoy.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Janet O'Brien	Response-01835	Green Belts are important for wildlife as they provide crucial habitats and act as corridors connecting various wildlife sites. As residents within the so-called ?safeguarded? area we witness the everyday environmental and ecological benefits. The area hosts and sustains a variety of species such as bats, nesting partridge, migrating swallows, stoats, owls, buzzards, foxes and is a regular hunting ground for the Derby peregrine falcons. They also offer green spaces for urban dwellers to enjoy nature using the various footpaths. Which if this development is allowed will turn footpaths in nature to a mere commute from one side of the urbanisation to the other. Enjoying country walks is a well documented supplement to mental health. Part of this Green Belts which has been ?safeguarded? for housing under this latest review has previously under government grants been segregated from cattle grazing land to provide a nature reserve with a wide range of species and floodplains which have been needed due to the added flood danger following the previous housing developments on the A608.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Janette Glenn	Response-00422	The proposed development encroaches further towards Breadsall village, removing vital green fields and biodiversity corridors for wildlife.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Jared Smyth	Response-00894	There are many animals in the surrounding woods that would be affected
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Jason Reader	Response-00320	The Breadsall Greenway is an important wildlife corridor in the area, it should remain completely untouched and a buffer placed around it. Until I see plans to leave it totally intact with additional green space I object.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Jeanette Kent	Response-00402	Lack of wildlife areas are a real concern. We are taking up more and more of the countryside instead of building in brown field sites, empty buildings should be knocked down and built upon before taking more and more countryside. There are regular Red Kites, Buzzards, song thrushes etc within the area defined that would all be displaced if this goes ahead.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Jessica Softley	Response-01408	Within the proposed build area and on and around the Great Northern Greenway there is lots of wildlife, including animals, birds and bats. Building upon this land and right up to the Great Northern Greenway footpath will impact these habitats and the biodiversity.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	J Hasse	Response-00875	We don't want to lose any wildlife, there's enough planning applications in for Breadsall already.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	John Harlow	Response-00619	The wildlife and biodiversity needs as much help as possible not additional building sites What type of surveys have taken place to first of all discover what wildlife?.which includes bird, animals, insects, needs to be protected? The Greenway has many diverse species of tree/ shrub that need protection.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	John Moffat	Response-01289	Further erosion / destruction of what once was the Green Wedge will seriously impact the wildlife corridor that currently stretches from the open countryside around Morley right into the centre of Derby at the cricket ground and Pentagon Island
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	John O'Brien	Response-01796	Green Belts are important for wildlife as they provide crucial habitats and act as corridors connecting various wildlife sites. As residents within the so-called 'safeguarded' area we witness the everyday environmental and ecological benefits. The area hosts a variety of species such as bats, nesting partridge, migrating swallows, stoats, owls, buzzards, foxes and is a regular hunting ground for the Derby peregrine falcons. They also offer green spaces for urban dwellers to enjoy nature using the various footpaths. Which if this development is allowed will turn footpaths in nature to a mere commute from one side of the urbanisation to the other. Enjoying country walks is a well documented supplement to mental health. Part of this Green Belts which has been 'safeguarded' for housing under this latest review has previously under government grants been segregated from cattle grazing land to provide a nature reserve with a wide range of species and floodplains which have been needed due to the added flood danger following the previous housing developments on the A608.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Jonathan Park	Response-01191	Destruction of the fields and green areas will significantly decrease the biodiversity of the area
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Julie Bates	Response-01326	The proposed development site is also a crucial breeding and feeding ground for, many animals ? and not limited to Buzzards, Kestrels and Barn Owls. It would also lead to excessive? ? destruction of mature hedgerow that surrounds the proposed site, further negatively? ? impacting the wildlife in the greenbelt area who use these as wild life corridors . It will be devastating to lose this green space for all wildlife
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Justine Dean	Response-00844	Cutting off more greenfield will reduce wildlife in the area - the hedgehogs, birds and foxes are already reduced by the 2 costing new housing estates
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Justin Windsor	Response-01544	This proposal along side the proposal for a new housing estate on the adjacent field is hugely restricting the open space required for the local wildlife, over the years, the space for rare breeds of birds as well as standard wildlife has been whittled down to just a few open areas and these proposals further limit the space and will inevitable cause wildlife to vacate the area.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Kara Crossley	Response-00865	The countryside has already been destroyed enough with the development of the houses on Breadsall hilltop and adding more houses will only destroy the countryside and wildlife further! It won't be classified as the countryside at the rate housing developments are being built
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Karen Read	Response-00923	There will only be concrete no place for wildlife. there must be surveys to assess the damage to our already fragile wildlife can you please share with us the results of any ecology survey results that have been carried out when you picked this site
			Karen Smith	Response-00635	The proposed land is a haven for flora and fauna with many unusual species such as newts
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Katie Hulland	Response-00382	The more houses and less green space makes it harder for wildlife to maintain habitats and cross different areas
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Kev Rodgers	Response-00897	As always, with developments like this, wildlife will be displaced - butterflies, birds and mammals will have to find new homes. There is a badger sett on the very northern tip of the proposed development, although it does not always appear to be in use. I have personally witnessed a weasel, a badger, foxes, a barn owl, a woodcock and also heard tawny owls on the proposed development site. Do you plan to ensure wildlife supporting initiatives, such as swift / nest boxes and hedgehog corridors to be incorporated in to the housing?
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Kimberley Woodward	Response-01445	Taking up more green space to build more housing, meaning local flora and fauna have less space to live. Would be upsetting more green space and habitats. Before you know it it will be like living in London central.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Kirstin Woodward	Response-01043	The proposed development is located in an area rich in wildlife and biodiversity. The surrounding fields provide a safe and important habitat for a wide range of species. I have personally seen foxes, rabbits, and many birds, including a breeding pair of lesser spotted woodpeckers, lapwings, and even the peregrine falcon from the cathedral, which uses the area as a hunting ground. This green space is also a valuable amenity for the thousands of families living nearby. Every day, hundreds of people use the area for walking, running, and cycling, enjoying the peace and beauty of the countryside. Many residents chose to live here, in what was promoted as a 'Country Park?', specifically because of its proximity to nature and wildlife.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	K Munson	Response-00631	Our wildlife in the area has already been compromised this potential development will only aggravate the situation
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Lara Small	Response-01262	I'm personally grateful that the decision was made to build Durose Country Park, I now live in a home probably built on allocated as Green Belt Land. I see the irony in my objection to further development and I'm trying to avoid a 'Not In My Back Yard?' attitude. I understand the housing crisis won't fix itself unless more homes are built. I seek to urge the planning team to consider how to get the most value out of the of the fields available in the area, and I'm not sure if the awkward triangle North of Breadsall Hilltop really achieves that. Fitting in sufficient houses to make it profitable seems disproportionate to the effort in getting access to the fields, levelling the sloped land, cutting through protected hedgerows, pressurising the Great Northern Greenway, establishing a road network and critically, establishing water catchment & run off areas that will be critical to ensuring the inhabitants of Breadsall Village stay flood free. One of the wonderful things about Derby, and part of the reason why I've chosen to settle here, is due its lack of heavy city intensity, As a proud Rolls-Royce employee, a huge amount of employee wealth is poured into Derby and its surrounding areas. Perhaps, this is also the reason why further housing is being considered; its becoming a more attractive place to live, but I urge you to ensure the city remains in balance with the green space around it. May I offer my very best wishes for your future plans and development of Derby, and may I urge you to consider the balance and impact of all options.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Laura	Response-00379	Local area perfect for the community to keep fit on family walks. Wildlife would be burdened. Also not enough bins for litter as is.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Laura Louca	Response-01266	You are continually building on the homes and food sources of our valuable wildlife. You use the excuse of ?no mow may? to leave grass verges on the side of busy roads to help the wildlife - this isn?t where wildlife want to live/eat - they need the fields, hedgerows, trees, shrubs, wildflowers, grasses etc
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	L Burton	Response-00342	There are many bats in the area and a lot of wildlife on the green belt
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Leah McCormack	Response-01481	Objection to Proposed Development ? Conflict with Policy CP18 (Green Wedges) I note that this application has been amended to exclude the development adjacent to the A61. However I still wish to raise strong objections to the proposed development (both in its amended form and original form) on the grounds that it conflicts with Policy CP18 concerning Green Wedges. Although the site lies just outside the designated green belt surrounding Breadsall, it directly abuts existing woodland and open countryside, forming an important part of the green corridor along the Great Northern Greenway. The application site provides valuable habitat for wildlife and functions as an essential green buffer. Its loss would significantly reduce ecological connectivity and visual amenity, impacting local biodiversity and the quality of life for residents, walkers, and cyclists who currently use and enjoy this open space. The site is actively appreciated by the community as a visual break in built development and as a wildlife corridor connecting to other open areas. While the outline proposal includes the retention of woodland, there are serious concerns that development will increase pressure on these areas, potentially leading to degradation over time. I am concerned that the proposed development does not provide an adequate buffer to the woodland corridor and built development will sit too close and will detrimentally impact the existing woodland. There is no BNG Assessment listed in the application documents on the portal so it appears that it hasn?t yet been done. How can there be any confidence that the proposal would be able to satisfy the statutory requirement to deliver 10% net gain. Any BNG delivery off site or through the purchase of biodiversity units elsewhere, dilutes the benefit of 10% net gain as the biodiversity is lost here in this locality and the significant environmental impact is here. Crucially, the proposed development sits adjacent to land at Breadsall recently released from the green belt, which Erewash Borough Council is considering for housing allocation. If both sites are developed, the cumulative impact will be substantial?leading to the loss of meaningful green space, erosion of the rural character of the Great Northern Greenway, and the elimination of the settlement gap between Breadsall and the wider Derby conurbation. For these reasons, I urge the Council to reject the proposal in order to uphold the principles of Policy CP18 and protect the integrity of this important green wedge.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Lee Wheatley	Response-01492	1. Habitat Loss and Fragmentation: o New housing will inevitably require the conversion of existing land, which will include green fields, hedgerows and other habitats that support local wildlife. This direct loss of habitat reduces the space available for species to live, forage, and breed. o Development will also fragment existing habitats, creating barriers to wildlife movement and isolating populations. This can reduce genetic diversity and make species more vulnerable to local extinction. 2. Disturbance to Wildlife: o Increased human activity, noise, and light pollution associated with new development will disturb wildlife patterns. This can affect breeding success, foraging behaviour, and migration routes/wildlife corridors. Nocturnal animals are particularly sensitive to increased light pollution. o Construction activities themselves can cause significant disturbance through noise, dust, and the presence of heavy machinery, potentially displacing wildlife from surrounding areas. 3. Impact on Ecological Corridors: o Breadsall and Breadsall Hilltop are connected to the wider countryside by green spaces, hedgerows, or watercourses that act as important ecological corridors, allowing wildlife to move between different habitats. Development that severs and degrades these corridors will have a significant negative impact on biodiversity at a landscape scale.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Linda Morris	Response-00867	Taking a chunk of Green belt will affect the wildlife habitation and the flora and fauna.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Lisa Stone	Response-01018	There is a lot of wildlife currently in that area both in the woodlands and surrounding bushes areas and long grass, this will have a detrimental effect on the eco system and destroy many habits , I often seen rabbits in the fields, birds and prey and bats which will all disappear when there?s no food or habitat left.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	lynne hollis	Response-01234	I fully support CPRE Derbyshire?s concerns regarding the proposed development. Preserving the Green Wedge is essential for maintaining open space, supporting wildlife, and ensuring the wood remains connected to the countryside. Urban expansion should be carefully planned to protect these natural areas rather than isolate them. Ancient wood is a lovely place and should be protected at all cost.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Mandy Cooling	Response-00312	This would appear to be a significant development on Green Wedge. It?s particularly concerning at a time when there is so much talk about the environmental impact that we are making and it?s disappointing that we aren?t seeing any innovative proposals to regenerate and redevelop areas rather than destroying even more green spaces and natural habitat for birds and animals. I note that you are planning to preserve the Greenway and ancient woodland but it?s not clear how you consider that is achievable with such a development. This area is a natural habit for example for rabbits, birds, trees etc. I?ve seen deer on the land which is proposed to be developed. The woods off the Greenway are a haven for bluebells in the spring. All of this would be decimated by this and other developments being considered by Derby City Council. It would, in effect, make the Greenway nothing more than a footpath devoid of much natural habitat which would be a significant loss. We do not know the environmental cost of such further erosion of natural habitat. I?m sure that there are concerns regarding the plans for drainage from these sites. I know from experience of previous developments that there can be unforeseen consequences particularly around flooding, caused by destroying natural drainage of the earth.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Margaret Stafford	Response-01231	This is a sizeable housing development and will destroy part of the Green Wedge and cause disruption to nature and woodland areas. It is important to preserve these areas as once they are destroyed and built upon, they are never replaced and wildlife habitats are lost. Brown and grey sites should always be considered before green belt areas.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Mark Herbert	Response-01285	Taking up a animal corridor

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Martin Harrison	Response-01395	I object to the proposed development due to the potential harm to local wildlife and biodiversity. The area includes green spaces and habitats that support various species. Construction and increased human activity would disrupt these ecosystems, leading to habitat loss and a decline in local biodiversity that cannot easily be reversed.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Mary Moffat	Response-01226	Loss of this green area would also mean a loss of wildlife and be detrimental to us all. So much of the Green Wedge above the Village has been built on and more is threatened to the South-West with a significant loss of bio-diversity. Therefore this green belt area now under consideration for development is one that is important to preserve.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Masheda Chowdhury	Response-01339	1. Proximity to Local Wildlife Site (ER 005) and the Great Northern Greenway: ? The development borders or interfaces directly with Local Wildlife Site ER 005 and the Breadsall Disused Railway corridor (Great Northern Greenway) ? both of which are valued for their biodiversity and serve as critical green infrastructure. ? These areas support diverse habitats, including protected and priority species (e.g., birds, bats, hedgehogs, amphibians, and invertebrates). 2. Inadequate Buffer Zones and Ecological Protections: ? The plan?s vague reference to a ?suitable interface? with the wildlife corridor lacks clarity and measurable commitments. ? Without strict buffer zones, lighting restrictions, and ecological monitoring, development poses a high risk of habitat fragmentation and light/noise pollution ? especially harmful to nocturnal and nesting species. 3. Destruction of Semi-natural Habitats and Hedgerows: ? The 8.2-hectare site likely includes important boundary hedgerows and grassland, which serve as wildlife corridors. ? Removal or disruption of these features would reduce habitat connectivity and violate Natural England?s guidelines on protecting biodiversity through planning. 4. No Published Ecological Impact Assessment (EclA): ? There is no publicly available Ecological Impact Assessment as part of this proposal. ? This is a serious omission, especially for land adjacent to a designated Wildlife Site ? without such a report, the ecological consequences cannot be fully understood or mitigated. 5. Cumulative Impact of Development and Safeguarded Land: ? The safeguarding of an additional 14.6 hectares for future development compounds the risk to local biodiversity over the long term. ? Piecemeal approvals without a landscape-scale ecological assessment will gradually degrade local ecosystems, contrary to national planning policy and Derbyshire?s Biodiversity Action Plan. 6. Threat to Local Conservation Goals and Net Biodiversity Loss: ? Development in this area may directly contravene local biodiversity policies, such as requirements to achieve Biodiversity Net Gain (BNG) under the Environment Act 2021. ? No clear plan is in place to enhance habitats or replace those lost ? a fundamental requirement of responsible planning in ecologically sensitive areas. I have observed regularly foxes, newts, birds of prey, pollinators in the area. Derbyshire Wildlife Trust guidance, which supports protecting habitat corridors like the Great Northern Greenway.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Matt	Response-00604	Ruining wild land which helps the biodiversity and animals
	North of Breadsall Hill Top	Wildlife / Biodiversity	Megan Byrne	Response-01432	Major impact see letter on other notes
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Melissa Little	Response-00389	Oakwood and the Breadsall area are continually being threatened with additional housing which is hugely detrimental to our local wildlife and biodiversity. Croft Wood can be seen adjacent to the proposed build site. A large number of animals and wildlife live within these areas and the surrounding fields provide a connection to this wildlife. Building on the land will be distressing and cut off some potential sources of food for these animals.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Michael Albinson	Response-00790	We have already seen a heavy reduction in wildlife in the area. This will continue to kill off the remaining
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Michael Grignon	Response-01335	It was only a couple of years ago that the council said it was prioritising its green belt in this area adding to wildlife and conservation protection . Breadsall would become a concrete jungle if this plan goes forward
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Michael Poplar	Response-00565	The current and proposed developments are constantly eroding green belt and green wedges of sufficient size to support both wildlife and biodiversity. The odd token greenways and pathways are not adequate.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Monique Johnson	Response-00663	We have already seen that certain species are no longer present in the village, for instance hedgehogs. Many birds are no longer coming as frequently. We need more green spaces, not building sites. Our village is small and cannot take all this turmoil. Nature is being squeezed out of the area. The Greenway alone is not sufficient.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Mrs Francoise Poplar	Response-00602	The current green wedge of land within Erewash's Green Belt serves a vital purpose in helping wildlife and biodiversity to survive in proximity to what is otherwise a very built up urban environment.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Mr Softley	Response-00344	Green space is home to all sorts of wildlife, this development will destroy that.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Mrs Sarah Morley	Response-01515	The green belt areas and the safe guarded land are extremely important for wildlife. There are a wide range of wildlife that live in these areas. The area they have to live in, is continually being reduced more and more. Where will the wildlife go if you remove the green belt and safe guarded areas? The land can be seen for a fair distance and a lot of people enjoy the view and watching the wildlife
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Nathan Cooke	Response-00896	Loss of habitat to yet more housing
	North of Breadsall Hill Top	Wildlife / Biodiversity	Neal Flint	Response-01220	Another large wildlife corridor would be lost along with good usable farm land.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Nicholas Lloyd	Response-00356	I object to this planning application on the grounds that the proposed development threatens local wildlife and biodiversity. The site in question supports a variety of species, some of which may be protected under UK law. According to the National Planning Policy Framework, development should not proceed if it results in significant harm to biodiversity that cannot be avoided, adequately mitigated, or, as a last resort, compensated for. Without comprehensive ecological surveys and a clear mitigation strategy, the development could disrupt local ecosystems, leading to the loss of habitats and a decline in species populations. This is particularly concerning given the UK's ongoing biodiversity crisis, with many species already at risk. Therefore, I urge the planning authority to reject this application unless it can be demonstrated that the development will not adversely affect local wildlife and biodiversity.?

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Norma HASWELL	Response-01384	Development would potentially harm the openness of the Green Belt between Breadsall and the Derby urban area. Furthermore, the site's proximity to a nature conservation area and multi-user trail is a great cause for concern, as the biodiversity in the area.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Oakwood Ward Councillors Eyre, Mulhall and Trehwella	Response-01359	We would like to see the conclusions of a full study on the impact of this development.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Paige Skivington	Response-00366	All the animals that live in the field will lose their home.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Paul Walsh	Response-00341	I think the fields and wood should be left for wildlife to roam free, it is a beautiful walking area, not for more houses to ruin.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Paul Wilkes	Response-01527	We have lived in Oakwood for eight years and have seen a substantial reduction of wildlife since the Lime Lane extension was built. With Oakwood now being an area where one cannot see a doctor or dentist, one cannot find parking in the shopping centre perhaps it is time to either improve the facilities in Oakwood or give a reduction in Council Tax which already very high for what we receive.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Philip Booth	Response-00683	Multiple new sites have already been built encroaching on the wildlife corridor adjacent to the Greenway. This development would significantly effect the biodiversity. The is a badger set in the field and numerous other species use this area such as bats, barn owls, foxes. The natural pond for drainage which has been there for years will hold a variety of wildlife and this would then be surrounded on all sides.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Prathap Paulson Junjuri	Response-01393	Will affect already depleted wildlife and plants
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Rachael	Response-00332	Living in an area with a small allocation of green space immediately near us allows us to witness lots of wildlife, their habitats will be destroyed if this proposed build is to go ahead. We see many birds of prey, a wide variety of wildlife, badgers, hedgehogs, foxes, birds etc.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Richard Kingham	Response-00849	The fields for the proposed development are full of insects, rabbits, birds etc. We have only just started having birds come back to our area after the redrow development. This will remove a huge area of living ecosystem that will never return.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Richard Stone	Response-01029	This area has a huge amount of wildlife, particularly bats in this area, this will be destroying their areas as well as for the other creatures such as rabbits that use the grassland in this area.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Richard Straw	Response-01412	All the local wildlife that me and my family enjoy will be gone
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Roy Ling	Response-01243	This would affect wildlife in the area.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Ruth Duxbury	Response-00301	New housing developments put wildlife at risk. There is a wide variety of plants including bluebells and animals such as foxes and deer are commonly seen.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Samantha Watts	Response-00869	The proposed development threatens the rich biodiversity of Breadsall Village, which is home to a variety of wildlife, including protected species and essential habitats. The loss of green spaces and natural corridors will disrupt local ecosystems, reducing biodiversity and harming species that rely on these areas for survival. The removal of vegetation and increased human activity will negatively impact pollinators, birds, and small mammals, leading to a decline in local wildlife populations. Additionally, the development risks disturbing established habitats, including hedgerows and woodland areas that serve as crucial nesting and feeding grounds.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Sam Saunders	Response-01557	The proposed development at North of Breadsall Hilltop raises considerable concerns regarding the protection of local wildlife and biodiversity. The site lies adjacent to important natural features, including the Breadsall Disused Railway corridor, known as the Great Northern Greenway, which is designated as a Local Wildlife Site (ER 005). This area provides valuable habitat and a vital ecological corridor for a variety of species, supporting biodiversity within an increasingly urbanized landscape. The development threatens to disrupt these habitats, fragmenting the corridor and potentially leading to a loss of flora and fauna. Construction activities such as land clearance, earthworks, and increased human presence may cause disturbance, displacement, or harm to wildlife, including protected species. Without adequate mitigation, these impacts could lead to a decline in local biodiversity and the degradation of important ecosystems. The development must also consider the safeguarding of Breadsall Footpath 24, a public right of way that doubles as an ecological link, ensuring that both human and wildlife access is maintained. Post-construction, the introduction of housing and associated infrastructure could increase light, noise, and pollution levels, all of which have negative effects on wildlife behaviour and habitat quality. The loss of green space and woodland areas further reduces opportunities for foraging, nesting, and shelter. While the proposal mentions the inclusion of landscaping and woodland planting to create a visual buffer between urban areas and Breadsall village, this alone may not compensate for the ecological loss. Comprehensive biodiversity assessments and robust, legally binding mitigation and enhancement plans are essential to protect and promote local wildlife. Without these measures, the development risks causing irreversible damage to the area's natural heritage.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Sam Woods	Response-01576	I strongly object to the proposed development on the land adjacent to my home due to its significant and irreversible impact on local wildlife. This area serves as a vital habitat for a variety of birds, small mammals, and pollinators, many of which are increasingly threatened by urban expansion. The natural green space provides essential shelter, nesting grounds, and food sources that will be lost if construction proceeds. Disrupting this delicate ecosystem not only threatens biodiversity but also undermines the environmental value of our community. I urge you to reconsider the development plans in favor of preserving this important natural habitat.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Sandra Perry	Response-00307	More houses being built is encroaching on wildlife filled land. We used to hear the cuckoo every spring, and tawny owls at night. Urbanising the area has reduced the habitat for these amazing birds
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Sara Cotton	Response-00370	Our woodland is a nature reserve don't build on it
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Scarlett Hamblin	Response-00398	Our wildlife is already struggling. We have lots of native British wildlife that is on the brink of extinction. We need to protect and preserve these precious animals for our future generations. By increasing the amount of housing we are taking away valuable habitats from these animals.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Scott Watson	Response-01284	The proposed development poses a serious threat to the biodiversity of Breadsall Village, which supports a range of wildlife, including protected species and vital habitats. The destruction of green spaces and ecological corridors will disrupt established ecosystems, reducing biodiversity and endangering species that rely on these areas for food and shelter. Increased human activity and the removal of vegetation will have a detrimental effect on pollinators, birds, and small mammals, accelerating the decline of local wildlife populations. Furthermore, the development risks disturbing long-standing habitats such as hedgerows and woodland, which serve as essential nesting and feeding grounds.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Silvia Mircic	Response-00884	This area lies in close proximity to an SSSI (LNR on the Great Northern Greenway) and woodland (Willowholt and Mill Plantations) which play host to a number of species including but not limited to: of brown-eared and pipistrelle bats, common toads, trout, smooth lizards, badgers, foxes, woodpeckers, swallows, martins, tawny owls, barn owls, (wild) bee hives and rare orchids (common spotted/heath spotted). Furthermore one residence on Brookside road close to the proposed site contains a maternity roost of over 200 soprano pipistrelle bats which use the woodland and proposed site as a feeding ground. In section 9.5 of the Breadsall Neighbourhood Plan it states: 'it is proposed that a number of smaller sites should be designated as Local Green Spaces as they provide habitat for wildlife, including protected species, such as whiteclawed crayfish, water vole, badgers and bats. These sites are as follows: 1 Dam Brook and banks 2 Boosemoor Brook and banks 3 Croft Wood 4 Willowholt Plantation 5 Mill Plantation' ...and later in the section: '2 Prevention of development on sites of special importance. Given the absence of pressure for anything other than small-scale development in the parish there is no justification for development of any of the sites identified above as local wildlife sites and Local Green Spaces. These should therefore be protected from development unless the wildlife ceases to occupy the site in question. The SSSI already enjoys strong protection through national policy.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Simon Ferrad	Response-00853	This will destroy wildlife habitats
			simon morris	Response-00866	Any loss of greenbelt will have an adverse effect on all species of flora and fauna.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Stephen and Janet Allis	Response-01221	wildlife badly affected
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Steven furness	Response-01516	We know we have a variety of wildlife along the Greenway. Fields both side protect this. Removing the field buffer butts the wildlife in the Greenway at risk.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Stuart Brown	Response-00771	Planned area currently has vegetation which is home to many insects birds and mammals in the area, also very near an establish forest near breadsall
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Susan Dundon	Response-00396	It will affect our already struggling wildlife
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Thomas Bateman-Wong	Response-00985	More wildlife areas being taken. Leaving the Northern Greenway is a good move but it's getting to the point where it will be a single, lonely track with no wildlife as they have no space
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Tom King	Response-00734	Bats nest in the surrounding areas
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Tom Parker	Response-01398	The estate currently has beautiful green spaces with thousands of habitats for many wildlife which of course will be destroyed with the proposed builds.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Tony Hawkins	Response-01532	The proposed development will adversely affect the wildlife in the area forcing them into a much smaller corridor. Light pollution will negatively impact this much smaller corridor namely the Great Northern Greenway and also the farming animals next door. The land provides breeding grounds for all types of wildlife including foxes, rabbits, insects, birds including buzzards, owls and bats. this would be lost. There is also a natural pond at the bottom right corner of the land and this and the wildlife within will be adversely affected by a through road if not lost. The proposal ignores the Breadsall Parish Council Village Neighbourhood plan 2019-2029. Key points of are: ? 1 - Protect and enhance the rural character of the parish and prevent urbanisation. ? 2 - Enforce the requirements of the Green Belt to prevent inappropriate development and avoid coalescence with the Derby conurbation. ? 9 - Improve measures to control existing flood risks within the parish and resist any new development that may increase existing flood risks. ? 11 - Identify key wildlife and biological features within the parish and take appropriate steps to preserve them. ? 12 - Mitigate the effect of the large volume of through traffic in the village and aim to prevent any growth in through traffic.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Tracey Turner	Response-00334	Wildlife between Durose Country Park and Breadsall Village is rife - animals need habitats protected.
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Wobbina Bugg	Response-00846	Ofcourse it effects biodiversity!!

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.8	North of Breadsall Hill Top	Wildlife / Biodiversity	Zora Wilson	Response-01575	Objection to Proposed Development ? Conflict with Policy CP18 (Green Wedges) I note that this application has been amended to exclude the development adjacent to the A61. However I still wish to raise strong objections to the proposed development (both in its amended form and original form) on the grounds that it conflicts with Policy CP18 concerning Green Wedges. Although the site lies just outside the designated green belt surrounding Breadsall, it directly abuts existing woodland and open countryside, forming an important part of the green corridor along the Great Northern Greenway. The application site provides valuable habitat for wildlife and functions as an essential green buffer. Its loss would significantly reduce ecological connectivity and visual amenity, impacting local biodiversity and the quality of life for residents, walkers, and cyclists who currently use and enjoy this open space. The site is actively appreciated by the community as a visual break in built development and as a wildlife corridor connecting to other open areas. While the outline proposal includes the retention of woodland, there are serious concerns that development will increase pressure on these areas, potentially leading to degradation over time. I am concerned that the proposed development does not provide an adequate buffer to the woodland corridor and built development will sit too close and will detrimentally impact the existing woodland. There is no BNG Assessment listed in the application documents on the portal so it appears that it hasn't yet been done. How can there be any confidence that the proposal would be able to satisfy the statutory requirement to deliver 10% net gain. Any BNG delivery off site or through the purchase of biodiversity units elsewhere, dilutes the benefit of 10% net gain as the biodiversity is lost here in this locality and the significant environmental impact is here. Crucially, the proposed development sits adjacent to land at Breadsall recently released from the green belt, which Erewash Borough Council is considering for housing allocation. If both sites are developed, the cumulative impact will be substantial?leading to the loss of meaningful green space, erosion of the rural character of the Great Northern Greenway, and the elimination of the settlement gap between Breadsall and the wider Derby conurbation. For these reasons, I urge the Council to reject the proposal in order to uphold the principles of Policy CP18 and protect the integrity of this important green wedge.
1.9	South of West Hallam	Air Quality	Amy Cartwright	Response-01017	West Hallam has some lovely green spaces, losing one of these spaces and putting more cars on the roads will have an impact on our air quality in the village.
1.9	South of West Hallam	Air Quality	Andrea Cochrane	Response-01485	Adding extra vehicles onto already busy roads will impact the air quality especially around the school. Scargill School has a wonderful new sensory garden and play area for pupils to improve the health and wellbeing of everyone and especially those with SEND. Also, Beech Lane recreation ground is extensively used for football training and matches. Current thinking is to encourage more time outdoors to improve mental health and well-being. Sadly, this will not be achieved if this development is allowed to go ahead. In addition, research has shown that pollutants from vehicles adversely impact health and have led to an increase in childhood asthma.
1.9	South of West Hallam	Air Quality	Andrew Zielinski-Raynor	Response-00135	Adding further traffic (and congestion) to an already busy road is going to cause an increase in pollution right opposite a school. We know the risks that pollution poses to developing children.
1.9	South of West Hallam	Air Quality	Angela Reid	Response-00134	More pollution
1.9	South of West Hallam	Air Quality	Anita Lawrence	Response-00726	For a proposed development of 90 houses potentially 180+ vehicles all coming and going, increasing not only the road safety risk but the air pollution in the area to which the young, elderly and those in poor health would be particularly susceptible to - is this really appropriate opposite a school, recreation ground and park? The additional use of personal vehicles would also negatively effect the intention to reduce emissions from fossil fuels.
1.9	South of West Hallam	Air Quality	Ann Toplis	Response-00271	More houses near the school would make the air quality worse for the children while at school.
1.9	South of West Hallam	Air Quality	Charles Brooks	Response-00535	Without doubt, hoses instead of open fields will naturally reduce the air quality as will the increased volume of vehicles. Its not just cars but delivery vehicles etc.
1.9	South of West Hallam	Air Quality	Charlotte Lun	Response-00150	90 additional houses could easily mean 180+ additional cars in the area. This will have a detrimental effect on air quality in the area. As well as destroying a green space in order to build on.
1.9	South of West Hallam	Air Quality	Chris Collins	Response-00037	With further traffic, households, waste etc comes further pollution. The air quality during construction of a number of houses would be incredibly polluting in the short to medium term on the health of residents, especially on the children in the school across the road. In the medium to longer term the new households would bring increased pollution with the added footprints.
1.9	South of West Hallam	Air Quality	Claire dean	Response-00069	Adding homes means adding pollution.
1.9	South of West Hallam	Air Quality	Daniel hickson	Response-00177	Children playing out at park and school which will suffer
1.9	South of West Hallam	Air Quality	David Morrell	Response-00477	Additional traffic will impact on the west Hallam conservation area
			Dean Wright	Response-00094	Increased vehicle numbers and homes will lower air quality, particularly worrying as it is next to a school
1.9	South of West Hallam	Air Quality	Emily Reeve	Response-01495	The increase in traffic can only lower the air quality around a school and play area.
1.9	South of West Hallam	Air Quality	Emily Reynolds	Response-00149	Again, average 180 cars will be added to the village if the proposed development goes ahead. That will have a massive negative impact on the air quality around the village which I have always considered to be good.
1.9	South of West Hallam	Air Quality	Emma Lound	Response-00187	More vehicles will contribute to poorer air quality. As combustion engine vehicles accelerate from stationary (at a junction for example) they emit a higher level of pollutants. The number of vehicles using that road already reduce the air quality, increasing that number by up to 150 vehicles would only make the situation worse.
1.9	South of West Hallam	Air Quality	Gilly Turrini	Response-00151	This build will create more road traffic creating more air pollution
1.9	South of West Hallam	Air Quality	Glenn Richardson	Response-00316	With cars often queuing for a considerable amount of time owing to only being enough room at peak times for single lane traffic it's obviously going to effect the air quality surrounding the school & adjacent park where people meet to play sports & recreation
			Guiliano Ricci	Response-01010	More traffic will impact on air pollution
1.9	South of West Hallam	Air Quality	Helen Collins	Response-00034	Increased traffic and pollution is inevitable from any building site and the consequential increase in residents with cars.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Air Quality	Helen fox	Response-00064	The air quality could be significantly compromised, posing serious risks to the community. Increased construction and population density may lead to higher levels of pollution, which can adversely affect the health of residents and the overall environment. Such developments could disrupt the village's tranquil atmosphere, diminishing its appeal and potentially harming local ecosystems. Therefore, careful consideration must be given to the implications of expanding housing in this area.
1.9	South of West Hallam	Air Quality	Helen Johnson	Response-00170	Will always be affected by volume of traffic
1.9	South of West Hallam	Air Quality	Helen Patenall	Response-00868	Air quality will be impacted by the increase in traffic in the area. More housing = more vehicles (possibly several vehicles at one property) = less clean air.
1.9	South of West Hallam	Air Quality	Helen Stanley	Response-01555	More cars means more pollution
1.9	South of West Hallam	Air Quality	Hollie Briggs	Response-00040	We do not want any more poor air quality. We supposed to live in a ?nicer? area.
1.9	South of West Hallam	Air Quality	Iain Harrison	Response-01214	Building on greenbelt land in West Hallam directly contradicts national air quality and environmental improvement goals. The UK government's Environmental Improvement Plan 2023 emphasizes the importance of preserving green spaces to enhance air quality and public health. Greenbelt areas, like the proposed development site, play a crucial role in filtering pollutants, reducing carbon emissions, and providing cleaner air for communities. GOV.UK Moreover, the Clean Air Strategy 2019 outlines the necessity of reducing air pollution through sustainable land use and transportation planning. Developing housing on greenbelt land often leads to increased vehicle dependency due to inadequate public transport options, exacerbating air pollution levels. In West Hallam, the limited bus services, especially after the discontinuation of the Black Cat service, mean that new residents would likely rely heavily on personal vehicles. This shift would not only increase traffic congestion but also deteriorate local air quality, posing health risks to existing and future residents. Preserving greenbelt land aligns with national objectives to improve air quality and public health. Prioritizing brownfield sites for development, which are often better integrated with existing infrastructure and public transport, supports these goals more effectively.
1.9	South of West Hallam	Air Quality	James Tilford	Response-00103	Increased air pollution
1.9	South of West Hallam	Air Quality	Jane Taylor	Response-01023	More traffic will always increase air pollution
1.9	South of West Hallam	Air Quality	Jenny Bexon	Response-00185	Its a village! Its small and its clean and we pay a premium in housing for this.
1.9	South of West Hallam	Air Quality	Jo-Anne Attenborough	Response-00129	The field is a haven for green trees and plants that photosynthesise, removing the carbon dioxide from our air and producing oxygen. Any destruction of these plants will result in poorer air quality and therefore a negative impact on the residents of West Hallam.
1.9	South of West Hallam	Air Quality	Johnson	Response-01037	Addition vehicles extra houses all will have a detrimental impact on the air quality which is already suffering in the Trent valley
1.9	South of West Hallam	Air Quality	Jon Skelson	Response-01025	With extra houses comes extra pollution. This is a fact.
			Judith Hare	Response-01014	More traffic more air pollution! Simple as that.
1.9	South of West Hallam	Air Quality	Julie Harker	Response-01073	More cars obviously means more pollution
			Katie	Response-00047	More pollution from cars
1.9	South of West Hallam	Air Quality	Katie Rice	Response-00036	More traffic, more pollution,
1.9	South of West Hallam	Air Quality	Kerry	Response-01034	More cars around the school area creates more pollution for children to inhale.
1.9	South of West Hallam	Air Quality	Kerry Barratt	Response-00168	Adding more pollution to our village
1.9	South of West Hallam	Air Quality	Kerry Middleton	Response-00266	This proposal would add congestion to the air quality thus ensuring asthma sufferers would be compromised.
1.9	South of West Hallam	Air Quality	Kevin Fox	Response-00682	The air quality around the school is already increasing. Further building dust and the inconvenience of further traffic will only make air pollution untenable for the residents.
1.9	South of West Hallam	Air Quality	Kian	Response-01493	Cutting down trees will mean more CO2 in the environment
1.9	South of West Hallam	Air Quality	Kirsty Oliver	Response-00558	Maybe another 180 vehicles to pollute the area on a daily basis.
1.9	South of West Hallam	Air Quality	Lindsey Lyons	Response-00071	Air pollution is a critical action the government has committed to reducing. By building additional houses, the increased gas emission from building a singular house contributes largely to the global emission crisis. Each house building operation contributes to 27% of global emissions with an additional 15% contribution for the building materials and embodied carbon process. I heavily contest why this is being considered with global warming at an all time high. For the local village, the air quality is moderate and unsafe for sensitive groups, adding additional housing will contribute to the air quality being unsafe for a larger proportion of the area, this should be a strong reason for not approving the development in its own.
1.9	South of West Hallam	Air Quality	Louise Annison	Response-01049	Pretty obvious, extra housing and lack of green area which makes this village have a lovely rural location would be impacted by poorer air quality.
			Mandie frith	Response-00247	More cars ect more fumes more chest and breathing issues
1.9	South of West Hallam	Air Quality	Mark Patenall	Response-00851	More cars, decreased air quality
			Mark Power	Response-00276	With added Cars, a lot of people have two cars per household these days, will indeed affect the Air quality of the area
1.9	South of West Hallam	Air Quality	Michelle	Response-00148	The air quality will suffer due to the toxic fumes that comes with more cars and housing
1.9	South of West Hallam	Air Quality	Mr and Mrs Mellors	Response-01797	With more vehicles travelling through West Hallam, especially during peak times, there would be a significant rise in air pollution and noise levels. Given the rural nature of the village, this would negatively impact residents' quality of life and contradict environmental goals aimed at reducing emissions in small communities. Children walking to school and elderly individuals with respiratory conditions would be particularly vulnerable to these changes.
1.9	South of West Hallam	Air Quality	Mrs Judith Pittson	Response-00753	More traffic and houses will effect the air quality.
1.9	South of West Hallam	Air Quality	Mrs Strelley	Response-00233	More traffic will add to congestion. Asthma cases are increasing and it is becoming alarming, the number of children requiring inhalers. It will increase poor air quality.
1.9	South of West Hallam	Air Quality	Nick Craddock	Response-00145	As per my comments for other west Hallam Proposal

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Air Quality	Nicola Elkington-Horridge	Response-00079	A lot of extra and completely unnesscary fumes from cars which will only add to ruining the village and the health of the people who pay a premium to live in it.
1.9	South of West Hallam	Air Quality	Nina Walters	Response-00244	Yes
1.9	South of West Hallam	Air Quality	Pamela Fox	Response-01242	The air quality around the school is already getting increasingly worse my husband is an asthmatic and has to use his inhaler more often nowadays so additional traffic will only make this worse
1.9	South of West Hallam	Air Quality	Patricia Eady	Response-00114	I feel the pollution would be high due to more cars coming to and from the school this is not acceptable outside a school especially for children with asthma
1.9	South of West Hallam	Air Quality	Paul aldre	Response-00152	It's a village we don't need more pollution from traffic and housing
1.9	South of West Hallam	Air Quality	Paula Piggott	Response-01041	Destroying the countryside, killing wildlife, all the things needed for the world to go round. Extra traffic, extra pollution. The air quality will be seriously impacted in a detrimental way! You need trees and you need wildlife for the world to exist! You can't keep destroying the countryside and it not affect the air we breathe.
1.9	South of West Hallam	Air Quality	Pauline wood	Response-01100	Air quality by the school will be badly affected both during building then extra traffic
1.9	South of West Hallam	Air Quality	Peter Litley	Response-00161	Queuing traffic at busy times already plays havoc with air quality. 90 extra homes can only make things worse.
1.9	South of West Hallam	Air Quality	Rachel	Response-01015	90 more vehicles in a small village.
1.9	South of West Hallam	Air Quality	Robert Hall	Response-00630	Development would inevitably worsen air pollution by reason of increasing level of traffic in the Village.
1.9	South of West Hallam	Air Quality	Robert Reynolds	Response-00260	More houses would mean more traffic and, therefore, more air pollution.
1.9	South of West Hallam	Air Quality	sam richards	Response-01467	building such a large site directly opposite a very busy primary school will be causing unnecessary fumes and construction dust which could be harmful to the children. this also applies to nearby residents. there will also be a huge amount of extra cars coming in and out of the village as homes are built, with most homes in the village having 2/3 cars each.
1.9	South of West Hallam	Air Quality	Sarah James	Response-01085	Traffic will increase pollution particularly in school vicinity.
1.9	South of West Hallam	Air Quality	Serena Bostock	Response-00125	Traffic concerns will elevate air quality issue and pollution in the area.
1.9	South of West Hallam	Air Quality	Simon Reeve	Response-01080	The government needs to make their minds up whether they're taxing us to death over emissions or making money out of us with a green con. The addition of more homes on green belt land brings more pollution and the removal of fields and trees less carbon capture and converting greenery. Use the dead town of Ilkeston where shops are closed and convert those in to homes, use some of the land around Stanton, these brown field sites go untouched
1.9	South of West Hallam	Air Quality	Stacey Eady	Response-01529	The south site is across the road from the school more houses and cars within this area will have a negative on the local air quality, and the children that are at the school Site, as well as those that live locally
1.9	South of West Hallam	Air Quality	Teresa Faulkner-Day	Response-00242	With the increase in traffic going through the village would have a negative impact on the air quality around the school, increasing the risk of long term health issues for our young people and children in the community
1.9	South of West Hallam	Air Quality	Teresa Webster	Response-00086	Increased housing brings increased traffic into a semi rural location - we are trying to maintain the village Green areas
1.9	South of West Hallam	Air Quality	Tracey Barks	Response-00111	As a resident of Hallam Way, we already have the school drop off and pick up to contend with in terms of extra vehicles and their associated noise and pollution. An extra 90 houses and their associated vehicles will cause added nuisance and pollution
1.9	South of West Hallam	Bus Services	Alison Fletcher	Response-00198	If affordable housing is to be planned then improved bus services will be a requirement
1.9	South of West Hallam	Bus Services	Andrea Cochrane	Response-01485	The current bus service is very limited. There are two buses an hour during the daytime (approx 6am to 6pm) on weekdays. Evening services are almost non-existent. At weekends, there is a limited service during the daytime on Saturdays and hardly anything at all on a Sunday.
1.9	South of West Hallam	Bus Services	Anita Lawrence	Response-00726	Bus services are wholly inadequate for the existing population, there is no evening service at all.
1.9	South of West Hallam	Bus Services	Ann Ainsworth	Response-01096	Poor transport links from the village especially in the evening
1.9	South of West Hallam	Bus Services	Anne Vanstone	Response-01216	We lack a reliable bus service, and the nearest train connections are not easily accessible.
1.9	South of West Hallam	Bus Services	Carol Hart	Response-01829	The bus service is non-existent, 6 buses in each direction in a day and nothing before 9 a.m. or after 6.30 p.m.
1.9	South of West Hallam	Bus Services	Charles Brooks	Response-00535	What bus service!! You refer to West Hallam being well served by buses. This is simply not true. I suggest you do your research and check bus timetables. For a village the size and population of West Hallam, it is poorly serviced by public transport.
1.9	South of West Hallam	Bus Services	Charlotte Lun	Response-00150	West Hallam has next to no bus service. This will lead to people that rely on buses not wanting to move to the area. It will however attract people that can drive thus creating more traffic and more air pollution in the area.
1.9	South of West Hallam	Bus Services	Chris Collins	Response-00037	The bus service is already appalling for the number of residents in west Hallam. With such significant developments planned there is no way a bus service will ever meet the needs. However, as only 40% of the houses are affordable? (the cynic in me says that these will also be out of reach of most young people anyway) then the rest will have cars and not worry about public transport?.
1.9	South of West Hallam	Bus Services	Christine	Response-01019	Already a very limited bus service to Ilkeston and Derby, meaning more cars on the tight roads especially St Wilfrids
1.9	South of West Hallam	Bus Services	Christine Barnes	Response-00640	There is a poor bus service, particularly for people trying to get to and from work. An hourly service, when frequent late or no show buses, and no evening service is not conducive to people getting to and from work. Potentially there could be another 2 cars per household, as the bus service will not meet the need for most people in employment.
1.9	South of West Hallam	Bus Services	Christine Barnes	Response-01827	Ninety households will need at least one vehicle each to commute to work as the number 32 bus is hourly and service finishes early evening. The 53 bus is every two hours and finishes late afternoon. It also has to be said buses can run very late or at times, not at all, not conducive for a person trying to reach a workplace. I would hope that you will come to the village at the start and end of the school day to witness the problems I have outlined.
1.9	South of West Hallam	Bus Services	Claire dean	Response-00069	Very poor in the area
1.9	South of West Hallam	Bus Services	Daniel Clark	Response-01094	They struggle to manoeuvre now with the high traffic and small roads and more houses in the area will make it worse

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Bus Services	David Fretwell	Response-00133	Currently Hallam is not really served by a bus service, which without further increases the use of cars and increases the volume of traffic
1.9	South of West Hallam	Bus Services	David Mosley	Response-01062	The bus service is quite poor for West Hallam. Will the bus provider be offering an improved service for the area? This then adds to the road safety on Beech lane in busy periods.
1.9	South of West Hallam	Bus Services	Diane Reynolds	Response-00216	There are no buses in the evening which means if you wanted to go anywhere in the evening you can't
1.9	South of West Hallam	Bus Services	Eileen Bailey	Response-00213	Terrible bus service
1.9	South of West Hallam	Bus Services	Eileen Bailey	Response-01053	Bus service is terrible doctors are terrible can't get appointments now
1.9	South of West Hallam	Bus Services	Emily Reeve	Response-01495	Our bus service is limited with no service in the evenings.
1.9	South of West Hallam	Bus Services	Emily Reynolds	Response-00149	The bus services are rubbish anyway in west hallam. People will be forced to rely on cars because it's difficult to get anywhere by bus therefore increasing congestion and the likelihood of accidents if the road is busier. More people would be likely to use the bus if it was more reliable and more frequent but if you added that many homes I think the buses would be rammed anyway and you'd struggle to get on them.
1.9	South of West Hallam	Bus Services	Emma Stanley-Smith	Response-01564	Very poor bus service which would mean people have to drive who live here. Making congestion worse.
1.9	South of West Hallam	Bus Services	Francesca Dean	Response-00221	Already limited and a nightmare. Adding more people will cause an increase to this.
1.9	South of West Hallam	Bus Services	Gary Hamson	Response-00052	A long standing bus stop opposite the school entrance is being relocated and taken away from the existing site opposite the school entrance
1.9	South of West Hallam	Bus Services	Graeme Taylor	Response-01131	There are insufficient bus services for the area already meaning increased cars and car pollution
1.9	South of West Hallam	Bus Services	Guiliano Ricci	Response-01010	The bus service is poor and would not support more housing
1.9	South of West Hallam	Bus Services	Helen Collins	Response-00034	The bus services to the village are poor, consequently inhabitants do rely on their own transport. Hence any new inhabitants must do the same and will only add to levels of traffic and congestion.
1.9	South of West Hallam	Bus Services	Helen fox	Response-00064	Local bus services may face significant challenges. The increase in residential development could lead to heightened traffic congestion, making it difficult for buses to maintain their schedules and efficiency. Furthermore, the potential rise in population may not be matched by an equivalent demand for public transport, resulting in underutilized services that could ultimately be reduced or eliminated. This decline in bus services would be detrimental to the village, as it would limit mobility for residents, particularly those without access to private vehicles, thereby isolating them and diminishing the overall quality of life in the community.
1.9	South of West Hallam	Bus Services	Helen Johnson	Response-00170	Already struggle to get through the village
1.9	South of West Hallam	Bus Services	Helen Patenall	Response-00868	The bus service in West Hallam is woefully inadequate. The buses run very infrequently during the day and the last bus available in the evening is 18:20. A perusal of the bus timetables will support this point
1.9	South of West Hallam	Bus Services	Helen Stanley	Response-01555	Evening and weekend service is poor, not the well connected village mention I the application
1.9	South of West Hallam	Bus Services	Homewood	Response-01074	Already limited services here
1.9	South of West Hallam	Bus Services	Iain Harrison	Response-01214	Public transport provision in West Hallam is extremely limited. Since the loss of the Black Cat service several years ago, residents have been left with minimal bus coverage. The current service is infrequent and does not run in the evenings, making it virtually unusable for commuting, appointments, or social activities. This lack of reliable public transport means that any new housing will inevitably lead to a sharp increase in car ownership and road usage?putting even more strain on already congested roads, insufficient parking, and overburdened infrastructure. Sustainable development should reduce dependency on cars, not increase it. In a village with such poor transport links, building more homes without first addressing this issue is entirely counterproductive.
1.9	South of West Hallam	Bus Services	Iris Howes	Response-01169	Bus services in West Hallam are infrequent and unreliable. Most new residents would inevitably rely on private cars, adding to the congestion.
1.9	South of West Hallam	Bus Services	James Johnson	Response-01125	The proposed development area is poorly served by public transport, meaning most residents will be dependent on cars. This not only increases emissions and road use but also highlights the unsustainable nature of this development. No substantial infrastructure improvements appear to be included in the application to address this.
1.9	South of West Hallam	Bus Services	James Painter	Response-01119	The village is served by a very poor bus service with no late buses
1.9	South of West Hallam	Bus Services	Jane Marshall	Response-01172	Already below par.
1.9	South of West Hallam	Bus Services	Jenny Bexon	Response-00185	Theres fuck all bus service as it is!! Its a village leave it alone.
1.9	South of West Hallam	Bus Services	Jenny Butler	Response-00202	The bus services here are poor and irregular anyway. How will they meet the need?
1.9	South of West Hallam	Bus Services	Jo-Anne Attenborough	Response-00129	What bus service! Getting in and out of West Hallam is already ridiculously hard on public transport. Why build houses in an area that has no reliable public transport?
1.9	South of West Hallam	Bus Services	Judith Hare	Response-01014	Buses are poor in the village. Only every 2 hours until early evening which means people have to drive or taxi to venture out of the village
1.9	South of West Hallam	Bus Services	Karina Cooper	Response-00267	Would need a regular service with a later running time
1.9	South of West Hallam	Bus Services	Kathryn Gilbert	Response-01574	Bus service is not adequate enough to persuade people to use public transport instead of cars. Increased housing with a development of this site will only increase traffic and cause heart and safety issues
1.9	South of West Hallam	Bus Services	Katie	Response-00047	West Hallam already had a limited bus service
1.9	South of West Hallam	Bus Services	Ken Mitchell	Response-00763	The bus service through West Hallam is intermittent and does not go directly to Nottingham. This is important since West Hallam is a commuter area for Derby and Nottingham. There is no evening service.
1.9	South of West Hallam	Bus Services	Ken Musson	Response-00900	The area has suffered in recent years with the withdrawal of public transport services and so nobody is going to use this to reach the school or surrounding area.
1.9	South of West Hallam	Bus Services	Kerry	Response-01034	Public transport not great for the area as it is. More people will use more cars

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	South of West Hallam	Bus Services	Kerry Middleton	Response-00266	This would be stretching the bus services beyond their capabilities.
1.9	South of West Hallam	Bus Services	Kirsty Oliver	Response-00558	Will there still be a bus service when the road is all dug up?
			Laura Egglestone	Response-01027	Limited services provided by the no 32 bus believe there was talks of this being reviewed in July 2025
1.9	South of West Hallam	Bus Services	Linda Webster	Response-00744	I would question some of the claims in the report. Travel links are definitely not OK - I am a slave to public transport and can tell you the daily service is very poor and there is no evening service at all.
1.9	South of West Hallam	Bus Services	Lindsey Lyons	Response-00071	Bus services are already limited in the area. Beech lane is used as a key point for secondary school children to get the local buses. That said, this is already dangerous with one bus stop and the road has limited visibility. Bus services are not frequent in the area with tight roads and dangerous curves proving a road hazard. Additionally housing would require a more frequent bus service but the roads are not fit for purpose.
1.9	South of West Hallam	Bus Services	Mandie frith	Response-00247	Poor already from and in west Hallam
			Mark	Response-00164	What Bus services? No way to get into Derby or Ilkeston if you work shifts or don't work in the centres
1.9	South of West Hallam	Bus Services	Mark Patenall	Response-00851	The bus service is very poor during the day and non-existent from early evening onwards.
1.9	South of West Hallam	Bus Services	Mark Power	Response-00276	The bus service is not great around here
1.9	South of West Hallam	Bus Services	Maureen Briggs	Response-00190	The buses have a struggle when schools coming out so more traffic would be terrible.!!
1.9	South of West Hallam	Bus Services	Max Egglestone	Response-01278	The village is poorly served by public transport, with minimal bus connections and no rail options. New residents would be forced to rely on private vehicles, increasing road traffic and undermining sustainability goals.
1.9	South of West Hallam	Bus Services	Max Longdon	Response-00128	The village has already lost bus services through the village at times when the school is there due to congestion levels
1.9	South of West Hallam	Bus Services	Mr and Mrs Mellors	Response-01797	Public transport in West Hallam is inadequate, particularly in the evenings. The village is served by limited bus services with no provision after early evening hours, making it difficult for residents - particularly the young, elderly, and those without private transport - to access work, education, healthcare, or leisure facilities. A housing development that increases population without improving connectivity will only lead to greater car dependency, exacerbating traffic and pollution problems further.
1.9	South of West Hallam	Bus Services	Mrs Glenda Orchard	Response-01490	Very poor bus service s
1.9	South of West Hallam	Bus Services	Mrs Judith Pittson	Response-00753	Bus services are already poor with no evening service at all. More traffic on Beech Lane will impede this further.
1.9	South of West Hallam	Bus Services	Mrs Strelley	Response-00233	So are bus services going to increase due to a growing population in West Hallam? I doubt it very much. Is the infrastructure going to accommodate more families?
1.9	South of West Hallam	Bus Services	Nick Craddock	Response-00145	As per my comments for other West Hallam Proposal
1.9	South of West Hallam	Bus Services	Nicola Elkington-Horridge	Response-00079	The bus services are already next to none the extra traffic will make the bus route even more congested!
1.9	South of West Hallam	Bus Services	Nicole Brookman	Response-01559	What bus service???? you can't get to Nottingham. For Derby there is one bus every couple of hours, there are very few bus stops and they are not reliable. There are no timetables so you don't know when they are. On a Friday the last bus is around 6pm and there aren't any later to get back.
1.9	South of West Hallam	Bus Services	Patrick Hynes	Response-01902	Public transport is limited. There are few buses and the services we do have are unreliable. This development would put hundreds more car journeys onto roads already under strain.
1.9	South of West Hallam	Bus Services	Paul Aldred	Response-00152	We can't have more big vehicles in the village it can't cope now
1.9	South of West Hallam	Bus Services	Paula Piggott	Response-01041	The bus service is already limited in West Hallam. Increasing this service would put extra traffic on the roads causing a safety issue and compromising the safety of the children in the village as well as polluting the clean air.
1.9	South of West Hallam	Bus Services	Pauline Wood	Response-01100	Very poor bus service and they struggle on that road because of parked cars
1.9	South of West Hallam	Bus Services	Peter Lilley	Response-00161	What bus services? We hardly have any, so more cars in the area!
1.9	South of West Hallam	Bus Services	Pete Vanstone	Response-01164	Public transport links in the area are almost non-existent, with very few bus services and no nearby rail connections. As such, any new residents will be heavily dependent on car travel for commuting, shopping, school runs, and medical appointments. This will further intensify traffic pressure and carbon emissions.
1.9	South of West Hallam	Bus Services	Richard Brewell	Response-01028	Bus services through and around West Hallam are poor currently and a larger population will only make this problem worse. Any new residents will be faced with the same problems.
1.9	South of West Hallam	Bus Services	Robert Reynolds	Response-00260	Bus service is poor, there is no indication it will improve, therefore there are likely to be more cars using Beech Lane.
1.9	South of West Hallam	Bus Services	Sam Richards	Response-01467	There is already a huge lack of public transport around the village, but Beech Lane is one of the main roads used for buses and school buses every day. Unnecessary build up of traffic due to the new site could cause delays for these buses. There is no evening bus service in the village.
1.9	South of West Hallam	Bus Services	Sarah James	Response-01085	Bus service is not sufficient as it is only hourly. The people moving in will probably be commuters and possibly non-bus users particularly if not regular enough.
1.9	South of West Hallam	Bus Services	Sarah Taylor	Response-01819	West Hallam's bus service is very poor. A bus every two hours in either direction during the day - 6 buses a day. None in the evenings.
1.9	South of West Hallam	Bus Services	Scott Wright	Response-00089	We do not have a strong bus service to support an additional 125 properties, this will mean additional vehicles and increased pollution, increase footfall and wear and tear to infrastructure.
1.9	South of West Hallam	Bus Services	Sharon Hickson	Response-01430	The buses can't already get around the corner of St Wilfreds due to householders not having drives adding more to the congestion of the village, the proposed development will only create more problems to the village and Beech Lane and for the buses themselves
1.9	South of West Hallam	Bus Services	Simon Reeve	Response-01080	The bus services in the area are good, commuting links to Ilkeston, on the Nottingham or direct to Derby are good
1.9	South of West Hallam	Bus Services	Sophie	Response-01105	Abysmal bus services as it is so this is irrelevant
1.9	South of West Hallam	Bus Services	Stacey Eady	Response-01529	The bus service for the village isn't great already, buses do not run later than 8pm, the road on Beech Lane does not meet the width of a bus route that should be 6.2m wide. Other sides could help house the new homes

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Bus Services	Teresa Faulkner-Day	Response-00242	The bus services have always been inadequate for the villagers. We have had promises of improvement for as long as I can remember.
			Teresa Webster	Response-00086	There is very limited bus services as it is
1.9	South of West Hallam	Bus Services	Tilly Fletcher	Response-00317	Bus services are already lacking, they do not increase frequency for busier times and we could not sustain once an hour for 90 more houses.
1.9	South of West Hallam	Bus Services	Tina Jay	Response-01801	Also the public travel links for West Hallam are very limited, with no evening service at all, with cars being the main use of transport, and any new housing developments of this size bringing further difficulties.
1.9	South of West Hallam	Flooding / Drainage	Adam Spencer	Response-00054	The development will result in an increased risk of flooding within the village and surrounding area of the development
1.9	South of West Hallam	Flooding / Drainage	Alex	Response-01026	This particular field is good at absorbing rainwater and holding it as groundwater which has been evident when walking through it when it has rained. If we build on top of it and tarmac it then we lose all the natural drainage and at greater risk of flooding to the village.
1.9	South of West Hallam	Flooding / Drainage	Alison Stills	Response-01057	West Hallam already has continued issues with water maintenance and leaks
1.9	South of West Hallam	Flooding / Drainage	Andrea Cochrane	Response-01485	During periods of heavy rainfall, Beech Lane suffers from surface water flooding and this is eased through runoff onto the proposed development area. If this land is built on, this runoff capacity will be lost. In addition, paving over more land will only intensify surface water flooding further down the slope onto the Station Road/ Cat and Fiddle junction.
1.9	South of West Hallam	Flooding / Drainage	Andrew and Julie Douglas	Response-00146	Natural spring in the field building over this will cause flooding
1.9	South of West Hallam	Flooding / Drainage	Andrew Zielinski-Raynor	Response-00135	The proposed site becomes very waterlogged in all but the Summer months due to clay soil.
1.9	South of West Hallam	Flooding / Drainage	Anna Richardson	Response-00162	The development on the old White Hart Pub site just round the corner has caused huge flooding problems along station road. This development would just exacerbate that,
	South of West Hallam	Flooding / Drainage	A Redshaw	Response-00287	The site is a wetland in winter
1.9	South of West Hallam	Flooding / Drainage	Charles Brooks	Response-00535	I do understand that the proposed land is often extremely wet and is quite undulating. It is also above an old mine. This area needs to be properly surveyed.
1.9	South of West Hallam	Flooding / Drainage	Chris Collins	Response-00037	There's probably not a flooding issue with the site as it's elevated and slopes away from the rest of the village. Drainage however maybe a concern. Severn Trent have no end of issues in West Hallam. I would be concerned with the ability of the service providers to ramp up and not impact others negatively.
1.9	South of West Hallam	Flooding / Drainage	Claire dean	Response-00069	Extra homes address pressure to our systems.
1.9	South of West Hallam	Flooding / Drainage	Connor Gratton	Response-00232	The area already suffers from poor drainage and West Hallam is frequently cutoff following heavy rain. This will further aggravate the situation.
1.9	South of West Hallam	Flooding / Drainage	Emily Reynolds	Response-00149	I honestly can't see how essentially concreting over that area won't have an effect on flooding in the village. You'd be covering that whole area in impermeable services and will likely increase the risk and likelihood of flooding events occurring and those events having a considerable impact on the surrounding homes and businesses.
1.9	South of West Hallam	Flooding / Drainage	Emma Lound	Response-00187	The safeguarded area is a run off field. It is low lying and some of the plants growing in there are associated with boggy/wet land. Building or considering building on this would cause issues.
1.9	South of West Hallam	Flooding / Drainage	Glenn Richardson	Response-00316	the fields off beech lane & station road act as natural flood plains. Since the council allowed the development on the old white hart pub site ,drainage is a constant problem (I've got videos to reinforce this )
1.9	South of West Hallam	Flooding / Drainage	Helen fox	Response-00064	Flooding can significantly impact a small village, particularly in areas where there are plans for new housing developments. Increased construction can lead to changes in land use and drainage patterns, exacerbating the risk of flooding. This not only threatens the safety of residents but can also damage infrastructure and disrupt local ecosystems. Furthermore, the potential for flooding may deter new residents and investors, ultimately hindering the village's growth and economic stability. The long-term consequences of such environmental challenges could be detrimental to the community's overall well-being and sustainability.
1.9	South of West Hallam	Flooding / Drainage	Helen Johnson	Response-00170	Site all ready floods on Beach lane
1.9	South of West Hallam	Flooding / Drainage	Helen Patenall	Response-00868	The land is boggy when wet, if the proposed site is covered in housing where will all the rainwater run off to?
1.9	South of West Hallam	Flooding / Drainage	Iain Harrison	Response-01214	looding and drainage are also serious concerns that must not be overlooked. Greenbelt land?particularly open fields like the one in question?plays a crucial role in natural drainage and flood prevention. These areas absorb rainwater, reduce surface runoff, and help manage the water table. Once this land is replaced with tarmac, roofs, and paved driveways, water has nowhere to go. This dramatically increases the risk of surface water flooding both on the development site and in the surrounding village. West Hallam already experiences flooding issues during periods of heavy rainfall, and the infrastructure for drainage is clearly not equipped to handle additional pressure. The Environment Agency has repeatedly warned that developments on previously undeveloped land without proper sustainable drainage systems (SuDS) can lead to increased flood risk not just locally, but downstream as well. With climate change leading to more intense and unpredictable weather events, building over natural drainage areas is both irresponsible and dangerous. Short-term housing gains should never come at the expense of long-term flood resilience and community safety.
1.9	South of West Hallam	Flooding / Drainage	James William Allen	Response-01280	The road at the bottom of the hill (ie the one from the old station leading to Midlands Storage) regularly floods in inclement weather. Reducing the amount of arable land above the road which intercepts said water will only make this problem worse.
1.9	South of West Hallam	Flooding / Drainage	Jenny Bexon	Response-00185	We dont need 90 houses here. It is a protective factor for the surrounding areas to have run off and natural drainage and land absorption
			Jo-Anne Attenborough	Response-00129	This field is a flood plain. For most of the year it is very wet and muddy. Surely it is not safe to build on this site!

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Flooding / Drainage	Julie Harbon	Response-00022	The playing fields across the road from the planned site is very prone to flooding, particularly at the pavilion end, being wet and boggy most of all year. I wonder if the additional build will increase water in this already fragile area?
			Julie Wright	Response-00091	More houses could potentially cause drainage issues
1.9	South of West Hallam	Flooding / Drainage	Karen Squire	Response-01040	In heavy downpours it does flood down past Station House so it will be interesting to see how that's managed. Maybe a holding pond like at Oakwood
			Katie	Response-00047	Often this field can be flooded.
1.9	South of West Hallam	Flooding / Drainage	Kerry	Response-01034	No thought to where the water ultimately has to flow
			Kerry Barratt	Response-00168	Had this been seriously addressed
1.9	South of West Hallam	Flooding / Drainage	Kerry Middleton	Response-00266	The fields beyond flood and are therefore not suitable for building houses on.
			Kevin Fox	Response-00682	Too often we see building works affect flood plains and increase flooding?
1.9	South of West Hallam	Flooding / Drainage	Laura Egglestone	Response-01027	The proposed site has a natural stream running in the safeguarded field.
			Lindsey Lyons	Response-00071	West Hallam already experiences flooding. As a local area, flooding has become a real concern over recent years with global warming. Additional housing will increase global warming, air pollution and take up vital land that absorbs water from excessive rainfall. There is already often roadworks to cope with draining issues on beech lane and additional housing will increase this issue tenfold, with the issues already struggling to be rectified.
1.9	South of West Hallam	Flooding / Drainage	Mandie frith	Response-00247	Already have issues around beech lane and station road with flooding more buildings less soak away
			Margaret Lewis	Response-01499	We will have more flooding due to loss of greenery
1.9	South of West Hallam	Flooding / Drainage	Mark Patenall	Response-00851	The proposed site is very boggy in wet weather
			Mark Power	Response-00276	Fields get really boggy
1.9	South of West Hallam	Flooding / Drainage	Maureen Briggs	Response-00190	Would there be arrangements for drainage etc because of any flooding that might appear.
			Mr and Mrs Wood	Response-01826	Climate change will undoubtedly make us more concerned about the removal of natural flood plains
1.9	South of West Hallam	Flooding / Drainage	Mrs Strelley	Response-00233	Drainage is a big issue. Parts of the field don't drain well. It has been looked into before as a building plot and it has complications.
			Nick Craddock	Response-00145	As per my comments for other west Hallam Proposal
1.9	South of West Hallam	Flooding / Drainage	Nina Walters	Response-00244	Yes
			Paul adred	Response-00152	Flooding is irrelevant we don't need more houses filling green belt
1.9	South of West Hallam	Flooding / Drainage	Paula Piggott	Response-01041	Keep building over green land will not only unnecessarily kill lots of wildlife you will also destroy the area as there will be less natural soak aways. This will cause flooding and cause drainage problems.
			Rachel	Response-01015	The area is already prone to flood
1.9	South of West Hallam	Flooding / Drainage	Rhonda Holt	Response-00237	Water infrastructure is at saturation point already. West Hallam has suffered flooding already. I suggest not building on a soakaway stretch of land.
			Robert Reynolds	Response-00260	No doubt there are zero plans to include additional sewer treatment facilities, and also make adequate provision to deal with heavy rainfall. Thus combination may well cause sewage to back-up through people's toilets in times of heavy rain.
1.9	South of West Hallam	Flooding / Drainage	sam richards	Response-01467	there are certain areas in west hallam that get affected by floods - some close to the site. maybe these problems should be looked and and fixed by the council before more properties are built.
			Sarah Taylor	Response-00115	There are already water drainage issues around WH with the underground clay content and natural water springs. They push up into the streets that the Highway Agencies are already aware of. This is considerably noticeable at the junction of Beech Lane and Station Road. With councils doing very little to tackle climate change and taking away green spaces these issues will only get worse.
1.9	South of West Hallam	Flooding / Drainage	sharon hickson	Response-01430	Building on open fields is always going to effect the natural way the ground absorbs water, tarmac, block paved drives all allow water to run off and flood areas, for the first time in years in 2024/2023 have I seen water collect at the bottom of St Wilfreds road and station road going out towards Stanley village, also in Stanley village we had floods and my grand parents, parents and I have lived in West Hallam and never have I seen it flood in those places
			Simon Reeve	Response-01080	It's a joke, the area already has issues along Nutbrook, the new housing on Quarry Hill floods as does the entire trail around Manor Flood, more so now than ever in my almost 50 years in the areas. Taking away fields and trees and replacing with tarmac and concrete with drains to "lose the water" to another location simply overloads another area....it can't continue
1.9	South of West Hallam	Flooding / Drainage	Stacey Eady	Response-01529	N/a
			Teresa Faulkner-Day	Response-00242	As we have seen in the past, where we have had new housing developments, little care or research has been done, causing issues of flooding, despite this being raised by locals in the community who have good knowledge of the area. Houses have been built and drainage systems have not been considered or inadequate systems have been put in place
1.9	South of West Hallam	Flooding / Drainage	Toni Tomlinson	Response-00204	This field is permanently waterlogged in Autumn/winter. Where will this water go? The cricket field?
			Tracey Barks	Response-00111	I do not have enough knowledge of this area but presumably there will be many disadvantages in terms of flooding and drainage
1.9	South of West Hallam	Green Belt	Alison Fletcher	Response-00198	Open green spaces, countryside and village community are reasons why people choose to live in West Hallam.
			Alison Reynolds	Response-00243	Taking away from area of natural beauty
1.9	South of West Hallam	Green Belt	Alison Stills	Response-01057	We need to maintain all green belt areas and use brown belt or rejuvenate empty properties
			Andrew and Julie Douglas	Response-00146	This is green belt land
1.9	South of West Hallam	Green Belt	Anita Lawrence	Response-00726	The Labour Party Manifesto 2024 states that 'Labour is committed to preserving the greenbelt which has served England's towns and cities'. Labour was elected on the basis of this manifesto, please leave this area to nature for the benefit of all. It is my understanding that the owner of the land concerned has had planning permission refused previously for an agricultural building, how could this now be considered as suitable for the development of housing?

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	South of West Hallam	Green Belt	Ann Ainsworth	Response-01096	Area well used and appreciated by walkers
1.9	South of West Hallam	Green Belt	Anne Vanstone	Response-01216	Greenbelt land should be protected, there is no excuse to use it at this present time. The risk of further development creeping onto nearby fields is also very real with it being 'safeguarded' on the plans. Once the precedent is set, the surrounding greenbelt becomes vulnerable. We must ask why more appropriate, better-connected locations have not been prioritised.
1.9	South of West Hallam	Green Belt	Bruce Broughton	Response-01534	The proposed site has been rebuffed by Planning at Erewash many times over the years and one application that was submitted for an agricultural building was refused, so what is different now?
1.9	South of West Hallam	Green Belt	Carl fox	Response-00067	Spoils the landscape over crowds the area
1.9	South of West Hallam	Green Belt	Carol Hart	Response-01829	This owner of this land has, I believe, contacted the Planning Department over the years in an effort to develop the area, he has always to my knowledge been rebuffed. He did actually put in an application to erect a barn in 2022, this was refused, the refusal mentioned due to its design and siting within the Green Belt and adjacent to the conservation area, it would have an adverse impact upon the visual appearance and character of the conservation area and would harm the openness of the Green Belt, so what has changed, if a single building is going to have that impact what are 90 or more likely 150+ going to have. I have not even mentioned the Green Belt invasion and the major impact on the wildlife in the site which is upsetting many of the residents.
1.9	South of West Hallam	Green Belt	Cat Hope	Response-00127	West hallam is a village, now soon will be an estate like oakwood! Traffic is horrendous, more so parking. Empty houses already on where the former white hart is. This once attractive village, will soon by awful. Ilkeston as the nearest town can't handle more traffic. Our villages are losing our green belt areas! Years ago Erewash would never budge, eg dale road stanley. We need to protect our green space! Soon will be none. Huge overcrowding happening. Criminal activity needs protection also! Our police can't cope as it is now.
			Cathy Bostock	Response-00181	Need to preserve green space for future generations
1.9	South of West Hallam	Green Belt	Charles Brooks	Response-00535	People live in a rural location to enjoy the countryside and the benefits of being surrounded by open space. I pay extra for the pleasure of living in West Hallam. If green belt was not important to me then I would choose to live in a town or city. Green belt is very precious to me and should be to Erewash. Once you start building on it then where does it end??
1.9	South of West Hallam	Green Belt	Chloe Parkin	Response-00154	Spoils the beautiful countryside views in our village that lift the spirits of many. Seeing these views is a wonderful part of the village we live in and will building on this site will spoil our lovely village.
1.9	South of West Hallam	Green Belt	Chris Collins	Response-00037	Stop developing on green belt when there is brown belt land available.
1.9	South of West Hallam	Green Belt	Chris Reid	Response-00136	This should not be happening in such a small area
1.9	South of West Hallam	Green Belt	Christine	Response-01019	The beauty of WH is the surrounding green fields, totally opposed to building on new land when there are disused sites that could be used
1.9	South of West Hallam	Green Belt	Christine Barnes	Response-00640	This site has previously been refused planning for further agricultural use. I cannot understand how circumstances have changed for it now to be considered for housing.
1.9	South of West Hallam	Green Belt	Christopher Chambers	Response-00172	The local authority should not be considering applications on green belt land.
1.9	South of West Hallam	Green Belt	Claire dean	Response-00069	There is several areas of brown belt so why take our green.
1.9	South of West Hallam	Green Belt	Connor Gratton	Response-00232	Refer to comments on wildlife.
1.9	South of West Hallam	Green Belt	Daniel hickson	Response-00177	Will ruin the cricket club with houses backing onto the ground
1.9	South of West Hallam	Green Belt	Daniel Stanbridge	Response-00099	We must strive to protect our green belt
1.9	South of West Hallam	Green Belt	David Morrell	Response-00477	This development would impact on the aesthetic of the west Hallam conservation area
1.9	South of West Hallam	Green Belt	Dean Wright	Response-00094	This area should be protected, loss of greenery belt will not only result in the loss of habitat and lower air quality, villages and towns will simply blur into one.
1.9	South of West Hallam	Green Belt	Diane Reynolds	Response-00216	It is important to protect the green belt so we still have green spaces. Why protect it for green belt if it is then able to be built on. How can a building in 2021 be objected due to it being green belt but now some money can be made it is being considered. This gives you no faith in the council when considering to vote that goal post can be moved to make money instead of considering wildlife and the area
1.9	South of West Hallam	Green Belt	Dominic Tye	Response-01016	We are losing yet more of our precious green belt land which is so important for everyone. We should be able to continue to enjoy the land as it is with the spectacular countryside which surrounds our village.
1.9	South of West Hallam	Green Belt	Emily Reeve	Response-01495	The green belt land should not be built on. There are other areas that would be a more suitable site
1.9	South of West Hallam	Green Belt	Emily Reynolds	Response-00149	The green belt should be left alone. The houses once built and while in development will have a negative impact on the surrounding environment.
1.9	South of West Hallam	Green Belt	Emma Lound	Response-00187	This is an area of green belt. A previous application for a farmer to build an agricultural bulding on this exact land was refused in 2021 due to it bordering conservation area and possible affecting the aesthetic of the green belt...but 90 houses is OK??? Also there has been a brown field site identified less than a mile away at the storage depot, why not extend that site where the road and infrastructure can be amended and built from scratch rather than shoehorn things into a spot that does not fit.
1.9	South of West Hallam	Green Belt	Francesca Dean	Response-00221	Use houses already available or brown sites. We must protect our greenbelt!
1.9	South of West Hallam	Green Belt	Gary Hamson	Response-00052	Is there any other sites in the village that is in green belt but away from the school and within the scoring given on the criteria layed down?
1.9	South of West Hallam	Green Belt	Gilly Turrini	Response-00151	Green belt should be protected for the sake of our planet. West Hallam used to be a village and is now a semi rural suburb of Ilkeston
1.9	South of West Hallam	Green Belt	Glenn Richardson	Response-00316	Consider that 10 years ago this wonderful council turned down our building application to extend our house ( which we won on appeal from the Secretary of State) on the grounds of it spoiling the view of greenbelt land from the junction of station road & beech lane ?.the same view you want to spoil with the proposed development?This land is a vital part of the local eco structure

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Green Belt	Graeme Taylor	Response-01131	It is clear that this development will sprawl further into the attractive and bio diverse green belt
1.9	South of West Hallam	Green Belt	Helen Collins	Response-00034	I opposed houses being built on green belt anywhere. There many brown field sites that should be utilised for housing developments.
1.9	South of West Hallam	Green Belt	Helen fox	Response-00064	Constructing on greenbelt land would adversely affect our small village just to expand housing. Such development threatens the village's character and environment, disrupting the natural landscape that provides essential ecological benefits. Additionally, increased housing could lead to overcrowding, straining local resources and infrastructure, while diminishing the community's sense of identity and cohesion. The loss of green spaces would not only impact residents' quality of life but also undermine the village's appeal, potentially leading to long-term economic consequences.
1.9	South of West Hallam	Green Belt	Helen Johnson	Response-00170	Over density
1.9	South of West Hallam	Green Belt	Helen Patenall	Response-00868	By definition green belt is "an area of open land, on which building is restricted". I have always been led to believe that the proposed site is green belt land. It seems more than suspicious that all the area around the proposed site remains green belt on the map. It would seem to me that the green belt rules protecting the proposed site have been 'altered' to suit political aims, this is underhand and bordering on the deceitful/corrupt. Proposals to develop the land in the past have been refused, why is it ok to build now?
1.9	South of West Hallam	Green Belt	Helen Stanley	Response-01555	Development would create a block between greenbelt land and the village. Current acts as a buffer between the village and adjacent greenbelt.
1.9	South of West Hallam	Green Belt	Helen Vickseds	Response-00062	Protecting green belt land is important and brown field sites / areas in towns with empty buildings should be considered as the first option before impacting our previous green belt.
1.9	South of West Hallam	Green Belt	Holly Mohamed	Response-00076	Loss of Greenbelt Land: The proposed development is on greenbelt land, which is meant to be preserved for its environmental and recreational value. Building on this land would lead to the loss of natural habitats and green spaces that are vital for the community's well-being. Greenbelt land serves as a buffer between urban and rural areas, and its loss could have long-term environmental impacts. Urban Sprawl: Developing greenbelt land can contribute to urban sprawl, reducing the separation between towns and leading to a loss of rural character. Once greenbelt land is developed, it is lost forever, which can have long-term negative impacts on the environment and community. The development could set a precedent for future encroachments on greenbelt land, further eroding its value.
1.9	South of West Hallam	Green Belt	Iain Harrison	Response-01214	The greenbelt exists for a reason. It was established to prevent urban sprawl, safeguard the countryside, and preserve the character of rural communities like West Hallam. The National Planning Policy Framework (NPPF) clearly states that greenbelt land should only be built on in exceptional circumstances?and overburdening a village with housing, without first exhausting all brownfield alternatives, does not meet that threshold. The Campaign to Protect Rural England (CPRE) has repeatedly found that there is enough brownfield land in England to build over 1 million new homes, without touching a single acre of greenbelt. In fact, building on greenbelt often leads to low-density, car-dependent developments that increase emissions, traffic, and pollution, while erasing the green spaces that benefit both people and wildlife. Greenbelt land is not "spare" or "unused"?it is performing vital functions: absorbing carbon, filtering air and water, supporting mental health through access to nature, and providing food and shelter for wildlife. Once built over, it cannot be restored. To sacrifice this for short-term gain, especially when better options exist, is poor planning and an affront to the long-term well-being of the community and the environment.
1.9	South of West Hallam	Green Belt	Ian Brown	Response-00163	open land for walking and bird watching
1.9	South of West Hallam	Green Belt	Iris Howes	Response-01169	This proposal would consume a large area of designated Green Belt land. Once built on, this land is lost for good ? along with its role in separating communities, preserving natural beauty, and supporting biodiversity. West Hallam has grown over the year and now need to protect our green spaces and fight for the ?village? it should be.
1.9	South of West Hallam	Green Belt	James Johnson	Response-00183	There are better areas like the old oak well brick yard or rear of the Newdigate public house that would cause less disruption to the countryside.
1.9	South of West Hallam	Green Belt	James Morris	Response-01060	Keep green belt, green belt land
1.9	South of West Hallam	Green Belt	James Painter	Response-01119	The site has been designated Green Belt and in a small island like ours the green spaces and wildlife areas must be protected and preserved, with our local industrial past surely we must use the Brown Field sites first , once the countryside has gone it has gone forever. This site been turned down on several occasions for various plans one being an application for an orchard and agricultural building which would have been much more in keeping with the idea of Green Belt I fail to see why agricultural use was turned down but houses on Green Belt are alright.
1.9	South of West Hallam	Green Belt	James Tilford	Response-00103	Loss of green belt
1.9	South of West Hallam	Green Belt	Jane Marshall	Response-01172	Develop brown sites, not green belt.
1.9	South of West Hallam	Green Belt	Jane Taylor	Response-01023	This is an important area for wildlife and biodiversity
1.9	South of West Hallam	Green Belt	Jane thomas	Response-01056	It's the wrong place to build find a grey site
1.9	South of West Hallam	Green Belt	Jane Zielinski-Raynor	Response-01095	This is Green belt land and should remain so
1.9	South of West Hallam	Green Belt	Jenny Bexon	Response-00185	This is part of the greenbelt. There's already too many developments nearer Ilkeston that are destroying land right by nature reserves.
1.9	South of West Hallam	Green Belt	Jo-Anne Attenborough	Response-00129	This is an important site for dog walkers and walkers who want to enjoy a green and pleasant space. It contributes to residents' well-being and happiness. Building on this site will have a strong negative psychological affect on the residents of West Hallam.
1.9	South of West Hallam	Green Belt	Johnson	Response-01037	Should not be building on green belt land. West Hallam does not want to become an urban sprawl. Green spaces needed for the biodiversity
1.9	South of West Hallam	Green Belt	Julie Harbon	Response-00022	Leave this area alone! What is the point of having Green Belt if it is ignored and used for profit?
1.9	South of West Hallam	Green Belt	Julie Harker	Response-01073	We were told when we decided to buy in West Hallam that no more houses would be built. It is important for people's health that we keep our green belt.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Green Belt	Julie Stewardson	Response-00282	Probably been renamed as grey belt but it is vital green belt to us!
1.9	South of West Hallam	Green Belt	Karen Squire	Response-01040	Controversial but I think we can spare a bit of green belt

1.9	South of West Hallam	Green Belt	Kevin Fox	Response-00682	What?s the point in having green belt protection if Liebour just come in and rip it up!!
1.9	South of West Hallam	Green Belt	Kian	Response-01493	this was green belt. Why does it have to change. Keep england the way it should be with fields and nice views instead of poor brickwork and shoddy roofs
1.9	South of West Hallam	Green Belt	Kirsty Oliver	Response-00558	This should just be kept as important green belt. A lot of people invest in their homes for this reason.
1.9	South of West Hallam	Green Belt	Laura Egglestone	Response-01027	Greenbelt should be protected. Also, dong understand why this site has been chosen over others in the area. It has been refused several times with the most recent being got just one dwelling. Each time it has been declined?. What?s different now? Nothing has changed and for this reason it makes a mockery of the whole system if it goes ahead
1.9	South of West Hallam	Green Belt	Lindsey Lyons	Response-00071	It?s disappointing to see the council is now considering the site, having previously been rejected twice to protect the green belt land. I strongly object to this space being used for housing as green belt is crucial to providing control over expansion of towns / villages. How does this now get initially approved when previously rejected? It is astounding to think the council are being flippant with their decisions.
1.9	South of West Hallam	Green Belt	Mandie frith	Response-00247	Protection needed on all areas we need areas to stop all the flooding ect
1.9	South of West Hallam	Green Belt	Margaret Lewis	Response-01499	We need to keep more of our green belts to help the planet
1.9	South of West Hallam	Green Belt	Mark	Response-00164	Green belt doesn,t seem to matter anymore. Why is that? Surely you have wasted opportunities everywhere for building on grey sites x industrial etc. Who needs more warehouses and industrial units? Build on these sites rather than our precious Green belt
1.9	South of West Hallam	Green Belt	Mark Newton	Response-00179	You don't care about this, but please leave some free land left for the children to look over from their school.
1.9	South of West Hallam	Green Belt	Mark Patenall	Response-00851	I'm led to believe that the proposed site is green belt. You can not change the rules just to support your political mantra. Those are the actions of a dictatorship and will be met with the strongest of resistance and disruption. If you break the rules, don't expect protesters to follow them either.
1.9	South of West Hallam	Green Belt	Mark Power	Response-00276	Destroying green belt is tragic and affects people?s mental health. Greenbelt is designed to protect land to be built on, there are places in Ilkeston that already have sites (industrial) that could be built on so it doesn?t effect green belt.
1.9	South of West Hallam	Green Belt	Max Egglestone	Response-01278	Greenbelt land should be protected to prevent overdevelopment. More suitable and sustainable locations have been proposed in the past. Why are those being overlooked?
1.9	South of West Hallam	Green Belt	Mr and Mrs Wood	Response-01826	The Covid outbreak in 2019 was a stark reminder how important open spaces are to our mental health. The one thing I love about West Hallam is that feeling of well-being and connection with nature that you get when taking a stroll or walking the dog just a stone?s throw from my house. The numerous fields that surround our village are natural spaces not those contrived by architects. All NIMBYs, I am sure make these points, maybe with justification as we all know that saying ?are these developments just the thin end of the wedge?. Rumours are already circulating, and locals need reassurance.
1.9	South of West Hallam	Green Belt	Mr Brown	Response-00191	Would ruin the Green belt and feel of the village
1.9	South of West Hallam	Green Belt	Mr J Martinazzoli	Response-00044	The loss of green belt to build houses will increase traffic in an already busy area. This will constitute a very high safety risk to pedestrians and school children from the west hallam school.
1.9	South of West Hallam	Green Belt	Mrs Bird	Response-00045	Quite frankly, building on green belt land is preposterous. There are many brown field sites within the Ilkeston area. Building this proposed development right in the centre of a rural village would set a dangerous precedence with the surrounding area. Further decreasing the gap between Stanley and west hallam.
1.9	South of West Hallam	Green Belt	Mrs Caroline Hooton	Response-00231	This has always been greenbelt so how did/can this be changed. We must protect these areas for the benefit of our environment.
1.9	South of West Hallam	Green Belt	Mrs Judith Pittson	Response-00753	Brown field sites should be built on not the green belt
1.9	South of West Hallam	Green Belt	Mrs Strelley	Response-00233	It is Green Belt. Areas of the field are boggy. Not suitable for foundations.
1.9	South of West Hallam	Green Belt	Nick Craddock	Response-00145	As per my comments for other west Hallam Proposal
1.9	South of West Hallam	Green Belt	Nicola Elkington-Horridge	Response-00079	Not sure why you label land greenbelt and apply rules to not building on it and then try and build on it.
1.9	South of West Hallam	Green Belt	Nina Walters	Response-00244	Yes, losing more green belt.
1.9	Non-specific	Green Belt	Patricia Hill	Response-01930	I wish to strongly oppose the above Core Strategy Amendments as the plans will cause Urban Sprawl. The villages will lose their identity and become towns with massive loss to green belt. When these plans are passed, I hope there will be Infrastructure to cover the proposed residence requirements as Spondon are left with inadequate facilities.
1.9	South of West Hallam	Green Belt	Patrick Barber	Response-00280	The site is using greenbelt land so reducing the greenbelt within Erewash.
1.9	South of West Hallam	Green Belt	Patrick Hynes	Response-01902	The proposed site sits entirely within the Green Belt. The land serves as a visual and environmental buffer, supporting not only wildlife but the rural identity of our village. Developing this land undermines the protections the Green Belt is supposed to provide.
1.9	South of West Hallam	Green Belt	Paul aldre	Response-00152	Keep the green belt you can?t just re select as grey or whatever it?s green belt. There?s plenty of broenfieldcsites availsble

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Green Belt	Paula Piggott	Response-01041	You can't keep destroying the countryside destroying habitats, killing wildlife and it all not have a knock on effect. You are destroying the air we breathe. We need flowers, we need bees these things the world can't exist without. The wildlife will seriously be impacted. You will destroy the habitats of many animals needed for the world to survive. This is a small village. With lots of precious animals, insects, flowers, trees etc you will kill these insects and animals when you destroy their habitats thus destroying the air we breathe. There is a school and many bungalows with pensioners. It is a accident waiting to happen. Also dog walkers, horse riders and lots of wildlife. Seriously someone will get hurt or worse killed! It is a small village without the capacity for more houses. The roads are not built for so many extra residents. You will totally destroy the area and you will totally destroy the clean air killing lots of wildlife and their habitats in the process.

1.9	South of West Hallam	Green Belt	Pete Vanstone	Response-01164	Greenbelt land, is essential in preventing urban sprawl and preserving our countryside. Alternative sites with fewer constraints and more robust infrastructure have previously been suggested. It is deeply concerning that those have been overlooked in favour of this unsuitable location.

1.9	South of West Hallam	Green Belt	Rhonda Holt	Response-00237	Keep the green belt as it is. There is no need to build any further in the periphery of West Hallam.
1.9	South of West Hallam	Green Belt	Richard Walters	Response-00546	Core Strategy Review Amendment - Public Consultation In response to your call for comments on the Core Strategy Review Document I hereby submit my views for your further consideration . My views will be largely confined to the Site Selection Paper, in particular as it relates to West Hallam and more specifically proposals relating to the Land South of West Hallam (CSR-0044) although my comments could equally apply to the other projected site in the village Land North of West Hallam (CSR0048). Point 1 - I note that in relation to site CSR-0044 the Paper states ?the site falls on land that fails to make an important contribution to the Green Belt? (ref p10, first full paragraph 1). I consider this statement, at best, a very subjective construct based on, what appears to be, unsubstantiated opinion. I presume that the justification for this is the assessment against the criteria of Safeguarding the Countryside from encroachment Checking the Unrestricted Sprawl of Large Built-Up Areas, and Preventing Neighbouring Towns Merging I further note that four sites at the Junction of St Wilfrids Road and High Lane Central ( CSR0004 & CSR0004 a, b and c) were rejected as meeting the above Green Belt criteria. I am unable to discern or find any evidence in the review as to why these sites meet the criteria and those at CSR0044 and CSR0048 do not. This distinction seems to arise purely from the unsubstantiated and subjective views of the paper?s author rather than any detailed and objective in depth analysis of the respective sites contribution to the Green Belt. In fact a case may be made that the Beech Lane site (CSR0044) indeed makes a greater contribution in meeting the criteria vis Safeguarding the Countryside from encroachment :- the immediate presence of large scale urban encroachment is far more apparent on the Beech Lane site, sitting as it does on the edge of West Hallam central/core housing developments. Whereas the rejected sites (CSR004 etc) only lie adjacent to the lesser populated ribbon developments of the village. Over my time living in the village I have monitored the habitat contribution of the Beech Lane site. I have for example, to date recorded 53 bird, 15 mammal and 4 amphibian species on this site. As such it makes a valuable contribution to the countryside that would be jeopardised rather than safeguarded if housing development were to proceed. Taken as a whole the Beech Lane site has, at least as diverse a range of countryside attributes (hedges, adjoining woodland, wetland habitat, ditches, grassland perfect for ?predator? hunters such as owls and hawks) as any of the ?rejected? sites. Checking the Unrestricted Sprawl of Large Built Up Areas:- with a current population of c.6000 in 2600 households (2001 census) West Hallam already has a population that surpasses that of several East Midland towns. This raises the existential question as to what is the fundamental nature of West Hallam as a community. Again the pressure from built up area sprawl is already more keenly felt at site CSR 0044 than at the ?rejected? village sites so it is difficult to understand why the Green Belt criteria apply to ?rejected sites? and not the Beech Lane site. Preventing Neighbourhood Towns Merging:- Suffice it to say that I can perceive no more justification in saying this criteria applies to the rejected sites than in doing so for the Beech Lane site (CSR0044). If there is a distinction to be made it needs to be justified/quantified. Point 2 Tr
1.9	South of West Hallam	Green Belt	Richard Walters	Response-00546	affic and Services The main core of the village, the Village and the Estate, is already poorly served by access and egress roads. This already creates excessive traffic congestion particularly at peak periods. This can be further exacerbated by:- the frequency of road works necessitated by the aging services infrastructure of the village e.g. utilities and the subsidence legacy of the mining past The presence of the village school and main playing fields adjoining one of those main access/egress points. Further housing development without improved/additional road infrastructure, as currently envisioned, is only going to worsen an already problematic situation. In Summary I note both the rejected and proposed housing proposals. However I cannot see that any case has been satisfactorily made justifying why some sites have been deemed to meet the Green Belt criteria and others do not do so. The only rather spurious justification appears to be that of expedience and opportunity! That the Land South of West Hallam (CSR0044) has an absentee owner who is only too willing to facilitate its development and, in doing so, meet the Authorities targets. In particular I would expect far greater transparency and justification as to why the report states that some sites meet the Green Belt criteria while others do not. THE SITE SELECTION PAPER FAILS TO MAKE ANY SUBSTANTIVE CASE WHY SOME SITES MEET THE GREEN BELT CRITERIA BUT OTHERS DO NOT.
1.9	South of West Hallam	Green Belt	Robert Flatley	Response-00978	This development would take place on existing greenbelt land
1.9	South of West Hallam	Green Belt	Robert Hall	Response-00630	Development on the Green Belt should not occur in the absence of special circumstances.Such circumstances have not been established.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Green Belt	Robert Mee	Response-01581	My main reason for objecting to these developments is that I do not believe that the criteria set out in the NPPF has been met justifying any encroachment into the Green Belt at this time. The Core Strategy and this Amendment are developed in order to meet the housing targets allocated to the council by central government. I do not believe that the number of houses required by government constitutes, in itself, the 'exceptional circumstances' which are required under the Framework. This is particularly so in view of there being no published objective basis for the numbers allocated to each authority. The term 'exceptional circumstances' does include 'instances where an authority cannot meet its identified need for homes'. The waiting list for social housing in the general area might suggest that this is the case, but I do not accept that these plans will go far to address this issue. The vast majority of the planned housing allocations are not even for affordable housing, let alone social housing. Additionally, I do not remember seeing evidence that Erewash has specifically quantified local (i.e. Erewash) housing needs. I also do not believe that much, if any, of the Green Belt selected for development would fit the definition of 'Grey Belt'. As a concept, I can support the idea of Grey Belt as originally reported, i.e. pieces of land within the Green Belt which have previously been developed. Indeed, I can think of a few locally, though they are all fairly small. I find the arguments that I have heard over distances between the edge of Derby and the edge of other towns, and how these distances will still be maintained, extremely spurious. The Green Belt in its entirety exists to prevent Nottingham and Derby from merging. While building on any of these sites does not immediately make the two cities any closer to each other, it does reduce the green space between the two cities, which is precisely what the Green Belt was established to prevent. The Green Belt is a regional initiative, covering two counties and several local authorities. With Erewash having such a high proportion of its land earmarked as Green Belt it is incumbent on the region as a whole to find a solution to the housing shortage, rather than to expect our authority to have to sacrifice its green spaces.
1.9	South of West Hallam	Green Belt	Robert Mee	Response-01511	My main reason for objecting to these developments is that I do not believe that the criteria set out in the NPPF has been met justifying any encroachment into the Green Belt at this time. The Core Strategy and this Amendment are developed in order to meet the housing targets allocated to the council by central government. With Erewash having such a high proportion of its land earmarked as Green Belt it is incumbent on the region as a whole to find a solution to the housing shortage, rather than to expect our authority to have to sacrifice its green spaces.
1.9	South of West Hallam	Green Belt	Robert Reynolds	Response-00260	The council/government should look for brown belt land to build on, rather than eating into the greenbelt with its associated ecological impacts.
1.9	South of West Hallam	Green Belt	sam richards	Response-01467	this is green belt land, which has been denied planning permission many times by the lands current owner, for obvious reasons. it is beyond me how the council suddenly feel it is ok to build here taking away more green from the village which it is already lacking in.
1.9	South of West Hallam	Green Belt	Sarah Taylor	Response-01819	Green belt needs to be preserved.
1.9	South of West Hallam	Green Belt	Scott wright	Response-00089	Green belt should be protected. Residents have purchased housing in West Hallam to benefit from being a village and embracing nature. More crammed in, thrown up housing does not adhere to the protection of our green belt and village status.
1.9	South of West Hallam	Green Belt	sharon hickson	Response-01430	you should never build on green belt land it is protected for a reason, I think our green spaces however small or large help with peoples mental health and nurture wildlife to help maintain environments. always protect our open spaces
		Green Belt	Shelly Meer	Response-00116	Worried about the plans for further expansion onto our lovely countryside.
1.9	South of West Hallam	Green Belt	Simon Reeve	Response-01080	The fields between West Hallam Village and Kirk Hallam, just like those between High Lane, West Hallam and Shipley/Heanor Road, Ilkeston support a diverse population of wildlife with open fields, woodlands, marsh land, lakes and streams/rivers. Removing any part of this environment for housing should be banned on this basis alone, there be no home for nature and "not cutting the grass verges" (to save money) won't make a difference.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Green Belt	Stacey Eady	Response-01529	Beech Lane As you will be aware this specific piece of land has been identified for development on several occasions within the last five years and was previously included in the work that was conducted for the core strategy before it was amended. At this point, it was removed from the plan. You will no doubt be aware that this has been the subject of objections on more than one occasion, not for just one reason but for several very valid ones which I would like to reiterate. So I, and many others, are asking why this site is being considered once again, when the situation concerning the land, infrastructure and position has not changed? I have been advised that this most recent inclusion of the Beech Lane site is not due to the recent changes in the Green Belt policy that was implemented in late 2024, as you have confirmed to me that you are not using this policy. I'm lead to believe that you are using the previous version of the policy that was in place at the beginning of the revised core strategy, and this was much earlier(2022). This merely creates more confusion about the desire to include the land in question. As the alternative site (CSR0004) on St Wilfrids Road in West Hallam had been rejected during this policy period, as a result of satisfying the Green Belt criteria, you will surely understand, having visited both sites, that this St Wilfrids site offers far less in terms of the Green Belt criteria than that of Beech Lane. This latter site has several mature trees that promenade the front of Beech Lane, not to mention the thousand of birds/wildlife and plants it houses and it's vital contribution to the mainainance of the conservation area that is within very close proximity. With the Safeguarded Land that is being discussed still been used for agricultural purposes, I feel that there is some misjudgment as to how these different sites scored and maybe this was influenced by the sudden need to deliver outcomes quickly rather than actually scoring this appropriately. As such, I wish to challenge the findings as the report doesn't clearly outline the process.
1.9	South of West Hallam	Green Belt	Teresa Faulkner-Day	Response-00242	The green belt area is a protected area for a reason, it can't just be concreted over for a few more houses. It needs to remain protected and other more suitable areas need to be considered.
1.9	South of West Hallam	Green Belt	Teresa Webster	Response-00086	Most residents have chosen to move out of the towns and cities to enjoy a more rural way of life. As the green belt gets ?eaten up? we will slowly lose the village atmosphere and the wildlife that we are surrounded by
1.9	South of West Hallam	Green Belt	Tracey Barks	Response-00111	Save the green spaces , we need them. West Hallam is not a town and should never be turned into one. Our children and future generations need these spaces
1.9	South of West Hallam	Green Belt	Victoria Walker	Response-00228	Building on a green belt should be a last resort, especially when there are plenty of brown/grey belt that can be built on where new transport links can be created.
1.9	South of West Hallam	Healthcare Facilities	Adam Spencer	Response-00054	Healthcare facilities in the village are already overstretched and are often having to send people to alternative GPs, the additional 90 homes with no extra healthcare provision is going to have a negative impact on both the current and potential new residents
1.9	South of West Hallam	Healthcare Facilities	Alesha Johnson	Response-00783	We live in the village and can see that the health care provider is already overwhelmed. We struggle to get the help we need from the healthcare services available.
1.9	South of West Hallam	Healthcare Facilities	Alice Johnson	Response-00093	impossible to get an appt at the doctors as it is. never mind adding potentially 300-400 people into the surgeries
1.9	South of West Hallam	Healthcare Facilities	Alison Reynolds	Response-00243	Already cannot support current housing
1.9	South of West Hallam	Healthcare Facilities	Alison Stills	Response-01057	Reducing the ability to access timely appointments for healthcare
1.9	South of West Hallam	Healthcare Facilities	Amy Cartwright	Response-01017	The local drs surgeries are already at capacity with regular appointments taking at least 2 weeks to get in, another nearly 200 people trying to access this already stretched service is wrong
1.9	South of West Hallam	Healthcare Facilities	Andrea Cochrane	Response-01485	The current healthcare services in the village are too limited to meet the needs of a proposed large influx of new patients. If the proposed development goes ahead, there will be further delays for anyone seeking medical treatment who is unable to travel outside West Hallam. Or alternatively, it will mean new residents having to travel for treatment, and so adding to the congestion on the roads.
1.9	South of West Hallam	Healthcare Facilities	Andrew and Julie Douglas	Response-00146	The doctors in the village are more than busy. No appointments are available and there will be even less with at least another 180 patients This will be a dangerous situation
1.9	South of West Hallam	Healthcare Facilities	Andrew Zielinski-Raynor	Response-00135	From personal experience I know that it is already frustratingly hard to get a Doctors appointment in the Village. An increase in population will simply result in an increased burden on an already overstretched service. Potentially putting people?s lives at risk.
1.9	South of West Hallam	Healthcare Facilities	Angela Reid	Response-00134	No appointments
1.9	South of West Hallam	Healthcare Facilities	Anita Lawrence	Response-00726	Services such as childcare and doctors are already unable to meet residents' needs, the addition of more housing within the village will put further strain on these services. It can take 4+ weeks to obtain an appointment with a GP and recently took 5 weeks for even a telephone consultation with the practice pharmacist . Increased housing will only exacerbate this problem.
1.9	South of West Hallam	Healthcare Facilities	Anna	Response-00112	We don?t have enough of anything anymore! Why aren?t doctors / schools and leisure facilities being built instead of all this ridiculous housing? Where are the people supposed to go?
1.9	South of West Hallam	Healthcare Facilities	Ann Ainsworth	Response-01096	Already inadequate to meet the needs of existing population
1.9	South of West Hallam	Healthcare Facilities	Anna Richardson	Response-00162	Healthcare facilities in west hallam are at maximum capacity and there are no NHS dentist places available at all locally
1.9	South of West Hallam	Healthcare Facilities	Anne Vanstone	Response-01216	Healthcare is another worry ? waiting times for GP appointments now regularly exceed five weeks. Patients are frequently offered appointments out of area. The current medical infrastructure simply isn?t coping.
1.9	South of West Hallam	Healthcare Facilities	A Redshaw	Response-00287	It is already impossible to register with a local doctor
1.9	South of West Hallam	Healthcare Facilities	Benjamin Price	Response-00257	It is currently a 3-4 week wait to get an appointment at the GP in West Hallam. By increasing the population of the village you?re putting a higher strain on those NHS services and reducing the service which they provide the the residents
1.9	South of West Hallam	Healthcare Facilities	Ben Rodney	Response-00122	Already cannot get appointments let alone adding another 90 homes
1.9	South of West Hallam	Healthcare Facilities	Charles Brooks	Response-00535	I'm sure Councillors are very aware of the declining lack of healthcare facilities in West Hallam. Its extremely difficult to get an appointment with a GP (no full time GP practicing in West Hallam) and you even have to go to Ilkeston for a simple blood test. The current practice cannot cope with the existing demand. Where are the occupants of the proposed new development meant to go to receive their medical care.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Healthcare Facilities	Charlotte Lun	Response-00150	The doctor?s surgery in West Hallam is at full capacity. Surrounding surgeries are at full capacity. 1.9	South of West Hallam	Healthcare Facilities	Chris Collins	Response-00037	Thankfully I use a doctor outside of the village who is fabulous. I hear nothing good about the capacity challenges faced with people attending the village doctor surgeries. To add further people to this without adding capacity / capability would be negligent.
1.9	South of West Hallam	Healthcare Facilities	Christine	Response-01019	Increased pressure on the Doctors surgery, when it already is too busy for a blood test and appointments are 3 weeks in advance

1.9	South of West Hallam	Healthcare Facilities	Diane Reynolds	Response-00216	Doctors are already at capacity and having to wait months for an appointment with more houses this will only make the situation worse and potentially dangerous for people who need to see a doctor
1.9	South of West Hallam	Healthcare Facilities	Eileen Bailey	Response-00213	Can?t get an appointment now
1.9	South of West Hallam	Healthcare Facilities	Emmet Barnes	Response-01053	Doctors are missing in West Hallam
1.9	South of West Hallam	Healthcare Facilities	Emily Reeve	Response-01495	It is difficult to get a doctor?s appointment as it is in the village.
1.9	South of West Hallam	Healthcare Facilities	Emily Reynolds	Response-00149	Same as schools really. It's difficult enough to get a doctors appointment as it is and the pharmacy always seems to be very busy. You cannot add 90 new homes to the village and expect everything to be okay and that it won't have a huge impact on the people already living here and the surrounding areas like ilkeston, and to the health care facilities.
1.9	South of West Hallam	Healthcare Facilities	Emma Lound	Response-00187	The local surgery is already busy. The plan does not address the need for more doctors places or additional funding to cope with the increase in residents...which could be up to 300 more people to cater for.
1.9	South of West Hallam	Healthcare Facilities	Francesca Dean	Response-00221	Again, no health care services to those who already live in west hallam. We already have to go to ilkeston for ours! It's a risk to everyone who already loves here
1.9	South of West Hallam	Healthcare Facilities	Gary Hamson	Response-00052	Has anyone checked if the local GP Practice have availability?
1.9	South of West Hallam	Healthcare Facilities	Gillian Bosworth	Response-00921	Healthcare facilities are already very stretched in this area.
1.9	South of West Hallam	Healthcare Facilities	Glenn Richardson	Response-00316	It?s already impossible to register for an nhs dentist in this area & almost as hard to get a doctors appointment..We?ve lived in the village for over 20 years & only our kids can get a dentist locally.
1.9	South of West Hallam	Healthcare Facilities	Heidi Spencer	Response-00189	The current doctors in the village doesn?t have capacity to serve the community never mind adding another 90 houses and families into the mix
1.9	South of West Hallam	Healthcare Facilities	Helen Collins	Response-00034	I understand that the 2 local practices in the village are already overstretched with appointments hard to obtain. There is not capacity to support the additional numbers of inhabitants proposed.
1.9	South of West Hallam	Healthcare Facilities	Helen fox	Response-00064	The proposed construction of additional housing could negatively impact the healthcare system. An increase in population may strain existing medical resources, leading to longer wait times and reduced access to care for residents. Furthermore, the influx of new residents could overwhelm local healthcare facilities, diminishing the quality of services available. This situation could ultimately be detrimental to the overall well-being of the village, as adequate healthcare is essential for maintaining a healthy community.
1.9	South of West Hallam	Healthcare Facilities	Helen Johnson	Response-00170	Would put extra strain on the practice
1.9	South of West Hallam	Healthcare Facilities	Helen Patenall	Response-00868	Again, another inadequate service in the village. The surgeries in the Dales often refer patients to Littlewick medical centre which is some 3 miles away, all too frequently the only service provided by the Dales medical centre is a consultation by telephone, this clearly is not satisfactory.
1.9	South of West Hallam	Healthcare Facilities	Helen Vickseds	Response-00062	Both doctors are already busy within West Hallam and people struggle to get access. Therefore additional housing will only seek to increase the impact
1.9	South of West Hallam	Healthcare Facilities	Holly Mohamed	Response-00076	Strain on Healthcare Services: The local healthcare facilities, such as West Hallam Medical Centre, are already under pressure. An influx of new residents could exacerbate this, leading to longer wait times and reduced quality of care. The medical centre currently serves a large number of patients, and additional residents could overwhelm the existing healthcare infrastructure. Limited Capacity: With only a few medical centres in the area, the additional population may overwhelm the existing healthcare infrastructure. This could result in longer waiting times for appointments and reduced access to essential healthcare services.
1.9	South of West Hallam	Healthcare Facilities	Iain Harrison	Response-01214	I have lived in West Hallam for 20 years. When we first moved here, accessing healthcare was straightforward?I could see a GP without difficulty and register with an NHS dentist locally. Now, it?s virtually impossible to get a doctor?s appointment, with both surgeries constantly full and waiting times unacceptably long. NHS dental care is entirely unavailable in the area. The healthcare infrastructure is already stretched beyond capacity. Adding more housing?and by extension, more residents?will place even greater strain on already overburdened services. To continue building on greenbelt land in a village already at breaking point is irresponsible and deeply concerning. This proposal reflects a complete disregard for the well-being of current residents and the long-term sustainability of the community.
1.9	South of West Hallam	Healthcare Facilities	Iris Howes	Response-01169	GP services are already stretched, with delays of up to five weeks for appointments. Residents are being directed to practices outside the village.
1.9	South of West Hallam	Healthcare Facilities	Jacqueline Shakh	Response-00095	Can't get in at the doctors now

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Healthcare Facilities	James Johnson	Response-01125	Local schools and GP surgeries are already under considerable pressure, with limited capacity to absorb a large influx of new residents. Without this, the development would reduce the quality and accessibility of local education and healthcare for existing residents.
1.9	South of West Hallam	Healthcare Facilities	James Morris	Response-01060	Takes along time to be seen by a doctor we don't have the infrastructure
1.9	South of West Hallam	Healthcare Facilities	Jane Marshall	Response-01172	Already difficult to get an appointment with a healthcare practitioner.
1.9	South of West Hallam	Healthcare Facilities	Jane Taylor	Response-01023	The drs surgeries in the village are already at capacity and it would be detrimental to existing villagers to have this stretched even further
1.9	South of West Hallam	Healthcare Facilities	Jane Zielinski-Raynor	Response-01095	Can't get doctors appointments now - with 90 more families it would be even worse
1.9	South of West Hallam	Healthcare Facilities	Jenny Stanbridge	Response-00088	Not enough appointment as it is at local doctors
1.9	South of West Hallam	Healthcare Facilities	Jo-Anne Attenborough	Response-00129	Have you tried to get a doctors appointment in West Hallam lately? Given , Doctor Burns is now operating his private practice, getting appointments will be even more challenging. We do not need more housing so more people are competing for the appointments that are available.
1.9	South of West Hallam	Healthcare Facilities	Jon Skelson	Response-01025	West Hallam medical centre seems busy all the time. Can it support more patients while still delivering the correct quality of service ?
1.9	South of West Hallam	Healthcare Facilities	Josh August	Response-00084	It is already difficult to get to see your doctor, without there being more in the village
1.9	South of West Hallam	Healthcare Facilities	Judith Hare	Response-01014	As it stands you cannot get into the doctors in the village within s as couple of weeks. No staff and not enough doctors now never mind after more houses are built
1.9	South of West Hallam	Healthcare Facilities	Julie Harbon	Response-00022	It is very difficult to get an appointment at The Dales Medical Centre now. Usually we have to go to Littlewick in Ilkeston. It is clear that there is insufficient resources for current patients without any additions.
1.9	South of West Hallam	Healthcare Facilities	Julie Harker	Response-01073	The same with the doctors. You have to wait long enough for an appointment as it is !!!!!
1.9	South of West Hallam	Healthcare Facilities	Julie Stewardson	Response-00282	Can't get an appointment as it is with only two part time doctors at The Dales Medical Centre. No capacity for extra patients at all without expansion of the services.
1.9	South of West Hallam	Healthcare Facilities	Julie Wright	Response-00091	The Health Service in the village is always difficult to access more patients would make it even worse.
1.9	South of West Hallam	Healthcare Facilities	Karen Squire	Response-01040	There are two surgeries and a chemist . I don't know how busy they are . I assume busy as you can never get in .
1.9	South of West Hallam	Healthcare Facilities	Karina Cooper	Response-00267	This is shocking. How do you propose to meet the needs of 90 more households when it already takes 3 weeks for a gp appointment locally.
1.9	South of West Hallam	Healthcare Facilities	Katie	Response-00047	Adding extra houses will have a huge impact on healthcare. Residents already find it difficult to access.
1.9	South of West Hallam	Healthcare Facilities	Katie Rice	Response-00036	We already can't get appointments at our doctors, it would be a nightmare with even more families using our doctors surgeries
1.9	South of West Hallam	Healthcare Facilities	Ken Mitchell	Response-00763	The doctors surgeries in West Hallam are already overwhelmed. There is currently ana average of 4 weeks wait for a routine GP appointment.
1.9	South of West Hallam	Healthcare Facilities	Ken Musson	Response-00900	The village does not have the infrastructure to support more housing in terms of doctors
1.9	South of West Hallam	Healthcare Facilities	Kerry	Response-01034	Struggle to get a GP appointment ad it is. More people put pressure on the current system
1.9	South of West Hallam	Healthcare Facilities	Kerry Barratt	Response-00168	Already awful to obtain a GP appointment
1.9	South of West Hallam	Healthcare Facilities	Kerry Middleton	Response-00266	An already overstretched health care provider, would be unable to cope with a growing population.
1.9	South of West Hallam	Healthcare Facilities	Kevin Fox	Response-00682	West Hallam would benefit from a single health care practice, I've no idea why we have 2 separate practices! They need to amalgamate and offer one for all in a bigger health care practice and not separate widening appointments from the one?
1.9	South of West Hallam	Healthcare Facilities	Kirsty Oliver	Response-00558	Already a nightmare to get appointments without the influx of new residents.
1.9	South of West Hallam	Healthcare Facilities	Laura Egglestone	Response-01027	Waiting times for appointments are currently around 5 weeks. If you try for an on the day appointment then we get redirected to Ilkeston as they cannot good with current demand.
1.9	South of West Hallam	Healthcare Facilities	Linda Webster	Response-00744	I do not think the doctors' surgeries would cope with an influx of new patients, you cannot get an appointment as it is.
1.9	South of West Hallam	Healthcare Facilities	Lindsey Lyons	Response-00071	The local Doctors already struggle to get residents that use the service an appointment within 24 hours, usually having to wait a minimum of 7 days. Additional housing increases the need for more Dr's appointments being available, this has not been mentioned in the proposal. How do you propose this will be managed? It needs to have a plan and not just ?winged? in the best hope that the occupants of the new houses will not use the local Dr's.
1.9	South of West Hallam	Healthcare Facilities	Louise Annison	Response-01049	Healthcare's already strained,
1.9	South of West Hallam	Healthcare Facilities	Louise Hunt	Response-01032	GP surgery in village not big enough to accomodate.
1.9	South of West Hallam	Healthcare Facilities	Mandie frith	Response-00247	Over stretched have to go to Ilkeston one due to capacity n West Hallam already. More houses more capacity
1.9	South of West Hallam	Healthcare Facilities	Mark	Response-00164	Doctors surgeries are a nightmare to get any sort of attention never mind a face to face appointment. More people more problems surely! There are no Dnetists locally for NHS patients!

1.9	South of West Hallam	Healthcare Facilities	Mark Patenall	Response-00851	The two surgeries we currently have in the village cannot cope with the numbers of residents we have now. The service is quite frankly terrible and will only get worse with an increase in the village population
1.9	South of West Hallam	Healthcare Facilities	Mark Power	Response-00276	It takes around one month to get an appointment if your lucky in the doctors in West Hallam
1.9	South of West Hallam	Healthcare Facilities	Matt Haddon	Response-00696	This site would also put a huge additional significant load on the Doctors surgeries, which are already heavily subscribed making it very difficult to get appointments, and would therefore be putting peoples health at risk.
1.9	South of West Hallam	Healthcare Facilities	Matthew Lyons	Response-00061	It's already hard the get a doctors appointment in, how will the local doctors cope with more patients?
1.9	South of West Hallam	Healthcare Facilities	Maureen Briggs	Response-00190	It will make a big difference to the health of everyone if the Dr s have to take on more patients without making extra provisions for them.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Healthcare Facilities	Max Egglestone	Response-01278	Healthcare provision is also at a breaking point. Waiting times for GP appointments regularly exceed five weeks, and residents are often referred to clinics in Ilkeston rather than their local practice. The system is already stretched too thin to take on more patients.
1.9	South of West Hallam	Healthcare Facilities	Max Longdon	Response-00128	Have you tried to get a doctors appointment in west Hallam . Last time I tried I was told it would be quicker to attend Ripley hospital drop in centre. Overcrowded already
1.9	South of West Hallam	Healthcare Facilities	Michelle	Response-00148	It's hard enough trying to get an app at the doctors without having more people in the area needing help.
1.9	South of West Hallam	Healthcare Facilities	M Mcfarlane	Response-00147	There is 1 doctor for the whole of west Hallam which is totally unacceptable for those in need. The waiting time to see a doctor would be well over 2 months if this were to happen
1.9	South of West Hallam	Healthcare Facilities	Mr and Mrs Mellors	Response-01797	West Hallam does not have the infrastructure to support a large influx of new residents, existing GP services are already stretched. Adding more families without expanding essential services would place an unfair and unsustainable burden on current facilities, negatively affecting both existing and new residents.
1.9	South of West Hallam	Healthcare Facilities	Mrs Bird	Response-00045	The surgeries at the Dales and west hallam medical centre are already full to capacity. Added housing would further put pressure on this.
1.9	South of West Hallam	Healthcare Facilities	Mrs Glenda Orchard	Response-01490	Dr fascilities already too busy to get appointments
1.9	South of West Hallam	Healthcare Facilities	Mrs Strelley	Response-00233	The doctor's surgery is bursting already. It can't cope with all it's patient intake at the best of times. Where are you going to build another surgery. How are the local hospitals going to cope?
1.9	South of West Hallam	Healthcare Facilities	Natalie Payne	Response-01523	The doctors surgeries in the village are already over subscribed and getting a gp appointment is already difficult
1.9	South of West Hallam	Healthcare Facilities	Nick Craddock	Response-00145	As per my comments for other west Hallam Proposal
1.9	South of West Hallam	Healthcare Facilities	Nicola Elkington-Horridge	Response-00079	Their is a short supply of health care services already in westhallam this will only add to the strain on the NHS to this area. West Hallis already struggling with too many appointments with many villagers having to go further away for treatment, making village life more like town life!
1.9	South of West Hallam	Healthcare Facilities	Nicole Brookman	Response-01559	i struggle to get into my doctors, you cant get appointments, you have to ring at 8 and when you get through the appointments have already gone. i am at west hallam medical centre. my inlaws, who are elderly are at the other one in the village and they can never get in so they have to go to one in ilkeston. my mother in law doesnt drive so relies on us taking her in. The pharmacy often has a que, but ou do have to rely on it as you cant see a doctor in the village. there is no dentist in west hallam. i couldnt get on ein the area for years so had to travel to long Eaton, which is half an hour away
1.9	South of West Hallam	Healthcare Facilities	Nina Walters	Response-00244	Yes
1.9	South of West Hallam	Healthcare Facilities	Pamela Fox	Response-01242	The Healthcare services are already stretched to the point that it is very rare to get an appointment in the village surgery on several occasions I have been sent to Littlewick centre in Ilkeston and also to Ilkeston Hospital if I didn't have my own transport I would find it difficult to attend these appointments
1.9	South of West Hallam	Healthcare Facilities	Patrick Barber	Response-00280	There is a lack of primary health care provision within the local area with long waiting lists for a GP appointment.
1.9	South of West Hallam	Healthcare Facilities	Patrick Hynes	Response-01902	GP waiting times in our area often exceed five weeks, and many residents are now being directed to clinics in Ilkeston. This is not acceptable now, and certainly not sustainable if the population grows.
1.9	South of West Hallam	Healthcare Facilities	Paul aldred	Response-00152	The village health care is possibly one of the worst around
1.9	South of West Hallam	Healthcare Facilities	Paula Piggott	Response-01041	Health care facilities are already strained there isn't the capacity for extra patients.
1.9	South of West Hallam	Healthcare Facilities	Pauline wood	Response-01100	Precious few doctors now to go round without adding more bodies
1.9	South of West Hallam	Healthcare Facilities	Peter Lilley	Response-00161	It is already impossible to get an appointment at our two local surgeries. Adding another 300 residents to the mix is madness without providing extra facilities
1.9	South of West Hallam	Healthcare Facilities	Pete Vanstone	Response-01164	Local GP practices are overstretched, with waiting times for non-urgent appointments exceeding five weeks. Many residents are being redirected to Ilkeston for care, despite being registered locally ? highlighting just how overwhelmed the service already is. Adding another large group of households to this catchment would only make access to care even more difficult.
1.9	South of West Hallam	Healthcare Facilities	Rachel	Response-01015	The doctors surgery in the village only had 2 GPs getting an appointment is somewhat impossible already.
1.9	South of West Hallam	Healthcare Facilities	Rhonda Holt	Response-00237	Littlewick, Dales and West Hallam Medical Centre are at capacity.
1.9	South of West Hallam	Healthcare Facilities	Richard Brewell	Response-01028	Healthcare in the area for West Hallam residents is currently appalling, with insufficient practitioners and with long wait time for appointments, including gp and simple tasks such as blood tests. Having more residents will take a poor service and stretch it to breaking point. This is exacerbated as many current residents in the area are already mature or aging and who will need this healthcare.
1.9	South of West Hallam	Healthcare Facilities	Robert Dodd	Response-00201	Infrastructure is not set up for additional housing occupants. Doctors are already a nightmare to get access to
1.9	South of West Hallam	Healthcare Facilities	Robert Flatley	Response-00978	This development would place and increased strain on the two medical facilities located within the Village where appointments are already hard to come by. Furthermore, these facilities are not able to extend or expand at their current premises due to constraints of the buildings already there.
1.9	South of West Hallam	Healthcare Facilities	Robert Hall	Response-00630	Existing health services are already fully stretched. NHS dentistry is not available for new adult patients in the area.
1.9	South of West Hallam	Healthcare Facilities	Robert Reynolds	Response-00260	The doctors in the village already have a massive amount of patients. No mention has been made of opening new medical practices etc to support an increase in population.
1.9	South of West Hallam	Healthcare Facilities	Ruby Reid	Response-00119	Added pressures on the local GP's and pharmacy services
1.9	South of West Hallam	Healthcare Facilities	sam richards	Response-01467	i dont know where to start on this one - healthcare facilities are almost non existent in the village. i can never get myself or my family into our registered doctors in the village when needed and get sent to ilkeston surgery instead which is very inconvenient. if plans go ahead for 90 houses this will bring a lot more residents to the area who will not be able to use a local surgery. there is also a lack of dentists with space, and none taking on nhs adults.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Healthcare Facilities	Sarah James	Response-01085	Already pressured.
1.9	South of West Hallam	Healthcare Facilities	Sarah Taylor	Response-00115	There are two Dr's surgeries one being Monday to Friday WH Medical Centre and the other open a couple of days a week. Medical appointments are already outsourced to Littlewick Medical Centre in Ilkeston which is not helpful if unwell if you don't have own transport and thinking of using a bus they do not operate regularly around here. If you have to have blood taken that is outsourced too, closest place for that is Ilkeston. As a WH resident we are already having to travel out for these services that once were in house more people will cause more strain to an already stretched service.
1.9	South of West Hallam	Healthcare Facilities	Sarah Taylor	Response-01819	The doctors surgeries already have very long waiting times for their patients so they wouldn't be able to cope with more.
1.9	South of West Hallam	Healthcare Facilities	sharon hickson	Response-01430	we can not get doctors appointments in the village now , adding more people to the doctors list will create less appointments for the locals already in west Hallam
1.9	South of West Hallam	Healthcare Facilities	Simon Reeve	Response-01080	The ability to get a doctor's appointment is a bit of a joke, the doctors surgeries are all over prescribed, chemists are too busy trying to pick up the slack and dentists are near impossible to get in to, we travel 40 minutes away to a dentist. There simply cannot be more pressure through new housing on a breaking system
1.9	South of West Hallam	Healthcare Facilities	Sophie	Response-01105	Do you think the already struggling GP services are going to be able to facilitate 90 extra family's?
1.9	South of West Hallam	Healthcare Facilities	Stacey Eady	Response-01529	Some reflections on the Health and Well-Being aspects of the proposal: - Will it reduce health inequalities? No, but this is no different for all of the sites in West Hallam. - Will it improve access to health services? No - Health Service provision in the village is currently inadequate and residents are being directed to local safety-net services such as Littlewick Medical Centre in Ilkeston and the nearest walk-in centres. Older residents find access to these alternatives quite difficult, especially when not feeling well. - Will it increase the opportunities for recreational physical activity? No, this is the same for all of the sites - Will it bring new open spaces or improve the quality of existing open spaces? No ? this is the same for all sites. However, the Beech Lane site will tarnish the visual aspect of our historical village centre and negatively impact the nearby Conservation Area. - Will it improve access to local food-growing opportunities? No - this is the same for all sites. However, I note that the 'Safeguarded Land' on Beech Lane seems to be the only land that is currently used for an agriculture purpose, and this land is worked annually to provide feed for local animals.
1.9	South of West Hallam	Healthcare Facilities	Teresa Faulkner-Day	Response-00242	The doctors surgeries, dentists and chemist's already struggle massively to meet the needs of the community. Forcing us to go out of the village to receive basic health care
1.9	South of West Hallam	Healthcare Facilities	Teresa Hall	Response-00270	It is difficult to get appointments at the local GPs surgery with the population of the village as it is
1.9	South of West Hallam	Healthcare Facilities	Teresa Webster	Response-00086	Health care facilities in the village are already stretched and we find often that we are unable to get appointments and have to go to other surgeries. This will become more of a problem if the population increases
1.9	South of West Hallam	Healthcare Facilities	Tina Jay	Response-01801	The Doctor's surgery/health care at The Dales Shopping Centre is not capable of coping with such a high influx of new patients. Current patients already now need to travel out of the village to Little Wick Medical Centre in Ilkeston and Ilkeston hospital for their appointments as West Hallam Medical Centre is not able to cope with the amount of appointments needed. Patients are also needing to wait far longer now for appointments, with the already increasing number of people in the area, and particularly for more serious conditions requiring the need to see a Doctor, which can involve waiting over a month to be seen.
1.9	South of West Hallam	Healthcare Facilities	Tracey Barks	Response-00111	West Hallam already struggles with health care provision. Getting a Doctors appointment is nigh on impossible. An extra 90 households will add to this burden resulting in inadequate health provision for all
1.9	South of West Hallam	Healthcare Facilities	Val Stevens	Response-01070	It is extremely difficult to get an appointment at our surgery and travelling to Ilkeston is often our only option, more families would exacerbate this problem.
1.9	South of West Hallam	Healthcare Facilities	Vicky Buckley	Response-00182	already overcrowded
1.9	South of West Hallam	Healthcare Facilities	Victoria Walker	Response-00228	I live in the village. I cannot get an appointment at the dales medical centre when I need one. Assuming 90 houses and 3 people in these houses on average, where are 270 people going to register for GP services? I cannot get a local NHS dentist. Again, where will these people register?
1.9	South of West Hallam	Landscape	Adam Spencer	Response-00054	The proposed new development will alter the landscape of the village and will impede on the picturesque countryside vies which attracted so many people to the village in the first place
1.9	South of West Hallam	Landscape	Alex	Response-01026	What makes living in West Hallam so special is the green space that surrounds us and the beautiful rolling landscapes that you can view from our village. We don't agree that these houses should be built here and it's people who don't live here that get to make the decision to build these houses but you aren't the ones who have to live with them on your door step and have them built on your dog walking routes.
1.9	South of West Hallam	Landscape	Andrew Zielinski-Raynor	Response-00135	The proposed site is essentially along a ridge overlooking rolling countryside. In building here the countryside aspect from miles around will be gone forever .
1.9	South of West Hallam	Landscape	Angela Reid	Response-00134	Views and walking taken away
1.9	South of West Hallam	Landscape	Ann Toplis	Response-00271	Building more houses here would spoil the countryside round this area.
1.9	South of West Hallam	Landscape	Benjamin Price	Response-00257	I walk my dog through that green field every day, as do a number of other dog walkers. It is local and convenient and a refreshing way for me to clean my mind
1.9	South of West Hallam	Landscape	Bruce Broughton	Response-01534	The development of this area would not respect or preserve identified landscape character nor have any positive impact on visual amenity.
1.9	South of West Hallam	Landscape	Carl fox	Response-00067	Will ruin the village feel
1.9	South of West Hallam	Landscape	Carly Denham	Response-00292	Ruin the look of the village
1.9	South of West Hallam	Landscape	Charles Brooks	Response-00535	West Hallam is a rural location and its identity must be preserved. We are a very close knit community who enjoy living in the countryside and enjoy the wonderful walks and green areas on our doorstep. Is it so necessary to disturb this.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	South of West Hallam	landscape	Chloe Parkin	Response-00154	Building here will ruin the landscape of the lovely village.
1.9	South of West Hallam	landscape	Chris Collins	Response-00037	As a village it would be preferable to not have more housing. To try and not come across as a NIMBY however, the current location means that the countryside starts across the road from the school, at the top of Hallam Way, at the end of The Village - changing this would be a significant impact to the landscape of the village and hundreds of people
1.9	South of West Hallam	landscape	Christopher Chambers	Response-00172	The proposed development will decimate the existing landscape.
1.9	South of West Hallam	landscape	Connor Gratton	Response-00232	The area is a commonly-used and very pleasant walking area. Destroying this will have a negative impact on the village.
1.9	South of West Hallam	landscape	Daniel Hickson	Response-00177	Will be ruined
1.9	South of West Hallam	landscape	David Fretwell	Response-00133	Part of the attraction of living in the village is it is surrounded by beautiful landscapes and walks. Adding houses both reduces the attraction, impacts the local wildlife and can have a negative impact on villagers mental state
1.9	South of West Hallam	landscape	David Morrell	Response-00477	This would irreversibly impact the open countryside views from west Hallam and take away from The conversation area
1.9	South of West Hallam	landscape	David Richards	Response-01465	The openness of this site is an important characteristic of the village and provides relief form the otherwise densely populated pattern of development. The loss of this will be harmful in this regard. The impact on the adjacent conservation area will be significant and this should be avoided. A densely populated housing development adjacent to a historic farmstead is inappropriate.
1.9	South of West Hallam	landscape	Dean Wright	Response-00094	The view across the dales will be irrevocably lost, with extensive habitat lost
1.9	South of West Hallam	landscape	Emily Reeve	Response-01495	The current landscape is used by lots of people. From dog walkers to children heading to the fields and woods to play.
1.9	South of West Hallam	landscape	Emily Reynolds	Response-00149	The houses would be a scar on the landscape.
1.9	South of West Hallam	landscape	Francesca Dean	Response-00221	What landscape? There won't be any with houses there!
1.9	South of West Hallam	landscape	Gary Hamson	Response-00052	This site with the safeguard land will severely affect residents living on Beech Lane
1.9	South of West Hallam	landscape	Glenn Richardson	Response-00316	Such a detrimental impact on the landscape & the diverse wildlife habitat .For many residents it's their only view of gods great countryside
1.9	South of West Hallam	landscape	Guiliano Ricci	Response-01010	Building an estate on this land will impact on my views
1.9	South of West Hallam	landscape	Helen Collins	Response-00034	It's a pleasure to be able to live so close to open land, people have invested in the location of their home for this reason. To have this taken away and spoiled is not acceptable. One small area, becomes another and another until large areas of land are lost. New houses are often 3 stories to capitalise on quantity of houses in a small area, which also effect the landscape.
1.9	South of West Hallam	landscape	Helen fox	Response-00064	Increased construction can lead to changes in land use and drainage patterns, exacerbating the risk of flooding. This not only threatens the safety of residents but can also damage infrastructure and disrupt local ecosystems. Furthermore, the potential for flooding may deter new residents and investors, ultimately hindering the village's growth and economic stability. The long-term consequences of such environmental challenges could be detrimental to the community's overall well-being and sustainability.
1.9	South of West Hallam	landscape	Helen Johnson	Response-00170	All tha will be seen is houses
1.9	South of West Hallam	landscape	Helen Patenall	Response-00868	The proposed development is alleged to " keep line of site views", this statement is nonsense, the view of rolling hills and a much treasured historic landmark (Cat and Fiddle Windmill) will be blighted and obscured from view for residents of our village
1.9	South of West Hallam	landscape	Jacqueline Shakh	Response-00095	Spoiling beautiful views for existing residents.
1.9	South of West Hallam	landscape	James Morris	Response-01060	Ruining the landscape for people that have lived there years
1.9	South of West Hallam	landscape	Jenny Butler	Response-00202	West Hallam has always had open spaces and countryside views. This is going to be an ugly unwanted addition
1.9	South of West Hallam	landscape	Jo-Anne Attenborough	Response-00129	This is an important site for dog walkers and walkers who want to enjoy a green and pleasant space. It contributes to residents well being and happiness. Building on this site will have a strong negative psychological affect on the residents of West Hallam.
1.9	South of West Hallam	landscape	Johnson	Response-01037	The development will have an impact on the landscape we need green spaces
1.9	South of West Hallam	landscape	Josh August	Response-00084	There is nothing better than looking out of your window and seeing the beautiful Derbyshire countryside. Building these houses will completely ruin all of that
1.9	South of West Hallam	landscape	Julie August	Response-01064	Ruins the landscape of the area
1.9	South of West Hallam	landscape	Julie Harbon	Response-00022	I?m glad the proposal protects the south facing aspect of some of the original houses. As I live at The Village end of Beech Lane, it certainly will affect my view! We have lived here for 25 years and chose this house partly for the open aspect across the road, which we will lose.
1.9	South of West Hallam	landscape	Julie Harker	Response-01073	Again we chose to live here because of the green landscape. It is what makes West Hallam a beautiful place to live
1.9	South of West Hallam	landscape	Julie Wright	Response-00091	We need to keep green areas
1.9	South of West Hallam	landscape	Karen Squire	Response-01040	It?s a sloping hill down towards a massive storage depot . It?s not like you?re looking over the Brazilian rain forest
1.9	South of West Hallam	landscape	Katie Rice	Response-00036	This will be ruining the view and peace of all the houses that back on to these fields, bought because of the view and will make there houses less desirable to live in or sell
1.9	South of West Hallam	landscape	Kay	Response-01030	I think it will take away from the beauty of the village and will make it look more like a state
1.9	South of West Hallam	landscape	Kerry	Response-01034	Lovely ad it is. Beech lane residents love the view. We all love the field to use. Stealing it from us all
1.9	South of West Hallam	landscape	Kirsty Oliver	Response-00558	It would change the open aspect turning up from Hallam way which enhanced the village looking up to the windmill.
1.9	South of West Hallam	landscape	Lindsey Lyons	Response-00071	The area proposed creates a beautiful landscape for the local area. The village does not have many open spaces and it is extremely disappointing to see that ghis landscape may now reside housing with limited view or the beautiful sunset / sunrises you can experience over the area.
1.9	South of West Hallam	landscape	Mark	Response-00164	Build here and everything is gone forever!
1.9	South of West Hallam	landscape	Mark Newton	Response-00179	As prior, I know the council doesn't care in the slightest about this becuase they want to impress the labour government. But please leave some free land left for the children to look over from their school, please don't forever harm a conservation area, please don't scar the village.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	landscape	Mark Patenall	Response-00851	The development supposedly will keep line of site views from Beech Lane to the open countryside. Let's be honest - it won't really will it.
			Maureen Briggs	Response-00190	As it is we have a lovely view over the fields and building houses there would put a stop to that.
1.9	South of West Hallam	landscape	Max Longdon	Response-00128	Part of being a village is being surrounded by countryside. New housing is an eyesore. Poor quality and shabby workmanship leaves a blot on the landscape
1.9	South of West Hallam	landscape	Michelle	Response-00148	Why damage beautiful landscape? I live here because of the landscape ?. Green fields and the wildlife
1.9	South of West Hallam	landscape	Michelle Cox	Response-00138	We need what field area / Grass area why spoil a beautiful Village with more crap built houses that look ugly all modern houses are not nice for a Village keep the Village a Village
1.9	South of West Hallam	landscape	Mrs Judith Pittson	Response-00753	Housing on this site will effect the landscape adversely particularly the views
1.9	South of West Hallam	landscape	Mrs Strelley	Response-00233	The beautiful landscape would be lost forever. Less bird song and less skyline for local residents.
			Nick Craddock	Response-00145	As per my comments for other west Hallam Proposal
1.9	South of West Hallam	landscape	Nicola Elkington-Horridge	Response-00079	The ruining of the landscape is everything, the views and green spaces are vitality important to residents mental and physical health. All the green areas in west hallam are sociable spaces full of freedom for walkers, places to meet and chat, dog walking a d immersing ourselves in beautiful nature. If you take this away you take away a huge part of village life, and we start to become a town but without the facilities and definitely without the desire
1.9	South of West Hallam	landscape	Nicole Brookman	Response-01559	We would loose our views, and the villiage feel of the villiage. it is currently green and you feel like you are in the countryside but we would loose that. We have a lovely big tree at the entrance to the field and we would loose that. At the moments we are in a small community that feels safe, inviting more people we may loose that. We chosse to move here becuse it felt small, friendly and safe. There is no pub in the villiage and not enough facilites for more houses.
1.9	South of West Hallam	landscape	Paul aldred	Response-00152	The village is fine as it is
1.9	South of West Hallam	landscape	Paula Piggott	Response-01041	You can't keep destroying the countryside destroying habitats, killing wildlife and it all not have a knock on effect. You are destroying the air we breathe. We need flowers, we need bees these things the world can't exist without. The wildlife will seriously be impacted. You will destroy the habitats of many animals needed for the world to survive. This is a small village. With lots of precious animals, insects, flowers, trees etc you will kill these insects and animals when you destroy their habitats thus destroying the air we breathe. There is a school and many bungalows with pensioners. It is a accident waiting to happen. Also dog walkers, horse riders and lots of wildlife. Seriously someone will get hurt or worse killed! It is a small village without the capacity for more houses. The roads are not built for so many extra residents. You will totally destroy the area and you will totally destroy the clean air killing lots of wildlife and their habitats in the process.
1.9	South of West Hallam	landscape	Rachel	Response-01015	Destroying the landscape
1.9	South of West Hallam	landscape	Rebecca Ricci	Response-00102	Building on this land will have an impact on the landscape. I look out of my bedroom window and see this area off green. I do not want to look at a housing estate. Save our green areas
1.9	South of West Hallam	landscape	Robert Flatley	Response-00978	This development is proposed for open fields which lay on the edge of a conservation area. It would further impact on the rural and historical character of the area in a negative way.
1.9	South of West Hallam	landscape	Robert Hall	Response-00630	Development on this site would compromise the integrity of the Village Conservation Area. There is no suitable development layout on the eastern boundary which would avoid this happening.
1.9	South of West Hallam	landscape	Robert Mee	Response-01581	Beech Lane runs across the top of a ridge overlooking the valley ? the development of a new estate here will alter the landscape of the village in general, and for existing residents of Beach Lane in particular.
1.9	South of West Hallam	landscape	Robert Mee	Response-01511	Beech Lane runs across the top of a ridge overlooking the valley ? the development of a new estate here will alter the landscape of the village in general, and for existing residents of Beach Lane in particular.
1.9	South of West Hallam	landscape	Robert Reynolds	Response-00260	The development would spoil the local landscape, and needlessly remove a greenfield site. The landscape should be preserved, it is vital in aiding stress management. We need as much beautiful landscape to enjoy as possible.
1.9	South of West Hallam	landscape	Ruby Reid	Response-00119	Negatively impact the landscape by removing more open land in what makes our village a nice place to live
1.9	South of West Hallam	landscape	Sarah Taylor	Response-00115	Answered this on previous questions
1.9	South of West Hallam	landscape	sharon hickson	Response-01430	the proposed development would not fit into the area it is a small field that would look overbearing with houses built on it
1.9	South of West Hallam	landscape	Simon Reeve	Response-01080	We have a beautiful landscape, any changes to the natural environment will shatter the beauty of the area, you can't keep adding more and more homes and solar farms on the countryside. Especially when there's so much dead town centre which will never recover and should be changed from retail to housing for example the lower half of Bath Street Similarly every shop, home and all the new factories in Stanton should have solar panels on the roofs and as canopies to the car parks adding addition benefits of sheltering vehicles before any consideration to rip up the countryside.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Landscape	Stacey Eady	Response-01529	My concerns are also that whilst the Beech Lane piece of land is a 'developers dream' and the land owner is eager to sell, these decisions should not be influenced merely by this aspect. The land is situated adjacent to the centre of our historic village, which dates back to as early as the Domesday Book, and which is currently part of the vital Conservation Area. As you will know, this area was initially designated and implemented to protect and preserve the local area. The proposed new development will be very close to this crucial area and will, in everyone's opinion, add very little visual benefit. Indeed it will, in all probability, have a negative impact on the Conservation Area, while being in no way in keeping with the current historical aesthetics of a traditional village centre that was built many years ago. To allow access to this historical village centre to become clogged with the excess traffic that will be generated by the current proposal is, in the opinion of most residents, intolerable. Upon reviewing the paperwork that was shared by the Planning Department, (including the scoring of each site), I'm finding it difficult to understand how some of the scores were arrived at, in terms of the Beech Lane site opposed to the other local West Hallam sites (North of West Hallam site, CSR0048, St Wilfrids Road site, CSR0004C and Land West of Station Road, CSR0016). I'm tempted to ask whether this could be the direct result of there being no actual site visits undertaken to 'obtain' this information, a point which Carol Hart, our local councillor, brought to your attention at the official planning meeting. I have listed for you below some areas that I feel should be checked/challenged as, once again, I fail to see how these sites have been scored so differently. 014 ? Landscape and Building Environment: Beech Lane scored -2, which appears to be a major negative, although St. Wilfrids scoring -3, suggesting a worse scenario. Again, I cannot see how this is possible. - Does it respect or preserve identified landscape character? The proposed Beech Lane site is just outside the centre of the village, right next to the Conservation Area. This raises the question of why the St Wilfrids site can be given a worse score than Beech Lane. The proposals for the Beech Lane site will also include the felling of several beautiful trees that currently add beauty to the area and a request for a Tree Preservation order has already been made for the significant large oak tree that is opposite to Hallam Way. This iconic tree adds significant beauty to the centre of the village. - Does it have a positive impact on visual amenity? The centre of the village is quaint and of a traditional appearance, this being one of the reasons it lies within a Conservation Area. These proposed new dwellings will hardly enhance this 'visual amenity' and in addition, will cause extra congestion in the immediate village area, thus reducing the 'visual amenity'. - Will it maintain or enhance the local distinctiveness of townscape and built environment? ? the proposed Beech Lane site will have more of a negative impact than the St.Wilfrids site, as it will be creating traffic congestion at both ends of the only through-route that serves a village that has already far outgrown its own infrastructure. - Will it conserve or enhance the interrelationship between landscape and the built environment? ? this would be a 'negative' for most of the sites, however CSR0048 and CSR00
1.9	South of West Hallam	Landscape	Stacey Eady	Response-01529	16 would be impacted less. 015- Heritage ? again, the St Wilfrids' site scored the same as the Beech Lane site with a -3 score, which is I find very puzzling. I would be grateful for some explanation as to how scores in this particular aspect have been agreed upon. - Will it conserve and enhance the historic environment, designated and non-designated heritage assets and their settings? Whilst none of the other sites, especially St. Wilfrids, are directly touching the village centre or near the Conservation Area, the Beech Lane site will cause more disturbance for access to the school and the village (shops/doctors/pharmacy). At this stage, we should also consider the ancient Scargill Foundation which has helped fund the village school and the education of local children for many centuries. Queues of clogged-up traffic outside the school gates whilst those same children are coming and going to and from their education is hardly showing any respect for such a fine, historic local institution. - Will it respect, maintain and strengthen the local character and distinctiveness? Whilst this will be a negative for all of the sites, once again the Beech Lane site butts up to the historical part of our village, unlike the other sites that are situated on the outskirts of the estate, where natural expansion has already happened. - Will it provide better opportunities for people to access and understand local heritage and participate in cultural activities? I don't believe any of the other sites are affected by this, other than Beech Lane, as constituents who reside in the immediate village (ie. within the Conservation Area) contribute to payments - via their Community Tax - towards the local church. Among several annual traditional village activities enjoyed by the West Hallam residents, the age-old Well-Dressing celebrations are a feature of the yearly cycle. Roads are closed-off on the 'big day' and the Hallam Way junction - already struggling to cope at such times - is the very spot where access to the proposed Beech Lane site will be created. - Will it protect or improve access and enjoyment of the historic environment? The site where there is the largest negative impact is again Beech Lane, due to its closeness to the already-discussed congested village centre. - Will it conserve and enhance the archaeological environment? Once again, this will have a significantly high impact on the Beech Lane site due to its proximity to the Conservation Area and the historical aspects of the village centre.
			Teresa Webster	Response-00086	This is a beautiful field which is home to a wide range of wildlife
1.9	South of West Hallam	Landscape	Tilly Fletcher	Response-00317	The landscape from the north view on Beech Lane will be completely destroyed - the benefits of this beautiful location will no longer be enjoyed.
1.9	South of West Hallam	Landscape	Tracey Barks	Response-00111	If this proposal goes ahead the village landscape will change forever. It will just be another housing estate with no heart
1.9	South of West Hallam	Landscape	Victoria Walker	Response-00228	The landscape is beautiful in this area, views of the church and village will be blocked
1.9	South of West Hallam	Number of Houses	Adam Spencer	Response-00054	The number of houses on the proposed development is too many, many of the houses are likely to go unsold or be unaffordable, we already have new houses in the village which have not been sold since they were built
1.9	South of West Hallam	Number of Houses	Alesha Johnson	Response-00783	90 new homes is too much for the infrastructure of the village. If each home then also has two cars this will overwhelm the roads and access to the school.
1.9	South of West Hallam	Number of Houses	Alison Reynolds	Response-00243	Facilities already struggle to support current housing
1.9	South of West Hallam	Number of Houses	Alison Stills	Response-01057	90 houses could mean up to 2-3 times that of vehicles on the local roads straining the already neglected facilities.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Number of Houses	Andrea Cochrane	Response-01485	Looking at the area for the proposed development and the number of houses intended to be built on the site, I think the density will be too great for the size of plot. This will mean limited space for gardens and open areas around the houses to allow for residents' enjoyment of their property and also to allow for surface water run off. There is likely to be limited parking space per plot so adding to congestion on the site and on adjoining roads. thereby adding to the traffic issues mentioned before.
1.9	South of West Hallam	Number of Houses	Andrew and Julie Douglas	Response-00146	90 houses is beyond a joke especially with the expectation of even more. The village cannot cope with this
1.9	South of West Hallam	Number of Houses	Andrew Zielinski-Raynor	Response-00135	As a Father and Grandfather I fully understand and agree with the need to build more houses. However the proposed site is far from ideal for the reasons already provided. Would a compromise be to limit building to a single row of roadside houses along the edge of Beech Lane?
1.9	South of West Hallam	Number of Houses	Anita Lawrence	Response-00726	The proposed development would be for 90 houses - with the potential for more houses to be built encroaching on safeguarded land - the above problems would be further exacerbated and have a seriously negative impact on the Conservation Area.
1.9	South of West Hallam	Number of Houses	Anne Vanstone	Response-01216	It's puzzling that this land, once considered inappropriate even for a single house, is now being pushed forward for a major development. That shift raises serious concerns about consistency and planning integrity.
1.9	South of West Hallam	Number of Houses	Bruce Broughton	Response-01534	The proposal to build around ninety homes on this site with a further area to the west being safeguarded for future development suggests even greater impact on this area is almost inevitable in the longer term.
1.9	South of West Hallam	Number of Houses	Carolyn Wojtas	Response-01052	The village has a lot of housing developments/estate already so I believe the area cannot cope with more housing re schools, roads, health centre etc.
1.9	South of West Hallam	Number of Houses	Cathy Bostock	Response-00181	Too many houses, new houses locally standing empty for past 2 years!
1.9	South of West Hallam	Number of Houses	Charles Brooks	Response-00535	I understand the proposal is for 90 new homes with provision for more in the future. I am 100% against such a large number with the threat of even more. Councillors need to come and look at West Hallam. How can they vote in favour without inspecting the area and spending time in the location.
1.9	South of West Hallam	Number of Houses	Charlotte Lun	Response-00150	90 houses on that plot of land is a lot to fit in. There will be barely any space between the houses.
1.9	South of West Hallam	Number of Houses	Chris Collins	Response-00037	The site shouldn't be developed at all, no houses. It is a dangerous location.
1.9	South of West Hallam	Number of Houses	Craig Johnston	Response-00234	Estate is already big enough for the infrastructure
1.9	South of West Hallam	Number of Houses	Dave Stone	Response-00140	How is the local infrastructure going to be improved to match extra demand of added houses and population. If it isn't then it should not be permitted.
1.9	South of West Hallam	Number of Houses	David Harasym	Response-01055	The site is not large enough for the number of proposed houses
1.9	South of West Hallam	Number of Houses	Diane Reynolds	Response-00216	The area will not be able to cope with the amount of houses the road structure is not suitable.
1.9	South of West Hallam	Number of Houses	Emily Reeve	Response-01495	The number of houses concerns me. I seems like it is going to be a case of squeezing in as many as possible to give maximum gain.
1.9	South of West Hallam	Number of Houses	Emily Reynolds	Response-00149	I don't think any houses should be built but if you build any the number should be massively reduced to limit the impact on the current residents of West hallam. The infrastructure simply won't cope with that number of houses. Our areas of greenspaces for us and our wildlife are in massive decline and they should not be taken away. For our own benefit in terms of mental wellbeing but also for species which are already in decline.
1.9	South of West Hallam	Number of Houses	Francesca Dean	Response-00221	Far too many
1.9	South of West Hallam	Number of Houses	Glenn Richardson	Response-00316	Do we really need more housing when the new builds on the white hart site are still empty ?yet again another planning office disgraceful decision
1.9	South of West Hallam	Number of Houses	Heidi Spencer	Response-00189	Too many houses to be squeezed into an area. All likely to be overlooking each other with tiny gardens
1.9	South of West Hallam	Number of Houses	Helen Collins	Response-00034	Too many houses proposed. In addition more large expensive houses are not needed. Affordable housing for young people is needed, they are currently priced out of the area.
1.9	South of West Hallam	Number of Houses	Helen fox	Response-00064	The construction of additional houses could have negative consequences for the community. An influx of new homes may strain local resources, disrupt the village's character, and lead to overcrowding. Furthermore, increased traffic and demand for services could overwhelm existing infrastructure, diminishing the quality of life for current residents. Preserving the village's unique identity and ensuring sustainable development should be prioritized over rapid expansion.
1.9	South of West Hallam	Number of Houses	Helen Johnson	Response-00170	Over density of area..
1.9	South of West Hallam	Number of Houses	Helen Patenall	Response-00868	As previously commented upon, more houses are not required, infrastructure is already at breaking point
1.9	South of West Hallam	Number of Houses	Helen Stanley	Response-01555	The density of housing ould not be in keeping with the village. Worry that the development would be set out to encourage future expansion
1.9	South of West Hallam	Number of Houses	Homewood	Response-01074	No need for such a large development here
1.9	South of West Hallam	Number of Houses	Ian Brown	Response-00163	too many houses should be more bungalows
1.9	South of West Hallam	Number of Houses	Iris Howes	Response-01169	Past applications ? even those proposing a single property ? have been rejected on this same site. Nothing has changed that would justify approval for a large-scale development now.
1.9	South of West Hallam	Number of Houses	James William Allen	Response-01280	Too many - simply. West Hallam is characterised by an eclectic mix of housing intermingled with footpaths (jitties), play areas and green spaces. This makes a pleasant and biodiverse environment for all, where walking to the shops (for example) is easy and healthy experience enjoyed by many. Allowing a developer to simply cram in as many houses as possible without inclusion of green spaces, play areas and footpaths will not only harm the chatacter of the village, but the physical and mental health of the residents.
1.9	South of West Hallam	Number of Houses	Jane Taylor	Response-01023	None appropriate
1.9	South of West Hallam	Number of Houses	Jane thomas	Response-01056	This amount of housing will have a negative impact on the area
1.9	South of West Hallam	Number of Houses	Jo-Anne Attenborough	Response-00129	No houses should be built on this field.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Number of Houses	Julie Harbon	Response-00022	Cramming in 90+ houses will mean small plots with little garden, definitely not in keeping with the area. There are several new builds unsold at the moment. I wonder how well these would sell, particularly in the ?affordable housing ? market which they most definitely would not be.
1.9	South of West Hallam	Number of Houses	Julie Harker	Response-01073	We don't need any more housing in West Hallam
1.9	South of West Hallam	Number of Houses	Julie Stewardson	Response-00282	90 to begin with and no doubt more to come will greatly increase the population for a small village and it's amenities
1.9	South of West Hallam	Number of Houses	Julie Wright	Response-00091	The estate is big enough
1.9	South of West Hallam	Number of Houses	Katie	Response-00047	There is no need for affordable housing in west Hallam. The area is already a sought after area. With people wanting to move here. I believe affordable housing will have impact on house prices within the village. Prime example there's been multiple new build houses unable to sell on the old white heart site.
1.9	South of West Hallam	Number of Houses	Keith Atkinson	Response-01050	West Hallam is big enough already and facilities struggle to support the current population.
1.9	South of West Hallam	Number of Houses	Kerry	Response-01034	Ridiculous! See a field & try to cram in as many houses as possible without thinking about the consequences
1.9	South of West Hallam	Number of Houses	Kerry Barratt	Response-00168	No thought of affected local people
1.9	South of West Hallam	Number of Houses	Kerry Middleton	Response-00266	Extra housing would be detrimental to an already full village.
1.9	South of West Hallam	Number of Houses	Kevin Fox	Response-00682	If the housing increase has to be approved just make the estate a good extension of the present village, nice houses that attract nice people?
1.9	South of West Hallam	Number of Houses	Kirsty Oliver	Response-00558	20 max we already have a very big estate.
1.9	South of West Hallam	Number of Houses	Laura Egglestone	Response-01027	90 houses with the request for the neighbouring field to be safeguarded for future development is ridiculous having a massive effect on the village as we know it and adding to the highway concerns that we already have.
			Linda Webster	Response-00744	I would not like to see a development taking away the village's identity.
1.9	South of West Hallam	Number of Houses	Lindsey Lyons	Response-00071	Given the size of the lane, the proposal for 90 houses feels excessive. Looking at the field, these houses will not be the type expected by the council. The large build, will devalue local housing (having already consulted an independent surveyor). How do you propose the new housing will not devalue housing but add to the wealth of the area? A lot of people move to the area as it is well kept and has a moderate level of wealth. Affordable housing I can see has increased from the initial proposal of 20% to 40% how has this proposal been carefully considered? In addition, the local area already struggles to accommodate the residents, with the only two pubs already closed (one was to build houses in that now appear to be unsafe) and the other no one can afford to take it on. The area has also lost a cafe, estate agents and pizza place in the last few years. Additional housing will need careful consideration on the local amenities being offered.
1.9	South of West Hallam	Number of Houses	Louise Annison	Response-01049	Far too many new proposed houses, West Hallam has already been developed to capacity so why try and ruin a great village and put undue strain on local services. West Hallam is special because of its green surrounding areas, it will just turn the village into an over populated, under serviced, congested, concrete housing holding area, losing the village charm. Most people who live in the village do so for the surrounding fields and wildlife.
1.9	South of West Hallam	Number of Houses	Mark Patenall	Response-00851	We have enough housing in West Hallam already. Any more and the services and infrastructure will not be able to cope
1.9	South of West Hallam	Number of Houses	Mark Power	Response-00276	We don't need anymore houses
1.9	South of West Hallam	Number of Houses	Matthew Lyons	Response-00061	90 houses is far too many. They will be cheap houses which will devalue the area.
1.9	South of West Hallam	Number of Houses	Max Egglestone	Response-01278	It's worth highlighting that this land has previously been deemed unsuitable, even for single dwellings. That decision should carry weight in assessing this much larger proposal. Moreover, allowing this build sets a precedent for creeping expansion onto nearby fields, further intensifying the negative impact.
1.9	South of West Hallam	Number of Houses	Michelle Cox	Response-00138	To many houses already in the area it will spoil the actual Village area
1.9	South of West Hallam	Number of Houses	Mr and Mrs Wood	Response-01826	plus further pressure on local public services, as well as air quality and local wildlife and diversity.
1.9	South of West Hallam	Number of Houses	Mrs Judith Pittson	Response-00753	Too many
1.9	South of West Hallam	Number of Houses	Mrs Strelley	Response-00233	How many houses are going to be squeezed into a field? Will the entrance be adequate for the traffic numbers? The driveway into the field is not wide and the entrance needs to be visible to speeding traffic using Beech Lane.
1.9	South of West Hallam	Number of Houses	Nick Craddock	Response-00145	As per my comments for other west Hallam Proposal
1.9	South of West Hallam	Number of Houses	Nicola Elkington-Horridge	Response-00079	We have more than enough houses in our over populated village already. New houses are not required
1.9	South of West Hallam	Number of Houses	Nina Walters	Response-00244	Yes, the knock on effect of more houses in the village.
1.9	South of West Hallam	Number of Houses	Pamela Fox	Response-01242	If the proposal goes ahead then reduce the amount of planned dwellings and keep more of the green spaces with plenty of planting of trees and hedges to blend in with the surrounding beautiful countryside
1.9	South of West Hallam	Number of Houses	Patrick Hynes	Response-01902	This same land has previously been turned down for development - including for a single dwelling. It is hard to understand how a plan for over 90 homes could now be deemed acceptable.
1.9	South of West Hallam	Number of Houses	Paul aldre	Response-00152	Regardless the village is full
1.9	South of West Hallam	Number of Houses	Paula Piggott	Response-01041	You can't keep destroying the countryside destroying habitats, killing wildlife and it all not have a knock on effect. You are destroying the air we breathe. We need flowers, we need bees these things the world can't exist without. The wildlife will seriously be impacted. You will destroy the habitats of many animals needed for the world to survive. This is a small village. With lots of precious animals, insects, flowers, trees etc you will kill these insects and animals when you destroy their habitats thus destroying the air we breathe. There is a school and many bungalows with pensioners. It is a accident waiting to happen. Also dog walkers, horse riders and lots of wildlife. Seriously someone will get hurt or worse killed! It is a small village without the capacity for more houses. The roads are not built for so many extra residents. You will totally destroy the area and you will totally destroy the clean air killing lots of wildlife and their habitats in the process.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Number of Houses	Pete Vanstone	Response-01164	It is notable that previous applications for even a single dwelling on this land have been refused. Approving a development of more than 90 homes now appears completely contradictory and raises serious concerns about the integrity and consistency of the planning process. This development creates a precedent that could open the door to further housing on adjacent fields. The cumulative effect would have a devastating impact on traffic, infrastructure, and the overall character of the village.
1.9	South of West Hallam	Number of Houses	Phil Campbell	Response-00109	Ensure plenty of homes for single people.
1.9	South of West Hallam	Number of Houses	Rebecca Ricci	Response-00102	West Hallam is already over populated - more housing is not required in our small village
1.9	South of West Hallam	Number of Houses	Robert Reynolds	Response-00260	There are plenty of houses for sale and rent in West Hallam. There is no requirement to build more.
1.9	South of West Hallam	Number of Houses	sam richards	Response-01467	far too many houses being planned in that area in my opinion. west hallam is already a very large village and we dont need to extend it anymore. as we all know, once 90 houses are put there it will soon lead to more.
1.9	South of West Hallam	Number of Houses	Sarah Taylor	Response-00115	The number houses proposed for the site sounds like they are going to be cramped and more townhouse like not keeping in line with houses that outline the village and whether they look out to the countryside they are taking away the countryside that we pay a premium in council Tax for for living around here. Because once it's gone it will never come back.
1.9	South of West Hallam	Number of Houses	Serena Bostock	Response-00125	90 houses doesn't just mean 90 houses. That could be a family of 4 which is an additional 360 people possibly and the services etc...are already stretched.
1.9	South of West Hallam	Number of Houses	sharon hickson	Response-01430	we dont need any more houses in the village on either site as west Hallam doesn't have the facilities to cope with any more
1.9	South of West Hallam	Number of Houses	Simon Reeve	Response-01080	Too many
1.9	South of West Hallam	Number of Houses	Stacey Eady	Response-01529	Please reconsider the current proposal for this approved site CSR0044 and reconsider the other sites within West Hallam. We are all aware of the huge challenges the Local Council is facing to provide housing within the borough and we want to support this. We understand the need to offer up some land within West Hallam area but we want this to be in the right spaces - ones that do not have huge negative impacts on the village. With an extra 90 houses (+ 32 dwellings within the 'safeguarded land' they wish to develop), this will total 122 houses, which seems ludicrous with this specific site having only one access in and out of the new development, meaning an extra (potentially) 244 cars coming on and off Beech Lane. This is, in my opinion, a disaster waiting to happen. Some of the other sites within the area could better facilitate the increase in traffic but they could also offer the key for the whole village. For example, the possible development of the site West of Station Road (CSR0016) is just on the lead into the village and has a large lay-by area that could be used as a filter lane to allow traffic on and off the site onto the existing road which has the major-road dimensions required. The North of West Hallam site (CSR0048) is on High Lane, a major road that is a straight one. A possible change here could be the reduction of speed used on this road, from 40mph to 30mph, to assist traffic on and off the site, which would be a positive impact to pedestrians within the whole village. The St. Wilfrids site (CSR0004) would benefit from the installation of a mini roundabout at its junction with High Lane. Further along towards Stanley Common, this new roundabout would ease the congestion currently suffered at the High Lane-Station Road junction, (Mill House Garage junction) where a blind bend already causes problems.
1.9	South of West Hallam	Number of Houses	Teresa Webster	Response-00086	There are a large number of houses for sale or sat empty within the village - why would we want to increase the number of properties when there is already ample ?
1.9	South of West Hallam	Number of Houses	Tilly Fletcher	Response-00317	The land in which to build 90 houses on is simply not suitable. To add 90 behind a row of just 15 is completely disproportionate and the roads/landscape are not fit for that level of people/traffic.
1.9	South of West Hallam	Number of Houses	Tina Jay	Response-01801	Both these proposed housing developments would also have a very detrimental impact on the village's identity, and on the Conservation area. This is a village area, which has already expanded greatly over the years with the building of a large housing estate and any further developments of these proposed sizes and in these areas would greatly damage the existing green belt and green open space of this rural village.
1.9	South of West Hallam	Number of Houses	Tina Rice	Response-00096	Surly just single row as full in never 90 houses
1.9	South of West Hallam	Number of Houses	Tracey Barks	Response-00111	90 is too many on this small area. None would be the better option. We need to save our green spaces. There are many brown field sites to usr
1.9	South of West Hallam	Number of Houses	Val Stevens	Response-01070	Far too many for the village to cope with and obviously there is a future plan to use the extra land.
1.9	South of West Hallam	Number of Houses	Vicky Buckley	Response-00182	already overcrowded
1.9	South of West Hallam	Number of Houses	Yvonne	Response-00207	What an awful eye sore
1.9	South of West Hallam	Other	Benjamin Price	Response-00257	I think reducing the size of the landscape around West Hallam and increasing the population would have a detrimental impact on a number of people's mental health as it is used by people to clean their minds and ensure they're getting out and about to improve their mental health.
1.9	South of West Hallam	Other	Cat Hope	Response-00127	West hallam is a village, now soon will be an estate like oakwood! Traffic is horrendous, more so parking. Empty houses already on where the former white hart is. This once attractive village, will soon by awful. Ilkeston as the nearest town can't handle more traffic. Our villages are losing our green belt areas! Years ago Erewash would never budge, eg dale road stanley. We need to protect our green space! Soon will be none. Huge overcrowding happening. Criminal activity needs protection also! Our police can't cope as it is now.
1.9	South of West Hallam	Other	Charles Brooks	Response-00535	Overall, I wish to object to this development on the grounds of its close proximity to the local primary school. I do consider it a health and safety issue caused by increased traffic movement on Beech Lane which is effectively a country road and not a full width highway. I am sure Highways would have concerns about an entrance onto the proposed development on Beech Lane which would have to be opposite the school.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Other	Chris Collins	Response-00037	Water supply issues are an issue in the village with Severn Trent regularly suffering leaks, pressure issues etc. adding another significant number of houses onto their old creaking network doesn't seem like a good idea.
			Chris Hull	Response-00272	All looks fine to me
1.9	South of West Hallam	Other	Connor Gratton	Response-00232	West Hallam is a greenbelt area which is surrounded by fields. In addition to the immediate negative impact of the development, the is a significant risk that this will set a harmful precedent for future damaging developments.
1.9	South of West Hallam	Other	Dale bush	Response-01542	Roads are already hazardous around beech Lane and the playing field and school, damaging to deerland increased risk of flooding in the area. The doctors is already to busy the village does not have the infrastructure for this site to go ahead.
1.9	South of West Hallam	Other	Dave Stone	Response-00140	How is the sale and development going to benefit West Hallam. If there are no benefits (as judged by residents) then alternative brown field sites should be used for development.
1.9	South of West Hallam	Other	Dean Wright	Response-00094	How is this development even being considered? West Hallam has no suitable areas for development.
1.9	South of West Hallam	Other	Diane Reynolds	Response-00216	This will effect my mental health. My garden and view are my sanctuary and for these to be taken away is so sad. It will also have an effect on our house value, not having clear views will mean lower value
1.9	South of West Hallam	Other	Emma Lound	Response-00187	Other sites have already been identified. Brown field sites have been identified. This site has been turned down several times due to the logistical issues, the safety issues and the green belt/conservation area. Amongst other concerns.
1.9	South of West Hallam	Other	Glenn Richardson	Response-00316	So with the only pub in the village closed ,the pav bar is now the hub of the community.We back on too the cricket club & occasionally we hear music / noise late at night ,but it?s great to see the community using it as an asset ..Bonfire night sees the whole village get together ..I?m sure the people living on the proposed development won?t be happy about that ..thus creating great concern that we might loose another community hub ..In the day time the field is used by numerous people exercising themselves/dogs/children etc in a safe & friendly environment
			Graeme Taylor	Response-01131	Local shopping areas are already at capacity for parking this will create significant congestion
1.9	South of West Hallam	Other	Heidi Spencer	Response-00189	Concerns over the noise and disruption to the school whilst the build is taking place. What impact will this have on the children trying to learn and concentrate
1.9	South of West Hallam	Other	Helen Collins	Response-00034	Areas such as ours need young people and affordable housing but not at the expense of the loss of key greenbelt areas. The infrastructure of the village does not currently lend itself to such a development.
1.9	South of West Hallam	Other	Helen Johnson	Response-00170	Village already struggling with parking issues,traffic along beach lane and st Wilfred?s junction off high line and st Wilfred?s has had many collisions
1.9	South of West Hallam	Other	Helen Patenall	Response-00868	The site has been previously refused for development, so why has this changed all of a sudden?
1.9	South of West Hallam	Other	Iain Harrison	Response-01214	This proposed development represents a serious and irreversible threat to the fabric of our local community. West Hallam is a village?small, close-knit, and already stretched to its limits in terms of healthcare, education, transport, and infrastructure. The people who live here do so because of its peaceful environment, rural setting, and community spirit. Pushing through further housing developments on precious greenbelt land will not only overwhelm our already fragile services?it will erode the very character that makes this village a special place to live. The destruction of the surrounding countryside is not a minor side effect?it is the loss of vital green space, biodiversity, and the mental and physical wellbeing that comes with access to nature. Once it is gone, it is gone forever. There are better, more sustainable alternatives?brownfield sites, empty homes, and underused urban areas?which should be prioritized before sacrificing the greenbelt. I urge you to reject this proposal in the interests of environmental integrity, community wellbeing, and responsible planning for future generations.
1.9	South of West Hallam	Other	Ian Brown	Response-00163	west hallam is big enough if you need to build housing build on already built on land
1.9	South of West Hallam	Other	Jack	Response-00278	I could add stuff in every box but it won't make a difference. This clearly isn't a suitable site due to the roads and infrastructure in the local area which are already over stretched
1.9	South of West Hallam	Other	James Tilford	Response-00103	Added pressure on existing facilities
1.9	South of West Hallam	Other	Jo-Anne Attenborough	Response-00129	Whilst housing may be needed this is not the place to put it. Why are there several empty new build houses on the old White Hart development that stand empty? Surely this shows houses in West Hallam are not needed as no one has moved into these!
1.9	South of West Hallam	Other	Julie Stewardson	Response-00282	Despite its size West Hallam maintains a lovely village feel. We would not want to lose that. Especially as the village pub has already closed
1.9	South of West Hallam	Other	Katie Rice	Response-00036	There are other sites that would be more suitable to build on around the west Hallam area that would affect less houses and wouldn't contribute as much to congestion in and out of the estate
			Kerry	Response-01034	Don't steal our green space. It's our village.
1.9	South of West Hallam	Other	Kerry Barratt	Response-00168	It's our village. An awful place to build. No thought to local residents.
			Kerry Middleton	Response-00266	The infrastructure of the village would be totally compromised by this proposal.
1.9	South of West Hallam	Other	Laura	Response-01530	No comments
1.9	South of West Hallam	Other	Linda Webster	Response-00744	I would not recommend the Dales for shopping, the car park is nearly always full.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Other	Lindsey Lyons	Response-00071	I strongly oppose the housing development for the following reasons; 1. SAFETY - of children using the school, pavilion for sports and park for their mental wellbeing. 2. POLLUTION - housing creates additional pollution from building and the ongoing air quality of the area 3. PARKING - this is already dangerous in beech lane, I urge you to go and witness this during school times and sporting events, you will then see the dangers. As well as local other roads, users already park over drives, additional housing will add to this issue 4. HOUSE PRICING - there is no doubt this will devalue local housing as stated by an independent surveyor 5. AMENITIES - local amenities already struggle to accommodate the residents in the village, there?s no proposal to increase amenities for the 90 houses with an average household of potentially 3+ residents. It is absurd to think the local area can cope with this extra demand 6. LANDSCAPE AND WILDLIFE - the local wildlife and landscape will be destroyed. This is disappointing for what was previously rejected to now be considered 7, HEALTH RISKS - as mentioned in pint 2, pollution will be increased leading to further potential health issues for residents and increased risks for sensitive groups I strongly encourage you as a local council to address each points with facts and evidence to support, else the housing should be rejected.
1.9	South of West Hallam	Other	Lynsey anderson	Response-01068	No room for any more car People can't park correctly at school times School is already full I am writing to object to both proposed building sites in Wwst Hallam. Firstly the site behind High lane West, putting houses here is dangerous. Access either directly from High Lane or from Park Hall Lane would cause traffic chaos. Park Hall Lane leads to a blind bend and is mostly single track. This is an accident waiting to happen. The filed also floods into the gardens and out onto the road. Houses surely can not be built on a field that floods. I can not comprehend what the field would cost to compulsory purchase as the owner does not want to sell. My house backs onto the field that has been proposed behind High lane West and I did not buy here to be in the middle of building site or housing estate, I bought this house to live near the countryside. I was in attendance at the council meeting in Long Eaton and I found it laughable the reasons that were being given for both sites, apparently £230,000 + houses were going to solve a homeless crisis we have In Erewash. Most of the houses being £400,000 or above just does not make any sense that it would solve anything to do with the homeless issue. This argument was clearly just being used to tug at the heart strings. The only reason the council is so desperate to build houses is you are under threat of having your planning department removed and London making the decisions. This is no reason too destroy green belt, nature and take over our village. With regards to the site off Beech lane there are multiple highway issues here, wherever you would put the access roads again it is an accident waiting to happen and it would cause traffic chaos during rush hr. Both sites have been turned down previously. So what has changed now. The danger to the children at Scargill is also not acceptable, school drop off is already dangerous adding 100+ cars to the scenario is just incomprehensible. The houses would add this many cars as the transport links are minimal and unreliable. Again this would destroy green belt and the environmental issues are numerous. How would the shops cope of Beech lane, the car park already overflows and with no plans for another school, doctors, dentist then where are these new residents supposed to go. Everything adds up to the fact that no one in West Hallam wants this and we do not appreciate the council trying to rush this through and not coming forward correctly sooner with the proposal. If you were at the meeting in Long Eaton I am sure you could tell from the noise and boo?s coming from all attendee?s that no one wants any of these sites built on. I would hope that mine and all the other objections would be listened to and the council would make the right decision however I am pretty sure that the decision has already been made and no matter what any of us say or think it will not be heard. Please listen and realise you are potentially destroying a community, green belt and causing environmental issues at a time we should be doing the opposite.
1.9	South of West Hallam	Other	Mandie frith	Response-00247	Why are we destroying our country side with more houses. There are enough empty run down houses ect that can be used to a good effect. We need to protect the land more and help provide a place for wildlife
1.9	South of West Hallam	Other	Mark	Response-00164	Recover and use all the houses that are currently unoccupied. Get Derbyshire council to sell some of their outdated and very large buildings! Do not build on Green Belt and fields what about the future for us all?
1.9	South of West Hallam	Other	Mark Patenall	Response-00851	The site has previously been turned down for development so what has changed now?
1.9	South of West Hallam	Other	Mark Perrin	Response-00223	The plans should include unrestricted access to the cricket club for pedestrians
1.9	South of West Hallam	Other	Matthew Lyons	Response-00061	Local amenities are not great. 2 pubs and cafe gone over the past 4 years. The community spirt is lost and becoming soulless. More housing coming with nothing much to do in walking distance for residents.
1.9	South of West Hallam	Other	Maureen Briggs	Response-00190	Considering we pay council tax and parish council tax I think our opinions matter.
1.9	South of West Hallam	Other	Max Longdon	Response-00128	I think the council should look at the development at white heart. A village pub pulled down houses built that have sat empty ever since. There are plenty of other sites to build on away from villages. The shops in the village are barely big enough now to cope with the mount is cars/ people. The junctions to get out the village can barely cope. The junctions onto high lane are far to dangerous to cope with anymore cars
1.9	South of West Hallam	Other	M Mcfarlane	Response-00147	This land is used as a lovely area for walking in across with dogs or to the cricket club? please stop robbing us of our lovely green areas
1.9	South of West Hallam	Other	Mrs Bird	Response-00045	These proposed houses would decrease the value of properties in the area. They would be entirely our of context for the local areas which is an old village combined with older housing.
1.9	South of West Hallam	Other	Mrs Strelley	Response-00233	The whole rural climate would be compromised with more dwellings being built. It would change the logistics and feel of the whole community.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Other	Nicola Elkington-Horridge	Response-00079	I've lived in the village for 50 yrs now and it has got worse and worse as more and more houses have been built. Enough is enough. The council should spend time on updating the parks for the hundreds of children that live here, the road markings, potholes and street signs, a recycling area and allotments, these are the things that will benefit the villages. If the council needs to make money then it should develop things that the village needs and that definitely isn't more houses. This goes for all areas of development in the village.
1.9	South of West Hallam	Other	Paul aldred	Response-00152	Villages like chellaston has proved this doesn't work. I grew up in chellaston when it was a village. People now won't walk alone home from the pub at night because of threat of attack. When will councils learn. And if councillors built on their back yard before everyone else's then no one could complain
1.9	South of West Hallam	Other	Paula Piggott	Response-01041	You can't keep destroying the countryside destroying habitats, killing wildlife and it all not have a knock on effect. You are destroying the air we breathe. We need flowers, we need bees these things the world can't exist without. The wildlife will seriously be impacted. You will destroy the habitats of many animals needed for the world to survive. This is a small village. With lots of precious animals, insects, flowers, trees etc you will kill these insects and animals when you destroy their habitats thus destroying the air we breathe. There is a school and many bungalows with pensioners. It is an accident waiting to happen. Also dog walkers, horse riders and lots of wildlife. Seriously someone will get hurt or worse killed! It is a small village without the capacity for more houses. The roads are not built for so many extra residents. You will totally destroy the area and you will totally destroy the clean air killing lots of wildlife and their habitats in the process. Keep building over land will cause flooding and lead to drainage problems as natural soakaway will be destroyed.
1.9	South of West Hallam	Other	Richard Fearn	Response-00180	Beach lane would not be a suitable access point. Cat and fiddle lane would be slightly further but much more suitable to handle the extra traffic.
1.9	South of West Hallam	Other	Robert Reynolds	Response-00260	There is only one shop serving the village, with only limited customer parking, that gets extremely congested, expanding onto the site south of West Hallam will only exacerbate this issue.
1.9	South of West Hallam	Other	sam richards	Response-01467	being so close to the proposed site i am clearly against the plans for my own reasons too. we have lived at our house for 3 years and paid a premium to have such lovely views across from us. it is such a shame that this could be replaced with a building site and houses. west hallam is already a large village but lacks facilities and doesn't even have a pub! I feel that bringing such a large amount of new residents will overcrowd the village and it will soon lose its village feel which is what residents live here for. the dates shopping centre car park is very often overfilled causing congestion. white rose cricket club is a very popular location which most people access via this land. it is also a very popular walk for dog owners with many walkers seen there every day. it would be a shame to lose this access to cock orchard.
1.9	South of West Hallam	Other	Sarah James	Response-01085	Surely there are alternative buildings that can be recycled rather than building new unaffordable housing for young local people. West Hallam is a sort of village, premium house prices. This site won't meet the needs of the current housing crisis.
1.9	South of West Hallam	Other	Sarah Taylor	Response-01819	West Hallam is a Conservation area that needs to be maintained.
1.9	South of West Hallam	Other	Simon Reeve	Response-01080	Just stop it, look at the many brownfield sites in Ilkeston, Derby, Stapleford, Long Eaton, Nottingham and regeneration of those sites will deliver the homes without irresponsible damage of natural environment

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Other	Stacey Eady	Response-01529	<p>I have written my full objection and emailed this in however I didn't know if I was still required to complete this for I have tried to divide my letter and responses to fit in each of the sections you have listed. However I want to attach the full response below so that this can be read and understood. Core Strategy Review- Public Consultation Please see below, my comments and objections to the proposed development of the SOUTH of WEST HALLAM BEECH LANE site (CSR0044) and why I believe this should not be allowed to progress. I also wish to put forward suggestions for other sites to be re-considered (CSR0016/CSR0048 and CSR0004C) that are also within the local West Hallam area and that scored similarly on your Core strategy report. I believe these to be safer/better situated and will service the needs of the local area as well as the core strategy and future planning targets. They could also help to rectify some of the local road infrastructure issues considerably, and also preserve our beautiful, quaint, village centre. Beech Lane As you will be aware this specific piece of land has been identified for development on several occasions within the last five years and was previously included in the work that was conducted for the core strategy before it was amended. At this point, it was removed from the plan. You will no doubt be aware that this has been the subject of objections on more than one occasion, not for just one reason but for several very valid ones which I would like to reiterate. So I, and many others, are asking why this site is being considered once again, when the situation concerning the land, infrastructure and position has not changed? I have been advised that this most recent inclusion of the Beech Lane site is not due to the recent changes in the Green Belt policy that was implemented in late 2024, as you have confirmed to me that you are not using this policy. I'm lead to believe that you are using the previous version of the policy that was in place at the beginning of the revised core strategy, and this was much earlier(2022). This merely creates more confusion about the desire to include the land in question. As the alternative site (CSR0004) on St Wilfrids Road in West Hallam had been rejected during this policy period, as a result of satisfying the Green Belt criteria, you will surely understand, having visited both sites, that this St Wilfrids site offers far less in terms of the Green Belt criteria than that of Beech Lane. This latter site has several mature trees that promenade the front of Beech Lane, not to mention the thousand of birds/wildlife and plants it houses and it's vital contribution to the mainainance of the conservation area that is within very close proximity. With the Safeguarded Land that is being discussed still been used for agricultural purposes, I feel that there is some misjudgment as to how these different sites scored and maybe this was influenced by the sudden need to deliver outcomes quickly rather than actually scoring this appropriately. As such, I wish to challenge the findings as the report doesn't clearly outline the process. My concerns are also that whilst the Beech Lane piece of land is a 'developers dream' and the land owner is eager to sell, these decisions should not be influenced merely by this aspect. The land is situated adjacent to the centre of our historic village, which dates back to as early as the Domesday Book, and which is currently part of the vital Conservat</p>
1.9	South of West Hallam	Other	Stacey Eady	Response-01529	<p>ion Area. As you will know, this area was initially designated and implemented to protect and preserve the local area. The proposed new development will be very close to this crucial area and will, in everyone's opinion, add very little visual benefit. Indeed it will, in all probability, have a negative impact on the Conservation Area, while being in no way in keeping with the current historical aesthetics of a traditional village centre that was built many years ago. To allow access to this historical village centre to become clogged with the excess traffic that will be generated by the current proposal is, in the opinion of most residents, intolerable. Upon reviewing the paperwork that was shared by the Planning Department, (including the scoring of each site), I'm finding it difficult to understand how some of the scores were arrived at, in terms of the Beech Lane site opposed to the other local West Hallam sites (North of West Hallam site, CSR0048, St Wilfrids Road site, CSR0004C and Land West of Station Road, CSR0016). I'm tempted to ask whether this could be the direct result of there being no actual site visits undertaken to 'obtain' this information, a point which Carol Hart, our local councillor, brought to your attention at the official planning meeting. I have listed for you below some areas that I feel should be checked/challenged as, once again, I fail to see how these sites have been scored so differently. 05 ? Health and Wellbeing: the Beech Lane site scored 2, which, in my opinion, was a major positive. The site scored significantly higher than the other two West Hallam sites while matching that of St.Wilfrids. However from a personal viewpoint, I cannot see any difference in any of the sites. Some reflections on the Health and Well-Being aspects of the proposal: - Will it reduce health inequalities? No, but this is no different for all of the sites in West Hallam. - Will it improve access to health services? No - Health Service provision in the village is currently inadequate and residents are being directed to local safety-net services such as Littlewick Medical Centre in Ilkeston and the nearest walk-in centres. Older residents find access to these alternatives quite difficult, especially when not feeling well. - Will it increase the opportunities for recreational physical activity? No, this is the same for all of the sites - Will it bring new open spaces or improve the quality of existing open spaces? No ? this is the same for all sites. However, the Beech Lane site will tarnish the visual aspect of our historical village centre and negatively impact the nearby Conservation Area. - Will it improve access to local food-growing opportunities? No - this is the same for all sites. However, I note that the 'Safeguarded Land' on Beech Lane seems to be the only land that is currently used for an agriculture purpose, and this land is worked annually to provide feed for local animals. 014 ? Landscape and Building Environment: Beech Lane scored -2, which appears to be a major negative, although St. Wilfrids scoring -3, suggesting a worse scenario. Again, I cannot see how this is possible. - Does it respect or preserve identified landscape character? The proposed Beech Lane site is just outside the centre of the village, right next to the Conservation Area. This raises the question of why the St Wilfrids site can be given a worse score than Beech Lane. The proposals for the Beech Lane site will also include the felling of sever</p>

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Other	Stacey Lady	Response-01529	<p>al beautiful trees that currently add beauty to the area and a request for a Tree Preservation order has already been made for the significant large oak tree that is opposite to Hallam Way. This iconic tree adds significant beauty to the centre of the village. - Does it have a positive impact on visual amenity? The centre of the village is quaint and of a traditional appearance, this being one of the reasons it lies within a Conservation Area. These proposed new dwellings will hardly enhance this 'visual amenity' and in addition, will cause extra congestion in the immediate village area, thus reducing the 'visual amenity'. - Will it maintain or enhance the local distinctiveness of townscape and built environment? ? the proposed Beech Lane site will have more of a negative impact than the St.Wilfrids site, as it will be creating traffic congestion at both ends of the only through-route that serves a village that has already far outgrown its own infrastructure. - Will it conserve or enhance the interrelationship between landscape and the built environment? ? this would be a 'negative' for most of the sites, however CSR0048 and CSR0016 would be impacted less. 015- Heritage ? again, the St Wilfrids' site scored the same as the Beech Lane site with a -3 score, which is I find very puzzling. I would be grateful for some explanation as to how scores in this particular aspect have been agreed upon. - Will it conserve and enhance the historic environment, designated and none-designated heritage assets and their settings? Whilst none of the other sites, especially St. Wilfrids, are directly touching the village centre or near the Conservation Area, the Beech Lane site will cause more disturbance for access to the school and the village (shops/doctors/pharmacy). At this stage, we should also consider the ancient Scargill Foundation which has helped fund the village school and the education of local children for many centuries. Queues of clogged-up traffic outside the school gates whilst those same children are coming and going to and from their education is hardly showing any respect for such a fine, historic local institution. - Will it respect, maintain and strengthen the local character and distinctiveness? Whilst this will be a negative for all of the sites, once again the Beech Lane site butts up to the historical part of our village, unlike the other sites that are situated on the outskirts of the estate, where natural expansion has already happened. - Will it provide better opportunities for people to access and understand local heritage and participate in cultural activities? I don't believe any of the other sites are effected by this, other than Beech Lane, as constituents who reside in the immediate village (ie. within the Conservation Area) contribute to payments - via their Community Tax - towards the local church. Among several annual traditional village activities enjoyed by the West Hallam residents, the age-old Well-Dressing celebrations are a feature of the yearly cycle. Roads are closed-off on the 'big day' and the Hallam Way junction - already struggling to cope at such times - is the very spot where access to the proposed Beech Lane site will be created. - Will it protect or improve access and enjoyment of the historic environment? The site where there is the largest negative impact is again Beech Lane, due to its closeness to the already-discussed congested village centre. - Will it conserve and enhance the archaeological envirom</p>
1.9	South of West Hallam	Other	Stacey Lady	Response-01529	<p>ent? Once again, this will have a significantly high impact on the Beech Lane site due to its proximity to the Conservation Area and the historical aspects of the village centre. Finally, the remaining issues surrounding traffic on Beech Lane. If you have ever visited Beech Lane, you will know that the road is currently already very busy during peak times, such as school drop off and pick up. Cars regularly park on both sides of the road, which causes major disruptions to ongoing traffic driving through the village. It is one of only two routes in and out of a village that has already expanded way beyond its initial infrastructure and is the major road that haulage uses to get deliveries through the village to the main centre, The Dales. Beech Lane also has a large recreational ground and children's playground adjacent to the school, which is used regularly during evenings and weekends to facilitate both football matches and cricket games meaning it's busy all day, most days. The road dimensions on Beech Lane are much narrower than those of a normal major road. It is not wide enough to be marked with central white lines (I'm guessing that's why it was originally termed a 'lane') which means it's even tighter when cars park on one or both sides and, at times, this has caused delays with emergency services/buses, simply being unable to get through. I also note that as a bus route, the road should be at least 6.2 m wide, and this is not the case. Living on Beech Lane, I regularly see people driving up onto the pavement to get up the road, which simply is unacceptable, considering the closeness to the school. The road has a 20mph speed limit during school times. However this is very rarely observed, and in my time on Beech Lane, I have never seen speeds being monitored. With the school blocking off a huge portion of the Lane for its own Keep Clear Zone, which is required to be kept clear at all times to comply with rule 243 of the Highway Code, I'm unsure how any safe or practical solution could be arrived at to allow access to the proposed new site from Beech Lane. The road to the school is currently also required to be left clear (hence the single white line on the opposite side), so quite where the access to and from the proposed site is going to be situated is a mystery. My concern is that this site has been identified on several previous occasions, as suitable land to build on, but the process has always been stopped, mainly due to the concerns regarding traffic. These issues have not changed and indeed have significantly worsened due to the natural increase in population, so I'm unsure why or how this proposal has been approved this time around. With an extra 90 houses (+ 32 dwellings within the 'safeguarded land' they wish to develop), this will total 122 houses, which seems ludicrous with this specific site having only one access in and out of the new development, meaning an extra (potentially) 244 cars coming on and off Beech Lane. This is, in my opinion, a disaster waiting to happen. I have also been made aware that the Erewash Planning team have not yet consulted with DCC highways up until this point, which worries me further! Obviously, you must undoubtedly understand that feelings are 'running high' within the West Hallam community and the need for transparency at every stage of the procedure is essential. If not, rumour-mongering and suspicion is bound to occur and there is a fear that the use of consultancy companies may, at w</p>

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Other	Stacey Eady	Response-01529	orst, cover up any indiscretions and, at best, cloud the issue. Are there any assurances in place to maintain the necessary complete transparency? Can I ask if DCC Highways will have the 'final say' in the Traffic Safety and suitability of this site or will this be left in the hands of a consultancy firm/Erewash Council planners? Some of the other sites within the area could better facilitate the increase in traffic but they could also offer the key for the whole village. For example, the possible development of the site West of Station Road (CSR0016) is just on the lead into the village and has a large lay-by area that could be used as a filter lane to allow traffic on and off the site onto the existing road which has the major-road dimensions required. The North of West Hallam site (CSR0048) is on High Lane, a major road that is a straight one. A possible change here could be the reduction of speed used on this road, from 40mph to 30mph, to assist traffic on and off the site, which would be a positive impact to pedestrians within the whole village. The St. Wilfrids site (CSR0004) would benefit from the installation of a mini roundabout at its junction with High Lane. Further along towards Stanley Common, this new roundabout would ease the congestion currently suffered at the High Lane-Station Road junction, (Mill House Garage junction) where a blind bend already causes problems. To conclude Please reconsider the current proposal for this approved site CSR0044 and reconsider the other sites within West Hallam. We are all aware of the huge challenges the Local Council is facing to provide housing within the borough and we want to support this. We understand the need to offer up some land within West Hallam area but we want this to be in the right spaces - ones that do not have huge negative impacts on the village. Stacey Eady 38 Beech Lane, West Hallam, De7 6GU. 07909332877.
1.9	South of West Hallam	Road Safety	Adam Spencer	Response-00054	Adding additional traffic from 90 houses and its vistors is going to add more cars on an already conjested road directly outside of the school and childrens play area
1.9	South of West Hallam	Road Safety	Alesha Johnson	Response-00783	I fear for children and the elderly in our village. The roads are not adequate for a new housing estate opposite the school.
1.9	South of West Hallam	Road Safety	Alex	Response-01026	This stretch of Beech Lane is already super busy, especially with Scargill being here and being a main route to the shops and getting out of the village.
1.9	South of West Hallam	Road Safety	Alice Johnson	Response-00093	traffic is already awful on this road during school pick up and drop off hours also at weekends when football tournaments are on
1.9	South of West Hallam	Road Safety	Alison Fletcher	Response-00198	Risks particularly around school start and finish times with increased vehicular and pedestrian activity., access to the proposed site and road crossing from the school into the development.
1.9	South of West Hallam	Road Safety	Alison Reynolds	Response-00243	Cars parked currently on Beech Lane and end of Pavilion Court already an issue without adding burden of additional housing and junction.
1.9	South of West Hallam	Road Safety	Alison Stills	Response-01057	This area already causes safety issues for local residents with the current usage especially with the school traffic.
1.9	South of West Hallam	Road Safety	Amy	Response-01031	Beech lane already heavily congested at school times and football matches at weekends.
1.9	South of West Hallam	Road Safety	Amy Cartwright	Response-01017	Due to the narrowness of the current road there is already congestion at weekends and on weekdays. This additional traffic will cause safety issues for all road users
1.9	South of West Hallam	Road Safety	Andrea Cochrane	Response-01485	Siting another junction so close to the school will not improve safety for parents/carers and pupils accessing Scargill School. Or for other road users needing to leave the estate. Visibility at school drop off and pick up times is already difficult due to parked cars and adding further vehicles plus another road junction will make the situation more hazardous. I have already seen many near misses over recent years .
1.9	South of West Hallam	Road Safety	Andrea Reed	Response-00123	There are multiple cars parked on beech lane as it is at school pick up and drop off and when they play football it is extremely dangerous already
1.9	South of West Hallam	Road Safety	Andrew and Julie Douglas	Response-00146	The site is opposite the school entrance of which is already very congested. This will be very dangerous as this is only a Lane
1.9	South of West Hallam	Road Safety	Andrew Zielinski-Raynor	Response-00135	It is opposite a large school with very young children. Before and after school already seems fraught with danger adding more traffic into the mix will make an already dangerous situation much worse for both pedestrians and motorists. I have personally witnessed a number of car accidents on this stretch of road.
1.9	South of West Hallam	Road Safety	Andy Flindall	Response-01013	Traffic is already busy near the school adding more traffic that this site will do is an accident waiting to happen and smacks of greed over common sense
1.9	South of West Hallam	Road Safety	Angela Reid	Response-00134	No school crossing on Beech Lane

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Road Safety	Anita Lawrence	Response-00726	Beech Lane is narrow and unsuitable for both access of groundworks and building vehicles and for the additional residential traffic that would ensue should housing be built on this site. Congestion causes some very frustrated delivery delivers to go over pavements and put pedestrians at risk. There are three ways to exit the village: a. Beech Lane meets Station Road on a blind bend, it is a very awkward junction with poor road surface. a/1. via Station Road towards Stanley Village (opposite new build houses that front the road of which some are unsold! Station Road leads to a T-junction over a humped backed bridge which has some visibility problems, turning left would take you towards the Cat and Fiddle Lane which is in very poor repair in places, turning right would take you through Stanley Village which is narrow, winding, is often reduced to single track due to parking and which struggles with drivers speeding. This is already a hazard to those crossing the road to access shop, post office, school, church, other. b. Via Station Road towards High Lane West/A609, this road gets very busy, vehicles are usually parked here creating a slalom course which some drivers negotiate in an extremely inconsiderate manner. Where Station Road meets High Lane West at a cross roads with Park Hall Lane is another blind bend from the direction of Stanley Common, even off-peak it is a difficult junction. b/1 The A609 is frequently used by emergency vehicles going at speed, increased traffic at this junction puts the emergency vehicles, other road users and pedestrians at risk and increases the likelihood of emergency vehicles being delayed in attending an incident. c. To exit the village by going through the West Hallam via The Village and St Wilfrid's Road: c/1 The Village is very narrow with parking on one or both sides reducing the road to single track slalom. c/2 at the junction with St Wilfrid's Road there is an extremely tight bend with poor visibility. c/3 at the top of St Wilfrid's road is a cross-roads with A609 and Mapperley Lane. There is very poor visibility from the Ilkeston direction due to the road dipping
1.9	South of West Hallam	Road Safety	Ann Ainsworth	Response-01096	Proximity rto school on an already congested road
1.9	South of West Hallam	Road Safety	Anna Richardson	Response-00162	The situation outside the primary school directly opposite this site is already very dangerous at school drop off and pick up time. Due to the volume of traffic there have been multiple accidents with cars damaged and two children run over in the last few years. We need to reduce the volume of traffic in this area.
1.9	South of West Hallam	Road Safety	Anne Vanstone	Response-01216	Beech Lane is already dangerous during school drop-off and pick-up times as well as when any other events such as football etc are using the playing fields or Powtrell Pavilion. With additional cars from a large development, the risk to pedestrians ? especially school children ? will only increase. There is no mention of substantial upgrades to the road network to offset these risks. Without that, this plan feels reckless.
1.9	South of West Hallam	Road Safety	Ann Toplis	Response-00271	Again building here would make the roads unsafe due to more traffic around the school area
1.9	South of West Hallam	Road Safety	Benjamin Price	Response-00257	There is a school just around the corner and a significant number of school children walk around that are with no suitable crossing facilities. Increasing houses would increase vehicles on the road causes a higher danger to young ones
1.9	South of West Hallam	Road Safety	Ben Rodney	Response-00122	Right opposite a primary school with more congestion,
1.9	South of West Hallam	Road Safety	Bruce Broughton	Response-01534	The site is directly opposite Scargill Primary School, where there are over 300 pupils, and as stated above Beech Lane is already regularly congested as a result of parking on the road. The provision of a new section of pavement along the southern side of Beech Lane where it adjoins the proposed development site will do nothing to address congestion and road safety concerns on Beech Lane as a whole, where it is not unusual to see vehicles mounting the pavement to avoid congestion.
1.9	South of West Hallam	Road Safety	Carl fox	Response-00067	Additional traffic on what is a very quiet village
1.9	South of West Hallam	Road Safety	Carol Hart	Response-01829	The proposed site is directly opposite the Scargill Primary School, which has over 300 pupils, the access to the development would be straight on to Beech Lane, as the name suggests it is not a major road and not even the width of a normal road, the access would also be very close to the major junction for leaving the estate, namely Hallam Way. The very major concerns are health and safety, Beech Lane is gridlocked several times a day, I am not sure whether the very short video can be included but it just proves a point, yes it is usually at school times but as there is a thriving junior football club that uses the Beech Lane recreation ground this also happens over the weekends. We are talking of 90 houses in the plan but with a safeguarded section adjacent, you might only be judging on the 90 but it is obvious once access was obtained then a further application would follow. It could mean up to 150 or more houses, even with one car per household that would be catastrophic but as we all know most houses now seem to have more than one car.
1.9	South of West Hallam	Road Safety	Carolyn Wojtas	Response-01052	It is difficult to drive down Beech Lane with parked cars constantly anyway. Lots of traffic for school drop off and pick up and cars for activities on the recreation ground. Dangerous near school and where children play.
1.9	South of West Hallam	Road Safety	Cat Hope	Response-00127	West hallam is a village, now soon will be an estate like oakwood! Traffic is horrendous, more so parking. Empty houses already on where the former white hart is. This once attractive village, will soon by awful. Ilkeston as the nearest town can't handle more traffic. Our villages are losing our green belt areas! Years ago Erewash would never budge, eg dale road stanley. We need to protect our green space! Soon will be none. Huge overcrowding happening. Criminal activity needs protection also! Our police can't cope as it is now.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Road Safety	Charles Brooks	Response-00535	This is already a serious issue on Beech Lane and especially at school opening and closing times. Its very difficult for through traffic to navigate the road safely. I have witnessed instances of vehicles mounting the pavements to get past. In the past I have been a school governor and Chair for about 10 years. The safety of the children near Beech Lane has always been an issue and has not improved over the years. In fact, the safety is even more acute since there is no longer a road crossing person or any measures to slow traffic. I always lived in dread of an accident involving a child and I still do. The village is already bulging with vehicles. Every household has more than one car. There are often near misses on the roads in West Hallam particularly people coming out from behind parked cars. Every exit out of West Hallam is difficult to navigate. There are no traffic lights, no mini roundabouts and no traffic calming apart from speed indicator devices on the High Lane Extra vehicles will only exacerbate the problems. I belong to Community Speed Watch and am very aware of the volume of traffic coming into and out of the village.,
1.9	South of West Hallam	Road Safety	Charlotte Lun	Response-00150	The planned site is directly opposite a large primary school. The safety of the school children needs to be addressed if additional housing is to go ahead. The area is already an accident waiting to happen.
1.9	South of West Hallam	Road Safety	Chloe Parkin	Response-00154	Not a good idea building more houses especially directly opposite a school. Will increase risks of accidents involving minors from the school.
1.9	South of West Hallam	Road Safety	Chris Collins	Response-00037	Similar to my comments regarding traffic congestion, further traffic in the immediate area of Scargill School is a huge safety concern. During school pick-up and drop off there are huge numbers of cars arriving into the village / around the school for children. To introduce many more households trying to exit a new mini-estate opposite the main school entrance at ?rush hour? would bring chaos to Beech Lane and further roads around the village and introduce risk and safety concerns.
1.9	South of West Hallam	Road Safety	Chris Reid	Response-00136	Already too many cars in area and as this is close to the school
			Christine	Response-01019	Due to the amount of traffic at school opening and closing times road safety will be a massive problem
1.9	South of West Hallam	Road Safety	Christine Barnes	Response-00640	The lane is narrow and there are many cars parked on the road/ pavement. Ninety plus houses will inevitably mean more children will have to cross the lane without a clear view of oncoming traffic. This will be an accident waiting to happen. I trust sufficient people have viewed the current difficulties and have sufficient foresight to do an appropriate risk assessment.
1.9	South of West Hallam	Road Safety	Christine Barnes	Response-01827	This site is directly opposite Scargill Primary School. Beech Lane is a narrow lane which is already heavily used by traffic entering and leaving the village. In addition parked vehicles present further hazards, particularly at the start and finish of the school day and during football matches at the weekends. These factors present a real problem for children crossing the lane, unseen, between parked vehicles, to access school and their home.
1.9	South of West Hallam	Road Safety	Christopher Chambers	Response-00172	90 dwellings is likely to bring 130+ vehicles. Beech Lane is not suitable for the current levels of traffic in peak times, and the proposal for more than 100 extra vehicles into the same area, without substantial and damaging consequences is unacceptable. The recreation ground is very popular and its use brings additional vehicles to the area that saturates existing capacity and encourages residents of the adjacent West Hallam estate to use alternative routes to High Lane West, adding all of these extra vehicles is only likely to harm the road safety in the village. The proposed development is scheduled to have an entry/exit road on Beech Lane and this can only be within 250m of the entrance to Scargill school, which is potentially catastrophic for the safety of children using the school.
1.9	South of West Hallam	Road Safety	Claire dean	Response-00069	The parking on beech lane poses a huge risk, to increase occupancy in the area and expect them to use beech lane as their main route in and out of the proposed estate would be utter chaos. Not to mention the primary school opposite.
1.9	South of West Hallam	Road Safety	Craig Johnston	Response-00234	Beech lane is already congested and unsafe
1.9	South of West Hallam	Road Safety	Daniel Clark	Response-01094	Busy with cars parked everywhere now. Adding potential traffic to a area that has high parking and traffic issues now. Is ridiculous and this will have more people coming in to the village to use the shops and schools.
1.9	South of West Hallam	Road Safety	Daniel hickson	Response-00177	Children getting dropped off and collected at school
1.9	South of West Hallam	Road Safety	David Fretwell	Response-00133	Additional traffic at beech lane junction and station road is far from ideal. What is already an unsafe junction will not be helped by further traffic
1.9	South of West Hallam	Road Safety	David Harasym	Response-01055	The location next to the school is a traffic concern
1.9	South of West Hallam	Road Safety	David Mosley	Response-01062	Again, the road is already quite unsafe with parents parking for school drop off and pick up and also at the weekends with people parking all along Beech Lane for football on the field as they have nowhere else to park.
1.9	South of West Hallam	Road Safety	David Richards	Response-01465	Children use this part of Beech Lane extensively due to the location of the school and using the park, cricket club and surrounding woodland. Introducing more traffic is not suitable.
			Dean Wright	Response-00094	Increased road traffic at an already busy junction
1.9	South of West Hallam	Road Safety	Diane Reynolds	Response-00216	The traffic is already bad getting out of the village. We live on beech lane and on school times and when football is on it is particularly bad. With cars mounting the pavement at speed to get past each other. I genuinely fear for the safety of my family when walking or reversing of our drive. With at least most people having 1 car per household the roads will not be able to cope with more houses. There has already been a near miss with kids up the road with a car nearly hitting them coming out of their house on the pavement
1.9	South of West Hallam	Road Safety	Ebony Eaves	Response-01497	.
1.9	South of West Hallam	Road Safety	Eileen Bailey	Response-01053	Parking is terrible

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Road Safety	Emily Reeve	Response-01495	Often during the times that vehicles are parked along the road and traffic comes from both directions which, it causes people to mount the curbs and drive along the footpath for a way. I have experienced this on many occasions when walking my children to school. People also speed down the road to be past the parked vehicles quickly making crossing very hard. An increase in housing in the area will only add to this issue. If the access to the site is put opposite the school this can only cause more danger to the children and adults of the school.
1.9	South of West Hallam	Road Safety	Emily Reynolds	Response-00149	Again, linking to traffic congestion. More congestion = higher chance of accidents. The proposed area of development is right outside a primary school. You will absolutely end up with kids at the very least injured if the proposed homes are built. Most households have 2 cars now so you would be adding at the least 180 cars to that one small area which links to increased congestion as well.
1.9	South of West Hallam	Road Safety	Emma Lound	Response-00187	The road is narrow and heavily congested already. More vehicles will increase the risk of KSI collisions. 300 children attend the primary school, the road junction is one of only two routes into the large residential estate and it's a main road to the shopping centre. This development will put residents and children in danger. Should there be any KSI collisions on this route there will be a record for the coroner and the relevant authorities of the concerns raised.
1.9	South of West Hallam	Road Safety	Emma Stanley-Smith	Response-01564	Serious concerns around traffic congestion and children's safety. Junction and surrounding roads already extremely busy during key times. This development could endanger a child's life.
1.9	South of West Hallam	Road Safety	Francesca Dean	Response-00221	No safe crossings or traffic control
1.9	South of West Hallam	Road Safety	Gary Hamson	Response-00052	I fear children's safety is at risk and the likelihood of serious injury or worse is a distinct possibility of happening
1.9	South of West Hallam	Road Safety	Gillian Bosworth	Response-00921	This proposed development is opposite the school off an already very busy road.
1.9	South of West Hallam	Road Safety	Gilly Turrini	Response-00151	Large school right opposite the proposed build site with lots of traffic already will put children, parents and staff at higher risk of RTC
1.9	South of West Hallam	Road Safety	Glenn Richardson	Response-00316	It's not rocket science to realise that building opposite a large school & a major road junction into the village isn't going to help with the already ludicrous traffic problems on an already saturated beech lane. Perhaps the council should come & take a look at for them self. Increasing the volume of traffic using the road is again increasing the dangers to the local community
1.9	South of West Hallam	Road Safety	Graeme Taylor	Response-01131	Beech lane is not wide enough to accommodate this development this will create road safety issues for the school and village center
1.9	South of West Hallam	Road Safety	Guiliano Ricci	Response-01010	The Hallam way junction is not safe and building a housing estate will impact on this
1.9	South of West Hallam	Road Safety	Heidi Spencer	Response-00189	Beach Lane is already a massive safety concern during school drop off, pick up and football training/fixtures. Cars park everywhere making it challenging to get through. Adding these houses into so close to the school will make things a lot worse and dangerous
1.9	South of West Hallam	Road Safety	Helen Blackwell	Response-00456	Cars mount the pavement on beach lane, additional traffic to an already congested road opposite a school will make beach lane more dangerous.
1.9	South of West Hallam	Road Safety	Helen Collins	Response-00034	Beech Lane is already busy road through the village. The location of the proposed site so close to the school will create additional traffic and congestion which will be dangerous. Exiting my home (Hallam Way, nr Beech Lane) that is close the school is already very challenging at peak times, due to the road layout, the number of cars parked (often inappropriately) and the increased pedestrian traffic. The increase in traffic onto Beech Lane in particular at peak times will be an increased danger to the many families exiting cars and walking to and from school. There are no designated crossing points or school crossing patrols to support the safety of the young children attending school.
1.9	South of West Hallam	Road Safety	Helen fox	Response-00064	In a small village where plans are underway to construct additional housing, concerns regarding road safety have emerged. The increase in residential development could lead to heightened traffic, posing risks to pedestrians and cyclists. This potential surge in vehicles may compromise the tranquility and safety of the village, ultimately detracting from its charm and livability. Therefore, careful consideration of road safety is essential to preserve the village's character and protect its residents.
1.9	South of West Hallam	Road Safety	Helen Johnson	Response-00170	Not enough parking. The village has to manage schools commuters and Tesco deliveries. Many homes on beech lane do not have drives so this also adds to the congestion
1.9	South of West Hallam	Road Safety	Helen Patenall	Response-00868	please see previous comment
1.9	South of West Hallam	Road Safety	Helen Stanley	Response-01555	The narrow road are beech Lane can not cope with more traffic Creating a junction opposite the school is an accident waiting to happen. At school drop off and pick up times and every weekend with football matches beech lane is full of red cars resulting in difficult passing situation s. The new housing could add another 240 cars which the village just can't cope with
1.9	South of West Hallam	Road Safety	Helen Taylor-Tipton	Response-00246	Lights needed at Mapperley crossroads
1.9	South of West Hallam	Road Safety	Helen Vickedes	Response-00062	The proposed site would have entrances / exits onto a very tight bend increasing the risk of accidents as well as entering the village across from the school already a very busy junction on Beech Lane / Hallam Way at school times
1.9	South of West Hallam	Road Safety	Hollie Briggs	Response-00040	Really silly location for new houses due to the 300+ children that walk to and from school, the increased traffic will become very dangerous for the children.
1.9	South of West Hallam	Road Safety	Holly Mohamed	Response-00076	Safety Concerns: More vehicles on the road can increase the risk of accidents, particularly in residential areas where children and pedestrians are present. The safety of residents, especially school children, could be compromised. There have already been concerns about speeding vehicles in the area, and additional traffic could exacerbate this issue. Inadequate Road Design: The current road design may not support the increased traffic volume, potentially leading to hazardous conditions. Narrow roads and lack of proper pedestrian crossings could pose significant risks to both drivers and pedestrians.
1.9	South of West Hallam	Road Safety	Iain Harrison	Response-01214	Road safety is another serious concern. The top of Hallam Way and Beech Lane?adjacent to the proposed housing development?has long been a dangerous crossing point. For years, a lollipop lady was stationed there to help children cross safely on their way to and from school, until that essential service was cut due to government funding reductions. Despite this, the road remains hazardous, particularly during peak times. Increasing the volume of traffic, along with the number of pedestrians and parked vehicles, will only heighten the risk of accidents. Once again, the idea of intensifying pressure on an already unsafe area is nothing short of reckless.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Road Safety	Iris Howes	Response-01169	cars often have to mount the kerb to pass, putting pedestrians ? especially children ? at risk. I've lived here a long time and witnessed many accidents over the years. Its also sad to see children struggling to cross a road in what should be a safe area.
			Jacqueline Shakh	Response-00095	Too near the school
1.9	South of West Hallam	Road Safety	Jade Harland-Toomer	Response-00217	Dangerous junction opposite school
1.9	South of West Hallam	Road Safety	James Gadsby	Response-01058	The junction is already extremely busy and dangerous at school pick up times with out adding even more cars onto a busy stretch of road.
1.9	South of West Hallam	Road Safety	James Johnson	Response-01125	West Hallam?s roads, particularly those leading into and out of the village, are not designed for high volumes of traffic. Additional housing will significantly increase vehicle numbers, leading to congestion, longer journey times, and heightened risks to pedestrians and cyclists, particularly around schools and village centres.
1.9	South of West Hallam	Road Safety	James Painter	Response-01119	As stated previously the proposed development will be situated opposite an entrance to the infants and junior school, with an already fairly congested road this development will add to an already hazardous situation even worse. With only two ways out of the village both of which are congested at peak times with neither junction having traffic control in place with more traffic using these junctions this could well create safety problems
1.9	South of West Hallam	Road Safety	James Tilford	Response-00103	Increased traffic at a busy junction on the door step of a school
1.9	South of West Hallam	Road Safety	James William Allen	Response-01280	Beech Lane is already a notorious traffic bottleneck, where school children and those using the sports fields already run the gauntlet, crossing the busy road between parked cars. Adding further traffic pressure and children will only make matters worse. Again, access to the site from the West would mitigate this.
1.9	South of West Hallam	Road Safety	Jane Marshall	Response-01172	Beech Lane is already notoriously impossible to drive down at certain times of the day. To add more traffic is dangerous and an accident waiting to happen as a drop off for the local primary school.
			Jane Taylor	Response-01023	Outside the school, is obviously going to be a risk to pupils!
1.9	South of West Hallam	Road Safety	Jane thomas	Response-01056	The roads and junctions are already busy, and congested
			Jane Zielinski-Raynor	Response-01095	Really busy and dangerous to cross at school times
1.9	South of West Hallam	Road Safety	Jennifer Noble	Response-01012	Dangerous as it is at the moment let alone if there's new houses built
1.9	South of West Hallam	Road Safety	Jenny Butler	Response-00202	Many children cross, walk and cycle along Beech Lane. What measures will there be to protect them??
1.9	South of West Hallam	Road Safety	Jessica Rogers	Response-01524	More traffic in the area will lead to road safety being a significant risk to children at school drop off times
1.9	South of West Hallam	Road Safety	Jo-Anne Attenborough	Response-00129	Since we have no lollipop person around Scargill, crossing roads around school time is very dangerous. Accidents have happened and children have been injured. Adding more roads will exacerbate the issue and make traffic congestion worse.
1.9	South of West Hallam	Road Safety	Joe Rice	Response-00063	Beech Lane is ALREADY a safety concern during busy times, school and football times. Lots of children need to use beech lane for the school and the park area and cars are already mounting the curbs to get past each other. As someone that lives on Beech Lane it seems to be a matter of time till there is a more serious accident.
			Johnson	Response-01037	Proposed development opposite school. Fears for safety of children on already very busy area
1.9	South of West Hallam	Road Safety	Jonathan moon	Response-00273	As someone who users west hallam school this road is not suitable for another large housing development the road is very tight at school times also the local park is used for west hallam community football various in the week for training and at wkds it is very busy and very tight. Most houses now need 2 cars that's at least another 180 vehicles im very concerned that this increases the chances of a accident involving children on beech lane outside the school
1.9	South of West Hallam	Road Safety	Jonathan Purkis	Response-00159	There is already an issue with cars parking on Beach Lane. This causes safety issues for motorists and pedestrians alike. More local traffic will only exacerbate this.
1.9	South of West Hallam	Road Safety	Jonie centro	Response-00730	too many houses near school and school children
			Jon Skelson	Response-00157	Beech lane is already at max capacity
1.9	South of West Hallam	Road Safety	Jon Skelson	Response-01025	It's already only a matter of time before someone is seriously injured around here. Building more houses, hence more traffic will only compound this problem.
			Judith Hare	Response-01014	Too many cars. The roads and pavements in the village were not built for heavy traffic.
1.9	South of West Hallam	Road Safety	Julie August	Response-01064	Creating more roads where there are children coming out of school is a road safety issue
1.9	South of West Hallam	Road Safety	Julie Harbon	Response-00022	I am very concerned at what the increase in traffic will do to an already extremely busy junction, right opposite the school. Parking is limited now, without additional housing. There are always lots of children around in school time, but also using the playing fields adjacent, particularly soccer practice.
1.9	South of West Hallam	Road Safety	Julie Harker	Response-01073	More houses means more cars right opposite the school so bound to be more of a hazard for children. Especially as it is a junior school
			Julie Stewardson	Response-00282	A crossing would need to be provided sure to the extra traffic
1.9	South of West Hallam	Road Safety	Julie Wright	Response-00091	The roads are very busy it is difficult trying to get across the road
1.9	South of West Hallam	Road Safety	Karen Squire	Response-01040	Cars move slowly along this stretch of road anyway
1.9	South of West Hallam	Road Safety	Karina Cooper	Response-00267	Too close to the school , would invite you to come and drive during collection and drop off times.
1.9	South of West Hallam	Road Safety	Kate Halls	Response-01035	The traffic is incredibly congested at times along Beech Lane. A housing development of this number will only increase this, along with difficulties for the school position (Scargill), and the safety of children who go there. The village will lose it's ?village? feel.
1.9	South of West Hallam	Road Safety	Katherine Earley	Response-01075	Opposite a school and a well used playing field it would mean the creation of 90 dwellings would mean more cars using and parking and already over populated area.
			Kathryn Fearn	Response-00100	The proposed site is next to the school

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Road Safety	Kathryn Gilbert	Response-01574	Already have near misses with accidents on Beech Lane. Access to school opposite entrance to proposed development is too dangerous
			Katie	Response-00047	Beech lane is already dangerous at school and peak times. Adding more houses will increase this
1.9	South of West Hallam	Road Safety	Katie Rice	Response-00036	Parking is unsafe and with even more traffic trying to get through, there is a chance emergency services would not get through when needed
			Kay	Response-01030	Will make it to busy
1.9	South of West Hallam	Road Safety	Keith Atkinson	Response-01050	Beech Lane is totally unsuitable for another access road. Traffic entering and leaving a new development would endanger children and parents attending the school.
1.9	South of West Hallam	Road Safety	Ken Mitchell	Response-00763	The congestion and hazards from parked cars on Beech lane , together with a new junction, is an unacceptable road safety hazard so near to a large primary school.
1.9	South of West Hallam	Road Safety	Ken Musson	Response-00900	the most important reason why this land should not be used for housing is to protect the health and safety of the school children and staff at Scargill Primary School which is opposite the said site to be used for more housing. The road in front of the school is often impassable with buses avoiding the area at school opening and closing times, cars end up having to mount the pavement to pass through or to park. Therefore, how can more traffic in the area improve this situation. This whole area is an accident waiting to happen in terms of traffic and emergency vehicle access is already compromised without further housing and therefore more cars and traffic.
			Kerry	Response-01034	School and nursery entrance . Unsafe to have more cars on the roads in this area
1.9	South of West Hallam	Road Safety	Kerry Barratt	Response-00168	Too much traffic already
			Kerry Middleton	Response-00266	There is already a risk of accidents within this area which would be increased with this proposal.
1.9	South of West Hallam	Road Safety	Kevin Fox	Response-00682	Further road safety measures and traffic calming will need to be added as beech lane speeds are increasing. Alternative road entrances into the village will need to be added if road safety is to be assured.
1.9	South of West Hallam	Road Safety	Kirsty Oliver	Response-00558	How can it be safe on such a narrow road that is half taken up with parked vehicles. It would be horrendous during building especially for safety.
1.9	South of West Hallam	Road Safety	Laura Egglestone	Response-01027	Cars regularly mounting the curbs to pass when cars are parked on one side of the road. People often speeding down past the cars to get to the end and not get stuck. Makes crossing the road very difficult
1.9	South of West Hallam	Road Safety	Lesley Foulkes	Response-00130	To leave West Hallam from this proposed site means heading out via St Wilfrids Road, already an overbusy junction or Beech Lane towards Station Road. This junction is, at best, awkward at busy times already and adding further traffic would be chaotic.
1.9	South of West Hallam	Road Safety	Linda Webster	Response-00744	My main concern is one of Health and Safety as the site is directly opposite Scargill Primary School - a very dangerous position. Beech Lane is not a full width road and is congested several times a day; surely the road needs to be widened before considering any housing development? There have been problems at the junctions of Beech Lane/Station Road, the T junction at Cat& Fiddle Lane as well as Millhouse/Mapperley crossroads and more traffic from a development would just make this more dangerous.
1.9	South of West Hallam	Road Safety	Lindsey Lyons	Response-00071	Road safety is paramount to the wellbeing of the area and children that already use the local school. There have been multiple incidents in recent years of children being knocked over as cars are already double parked making visibility poor and safe for crossing the road. Adding additional housing will only increase this risk with more vehicles using the roads (Beech lane and Hallam Way) as access points driving further increased risk for incidents involving children and the potential for road traffic accidents (these have increased as well in recent years, I have personally witnessed several in the last two years). As mentioned in my previous comment, traffic is already heavily congested adding additional vehicles makes the area unsafe for not only school children but also road users as parking is limited, visibility poor and leaves the village open to further RTA's, which I am sure no council wants to increase.
1.9	South of West Hallam	Road Safety	Louise Annison	Response-01049	The road is already a dangerous congestion point.
			Louise Hunt	Response-01032	Opposite a school presents such a risk to kids, parents and teachers.
1.9	South of West Hallam	Road Safety	Mandie frith	Response-00247	Terrible congestion already in this area
1.9	South of West Hallam	Road Safety	Mark	Response-00164	More Traffic onto the congested road around a school very sensible not!
1.9	South of West Hallam	Road Safety	Mark Baker	Response-00110	Beech lane is meant to be 30mph but very few people obey this. More traffic increases the risk of injury.
1.9	South of West Hallam	Road Safety	Mark Mason	Response-01194	As previous comment
1.9	South of West Hallam	Road Safety	Mark Newton	Response-00179	Needless to say, it is insane to add a junction for further housing here due to the large numbers of children that are present during term times in morning and afternoon, as well as every weekend due to the football matches and playing fields. I have seen so many near misses on this road. Developing on Beech Lane opposite a busy primary school and playing field, on an already dangerous road, thus increasing traffic volumes from a new direction, will almost certainly cause the death of a child. Whether school age, young infants playing on the fields, young children accessing the weekend matches, every day of the week this is a high activity area for children. There is nothing on this road to stop speeding traffic as it is. All you need is a speed gun, or to observe for 30 mins at school opening time each day, or simply to watch cars do dangerous moves every match day to swerve around the long line of parked cars, denotes it is simply insanity to add high risk to this area.
1.9	South of West Hallam	Road Safety	Mark Patenall	Response-00851	The junctions at Station road, Cat and Fiddle lane and Millhouse corner are already very busy. The proposed development includes a new access road near the school which will pose further risks for the children
1.9	South of West Hallam	Road Safety	Mark Perrin	Response-00223	A zebra crossing should be provided across beech lane including traffic calming measures (not speed bumps!)

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Road Safety	Mark Power	Response-00276	People speeding near schools, and busy junction at Scargill. The junctions around the area are extremely busy, again causing traffic issues . Scargill onto Beech lane is constant as is station road into Beech lane, the top of station road into high lane west, station road down to Cat and fiddle lane and the junction near there is a Stop junction and is a safety concern anyway. Cars mount kerbs and speed at school/football times and is rising safety issue as cars speed even on the kerbs
1.9	South of West Hallam	Road Safety	Matt Haddon	Response-00696	The village is already very congested at times with the car park at the Dales often full causing vehicles to park on both sides of the road in the village resulting in very poor visibility for those exiting the Dales and also on the dangerous blind bend on to St Wilfreds Road. Highway issues would be increased if this site goes ahead due to Beech Lane not being a full width road and already has issues with vehicles parked down the full length at school pick up and drop off times, as well as weekends when the recreation ground on Beech Lane is utilised by the local children?s football teams. With vehicles often mounting the kerb as mentioned before this creates a huge safety concern for pedestrians and parents/children crossing the road, as well as wheel chair users and parents with pushchairs. Hallam Way is also badly affected by parking at school times resulting in very poor visibility for cars, buses and pedestrians crossing the road.
1.9	South of West Hallam	Road Safety	Matthew Lyons	Response-00061	Parking already a big problem at school time. Accidents happening and lots of near misses. Parents already park across home owners home. How will this be managed. Are we expected to just accept it
1.9	South of West Hallam	Road Safety	Maureen Briggs	Response-00190	The road is already very busy at school times with parking and picking children up.It can be very dangerous at times and would be a terrible idea to build more houses and therefore more traffic.!!
1.9	South of West Hallam	Road Safety	Max Egglestone	Response-01278	The influx of new cars will heighten these existing issues, making daily commutes more hazardous for drivers and pedestrians alike. We have footage of this and I'm more than happy to provide it along with a police incident number which involved our three daughters - Luckily no one was hurt this time but do know of accidents that have been caused by erratic driving during busy times. Nearby junctions-especially those with Station Road and areas near the Cat & Fiddle and Millhouse Garage-already suffer from poor visibility and congestion during peak times. With no concrete plans to improve these access points, any further development would only exacerbate the danger.
1.9	South of West Hallam	Road Safety	Max Longdon	Response-00128	Dangerous levels of traffic at busy periods is only going to get worse
1.9	South of West Hallam	Road Safety	Michael Earley	Response-01039	It's irresponsible to expand more housing on a densely populated area?.. that is flooded with traffic at numerous times of day
1.9	South of West Hallam	Road Safety	Michelle	Response-00148	More traffic will no doubt cause road safety issues.
1.9	South of West Hallam	Road Safety	Michelle Cox	Response-00138	T o much traffic going through The Village already
1.9	South of West Hallam	Road Safety	Mr and Mrs Mellors	Response-01797	The roads throughout West Hallam ? including Beech Lane, Station Road, and surrounding lanes ?are narrow and were not designed to accommodate the increased volume of traffic that would arise from a large-scale housing development. This poses a serious health and safety risk to elderly residents and children who regularly walk through the village to reach the local shop, school, or recreation grounds. Increased traffic would heighten the risk of accidents, particularly in areas with no continuous footpaths or safe crossing points. The influx of construction vehicles during development and additional cars post-completion would make the village environment far more hazardous for all pedestrians.
1.9	South of West Hallam	Road Safety	Mr and Mrs Wood	Response-01826	I am sure others will make points about concerns regarding road safety around the two proposed sites, one directly opposite a primary school and the other near a busy crossroads.
1.9	South of West Hallam	Road Safety	Mrs Bird	Response-00045	More traffic along beech lane would be detrimental to safety, especially given its outside a school. Traffic coming from either direction to the proposed development would increase the poor safety of the area and road layout. In addition the traffic going towards the village centre, using the already tight bends and junctions, would further increase risk.
			Mrs Glenda Orchard	Response-01490	Traffic and parking is a nightmare at school time
1.9	South of West Hallam	Road Safety	Mrs Judith Pittson	Response-00753	Beech lane cannot cope with more traffic and the dangers that will bring.
1.9	South of West Hallam	Road Safety	Mrs Strelley	Response-00233	The school on Beech lane and the recreation green already add to traffic congestion. The traffic speeds along this road. Children cross all the time. It is positively dangerous.
1.9	South of West Hallam	Road Safety	Natalie Payne	Response-01523	Traffic and parking around this area is already at a level where accidents can easily happen
1.9	South of West Hallam	Road Safety	Neil Fletcher	Response-01063	Area is already very busy at school times. Adding housing here would significantly increase the likelihood of road traffic accidents.
1.9	South of West Hallam	Road Safety	Nichola Dodd	Response-00196	Beech lane is already congested regularly due to the school, use of the playing fields etc. It would be dangerous and an accident waiting to happen to have an access to 90 houses there.
			Nick Craddock	Response-00145	As per my comments for other west Hallam Proposal
1.9	South of West Hallam	Road Safety	Nicola Elkington-Horridge	Response-00079	Too many cars going past school already! We don't need anymore.
1.9	South of West Hallam	Road Safety	Nicole Brookman	Response-01559	the roads are already too busy so my children can not cycle around the villiage and they are 11 and 13 as there is too much car movement
1.9	South of West Hallam	Road Safety	Nina Walters	Response-00244	Beech Lane is already congested and dangerous when parked cars are there at school times and when football matches take place on the recreation ground / events in the village. The proposed area is opposite the primary school which already has road safely concerns at school drop off and pick up times .
1.9	South of West Hallam	Road Safety	Pamela Fox	Response-01242	Further road safety measures and traffic calming will need to be added as Beech Lane speeds are increasing. Alternative road entrance into the village will need to be added if road safety is to be assured
1.9	South of West Hallam	Road Safety	Patricia Eady	Response-00114	I visit the area frequently, my granddaughter attends Scargill school at drop off and pick up time the congestion up beech lane is horrendous and the cars park bumper to bumper, also on the pavement I feel there is an accident waiting to happen, it's bad enough now without more houses off beech lane

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Road Safety	Patricia Ryan	Response-00132	Beech Lane is dangerous enough with parking at the school with more 90 more hours and the coming out onto Beech Lane it will be a nightmare. An accident waiting to happen.
1.9	South of West Hallam	Road Safety	Patrick Barber	Response-00280	The proposed entrance to the site is close to the school and a number of other road junctions so causing problems at busy periods and produce addition risks to children.
1.9	South of West Hallam	Road Safety	Paul aldre	Response-00152	It's a death trap now
1.9	South of West Hallam	Road Safety	Paula Piggott	Response-01041	Road safety will seriously be impacted. There is already too much traffic. This is a small village. There is a school and many bungalows with pensioners. It is a accident waiting to happen. Also dog walkers, horse riders and lots of wildlife. Seriously someone will get hurt or worse killed!
1.9	South of West Hallam	Road Safety	Pauline wood	Response-01100	As previous comment
1.9	South of West Hallam	Road Safety	Peter Lilley	Response-00161	Extra traffic on an already busy road near a Primary School is an accident waiting to happen.
1.9	South of West Hallam	Road Safety	Pete Vanstone	Response-01164	Parked cars leave barely enough space for a single vehicle to pass, forcing motorists onto pavements and endangering pedestrians, especially children walking to and from school. This danger is compounded by poor sightlines and the lack of traffic-calming measures. The T-junctions where Beech Lane meets Station Road, near the Cat & Fiddle pub and Millhouse Garage, already present difficult and unsafe conditions during busy periods. The additional vehicle load from 90+ homes would severely compromise road safety and lead to daily congestion and delays. No road upgrades have been proposed to address this.
1.9	South of West Hallam	Road Safety	Phil Campbell	Response-00109	Ideally, a traffic light should be installed to ensure safe crossing to the school.
1.9	South of West Hallam	Road Safety	Philip Davies	Response-01116	Already many vehicles appear to be speeding along Beech Lane, taking little or no notice of the school speed restrictions. Added numbers of children and adults crossing will be a safety hazard.
1.9	South of West Hallam	Road Safety	Rebecca howe	Response-00126	School drop off and pick up already awful
1.9	South of West Hallam	Road Safety	Rebecca Ricci	Response-00102	Beech Lane and Hallam way is already too busy especially at the start and end of the day coinciding with the school day. Adding houses on this site and a junction for the houses will have a significant impact on road safety.
1.9	South of West Hallam	Road Safety	Richard Fearn	Response-00180	With a blind bend and a school nearby extra traffic would be dangerous.
1.9	South of West Hallam	Road Safety	Richard Norman	Response-00043	The access on beach lane will increase the already high chance of an accident around school times and sports events on the recreation ground
1.9	South of West Hallam	Road Safety	Robert Dodd	Response-00201	Beech Lane already gets heavily congested at times due to the school and the use of the playing fields. There is not adequate infrastructure for the additional access for 90 homes.
1.9	South of West Hallam	Road Safety	Robert Flatley	Response-00978	In a similar vein to concerns regarding congestion the proximity to the school and the frequent presence of parked vehicles along one side of the road makes an increased risk of accidents both for vehicles and pedestrians. Furthermore there is no school crossing patrol present here either meaning that increased vehicular traffic could pose a risk to school children and other pedestrians crossing the road.
1.9	South of West Hallam	Road Safety	Robert Hall	Response-00630	Development on this site be detrimental to road safety by reason of proximity to Scargill Primary School.
1.9	South of West Hallam	Road Safety	Robert Mee	Response-01581	I have considerable concerns over road safety with this proposal. Beech Lane is already the most congested street in the village. In the afternoon, in the lead-up to school finishing, it is not unusual to see traffic having to drive along the pavement in order to get past obstructions at the same time as there is a large number of young pedestrians in the vicinity. Adding more housing, and a further junction, will only add to what is already an intolerable situation. I see nothing in the notes for this site that suggests that there will be any mitigating measures introduced.
1.9	South of West Hallam	Road Safety	Robert Mee	Response-01511	I have considerable concerns over road safety with this proposal. Beech Lane is already the most congested street in the village. In the afternoon, in the lead-up to school finishing, it is not unusual to see traffic having to drive along the pavement in order to get past obstructions at the same time as there is a large number of young pedestrians in the vicinity. Adding more housing, and a further junction, will only add to what is already an intolerable situation. I see nothing in the notes for this site that suggests that there will be any mitigating measures introduced.
1.9	South of West Hallam	Road Safety	Robert Reynolds	Response-00260	Beech Lane is already extremely busy, especially at school drop-off and pick-up times, and when football matches are being played. More houses will just make this worse.
1.9	South of West Hallam	Road Safety	Ruby Reid	Response-00119	Dangerous parking along beach lane and other areas of the village especially around school times which would only increase with an increase in population
1.9	South of West Hallam	Road Safety	sam richards	Response-01467	This location is one of the main routes people use for drivers and pedestrians - particularly young children out playing on their bikes or walking to the shop and back to the park or over to the cricket club. the junction where Hallam way meets beech lane is already particularly dangerous which is directly opposite the proposed site. parked cars all along beech lane already provide risks to other drivers and walkers. the school buses also regularly get stuck due to parked cars on beech lane and hallam way causing further traffic disruption. plans have not been released as of yet so it is difficult to know, but hopefully the hedgerow along beech lane will remain there, as having multiple driveways along the road would be very dangerous.
1.9	South of West Hallam	Road Safety	Sarah James	Response-01085	Opposite the school. Traffic accidents waiting to happen.
1.9	South of West Hallam	Road Safety	Sarah Taylor	Response-00115	Beech lane is a route used by school children, it becomes congested around school hours and more traffic poses more risk and blocking the only way in from Derby causing potential obstruction for emergency services as WH has elderly residents. With regards to congestion of parked cars lining the street on Sunday mornings when football has taken place I have been bullied onto the kerb from an oncoming driver when it was my right of way as cars were parked on their side not wanting to wait in an aggressive manner. Causing damage to my wheels in the process.
1.9	South of West Hallam	Road Safety	Scott wright	Response-00089	Roads already too busy and dangerous for young children commuting to school and attending the field/Park.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Road Safety	Serena Bostock	Response-00125	The traffic is horrendous in West Hallam already. The parking is a nightmare as people have started parking on bends etc... which has become hazardous. Too many houses with 3 or 4 people who have cars and don't utilise their driveway. This will only add to this!
1.9	South of West Hallam	Road Safety	sharon hickson	Response-01430	with the amount of cars parked on the road with households let alone the school traffic that is parked ,having a housing development on beech lane directly opposite a school ,would increase a child being hit by a car ,lorry , work van is a massive possibility, as in the last few years I know of 2 children being hit by a car in west Hallam.
1.9	South of West Hallam	Road Safety	Simon Hinsley	Response-00106	beech Lane is already busy and particularly so at school time. additional traffic onto beech Lane is likely to cause more congestion and pose a safety risk to other road users around the school
1.9	South of West Hallam	Road Safety	Simon Reeve	Response-01080	The roads simply aren't built for the traffic we already have without adding more homes with more cars; I grew up in West Hallam (High Lane East) in the 80s, spending time in West Hallam Village and there were approximately 1 car for every 1.5 homes, now there's 2 for every house. The junctions at Millhouse Garage and the Bottle Kiln have poor visibility with huge queues up St Wilfreds every rush hour and simply aren't suitable for supporting more homes
1.9	South of West Hallam	Road Safety	Sophie	Response-01105	Same as my traffic comment, how is an already busy through road going to cope with 90+ extra vehicles consistently using it?
1.9	South of West Hallam	Road Safety	Stacey Eady	Response-01529	If you have ever visited Beech Lane, you will know that the road is currently already very busy during peak times, such as school drop off and pick up. Cars regularly park on both sides of the road, which causes major disruptions to ongoing traffic driving through the village. It is one of only two routes in and out of a village that has already expanded way beyond its initial infrastructure and is the major road that haulage uses to get deliveries through the village to the main centre, The Dales. Beech Lane also has a large recreational ground and children's playground adjacent to the school, which is used regularly during evenings and weekends to facilitate both football matches and cricket games meaning it's busy all day, most days. The road dimensions on Beech Lane are much narrower than those of a normal major road. It is not wide enough to be marked with central white lines (I'm guessing that's why it was originally termed a 'lane') which means it's even tighter when cars park on one or both sides and, at times, this has caused delays with emergency services/buses, simply being unable to get through. I also note that as a bus route, the road should be at least 6.2 m wide, and this is not the case. Living on Beech Lane, I regularly see people driving up onto the pavement to get up the road, which simply is unacceptable, considering the closeness to the school. The road has a 20mph speed limit during school times. However this is very rarely observed, and in my time on Beech Lane, I have never seen speeds being monitored. With the school blocking off a huge portion of the Lane for its own Keep Clear Zone, which is required to be kept clear at all times to comply with rule 243 of the Highway Code, I'm unsure how any safe or practical solution could be arrived at to allow access to the proposed new site from Beech Lane. The road to the school is currently also required to be left clear (hence the single white line on the opposite side), so quite where the access to and from the proposed site is going to be situated is a mystery. My concern is that this site has been identified on several previous occasions, as suitable land to build on, but the process has always been stopped, mainly due to the concerns regarding traffic. These issues have not changed and indeed have significantly worsened due to the natural increase in population, so I'm unsure why or how this proposal has been approved this time around. With an extra 90 houses (+ 32 dwellings within the 'safeguarded land' they wish to develop), this will total 122 houses, which seems ludicrous with this specific site having only one access in and out of the new development, meaning an extra (potentially) 244 cars coming on and off Beech Lane. This is, in my opinion, a disaster waiting to happen. I have also been made aware that the Erewash Planning team have not yet consulted with DCC highways up until this point, which worries me further! Obviously, you must undoubtedly understand that feelings are 'running high' within the West Hallam community and the need for transparency at every stage of the procedure is essential. If not, rumour-mongering and suspicion is bound to occur and there is a fear that the use of consultancy companies may, at worst, cover up any indiscretions and, at best, cloud the issue. Are there any assurances in place to maintain the necessary complete transparency? Can I ask if DCC Highways will have the 'final say' in the Traffic Safety and suitability of this
1.9	South of West Hallam	Road Safety	Stacey Eady	Response-01529	site or will this be left in the hands of a consultancy firm/Erewash Council planners? Some of the other sites within the area could better facilitate the increase in traffic but they could also offer the key for the whole village. For example, the possible development of the site West of Station Road (CSR0016) is just on the lead into the village and has a large lay-by area that could be used as a filter lane to allow traffic on and off the site onto the existing road which has the major-road dimensions required. The North of West Hallam site (CSR0048) is on High Lane, a major road that is a straight one. A possible change here could be the reduction of speed used on this road, from 40mph to 30mph, to assist traffic on and off the site, which would be a positive impact to pedestrians within the whole village. The St. Wilfrids site (CSR0004) would benefit from the installation of a mini roundabout at its junction with High Lane. Further along towards Stanley Common, this new roundabout would ease the congestion currently suffered at the High Lane- Station Road junction, (Mill House Garage junction) where a blind bend already causes problems.
1.9	South of West Hallam	Road Safety	Stephen Wood	Response-00139	Dangerous for children at school drop off and pick up.
1.9	South of West Hallam	Road Safety	Steve Bailey	Response-01022	Similar to the previous comment, more cars means more congestion. People trying to cross the road will become harder with more cars about.
1.9	South of West Hallam	Road Safety	Tarnia	Response-00199	That road is already dangerous enough , especially at school pick up times. The buses struggle to get though. A child is going to get injured. There are already enough empty houses around west hallam ie the ones where the old pub was . They've been empty 2 years !
1.9	South of West Hallam	Road Safety	Teresa Faulkner-Day	Response-00242	There are already numerous small accidents along this stretch of road. I personally avoid using it yo get in and out of the village because I can. Other people are not always able to fo this.
1.9	South of West Hallam	Road Safety	Teresa Webster	Response-00086	Major concerns as this area is directly opposite the school which is already a very busy road at peak times - my concern is the primary aged children crossing an already busy road
1.9	South of West Hallam	Road Safety	Tina Jay	Response-01801	It would also make it considerably more dangerous for children walking to school and crossing the road.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Road Safety	Toni Tomlinson	Response-00204	Dangerous for children leaving school and football matches. A turning circle for school would need to be included in any development.
1.9	South of West Hallam	Road Safety	Tracey Barks	Response-00111	Road safety in this area is already an issue as the school is located opposite the proposed entrance to the development. Safety in terms of pedestrians and vehicles should be a top priority when considering the development
1.9	South of West Hallam	Road Safety	Tracey BURDUS	Response-00141	Access to the village along Beech Lane at certain times of the day is dangerous at the present time, further housing would make this an even worse situation.
1.9	South of West Hallam	Road Safety	Val Stevens	Response-01070	The proposed exit for the site is opposite a large primary school and near the exit from an already large established estate. We already have parent parking problems and no crossing patrols so the proposed build will further increase safety risks for children and parents.
1.9	South of West Hallam	Road Safety	Vicky Buckley	Response-00182	People speed, dont look for children
1.9	South of West Hallam	Road Safety	Vicky smith	Response-00171	Beech lane is already highly congested at peak times and can be quite dangerous when school pick up and drop off along with weekends when used for football matches on the recreational ground. Creating higher volumes by erecting 99 new properties will contribute to the potential of blocking the junction of beech lane and station road upon these times due to awaiting oncoming vehicles to pass and the potential of more accidents as people don't like to wait their turn.
1.9	South of West Hallam	Road Safety	Victoria Walker	Response-00228	Cars are very often parked on Beech Lane, a road coming out at this junction, with cars for 90 houses, will lead to more potential accidents.
1.9	South of West Hallam	School Capacity	Adam willetts	Response-00083	The parking outside the school is horrendous as it is
1.9	South of West Hallam	School Capacity	Alice Johnson	Response-00093	i believe the school will struggle capacity wise with possibly adding 200 children
1.9	South of West Hallam	School Capacity	Alison Reynolds	Response-00243	Local schools cannot cope as it is, and with pressure from other local planned housing projects (e.g. in Kirk Hallam)
1.9	South of West Hallam	School Capacity	Alistair	Response-01138	Schools are already full and we are fighting for a spot
1.9	South of West Hallam	School Capacity	Andrea Cochrane	Response-01485	The primary school is currently at capacity and will struggle to cope with an influx of new pupils . Should the development go ahead, this will either mean adding to the school buildings and thereby losing the play areas on the school grounds which benefit pupils, or families having to take children into Kirk Hallam or Ilkeston to other schools with space. This will add further to the road congestion and pollution.
1.9	South of West Hallam	School Capacity	Andrew and Julie Douglas	Response-00146	The school is over subscribed as it is
1.9	South of West Hallam	School Capacity	Ann Toplis	Response-00271	The school is already full so more houses would make it harder to get into this school
1.9	South of West Hallam	School Capacity	A Redshaw	Response-00287	The school does not have capacity
1.9	South of West Hallam	School Capacity	Barbara Glaves	Response-01046	Too many overcrowded schools already please don't make West Hallam another one
1.9	South of West Hallam	School Capacity	Carl fox	Response-00067	Only one small school in West Hallam additional housing will over crowd schools
1.9	South of West Hallam	School Capacity	Charles Brooks	Response-00535	I fully appreciate that Scargill School numbers are in decline from the days of new families coming to West Hallam and into the large new estate that was build in the late 70's and early 80's. In time the school may become unsustainable due to the maintenance of the additional buildings built during the peak of pupil number. I also understand that the school would benefit from more pupils and each child generates income for the school. In life we always have to make choices and in my opinion increasing pupil numbers should not trump the health and safety risks of increasing traffic around the school.
1.9	South of West Hallam	School Capacity	Chris Collins	Response-00037	The local school goes through cycles in terms of numbers on roll. I used to be a governor but haven't seen the numbers for a few years now. The Erewash birth rate suggests that school numbers shouldn't be a problem but the school does attract from a wide area so this is one that needs to be seen through the lens of someone who has the actual numbers to hand.
1.9	South of West Hallam	School Capacity	Chris Reid	Response-00136	Can the school cope?
1.9	South of West Hallam	School Capacity	Christine	Response-01019	Does the school have capacity for the extra children this development will hold?
1.9	South of West Hallam	School Capacity	Christopher Chambers	Response-00172	Scargill School has a capacity of around 420 pupils, with a current term roster of 310. Whilst this appears to offer headroom for intake, this is unlikely to align with the expected requirements of up to 90 households, assuming no other intake is considered.
1.9	South of West Hallam	School Capacity	Claire dean	Response-00069	Not enough spaces in local schools as it is.
1.9	South of West Hallam	School Capacity	Craig Johnston	Response-00234	School is at capacity already
1.9	South of West Hallam	School Capacity	Daniel Clark	Response-01094	There is no parking now at the school making it dangerous for drivers and children with cars parked on the narrow roads and your perposal will add to this. There is no way of expanding the school to accommodate more children
1.9	South of West Hallam	School Capacity	Daniel hickson	Response-00177	School is only small and classes are at a maximum at Scargill
1.9	South of West Hallam	School Capacity	Daniel Stanbridge	Response-00099	Schools in the area are already at capacity
1.9	South of West Hallam	School Capacity	David Henfrey	Response-00118	Schools not big enough
1.9	South of West Hallam	School Capacity	David Mosley	Response-01062	Have Scargill been consulted about an influx of children and their capacity? My daughter is in a class that already has 33 children in the class which I believe is around the maximum there can be.
1.9	South of West Hallam	School Capacity	Emily Reynolds	Response-00149	Scargill is already at max capacity and so are the surrounding primary and secondary schools. Most people moving to the new homes will likely be families or people who intend to start families. Lets say 1 child per home. 90 children. Where are those children going to go to school? Unless you plan on building another school I don't see how this development could possibly be successful. We do not have the infrastructure to support the proposed development.
1.9	South of West Hallam	School Capacity	Emma Lound	Response-00187	The school already provides places for 300 children. This is already an extraordinary amount for a primary school. There is no mention of any provision for extra places or funding for the school to cope with extra students.
1.9	South of West Hallam	School Capacity	Francesca Dean	Response-00221	None with two more sites proposed. The school already has none catchment pupils
1.9	South of West Hallam	School Capacity	Gary Hamson	Response-00052	Has anyone from planning checked with the school on vacancies for new pupils?

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	South of West Hallam	School Capacity	Glenn Richardson	Response-00316	Scargill school is already nearly full to capacity & its almost impossible to get pre school places & child care
1.9	South of West Hallam	School Capacity	Graeme Taylor	Response-01131	The local school has no additional capacity and has no way to expand
			Guiliano Ricci	Response-01010	I
1.9	South of West Hallam	School Capacity	Helen fox	Response-00064	The existing school capacity may be adversely affected. An influx of new residents could lead to overcrowded classrooms, straining educational resources and diminishing the quality of instruction. This situation could ultimately hinder the village's development, as a well-functioning school is essential for attracting families and fostering a vibrant community. The potential decline in educational standards may deter new families from settling in the area, thereby stunting the village's growth and vitality.
			Helen Johnson	Response-00170	Over subscribed
1.9	South of West Hallam	School Capacity	Helen Stanley	Response-01555	Current staff levels would not permit more students
1.9	South of West Hallam	School Capacity	Helen Vickeds	Response-00062	The school is already a very popular school attracting children from outside the area. An additional of more housing attracting further families will put strain on the school
1.9	South of West Hallam	School Capacity	Homewood	Response-01074	Schools are already at capacity - is there going to be a new primary and secondary?
1.9	South of West Hallam	School Capacity	Iain Harrison	Response-01214	As a parent with children attending the local school?and living right next to it?I can say with certainty that the school is already at full capacity and struggling. Despite the best efforts of the dedicated staff, the school is underfunded and frequently relies on parents and the community to raise money for basic supplies and equipment. It?s difficult enough to meet the needs of current students, let alone absorb an influx of new children from additional housing. Exactly where are these new families expected to send their children? Or is the push for profit now outweighing critical considerations like education, healthcare, traffic safety, air quality, and environmental preservation?
1.9	South of West Hallam	School Capacity	Jacqueline Shakh	Response-00095	Need a bigger school for extra children
	South of West Hallam	School Capacity	Jade Harland-Toomer	Response-00217	The school is stretched as it is
1.9	South of West Hallam	School Capacity	James William Allen	Response-01280	The buildings at Scargill school have expanded massively since I attended over 40 years ago. It is clear that the school is already at capacity for pupils, so adding even more pressure on spaces will be disadvantageous.
	South of West Hallam	School Capacity	Jane Taylor	Response-01023	I believe the school is already at capacity for the area
1.9	South of West Hallam	School Capacity	Jenny Stanbridge	Response-00088	Not enough space as it is
1.9	South of West Hallam	School Capacity	Jonathan Purkis	Response-00159	The local school is already at capacity. Both my children have previously attended and I cannot see how classroom sizes could be increased to accommodate children from all the new houses.
1.9	South of West Hallam	School Capacity	Jon Skelson	Response-01025	Has anybody checked the capacity of the local schools ?
			Judith Hare	Response-01014	At the minute it?s ok but 90+ plus houses. If each household only had one child would Scargill cope?
1.9	South of West Hallam	School Capacity	Julie Harbon	Response-00022	Scargill school would need to make adjustments to cater for an additional 90+ families. This would need to be carefully scrutinised to make sure they have the capacity for this, which I highly doubt.
	South of West Hallam	School Capacity	Julie Harker	Response-01073	The school is over subscribed as it is so they will not be able to provide for more children in the area
1.9	South of West Hallam	School Capacity	Karen Squire	Response-01040	Yes it may add to existing numbers but children have to go to school somewhere.
1.9	South of West Hallam	School Capacity	Kay	Response-01030	I think the school would end up over crowded and pick up and drop off is already a nightmare
1.9	South of West Hallam	School Capacity	Ken Mitchell	Response-00763	It would be very unlikely that Scargill school would be able to offer enough places to fulfil the needs of an additional 90 households. This would mean a school run by car to Ilkeston, causing further traffic congestion on Beech lane and also at the dangerous junction of High lane and St Wilfrids road.
1.9	South of West Hallam	School Capacity	Ken Musson	Response-00900	The village does not have the infrastructure to support more housing in terms of schooling (particularly senior schools in the area)
1.9	South of West Hallam	School Capacity	Kerry	Response-01034	Services stretched already
	South of West Hallam	School Capacity	Kerry Barratt	Response-00168	Class sizes impacted
1.9	South of West Hallam	School Capacity	Kerry Middleton	Response-00266	The school is already a large junior and infants, which doesn?t have the space to expand or offer extra support for children who may need more.
	South of West Hallam	School Capacity	Kevin Fox	Response-00682	Without doubt the school is at capacity a further additional housing estate will need to create an additional school or an extension
1.9	South of West Hallam	School Capacity	Kirsty Oliver	Response-00558	Not applicable to me
1.9	South of West Hallam	School Capacity	Kristen Hamilton	Response-00209	Schools are struggling with capacity already
1.9	South of West Hallam	School Capacity	Laura Egglestone	Response-01027	The school probably does have capacity however, would question their ability to cope with the demand as ofsted reports have been a concern recently
1.9	South of West Hallam	School Capacity	Lesley Foulkes	Response-00130	I don?t know if our village school is full to capacity, my children are too old so I don?t have contact with Scargill anymore but I do know that many of the children at the school come from outside our village. I know this because of the amount of traffic that comes into the village in a morning and at school end. Is there really capacity for children from a further 90 homes?
1.9	South of West Hallam	School Capacity	Lindsey Lyons	Response-00071	Scargill School already struggles to accommodate the school children that use the facilities, with the before and after school club already servicing notice on the school (vacating 20th June). Additional housing will create the need for more school places that I strongly believe Scargill cannot accommodate in its current form, coupled with the lack of wraparound care needs to be carefully considered as local childminders are already full. I do not see any reference to how the school has been considered, extreme careful planning is required to accommodate the needs of existing children and potential new children using the area.
1.9	South of West Hallam	School Capacity	Louise Annison	Response-01049	School is already running with larger class sizes, extra homes will just put increased pressure on children and staff.
1.9	South of West Hallam	School Capacity	Mandie frith	Response-00247	Over stretched as it is need more schools less houses
			Mark	Response-00164	Hardly big enough now never mind with more adjacent housing!
1.9	South of West Hallam	School Capacity	Mark Baker	Response-00110	Has there been a study done on the impact to local School places? Funding? Infrastructure?

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	South of West Hallam	School Capacity	Mark Power	Response-00276	Our son went to Scargill and could hardly cope then
1.9	South of West Hallam	School Capacity	Matt Haddon	Response-00696	Already very busy and popular school meaning that existing local residents may not be able to secure places for their children at the local school
	South of West Hallam	School Capacity	Matthew Lyons	Response-00061	The school is already full with years being mixed with negative feedback. How will the increase in potential demand be managed
1.9	South of West Hallam	School Capacity	Maureen Briggs	Response-00190	It could impact on school if it had to take more children .
1.9	South of West Hallam	School Capacity	Melanie Johnson	Response-01133	There is no school capacity roads always blocked green belt where my kids play not good for the village at all as it will increase anti social behaviour with over 100 homes.
1.9	South of West Hallam	School Capacity	Michelle	Response-00148	The school isn't big enough to cope with more intake this will then put pressure on teachers with class sizes increasing. More staff will be off sick with stress which in turn costs the council money in sick pay
1.9	South of West Hallam	School Capacity	Michelle Cox	Response-00138	The school is ridiculously full already I don't even send my own child there and I live in the actual village
1.9	South of West Hallam	School Capacity	Mr and Mrs Mellors	Response-01797	The local primary school is near capacity, and there are limited childcare and youth services available in the area. Adding more families without expanding essential services would place an unfair and unsustainable burden on current facilities, negatively affecting both existing and new residents.
	South of West Hallam	School Capacity	Mrs Caroline Hooton	Response-00231	School is already at capacity. How do they propose to give spaces to school age children
1.9	South of West Hallam	School Capacity	Mrs Glenda Orchard	Response-01490	Scargill school is full
1.9	South of West Hallam	School Capacity	Mrs Strelley	Response-00233	The school is busy. It will need to be able to take on more pupils. It is stretched already with special needs and additional support for pupils.
1.9	South of West Hallam	School Capacity	Nick Craddock	Response-00145	As per my comments for other West Hallam Proposal
	South of West Hallam	School Capacity	Nicola Elkington-Horridge	Response-00079	The school already has more than enough pupils, as does the preschool.
1.9	South of West Hallam	School Capacity	Nina Walters	Response-00244	Yes
1.9	South of West Hallam	School Capacity	Paul Aldred	Response-00152	Schools big enough
1.9	South of West Hallam	School Capacity	Paula Piggott	Response-01041	West Hallam has a small village school. It couldn't cater for more residents. You would be compromising the teacher / pupil ratio therefore compromising education taught and learnt.
1.9	South of West Hallam	School Capacity	Pauline Wood	Response-01100	Will the school be able to cope
1.9	South of West Hallam	School Capacity	Peter Lilley	Response-00161	Where are the potential 150 children going to be educated?
1.9	South of West Hallam	School Capacity	Rachel	Response-01015	Schools in the area are very small.
1.9	South of West Hallam	School Capacity	Rhonda Holt	Response-00237	Scargill school has classes of 37 already. The school cannot accommodate any more pupils.
	South of West Hallam	School Capacity	Richard Fearn	Response-00180	Scargill school already has very large class sizes.
1.9	South of West Hallam	School Capacity	Robert Reynolds	Response-00260	My understanding is that local schools (especially Scargill in this case) are already at capacity. I haven't seen anything to indicate new schools will be built.
	South of West Hallam	School Capacity	Rosemary Moorby	Response-00222	Understand the local adjacent school is already full.
1.9	South of West Hallam	School Capacity	Sam Richards	Response-01467	I do believe at this current time the primary school is not at its full capacity, however due to staff cuts and mixing classes, I believe all or at least most classes are at their capacity. There are no secondary schools in the village so residents have to apply to schools out of the area which can be very competitive some years.
1.9	South of West Hallam	School Capacity	Sarah James	Response-01085	I'm assuming the school is bursting at the seams.
1.9	South of West Hallam	School Capacity	Sarah Taylor	Response-00115	There is one school in WH which is of a good standard with my experience of my children going there both pupils and staff are very positive. However, they are stretched enough as it has 40 pupils to a class with a high amount of children needing special educational needs. They are recruiting more TA's to cope with demand.
	South of West Hallam	School Capacity	Scott Wright	Response-00089	The school is already busy and at capacity, the other local schools also do not have parking facilities for another 50 families.
1.9	South of West Hallam	School Capacity	Simon Reeve	Response-01080	There simply isn't enough resource for the children already attending school in the area. There hasn't been needed investment and it's only getting worse with needs for investment in SEND taking investment from the mainstream; they cannot cope with the demands already.
1.9	South of West Hallam	School Capacity	Sophie	Response-01105	The school is already at capacity
1.9	South of West Hallam	School Capacity	Stacey Eady	Response-01529	The school has capacity, it's the infrastructure around that school such as the road and the parking on Beech Lane for school drop off and pick up that I feel is the concern, winding the road for the possible new development will not help as they will still bottle neck further down the road at the recreation ground side. Other sites in West Hallam could also provide the school with more children.
1.9	South of West Hallam	School Capacity	Teresa Faulkner-Day	Response-00242	The school in the village is at capacity with no scope to expand.
1.9	South of West Hallam	School Capacity	Teresa Webster	Response-00086	Scargill school is already a large and busy school - I don't believe there is capacity or space for a potential large influx of children
1.9	South of West Hallam	School Capacity	Tracey Barks	Response-00111	This should be of great concern to the Authorities. The local school is already at capacity and the potential of 90 houses with families and children moving to the area would make the education provision unsustainable
1.9	South of West Hallam	School Capacity	Vicky Buckley	Response-00182	Already overcrowded
1.9	South of West Hallam	Traffic Congestion	Adam Spencer	Response-00054	Traffic during school times and at weekends when the football pitches are in use is already a nightmare, adding this extra development will make the problem even worse especially during the building phase of the development. Having plant machines and articulated lorries driving through an area which there are already restrictions in place on the roads for certain types of vehicles is unsafe and especially directly opposite the school
1.9	South of West Hallam	Traffic Congestion	Adam Willetts	Response-00083	Already too busy in the village

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Traffic Congestion	Alesha Johnson	Response-00783	The traffic and congestion through the village at peak times is already dangerous .I?m a resident in West Hallam and my daughter attends Scargill School. The roads and infrastructure in the village will not be adequate enough for this many houses to be built opposite the village school.
1.9	South of West Hallam	Traffic Congestion	Alice Johnson	Response-00093	traffic is already awful on this road during school pick up and drop off hours also at weekends when football tournaments are on
1.9	South of West Hallam	Traffic Congestion	Alison Fletcher	Response-00198	Beech Lane is already busy with increased traffic during peak times. Parking is hazardous at school start and finish times and further increased traffic will pose serious risk of incidents at this time.
1.9	South of West Hallam	Traffic Congestion	Alison Milner	Response-00120	The traffic situation is already terrible now, especially at school drop off and collection times. The infrastructure just isn't there to support this.
1.9	South of West Hallam	Traffic Congestion	Alison Reynolds	Response-00243	Congestion due to school and sports clubs already make it dangerous pulling out of Pavilion Court and driving along Beech lane
1.9	South of West Hallam	Traffic Congestion	Alistair	Response-01138	Already such a busy road and even more busy on school times
1.9	South of West Hallam	Traffic Congestion	Amy	Response-01031	Already nowhere to park for school drop off and pick up leaving Beech lane a one lane road. Lots of congestion on Beech lane at school times.
1.9	South of West Hallam	Traffic Congestion	Amy Cartwright	Response-01017	The residential roads in this area are already overloaded with traffic both in the week and at weekends. It would be a safety issue and an accident waiting to happen should more traffic be using this road
1.9	South of West Hallam	Traffic Congestion	Andrea Cochrane	Response-01485	The road is already at full capacity, especially during school drop-off/collection times. Trying to leave Hallam Way and travel along Beech Lane is nearly impossible at the moment without adding in extra vehicles from the proposed development and another junction opposite the school. If you add in to this the delivery vehicles heading into the estate at these times, nobody will be able to move. What then will happen if an emergency vehicle needs to get into the estate?
1.9	South of West Hallam	Traffic Congestion	Andrea Reed	Response-00123	Beech lane is terrible at school pick up time and when football is on as it is
1.9	South of West Hallam	Traffic Congestion	Andrew and Julie Douglas	Response-00146	Beech Lane is very congested already. Cars mount the pavement to get by parked cars. At school time and when there is football on the park the lane virtually comes to a stand still. Buses have to wait for cars to move before continuing their journey. Children have to cross the road between parked cars
1.9	South of West Hallam	Traffic Congestion	Andrew Zielinski-Raynor	Response-00135	Beech Lane is already very busy especially at school drop off and collecting times. Because of parked cars traffic it is already limited to a single lane causing extensive congestion as cars wait to get through adding more traffic coming from a third way would make this bad situation even worse.
1.9	South of West Hallam	Traffic Congestion	Andy Flindall	Response-01013	Traffic is already busy near the school adding more traffic that this site will do is an accident waiting to happen and smacks of greed over common sense
1.9	South of West Hallam	Traffic Congestion	Angela Reid	Response-00134	Beech Lane and surrounding roads are already very busy and congested
1.9	South of West Hallam	Traffic Congestion	Anita Lawrence	Response-00726	Traffic is a nightmare during school drop-off and pick up times, with vehicles, reducing Beech Lane to single track causing considerable delays for those entering and exiting the village. I have myself been very late for medical appointments due to the weight of traffic already using this Lane. Traffic outside peak school times is often backed up by the volume of parked vehicles using the playing fields and recreation area. It can be very difficult to enter or leave the village. I have witness some very frustrated residents trying to access their homes. The Dales shopping centre has limited parking causing congestion and difficulties for those wishing to use the centre facilities or visit the doctor.
1.9	South of West Hallam	Traffic Congestion	Anita Lawrence	Response-00726	There are also large delivery lorries servicing Tesco in The Dales causing further congestion and reducing available parking. Vehicles park on neighbouring roads adding to the general congestion of the area and again causing difficulties for those accessing their doctor or collecting medication. There are frequent lengthy delays at the crossroads at the top of St Wilfrid's Road with A609 and Mapperley Lane.
1.9	South of West Hallam	Traffic Congestion	Anna	Response-00112	It's already a heavily congested area that can't cope with any additional traffic that these new homes will bring
1.9	South of West Hallam	Traffic Congestion	Ann Ainsworth	Response-01096	Only two roads out of the village including the road where the development will take place. Frequent traffic jams on Beech Lane
1.9	South of West Hallam	Traffic Congestion	Anna Richardson	Response-00162	There is already a very dangerous situation outside the primary school. There have been multiple accidents due to traffic levels outside the school which is directly opposite the site
1.9	South of West Hallam	Traffic Congestion	Anne Vanstone	Response-01216	Beech Lane is not equipped to handle more traffic. The road is narrow, often reduced to a single lane due to parked cars. Local shops at The Dales are already oversubscribed, and the car park is often gridlocked. This puts additional strain on surrounding streets, many of which aren't built to support overflow parking. We lack a reliable bus service, and the nearest train connections are not easily accessible. This makes it almost certain that new households would rely on private vehicles for everything from commuting to basic errands. The knock-on effect on traffic and pollution cannot be ignored.
1.9	South of West Hallam	Traffic Congestion	Ann Toplis	Response-00271	Building here will make the traffic worse on Beech Lane near the school where it is already very bad at school times.
1.9	South of West Hallam	Traffic Congestion	A Redshaw	Response-00287	The area is not suitable due to The Road infrastructure
1.9	South of West Hallam	Traffic Congestion	Benjamin Price	Response-00257	Beech Lane is already busy road, with cars parked on both sides of the road often only allowing single file traffic through. There is no pedestrian crossing there and so causes a danger to pedestrians
1.9	South of West Hallam	Traffic Congestion	Ben Rodney	Response-00122	On school days, the road is congested as it is, let alone adding in at least another 90 cars
1.9	South of West Hallam	Traffic Congestion	Bruce Broughton	Response-01534	Beech Lane is limited in width and often congested ? both weekdays and weekends ? as a result of parking by football teams and others using Beech Lane Recreation Ground and by parents delivering or collecting children from Scargill School. The junctions at Beech Lane/Station Road, at Cat & Fiddle Lane and at the Millhouse and Mapperley crossroads already have regular traffic tailbacks due to the volume of traffic. It is understood that Derbyshire County Council's Highways Department acknowledged problems at these junctions when approached by the Parish Council about them a year or two ago. There are however no signs of any improvements in the pipeline to achieve improvements and this proposed further development will only make matters worse.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Traffic Congestion	Carl fox	Response-00067	Increased traffic especially during building.
1.9	South of West Hallam	Traffic Congestion	Carol Hart	Response-01829	The report even mentions facilities in the Dales shopping area, this again is not capable of taking more cars, already cars cannot park in the car park and they then park in the village centre causing congestion yet again. We are talking of 90 houses in the plan but with a safeguarded section adjacent, you might only be judging on the 90 but it is obvious once access was obtained then a further application would follow. It could mean up to 150 or more houses, even with one car per household that would be catastrophic but as we all know most houses now seem to have more than one car. The bus service is non-existent, 6 buses in each direction in a day and nothing before 9 a.m. or after 6.30 p.m. It means residents have to rely on their own transport. This Core Strategy was commenced when I was Leader at EBC and officers were tasked to list all possible sites in the Borough that might be used for development. Myself along with my Deputy and other Executive Members along with the Planning Team and Green Spaces visited every site and we consulted with Derbyshire County Council about any highway problems. I still have the feedback from DCC on the West Hallam Site, they acknowledge that access/egress to and from West Hallam is difficult, they mention the awkward Beech Lane/Station road junction, awkward to make safer, they then mention the T junction with Cat & Fiddle Lane, they commented that signalization but also admit the topography is not suitable. They then go on to mention the other two junctions, Millhouse crossroads and Mapperley cross roads and say work would need to be done on those junctions. Yes the number of houses being suggested are slightly different but the concerns still are relevant.
1.9	South of West Hallam	Traffic Congestion	Carolyn Wojtas	Response-01052	I live in Beech Lane and the parking and traffic is horrendous a lot of the time ~ school drop off and activities on the recreation ground which is nearly every evening and every Saturday and Sunday.
1.9	South of West Hallam	Traffic Congestion	Cat Hope	Response-00127	West hallam is a village, now soon will be an estate like oakwood! Traffic is horrendous, more so parking. Empty houses already on where the former white hart is. This once attractive village, will soon by awful. Ilkeston as the nearest town can't handle more traffic. Our villages are losing our green belt areas! Years ago Erewash would never budge, eg dale road stanley. We need to protect our green space! Soon will be none. Huge overcrowding happening. Criminal activity needs protection also! Our police can't cope as it is now.
1.9	South of West Hallam	Traffic Congestion	Cathy Bostock	Response-00181	Already problems with on street parking during school drop off/pick up and football matches
1.9	South of West Hallam	Traffic Congestion	Charles Brooks	Response-00535	The chosen site directly opposite Scargill School and adjacent to Beech Lane will significantly increase an already congested area particularly during school hours and most noticeably at the beginning and end of the school day. Beech Lane is not a normal width road and there are always instances of cars mounting the pavement near the school to get my. There will inevitably be more traffic congestion on Beech Lane as a result of the proposed development and the entrance on Beech Lane itself. Its clear to me that Councillors have not visited the site and I encourage them to do so. The development represents a serious health and safety issue so close to the primary school. Furthermore the centre of West Hallam which is approx. 100 yards away is continually busy with parked cars and through traffic. Even the occasional bus that comes into the centre often struggles to get through.
1.9	South of West Hallam	Traffic Congestion	Charlotte broughton	Response-01475	Too much traffic in area without the new houses
1.9	South of West Hallam	Traffic Congestion	Charlotte Lun	Response-00150	Traffic on Beech Lane especially and surrounding areas is dreadful particularly around school drop off and pick up times. Adding additional housing will only contribute to the chaos. The safety of the school children needs to be taken into consideration as the area is already an accident waiting to happen.
1.9	South of West Hallam	Traffic Congestion	Chris Collins	Response-00037	Beech Lane and surrounding streets (The Village, Hallam Way, Scargill Road etc) are extremely congested at school drop off and pickup time, often leading to buses being unable to pass along their routes. It is already dangerous for young children to cross the roads with the current level of traffic, this was obviously exacerbated a few years ago when DCC withdrew funding for the school crossing patrol. There couldn't be a worse place from a safely standpoint to build further housing than opposite Scargill School with the extra traffic that this would bring to the immediate area.
1.9	South of West Hallam	Traffic Congestion	Chris Reid	Response-00136	Beech lane area is already difficult to get through in mornings due to school
1.9	South of West Hallam	Traffic Congestion	Christine	Response-01019	Already huge parking problems in and around this area, especially during term times, making it impossible to see at junction
1.9	South of West Hallam	Traffic Congestion	Christine Barnes	Response-00640	Beech Lane is already a heavily congested lane with inconsiderate parking. So many working parents find it necessary to use cars to drop children off and pick up children after school and parking is already a massive problem. Anyone who has carried out a risk assessment must acknowledge the increased use of the lane, dodging between cars is a huge hazard for children and indeed parents with pushchairs. Ninety plus houses will inevitably mean quite a number of children will have to cross the lane to the new houses.
1.9	South of West Hallam	Traffic Congestion	Christine Barnes	Response-01827	Beech Lane is a narrow lane which is already heavily used by traffic entering and leaving the village. Additional traffic from the development will also impact on junctions at Station Road, Millhouse Garage, St Wilfrid's Road and High Lane West, which already are very busy junctions.
1.9	South of West Hallam	Traffic Congestion	Christopher Chambers	Response-00172	The local authority should carry out traffic frequency surveys on Beech Lane at the following times: Mon-Fri 0830 - 0930am Mon-Fri 1500 - 1600pm Sat-Sun 0930-1130am Sat-Sun 1300-1700pm This should illustrate the existing traffic conditions that cover school entry/exit and use of the recreation ground over the course of a typical week. The survey needs to be when both cricket and football seasons are in progress and during term times. This illustration will highlight the folly of granting consent to a development of houses that is likely to add 100+vehicles at some or all of the proposed times.
1.9	South of West Hallam	Traffic Congestion	Claire dean	Response-00069	Beech lane is a very well used narrow road, the site opposite is home to west hallam football club and host many games, the traffic congestion is already a concern so adding to this is ludicrous.
			Connor Gratton	Response-00232	Traffic is already very congested. Further traffic will be untenable
1.9	South of West Hallam	Traffic Congestion	Craig Johnston	Response-00234	Roads not adequate

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Traffic Congestion	Daniel Clark	Response-01094	Traffic Congestion The Village is already busy with poor access at school and busy times. The parking in and around the village is dangerous and congested
1.9	South of West Hallam	Traffic Congestion	Daniel hickson	Response-00177	Very busy road especially when school starts and ends
1.9	South of West Hallam	Traffic Congestion	Daniel Stanbridge	Response-00099	The village is already busy
1.9	South of West Hallam	Traffic Congestion	Dave Stone	Response-00140	The area in question is already a bottle neck at key school times and is often dangerous due to parked cars.
1.9	South of West Hallam	Traffic Congestion	David Fretwell	Response-00133	Already lots of complaints due to heavy congestion at school times plus recreational use at weekends. Adding further volume could potentially grid lock beech lane
1.9	South of West Hallam	Traffic Congestion	David Henfrey	Response-00118	Beech land already very unsafe at school times
1.9	South of West Hallam	Traffic Congestion	David Morrell	Response-00477	Traffic is an issue around the village centre and this development will further impact on this and impact on the West Hallam Conservation area
1.9	South of West Hallam	Traffic Congestion	David Mosley	Response-01062	Beech lane is already really bad for parking around school drop off and pick up and even on weekends when there is football on the field as the parents have nowhere to park other than Beech Lane
1.9	South of West Hallam	Traffic Congestion	David Richards	Response-01465	Traffic is a key concern. School drop-off / pick-up times are chaotic and all of Beech Lane is effectively reduced to a single track lane. This will be worsened by the proposal. It will also affect surrounding villages and access for service and emergency vehicles.
1.9	South of West Hallam	Traffic Congestion	Dean Wright	Response-00094	Increased traffic in an already busy area, particularly at the start and end of the school day
1.9	South of West Hallam	Traffic Congestion	Diane Reynolds	Response-00216	It's already a very busy road to have more cars would not help. The traffic is already bad trying to get out of the villages. With queues are already bad on st Wilfred, station road and cat and fiddle cross roads. With most family's having at least 1 car this is a concerned that this will only get worse. Even with currently families in the village as their kids get older this will already increase as there will then be more people with cars so adding to this with more houses is a real concern. The congestion at the shops is getting even worse already with the car park being full and spilling over onto the road
1.9	South of West Hallam	Traffic Congestion	Dominic Tye	Response-01016	The development will dramatically increase the volume of traffic in our village which will have a detrimental impact on all those who live in our gorgeous village.
1.9	South of West Hallam	Traffic Congestion	Ebony Eaves	Response-01497	Beech Lane can?t cope with any more traffic, there?s limited bus links, It is already really congested at peak times and when recreation ground in use and it also has a huge affect on the wildlife and the village amenities
1.9	South of West Hallam	Traffic Congestion	Eileen Bailey	Response-01053	Traffic is terrible overcrowding
1.9	South of West Hallam	Traffic Congestion	Emily Reeve	Response-01495	The area is already very busy at times. Often with people parking the entire length of the road making it into a road where only one car can drive. There is limited visibility from one end of the parked cars to the other causing vehicles to come from both directions which causes back ups of traffic.
1.9	South of West Hallam	Traffic Congestion	Emily Reynolds	Response-00149	Traffic is bad enough around the village already especially at school pick up time. West Hallam does not have the road infrastructure to support more homes. Building houses will without a doubt cause crashes and will make it much much harder to get around the village. The road/connection on beech lane you have planned will not be enough to offset this.
1.9	South of West Hallam	Traffic Congestion	Emma Lound	Response-00187	Beech Lane is already heavily congested during the day. On road parking, the school, the main turning into the estate and the already heavily congested routes into West hallam already struggle to cope. At school times there are hundreds of children and their parents in the area. More cars and another junction will mean higher risks. I already find it dangerous to turn on to my drive at the junction of Beech Lane and Station Road and even more traffic will increase the risk to myself and other users of Beech Lane.
1.9	South of West Hallam	Traffic Congestion	Emma Newsham	Response-00117	Beech lane is already externally congested at school pick up and drop offs and when the field is in use for football
1.9	South of West Hallam	Traffic Congestion	Emma Stanley-Smith	Response-01564	Serious concerns around traffic congestion and children?s safety. Junction and surrounding roads already extremely busy during key times. This development could endanger a child?s life.
1.9	South of West Hallam	Traffic Congestion	Fiona Petrie	Response-00274	At school start and closing times this road and those around it is already congested. Adding more traffic to this area is ludicrous.
1.9	South of West Hallam	Traffic Congestion	Francesca Dean	Response-00221	Beech lane is chaos at all times of the day. There is no parking for houses that already exist, for school, for football, for cricket, for anything. You can barely pass the parked cars. The pavement is too thin either side and dangerous.
1.9	South of West Hallam	Traffic Congestion	Gary Hamson	Response-00052	The proposed entrance to the site is directly opposite the main entrance to the school on what is one of two roads out of the village, the other being St Wilfred?s Road. The road is gridlocked from around 8-30am to 9-15am and from 2-50 pm to 4-00pm Has the site been visited by any of the planning dept who chose this site ??
1.9	South of West Hallam	Traffic Congestion	Gillian Bosworth	Response-00921	Already extremely busy / jams at school times.
1.9	South of West Hallam	Traffic Congestion	Gilly Turrini	Response-00151	This road is already a parking and traffic hazard due to the school and existing road junction . Also site traffic will be hazardous
1.9	South of West Hallam	Traffic Congestion	Glenn Richardson	Response-00316	Beech lane is already a highways nightmare. parking (especially at school time ) is at best dangerous..Numerous accidents have occurred involving both pedestrians & vehicles..It?s a miracle no child has been seriously injured ..All week the park is in constant use with especially grassroots football which again causes traffic problems with very often cars parked along the whole of beech lane ..Anyone with any common knowledge would realise that any sort of developments on the land would add to the problems.
1.9	South of West Hallam	Traffic Congestion	Graeme Taylor	Response-01131	Beech lane is already heavily congested this is a safety hazard and will endanger life if new development goes ahead
1.9	South of West Hallam	Traffic Congestion	Guiliano Ricci	Response-01010	Traffic already very busy especially at school times and football time Very dangerous for children and families
1.9	South of West Hallam	Traffic Congestion	Heidi Spencer	Response-00189	Beach lane is already heavily congested especially on school drop off and pick up, adding these houses into the mix will make it a lot worse
1.9	South of West Hallam	Traffic Congestion	Helen Blackwell	Response-00456	Beech Lane is always congested, especially at school drop off and pick up. At minimum a car park for parents would be needed.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Traffic Congestion	Helen Collins	Response-00034	Beech Lane is already a busy road through the village. It is particularly congested at peak times of the school day and sports sessions on Scargill Recreation Ground. To add another possible 90 - 180 cars exiting onto this already busy road would not only be dangerous, but also cause unacceptable levels of congestion in the immediate area and at the main exit points in and out of the village, St. Wilfreds Road and Station road onto Hight Lane and Beech Lane onto Station Road.
1.9	South of West Hallam	Traffic Congestion	Helen fox	Response-00064	The village is too small to take on that much more traffic which would likely lead to more accidents in the narrow village. School time is already horrendous as it is for parking never mind adding more cars to the scenario it would just be a waiting game for a child to become injured crossing to get to school.
1.9	South of West Hallam	Traffic Congestion	Helen Johnson	Response-00170	Traffic is horrendous already in morning rush hour . Parking for the school is a real safety issue
1.9	South of West Hallam	Traffic Congestion	Helen Patenall	Response-00868	Beech Lane is a congested area of West Hallam, particularly at the start and end of the school day and at the weekends when the Powtrell recreation ground is being used. Cars are parked on both sides of the road. I have witnessed on several occasions drivers approaching the village 'running the gauntlet' from the end of the parked cars (near to Pavilion Court T -junction) at some considerable speed to get past the parked cars and onto the village before the approach of oncoming traffic. This driver behaviour is putting children and their parents at risk and is quite the reason why the village speed-watch has to operate in this area. Building more properties will increase the volume of traffic at the congested times even more thus adding more risk to pedestrians in the area.
1.9	South of West Hallam	Traffic Congestion	Helen Stanley	Response-01555	The village can't cope with the though traffic currently. The number of houses proposed could add another 240 to already narrow roads and bust junctions with the village itself and at the major junctions to high lane and at station road to Stanley
1.9	South of West Hallam	Traffic Congestion	Helen Vickeds	Response-00062	This area is very close to the school which already is a traffic black spot at the start and end of school. The roads become heavily blocked with parked cars which will be increased with more junctions in and out of Beech Lane
1.9	South of West Hallam	Traffic Congestion	Holly Mohamed	Response-00076	Increased Traffic: The addition of approximately 90 homes will significantly increase traffic on Beech Lane and surrounding roads. Currently, these roads are already experiencing congestion, particularly during peak hours. The increased traffic could lead to longer commute times and increased frustration for current residents. Infrastructure Strain: The existing road infrastructure may not be equipped to handle the additional traffic. This could lead to potential bottlenecks and delays, especially at key junctions and intersections. The increased wear and tear on the roads could also result in higher maintenance costs for the local council.
1.9	South of West Hallam	Traffic Congestion	Homewood	Response-01074	Already issues on main roads, not enough routes through to main towns. Will be especially bad at school drop off times
1.9	South of West Hallam	Traffic Congestion	Iain Harrison	Response-01214	Traffic congestion is also a major and growing problem. The village shop car park is consistently overflowing, and the road leading up to St Wilfrid's Church is lined with parked cars on both sides, reducing it to a narrow and often dangerous route. Beech Lane is effectively a single-lane road much of the time, due to constant on-street parking near the park. Adding more housing in this location will dramatically worsen an already chaotic traffic situation. It is unthinkable that further development is even being considered in such an overburdened area. The idea of building more homes on greenbelt land in a village already at capacity is not just short-sighted?it?s a gross failure of proper planning and governance.
1.9	South of West Hallam	Traffic Congestion	Ian Brown	Response-00163	too near school , parking at school would cause serious conjection at shool times
1.9	South of West Hallam	Traffic Congestion	Iris Howes	Response-01169	Beech Lane is not equipped to accommodate the traffic levels this development would bring. It becomes gridlocked during school runs
1.9	South of West Hallam	Traffic Congestion	Jack	Response-00278	Already this road is terrible for traffic and key times of the day. The increased housing will add further stress on the road etc
1.9	South of West Hallam	Traffic Congestion	Jacqueline Shakh	Response-00095	Too much traffic now
1.9	South of West Hallam	Traffic Congestion	Jade Harland-Toomer	Response-00217	The traffic outside of the school now is dangerous adding housing opposite will make this worse
1.9	South of West Hallam	Traffic Congestion	James Johnson	Response-00183	West Hallam suffers from congestion on and off the estate currently and a further 90 homes could see up to 180 cars. I don?t oppose building in the area but a new traffic entrance onto the estate needs to be provided.
1.9	South of West Hallam	Traffic Congestion	James Morris	Response-01060	There is already too much traffic joining other nearby areas
1.9	South of West Hallam	Traffic Congestion	James Painter	Response-01119	The chosen site is situated opposite vehicular entrance to the infants and primary school,Beech Lane is relatively narrow road that is very congested much of the time.With access and exit to the village only possible by the Station Road/Beech Lane junction or High Lane/St. Wilfrids Road cross roads these junctions are already extremely congested with several accidents occurring in the recent past .With the addition of probably upwards of more than 100 cars this can only exacerbate the situation.
1.9	South of West Hallam	Traffic Congestion	James Tilford	Response-00103	Increased traffic at an already busy junction
1.9	South of West Hallam	Traffic Congestion	James William Allen	Response-01280	Having lived in the area for 52 years, I can confidently state the Beech Lane is already a notorious traffic bottleneck due - primarily - to parking for Scargill school and the adjacent playing fields. If this site is chosen, clearly that problem would be exacerbated. Two possible mitigations spring to mind: 1) stipulating that the developers have to provide a free car park for general use in the vicinity of Scargill school; 2) providing road access to the site from Station Road to the west, as well as from Beech Lane to the north.
1.9	South of West Hallam	Traffic Congestion	Jane Marshall	Response-01172	To even consider access onto Beech Lane, is honestly ridiculous and opposite a primary school is crazy.
1.9	South of West Hallam	Traffic Congestion	Jane Taylor	Response-01023	Beech lane is already congested and as it is the main entrance to the primary school, increased traffic will be a hazard and a danger to the school children. The road through the village is also very narrow and restricted with a very tight corner at the church entrance.
1.9	South of West Hallam	Traffic Congestion	Jane Zielinski-Raynor	Response-01095	Beech lane already too busy, no capacity for more traffic
1.9	South of West Hallam	Traffic Congestion	Jennifer Noble	Response-01012	School pick drop off / pick up is already a hazard I'm surprised no one has been killed yet as it is it'll only add to the congestion. The village can't cope with it
1.9	South of West Hallam	Traffic Congestion	Jenny Butler	Response-00202	Parking along Beech Lane is already a massive issue at school times, during football matches and community events. This development will make it far worse
1.9	South of West Hallam	Traffic Congestion	Jenny Stanbridge	Response-00088	Near a school so deemed unsafe
1.9	South of West Hallam	Traffic Congestion	Jessica Rogers	Response-01524	This area is already constantly congested at school times. Further houses will increase that congestion and increase risk to life

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Traffic Congestion	Jo-Anne Attenborough	Response-00129	Around school is already very busy and congested, parking along Beech Lane is extremely hazardous already. Adding more roads, cars and people will result in accidents and most likely fatalities.
1.9	South of West Hallam	Traffic Congestion	Joe Rice	Response-00063	Traffic on Beech Lane at school times and weekends when football is on the recreation ground is already a big problem. Cars are constantly forced to mount the kerbs to get through and the additional housing is going to make this much worse. Beech Lane is the main route out from this site and in my opinion it can't accommodate more traffic.
1.9	South of West Hallam	Traffic Congestion	Johnson	Response-01037	West Hallam traffic already extremely busy especially in the proposed area, excess/exit to west Hallam already an issue. Beech lane extremely congested already, more so at school times and the activities on the recreation ground.
1.9	South of West Hallam	Traffic Congestion	Jonathan moon	Response-00273	Beech lane at school and community football times in the week and at wkds that road can easily become gridlocked adding 90 houses that would need access to beech lane is not a safe and suitable idea. This would need a very detailed highway assessment most houses have 2 cars so another 180 cars ro an already tricky road is not ideal
1.9	South of West Hallam	Traffic Congestion	Jonathan Purkis	Response-00159	The traffic in Beach Lane is already an issue. Especially during school drop off/pick up times. Also during the regular sporting events held on then community field and whenever there is an event in the village. Given that Beach Lane is one of only two primary routes out of the village this will make the traffic situation significantly worse and more dangerous for residents/visitors.
1.9	South of West Hallam	Traffic Congestion	Jonie centro	Response-00730	parking in this area is already difficult
1.9	South of West Hallam	Traffic Congestion	Jon Skelson	Response-01025	The traffic is already horrendous around school drop off and pick up times. Also, generally, this area is already hugely busy. We really do not need to add to this.
1.9	South of West Hallam	Traffic Congestion	Josh August	Response-00084	Getting in and out of West Hallam is already a nightmare, let alone more houses being built
1.9	South of West Hallam	Traffic Congestion	Judith Hare	Response-01014	It?s already a nightmare on beech lane without lots more cars that will come from 90+ houses. It?s dangerous to drive and walk and if you live on beech lane you cannot get in and out of your drive easily.
1.9	South of West Hallam	Traffic Congestion	Julie August	Response-01064	This area is often congested already
1.9	South of West Hallam	Traffic Congestion	Julie Harbon	Response-00022	Traffic is awful along Beech Lane now. It is a bus route, it is the main access to Scargill School, the main route to the shops and doctors, and people use it as a cut through to get to the top of St. Wilfred?s to get onto High Lane. There is no doubt that additional housing will further compound this problem , particularly during the building phase.
1.9	South of West Hallam	Traffic Congestion	Julie Harker	Response-01073	The traffic at certain times of the day is bad enough already especially when cars are parked up for events on the park, eg football matches. Also at school pick up and drop off and events.
1.9	South of West Hallam	Traffic Congestion	Julie Stewardson	Response-00282	Beech Lane is already a nightmare with parked cars using the recreation ground and Scargill School. The left turn from Station Road onto Beech Lane is already quite dangerous and very very busy. Sometimes you can wait ages to turn right from Beech Lane
1.9	South of West Hallam	Traffic Congestion	Julie Wright	Response-00091	There is a lot of traffic already
1.9	South of West Hallam	Traffic Congestion	Kara walters	Response-00258	Beech lane is a danger hazard already traffic wise
1.9	South of West Hallam	Traffic Congestion	Karen Squire	Response-01040	In a weird way this may have a positive impact on traffic congestion as there will be more parking available for school drop offs and pick ups. Residents may not like people parking outside their house but as someone who grew up living opposite a school it?s just one of those things
1.9	South of West Hallam	Traffic Congestion	Karina Cooper	Response-00267	Already experiencing heavy traffic and dangerous to add to this
1.9	South of West Hallam	Traffic Congestion	Katherine Earley	Response-01075	With the school it?s dangerous and adding more cars to the mix would grid lock the area and would be unsafe. There have been a number of near misses already.
1.9	South of West Hallam	Traffic Congestion	Kathryn Fearn	Response-00100	It is already extremely difficult to druve in Beech Lane, due to school traffic and cars parking on the road for the beech lane recreation park.
1.9	South of West Hallam	Traffic Congestion	Kathryn Gilbert	Response-01574	Beech lane is already congested with school traffic and when football matches in progress at the playing field opposite development.
1.9	South of West Hallam	Traffic Congestion	Katie	Response-00047	Parking at school times alone beech lane and Hallam way onto Scargill road is dangerous and already too many near misses with cars, pedestrians and most importantly school children. The traffic at peak times to get off west Hallam is already concerning and at peak.
1.9	South of West Hallam	Traffic Congestion	Katie Rice	Response-00036	Beech lane is already congested and unsafe at school times and when any sporting event etc is happening on beech lane! The village only has 2 entrance/exits which are already unable to cope with the traffic
1.9	South of West Hallam	Traffic Congestion	Kay	Response-01030	Already vehicles everywhere on that main road we make it even worse
1.9	South of West Hallam	Traffic Congestion	Keith Atkinson	Response-01050	Beech Lane is already highly conjested, particularly at school time. Buses and large vehicles often have great difficulty navigating along there.
1.9	South of West Hallam	Traffic Congestion	Ken Mitchell	Response-00763	Beech lane is infamous locally for traffic congestion. The road is narrow and , at certain times of the day, parked cars on the school side of the road enable traffic to flow in one direction only. This causes tailbacks towards the village and the junction of Station road. The problem is exacerbated by the fact that it is also a bus route. I have witnessed buses being unable to proceed down Beech lane ,near the school, and cars having to mount the pavement as a result of the road being obstructed by parked cars. The existence of an additional junction and a major increase in traffic so close to a primary school is a serious health and safety issue. I believe that this site has been turned down on numerous occasions for this very reason.
1.9	South of West Hallam	Traffic Congestion	Ken Musson	Response-00900	After years of rejections on planning, why has now this land been considered when nothing has changed. In fact, there are strong arguments to say that the area has got worse in terms of traffic levels and lack pf parking in the area. Beech Lane is not the required width of road for modern day traffic numbers, residents there must park on the road due to lack of drive space. The village in extremely congested with parking on one side of the road from Beech Lane all through the village and onto the top of St Wilfrid?s Rd
1.9	South of West Hallam	Traffic Congestion	Kerry	Response-01034	Enough congestion already., especially around school times. New houses = more cars. Small village roads. Buses struggle to get through as it is.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	South of West Hallam	Traffic Congestion	Kerry Barratt	Response-00168	Beech Lane is crazy at school times and weekend football matches
1.9	South of West Hallam	Traffic Congestion	Kerry Middleton	Response-00266	The traffic is already busy and chaotic within this village and this proposal would be detrimental.
1.9	South of West Hallam	Traffic Congestion	Kevin Fox	Response-00682	Congestion is already at a peak and further housing will bring chaos and increase accidents. There's only 2 access roads into the village. If the plans go ahead an additional road access other than off station road into beech lane and at mapperley cross roads to st Wilfred's will need to be added..
1.9	South of West Hallam	Traffic Congestion	Kian	Response-01493	Beech Lane gets really congested, especially when school times are. Adding more houses will just worsen the traffic
1.9	South of West Hallam	Traffic Congestion	Kirsty Oliver	Response-00558	I regularly visit my parents in west hallam and already find it difficult on many occasions to negotiate traffic on beach lane due to traffic. Due to football which is in the week and weekends and school traffic.
1.9	South of West Hallam	Traffic Congestion	Kristen Hamilton	Response-00209	There is high traffic congestion as it is without the need for more
1.9	South of West Hallam	Traffic Congestion	Laura Egglestone	Response-01027	Beech lane is already contested at peak times - during school drop off/ pick up and whenever the recreation ground is used. Cars often mount the curbs due to the parking and the build up of traffic. This makes it unsafe for pedestrians and we personally had a near miss with our children and a police account was raised. It also blocks buses and emergency vehicles Car parking is also a concern nr The Dales, with the parking often spilling out into the village causing more issues. Photos and videos can be provided upon request. The effects on neighbouring villages should also be considered.
1.9	South of West Hallam	Traffic Congestion	Lindsey Lyons	Response-00071	The traffic congestion on beech lane and surrounding areas are already heightened with existing households already having multiple vehicles. Parking on beech lane is already at a dangerous level, I have witnessed multiple near misses of not only vehicle collisions but children being run over through poor visibility. Adding additional traffic to this location is extremely concerning.
1.9	South of West Hallam	Traffic Congestion	Louise Annison	Response-01049	The traffic is already horrific for this area, I avoid that area at certain times of the day already because of how busy the village is. Adding 90 extra homes would be horrendous and even more dangerous.
1.9	South of West Hallam	Traffic Congestion	Louise Hunt	Response-01032	Traffic is already poor at school pick up and drop off times.
1.9	South of West Hallam	Traffic Congestion	Louise williams	Response-01011	There's too much traffic as it is. School times are already dangerous People that live in the village still drive their children to school, they park over driveways blocking people in. The school isn't big enough for more children
1.9	South of West Hallam	Traffic Congestion	Lucy corrigan	Response-00142	That road is already busy with school drop offs either side
1.9	South of West Hallam	Traffic Congestion	Mandie frith	Response-00247	It's already terrible for traffic and around the school isn't easy to manoeuvre. Accident waiting to happen
1.9	South of West Hallam	Traffic Congestion	Margaret Lewis	Response-01499	As a community the road already gets congested by traffic especially at peak times this will Further cause more delays and pollution due to stationary cars
1.9	South of West Hallam	Traffic Congestion	Mark	Response-00164	Already a stalom between parking at most times of day on Beech Lane and many heated arguments about access.
1.9	South of West Hallam	Traffic Congestion	Mark Baker	Response-00110	Beech lane is already blocked at school drop off periods as well as when the sports field is in use. Additional housing will make this situation even worse
			Mark Mason	Response-01194	Traffic is already very bad without this development.
1.9	South of West Hallam	Traffic Congestion	Mark Newton	Response-00179	This road already gets snarled up with traffic at peak moments during the day, with high volumes of speeding traffic 40mph+ at other times; it's congested with parking on weekends due to sports events on the playing field. To add more housing here is going to make things spectacularly worse.
1.9	South of West Hallam	Traffic Congestion	Mark Patenall	Response-00851	Beech Lane is already frequently jammed with a line of parked vehicles for it's whole length . The line of sight is restricted making navigation without meeting an oncoming vehicle very difficult. More traffic will only make the situation worse. The Dales shopping area car park is always full so the village will be even more busy with parking
1.9	South of West Hallam	Traffic Congestion	Mark Perrin	Response-00223	90 properties will equate to an average of between 180 -270 vehicles accessing beech lane which is not equiped to cope especially as road parking outside the school and playing field is already a constant problem. Additional off road parking needs to be provided by the developers as part of the plans for approx 40 vehicles to ensure beech lane is clear at all times.
1.9	South of West Hallam	Traffic Congestion	Mark Power	Response-00276	Traffic through Beech lane is already busy. Beech Lane is very busy through out the day with school pick ups, football team and this causes congestion and for people to mount kerbs and speeding to get past parked cars
1.9	South of West Hallam	Traffic Congestion	Matt Haddon	Response-00696	The proposed site would significantly increase the volume of traffic around the village which is already very congested at times. The T junction at the end of Beech Lane where it joins Station Road is already a problem junction at time and the significant increase in traffic from this site would make that significantly worse with increased congestion in the area. This is also likely to result in an increase of cars driving through the village to try to exit the estate via St Wilfreds Road, which again can be very congested with long queues at peak times. The village and estate are not capable of dealing with this extra volume of traffic due to only have the two roads in and out.
1.9	South of West Hallam	Traffic Congestion	Matthew Lyons	Response-00061	Traffic bad especially around school times making it's dangerous for home owners and children.
1.9	South of West Hallam	Traffic Congestion	Maureen Briggs	Response-00190	Traffic is terrible at school times with parking and parking is a nightmare at times. There is parking at the Tesco shopping area but sometimes even that is full. So more cars will make that a bigger problem.!!
1.9	South of West Hallam	Traffic Congestion	Max Egglestone	Response-01278	The current road infrastructure around Beech Lane is not designed to accommodate additional traffic. The lane itself is narrow and often obstructed by parked vehicles, creating bottlenecks during school hours and at weekends. The additional traffic will also impact neighbouring villages such as Stanley and Stanley Common both with schools on the main routes through. Also, the larger vehicles which would be required during the development would cause absolute chaos. Shops at The Dales are already under strain, with frequent congestion in the car park and surrounding streets. Introducing a high number of additional households without expanding local services will result in overcrowding and frustration.
1.9	South of West Hallam	Traffic Congestion	Max Longdon	Response-00128	The village is already far too busy. Speeding cars and dangerous levels of congestion. This being planned on a road with the school on which already is dangerous at busy periods is not for a small village

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	South of West Hallam	Traffic Congestion	Michael Earley	Response-01039	It's dangerous at multiple times of day. This would cause absolute gridlock to surrounding roads
1.9	South of West Hallam	Traffic Congestion	Michelle	Response-00148	Traffic is awful down the road, many parking. School hours make it dangerous.
	South of West Hallam	Traffic Congestion	Michelle Cox	Response-00138	Traffic is mayhem at school time
1.9	South of West Hallam	Traffic Congestion	M Mcfartane	Response-00147	Traffic is already congested in this area when schools open/close or have events and football games are being played? this will impact road safety in a huge way with more cars in and out of West Hallam
1.9	South of West Hallam	Traffic Congestion	Mr and Mrs Wood	Response-01826	Having lived in West Hallam for over 40 years and having our children attend Scargill School I have witnessed how increasingly busy Beech Lane becomes around school time and at weekends during football
1.9	South of West Hallam	Traffic Congestion	Mrs Bird	Response-00045	The village centre of West Hallam lies along Beech Lane, which is narrow with parked cars along its length, especially during school run times. In addition, the lane itself is not wide enough for further traffic from a new development. The junctions of station road and beech lane is on a blind bend, further traffic would only worsen this. In addition, traffic through Stanley and Stanley Common would in read with traffic cutting through. The junction of station road and cat and fiddle is incredibly tight, busy and visibility is terrible. More traffic would compound these issues.
1.9	South of West Hallam	Traffic Congestion	Mrs Caroline Hooton	Response-00231	This area is already a busy area at peak times. To add extra traffic at an already busy junction near a school would add congestion resulting accidents
1.9	South of West Hallam	Traffic Congestion	Mrs Glenda Orchard	Response-01490	Have to queue haphazardly at school times
1.9	South of West Hallam	Traffic Congestion	Mrs Judith Pittson	Response-00753	Beech lane is narrow and very congested particularly when the playing field is being used and at the start and end of the school day. Pavement parking often happens meaning wheelchairs and pushchairs can't use the pavement.
1.9	South of West Hallam	Traffic Congestion	Mrs Strelley	Response-00233	Extra traffic would be dangerous. There is a school on Beech Lane. Parking is already at a premium.
1.9	South of West Hallam	Traffic Congestion	Natalie Payne	Response-01523	Traffic around the school is already at dangerous levels.
1.9	South of West Hallam	Traffic Congestion	Neil Fletcher	Response-01063	Congestion is already bad at school drop-off and collection times. Adding more houses here will only make things worse.
1.9	South of West Hallam	Traffic Congestion	N Gregory	Response-01066	Traffic is already an issue during the week especially around the school. Either junction onto the main road at high lane are notoriously difficult to exit. Possibly a mini roundabout at the millhouse jct would ease this?
1.9	South of West Hallam	Traffic Congestion	Nick Craddock	Response-00145	As per my comments for other west Hallam Proposal
1.9	South of West Hallam	Traffic Congestion	Nicola Elkington-Horridge	Response-00079	Already too much traffic in the village and around school. This would put all children and their families in danger everyday.
1.9	South of West Hallam	Traffic Congestion	Nicola holmes	Response-01168	Already a nightmare on beech lane
1.9	South of West Hallam	Traffic Congestion	Nicole Brookman	Response-01559	The traffic is really bad in this area already, especially during school pick up time and drop off. You can not drive down beech lane. You also can not park outside your house during this time outside your own house. The traffic in and out of tescos is really bad and you often can not get a space, it is dangerous so it doesn't need any more cars needing these facilities. The main junctions out of west hallam can be very busy and dangerous and there have been several crashes i am aware of getting out of the village near the bottle kiln on high lane.
1.9	South of West Hallam	Traffic Congestion	Nina Walters	Response-00244	Beech Lane is already congested and dangerous when parked cars are there at school times and when football matches take place on the recreation ground / events in the village.
1.9	South of West Hallam	Traffic Congestion	Pamela Fox	Response-01242	Traffic is already at a peak and further housing will bring chaos and increase congestion. There are only two access roads into the village. If plans go ahead an additional access road needs to be considered.
1.9	South of West Hallam	Traffic Congestion	Patricia Eady	Response-00114	Beech lane is a busy rd especially at pick up and drop of at the school making it really hard to get up and down the rd especially when emerging from existing drive ways I dread to think what the congestion would be like if the proposed site goes ahead
1.9	South of West Hallam	Traffic Congestion	Patrick Barber	Response-00280	The proposed development will increase traffic congestion in the area.
1.9	South of West Hallam	Traffic Congestion	Patrick Hynes	Response-01902	Beech Lane, while technically a two-way road, lacks the width and capacity to handle any notable increase in traffic. It was built for the original size of West Hallam and now struggles to cope with the volume of vehicles ? particularly at school drop-off and pickup times, when parked cars reduce access and force drivers onto pavements. The junctions surrounding Beech Lane, including Station Road and Cat and Fiddle Lane, already experience regular congestion. Adding more cars from over 90 homes will severely worsen safety and flow.
1.9	South of West Hallam	Traffic Congestion	Paul aldred	Response-00152	It's a death trap now
1.9	South of West Hallam	Traffic Congestion	Paula Piggott	Response-01041	There is already too much traffic. This is a small village. There is a school and many bungalows with pensioners. It is a accident waiting to happen. Also dog walkers, horse riders and lots of wildlife. Seriously someone will get hurt. It is a small village and more traffic flow will have such a detrimental impact.
	South of West Hallam	Traffic Congestion	Pauline wood	Response-01100	Beech Lane gridlocked on occasions already. Not safe for children having more traffic. No pavement. Road narrow
1.9	South of West Hallam	Traffic Congestion	Peter Lilley	Response-00161	Beech Lane is already heavily congested/ impassable when cars are parked near the Recreation ground and school. An extra 90 homes will create gridlock.
1.9	South of West Hallam	Traffic Congestion	Pete Vanstone	Response-01164	Beech Lane is a narrow, substandard road with limited visibility and inadequate width for the volume of traffic it currently supports ? let alone any increase. At peak times, including school drop-offs and when the nearby recreation ground is in use, traffic grinds to a halt. The car park at The Dales shopping area is often overwhelmed, with overspill parking frequently clogging up adjacent streets. It is already challenging to access local services due to this. The proposed development would create an untenable situation for both current and future residents.
1.9	South of West Hallam	Traffic Congestion	Philip Davies	Response-01116	The traffic on Beech Lane is already close to chaotic during school run times and also when football matches and training takes place during evenings and weekends. More housing will no doubt add to this problem.
	South of West Hallam	Traffic Congestion	Phil Sloan	Response-01038	Already far too much traffic flowing through the village which causes congestion
1.9	South of West Hallam	Traffic Congestion	Rachel	Response-01015	This little village already has too much traffic flowing. The school parking/traffic is already an issue for such a small village.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Traffic Congestion	Rebecca Ricci	Response-00102	At school times Beech Lane is already dangerous for children and their families with parked cars and traffic entering and leaving the village. With only two routes to enter and exit the village, we don't need anymore traffic.
1.9	South of West Hallam	Traffic Congestion	Rhonda Holt	Response-00237	Roads in West Hallam are at capacity especially at rush hour. There are only three exits out of West Hallam and these will be overstretched.
1.9	South of West Hallam	Traffic Congestion	Richard Brewell	Response-01028	Beech Lane is already congested, busy and narrow. Any further housing will only exacerbate this in the area. Further, parking is also congested around West Hallam village, and wider and this will also be made worse.
1.9	South of West Hallam	Traffic Congestion	Richard Fearn	Response-00180	Beach lane is already tight and very busy around school time.
1.9	South of West Hallam	Traffic Congestion	Richard Walters	Response-00546	Core Strategy Review Amendment - Public Consultation In response to your call for comments on the Core Strategy Review Document I hereby submit my views for your further consideration . My views will be largely confined to the Site Selection Paper, in particular as it relates to West Hallam and more specifically proposals relating to the Land South of West Hallam (CSR-0044) although my comments could equally apply to the other projected site in the village Land North of West Hallam (CSR0048). Point 1 - I note that in relation to site CSR-0044 the Paper states 'the site falls on land that fails to make an important contribution to the Green Belt?' (ref p10, first full paragraph 1). I consider this statement, at best, a very subjective construct based on, what appears to be, unsubstantiated opinion. I presume that the justification for this is the assessment against the criteria of Safeguarding the Countryside from encroachment Checking the Unrestricted Sprawl of Large Built-Up Areas, and Preventing Neighbouring Towns Merging I further note that four sites at the Junction of St Wilfrids Road and High Lane Central ( CSR0004 & CSR0004 a, b and c) were rejected as meeting the above Green Belt criteria. I am unable to discern or find any evidence in the review as to why these sites meet the criteria and those at CSR0044 and CSR0048 do not. This distinction seems to arise purely from the unsubstantiated and subjective views of the paper's author rather than any detailed and objective in depth analysis of the respective sites contribution to the Green Belt. In fact a case may be made that the Beech Lane site (CSR0044) indeed makes a greater contribution in meeting the criteria vis Safeguarding the Countryside from encroachment :- the immediate presence of large scale urban encroachment is far more apparent on the Beech Lane site, sitting as it does on the edge of West Hallam central/core housing developments. Whereas the rejected sites (CSR004 etc) only lie adjacent to the lesser populated ribbon developments of the village. Over my time living in the village I have monitored the habitat contribution of the Beech Lane site. I have for example, to date recorded 53 bird, 15 mammal and 4 amphibian species on this site. As such it makes a valuable contribution to the countryside that would be jeopardised rather than safeguarded if housing development were to proceed. Taken as a whole the Beech Lane site has, at least as diverse a range of countryside attributes (hedges, adjoining woodland, wetland habitat, ditches, grassland perfect for ?predator? hunters such as owls and hawks) as any of the ?rejected? sites. Checking the Unrestricted Sprawl of Large Built Up Areas:- with a current population of c.6000 in 2600 households (2001 census) West Hallam already has a population that surpasses that of several East Midland towns. This raises the existential question as to what is the fundamental nature of West Hallam as a community. Again the pressure from built up area sprawl is already more keenly felt at site CSR 0044 than at the ?rejected? village sites so it is difficult to understand why the Green Belt criteria apply to ?rejected sites? and not the Beech Lane site. Preventing Neighbourhood Towns Merging:- Suffice it to say that I can perceive no more justification in saying this criteria applies to the rejected sites than in doing so for the Beech Lane site (CSR0044). If there is a distinction to be made it needs to be justified/quantified. Point 2 Tr
1.9	South of West Hallam	Traffic Congestion	Richard Walters	Response-00546	affic and Services The main core of the village, the Village and the Estate, is already poorly served by access and egress roads. This already creates excessive traffic congestion particularly at peak periods. This can be further exacerbated by:- the frequency of road works necessitated by the aging services infrastructure of the village e.g. utilities and the subsidence legacy of the mining past The presence of the village school and main playing fields adjoining one of those main access/egress points. Further housing development without improved/additional road infrastructure, as currently envisioned, is only going to worsen an already problematic situation. In Summary I note both the rejected and proposed housing proposals. However I cannot see that any case has been satisfactorily made justifying why some sites have been deemed to meet the Green Belt criteria and others do not do so. The only rather spurious justification appears to be that of expedience and opportunity! That the Land South of West Hallam (CSR0044) has an absentee owner who is only too willing to facilitate its development and, in doing so, meet the Authorities targets. In particular I would expect far greater transparency and justification as to why the report states that some sites meet the Green Belt criteria while others do not. THERE IS NO EVIDENCE OF ANY TRAFFIC IMPACT ASSESSMENT HAVING BEEN UNDERTAKEN
1.9	South of West Hallam	Traffic Congestion	Robert Dodd	Response-00201	Traffic is already bad in the village and trying to get onto High Lane from Station Road or St Wilfred's is already nightmare at certain times
1.9	South of West Hallam	Traffic Congestion	Robert Flatley	Response-00978	This stretch of road along Beech Lane is already incredibly congested due to both pick up and drop off at Scargill School and the use of the playing field by West Hallam Jnr Football Club which often results in one side of the road being taken up entirely by parked cars creating queues of traffic at either end of Beech Lane. The addition of a junction for the proposed development would further add to this with the likelihood of additional cars using Beech Lane for access/egress.
1.9	South of West Hallam	Traffic Congestion	Robert Hall	Response-00630	Development on this site would increase the existing problem to an unacceptable level . Beech Lane is not a full width road. Already a considerable problem for traffic at school time.
1.9	South of West Hallam	Traffic Congestion	Robert Mee	Response-01511	See my comments on Road Safety
1.9	South of West Hallam	Traffic Congestion	Robert Reynolds	Response-00260	Beech Lane is already extremely busy, especially at school drop-off and pick-up times. Also when football matches are being played.
1.9	South of West Hallam	Traffic Congestion	Rosemary Moorby	Response-00222	Already a busy road opposite a primary school. Plus a park and playing fields for football. Parking very busy at key times.
			Ruby Reid	Response-00119	Traffic is already congested especially around the school on beach lane. Plus dangerous parking

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Traffic Congestion	sam richards	Response-01467	As a homeowner right by the proposed planning site, I simply cannot believe the council believe this is an acceptable site to build on. Beech Lane is one of the main roads through the village, and there is very heavy traffic particularly at school drop off and pick up times. recent temporary traffic lights caused havoc for a week, let alone for the duration of 90 new homes being built. There are always cars parked up all the way down beech lane throughout the day for school workers, and at weekends for sport events. traffic around school drop off and pick up times is already extremely dangerous, around beech lane and hallam way which leads up to beech lane. i cant imagine how much worse this will get with all the extra traffic from the new builds. i am aware that in the past plans for this site have been refused by the highways due to problems at several junctions., which makes me wonder what has suddenly changed?
1.9	South of West Hallam	Traffic Congestion	Sarah James	Response-01085	Beech lane narrows at this point so congestion and potential accidents due to the need of passing will increase. Parking during school drop off and collection will be a problem, even more so during potential construction. Is Beech Lane fit enough for construction traffic?
1.9	South of West Hallam	Traffic Congestion	Sarah Taylor	Response-00115	With regards to Beech lane there is heavy traffic as it is a main route into WH. Football training and school drop offs and pick ups also cause a lot of congestion. Adding to this WH cannot cope.
1.9	South of West Hallam	Traffic Congestion	Sarah Taylor	Response-01819	It's entrance or exit onto Beech Lane is onto a narrow road which is very congested at school times and at the weekend when the Recreation Ground is being for team games. It is also directly opposite the Scargill Primary School. There is insufficient parking for the Dales shopping area. The roads around have to be used for parking causing more driving difficulties. More cars from the houses mean that West Hallam crossroads and Mapperley crossroads will have more problems than Highways have already said they have. Also more traffic at the junctions between Beech Lane and Station Road and Station Road to Stanley and the junction between Cat and Fiddle Lane and the B6001 from Ilkeston through to Derby.
1.9	South of West Hallam	Traffic Congestion	Scott wright	Response-00089	West Hallam does not have the infrastructure to support increased traffic, nor can the shop/amenities support bigger footfall.
1.9	South of West Hallam	Traffic Congestion	Serena Bostock	Response-00125	The traffic is horrendous in West Hallam already. The parking is a nightmare as people have started parking on bends etc... which has become hazardous. This will only add to this!
1.9	South of West Hallam	Traffic Congestion	sharon hickson	Response-01430	I travel on beech lane to work daily and the traffic is always backed up not only at school times , when there is any sporting event on the playing fields at night as well ,let alone people visiting the shops, houses in the village and the delivery drivers adding to the congestion in west Hallam to put any more traffic coming in or out of the village would create massive issues
1.9	South of West Hallam	Traffic Congestion	Shelly Meer	Response-00116	Already a bad site for traffic due to the school. Further traffic to the new site will add to this
1.9	South of West Hallam	Traffic Congestion	Simon Reeve	Response-01080	The roads simply aren't built for the traffic we already have without adding more homes with more cars; I grew up in West Hallam (High Lane East) in the 80s, spending time in West Hallam Village and there were approximately 1 car for every 1.5 homes, now there's 2 for every house. The junctions at Millhouse Garage and the Bottle Kiln have poor visibility with huge queues up St Wilfreds every rush hour and simply aren't suitable for supporting more homes
1.9	South of West Hallam	Traffic Congestion	Sophie	Response-01105	Ridiculous idea considering there is a school opposite the proposed site that already has an obscene amount of traffic.
1.9	South of West Hallam	Traffic Congestion	Stacey Eady	Response-01529	If you have ever visited Beech Lane, you will know that the road is currently already very busy during peak times, such as school drop off and pick up. Cars regularly park on both sides of the road, which causes major disruptions to ongoing traffic driving through the village. It is one of only two routes in and out of a village that has already expanded way beyond its initial infrastructure and is the major road that haulage uses to get deliveries through the village to the main centre, The Dales. Beech Lane also has a large recreational ground and children's playground adjacent to the school, which is used regularly during evenings and weekends to facilitate both football matches and cricket games meaning it's busy all day, most days. The road dimensions on Beech Lane are much narrower than those of a normal major road. It is not wide enough to be marked with central white lines (I'm guessing that's why it was originally termed a 'lane') which means it's even tighter when cars park on one or both sides and, at times, this has caused delays with emergency services/buses, simply being unable to get through. I also note that as a bus route, the road should be at least 6.2 m wide, and this is not the case. Living on Beech Lane, I regularly see people driving up onto the pavement to get up the road, which simply is unacceptable, considering the closeness to the school. The road has a 20mph speed limit during school times. However this is very rarely observed, and in my time on Beech Lane, I have never seen speeds being monitored. With the school blocking off a huge portion of the Lane for its own Keep Clear Zone, which is required to be kept clear at all times to comply with rule 243 of the Highway Code, I'm unsure how any safe or practical solution could be arrived at to allow access to the proposed new site from Beech Lane. The road to the school is currently also required to be left clear (hence the single white line on the opposite side), so quite where the access to and from the proposed site is going to be situated is a mystery. My concern is that this site has been identified on several previous occasions, as suitable land to build on, but the process has always been stopped, mainly due to the concerns regarding traffic. These issues have not changed and indeed have significantly worsened due to the natural increase in population, so I'm unsure why or how this proposal has been approved this time around. With an extra 90 houses (+ 32 dwellings within the 'safeguarded land' they wish to develop), this will total 122 houses, which seems ludicrous with this specific site having only one access in and out of the new development, meaning an extra (potentially) 244 cars coming on and off Beech Lane. This is, in my opinion, a disaster waiting to happen. I have also been made aware that the Erewash Planning team have not yet consulted with DCC highways up until this point, which worries me further! Obviously, you must undoubtedly understand that feelings are 'running high' within the West Hallam community and the need for transparency at every stage of the procedure is essential. If not, rumour-mongering and suspicion is bound to occur and there is a fear that the use of consultancy companies may, at worst, cover up any indiscretions and, at best, cloud the issue. Are there any assurances in place to maintain the necessary complete transparency? Can I ask if DCC Highways will have the 'final say' in the Traffic Safety and suitability of this

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Traffic Congestion	Tracey Eady	Response-01529	site or will this be left in the hands of a consultancy firm/Erewash Council planners? Some of the other sites within the area could better facilitate the increase in traffic but they could also offer the key for the whole village. For example, the possible development of the site West of Station Road (CSR0016) is just on the lead into the village and has a large lay-by area that could be used as a filter lane to allow traffic on and off the site onto the existing road which has the major-road dimensions required. The North of West Hallam site (CSR0048) is on High Lane, a major road that is a straight one. A possible change here could be the reduction of speed used on this road, from 40mph to 30mph, to assist traffic on and off the site, which would be a positive impact to pedestrians within the whole village. The St. Wilfrids site (CSR0004) would benefit from the installation of a mini roundabout at its junction with High Lane. Further along towards Stanley Common, this new roundabout would ease the congestion currently suffered at the High Lane-Station Road junction, (Mill House Garage junction) where a blind bend already causes problems.
1.9	South of West Hallam	Traffic Congestion	Stephen Wood	Response-00139	It's terrible around the school and dangerous for the children.
1.9	South of West Hallam	Traffic Congestion	Steve Bailey	Response-01022	That area around the park and the top of Hallam Way is already overly busy and sometimes dangerous during school pick up and drop off. Another 90 houses will only add to this, and make the area worse. When football matches or cricket matches are taking place, cars park around the area causing more congestion. This will only increase with more cars.
1.9	South of West Hallam	Traffic Congestion	Suzanne Campbell	Response-00087	Additional traffic into the village could be an issue as the village does sometimes become congested in that area.
1.9	South of West Hallam	Traffic Congestion	Teresa Faulkner-Day	Response-00242	Traffic along this stretch of road is always congested. With both the school, pavillion and cricket club not having adequate parking facilities creating numerous issues. To add to this with more vehicles would be a disaster waiting to happen
1.9	South of West Hallam	Traffic Congestion	Teresa Hall	Response-00270	Beech Lane is already too busy as one of only two access routes to the village. Beech Lane exit has an extremely difficult junction where it is often difficult to turn right leading to traffic queuing up towards the village. It has a primary school & a children's playground on it so the road is regularly blocked on one side by cars. More cars along here would make it an accident hotspot.
1.9	South of West Hallam	Traffic Congestion	Teresa Webster	Response-00086	Beech Lane is a busy road through the village especially at peak times - the proposed site is directly opposite the entrance for the school and will hugely increase congestion plus increase the risk of accidents with children crossing those roads
1.9	South of West Hallam	Traffic Congestion	Tilly Fletcher	Response-00317	Beech Lane cannot cope with more rush hour or school time traffic. It is a safety hazard and will create awful delays.
1.9	South of West Hallam	Traffic Congestion	Tina Jay	Response-01801	The proposed site is directly opposite Scargill Primary School with 300+ pupils, which is not a full width road, and it is already heavily congested several times a day and at weekends for football games on the Beech Lane Recreation ground. The proposed planning of 90+ houses in this area (with the proposal open for further development which is also additionally highly concerning and problematic) would mean an extra high influx of traffic, making this road exceptionally more difficult to pass through and during school pick up and drop off hours/football events, unacceptably congested. When these sites have been approached previously, Highways have raised problems at both the junctions of Millhouse and Mapperley Crossroads, as well as those at Beech Lane, Station Road, and the T junction at Cat and Fiddle Lane. It is therefore difficult to understand how these sites could now be considered suitable, when traffic problems have only increased and brought more difficulties. Adding to the congestion of the road area, the Dales shopping area car park is now constantly full, with a heavy increase over the last few years, causing overspill parking into the village, School Square and Orchard Close. These additional housing developments, and with the high number of houses involved is not suitable for a village location, and would cause a further unacceptable influx of traffic/parking which the village would not be able to cope with. Also the public travel links for West Hallam are very limited, with no evening service at all, with cars being the main use of transport, and any new housing developments of this size bringing further difficulties.
1.9	South of West Hallam	Traffic Congestion	Tina Rice	Response-00096	An absolute nightmare already. Emergency vehicles would have a nightmare getting brought at school drop of and pickup times also when the sports fields are in use at the weekends
			Toni Tomlinson	Response-00204	Extremely dangerous road. Impossible to get out during football matches, school pick up. Entry should be from Cock Orchard.
1.9	South of West Hallam	Traffic Congestion	Tracey Barks	Response-00111	On average, 2 cars for each of the 90 proposed houses will add to the increased traffic already experienced in West Hallam Village, especially around school times and when the recreation ground is used by groups for sports. This will make our beautiful village a relatively no go area for residents at particular times of the day and evening
1.9	South of West Hallam	Traffic Congestion	Tracey BURDUS	Response-00141	Traffic on Beech Lane is already a concern, especially at pick up and drop off at school, the road would be even more dangerous than it is currently for residents and people trying to get in and out of the village
1.9	South of West Hallam	Traffic Congestion	Val Stevens	Response-01070	Traffic congestion is already a problem in the village especially on Beech Lane. The proposed building site will make this worse with more vehicles competing to enter and exit the village. Beech Lane is aptly named, not a wide road so traffic already has to either queue or mount the pavements at busy times.
			Vicky Buckley	Response-00182	It is already a death trap with parking
1.9	South of West Hallam	Traffic Congestion	Vicky smith	Response-00171	Beech lane is already highly congested at peak times and can be quite dangerous when school pick up and drop off along with weekends when used for football matches on the recreational ground. Creating higher volumes by erecting 99 new properties will contribute to the potential of blocking the junction of beech lane and station road upon these times due to awaiting oncoming vehicles to pass and the potential of more accidents as people don't like to wait their turn.
1.9	South of West Hallam	Traffic Congestion	Victoria Walker	Response-00228	Beech lane is heavily congested already, especially at school times. It is the main way into the village from Derby. Adding in 90 houses will increase the number of cars using this village road. It is dangerous to have it near a school.
1.9	South of West Hallam	Traffic Congestion	Yvonne	Response-00207	The traffic is hugely contested already
1.9	South of West Hallam	Type of Housing	Anna Richardson	Response-00162	Housing has been built nearby and has been standing empty for over two years. This planning decision was unbelievably poor, no consideration was taken regarding road safety or flooding. The front garden of one is already sinking. This site needs investigating and all homes should be occupied before any further new homes are built in the area. I would like to call for a full investigation into the mistakes that were made regarding this development.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Type of Housing	Carolyn Wojtas	Response-01052	Is this genuinely housing for the West Hallam community. Is it going to bring issues in the village that we don't suffer from now?
1.9	South of West Hallam	Type of Housing	Charles Brooks	Response-00535	None please. There are generally enough houses in West Hallam. The existing infrastructure struggles to cope. Personally I am not a NIMBY and not against new houses but very against the proposed site opposite the primary school and the associated issues this will create.
1.9	South of West Hallam	Type of Housing	Charlotte Lun	Response-00150	The majority of new build housing will not last more than 50 years. They are badly built by mostly under skilled workers that do not care about their workmanship.
1.9	South of West Hallam	Type of Housing	Chris Collins	Response-00037	The wider area is in dire need of affordable nice housing. There are countless brown field sites that should be developed prior to green belt being prioritised. I understand that brownfield is more expensive but that's a legacy we all have to clean up these sites and redevelop them for the next generation.
1.9	South of West Hallam	Type of Housing	Emily Reeve	Response-01495	I would be concerned about the type and quality of housing. We currently have new buildings on Station Road that are unoccupied and need work to make them more habitable. The houses have been crammed in there with no regard to vision around a corner. Can you guarantee that the housing would be of suitable quality for the village where we pay a premium to live?
1.9	South of West Hallam	Type of Housing	Emily Reynolds	Response-00149	I think if you did build some homes it would be good to incorporate some environmentally friendly features into them such as bat boxes, swift boxes, and hedgehog corridors between the gardens. Solar panels would also be a good feature but I understand that would be a big ask.
1.9	South of West Hallam	Type of Housing	Guiliano Ricci	Response-01010	West Hallam is a mainly owner occupied village Social housing will have a detrimental effect on the house prices of the village - social deprivation, antisocial behaviour, drugs and criminality
1.9	South of West Hallam	Type of Housing	Heidi Spencer	Response-00189	There are currently new builds at the top of Beach Lane that have sat empty since being built. Unsure there is demand for additional housing in the village. Lots of houses up for sale and not selling due to the current financial climate.
1.9	South of West Hallam	Type of Housing	Helen Collins	Response-00034	Many houses in the village are being bought and developed, selling at a high price. More affordable housing is needed everywhere. If such a number of houses were to be built, it would be more appropriate to provide 100% affordable homes.
1.9	South of West Hallam	Type of Housing	Helen fox	Response-00064	The influx of new homes may disrupt the village's character and social fabric, leading to overcrowding and strain on local resources. Additionally, the type of housing planned may not align with the village's architectural style or cultural heritage, further diminishing its unique identity. Such developments could also result in environmental degradation, affecting the natural landscape and quality of life for existing residents. Overall, the introduction of these housing projects could prove detrimental to the village's long-term sustainability and well-being.
1.9	South of West Hallam	Type of Housing	Helen Patenall	Response-00868	Type of housing is irrelevant. Whichever 'type' is proposed is not required and would lead to a drain on already strained local services.
1.9	South of West Hallam	Type of Housing	Hollie Briggs	Response-00040	Absolutely do NOT want social housing!
1.9	South of West Hallam	Type of Housing	Holly Mohamed	Response-00076	Reputation of Developers: Some developers have a reputation for cutting corners to reduce costs, which can compromise the quality and safety of the homes. This can result in homes that do not meet the expected standards and require significant repairs shortly after purchase. White Hart Development Example: The White Hart development in West Hallam is a prime example of cutting corners. Residents have reported issues such as poorly finished interiors, inadequate drainage systems, and insufficient parking spaces. These problems highlight the risks associated with new developments and the potential for similar issues in the proposed residential development.
1.9	South of West Hallam	Type of Housing	Homewood	Response-01074	Not an area where social housing would be suitable as you need to drive or use transport for most facilities - already limited
1.9	South of West Hallam	Type of Housing	Jane Taylor	Response-01023	No housing is appropriate in this site due to traffic issues and increased population for an already large population
1.9	South of West Hallam	Type of Housing	Jo-Anne Attenborough	Response-00129	No housing should be built on this site.
1.9	South of West Hallam	Type of Housing	Julie Harbon	Response-00022	Would the proposed ?affordable housing? truly be affordable? House prices are driven up here because it's a nice area, well maintained, good community spirit, decent school etc. I doubt prices will be ?affordable? for many.
1.9	South of West Hallam	Type of Housing	Julie Stewardson	Response-00282	Large houses, who can afford them?
1.9	South of West Hallam	Type of Housing	Kerry	Response-01034	Cheap, crammed in housing. Tiny drives. Cars parked on streets
1.9	South of West Hallam	Type of Housing	Kerry Barratt	Response-00168	no thought of local people
1.9	South of West Hallam	Type of Housing	Kerry Middleton	Response-00266	Further housing would be detrimental to the current skyline, thus ensuring the mental health of residents would decline.
1.9	South of West Hallam	Type of Housing	Kevin Fox	Response-00682	Affordable housing? great! Does that mean cars on axle stands, grubby gardens and just an apathy to how folk live their lives? no thanks!
1.9	South of West Hallam	Type of Housing	Kirsty Oliver	Response-00558	I feel it's too large a project for the size of this village.
1.9	South of West Hallam	Type of Housing	Lindsey Lyons	Response-00071	The proposal gives no indication to the type of housing being developed. Given existing housing in the village is required to keep with the ambience of the village, how do you propose this will be maintained? This is crucial to making sure the village is kept to a standard that has always been expected by the council for existing housing extension and singular builds approved. Take for example, the small cottage that was built in previous 4 years just off Beech lane that had to keep with the ambience of the village else it was rejected by the council.
1.9	South of West Hallam	Type of Housing	Mark Newton	Response-00179	Look. This is bordering an historic CONSERVATION area, of beautiful period housing. To see more ugly modern housing crammed here is just going to forever - FOREVER - scar this last remaining beautiful area in the region. If you just blaze through to approve housing to meet arbitrary targets without fully considering the destruction of an iconic village landscape, and school children safety, and traffic damage, then please make the houses an example of what can be achieved with BEAUTY and not the hideous, ugly housing that is thrown up today. Take an example from King Charles in seeking to add beauty - such as Poundbury. Try to create something future generations will look back on with a sense of respect and pride, not harming heritage, conservation and more.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
		Type of Housing	Mark Patenall	Response-00851	Irrelevant what type of housing is proposed. Whether it's social or for multi millionaires, we have enough
1.9	South of West Hallam	Type of Housing	Matthew Lyons	Response-00061	The house are next to the village, originally rules were housing design must keep with the theme of the village. How will this be managed
		Type of Housing	Michelle Cox	Response-00138	Too many house it the area already
1.9	South of West Hallam	Type of Housing	Mr and Mrs Wood	Response-01826	And my last point is in regards to the algorithm, if indeed one even exists and I am being too kind that determine the percentage of affordable housing which I have heard could be as high as 4 in every 10 households; this an unprecedented high proportion compared to other nearby developments and it is a question, even though it?s an uncomfortable one to ask that needs to be answered.
		Type of Housing	Mrs Judith Pittson	Response-00753	90 houses seems far too many for the proposed site
1.9	South of West Hallam	Type of Housing	Mrs Strelley	Response-00233	What housing is going to be built there? Exclusive? Or for the more affordable market? Either way, West Hallam hasn't got the facilities to benefit a bigger population.
		Type of Housing	Nick Craddock	Response-00145	As per my comments for other west Hallam Proposal
1.9	South of West Hallam	Type of Housing	Nicola Elkington-Horridge	Response-00079	The council should spend more time restricting landlords from buying all the afforhkises in west hallam and restrict how much they can charge before anything else.
1.9	South of West Hallam	Type of Housing	Paul aldre	Response-00152	We do t need more housing regardless of affordable or not. We don?t need welfare housing to create more trouble and fraction there?s enough theft and trouble now
1.9	South of West Hallam	Type of Housing	Paula Piggott	Response-01041	You can't keep destroying the countryside destroying habitats, killing wildlife and it all not have a knock on effect. You are destroying the air we breathe. We need flowers, we need bees these things the world can't exist without. The wildlife will seriously be impacted. You will destroy the habitats of many animals needed for the world to survive. This is a small village. With lots of precious animals, insects, flowers, trees etc you will kill these insects and animals when you destroy their habitats thus destroying the air we breathe. There is a school and many bungalows with pensioners. It is a accident waiting to happen. Also dog walkers, horse riders and lots of wildlife. Seriously someone will get hurt or worse killed! It is a small village without the capacity for more houses. The roads are not built for so many extra residents. You will totally destroy the area and you will totally destroy the clean air killing lots of wildlife and their habitats in the process.
		Type of Housing	Pauline wood	Response-01100	Why no bungalows
1.9	South of West Hallam	Type of Housing	Phil Campbell	Response-00109	The greatest identified need for social housing in Erewash is for single people and this should be taken into account when deciding which properties to build on the site.
1.9	South of West Hallam	Type of Housing	Rebecca Ricci	Response-00102	People pay a premium to live in an area where there is no social housing. Social housing comes with unemployment, deprivation, crime, drugs and anti social behaviour. We need to protect our village and our house prices
1.9	South of West Hallam	Type of Housing	Robert Reynolds	Response-00260	The type of housing is irrelevant. This site does not require development. As already stated, local infrastructure is already at very high capacity.
1.9	South of West Hallam	Type of Housing	sam richards	Response-01467	plans have not been released so it is unclear what types of houses are in the plans.
1.9	South of West Hallam	Type of Housing	Sarah Taylor	Response-01819	Planning permission has been denied in the past even for agricultural buildings.
1.9	South of West Hallam	Type of Housing	sharon hickson	Response-01430	we just don't need any more houses in west Hallam , there are plenty for sale in the village and we have a good mix of social ,bungalow and houses
1.9	South of West Hallam	Type of Housing	Simon Reeve	Response-01080	The types of housing isn't too much of a concern, that said all housing developed anywhere in the UK should be legislated to have solar, heat pump etc to ensure self sufficiency as the grid is at breaking point. As are the sewers and refuse collection services that often aren't considered. There needs to be more affordable housing £120k - £280k but not more social housing; more needs to be done for working people on lower wages as they are the group missed out when housing strategy is planned and yet they're working hard and paying taxes
		Type of Housing	Stacey Eady	Response-01529	The issue is the amount and the position of the proposed site.
1.9	South of West Hallam	Type of Housing	Steve Bailey	Response-01022	West Hallam has always been a sought after area, and adding more houses will dilute this and make it into more of a estate rather than village.
1.9	South of West Hallam	Type of Housing	Teresa Webster	Response-00086	West Hallam has a diverse and interesting mix of houses which adds to the charm and character of the village. Adding in an ?estate? of identical house will massively detract from the overall ambience
1.9	South of West Hallam	Type of Housing	Tracey Barks	Response-00111	Depending on developer, we could end up with 90 substandard houses making out beautiful village an eye sore
		Type of Housing	Vicky Buckley	Response-00182	already overcrowded
1.9	South of West Hallam	Wildlife / Biodiversity	Alison Fletcher	Response-00198	Damage to the environment, open green space and the natural habitat of flora and fauna .
		Wildlife / Biodiversity	Alison Stills	Response-01057	The area is home to deer and many other flora and fauna.
1.9	South of West Hallam	Wildlife / Biodiversity	Alistair	Response-01138	Building on fields
1.9	South of West Hallam	Wildlife / Biodiversity	Andrea Cochrane	Response-01485	The proposed development site contains a number of mature trees, hedgerows and open space. These together act as a buffer zone between the estate and open country and house an array of different birds and wildlife. I have seen bats in the area, and tawny owls, plus foxes, rabbits and badgers. If these are lost due to development, another valuable learning resource will disappear.
1.9	South of West Hallam	Wildlife / Biodiversity	Andrew and Julie Douglas	Response-00146	We will see the demise of the barn owl who often hunts in the field
1.9	South of West Hallam	Wildlife / Biodiversity	Andrew Zielinski-Raynor	Response-00135	The proposed site is what gives West Hallam its village/countryside feel. There are vast numbers of birds including birds of prey, woodpeckers, pheasants, jays etc that daily frequent and feed in this area. Plus all the other wildlife that you would expect to see in a rural area.
1.9	South of West Hallam	Wildlife / Biodiversity	Angela Reid	Response-00134	Impacting the natural environment in the area

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	South of West Hallam	Wildlife / Biodiversity	Anita Lawrence	Response-00726	The development would have a negative effect on the biodiversity of the proposed and surrounding areas during and after build.
1.9	South of West Hallam	Wildlife / Biodiversity	Anna	Response-00112	West Hallam is a pretty village that is home to many nice walkways and wildlife, it will be spoilt by builders trashing the landscape
1.9	South of West Hallam	Wildlife / Biodiversity	Anne Vanstone	Response-01216	This site supports a range of wildlife ? including protected and rare species. Pushing ahead with this build would destroy an important ecological space and chip away at our village?s green character.
1.9	South of West Hallam	Wildlife / Biodiversity	A Redshaw	Response-00287	This area is a natural wildlife field without disturbances from any current interference
1.9	South of West Hallam	Wildlife / Biodiversity	Carl fox	Response-00067	Will spoil the village feel. Village is too small to build more housing
1.9	South of West Hallam	Wildlife / Biodiversity	Carly Denham	Response-00292	These are our green spaces. There is a huge amount of wildlife in this area
1.9	South of West Hallam	Wildlife / Biodiversity	Cat Hope	Response-00127	West hallam is a village, now soon will be an estate like oakwood! Traffic is horrendous, more so parking. Empty houses already on where the former white hart is. This once attractive village, will soon by awful. Ilkeston as the nearest town can't handle more traffic. Our villages are losing our green belt areas! Years ago Erewash would never budge, eg dale road stanley. We need to protect our green space! Soon will be none. Huge overcrowding happening. Criminal activity needs protection also! Our police can't cope as it is now.
1.9	South of West Hallam	Wildlife / Biodiversity	Charles Brooks	Response-00535	In todays world people are more and more concerned about wildlife and biodiversity. The proposed development land is rich in wildlife which should not be disturbed. There is currently a wonderful vista looking across the land. West Hallam is a rural village where I believe a large development like the one proposed can only significantly reduce the feeling of living in a rural environment. I moved to West Hallam to enjoy being surrounded by green fields and the sound of wildlife.
1.9	South of West Hallam	Wildlife / Biodiversity	Charlotte Lun	Response-00150	The planned building site is a lovely area of green land full of wildlife. Turning the area into housing will destroy the wildlife.
1.9	South of West Hallam	Wildlife / Biodiversity	Chris Collins	Response-00037	The area in question is currently a haven for lots of wildlife, in the heart of the village. There are daily sightings of birds of prey hunting in the field, the field provides a habitat for a wide range of small mammals and other animals, grasses, plants and trees. Losing a habitat such as this will drive out / destroy the environment for countless animals.
1.9	South of West Hallam	Wildlife / Biodiversity	Claire dean	Response-00069	There's is a significant amount of wildlife in this land, I have known times people have been unable to access this due to this and to respect the wildlife.
1.9	South of West Hallam	Wildlife / Biodiversity	Connor Gratton	Response-00232	This is a very large greenbelt area. I have more concerns over the negative impact on the local wildlife.
1.9	South of West Hallam	Wildlife / Biodiversity	Daniel Clark	Response-01094	We live in a village for the wewis and wildlife and more houses should not be approved to this beautiful area
1.9	South of West Hallam	Wildlife / Biodiversity	Daniel hickson	Response-00177	Ecosystem will be damaged
1.9	South of West Hallam	Wildlife / Biodiversity	Dave Stone	Response-00140	Using green areas for development should not be allowed.
1.9	South of West Hallam	Wildlife / Biodiversity	David Richards	Response-01465	The field has much wildlife including pheasants, kestrels, owls, badgers etc. It should not be acceptable for the loss of this to be mitigated via another site miles away. The Oak tree on the frontage of the site along with the established hedgerow should not be allowed to be change - this is an important visual characteristic of the village.
			Dean Wright	Response-00094	Considerable loss of greenery and wildlife habitat. That this development is even being considered is utterly unacceptable.
1.9	South of West Hallam	Wildlife / Biodiversity	Diane Reynolds	Response-00216	There are a family of pheasant that frequent over the field. Birds of prey and many other wildlife that would be effected by the build. We see many animals such as pheasants family, see and hear owls, woodpeckers and many other birds that will be effected
1.9	South of West Hallam	Wildlife / Biodiversity	Emily Reeve	Response-01495	The area set out has a population of birds and animals. It is hunting grounds for birds of pray including buzzards, kestrels and owls. All seen on a regular basis. Obviously if the birds of prey are there, there must be a population of small animals to sustain them. The housing would impact on the natural habitat.
1.9	South of West Hallam	Wildlife / Biodiversity	Emily Reynolds	Response-00149	Building houses will have a big impact on the species living in and around the field. The field itself youd be destroying habitats. No amount of putting in hedges and grass edges "for biodiversity" will replace that. It won't be the same. For species around it in terms of feeding/hunting ground. You will reduce the amount of biodiversity around west hallam which make it such a nice place to live.
1.9	South of West Hallam	Wildlife / Biodiversity	Emma Lound	Response-00187	The fields behind Beech Lane and Station Road are a hive of activity for wildlife and birds such as Red Kites, pheasants and Bats. Building on this land will force them out of their habitat.
1.9	South of West Hallam	Wildlife / Biodiversity	Emma Newsham	Response-00117	Using up more green space,
1.9	South of West Hallam	Wildlife / Biodiversity	Emma Stanley-Smith	Response-01564	Current area is used by a wide variety of wildlife.
1.9	South of West Hallam	Wildlife / Biodiversity	Gary Hamson	Response-00052	Has a check been done for wildlife on the site - bats, newts or slo worms ?
1.9	South of West Hallam	Wildlife / Biodiversity	Gilly Turrini	Response-00151	We need to keep our green belt for nature, habitats and cleaner air
1.9	South of West Hallam	Wildlife / Biodiversity	Glenn Richardson	Response-00316	I've got numerous videos and pictures of the amazing diverse wild life around the questioned area ..It?s corridor for wild life ..It?s a habitat for deer ,badgers,foxes bats & hundreds of varieties of birds ..from kestrels,barn owls& buzzard to woodpecker,pheasant & owls ?not to mention the common bird.im a regular user of an app to recognise bird calls & the variety is amazing ?.this development would have a massive negatively affect on this
			Guiliano Ricci	Response-01010	This is a green belt area - it has wildlife and should not be spoilt
1.9	South of West Hallam	Wildlife / Biodiversity	Helen Blackwell	Response-00456	Building on grassland will inevitably have a negative impact on wildlife.
1.9	South of West Hallam	Wildlife / Biodiversity	Helen Collins	Response-00034	Obviously it's reducing the amount of green space around the village which mean a direct loss of wildlife habitat in the immediate area and ffect upon the surrounding area.
1.9	South of West Hallam	Wildlife / Biodiversity	Helen fox	Response-00064	The proposed construction of additional housing in a small village poses significant risks to local wildlife and biodiversity. The disruption of natural habitats can lead to the decline of various species, ultimately upsetting the ecological balance. Furthermore, the loss of biodiversity can have detrimental effects on the village itself, as it may diminish the natural resources and ecosystem services that the community relies on, such as clean air and water, pollination of crops, and recreational opportunities. This development could compromise the village's environmental integrity, making it less sustainable in the long term.
1.9	South of West Hallam	Wildlife / Biodiversity	Helen Johnson	Response-00170	Again affected by volume of traffic

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Wildlife / Biodiversity	Helen Patenall	Response-00868	The proposed are for development is teeming with wildlife, it is currently a field covered in grass. Birds, insects and other wildlife will be lost by developing the area. I walk on a very regular basis past the proposed site and the area is constantly frequented by birds.
1.9	South of West Hallam	Wildlife / Biodiversity	Helen Stanley	Response-01555	Th isnis a lovely open space with our village, providing habitats in the long grass and surrounding hedgerows These will be permanently lost
1.9	South of West Hallam	Wildlife / Biodiversity	Helen Vickedes	Response-00062	Removal of an area that has been untouched for many years which has a large variety of wildlife & vegetation will negatively impact the biodiversity in the area.
1.9	South of West Hallam	Wildlife / Biodiversity	Homewood	Response-01074	It's an area with rich wildlife and diverse species which will end up being affected
1.9	South of West Hallam	Wildlife / Biodiversity	Iain Harrison	Response-01214	he proposed site is a wild, open field that currently supports a variety of local wildlife. My family and I regularly see foxes and other animals in this area?it is part of a fragile but vital natural ecosystem that contributes to biodiversity and supports pollinators, birds, and small mammals. Building over it would be a permanent loss, not just of greenbelt land, but of habitat. According to the Wildlife Trusts and other conservation groups, building on greenbelt and greenfield sites often causes irreversible damage to local biodiversity, fragmenting habitats and disrupting the natural corridors that wildlife rely on to survive. This is particularly unjustifiable when there are numerous brownfield sites and derelict properties across Ilkeston and the wider borough that remain unused or underutilized. National planning guidelines (such as those from the Campaign to Protect Rural England and the government?s own National Planning Policy Framework) encourage the development of brownfield land before greenbelt is even considered. Why is this not being enforced? Why are we targeting wildlife-rich, undeveloped land when there are more sustainable alternatives readily available? Once this green space is gone, it is gone for good. The loss of biodiversity, access to nature, and clean air cannot be undone.
			Ian Brown	Response-00163	open land for walking and bird watching
1.9	South of West Hallam	Wildlife / Biodiversity	Iris Howes	Response-01169	Wildlife including deer, birds of prey, and protected newts are frequently observed in this area. Development would destroy their habitats and disrupt the local ecosystem.
			James Johnson	Response-00183	The area proposed is home to a beautiful barn owl as well as kestrel?s.
1.9	South of West Hallam	Wildlife / Biodiversity	James Johnson	Response-01125	The area north of West Hallam includes valuable greenfield land that supports a variety of wildlife, including birds, small mammals, and important plant species. Development here would result in the irreversible loss of natural habitats and corridors essential for biodiversity. With increasing awareness of ecological decline and climate challenges, preserving this natural environment should be a planning priority.
1.9	South of West Hallam	Wildlife / Biodiversity	James Morris	Response-01060	Pushing wildlife further back away from the village
1.9	South of West Hallam	Wildlife / Biodiversity	James Painter	Response-01119	The site in question bounded on one side by a wood that supports a variety wildlife that also uses the site in question with road and playing field on one side and the cricket ground on the other side this site allows wildlife to have space and is becoming a wildlife meadow
1.9	South of West Hallam	Wildlife / Biodiversity	James Tilford	Response-00103	Loss of important biodiversity and habitat including veteran tree
1.9	South of West Hallam	Wildlife / Biodiversity	Jane Taylor	Response-01023	The area concerned is a wildlife haven and any development would cause damage to the wildlife and biodiversity
1.9	South of West Hallam	Wildlife / Biodiversity	Jane Zielinski-Raynor	Response-01095	The field is a beautiful resource in the village,
1.9	South of West Hallam	Wildlife / Biodiversity	Jenny Bexon	Response-00185	These wild grassland area and woodland allow natural biodiversity to bloom. The trees provide a haven for wildlife such as owls and bats. I walk through here almost daily and appreciate the nature all around this site
1.9	South of West Hallam	Wildlife / Biodiversity	Jo-Anne Attenborough	Response-00129	The field is a haven for many species of wildflowers. It is an important habitat for insects. Building on this site will destroy the biodiversity and have a negative impact on on wildlife.
1.9	South of West Hallam	Wildlife / Biodiversity	Joe Rice	Response-00063	As this is technically a green belt site that has been delisted there are wildlife and biodiversity issues. It will push the houses out even further into the surrounding countryside removing more hedge rows and trees.
1.9	South of West Hallam	Wildlife / Biodiversity	Johnson	Response-01037	Taking away green belt land is detrimental to our local wildlife. Barn owl often seen in this area
1.9	South of West Hallam	Wildlife / Biodiversity	Jonathan Purkis	Response-00159	The proposed site is unmaintained and is a natural habitat for many wild animals.
1.9	South of West Hallam	Wildlife / Biodiversity	Jon Skelson	Response-00157	We need to stop building on green belt land. The community needs it's greenery for everyones well being. This is why we choose to live here.
1.9	South of West Hallam	Wildlife / Biodiversity	Jon Skelson	Response-01025	We need our green areas, They are hugely important. Evew if it looks unused, there will always be a huge selection of wildlife.
1.9	South of West Hallam	Wildlife / Biodiversity	Josh August	Response-00084	Building houses on fields with hedges, trees, bushes and plants will eradicate a lot of wildlife already living around this area
1.9	South of West Hallam	Wildlife / Biodiversity	Judith Hare	Response-01014	The fields on beech lane have lots of wildlife being there for so many years. It would be so sad to see these removed for housing
1.9	South of West Hallam	Wildlife / Biodiversity	Julie Harbon	Response-00022	The proposed area is green belt. West Hallam is a sought after area because it?s nicely maintained and has green spaces. If all the green spaces are filled, we will lose that. It is also a home to lots of wildlife- many birds have been seen there, owls, buzzards, sparrow hawks, kites, robins, blue tits, gold finches, woodpeckers to name but a few. There are also lots of squirrels, field mice and hedgehogs etc around.
1.9	South of West Hallam	Wildlife / Biodiversity	Julie Harker	Response-01073	We picked West Hallam as a place to live because of the green spaces and abundance of wildlife. Quiet spaces to walk for your mental health. Don't want to lose the wildlife that there is left in this area
1.9	South of West Hallam	Wildlife / Biodiversity	Julie Stewardson	Response-00282	Taking away well used green spaces from the Community!!
1.9	South of West Hallam	Wildlife / Biodiversity	Kate Halls	Response-01035	The field behind Beech Lane which has housing allocation will adversely affect the wildlife and biodiversity. It?s such a beautiful place, and would be enormously damaging to wildlife and also to those people who enjoy using the field. It will mean less accessible places to walk.
			Kathryn Fearn	Response-00100	The field is an untouched part of the area, ideal for wildlife
1.9	South of West Hallam	Wildlife / Biodiversity	Katie	Response-00047	This is land that has plenty of wildlife.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	South of West Hallam	Wildlife / Biodiversity	Katie Rice	Response-00036	The fields and woodland area are home to lots of wildlife and This would be destroying their habitat
1.9	South of West Hallam	Wildlife / Biodiversity	Kay	Response-01030	Lots of wildlife in the area would be a shame to put houses there
	South of West Hallam	Wildlife / Biodiversity	Kerry	Response-01034	Ruining a wildlife area.
1.9	South of West Hallam	Wildlife / Biodiversity	Kerry Barratt	Response-00168	Greenbelt development means wildlife affected
1.9	South of West Hallam	Wildlife / Biodiversity	Kerry Middleton	Response-00266	This proposal would be detrimental to the surrounding wildlife, destroying hedgerow habitats.
1.9	South of West Hallam	Wildlife / Biodiversity	Kian	Response-01493	Animals that live in the area will have to relocate effecting the UK?s wildlife population
1.9	South of West Hallam	Wildlife / Biodiversity	Kirsty Oliver	Response-00558	Speaks for itself! this area has been has only ever been fallow land. Is also a big dog walking area.
1.9	South of West Hallam	Wildlife / Biodiversity	Kristen Hamilton	Response-00209	This will affect local wildlife
1.9	South of West Hallam	Wildlife / Biodiversity	Laura Egglestone	Response-01027	There are often hedgehogs, rabbits, owls and pheasants seen in the area with the odd sighting of deer and also known to have gold crested newts living on the site.
1.9	South of West Hallam	Wildlife / Biodiversity	Lindsey Lyons	Response-00071	The area that has been put forward is a large part of land that houses Wildlife (rabbits, foxes, badgers to name a few). Wildlife are crucial to the biodiversity of the area and with little other areas for them to reside on an already large housing area in West Hallam this is saddening to think about. What are the plan for wildlife? I strongly believe this has not been considered.
	South of West Hallam	Wildlife / Biodiversity	Louise Annison	Response-01049	The village is a lovely rural gem and a haven for wildlife.
1.9	South of West Hallam	Wildlife / Biodiversity	Lucy Corrigan	Response-00142	That field is a lovely addition to west Hallam wildlife and its majority of the nice view we have in west Hallam it does not need houses on it
1.9	South of West Hallam	Wildlife / Biodiversity	Mandie Frith	Response-00247	Would A big impact on wild life in that area we need more wildlife areas not houses
1.9	South of West Hallam	Wildlife / Biodiversity	Margaret Lewis	Response-01499	We have a depleted wildlife as it is and removing more of there homes is having an impact on were they live and where they end up going into housing estates then they get killed by traffic
	South of West Hallam	Wildlife / Biodiversity	Mark	Response-00164	The area has Owls and wildflowers and of course was designated green belt. Not that you seem to care
1.9	South of West Hallam	Wildlife / Biodiversity	Mark Newton	Response-00179	I know the council doesn't care about this, but it is one of the last precious green spaces in the village that allows grassland and important biodiversity to the region. But I know for a fact the council doesn't care.
1.9	South of West Hallam	Wildlife / Biodiversity	Mark Patenall	Response-00851	The site is green field with much flora and fauna. The site has previously been turned down for development so what has changed now?
1.9	South of West Hallam	Wildlife / Biodiversity	Mark Power	Response-00276	Pheasants, bird of prey are regular at the back of houses plus other animal?s habitat would be destroyed. The fields at the back of Beech Lane have varied Wildlife and to destroy natural habitats and Greenbelt is a disgrace.
1.9	South of West Hallam	Wildlife / Biodiversity	Matt Haddon	Response-00696	There is significant wildlife that would be impacted with horses, rabbits, birds (including birds of prey), butterflies and bees that can all be regularly seen at this location. These habitats would be lost as a result of allowing building on this site.
1.9	South of West Hallam	Wildlife / Biodiversity	Matthew Lyons	Response-00061	Taking green area away from the local community who have paid more money to live where they do is neither necessary or acceptable. Devaluing people?s homes who have worked hard to pay for them is irresponsible
1.9	South of West Hallam	Wildlife / Biodiversity	Maureen Briggs	Response-00190	The field is a green area for the wildlife and insects etc. And people enjoy the green open space and would not want houses to spoil it.!
1.9	South of West Hallam	Wildlife / Biodiversity	Max Egglestone	Response-01278	This site is home to a variety of wildlife, including deer, pheasants, owls, hedgehogs and protected species like the gold-crested newt. Development here would mean the destruction of important habitats and a loss of biodiversity that cannot be easily replaced.
1.9	South of West Hallam	Wildlife / Biodiversity	Michelle	Response-00148	There is a lot of wildlife in the fields including bees. To kill these to build houses is murder
1.9	South of West Hallam	Wildlife / Biodiversity	Michelle Cox	Response-00138	Nice to see a bit of wild life when you can
1.9	South of West Hallam	Wildlife / Biodiversity	Mr and Mrs Mellors	Response-01797	The proposed site is a vital habitat for diverse and protected wildlife species, including: Bats ?legally protected under the Wildlife and Countryside Act 1981. Palmate newts ? often found in local ponds and at risk from habitat loss. Owls, kestrels, and woodpeckers ? all of which rely on the fields, hedgerows, and mature trees for nesting and feeding. Developing this greenfield site would destroy this irreplaceable habitat and permanently damage local biodiversity. It is imperative that such ecosystems are protected, not sacrificed for urban expansion.
1.9	South of West Hallam	Wildlife / Biodiversity	Mrs Caroline Hooton	Response-00231	Removing an area with an abundance of natural wildlife affects our biodiversity along with the increased pollution
1.9	South of West Hallam	Wildlife / Biodiversity	Mrs Judith Pittson	Response-00753	There is a beautiful mature oak tree opposite Hallam Way which must be protected.
1.9	South of West Hallam	Wildlife / Biodiversity	Mrs Strelley	Response-00233	There are many varieties of birds spotted in the field. The building of dwellings will reduce the hedgerows and habitats of the local wildlife. The marsh-like ground lends itself to usual flora and fauna. Not the ideal setting for footings and stable foundations for houses.
	South of West Hallam	Wildlife / Biodiversity	Natalie Payne	Response-01523	There is so much wildlife in this area that a housing estate would have a very negative impact on the habitat
1.9	South of West Hallam	Wildlife / Biodiversity	Nick Craddock	Response-00145	As per my comments for other west Hallam Proposal
	South of West Hallam	Wildlife / Biodiversity	Nicola Elkington-Horridge	Response-00079	This is a beautiful area that should be preserved to keep the village full of wildlife and birds
1.9	South of West Hallam	Wildlife / Biodiversity	Nicole Brookman	Response-01559	at the moment we have a lot of wildlife and birds and i will loose that. my wildlife comes from this field
1.9	South of West Hallam	Wildlife / Biodiversity	Nina Walters	Response-00244	Yes
1.9	South of West Hallam	Wildlife / Biodiversity	Pamela Fox	Response-01242	We have an abundance of wildlife in the fields where planning permission is being sought, many birds live in the trees and take refuge in the hedgerow, we have Blue Tits, Great Tits, Goldfinches, Wood Peckers, hedge sparrows, black birds, squirrels and hedgehogs all live in and around the field not to mention the Bats which are regularly seen flying around at night. I fear that all these creatures will be lost to the area forever.
1.9	South of West Hallam	Wildlife / Biodiversity	Patricia Ryan	Response-00132	This area should be left for wildlife and humans to enjoy.
1.9	South of West Hallam	Wildlife / Biodiversity	Patrick Hynes	Response-01902	There are frequent sightings of deer, owls, and other wildlife in the proposed development area. These creatures will lose their habitat if construction proceeds, and we may never see their return.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	South of West Hallam	Wildlife / Biodiversity	Paul aldre	Response-00152	The village has been overdeveloped already and wildlife areas are less and less
1.9	South of West Hallam	Wildlife / Biodiversity	Paula Piggott	Response-01041	You can't keep destroying the countryside destroying habitats, killing wildlife and it all not have a knock on effect. You are destroying the air we breathe. We need flowers, we need bees these things the world can't exist without. The wildlife will seriously be impacted. You will destroy the habitats of many animals needed for the world to survive. This is a small village. With lots of precious animals, insects, flowers, trees etc you will kill these insects and animals when you destroy their habitats thus destroying the air we breathe.
	South of West Hallam	Wildlife / Biodiversity	Pauline wood	Response-01100	Conservation area. How can building be right
1.9	South of West Hallam	Wildlife / Biodiversity	Peter Lilley	Response-00161	The loss of another green space in an already highly built up area is deplorable
1.9	South of West Hallam	Wildlife / Biodiversity	Pete Vanstone	Response-01164	The development site is a known habitat for deer, owls, pheasants, and protected species such as the gold-crested newt. Disturbing this natural environment would be ecologically irresponsible and damage the biodiversity of the area.
1.9	South of West Hallam	Wildlife / Biodiversity	Philip Davies	Response-01116	Like many of the residents we have spent a lot of time and effort in providing spaces in our garden for birds, insects and animals. We have put bee and butterfly friendly plants in the garden and encouraged biodiversity. A housing complex backing onto our gardens will destroy all of this hard work and effort.
1.9	South of West Hallam	Wildlife / Biodiversity	Rachel	Response-01015	The site is home for so much wildlife.
1.9	South of West Hallam	Wildlife / Biodiversity	Rebecca Ricci	Response-00102	This site has wildlife and building houses on will remove their natural habitat. West Hallam needs to be kept rural.
1.9	South of West Hallam	Wildlife / Biodiversity	Richard Walters	Response-00546	Core Strategy Review Amendment - Public Consultation In response to your call for comments on the Core Strategy Review Document I hereby submit my views for your further consideration . My views will be largely confined to the Site Selection Paper, in particular as it relates to West Hallam and more specifically proposals relating to the Land South of West Hallam (CSR-0044) although my comments could equally apply to the other projected site in the village Land North of West Hallam (CSR0048). Point 1 - I note that in relation to site CSR-0044 the Paper states 'the site falls on land that fails to make an important contribution to the Green Belt' (ref p10, first full paragraph 1). I consider this statement, at best, a very subjective construct based on, what appears to be, unsubstantiated opinion. I presume that the justification for this is the assessment against the criteria of Safeguarding the Countryside from encroachment Checking the Unrestricted Sprawl of Large Built-Up Areas, and Preventing Neighbouring Towns Merging I further note that four sites at the Junction of St Wilfrids Road and High Lane Central ( CSR0004 & CSR0004 a, b and c) were rejected as meeting the above Green Belt criteria. I am unable to discern or find any evidence in the review as to why these sites meet the criteria and those at CSR0044 and CSR0048 do not. This distinction seems to arise purely from the unsubstantiated and subjective views of the paper's author rather than any detailed and objective in depth analysis of the respective sites contribution to the Green Belt. In fact a case may be made that the Beech Lane site (CSR0044) indeed makes a greater contribution in meeting the criteria vis Safeguarding the Countryside from encroachment :- the immediate presence of large scale urban encroachment is far more apparent on the Beech Lane site, sitting as it does on the edge of West Hallam central/core housing developments. Whereas the rejected sites (CSR004 etc) only lie adjacent to the lesser populated ribbon developments of the village. Over my time living in the village I have monitored the habitat contribution of the Beech Lane site. I have for example, to date recorded 53 bird, 15 mammal and 4 amphibian species on this site. As such it makes a valuable contribution to the countryside that would be jeopardised rather than safeguarded if housing development were to proceed. Taken as a whole the Beech Lane site has, at least as diverse a range of countryside attributes (hedges, adjoining woodland, wetland habitat, ditches, grassland perfect for ?predator? hunters such as owls and hawks) as any of the ?rejected? sites. Checking the Unrestricted Sprawl of Large Built Up Areas:- with a current population of c.6000 in 2600 households (2001 census) West Hallam already has a population that surpasses that of several East Midland towns. This raises the existential question as to what is the fundamental nature of West Hallam as a community. Again the pressure from built up area sprawl is already more keenly felt at site CSR 0044 than at the ?rejected? village sites so it is difficult to understand why the Green Belt criteria apply to ?rejected sites? and not the Beech Lane site. Preventing Neighbourhood Towns Merging:- Suffice it to say that I can perceive no more justification in saying this criteria applies to the rejected sites than in doing so for the Beech Lane site (CSR0044). If there is a distinction to be made it needs to be justified/quantified. Point 2 Tr
1.9	South of West Hallam	Wildlife / Biodiversity	Richard Walters	Response-00546	affic and Services The main core of the village, the Village and the Estate, is already poorly served by access and egress roads. This already creates excessive traffic congestion particularly at peak periods. This can be further exacerbated by:- the frequency of road works necessitated by the aging services infrastructure of the village e.g. utilities and the subsidence legacy of the mining past The presence of the village school and main playing fields adjoining one of those main access/egress points. Further housing development without improved/additional road infrastructure, as currently envisioned, is only going to worsen an already problematic situation. In Summary I note both the rejected and proposed housing proposals. However I cannot see that any case has been satisfactorily made justifying why some sites have been deemed to meet the Green Belt criteria and others do not do so. The only rather spurious justification appears to be that of expedience and opportunity! That the Land South of West Hallam (CSR0044) has an absentee owner who is only too willing to facilitate its development and, in doing so, meet the Authorities targets. In particular I would expect far greater transparency and justification as to why the report states that some sites meet the Green Belt criteria while others do not. THE SITE SELECTION PAPER FAILS TO MAKE ANY SUBSTANTIVE CASE WHY SOME SITES MEET THE GREEN BELT CRITERIA BUT OTHERS DO NOT. THE SITE HAS BEEN SELECTED WITHOUT ANY APPARENT WILDLIFE/BIODIVERSITY SURVEY BEING UNDERTAKEN
	South of West Hallam	Wildlife / Biodiversity	Robert Hall	Response-00630	Development would inevitably harm existing wildlife and biodiversity.
1.9	South of West Hallam	Wildlife / Biodiversity	Robert Reynolds	Response-00260	Building these houses would have a negative impact on local wildlife, from insects (especially pollinators) to birds and small mammals since it would remove an area in which they live.
	South of West Hallam	Wildlife / Biodiversity	Ruby Reid	Response-00119	Disrupt the wildlife habitats in the fields and surrounding woodlands

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.9	South of West Hallam	Wildlife / Biodiversity	sam richards	Response-01467	living opposite this piece of land, i always see how much wildlife exists there. owls, kestrels and pheasants can be seen on a daily basis and we have also seen a badger too. the large oak tree (which i hope is protected) provides vital space for animals to shelter, feed and breed.
1.9	South of West Hallam	Wildlife / Biodiversity	Sarah Taylor	Response-00115	The area provides a home for wildlife which is largely contradicting Erewash's re-wilding vision. I have seen field mice, barn owls, rabbits, various hedge birds that the RSPB do an annual count on. This area doesn't look like there is much going on however it is a haven for wildlife.
1.9	South of West Hallam	Wildlife / Biodiversity	Serena Bostock	Response-00125	People live in West Hallam because they want to be away from busy, overcrowded areas and enjoy their surroundings and nature. This will destroy that. It will become another Ilkeston town and push people out.
1.9	South of West Hallam	Wildlife / Biodiversity	sharon hickson	Response-01430	the field has always been a habitation for wildlife and has been kept as wild for years, so the amount of wildlife in the field alone is worth leaving and would fore fill the governments wild areas commentment
1.9	South of West Hallam	Wildlife / Biodiversity	Simon Reeve	Response-01080	The fields between High Lane, West Hallam and Shipley/Heanor Road, Ilkeston support a diverse population of wildlife with open fields, woodlands, marsh land, lakes and streams/ivers. Removing any part of this environment for housing should be banned on this basis alone, there be no home for nature and "not cutting the grass verges" (to save money) won't make a difference.
1.9	South of West Hallam	Wildlife / Biodiversity	Sophie	Response-01105	The site will remove necessary green spaces for wildlife
1.9	South of West Hallam	Wildlife / Biodiversity	Stacey Eady	Response-01529	I have been advised that this most recent inclusion of the Beech Lane site is not due to the recent changes in the Green Belt policy that was implemented in late 2024, as you have confirmed to me that you are not using this policy. I'm lead to believe that you are using the previous version of the policy that was in place at the beginning of the revised core strategy, and this was much earlier(2022). This merely creates more confusion about the desire to include the land in question. As the alternative site (CSR0004) on St Wilfrids Road in West Hallam had been rejected during this policy period, as a result of satisfying the Green Belt criteria, you will surely understand, having visited both sites, that this St Wilfrids site offers far less in terms of the Green Belt criteria than that of Beech Lane. This latter site has several mature trees that promenade the front of Beech Lane, not to mention the thousand of birds/wildlife and plants it houses and it's vital contribution to the mainainance of the conservation area that is within very close proximity. With the Safeguarded Land that is being discussed still been used for agricultural purposes, I feel that there is some misjudgment as to how these different sites scored and maybe this was influenced by the sudden need to deliver outcomes quickly rather than actually scoring this appropriately. As such, I wish to challenge the findings as the report doesn't clearly outline the process. My concerns are also that whilst the Beech Lane piece of land is a 'developers dream' and the land owner is eager to sell, these decisions should not be influenced merely by this aspect. The land is situated adjacent to the centre of our historic village, which dates back to as early as the Domesday Book, and which is currently part of the vital Conservation Area. As you will know, this area was initially designated and implemented to protect and preserve the local area. The proposed new development will be very close to this crucial area and will, in everyone's opinion, add very little visual benefit. Indeed it will, in all probability, have a negative impact on the Conservation Area, while being in no way in keeping with the current historical aesthetics of a traditional village centre that was built many years ago. To allow access to this historical village centre to become clogged with the excess traffic that will be generated by the current proposal is, in the opinion of most residents, intolerable.
1.9	South of West Hallam	Wildlife / Biodiversity	Steve Bailey	Response-01022	The field that is being suggested provides the local wildlife and a nice area to walk to the cricket ground.
1.9	South of West Hallam	Wildlife / Biodiversity	Teresa Faulkner-Day	Response-00242	There is a wealth of wildlife in the village that can't be found in the surrounding areas. This would be lost forever.
1.9	South of West Hallam	Wildlife / Biodiversity	Teresa Webster	Response-00086	We have pheasants nesting in the field, a family of deer living in the woods and a family of buzzards that have been living in the trees near here for years. I also understand that the newts are protected
1.9	South of West Hallam	Wildlife / Biodiversity	Tilly Fletcher	Response-00317	Building houses in this area will completely decimate all wildlife.
1.9	South of West Hallam	Wildlife / Biodiversity	Toni Tomlinson	Response-00204	There are foxes, rabbits and deer using this land .
1.9	South of West Hallam	Wildlife / Biodiversity	Tracey Barks	Response-00111	The proposed development on a buffer green way between The Storage Depot and the village will add to the erosion of wildlife habitat areas around our village. The woodland next to the area is home to many nesting birds including buzzards with the potential for the red kites that are now in our area, nesting there.
1.9	South of West Hallam	Wildlife / Biodiversity	Vicky Buckley	Response-00182	we need green spaces for wildlife
1.9	South of West Hallam	Wildlife / Biodiversity	Victoria Walker	Response-00228	The proposed land is on fields where animals and birds live. It is a nesting site.
1.9	South of West Hallam	Wildlife / Biodiversity	Yvonne	Response-00207	This area is full of birds and wildlife ..
1.10	North of West Hallam	Air Quality	Alesha Johnson	Response-01122	Air quality in the area is of vital importance to the residents. Alot of people who live in West Hallam already feel the effects of air pollution on especially on High Lane. We all know how dangerous the side effects can be.
1.10	North of West Hallam	Air Quality	Andy Williams	Response-00184	This area is on the edge of the country parks & nature reserves and the air quality is clearly going to be affected with built up area.
1.10	North of West Hallam	Air Quality	Anita Lawrence	Response-00660	Increased pollution. More vehicles accessing High Lane West will raise pollution levels unless public transport is improved and utilised. Levels of pollution along High Lane West and onto Belper Road, Stanley Common are high, especially particulate matter which can be clearly seen as it settles onto windows, vehicles and penetrates into homes, this together with less visible pollution is a considerable health risk especially to the very young, elderly and other vulnerable people.
1.10	North of West Hallam	Air Quality	Charles Brooks	Response-00933	Additional housing can only make air quality worse. The proposed land is lovely and green and used by animals and wildlife. Residents who live on the High Lane by the proposed development have wonderful views over the countryside.
1.10	North of West Hallam	Air Quality	Claire Dean	Response-00068	Noise and air pollution would have an effect on the local area without a doubt. The quality of the air from the use of vehicles is already poor so again adding to this with not only transportation but household activities such as burning solid fuels such as cooking, heating and everyday living activities which would occur should you increase the number of households and occupants in the area.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	North of West Hallam	Air Quality	Claire Hunter	Response-00709	More traffic will Mean added pollution in the area affecting the residents and wildlife in the area
1.10	North of West Hallam	Air Quality	Cory page	Response-01425	More people more pollution and ruining the wildlife and increasing this pollution is selfish.
	North of West Hallam	Air Quality	David Whitehead	Response-01051	The development will cause a degradation in air quality from construction machinery fumes and dust.
1.10	North of West Hallam	Air Quality	Hannah	Response-00252	Already high lane west station road much busier than when we moved especially station road, the crossroads are a death waiting to happen
	North of West Hallam	Air Quality	Helen Patenall	Response-00872	Air quality will be impacted by the increase in traffic in the area. More housing = more vehicles (possibly several vehicles at one property) = less clean air.
1.10	North of West Hallam	Air Quality	Helen Stanley	Response-01558	More cars more pollution
	North of West Hallam	Air Quality	Jane Garner	Response-01076	Air quality will decrease with the extra traffic on the roads.
1.10	North of West Hallam	Air Quality	Jayne Trueman	Response-00427	The extra volume of traffic and construction off the development will add to the already high amount of traffic emissions.
	North of West Hallam	Air Quality	Jonie Centro	Response-00729	more heating/cars/congestion will all increase air polution and lower general quality of life and air
1.10	North of West Hallam	Air Quality	Julie Harbon	Response-00026	Congestion will be detrimental to air quality
1.10	North of West Hallam	Air Quality	Kathryn McCartney	Response-01042	Traffic is ever increasing, many of the existing homes in the surrounding area have more than one vehicle, air quality is diminishing as a result. Hampered by the inevitable destruction of trees and hedgerows increases reducing air quality.
1.10	North of West Hallam	Air Quality	Kerry Middleton	Response-00265	This proposal would be detrimental to the air quality, thus causing health problems to the residents.
1.10	North of West Hallam	Air Quality	laura slater	Response-01540	It is a 40mph road with heavy traffic at almost all times of day. the air quality will obviously get poorer with each new house owning at least one vehicle
1.10	North of West Hallam	Air Quality	Lee Hunter	Response-00176	This is a tree lined area adding natural beauty to our area
	North of West Hallam	Air Quality	Marie cox	Response-00105	More houses more traffic poorer air pollution
1.10	North of West Hallam	Air Quality	Matt Haddon	Response-00098	The increased volume of traffic, and increased queuing times of cars trying to join from Station Road or Park Hall Lane will generate significantly more car fumes in the area, which aside from the impact on residents is not good for the environment.
	North of West Hallam	Air Quality	Nick Craddock	Response-00144	More traffic in the area
1.10	North of West Hallam	Air Quality	Nicola Elkington-Horridge	Response-00082	It goes without saying about the amount of extra pollution this will cause.
1.10	North of West Hallam	Air Quality	Patrick Barber	Response-00279	The increase in traffic will reduce the local air quality
1.10	North of West Hallam	Air Quality	Paula Piggott	Response-01044	You can't keep destroying the countryside destroying habitats, killing wildlife and it all not have a knock on effect. You are destroying the air we breathe. We need flowers, we need bees these things the world can't exist without. The wildlife will seriously be impacted. You will destroy the habitats of many animals needed for the world to survive. This is a small village. With lots of precious animals, insects, flowers, trees etc you will kill these insects and animals when you destroy their habitats thus destroying the air we breathe. There is a school and many bungalows with pensioners. It is a accident waiting to happen. Also dog walkers, horse riders and lots of wildlife. Seriously someone will get hurt or worse killed! It is a small village without the capacity for more houses. The roads are not built for so many extra residents. You will totally destroy the area and you will totally destroy the clean air killing lots of wildlife and their habitats in the process. Keep building over land will cause flooding and lead to drainage problems as natural soakaway will be destroyed.
	North of West Hallam	Air Quality	Pauline Lawson	Response-00314	More traffic will inevitably add to the air pollution
1.10	North of West Hallam	Air Quality	Pauline Wood	Response-01099	Air quality would be affected
	North of West Hallam	Air Quality	Richard elks	Response-01422	Need I comment, air quality will certainly be impacted by the amount of properties proposed aswell as car usage.
1.10	North of West Hallam	Air Quality	Simon Reeve	Response-01059	The government needs to make their minds up whether they're taxing us to death over emissions or making money out of us with a green con. The addition of more homes on green belt land brings more pollution and the removal of fields and trees less carbon capture and converting greenery. Use the dead town of Ilkeston where shops are closed and convert those in to homes, use some of the land around Stanton, these brown field sites go untouched
	North of West Hallam	Air Quality	Sophy Cunningham	Response-00211	Further traffic congestion and additional cars in the area will affect air quality.
1.10	North of West Hallam	Air Quality	Teresa Faulkner-Day	Response-00240	With the high number of vehicles often heavy ones, already going through the village this way, causing poor air quality in this part of the village. This does not need adding to
1.10	North of West Hallam	Air Quality	Thomas Edward Tyler	Response-01079	Living on the main road means lots of traffic and therefore there is naturally going to be vehicle fumes especially from lorries. In the drier months there is a lot of dust deposited daily on windows and our vehicles. This is to be expected and no different to anywhere else adjacent to the roadside. However, we acknowledge this and use our rear garden area as a refuge where the noise and air quality levels are clearly better. Our concerns regarding developing to the rear of our property are that these benefits will then cease to exist.
1.10	North of West Hallam	Bus Services	Alesha Johnson	Response-01122	The proposed development area is poorly served by public transport, meaning most residents will be dependent on cars. This not only increases emissions and road use but also highlights the unsustainable nature of this development. No substantial infrastructure improvements appear to be included in the application to address this.
1.10	North of West Hallam	Bus Services	Andy Williams	Response-00184	Bus services in this area are already limited and do not operate in the evenings. Therefore necessary for increase in car journeys and cars parked causing congestions and safety concerns
1.10	North of West Hallam	Bus Services	Anita Lawrence	Response-00660	The bus service along the A609 is poor, quite unsuitable for further developing the village and incompatible for those needing to travel. The existing service will not reduce the use of fossil fuels from private vehicles.
1.10	North of West Hallam	Bus Services	Asha Haynes	Response-00059	There isn't a bus service after 6 so unless the new owners have cars they will be isolated. The bus service that exists is limited.
1.10	North of West Hallam	Bus Services	Charles Brooks	Response-00933	There are occasional buses along the High Lane but not always regular. West Hallam does lack a really good regular bus service between Derby and Ilkeston especially in the evenings.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	North of West Hallam	Bus Services	Claire Dean	Response-00068	The bus services are poor in west hallam.
1.10	North of West Hallam	Bus Services	Claire Hunter	Response-00709	The bus service doesn't ring regular enough or late enough for the amount of audience we have in the village never mind with more people joining the area.
	North of West Hallam	Bus Services	Cory page	Response-01425	There are barely any buses, I rely on my bike.
1.10	North of West Hallam	Bus Services	Daniel Clark	Response-01091	They struggle to manoeuvre now with the high traffic and small roads and more houses in the area will make it worse
	North of West Hallam	Bus Services	Danielle Tyler	Response-01121	Virtually none existent as it is.
1.10	North of West Hallam	Bus Services	Ellen Haddon	Response-00065	There is a very poor bus service running from West Hallam. Putting social housing here, who may not have cars would be very restrictive for people and unworkable for them.
	North of West Hallam	Bus Services	Hannah	Response-00252	What bus service! Sunday for my teenagers none I have to take and fetch from work!
1.10	North of West Hallam	Bus Services	Helen Patenall	Response-00872	The bus service in West Hallam is woefully inadequate. The buses run very infrequently during the day and the last bus available in the evening is 18:20. A perusal of the bus timetables will support this point
	North of West Hallam	Bus Services	Homewood	Response-01069	Already limited service
1.10	North of West Hallam	Bus Services	Jane Garner	Response-01076	Very limited service so it's easier to use your car.
	North of West Hallam	Bus Services	Jane Marshall	Response-01171	Already way below par.
1.10	North of West Hallam	Bus Services	Jayne Trueman	Response-00427	The bus service is very limited in the area and ends early in the evening. Buses are also held up the traffic jams at the two crossroads particularly at school drop off and collection times.
	North of West Hallam	Bus Services	kelly centro	Response-00203	The bus service is shocking
1.10	North of West Hallam	Bus Services	Kerry Middleton	Response-00265	This would be detrimental to the bus services that run throughout the village.
	North of West Hallam	Bus Services	Lee Hunter	Response-00176	Buses dont run in this area after a certain time of day
1.10	North of West Hallam	Bus Services	Lewis Tyler	Response-01104	Virtually non-existent. Funding gets cut year on year
1.10	North of West Hallam	Bus Services	Marie cox	Response-00105	Only limited bus service through the village as it is
1.10	North of West Hallam	Bus Services	Mark	Response-00166	There a no bus services that cater for the shift worker! Or elderly shoppers this housing growth will lead to more cars
1.10	North of West Hallam	Bus Services	Matt Haddon	Response-00098	There are virtually no bus services these days therefore anyone without their own transport living at the site would feel isolated and unable to easily access essential shops and social venues
1.10	North of West Hallam	Bus Services	Melanie Lawson	Response-00848	There is no public transport in the area so the plot is not suitable as the community will be isolated. There isn't a bus service after 6.
1.10	North of West Hallam	Bus Services	Nick Craddock	Response-00144	The buses in the area run regularly, but may need to add more.
1.10	North of West Hallam	Bus Services	Nicola Elkington-Horridge	Response-00082	The bus service in West hallam is useless and poor. This will jot help it in anyway what so ever.
	North of West Hallam	Bus Services	Patrick Barber	Response-00279	The area is lacking bus services and the number of bus services is declining, with only services to Ilkeston and Derby now available.
1.10	North of West Hallam	Bus Services	Paula Piggott	Response-01044	The bus service is already limitd in West Hallam. Increasing this service will have a devastating impact on wildlife and the air we breathe. Also the roads are not safe for any more traffic
	North of West Hallam	Bus Services	Pauline Wood	Response-01099	Terrible bus service
1.10	North of West Hallam	Bus Services	P Newton	Response-00773	The current bus service is very poor anyway in the village , what we need is an increased bus service not more housing developments.
1.10	North of West Hallam	Bus Services	Rachael Winfield	Response-01537	Bus services are useless. One bus every hour isn't a service, if the houses are to be affordable housing, likely for people not to have a car. Bus service needs improving
1.10	North of West Hallam	Bus Services	Richard Brewell	Response-00193	Bus services are already poor, especially at weekends. As a result, travel and commuting links are already unsuitable.
1.10	North of West Hallam	Bus Services	Richard elks	Response-01422	It's poor, unfortunately unless you drive you would find it very difficult to leave this area.
1.10	North of West Hallam	Bus Services	REDACTED	Response-00178	REDACTED
	North of West Hallam	Bus Services	Simon Reeve	Response-01059	The bus services in the area are good, commuting links to Ilkeston, on the Nottingham or direct to Derby are good
1.10	North of West Hallam	Bus Services	Tina Jay	Response-01802	Also the public travel links for West Hallam are very limited, with no evening service at all, with cars being the main use of transport, and any new housing developments of this size bringing further difficulties.
1.10	North of West Hallam	Bus Services	Varley	Response-00290	Bus services are now on a reduced timetable due to funding. I know of people who have to walk from stanley common to west hallam to get the buses in to ilkeston.
1.10	North of West Hallam	Bus Services	Victoria noble	Response-00107	Bus services are already few and far between
1.10	North of West Hallam	Flooding / Drainage	Andy Williams	Response-00184	This area already has significant drainage issues and any increase in water volume in existing drainage system will push beyond design capacity
1.10	North of West Hallam	Flooding / Drainage	Anita Lawrence	Response-00660	The A609 is known to flood in the proposed area.
1.10	North of West Hallam	Flooding / Drainage	Asha Haynes	Response-00059	To my understanding the area floods and the field has a large area of flooding for most of the year. This can be seen from my bedroom window.
1.10	North of West Hallam	Flooding / Drainage	Bruce Broughton	Response-01533	The land is known locally to be liable to flooding with water overflowing onto public footpath no 2 at the eastern end of the site and the adjacent gardens, and even crosses High Lane West (A609) into gardens on the opposite side of the road. It is understood (from the Parish Council) that Severn Trent Water have visited the affected properties but have declined to do anything to remedy the situation. I can see nothing in the proposals to suggest that this has been considered.
1.10	North of West Hallam	Flooding / Drainage	Carol Hart	Response-01828	There are two major problems with this site, one is that it is constantly under water, this water floods the footpath adjacent the site and the garden of the house adjacent the site, the water crosses the road at times and floods the gardens of a couple of properties on the opposite side of the road. Seven Trent water know of the problem but have taken no actions to remedy this.
1.10	North of West Hallam	Flooding / Drainage	Caroline Tew	Response-01021	This area regularly floods in times of high rainfall and water is pumped out the garden of one house
1.10	North of West Hallam	Flooding / Drainage	Charles Brooks	Response-00933	It is common knowledge that the proposed area is prone to flooding and the new build will increase the risk of surface water run-off. Please consult the residents that back onto the site. They will give you first hand information

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Flooding / Drainage	Christine Barnes	Response-00639	Houses at the bottom end of High Lane West are already affected by flooding. At times flood water crosses HLW affecting properties on the other side. With increased housing this problem would be exacerbated. Who will sort out this problem for the affected householders.
1.10	North of West Hallam	Flooding / Drainage	Christopher Chambers	Response-00169	This site is perpetually flooded, especially at the end opposite to Park Hall Lane. In heavy rains, the last 50m of the field is boggy or often underwater. There is a very well used footpath at this end as well as the access drive for the properties on High Lane West. Any development is to exacerbate the drainage issues and without extensive and potentially damaging (aesthetically, ecologically) drains and run off areas, the water that pools here will be moved to the footpath/drives access road. This development cannot take place without a detailed and proper groundwater survey, with mandatory compliances baked-in to any permissions granted. Examples of where the local authority has failed in this regard include former White Hart Public House Station Rd West Hallam which regularly floods as the building contractor has infilled the drainage ditches that were not adequately surveyed and the play park area off the Nutbrook trail to the rear of Elka's Rise Ilkeston, which is so poorly constructed that the meagre and rather desolate design of drainage is wholly inadequate for the needs of the site, which is largely unusable. The local authority needs to ensure that any planning consent includes strict mandates on drainage and that these are enforced.
1.10	North of West Hallam	Flooding / Drainage	Claire Dean	Response-00068	More hosing means strain on our water systems, pollution, which increases the risk of flooding an area that in the past has been known to flood.
1.10	North of West Hallam	Flooding / Drainage	Claire Hunter	Response-00709	We live next to the field and there is a major drainage problem that has been reported. We had to purchase our own pump to pump the water during times of rain or heavy snow. The water runs off the field onto the public footpath and onto our drive. Carol Hart has delivered sandbags before to us and this has been reported. This would be a major problem for the houses on this land
1.10	North of West Hallam	Flooding / Drainage	Cory page	Response-01425	The land proposed does flood and has done in the past.
1.10	North of West Hallam	Flooding / Drainage	Danielle Tyler	Response-01121	The field has poor drainage already
1.10	North of West Hallam	Flooding / Drainage	David Whitehead	Response-01051	The field floods every winter and Autumn after moderate and heavy rain.
1.10	North of West Hallam	Flooding / Drainage	E bayley	Response-00080	This area floods easily so increasing run off will cause flooding at other houses already present
1.10	North of West Hallam	Flooding / Drainage	Ellen Haddon	Response-00065	The field on mention floods continuously often overflowing into the road and building up there. Surely putting houses on here will cause high lane to flood more frequently and more severe.
1.10	North of West Hallam	Flooding / Drainage	Francesca Dean	Response-00220	The entire field floods with any water. It also gets water from the houses and other fields on it due to it being lower. This also floods highland west making it lethal
1.10	North of West Hallam	Flooding / Drainage	Gary Hamson	Response-00055	There is a ditch along the boundary on the roadside and the field is a terrible location in terms of flooding and no 49 High Lane West has dealt with this over the last few years
1.10	North of West Hallam	Flooding / Drainage	Gillian Bosworth	Response-00920	This field is often flooded, the flooding spreading to neighbouring properties and the road. New housing can only make matters worse.
1.10	North of West Hallam	Flooding / Drainage	Hannah	Response-00252	We on station road on a high water table according to survey and our underneath our house and next doors regularly floods, we have reach out to council and private. It's all built on clay
1.10	North of West Hallam	Flooding / Drainage	Helen Patenall	Response-00872	The land is a known flood problem and is always boggy and water logged for some time after any prolonged spell of rain, affecting gardens and footpaths in the area. I am led to believe Severn Trent Water are aware of the issues
1.10	North of West Hallam	Flooding / Drainage	Homewood	Response-01069	Already have major issues
1.10	North of West Hallam	Flooding / Drainage	Jane Garner	Response-01076	The field in question floods - why build on land that floods you are asking for future problems
1.10	North of West Hallam	Flooding / Drainage	Jane Marshall	Response-01171	Field regularly floods and flows onto main road.
1.10	North of West Hallam	Flooding / Drainage	Jayne Trueman	Response-00427	The area constantly floods. Impacting property and the road. Drainage is not adequate to deal with this and is made worse by the extreme weather events we now see. It also froze in the road this winter causing dangerous conditions for road users.
1.10	North of West Hallam	Flooding / Drainage	Kerry Middleton	Response-00265	This ground is not suitable for building work to be carried out on it.
1.10	North of West Hallam	Flooding / Drainage	Laura Egglestone	Response-01500	Area is often flooded and already causes issues to nearby houses.
1.10	North of West Hallam	Flooding / Drainage	Lee Hunter	Response-00176	What measures will be taken to sort the drainage, our house has been threatened by flooding for the past 5 years and with more house doesn't this add even more pressure the drainage system. The current owner of the land has done nothing to stop any flooding of our property
1.10	North of West Hallam	Flooding / Drainage	Lewis Tyler	Response-01104	I walk my dog in nearby fields and they already flood
1.10	North of West Hallam	Flooding / Drainage	Linda Webster	Response-00747	My main objection concerns the flooding which Severn Trent Water have declined to remedy. The land floods, overflowing into the footpath and the adjacent gardens. It even crosses the A609 into gardens on the opposite side of the road!
1.10	North of West Hallam	Flooding / Drainage	Marie cox	Response-00105	The field floods in the corner and onto the property adjacent to the Where is the sense in building on land that floods
1.10	North of West Hallam	Flooding / Drainage	Matt Haddon	Response-00098	The current site is often partially under water during heavy rain and water often overflows on to High Lane. The proposed site is also very prone to flooding during heavy rain with water often overflowing on to nearby pavements and roads, as well as local gardens. Large parts of the field are submerged in water following heavy rain.
1.10	North of West Hallam	Flooding / Drainage	Melanie Lawson	Response-00848	The plot regularly floods and if built on this will cause increasing issues of flooding for more houses. Severn Trent are aware of this.
1.10	North of West Hallam	Flooding / Drainage	Mr and Mrs Wood	Response-01825	Climate change will undoubtedly make us more concerned about the removal of natural flood plains,
1.10	North of West Hallam	Flooding / Drainage	Natalie Payne	Response-01520	Area floods
1.10	North of West Hallam	Flooding / Drainage	Nichola Dodd	Response-00197	The land regularly floods, causing a safety issue to the local residents
1.10	North of West Hallam	Flooding / Drainage	Nick Craddock	Response-00144	Already natural drainage is being destroyed by chopping down trees, making hard standings. Generally destroying natural drainage
1.10	North of West Hallam	Flooding / Drainage	Nicola Elkington-Horridge	Response-00082	This area often gets waterlogged. Building here would add to the problem.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Flooding / Drainage	Patrick Barber	Response-00279	The site has poor drainage and run off from the site regularly floods nearby properties and on occasions the adjoining highway (High Lane West)
1.10	North of West Hallam	Flooding / Drainage	Paula Piggott	Response-01044	Keep building over natural land will cause drainage and flooding problems. It is a small village that needs natural ground for water to escape to.
1.10	North of West Hallam	Flooding / Drainage	Pauline Wood	Response-01099	Land is already known for flooding. Will get worse
1.10	North of West Hallam	Flooding / Drainage	R F Smith	Response-00685	The land floods following heavy rain developing lakes and overflows onto the adjacent footpath and gardens. Drainage is therefore poor. There is no natural watercourse in the immediate vicinity. Should the land be developed presumably appropriate drainage systems will be required to drain excess water into the sewer system which may overload current capacity causing potential problems elsewhere in the village.
1.10	North of West Hallam	Flooding / Drainage	Rhonda Holt	Response-00236	I would say the water infrastructure has already had problems and there's problems of flooding in West Hallam.
1.10	North of West Hallam	Flooding / Drainage	Richard Brewell	Response-00193	The location highlighted already holds flood water during periods of heavy rain. Building hard landscaping in this area will only increase surface water runoff causing problems in the immediate area.
1.10	North of West Hallam	Flooding / Drainage	Richard elks	Response-01422	The proposed site has a reputation of flooding and it had impacted neighbouring properties in the past.
1.10	North of West Hallam	Flooding / Drainage	Robert Mee	Response-01790	There is also a problem with flooding at this location, which any local residents can attest to.
1.10	North of West Hallam	Flooding / Drainage	Robert Mee	Response-01507	There is also a problem with flooding at this location, which any local residents can attest to
1.10	North of West Hallam	Flooding / Drainage	Simon Reeve	Response-01059	It's a joke, the area already has issues along Nutbrook, the new housing on Quarry Hill floods as does the entire trail around Manor Flood, moreso now than ever in my almost 50 years in the areas. Taking away fields and trees and replacing with tarmac and concrete with drains to "lose the water" to another location simply overloads another area....it can't continue
1.10	North of West Hallam	Flooding / Drainage	Sophy Cunningham	Response-00211	This field often floods when there is heavy rain and a pump system has to be used to drain the field. If houses are built here this could impact drainage further down high lane for the existing houses and residents.
1.10	North of West Hallam	Flooding / Drainage	Stuart Dobson	Response-01114	This field is prone to flooding. Building on this site would cause this flooding to go down to other houses and areas
1.10	North of West Hallam	Flooding / Drainage	Teresa Faulkner-Day	Response-00240	As we have seen with other developments in the village over the years, this increases the risk of flooding. Too often planning permission has been granted without the proper research in to the land that is being built on
1.10	North of West Hallam	Flooding / Drainage	Thomas Edward Tyler	Response-01079	Usual concerns over building on any areas that are subject to any flooding.
1.10	North of West Hallam	Flooding / Drainage	Tina Jay	Response-01802	Also the land floods constantly overflowing into the footpath and the gardens adjacent and even crosses the A609 into gardens on the opposite side of the road, causing further problems.
1.10	North of West Hallam	Flooding / Drainage	tracey knighton	Response-01228	Area floods regularly
1.10	North of West Hallam	Green Belt	Alison Bull	Response-00238	We should preserve our green areas such as this - they are something to be proud of and are becoming less and less unfortunately. If we continue to build on them the appeal of living in areas such as West Hallam will diminish
1.10	North of West Hallam	Green Belt	Alistair	Response-01139	Building on green belt and will build awful new builds that are crammed in with no gardens
1.10	North of West Hallam	Green Belt	Andy Williams	Response-00184	There are several brown belt areas that could be developed to ensure protection of the green belt in this area which has been reduced significantly over recent decades
1.10	North of West Hallam	Green Belt	Asha Haynes	Response-00059	The area is green belt and should be left as this.
1.10	North of West Hallam	Green Belt	Bruce Broughton	Response-01533	In many ways Park Hall Lane represents the 'gateway' to the countryside from the built-up parts of West Hallam. It is widely used as a recreational route by walkers, runners, horse riders and cyclists, seven days a week. The proposals suggest only 'emergency' access from Park Hall Lane from the site, with houses presumably backing onto the lane. However, developing area D would create about 120m of new 'urbanised' frontage to Park Hall Lane, affecting the area's recreational and rural character. The development of this area would not respect or preserve identified landscape character nor have any positive impact on visual amenity.
1.10	North of West Hallam	Green Belt	Carly Denham	Response-00291	These are our green spaces
1.10	North of West Hallam	Green Belt	Caroline Tew	Response-01021	It is important to protect the greenbelt for future generations. Everyone needs green spaces to enjoy and being in the natural environment within a village environment is the reason many people live in West Hallam. It is a well known fact that access to the countryside and open space helps with mental health difficulties
1.10	North of West Hallam	Green Belt	Charles Brooks	Response-00933	Please do not build on the green belt. As said previously, I moved to West Hallam to be in the country and I want to be surrounded by open spaces and to hear the sound of nature and wildlife.
1.10	North of West Hallam	Green Belt	Chloe Parkin	Response-00153	Our green spaces are so valuable and cannot be recreated. Keep our green spaces for our beautiful countryside! Great for people's mental and physical health.
1.10	North of West Hallam	Green Belt	Chris Reid	Response-00137	We should not be building on green belt land
1.10	North of West Hallam	Green Belt	Christopher Chambers	Response-00169	The local authority should not be actively seeking to meet Government housing quotes by targeting green belt land over brownfield or existing development areas. This particular site is not subject to former industrial development, such as the area behind Newdigate Arms further towards Ilkeston, and there is no obvious need, other than the desires of private developers, in seeking to irrevocably altering the landscape with this proposal.
1.10	North of West Hallam	Green Belt	Claire Dean	Response-00068	We have several areas of brown belt so why try and take our green belt.
1.10	North of West Hallam	Green Belt	Claire Hunter	Response-00709	This green belt land is what attracted us to the area. We moved here because we weren't surrounded by houses and now there will be affordable housing next to us. Animal habitats destroyed and the beautiful surroundings will disappear
1.10	North of West Hallam	Green Belt	Danielle Tyler	Response-01121	Land is green belt, should not be built on.
1.10	North of West Hallam	Green Belt	David Whitehead	Response-01051	The green belt should be left while there are plenty of more suitable brown fields sites available for development.
1.10	North of West Hallam	Green Belt	Francesca Dean	Response-00220	Needs to be protected. There are lots of houses that can be fixed up, brown sites can be used. Once it starts on this field it will continue all across our green belt!

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Green Belt	Gale Harvey	Response-01130	More green space disappearing
1.10	North of West Hallam	Green Belt	Helen Blackwell	Response-00457	When there is so much land that is no longer in use undeveloped greenbelt land should not be used.
1.10	North of West Hallam	Green Belt	Helen Patenall	Response-00872	By definition green belt is "an area of open land, on which building is restricted". I have always been led to believe that the proposed site is green belt land. It seems more than suspicious that all the area around the proposed site remains green belt on the map. It would seem to me that the green belt rules protecting the proposed site have been 'altered' to suit political aims, this is underhand and bordering on the deceitful/corrupt.
1.10	North of West Hallam	Green Belt	Helen Stanley	Response-01558	Permanent loss of greenbelt, habitats and increased risk of future expansion with the proposed layout
1.10	North of West Hallam	Green Belt	Helen Taylor-Tipton	Response-00245	Never to be built on
1.10	North of West Hallam	Green Belt	Howard marshall	Response-00124	Green belt land is there for a reason! Wildlife needed! Money cause rules and not interested in the public.
1.10	North of West Hallam	Green Belt	Jane Garner	Response-01076	Why build on green belt. There are plenty of empty unused properties in towns already built that could be redeveloped into apartments. Like what has been done to the Rutland mill building in Ilkeston and the old department store on the market place Ilkeston. Also there are plenty of brown field sites around the area that can be used to build on.
1.10	North of West Hallam	Green Belt	Jayne Trueman	Response-00427	Green belt and green spaces should be protected to be enjoyed by our depleted wildlife and are vital for leisure, health and well being. People from all around this area come to horse ride, cycle and walk in these open spaces.
1.10	North of West Hallam	Green Belt	Jon Skelson	Response-00156	It's called green belt for a reason. Nobody here needs more houses at the expense of wildlife and residents well being.
1.10	North of West Hallam	Green Belt	Kathryn McCartney	Response-01042	Continued erosion of green belt, agricultural land is an easy option for developers instead of developing brown site areas. This erosion in small doses will destroy the area.
1.10	North of West Hallam	Green Belt	Kerry Middleton	Response-00265	This should not be used for housing as it should preserved for wildlife and for locals to enjoy. The ground is not suitable for footings.
1.10	North of West Hallam	Green Belt	Laura Egglestone	Response-01500	This is green belt and should be protected
1.10	North of West Hallam	Green Belt	laura slater	Response-01540	What is the point of having green belt if the amount of green belt is getting smaller and smaller. Reducing west hallams beauty and village idyllic feel
1.10	North of West Hallam	Green Belt	Lee Hunter	Response-00176	Isnt this a green belt site, we moved to this area for its beauty
1.10	North of West Hallam	Green Belt	Lenny	Response-00167	Green Belt used to mean unchanged areas and also and pull to leave in these villages. Putting up new houses, increasing traffic, increasing noise is not long what village life is about
1.10	North of West Hallam	Green Belt	Lewis Tyler	Response-01104	Go and build somewhere that isn't green belt
1.10	North of West Hallam	Green Belt	M. Morten	Response-00399	I welcome the inclusion of this site but access needs to be included to the northern boundary to facilitate future development into the green belt to the north and east of this proposal. It makes sense to round off the development edge to meet up with the long gardens further to the east down High Lane West . This site provides a valuable access point to High Lane West as identified in previous proposals which may be premature, but provide feasible development opportunities in the future when additional sites need to be sourced.
1.10	North of West Hallam	Green Belt	Marie cox	Response-00105	The field concerned is green belt What has happened to the lands green belt status ???
1.10	North of West Hallam	Green Belt	Mark	Response-00166	You don't seem to care about ruining greenbelt. Once gone it is gone forever!
1.10	North of West Hallam	Green Belt	Matt Haddon	Response-00098	The proposed site will begin eating in to the beautiful greenbelt land we have around us, which should be protected for the future of all.
1.10	North of West Hallam	Green Belt	Melanie Lawson	Response-00848	The area is green belt and should remain so
1.10	North of West Hallam	Green Belt	Molly	Response-01071	We need to conserve and protect the Green Belt land for wildlife.
1.10	North of West Hallam	Green Belt	Mr and Mrs Wood	Response-01825	The Covid outbreak in 2019 was a stark reminder how important open spaces are to our mental health. The one thing I love about West Hallam is that feeling of well-being and connection with nature that you get when taking a stroll or walking the dog just a stone's throw from my house. The numerous fields that surround our village are natural spaces not those contrived by architects. All NIMBYs, I am sure make these points, maybe with justification as we all know that saying 'are these developments just the thin end of the wedge?'. Rumours are already circulating, and locals need reassurance.
1.10	North of West Hallam	Green Belt	Mr Brown	Response-00192	No
1.10	North of West Hallam	Green Belt	Nick Craddock	Response-00144	Destroying our green and pleasant land. Communities just get bigger, with no infrastructure to support.
1.10	North of West Hallam	Green Belt	Nicola Elkington-Horridge	Response-00082	Green belt should be left green! Or what is the actual point of having it?
1.10	North of West Hallam	Green Belt	Nigel Wright	Response-00101	No further development on the green belt should be considered as West Hallam needs open space.
1.10	North of West Hallam	Green Belt	Patrick Barber	Response-00279	The proposed development site is on greenbelt land and so is reducing the green belt within the Erewash area.
1.10	North of West Hallam	Green Belt	Paula Piggott	Response-01044	You can't keep destroying the countryside destroying habitats, killing wildlife and it all not have a knock on effect. You are destroying the air we breathe. We need flowers, we need bees these things the world can't exist without. The wildlife will seriously be impacted. You will destroy the habitats of many animals needed for the world to survive. This is a small village. With lots of precious animals, insects, flowers, trees etc you will kill these insects and animals when you destroy their habitats thus destroying the air we breathe. There is a school and many bungalows with pensioners. It is a accident waiting to happen. Also dog walkers, horse riders and lots of wildlife. Seriously someone will get hurt or worse killed! It is a small village without the capacity for more houses. The roads are not built for so many extra residents. You will totally destroy the area and you will totally destroy the clean air killing lots of wildlife and their habitats in the process. Keep building over land will cause flooding and lead to drainage problems as natural soakaway will be destroyed.
1.10	North of West Hallam	Green Belt	Pete Vanstone	Response-00294	No need to build on green belt land.
			Rhonda Holt	Response-00236	The land is greenbelt. It needs to be left that way for wildlife and the environment.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Green Belt	Robert Mee	Response-01790	My main reason for objecting to these developments is that I do not believe that the criteria set out in the NPPF has been met justifying any encroachment into the Green Belt at this time. The Core Strategy and this Amendment are developed in order to meet the housing targets allocated to the council by central government. I do not believe that the number of houses required by government constitutes, in itself, the ?exceptional circumstances? which are required under the Framework. This is particularly so in view of there being no published objective basis for the numbers allocated to each authority. The term ?exceptional circumstances? does include ?instances where an authority cannot meet its identified need for homes?. The waiting list for social housing in the general area might suggest that this is the case, but I do not accept that these plans will go far to address this issue ? the vast majority of the planned housing allocations are not even for affordable housing, let alone social housing. Additionally, I do not remember seeing evidence that Erewash has specifically quantified local (i.e. Erewash) housing needs. I also do not believe that much, if any, of the Green Belt selected for development would fit the definition of ?Grey Belt?. As a concept, I can support the idea of Grey Belt as originally reported, i.e. pieces of land within the Green Belt which have previously been developed ? indeed, I can think of a few locally, though they are all fairly small. I find the arguments that I have heard over distances between the edge of Derby and the edge of other towns, and how these distances will still be maintained, extremely spurious. The Green Belt in its entirety exists to prevent Nottingham and Derby from merging ? while building on any of these sites does not immediately make the two cities any closer to each other, it does reduce the green space between the two cities, which is precisely what the Green Belt was established to prevent. The Green Belt is a regional initiative, covering two counties and several local authorities. With Erewash having such a high proportion of its land earmarked as Green Belt it is incumbent on the region as a whole to find a solution to the housing shortage, rather than to expect our authority to have to sacrifice its green spaces.
1.10	North of West Hallam	Green Belt	Robert Mee	Response-01507	My main reason for objecting to these developments is that I do not believe that the criteria set out in the NPPF has been met justifying any encroachment into the Green Belt at this time. The Core Strategy and this Amendment are developed in order to meet the housing targets allocated to the council by central government. I do not believe that the number of houses required by government constitutes, in itself, the ?exceptional circumstances? which are required under the Framework. This is particularly so in view of there being no published objective basis for the numbers allocated to each authority. The term ?exceptional circumstances? does include ?instances where an authority cannot meet its identified need for homes?. The waiting list for social housing in the general area might suggest that this is the case, but I do not accept that these plans will go far to address this issue ? the vast majority of the planned housing allocations are not even for affordable housing, let alone social housing. Additionally, I do not remember seeing evidence that Erewash has specifically quantified local (i.e. Erewash) housing needs. I also do not believe that much, if any, of the Green Belt selected for development would fit the definition of ?Grey Belt?. As a concept, I can support the idea of Grey Belt as originally reported, i.e. pieces of land within the Green Belt which have previously been developed ? indeed, I can think of a few locally, though they are all fairly small. I find the arguments that I have heard over distances between the edge of Derby and the edge of other towns, and how these distances will still be maintained, extremely spurious. With Erewash having such a high proportion of its land earmarked as Green Belt it is incumbent on the region as a whole to find a solution to the housing shortage, rather than to expect our authority to have to sacrifice its green spaces.
1.10	North of West Hallam	Green Belt	REDACTED	Response-00178	REDACTED
1.10	North of West Hallam	Green Belt	Simon Reeve	Response-01059	The fields between High Lane, West Hallam and Shipley/Heanor Road, Ilkeston support a diverse population of wildlife with open fields, woodlands, marsh land, lakes and streams/rivers. Removing any part of this environment for housing should be banned on this basis alone, there be no home for nature and "not cutting the grass verges" (to save money) won't make a difference.
1.10	North of West Hallam	Green Belt	Sophy Cunningham	Response-00211	Green belt should be protected at all costs. All other land should be developed without impacting our green areas.
1.10	North of West Hallam	Green Belt	Teresa Faulkner-Day	Response-00240	Green belt is the communities protected land, it has been given this status to protect it. How then is it allowed to become unprotected just because it suits the powers that be.
1.10	North of West Hallam	Green Belt	Thomas Edward Tyler	Response-01079	As previously mentioned. There is much talk across the whole country about lack of housing and we acknowledge that wholeheartedly. However, if it has to be Green Belt land, then please select areas which will have the least impact upon existing residential areas as well as meeting development requirements. Are there any other proposed areas within the West Hallam area that meet the criteria but have less impact upon existing housing? Better still, are there any other areas locally that would be suitable for development with less impact and erosion of the Green Belt.
			Victoria noble	Response-00107	Building would take away our beautiful countryside
1.10	North of West Hallam	Healthcare Facilities	Alesha Johnson	Response-01122	Local schools and GP surgeries are already under considerable pressure, with limited capacity to absorb a large influx of new residents. No clear or deliverable plan has been provided to show how these essential services will be expanded to meet additional demand. Without this, the development would reduce the quality and accessibility of local education and healthcare for existing residents.
			Alison Bull	Response-00238	Our healthcare facilities are stretched already without adding to their burden
1.10	North of West Hallam	Healthcare Facilities	Anita Lawrence	Response-00660	Services such as childcare and doctors are already unable to meet resident's needs. Addition of more housing within the village will put further strain on these services.
			Asha Haynes	Response-00059	You can't get an appointment now so more residents will add to an already stretched service.
1.10	North of West Hallam	Healthcare Facilities	Barbara Graves	Response-01047	Not enough doctors for the current population so dread to think what it will be like if the area grows

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	North of West Hallam	Healthcare Facilities	Ben Rodney	Response-00121	Can't get appointments as it is now let alone with more people adding to it
1.10	North of West Hallam	Healthcare Facilities	Charles Brooks	Response-00933	The current healthcare facilities in West Hallam are extremely poor and insufficient to cater for the current population. Its extremely difficult to get an appointment to see a GP. Many people go straight to A and E at Derby Royal to be assessed. Even a simple blood test has to be done at Ilkeston.
	North of West Hallam	Healthcare Facilities	Charlotte broughton	Response-01474	Can't get a doctors appointment as it is, never mind with loads of new houses appearing
1.10	North of West Hallam	Healthcare Facilities	Christine Barnes	Response-00639	Doctors already unable to cope with local demand.
1.10	North of West Hallam	Healthcare Facilities	Claire Dean	Response-00068	There is already a huge demand for health services in the area and not enough resources to meet those demands, this will only get worse.
1.10	North of West Hallam	Healthcare Facilities	Claire Hunter	Response-00709	There is a strain on nearby doctors surgeries and not being able to make appointments as they are overstretched without more people moving to the area
	North of West Hallam	Healthcare Facilities	Danielle Tyler	Response-01121	Already unable to get it at local GP practices, they would not be able to support increase of patients.
1.10	North of West Hallam	Healthcare Facilities	David Whitehead	Response-01051	It is difficult enough to get an appointment at any of the West Hallam surgeries as it is.
1.10	North of West Hallam	Healthcare Facilities	E bayley	Response-00080	Already cannot get appointments at local doctors and dentists
1.10	North of West Hallam	Healthcare Facilities	Ellen Haddon	Response-00065	I am a pharmacist and know the pressures the NHS are currently under. I know this area first hand and doctors appointments are extremely difficult to get resulting in the pharmacy seeing a lot more patients and trying to help as best they can. With the lack of government funding to pharmacies over the past few years there is no money for extra staff and having this increased volume of patients would be unthinkable and unmanageable. People do not realise how on the edge pharmacies are and this would be the final push. The doctors surgeries in the area are extremely small and are not built for the increased demand. We also do not have the money or qualified doctors to increase appointments. This along with the poor bus services to get to other surgeries in Ilkeston makes the situation impossible.
1.10	North of West Hallam	Healthcare Facilities	Francesca Dean	Response-00220	What healthcare facilities? We already had to move to ilkeston due to lack of health care in west hallam. This will make it even worse
1.10	North of West Hallam	Healthcare Facilities	Gale Harvey	Response-01130	GPS already very busy with poor capacity to serve local area
1.10	North of West Hallam	Healthcare Facilities	Gillian Bosworth	Response-00920	Local health care facilities are already very stretched.
1.10	North of West Hallam	Healthcare Facilities	Helen Patenall	Response-00872	Again, another inadequate service in the village. The surgeries in the Dales often refer patients to Littlewick medical centre which is some 3 miles away, all too frequently the only service provided by the Dales medical centre is a consultation by telephone, this clearly is not satisfactory.
1.10	North of West Hallam	Healthcare Facilities	James Johnson	Response-01124	We live in the village and can see that the health care provider is already overwhelmed. We struggle to get the help we need from the healthcare services available.
1.10	North of West Hallam	Healthcare Facilities	Jane Garner	Response-01076	Getting an appointment at the local surgery is hard enough already- so an increase in residents will make it even harder to se a doctor.
1.10	North of West Hallam	Healthcare Facilities	Jane Marshall	Response-01171	Difficult to see a health practitioner already.
1.10	North of West Hallam	Healthcare Facilities	Jayne Trueman	Response-00427	Healthcare in the area is virtually non existent despite there being two surgeries in the village. I have had to move to a practice in Ilkeston.
1.10	North of West Hallam	Healthcare Facilities	Jonie Centro	Response-00729	appts with GP is already hard enough - more residents will increase the pressure on local services
1.10	North of West Hallam	Healthcare Facilities	Jon Skelson	Response-00156	The local GP surgery already struggle to fit in appointments. The last thing we need is more patients.
1.10	North of West Hallam	Healthcare Facilities	Julie Harbon	Response-00026	Local health care facilities are already full to capacity and beyond.
1.10	North of West Hallam	Healthcare Facilities	Kathryn McCartney	Response-01042	More housing will put pressure on an already over burdened health system, without necessary health care facilities being an integral part of the planning application this developent should not be approved.
1.10	North of West Hallam	Healthcare Facilities	kelly centro	Response-00203	Drs already overcrowded
1.10	North of West Hallam	Healthcare Facilities	Kerry Middleton	Response-00265	An already over used health care system within our area would be compromised by this proposal.
1.10	North of West Hallam	Healthcare Facilities	Lee Hunter	Response-00176	Can you even get an appointment already with the doctor?
1.10	North of West Hallam	Healthcare Facilities	Louise Hunt	Response-01033	GP surgery in the village not big enough to accommodate.
1.10	North of West Hallam	Healthcare Facilities	Mark	Response-00166	Cannot get a doctors appointment now. There are no dentists for new NHS patients where will all these new patients go?
1.10	North of West Hallam	Healthcare Facilities	Mark Baker	Response-00108	West Hallam surgery is already overcrowded
1.10	North of West Hallam	Healthcare Facilities	Matt Haddon	Response-00098	The local Doctors surgeries are already struggling to cope with demand, with appointments being near impossible to get in the near term, so a significant increase in local population introduced by the proposed site would further exacerbate this already problematic situation. This site would also put a huge additional significant load on the Doctors surgeries, which are already heavily subscribed making it very difficult to get appointments, and would therefore be putting peoples health at risk.
1.10	North of West Hallam	Healthcare Facilities	Melanie Lawson	Response-00848	The village facilities are already stretched and building more house will put increased pressure on these facilities. The Drs in the village is already at capacity - so adding houses won't help
1.10	North of West Hallam	Healthcare Facilities	Molly	Response-01071	Already at capacity and very limited availability
1.10	North of West Hallam	Healthcare Facilities	Natalie Payne	Response-01520	It is already difficult to get an appointment with a GP at the surgeries in the village
1.10	North of West Hallam	Healthcare Facilities	Nichola Dodd	Response-00197	Already difficult to get doctors appointments. Infrastructure of the village is not compatible with additional housing
1.10	North of West Hallam	Healthcare Facilities	Nick Craddock	Response-00144	The medical centre is already maxed out. Trying to get an appointment is already a nightmare without adding more people.
1.10	North of West Hallam	Healthcare Facilities	Nicola Elkington-Horridge	Response-00082	Our doctors is already under too much strain to open fully this will add to the problem further
1.10	North of West Hallam	Healthcare Facilities	Patrick Barber	Response-00279	The local health care facilities are currently over capacity with waits of over 2 weeks to see a GP in the area and a lack of NHS dentists.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Healthcare Facilities	Paula Piggott	Response-01044	Health care facilities are already stretched to maximum point. It's already extremely hard to get an appointment. More residents will make it impossible to get seen by a doctor which obviously could cause life changing consequences.
1.10	North of West Hallam	Healthcare Facilities	Pauline Wood	Response-01099	Not enough doctors for amount of people already here in west hallam
1.10	North of West Hallam	Healthcare Facilities	Rhonda Holt	Response-00236	Littlewick, Dales and West Hallam Medical Centre are under pressure already.
1.10	North of West Hallam	Healthcare Facilities	Richard Brewell	Response-00193	The healthcare for Stanley Common and West Hallam from The Medical Centre at West Hallam is already extremely poor. There are currently only 1.5 GPs supporting the practice with long wait times for current patients. Littlewick is similarly overcrowded and more local housing will only make this situation worse. Further, the population around the area is typically older generation who will be increasingly demanding of the already limited service.
1.10	North of West Hallam	Healthcare Facilities	REDACTED	Response-00178	REDACTED
1.10	North of West Hallam	Healthcare Facilities	Simon Reeve	Response-01059	The ability to get a doctor's appointment is a bit of a joke, the doctors surgeries are all over prescribed, chemists are too busy trying to pick up the slack and dentists are near impossible to get in to, we travel 40 minutes away to a dentist. There simply cannot be more pressure through new housing on a breaking system
1.10	North of West Hallam	Healthcare Facilities	Sophy Cunningham	Response-00211	It is already almost impossible to access a doctors appointment efficiently in the area.
1.10	North of West Hallam	Healthcare Facilities	Teresa Faulkner-Day	Response-00240	The local doctors surgeries, dentists and chemist already massively struggle to meet the needs of the local community.
1.10	North of West Hallam	Healthcare Facilities	Tina Jay	Response-01802	The Doctor's surgery/health care at The Dales Shopping Centre is not capable of coping with such a high influx of new patients. Current patients already now need to travel out of the village to Little Wick Medical Centre in Ilkeston and Ilkeston hospital for their appointments as West Hallam Medical Centre is not able to cope with the amount of appointments needed. Patients are also needing to wait far longer now for appointments, with the already increasing number of people in the area, and particularly for more serious conditions requiring the need to see a Doctor, which can involve waiting over a month to be seen.
1.10	North of West Hallam	Healthcare Facilities	Varley	Response-00290	If you can try, don't get sick. What services? Consistently getting messages from the dales that they are closed due to staffing issues and their opening hours are already inhumane.
			Victoria noble	Response-00107	I doctors which is already difficult enough to get an appointment at !
1.10	North of West Hallam	Landscape	Alistair	Response-01139	Destroying the landscape
1.10	North of West Hallam	Landscape	Bruce Broughton	Response-01533	I would reiterate what I said under the 'Green Belt' heading namely that in many ways Park Hall Lane represents the 'gateway' to the countryside from the built-up parts of West Hallam. It is widely used as a recreational route by walkers, runners and cyclists, seven days a week. The proposals suggest only 'emergency' access from Park Hall Lane from the site, with houses presumably backing onto it. However, developing area D would create about 120m of new 'urbanised' frontage to the lane, affecting the area's recreational and rural character. The development of this area would not respect or preserve identified landscape character nor have any positive impact on visual amenity.
1.10	North of West Hallam	Landscape	Charles Brooks	Response-00933	The landscape currently from the proposed development land is spectacular across fields and open spaces. Please leave it like this. There are surely better site in and around West Hallam. why not ask residents for their views instead of Councillors making decisions when i doubt they have even been to West Hallam to see for themselves. The decisions on housing are far to important to be made in Council Chambers. It should also not be a decision based on politics.
1.10	North of West Hallam	Landscape	Claire Dean	Response-00068	It would ruin the landscape end of.
1.10	North of West Hallam	Landscape	Daniel Clark	Response-01091	This will ruin the landscape and the nature around the area
1.10	North of West Hallam	Landscape	Danielle Tyler	Response-01121	New houses would ruin countryside feel. Ruin landscape for local houses. Reduced current property prices.
1.10	North of West Hallam	Landscape	David Whitehead	Response-01051	The site provides a natural break between west Hallam and Mapperley to the north.
1.10	North of West Hallam	Landscape	James Morris	Response-01061	All houses at the top of highland landscapes and view will be ruined
1.10	North of West Hallam	Landscape	Jayne Trueman	Response-00427	The landscape is outside the village boundaries and is green and open . Better smaller sites are available within the village.
1.10	North of West Hallam	Landscape	Jon Skelson	Response-00156	Nobody wants more green areas to go. We need to keep them and allow nature to flourish.
1.10	North of West Hallam	Landscape	Julie Harbon	Response-00026	I'm sure the people living opposite and close to the proposed site will not be pleased to have their lovely views spoiled.
1.10	North of West Hallam	Landscape	Kathryn McCartney	Response-01042	The area is rural and unspoilt the proposed development will destroy a landscape that has been unchanged for a considerable amount of time.
1.10	North of West Hallam	Landscape	kelly centro	Response-00203	It will ruin the landscape
1.10	North of West Hallam	Landscape	Kerry Middleton	Response-00265	The locals do not wish to lose this landscape or their skyline, to be replaced by grey buildings, which would be detrimental to people mental health.
1.10	North of West Hallam	Landscape	laura slater	Response-01540	Obviously countryside is a priority. West Hallam is stunning as it is without ugly new builds being erected everywhere
1.10	North of West Hallam	Landscape	Lee Hunter	Response-00176	These fields depict the beauty of our village
1.10	North of West Hallam	Landscape	Lewis Tyler	Response-01104	Does not fit where every view is a field
1.10	North of West Hallam	Landscape	Mark	Response-00166	runied!
1.10	North of West Hallam	Landscape	Matt Haddon	Response-00098	A new housing estate on the proposed site would be extremely detrimental to the current landscape and would not be in keeping with it.
1.10	North of West Hallam	Landscape	Nick Craddock	Response-00144	Eyesore

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Landscape	Paula Piggott	Response-01044	You can't keep destroying the countryside destroying habitats, killing wildlife and it all not have a knock on effect. You are destroying the air we breathe. We need flowers, we need bees these things the world can't exist without. The wildlife will seriously be impacted. You will destroy the habitats of many animals needed for the world to survive. This is a small village. With lots of precious animals, insects, flowers, trees etc you will kill these insects and animals when you destroy their habitats thus destroying the air we breathe. There is a school and many bungalows with pensioners. It is a accident waiting to happen. Also dog walkers, horse riders and lots of wildlife. Seriously someone will get hurt or worse killed! It is a small village without the capacity for more houses. The roads are not built for so many extra residents. You will totally destroy the area and you will totally destroy the clean air killing lots of wildlife and their habitats in the process. Keep building over land will cause flooding and lead to drainage problems as natural soakaway will be destroyed.
1.10	North of West Hallam	Landscape	Sarah James	Response-01086	Will spoil a beautiful area.
1.10	North of West Hallam	Landscape	Simon Reeve	Response-01059	We have a beautiful landscape, any changes to the natural environment will shatter the beauty of the area, you can't keep adding more and more homes
1.10	North of West Hallam	Landscape	Sophy Cunningham	Response-00211	What is being suggested will dramatically change the area of natural beauty that all of the existing residents enjoy for walks with pets and children. Green space should be protected.
1.10	North of West Hallam	Landscape	Varley	Response-00290	Keep the tree line up, plant more trees for less impact on the area.
1.10	North of West Hallam	Number of Houses	Andy Williams	Response-00184	We are continually seeing large numbers of houses being developed on plots that provide minimal space for each property to maximise return on investment to property developers.
1.10	North of West Hallam	Number of Houses	Asha Haynes	Response-00059	Far too many for the plot.
1.10	North of West Hallam	Number of Houses	Bruce Broughton	Response-01533	The proposal to build around thirty-five houses on this site minimally addresses overall stated housing needs and, in my view, represents a significant, unnecessary intrusion into the Green Belt. A more appropriate option (if new housing is needed here) would be to extend the existing ribbon development on High Lane West, between 13 and 49 High Lane West (albeit currently Green Belt), accommodating about fifteen new houses without the need for wider encroachment into the Green Belt. This would be more in line with the suggestion of 'rounding off' in the Council's Core Strategy Amendment Report (March 2025 update).
1.10	North of West Hallam	Number of Houses	Charles Brooks	Response-00933	No more needed in West Hallam. The current infrastructure cannot cope and is inadequate. Infrastructure improvements must be actioned before new housing is considered (eg GP's, buses, shops, pub, parking)
1.10	North of West Hallam	Number of Houses	Claire Dean	Response-00068	35 homes is a significant amount, it means potentially 35 families which if it means families of 4 that's 140 people, 70 of those potentially using vehicles, footfall increases, noise, it just does not reflect the quiet calm area west hallam is now.
1.10	North of West Hallam	Number of Houses	Claire Hunter	Response-00709	Feel concerned about how the houses will positioned in the field that is next to us. How will This look how will this effect us as the house next door. The fields which we once looked over which attracted us to this area could potentially be destroyed and actually would make us want to move like many other residents in the area
1.10	North of West Hallam	Number of Houses	David Whitehead	Response-01051	25 houses on that small field will cause so much upset on a green field site and all over the value of most first time buyers.
1.10	North of West Hallam	Number of Houses	Francesca Dean	Response-00220	Far too many. The field always floods, there are mines, petrol station was previously on site.
1.10	North of West Hallam	Number of Houses	Gary Hamson	Response-00055	30 is not going to make any positive impact on the VILLAGE!
1.10	North of West Hallam	Number of Houses	Helen Patenall	Response-00872	As previously commented upon, more houses are not required, infrastructure is already at breaking point
1.10	North of West Hallam	Number of Houses	Helen Stanley	Response-01558	Too many houses for such a small area Worrying that the layout would encourage future expansion and further loss of land
1.10	North of West Hallam	Number of Houses	Homewood	Response-01069	Not needed, there are so many other places where affordable housing where there is better transport to main towns
1.10	North of West Hallam	Number of Houses	James Johnson	Response-01124	90 new homes is too much for the infrastructure of the village. If each home then also has two cars this will overwhelm the roads and access to the school.
1.10	North of West Hallam	Number of Houses	Jayne Trueman	Response-00427	Smaller developments would be more suitable to this already well stocked area.
1.10	North of West Hallam	Number of Houses	Jonie Centro	Response-00729	should be 0 to 2
1.10	North of West Hallam	Number of Houses	kelly centro	Response-00203	Too many houses for the area mentioned
1.10	North of West Hallam	Number of Houses	Kerry Middleton	Response-00265	We do not need any further housing within this area.
1.10	North of West Hallam	Number of Houses	laura slater	Response-01540	This is by far too many houses for all of the above reasons.
1.10	North of West Hallam	Number of Houses	Lee Hunter	Response-00176	High Lane West is busy enough already so why add more houses ?
1.10	North of West Hallam	Number of Houses	Lewis Tyler	Response-01104	There are plenty of houses for sale every year in West Hallam
1.10	North of West Hallam	Number of Houses	Mr and Mrs Wood	Response-01825	plus further pressure on local public services, as well as air quality and local wildlife and diversity.
1.10	North of West Hallam	Number of Houses	Nick Craddock	Response-00144	Are all these houses necessary?
1.10	North of West Hallam	Number of Houses	Paula Piggott	Response-01044	You can't keep destroying the countryside destroying habitats, killing wildlife and it all not have a knock on effect. You are destroying the air we breathe. We need flowers, we need bees these things the world can't exist without. The wildlife will seriously be impacted. You will destroy the habitats of many animals needed for the world to survive. This is a small village. With lots of precious animals, insects, flowers, trees etc you will kill these insects and animals when you destroy their habitats thus destroying the air we breathe. There is a school and many bungalows with pensioners. It is a accident waiting to happen. Also dog walkers, horse riders and lots of wildlife. Seriously someone will get hurt or worse killed! It is a small village without the capacity for more houses. The roads are not built for so many extra residents. You will totally destroy the area and you will totally destroy the clean air killing lots of wildlife and their habitats in the process. Keep building over land will cause flooding and lead to drainage problems as natural soakaway will be destroyed.
1.10	North of West Hallam	Number of Houses	Pauline Wood	Response-01099	Ear marking conservation land for even more houses is a worry for the same reasons given
1.10	North of West Hallam	Number of Houses	REDACTED	Response-00178	REDACTED

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Number of Houses	Simon Reeve	Response-01059	Too many
1.10	North of West Hallam	Number of Houses	Sophy Cunningham	Response-00211	The number of houses is very large and will add significant traffic and people needing access to services in the area.
1.10	North of West Hallam	Number of Houses	Thomas Edward Tyler	Response-01079	Obviously for any development to be financially viable, it would be necessary to have a minimum number of properties built. We would hope that common sense would apply here in terms of how many are actually considered.
1.10	North of West Hallam	Number of Houses	Tina Jay	Response-01802	Both these proposed housing developments would also have a very detrimental impact on the village's identity, and on the Conservation area. This is a village area, which has already expanded greatly over the years with the building of a large housing estate and any further developments of these proposed sizes and in these areas would greatly damage the existing green belt and green open space of this rural village.
1.10	North of West Hallam	Number of Houses	Varley	Response-00290	Scrap the 40% social housing, make 100% beautiful properties and I will vote approve.
1.10	North of West Hallam	Other	Andy Williams	Response-00184	Why are we allowing development of extraordinarily large properties on High Lane & St Wilfred's instead of insisting development of two smaller (but still large) properties. This negating the need for additional groups of housing.
1.10	North of West Hallam	Other	Anita Lawrence	Response-00660	The Labour Party Manifesto 2024 states that 'Labour is committed to preserving the greenbelt which has served England's towns and cities'. Labour was elected on the basis of this manifesto, please leave this area to nature for the benefit of all.
1.10	North of West Hallam	Other	Beverley Dawn Kilby	Response-00235	these area is not part of West Hallam, would have a main road separating it from West Hallam
1.10	North of West Hallam	Other	Charles Brooks	Response-00933	It is clear that little thought has gone into choosing this as a suitable site for additional housing. Please come and visit and see for yourselves.
1.10	North of West Hallam	Other	Claire Dean	Response-00068	I really hope you consider the upset this is causing, it does not seem fair you can come and ruin what is now a lovely area to live in. We have worked tirelessly for year to buy the house in which we currently reside in, to have houses built directly behind us would cause a significant amount of stress and loss in value to our own home. Please carefully consider all of the reasons.
1.10	North of West Hallam	Other	Danielle Tyler	Response-01121	New houses not wanted.
1.10	North of West Hallam	Other	Ellen Haddon	Response-00065	Families have worked and saved hard, many for the NHS and government, to get houses looking over this field. It has been their dream home for their children with the perfect view. These houses will be destroyed and devalued massively. Is this the thanks they get for working and saving hard ?
1.10	North of West Hallam	Other	Gary Hamson	Response-00055	Again has anyone been from planning or the highways dept ??
1.10	North of West Hallam	Other	Hannah	Response-00252	I have no objections to houses but I cannot understand why these places, there are so many negative points and can't see any good points to it! It just seems there is no logical especially as mention empty houses at bottom station road and lots for sale.....
1.10	North of West Hallam	Other	Jayne Trueman	Response-00427	This proposed development will negatively impact an already crowded area. The infrastructure isn't adequate. The congestion in and out of the village is already an issue. The crossroads are accident hotspots and lives have been changed or lost in accidents at them over the years. The car park at the village shops and doctors is inadequate and cars have to wait to park causing congestion through the village. The general condition of the busy main roads is terrible with potholes damaging vehicles.
1.10	North of West Hallam	Other	Kerry Middleton	Response-00265	This proposal would be detrimental to the locals, both mental health wise, and the overall running of day to day services and lifestyles.
1.10	North of West Hallam	Other	Laura	Response-01531	None
1.10	North of West Hallam	Other	Louise williams	Response-01008	We don't need anymore houses, the school is already full, the parking at school times are horrendous and dangerous as it is
1.10	North of West Hallam	Other	Lynsey anderson	Response-01067	I am writing to object to both proposed building sites in Wwst Hallam. Firstly the site behind High lane West, putting houses here is dangerous. Access either directly from High Lane or from Park Hall Lane would cause traffic chaos. Park Hall Lane leads to a blind bend and is mostly single track. This is an accident waiting to happen. The field also floods into the gardens and out onto the road. Houses surely can not be built on a field that floods. I can not comprehend what the field would cost to compulsory purchase as the owner does not want to sell. My house backs onto the field that has been proposed behind High lane West and I did not buy here to be in the middle of building site or housing estate, I bought this house to live near the countryside. I was in attendance at the council meeting in Long Eaton and I found it laughable the reasons that were being given for both sites, apparently £230,000 + houses were going to solve a homeless crisis we have in Erewash. Most of the houses being £400,000 or above just does not make any sense that it would solve anything to do with the homeless issue. This argument was clearly just being used to tug at the heart strings. The only reason the council is so desperate to build houses is you are under threat of having your planning department removed and London making the decisions. This is no reason too destroy green belt, nature and take over our village. With regards to the site off Beech lane there are multiple highway issues here, wherever you would put the access roads again it is an accident waiting to happen and it would cause traffic chaos during rush hr. Both sites have been turned down previously. So what has changed now. The danger to the children at Scargill is also not acceptable, school drop off is already dangerous adding 100+ cars to the scenario is just incomprehensible. The houses would add this many cars as the transport links are minimal and unreliable. Again this would destroy green belt and the environmental issues are numerous. How would the shops cope of Beech lane, the car park already overflows and with no plans for another school, doctors, dentist then where are these new residents supposed to go. Everything adds up to the fact that no one in West Hallam wants this and we do not appreciate the council trying to rush this through and not coming forward correctly sooner with the proposal. If you were at the meeting in Long Eaton I am sure you could tell from the noise and boo's coming from all attendee's that no one wants any of these sites built on. I would hope that mine and all the other objections would be listened to and the council would make the right decision however I am pretty sure that the decision has already been made and no matter what any of us say or think it will not be heard. Please listen and realise you are potentially destroying a community, green belt and causing environmental issues at a time we should be doing the opposite.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Other	Mark	Response-00166	Use the grey belt old factories and derelict empty building before ruining the environment for the children of the future. Sell off all the old derbyshire council building around the county or use these building to help people!
1.10	North of West Hallam	Other	Melanie Lawson	Response-00848	The village facilities are already stretched and building more house will put increased pressure on these facilities
1.10	North of West Hallam	Other	Nicola Elkington-Horridge	Response-00082	Whilst I appreciate a need for the council to make money, it needs to find new more innovative ways which do not include building more houses, and ruining the most beautiful and needed parts of the village. Most villages would welcome proper dog walking facilities, allotments more choice of local shops, a coffee shop, a dentist, a community hub ran buy the village for the village. Perhaps the council could look at taking over the punchbowl. This would be a perfect area for a coffee shop/tearooms, meeting rooms for local businesses and groups to hire out, a hub for elderly residents to meet, craft clubs, quizzes, youth work, it could be filled with local artists work, a function room, some small allotments in the old pub gardens which could be rented out, an official car parking area which the council could charge for, the council needs to work with the community and its needs. And as a village we are lacking greatly in community facilities they can be something to everyone and enjoyed by all.
1.10	North of West Hallam	Other	Paula Piggott	Response-01044	You can't keep destroying the countryside destroying habitats, killing wildlife and it all not have a knock on effect. You are destroying the air we breathe. We need flowers, we need bees these things the world can't exist without. The wildlife will seriously be impacted. You will destroy the habitats of many animals needed for the world to survive. This is a small village. With lots of precious animals, insects, flowers, trees etc you will kill these insects and animals when you destroy their habitats thus destroying the air we breathe. There is a school and many bungalows with pensioners. It is a accident waiting to happen. Also dog walkers, horse riders and lots of wildlife. Seriously someone will get hurt or worse killed! It is a small village without the capacity for more houses. The roads are not built for so many extra residents. You will totally destroy the area and you will totally destroy the clean air killing lots of wildlife and their habitats in the process. Keep building over land will cause flooding and lead to drainage problems as natural soakaway will be destroyed.
1.10	North of West Hallam	Other	Peter John Ball	Response-00706	This development completes the village. This could be developed further to the north without merging of urban areas. West Hallam is a popular location and the demand for housing is strong in this area.
1.10	North of West Hallam	Other	P Newton	Response-00773	More houses equals more traffic, just look at what has happened to Heanor road, Ilkeston on any day to see what effect new housing developments have done to increased traffic congestion and poor air quality within those areas.
1.10	North of West Hallam	Other	REDACTED	Response-00178	REDACTED
1.10	North of West Hallam	Other	sam richards	Response-01468	this area has a dangerous blind bend. at the moment traffic is fairly quiet but if new homes are to be built there this will inevitably increase traffic flow causing more risk of accidents. this is a country road used by families walking with young children, and horse riders. it will be a huge shame to change the feel to this area. once a few houses are built it opens it up to the whole area being built on
1.10	North of West Hallam	Other	Simon Reeve	Response-01059	Just stop it, look at the many brownfield sites in Ilkeston, Derby, Stapleford, Long Eaton, Nottingham and regeneration of those sites will deliver the homes without irresponsible damage of natural environment
1.10	North of West Hallam	Other	Thomas Edward Tyler	Response-01079	Finally,thank you for giving me the opportunity to voice my views. I have lived in West Hallam since 1964. Our two children and two grand children have all been born and raised here also. I hold all of the aforementioned issues very close to my heart.I love West Hallam and its surrounding areas and I am clearly deeply concerned that these development plans are given the utmost scrutiny before any decisions are made. Thanks again. Thomas Tyler 7 High Lane West West Hallam
1.10	North of West Hallam	Other	Varley	Response-00290	Affordable housing is a fancy word for social housing. How are the tenants going to be processed? How are you going to keep the locals safe, respected. As a young woman who walks the local green belt with a dog, will I feel safe? Will I feel safe at night? Will I feel safe in my own property. Social housing leads to social problems. Social problems in an area where people graft to work and pay to live in an area of beauty and safety.
1.10	North of West Hallam	Road Safety	Alesha Johnson	Response-01122	This road is enjoyed as a quiet road for local residents to bike with small children. Currently, it feels very safe, but if more houses were to be built on this land, this would quickly become dangerous. This cross road is very badly congested already at peak times of day.
1.10	North of West Hallam	Road Safety	Andrew Gotheridge	Response-00195	Park hall lane is commonly used by horses and pedestrians as a quiet country lane. I cannot see what changes can be made to make the entrance to the proposed site safe for these users. There?s no pavement now and no room to widen the road.
1.10	North of West Hallam	Road Safety	Andy Williams	Response-00184	Frequent near misses due to poor visibility around the Millhouse Garage crossroads. Speed issues on main High Lane add to this.
1.10	North of West Hallam	Road Safety	Anita Lawrence	Response-00660	The proposed site is very close to a blind bend and crossroads (A609/Park Hall Lane/Station Road). This is already a concern for locals and regular users of this junction. The A609 is frequently used by emergency vehicles proceeding at high speed, positioning a further exit at this site, so close to a blind bend and difficult crossroads: a. increases risk of accidents to emergency services b. increases risk to other road users from speeding emergency vehicles, including pedestrians who may cross to use the bus stop, post box, attend school, shops, doctor, play area, community hall etc. c. increases potential delay for emergency vehicles to arrive where needed.
1.10	North of West Hallam	Road Safety	Asha Haynes	Response-00059	The position is very close to a cross road and traffic travels on this blind spot. Any additional traffic will be dangerous.
1.10	North of West Hallam	Road Safety	Ben Rodney	Response-00121	As referenced in traffic
1.10	North of West Hallam	Road Safety	Beverley Dawn Kilby	Response-00235	brow of a hill, 40 mph speed limit on this section of road

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Road Safety	Bruce Broughton	Response-01533	The crossroads at High Lane West/Station Road/Belper Road/Park Hall Lane are busy throughout the day. The high traffic volume and speed of vehicles on High Lane West and Belper Road (A609), along with restricted visibility to the west, make it a difficult junction to navigate safely. Although official accident records may not show significant issues, minor collisions and near misses occur regularly at this junction, as I have observed living nearby for over forty years. The creation of a new junction serving around thirty-five houses less than 250m east of the existing junction will inevitably aggravate the current situation.
1.10	North of West Hallam	Road Safety	Carly Denham	Response-00291	Junction is dangerous
1.10	North of West Hallam	Road Safety	Carol Hart	Response-01828	Although for fewer houses from when this site was first considered there is still the major problem of access, the access would be close to the major Millhouse crossroads, the cross roads that had already been highlighted as a problem by Highways, there is also for some reason an emergency access on to Park Hall Lane, why is this needed and also Park Hall Lane is so narrow it is mainly used by walkers and dog users, to even access the A609 from Park Hall Lane is an accident waiting to happen as it is a blind bend to the right from Stanley Common.
1.10	North of West Hallam	Road Safety	Caroline Tew	Response-01021	It is near a very busy crossroads and it is already difficult to cross the road at busy times without additional traffic. I walk my dog every day down Park Hall Lane and it is already busy and at times dangerous to cross High Lane
1.10	North of West Hallam	Road Safety	Charles Brooks	Response-00933	There are regularly instances of near misses with pedestrians trying to cross the High lane due to the sheer volume and speed of traffic. A new exit and entrance in the High Lane will only make the situation worse. Credit to the Parish Council who have installed two Speed Indicator Devices (SID's) to try to make motorists aware of the speed limit but it appears to have had little effect. There are not continual pavements on both sides of the High Lane. There is no pavement by the proposed new entrance/exit. I understand there is an exit/entrance proposed for the new development for emergency vehicles only on Park Hall Lane. What is the purpose of this? Current exit from park Hall Lane onto the A609 id very difficult and particularly if you want to turn right which is a blind bend. Park Hall Lane is used primarily for walkers and horses. leave our green spaces alone pkease.
1.10	North of West Hallam	Road Safety	Christine Barnes	Response-00639	This site would involve more vehicles using the crossroads at High Lane West and Station Road where visibility is poor. There would also be increased pedestrian useage at this junction from residents accessing the local school, and other village amenities; Tescos, is the only local shop in the area Doctors Pharmacy Village Hall Church
1.10	North of West Hallam	Road Safety	Christopher Chambers	Response-00169	The proposed development of 35 homes is likely to generate a demand of around 50 vehicles (using the 3 cars per 2 dwelling allowance). I conservatively estimate a 100% increase in traffic in addition to existing usage, and this is likely to be heavily concentrated in the busiest 'rush hour' periods. The junction with High Lane West / Belper Road / Park Hall Lane is very busy and is blind to approach from Stanley Common direction. At night, it is difficult to retain sight of the road due to the positioning of right-turning vehicles into Station Road when arriving at this junction from High Lane West. The junction is not capable of carrying more traffic at busy periods and the lack of suitable pavement at the entry from Stanley Common side, combined with the tendency for the traffic from this direction to 'dip into' Park Hall Lane to 'undertake' vehicles turning right into Station Road can only be perilous for pedestrians and drivers wishing to exit Park Hall Lane. As the development is likely to contain a significant number of children that are likely to fall into the Scargill catchment area, the foot traffic in this area will therefore obviously increase and place a very heavy burden on a junction that is at capacity during peak periods. Park Hall Lane itself is used extensively by walkers, runners, cyclists, and families, and this is especially noticeable at weekends / evenings. There are multiple adjoining fields and livery stables containing horses and the lane is used for group riding, in a relatively safe area due to current limited vehicular use. The advent of up to 50 vehicles entering and exiting the lane is likely to be catastrophic for the wellbeing of those people who will no longer feel safe using this largely traffic free route. The local authority much not ignore that due to the capacity issues with the junction noted above, residents of the proposed development are very much likely to drive through Mapperley village to use the alternative entry to High Lane West at the junction with St Wilfrid's Rd. This is likely to be cause significant disruption to the hamlet as well as place additional burden on said junction, which is a known accident black spot. The addition of dozens of vehicles every day along Park Hall Lane is likely to be economically threatening for the owners and operators of the Park Hall Pods and livery stables and cause irreversible hardship for existing residents and users of the area.
1.10	North of West Hallam	Road Safety	Claire Dean	Response-00068	As previously mentioned the proposed site would significantly increase the traffic congestion. The proposed land is near to the blind bend before park hall lane which changes from 30 to 40mph in which many do speed up so it is an accident waiting to happen, I have first hand witnessed many near misses. More house means more people and vehicles, there isn't any means of crossings, traffic lights or support for those wishing to cross High lane in order to access the local amenities such as shops, schools, doctors etc Road safety should be a priority of the council and not adding danger to what is already a very busy road.
1.10	North of West Hallam	Road Safety	Claire Hunter	Response-00709	My children have to cross this already busy road to get the school bus. It is already very risk without the added traffic of new housing. There is no pedestrian crossing and often people park untangle on Highlane west blocking the view of people trying to cross.
1.10	North of West Hallam	Road Safety	Cory page	Response-01425	Cars travel at speed on this road, we've witnessed near misses and accidents and have only lived here for 7 months.
1.10	North of West Hallam	Road Safety	Daniel Clark	Response-01091	Busy with cars parked everywhere now. Adding potential traffic to a area that has high parking and traffic issues now. Is ridiculous and this will have more people coming in to the village to use the shops and schools.
1.10	North of West Hallam	Road Safety	Danielle Tyler	Response-01121	So damgerous already when trying to cross the road as a pedestrian, increased cars would make this worse.
1.10	North of West Hallam	Road Safety	David Whitehead	Response-01051	Park hall lane is not suitable for an increase of traffic that this development would result in.
1.10	North of West Hallam	Road Safety	Ellen Haddon	Response-00065	Many children cross at this area of high lane for the school buses. They can be standing for ages as it is and you often see them making foolish runs as they have been there for so long. The extra traffic and pressure on this area would have unthinkable consequences.
1.10	North of West Hallam	Road Safety	Emma Stanley-Smith	Response-01565	Very busy road. Accident waiting to happen

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Road Safety	Francesca Dean	Response-00220	Speed limits are not kept, children cross here, the field already floods onto Highlane
1.10	North of West Hallam	Road Safety	Gale Harvey	Response-01130	Will need lights coming onto high lane - awful junction
1.10	North of West Hallam	Road Safety	Gary Hamson	Response-00055	This is a fast road in terms of the cars speeding with no speed cameras although they have been promised in the past and this just is not a safe place for an entrance to a cul de sac
1.10	North of West Hallam	Road Safety	Gillian Bosworth	Response-00920	High Lane is a very busy road now. Adding a new road exiting onto High Lane adds more danger to those leaving the driveways of existing housing.
1.10	North of West Hallam	Road Safety	Hannah	Response-00252	Station road, crossroads many accidents/extremely busy area especially at peak times. Worry about access to both nursing homes- I know Ambulances already struggle down bagot/newidgate street
1.10	North of West Hallam	Road Safety	Helen Blackwell	Response-00457	With millhouse junction being busy with limited visibility adding further traffic from both west hallam developments will cause the junction to become dangerous and will increase the number of road traffic accidents.
1.10	North of West Hallam	Road Safety	Helen Patenall	Response-00872	Exit from the proposed site to High lane West is real road safety issue due to the volume of traffic, particularly at busy times
1.10	North of West Hallam	Road Safety	Helen Stanley	Response-01558	Dangerous junction already More car will try and cross straight over to access the village meaning greaterniak of accident
1.10	North of West Hallam	Road Safety	Jade Harland-Toomer	Response-00218	The road quality isn't great
1.10	North of West Hallam	Road Safety	James Johnson	Response-01124	I fear for children and the elderly in our village. The roads are not adequate for a new housing estate opposite the school.
1.10	North of West Hallam	Road Safety	James Morris	Response-01061	Accidents will happen just like at the crossroads near the bottle kiln
1.10	North of West Hallam	Road Safety	Jane Garner	Response-01076	The speed along the A609 around this location is 40. You have a junction at Station Road, parking causing sight issues on the corner of Newdigate outside the Barbers, parking at Millhouse corner also causing sight issues, traffic travelling above 40 up and down the road from Stanley Common once they are out of the 30 zone. To have an extra junction or additional traffic coming out onto the 40 zone would be more dangerous.
1.10	North of West Hallam	Road Safety	Jane Marshall	Response-01171	40 mph speed limit too high. Unless traffic calming and or traffic lights/roundabout put in place it will be a nightmare.
1.10	North of West Hallam	Road Safety	Jayne Trueman	Response-00427	The development is on a crossroads on a blind bend making an already dangerous junction worse. It's difficult to navigate these crossroads for all road uses and pedestrian's. High land and Belper Road are busy roads and traffic speeds are dangerous. There are frequent accidents and near misses.
1.10	North of West Hallam	Road Safety	Jenny Butler	Response-00200	It's already a busy/ difficult junction to pull out of and this will make it worse
1.10	North of West Hallam	Road Safety	Jessica Starling	Response-00259	High Lane is a busy road and fast so with extra pedestrians I worry about safety
1.10	North of West Hallam	Road Safety	Jonie Centro	Response-00729	road is already more dangerous with many cars parked on high lane west
1.10	North of West Hallam	Road Safety	Julie Harbon	Response-00026	Access to a 40mph road used as a main route to Derby and Nottingham, on a blind bend makes no sense at all. Even if access is via Park Hall Lane, it will cause massive congestion particularly around peak times.
1.10	North of West Hallam	Road Safety	Kathryn McCartney	Response-01042	Increasing the levels of traffic to an already busy junction, with no traffic controls in place increases the risk of accidents to both drivers and pedestrians. In addition there is a bus stop near to the junction which increases the risks of accidents.
1.10	North of West Hallam	Road Safety	Keith Atkinson	Response-01048	Access too close to busy major crossroads.
1.10	North of West Hallam	Road Safety	kelly centro	Response-00203	Dangerous stretch for access and same comments as traffic
1.10	North of West Hallam	Road Safety	Kerry Middleton	Response-00265	This would ensure that the safety of the residents is compromised.
1.10	North of West Hallam	Road Safety	Laura Egglestone	Response-01500	You cannot see clearly at this area of high lane and believe this will be dangerous.
1.10	North of West Hallam	Road Safety	laura slater	Response-01540	As above, the bends are hard to see, there are always drivers overtaking especially when waiting for a car to turn onto station road.
1.10	North of West Hallam	Road Safety	Lee Hunter	Response-00176	This will add even more stress to an already busy road
1.10	North of West Hallam	Road Safety	Lenny	Response-00167	The road is already a speed runway and the cross road is a death trap waiting to happen for motorists and pedestrians alike. The noise and pollution disruption in addition to the dangers should squash this petition. Belper Road already sees too much traffic and congestion at and near the school. Invest in a ring road please instead of houses 
1.10	North of West Hallam	Road Safety	Lewis Tyler	Response-01104	West Hallam is an old village and roads aren't designed to handle the volume of traffic. Speeding around the village is atrocious.
1.10	North of West Hallam	Road Safety	Linda Webster	Response-00747	I am concerned about a new access onto the A609 so close to Millhouse crossroads and would question why an emergency access/egress is needed into Park Hall Lane. Is it a good idea to access the A609 at Millhouse crossroads with a blind bend from Belper Road?
1.10	North of West Hallam	Road Safety	Lyndsey Taylor	Response-00250	Too many cars etc will using the main rd to get to the site
1.10	North of West Hallam	Road Safety	Marie cox	Response-00105	The road is extremely busy already with several dangerous spots the development will add more traffic to an already busy road
1.10	North of West Hallam	Road Safety	Mark	Response-00166	Busy road bad parking more traffic = disaster
			Mark Baker	Response-00108	The acceptance is on a concealed bend.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Road Safety	Matt Haddon	Response-00098	The crossroads the proposed site is already very dangerous due to the limited visibility of approaching traffic it offers due to the blind bend on Belper Road and rise in the road on High Lane West. There have been some awful collisions in this location and an increase in traffic and new access location will make this far worse and significantly increase the risk of accidents, injury and loss of life. The location would also result in a significantly increased number of children needing to cross the road from the proposed site to access the village, local school and bus stops etc. It is a very difficult and dangerous road to cross and more footfall will increase the risk of a child being knocked down and killed. In addition Park Hall Lane does not have any pavement, so again this would be a significant danger and risk to the increased number of pedestrians the proposed location would introduce. This site is planned very close to the already very busy and dangerous crossroads where High Lane West, Station Road and Park Hall Lane meet, where visibility for vehicles joining High Lane West is very poor due to the blind bend and rise in the road, and this has been the site of a number of serious vehicle collisions. Increased volume of traffic would further exacerbate the issue and increase the likelihood of vehicle collisions, injuries and fatalities. In addition to the the increased risk of vehicle collisions, the risk to pedestrians in the area is greatly increased as there will be an increased number of pedestrians needing to cross this dangerous road as all the local amenities such as the school, play areas, shops, Doctors, Pharmacy takeaways and hair salon/barbers are all in the existing village on the opposite side of the road. This presents a real risk of fatalities to both adults and children. There would also be an increase in pedestrians using Park Hall Lane, which does not have any pavements, and therefore again a significant increase in the risk of pedestrians being knocked down by cars.
1.10	North of West Hallam	Road Safety	Melanie Lawson	Response-00848	The community centre park is used by lots of children and this will cause safety issues
1.10	North of West Hallam	Road Safety	Mr and Mrs Wood	Response-01825	I am sure others will make points about concerns regarding road safety around the two proposed sites, one directly opposite a primary school and the other near a busy crossroads. Climate change will undoubtedly make us more concerned about the removal of natural flood plains, plus further pressure on local public services, as well as air quality and local wildlife and diversity.
1.10	North of West Hallam	Road Safety	Nichola Dodd	Response-00197	Issues with speeding traffic already and cars now more regularly parking on High Lane West particularly overnight will increase safety problems
1.10	North of West Hallam	Road Safety	Nick Craddock	Response-00144	Already an area renowned for excessive speeding, so will add to this with more cars in the area.
1.10	North of West Hallam	Road Safety	Nicola Elkington-Horridge	Response-00082	This development is right next to an area where all the children if westhallam play from football and skateboarding to the park and cycling. It will be highly dangerous.
1.10	North of West Hallam	Road Safety	Nigel Wright	Response-00101	Heavy traffic makes crossing the road difficult and dangerous for children who need to cross the road. Cyclists also need to be considered as the government is encouraging alternatives to cars.
1.10	North of West Hallam	Road Safety	Patrick Barber	Response-00279	The proposed exit for the site is onto a 40mph limited highway and is close to the West Hallam Cross roads which is a recorded accident black spot. The sight lines to the West Hallam Cross roads from the proposed junction are inadequate and will add to the safety issues at this location.
1.10	North of West Hallam	Road Safety	Paula Piggott	Response-01044	You can't keep destroying the countryside destroying habitats, killing wildlife and it all not have a knock on effect. You are destroying the air we breathe. We need flowers, we need bees these things the world can't exist without. The wildlife will seriously be impacted. You will destroy the habitats of many animals needed for the world to survive. This is a small village. With lots of precious animals, insects, flowers, trees etc you will kill these insects and animals when you destroy their habitats thus destroying the air we breathe. There is a school and many bungalows with pensioners. It is a accident waiting to happen. Also dog walkers, horse riders and lots of wildlife. Seriously someone will get hurt or worse killed! It is a small village without the capacity for more houses. The roads are not built for so many extra residents. You will totally destroy the area and you will totally destroy the clean air killing lots of wildlife and their habitats in the process. Keep building over land will cause flooding and lead to drainage problems as natural soakaway will be destroyed.
1.10	North of West Hallam	Road Safety	Pauline Lawson	Response-00314	More traffic means more accidents will happen
1.10	North of West Hallam	Road Safety	Pauline Wood	Response-01099	Already a lot of traffic
1.10	North of West Hallam	Road Safety	Pete Vanstone	Response-00294	Already too busy.
1.10	North of West Hallam	Road Safety	P Newton	Response-00773	The current traffic levels on High Lane continue to increase yearly, so with this proposed site additional traffic onto High Lane will lead to potential safety issues at the site entrance to High Lane. The current crossroads at station road onto high lane have become a accident waiting to happen due to the speed and volume of traffic , by having another site entrance onto High lane will only lead to further potential health & safety issues on what is a fast road already.
1.10	North of West Hallam	Road Safety	R F Smith	Response-00685	The A609 High Lane West is already dangerous for pedestrians wishing to cross in the daytime. Further development is likely to exacerbate the situation. The nearby West Hallam Crossroads at the junction with Park Hall Lane, Station Road and Belper Road is awkward and requires considerable care if collisions are to be avoided. Increased traffic from a nearby development can only worsen the situation. Increased vehicular access and egress onto the main carriageway from the potential site is likely to increase an already difficult situation in relation to road safety. It should be noted that speeding vehicles are a particular problem. Any usage of Park Lane in relation to the site would be entirely unsuitable as this is a minor narrow country lane.
1.10	North of West Hallam	Road Safety	Richard Brewell	Response-00193	As the lane comes to a dangerous, and busy crossroads with an A road, on the rise of a hill and round a corner, leaving Stanley Common, this will present a significant added road hazard.
1.10	North of West Hallam	Road Safety	Richard elks	Response-01422	The road in which I live, High lane west, is extremely busy, vehicles rarely adhering to the speed limit, only this weekend, Saturday the 16th did we have police outside after a road traffic collision. My concerns are that more houses equally means increased footfall, the proposed site regardless of where the entrance and exit may be will mean pulling out onto this busy main road. It's concerning that it's even being considered, safety should come first.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Road Safety	Robert Mee	Response-01790	from a road safety perspective, this is a ludicrous suggestion. Crossing the road near to the High Lane West / Station Road junction is already a dangerous activity. We may not have had any fatalities, but accidents do happen here (my own daughter still has the pins in her legs from 20 years ago to show what this road is like). Any residents in the new development will have to cross the main road in order to get to any facilities in the village (playgrounds, school, shops, doctor?s, etc.) There is no pedestrian crossing, and I notice that there is no requirement for a pedestrian crossing in the notes accompanying this amendment. Indeed, the nearest pedestrian crossings over the A609 are in Ilkeston and at Smalley Crossroads! Having often crossed the junction on a bicycle too, I know that this is even worse. If people are not going to walk into the village, then they will drive, which makes a mockery of any suggestion that this is a sustainable location for development.
1.10	North of West Hallam	Road Safety	Robert Mee	Response-01507	From a road safety perspective, this is a ludicrous suggestion. Crossing the road near to the High Lane West / Station Road junction is already a dangerous activity. We may not have had any fatalities, but accidents do happen here (my own daughter still has the pins in her legs from 20 years ago to show what this road is like). Any residents in the new development will have to cross the main road in order to get to any facilities in the village (playgrounds, school, shops, doctor?s, etc.) There is no pedestrian crossing, and I notice that there is no requirement for a pedestrian crossing in the notes accompanying this amendment. Indeed, the nearest pedestrian crossings over the A609 are in Ilkeston and at Smalley Crossroads! Having often crossed the junction on a bicycle too, I know that this is even worse. If people are not going to walk into the village, then they will drive, which makes a mockery of any suggestion that this is a sustainable location for development.
1.10	North of West Hallam	Road Safety	Sarah James	Response-01086	See congestion comments.
1.10	North of West Hallam	Road Safety	Simon Reeve	Response-01059	The roads simply aren't built for the traffic we already have without adding more homes with more cars; I grew up in West Hallam (High Lane East) in the 80s and there were approximately 1 car for every 3 homes, now there's 6 for every 3. The junctions at Millhouse Garage and the Bottle Kiln have poor visibility and simply aren't suitable for supporting more homes
1.10	North of West Hallam	Road Safety	Sophy Cunningham	Response-00211	High Lane West is already a busy road and drivers are often speeding even though it is 40mph. Adding further cars to this road is a safety problem.
1.10	North of West Hallam	Road Safety	Teresa Faulkner-Day	Response-00240	Cars regularly speed down this road, it's extremely difficult to get on and off driveways as it is without adding more vehicles coming and going
1.10	North of West Hallam	Road Safety	Thomas Edward Tyler	Response-01079	Speed of traffic as previously mentioned along here is in our opinion worse now than ever .We have lived here for 21 years .We frequently cross the road at school start and finish times assisting with our grandchildren but would never let them cross here on their own despite them being old enough to do so!
1.10	North of West Hallam	Road Safety	Tina Jay	Response-01802	This site is also highly unsuitable for housing development, with new access onto the A609 and being so close to the Millhouse crossroads, which is already a very congested and problematic crossroads. This new access would also mean accessing the A609 at the Millhouse crossroads with a blind bend from Belper Road. The proposal for other access/egress from the site via a new access off High Lane West coinciding with the public footpath to the 'Blue Fly' area is also additionally dangerous and problematic.
1.10	North of West Hallam	Road Safety	tracey knighton	Response-01228	Entry road in area of poor visibility
1.10	North of West Hallam	Road Safety	Victoria noble	Response-00107	Heavy traffic adds to accidents
1.10	North of West Hallam	School Capacity	Alesha Johnson	Response-01122	Local schools and GP surgeries are already under considerable pressure, with limited capacity to absorb a large influx of new residents. No clear or deliverable plan has been provided to show how these essential services will be expanded to meet additional demand. Without this, the development would reduce the quality and accessibility of local education and healthcare for existing residents.
1.10	North of West Hallam	School Capacity	Andy Williams	Response-00184	The local schools & pre-schools are already operating at capacity and increase in the community will further exacerbate the issues
1.10	North of West Hallam	School Capacity	Ben Rodney	Response-00121	Already a busy subscribed area for school places
1.10	North of West Hallam	School Capacity	Charles Brooks	Response-00933	Not an issue here. The school has spare capacity as it was extended a few years ago to cater for the huge demand created by the new estate in the village. When I was Chair of Governors the population of young children exploded. Now the estate is more mature the school population has declined.
1.10	North of West Hallam	School Capacity	Charlotte broughton	Response-01474	School will be over run
1.10	North of West Hallam	School Capacity	Claire Dean	Response-00068	The schools in the local areas would feel a great strain from increased occupancy in the area. We already have very large numbers in the main primary school located in west hallam which may mean those living in the area may have to travel to other nearby schools.
1.10	North of West Hallam	School Capacity	Claire Hunter	Response-00709	The schools will not be able to accomodate the amount of children possibly moving to the area. Senior schools are oversubscribed and places will be hard to find.
1.10	North of West Hallam	School Capacity	Daniel Clark	Response-01091	There is no parking now at the school making it dangerous for drivers and children with cars parked on the narrow roads and your perposal will add to this. There is no way of expanding the school to accommodate more children
1.10	North of West Hallam	School Capacity	Danielle Tyler	Response-01121	Very difficult to get secondary children in at chosen schools as it is without increased number of children.
1.10	North of West Hallam	School Capacity	David Whitehead	Response-01051	West Hallam only has a small capacity for school intake.
1.10	North of West Hallam	School Capacity	Hannah	Response-00252	Interesting one as yes birth rates declining however schools can't recruit , children have more needs no wrap around care for parents and with with proposals seems only so mang be affordable? Empty houses station road brand new
1.10	North of West Hallam	School Capacity	Homewood	Response-01069	Lack of school places traffic increase at drop off and collection
1.10	North of West Hallam	School Capacity	Jayne Trueman	Response-00427	School places are limited in the area.
1.10	North of West Hallam	School Capacity	Jessica Starling	Response-00259	Local Primary School, Scargill is a small village Primary School that will not have the capacity with already stretched funding. Local senior schools are also fairly full
1.10	North of West Hallam	School Capacity	Jonie Centro	Response-00729	local school cannot meet the need

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1-10	North of West Hallam	School Capacity	Kathryn McCartney	Response-01042	All the schools in our area are already under pressure, affordable housing is of course necessary, but likely to be families and therefore increasing the demand for school places at all levels.
1-10	North of West Hallam	School Capacity	Kerry Middleton	Response-00265	The school is up to full capacity and would be compromised by having an influx of further students.
1-10	North of West Hallam	School Capacity	Kristen Hamilton	Response-00208	Schools are struggling with capacity already
1-10	North of West Hallam	School Capacity	laura slater	Response-01540	I am not aware of how much room Scargill school has for new pupils but I do know there is absolutely no room for more school time traffic.
1-10	North of West Hallam	School Capacity	Lee Hunter	Response-00176	Schools are already over subscribed and parents are fighting to get their children already in limited place schools
1-10	North of West Hallam	School Capacity	Lewis Tyler	Response-01104	Would mean more children having to drive to a secondary school
1-10	North of West Hallam	School Capacity	Mark	Response-00166	I imagine the school is fit to bursting already
1-10	North of West Hallam	School Capacity	Matt Haddon	Response-00098	West Hallam is already a very large area for the size of the local school, and the significant increase in number of children the new development would bring to the area would undoubtedly cause this to be overloaded and potentially depriving children of access to their local school. Already very busy and popular school meaning that existing local residents may not be able to secure places for their children at the local school.
1-10	North of West Hallam	School Capacity	Nicola Elkington-Horridge	Response-00082	The school will continue to flourish without extra housing. We already have enough children for the school.
1-10	North of West Hallam	School Capacity	Nigel Wright	Response-00101	Local schools are at near capacity and funding is already inadequate for present schools.
1-10	North of West Hallam	School Capacity	Paula Piggott	Response-01044	There is not the capacity for more residents. There is a small village school but the staff to pupil ratio if stretched anymore will impact the quality of teaching and learning.
1-10	North of West Hallam	School Capacity	Rachael Winfield	Response-01537	Congestion around school is terrible. Cannot drive into west Hallam village at school times
1-10	North of West Hallam	School Capacity	Rhonda Holt	Response-00236	Scargill school is already bursting at the seams with classes of 37. There is NO leeway of more pupils.
1-10	North of West Hallam	School Capacity	REDACTED	Response-00178	REDACTED
1-10	North of West Hallam	School Capacity	Simon Reeve	Response-01059	There simply isn't enough resource for the children already attending school in the area. There hasn't been needed investment and it's only getting worse with needs for investment in SEND taking investment from the mainstream; they cannot cope with the demands already.
1-10	North of West Hallam	School Capacity	Stuart Dobson	Response-01114	The school already has to many students in each class
1-10	North of West Hallam	School Capacity	Varley	Response-00290	Every school is over subscribed. I work in an over subscribed school which puts pressure on staffing, facilities etc.
1-10	North of West Hallam	School Capacity	Victoria noble	Response-00107	1 local primary school in west Hallam so would add pressure on and people not being able to get places even when local
1-10	North of West Hallam	Traffic Congestion	Alesha Johnson	Response-01122	West Hallam's roads, particularly those leading into and out of the village, are not designed for high volumes of traffic. Additional housing will significantly increase vehicle numbers, leading to congestion, longer journey times, and heightened risks to pedestrians and cyclists, particularly around schools and village centres.
1-10	North of West Hallam	Traffic Congestion	Alison Bull	Response-00238	Traffic is heavy enough already without adding to it
1-10	North of West Hallam	Traffic Congestion	Alistair	Response-01139	Busy T junction
1-10	North of West Hallam	Traffic Congestion	Andrew Gotheridge	Response-00195	The road(park hall lane) is already a dangerous road and the junction will not cope with the increased traffic.
1-10	North of West Hallam	Traffic Congestion	Andy Williams	Response-00184	This area already has significant traffic volume & frequent control issues around Millhouse garage crossroads with limited vision at the junctions.
1-10	North of West Hallam	Traffic Congestion	Anita Lawrence	Response-00660	The A609 through West Hallam is already very busy with frequent speeding. Additional traffic on the A609 will also affect residents of Belper Road, Stanley Common, which has frequent problems with speeding traffic.
1-10	North of West Hallam	Traffic Congestion	Asha Haynes	Response-00059	There isn't capacity for any more traffic on a 40 mile an hour road. The drives already on the road find it difficult enough to get out.
1-10	North of West Hallam	Traffic Congestion	Barbara Graves	Response-01047	Hard enough to get onto High Lane at peak periods now so would only get worse
1-10	North of West Hallam	Traffic Congestion	Ben Rodney	Response-00121	All ready a busy road and junction adding more houses will contest area
1-10	North of West Hallam	Traffic Congestion	Beverley Dawn Kilby	Response-00235	access will need to be carefully managed, it is the brow of a hill and the road speed limit currently is 40mph. could be an accident black spot. increased housing will lead to more cars
1-10	North of West Hallam	Traffic Congestion	Carly Denham	Response-00291	The road from park hall is single track , already congested. Many horse riders and dog walkers
1-10	North of West Hallam	Traffic Congestion	Carol Hart	Response-01828	Again the site is quoted as 30 and this is only what you will be responding on but everyone in West Hallam knows that developers want to extend along the rear of High Lane West and again the pressure on the A609 is already a nightmare and again would put major pressure on the two junctions, Millhouse and Mapperley, again we also go back to the local transport which as already stated is practically non-existent and therefore your own transport is needed.
1-10	North of West Hallam	Traffic Congestion	Caroline Tew	Response-01021	Traffic already backs up onto Station Road at busy times., this development will add to the problems. Turning right out of Station Road is already hazardous as the bend is not good towards Stanley Common. Turning out of the junction from Park Hall Lane is also dangerous, especially at busy times. It is very difficult to cross the road here. Additional traffic at the junction, even if it was further along would add to the problems
1-10	North of West Hallam	Traffic Congestion	Charles Brooks	Response-00933	The High Lane in West Hallam is already an extremely busy road and the slightest issue can cause congestion and delays. I know this road is busy because i am a member of the village Community Speedwatch Group and it is surprising how many vehicles travel along the High Lane in both directions. Residents living on the High Lane often have difficulty exiting their drives onto the road whether turning left or right. A new entrance and exit on the High Lane will only increase the issues. Whilst the speed limit is 40mph many vehicles exceed this speed as the road is relatively straight.
1-10	North of West Hallam	Traffic Congestion	Charlotte broughton	Response-01474	Too much traffic already in the village
1-10	North of West Hallam	Traffic Congestion	Chris Reid	Response-00137	Access road near high lane will cause issues with traffic

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Traffic Congestion	Christopher Chambers	Response-00169	This development will increase traffic congestion at both 4-way cross roads at Stanley Common end and West Hallam (Bottle Kiln) end. Traffic through Mapperley village will increase. The route is heavily used by horse riding schools and any traffic along its entirety will therefore be subject to negotiation of these hazards.
1.10	North of West Hallam	Traffic Congestion	Claire Dean	Response-00068	High lane is already a busy road in which poses a great risk. The site in which your proposing to develop will not only add to the congestion but would also mean those living in the new proposed area would be pulling out onto a road of 40mph in which many do not adhere to the speed limit. Its an accident waiting to happen. Crossing this road on foot is also a huge danger and again adding to this and increasing habitats close by which increases vehicle usage is a threat to life. Not to mention the increased pollution and noise/disturbance from the traffic.
1.10	North of West Hallam	Traffic Congestion	Claire Hunter	Response-00709	The traffic on this road is often congested and cars at times go well above the speed limit. This is a dangerous road without having the added risk of slowing traffic to access the housing. There have been many near misses with people turning right out of station road.
1.10	North of West Hallam	Traffic Congestion	Cory page	Response-01425	The road is busy, I often walk my dog and to cross this road can take 10 to 15 minutes at times.
1.10	North of West Hallam	Traffic Congestion	Daniel Clark	Response-01091	The Village is already busy with poor access at school and busy times. The parking in and around the village is dangerous and congested
1.10	North of West Hallam	Traffic Congestion	Danielle Tyler	Response-01121	Traffic is already very dangerous, we do not need increased amount of cars. Would be lethal trying to pull out at the crossroads.
1.10	North of West Hallam	Traffic Congestion	David Harasym	Response-01054	The traffic in a morning is already too heavy for the junction.
1.10	North of West Hallam	Traffic Congestion	David Whitehead	Response-01051	The development will increase traffic to an already difficult/hazardous crossroads
1.10	North of West Hallam	Traffic Congestion	E bayley	Response-00080	Busy crossroads already with bus stops so increasing danger for school children
1.10	North of West Hallam	Traffic Congestion	Ellen Haddon	Response-00065	This is obviously a main road and extremely busy making pulling out of the junctions from Mapperley very difficult. With increased volume of traffic from the development and the poor vision due to the bend in the road this would be an absolute disaster and death trap.
			Emma Stanley-Smith	Response-01565	Very busy road. Accident waiting to happen!
1.10	North of West Hallam	Traffic Congestion	Francesca Dean	Response-00220	The junction prior to this field is already very dangerous and unsafe for everyone.
1.10	North of West Hallam	Traffic Congestion	Gale Harvey	Response-01130	Will make an awful junction there !
1.10	North of West Hallam	Traffic Congestion	Gary Hamson	Response-00055	I have lived on High Lane West since 1988 and witness in a daily basis cars speeding in access of the 40mph limit for this road and to have an entrance on here is lunacy ? has anyone from your planning dept walked up and down this road at any time during the day ??
1.10	North of West Hallam	Traffic Congestion	Hannah	Response-00252	Crossroads at station road/park lane already black spot, surrounding streets choas parked cars station road accidents regularly, speeding
1.10	North of West Hallam	Traffic Congestion	Helen Blackwell	Response-00457	Millhouse junction has limited visibility and a busy junction. Housing here will add further congestion. Reducing the speed limit may help.
1.10	North of West Hallam	Traffic Congestion	Helen Patenall	Response-00872	see following comment
1.10	North of West Hallam	Traffic Congestion	Helen Stanley	Response-01558	This is a busy and dangerous road junction without adding more traffic
1.10	North of West Hallam	Traffic Congestion	Homewood	Response-01069	Already huge issues with traffic
1.10	North of West Hallam	Traffic Congestion	Howard marshall	Response-00124	West hallam already congested heavily. This junction hazardous as it is! Leave our green land alone!
1.10	North of West Hallam	Traffic Congestion	Jade Harland-Toomer	Response-00218	Bad junction with 4 way traffic without adding more traffic
1.10	North of West Hallam	Traffic Congestion	James Johnson	Response-01124	The traffic and congestion through the village at peak times is already dangerous .I?m a resident in West Hallam and my daughter attends Scargill School. The roads and infrastructure in the village will not be adequate enough for this many houses to be built opposite the village school.
1.10	North of West Hallam	Traffic Congestion	James Morris	Response-01061	That area of high lane is already congested
1.10	North of West Hallam	Traffic Congestion	Jane Garner	Response-01076	Traffic at the junction of station Road, Belper Road, High Lane West and Park Hall Lane is already busy. Any more traffic at this junction or a new junction further along Hugh Lane West would make matters worse.
1.10	North of West Hallam	Traffic Congestion	Jane Marshall	Response-01171	The traffic in the area is already terribly high and getting access onto high lane almost impossible at times.
1.10	North of West Hallam	Traffic Congestion	Jayne Trueman	Response-00427	The area already has an issue with congestion at the two crossroads junctions. This will be worsened by adding to this with further developments. There are long waits to exit the village particularly at work/school commute times.
1.10	North of West Hallam	Traffic Congestion	Jessica Starling	Response-00259	Lots of traffic already in the area at peak times
1.10	North of West Hallam	Traffic Congestion	Joanne Vickerton	Response-00251	There will be an increase in traffic
1.10	North of West Hallam	Traffic Congestion	Jonie Centro	Response-00729	numerous objections - traffic conjection being the most prominent
1.10	North of West Hallam	Traffic Congestion	Jon Skelson	Response-00156	It's already too busy and chaotic around here. The last thing we need is more houses.
1.10	North of West Hallam	Traffic Congestion	Julie Harbon	Response-00026	This will lead to a junction on a blind bend, on a 40mph road. Nonsensical!
1.10	North of West Hallam	Traffic Congestion	Kathryn McCartney	Response-01042	The crossroads are already busy form three directions, a fourth increase in traffic would create a higher risk of incidents, without the plan to put traffic lights in and safe areas for pedstrians to cross the safety issue is high. In addition the fourth road is narrow and not suitable for a higher level of two way traffic
1.10	North of West Hallam	Traffic Congestion	kelly centro	Response-00203	Traffic is already bad . Speeding cars people parking on a 40 mph road at night with no lights Access will be dangerous
1.10	North of West Hallam	Traffic Congestion	Kerry Middleton	Response-00265	Further traffic congestion added to an already busy village with a huge volume of traffic.
1.10	North of West Hallam	Traffic Congestion	Kristen Hamilton	Response-00208	We have high traffic congestion already we don't need more due to health reasons
1.10	North of West Hallam	Traffic Congestion	Laura Egglesstone	Response-01500	Access from high lane will be dangerous and park hall lane is too narrow.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Traffic Congestion	laura slater	Response-01540	It's already busy at the cross roads, there was a collision on 17th May 25. I have seen many a near miss. The traffic is particularly bad during school pic up times. The bend is nearly a blind bend that goes straight to a cross roads. Its also a fast road at 40 mph which is too fast for this type of congestion let alone more.
1.10	North of West Hallam	Traffic Congestion	Lee Hunter	Response-00176	This road is already a race track and safety hazard with speeding cars all hours of the day
1.10	North of West Hallam	Traffic Congestion	Lewis Tyler	Response-01104	West Hallam is a rat run for the distribution centre on cat and fiddle lane. Traffic queues down station Road.
1.10	North of West Hallam	Traffic Congestion	Louise Hunt	Response-01033	Going to cause a lot of traffic and congestion on an already busy road.
1.10	North of West Hallam	Traffic Congestion	Lyndsey Taylor	Response-00250	Congestion on the roads too busy
1.10	North of West Hallam	Traffic Congestion	Lynsey anderson	Response-01067	I am writing to object to both proposed building sites in Wwst Hallam. Firstly the site behind High lane West, putting houses here is dangerous. Access either directly from High Lane or from Park Hall Lane would cause traffic chaos. Park Hall Lane leads to a blind bend and is mostly single track. This is an accident waiting to happen. The filed also floods into the gardens and out onto the road. Houses surely can not be built on a field that floods. I can not comprehend what the field would cost to compulsory purchase as the owner does not want to sell. My house backs onto the field that has been proposed behind High lane West and I did not buy here to be in the middle of building site or housing estate, I bought this house to live near the countryside. I was in attendance at the council meeting in Long Eaton and I found it laughable the reasons that were being given for both sites, apparently £230,000 + houses were going to solve a homeless crisis we have In Erewash. Most of the houses being £400,000 or above just does not make any sense that it would solve anything to do with the homeless issue. This argument was clearly just being used to tug at the heart strings. The only reason the council is so desperate to build houses is you are under threat of having your planning department removed and London making the decisions. This is no reason too destroy green belt, nature and take over our village. With regards to the site off Beech lane there are multiple highway issues here, wherever you would put the access roads again it is an accident waiting to happen and it would cause traffic chaos during rush hr. Both sites have been turned down previously. So what has changed now. The danger to the children at Scargill is also not acceptable, school drop off is already dangerous adding 100+ cars to the scenario is just incomprehensible. The houses would add this many cars as the transport links are minimal and unreliable. Again this would destroy green belt and the environmental issues are numerous. How would the shops cope of Beech lane, the car park already overflows and with no plans for another school, doctors, dentist then where are these new residents supposed to go. Everything adds up to the fact that no one in West Hallam wants this and we do not appreciate the council trying to rush this through and not coming forward correctly sooner with the proposal. If you were at the meeting in Long Eaton I am sure you could tell from the noise and boo?s coming from all attendee?s that no one wants any of these sites built on. I would hope that mine and all the other objections would be listened to and the council would make the right decision however I am pretty sure that the decision has already been made and no matter what any of us say or think it will not be heard. Please listen and realise you are potentially destroying a community, green belt and causing environmental issues at a time we should be doing the opposite.
1.10	North of West Hallam	Traffic Congestion	Marie cox	Response-00105	High lane is an accident waiting to happen particularly at morning and evening rush hour With only 2 ways on and off the estate added to the cars in high lane plus 60 plus potential cars situated on the new development it is potentially lethal
1.10	North of West Hallam	Traffic Congestion	Mark	Response-00166	Access points onto a main road? Or onto park hall lane and then a bust crossroads? What a joke
1.10	North of West Hallam	Traffic Congestion	Mark Baker	Response-00108	The lane access is already hazardous greater use will only increase this risk.
1.10	North of West Hallam	Traffic Congestion	Matt Haddon	Response-00098	This location is adjacent to an already very busy road and junction, which would become significantly worse if further housing were to be added in the proposed location, particularly so close to this already difficult junction to navigate due to limited visibility of approaching traffic. The proposed site would significantly increase the volume of traffic around the village which is already very congested at times
1.10	North of West Hallam	Traffic Congestion	Melanie Lawson	Response-00848	The traffic on High Lane West is already an issue and the position of the plot is in a very awkward position being on the brow of a hill. The roads linking these areas in Mapperley, Stanley Common and Stanley are not designed for increased traffic. The position of the development is unsuitable due to closeness to the junction. There will be issues with traffic due to the position of the plot. High Lane West is busy enough without more traffic.
1.10	North of West Hallam	Traffic Congestion	Mia Foulkes	Response-01072	Disruption in the village whilst building will be huge - it?s busy enough already!
1.10	North of West Hallam	Traffic Congestion	Molly	Response-01071	Parking and traffic are already issues in this area.
1.10	North of West Hallam	Traffic Congestion	Natalie Payne	Response-01520	Getting on to high lane is already difficult without introducing more traffic to the area
1.10	North of West Hallam	Traffic Congestion	Nichola Dodd	Response-00197	Traffic congestion is already bad getting in and out of the village. This will increase the traffic
1.10	North of West Hallam	Traffic Congestion	Nick Craddock	Response-00144	Will add more traffic to the area. So chances of congestion
1.10	North of West Hallam	Traffic Congestion	Nicola Elkington-Horridge	Response-00082	Too much traffic already in this area and the money spent on development should be spent on traffic calming and making good of the residential parking areas westhallam already has which are an eyesore.
1.10	North of West Hallam	Traffic Congestion	Nigel Wright	Response-00101	Further development will increase traffic congestion and air pollution.
1.10	North of West Hallam	Traffic Congestion	Patrick Barber	Response-00279	The development will put further pressure on the current congested local roads system.
1.10	North of West Hallam	Traffic Congestion	Paula Piggott	Response-01044	You can't keep destroying the countryside destroying habitats, killing wildlife and it all not have a knock on effect. You are destroying the air we breathe. This is a small village. There is a school and many bungalows with pensioners. It is a accident waiting to happen. You will be compromising the safety of children. Also dog walkers, horse riders and lots of wildlife. Seriously someone will get hurt or worse killed! It is a small village without the capacity for more houses. The roads are not built for so many extra residents. You will totally destroy the area and you will totally destroy the clean air killing lots of wildlife and their habitats in the process. Keep building over land will cause flooding and lead to drainage problems as natural soakaway will be destroyed.
1.10	North of West Hallam	Traffic Congestion	Pauline Lawson	Response-00314	High Lane is busy enough without more traffic. Vehicles leaving the site to join High Lane will gave great difficulty

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Traffic Congestion	Pauline Wood	Response-01099	Entrance/exit would be on a busy road
1.10	North of West Hallam	Traffic Congestion	P Newton	Response-00773	The current traffic levels on High Lane continue to increase yearly, with this proposed site additional traffic onto High Lane will lead to potential safety issues at the site entrance to High Lane.
1.10	North of West Hallam	Traffic Congestion	Rachael Winfield	Response-01537	Already congestion throughout the day. Very difficult to drive past / through west Hallam especially at school times
1.10	North of West Hallam	Traffic Congestion	R F Smith	Response-00685	The A609 High Lane West is an extremely busy road.
1.10	North of West Hallam	Traffic Congestion	Rhonda Holt	Response-00236	There is already highly congested roads in the rush hours in West Hallam. The infrastructure is at capacity.
1.10	North of West Hallam	Traffic Congestion	Richard Brewell	Response-00193	The road that it will come out onto is a small lane with a poor visibility junction, along with a busy A road running perpendicular. This A road is already busy in rush hour periods and this will exacerbate the problem.
1.10	North of West Hallam	Traffic Congestion	Richard elks	Response-01422	Traffic is constant. It's a busy road, 40mph rarely adhered to, it's concerning that adding both sites in west hallam means more traffic.
			REDACTED	Response-00178	REDACTED
1.10	North of West Hallam	Traffic Congestion	Sarah	Response-00075	Roads are already difficult for people to cross
1.10	North of West Hallam	Traffic Congestion	Sarah James	Response-01086	Current road not suitable for increased traffic. Junction with High Lane treacherous.
1.10	North of West Hallam	Traffic Congestion	Simon Reeve	Response-01059	The roads simply aren't built for the traffic we already have without adding more homes with more cars; I grew up in West Hallam (High Lane East) in the 80s and there were approximately 1 car for every 3 homes, now there's 6 for every 3. The junctions at Millhouse Garage and the Bottle Kiln have poor visibility and simply aren't suitable for supporting more homes
1.10	North of West Hallam	Traffic Congestion	Sophy Cunningham	Response-00211	High Lane West is already very busy and this will add to the already high traffic flow
1.10	North of West Hallam	Traffic Congestion	Stuart Dobson	Response-01114	The junction is already too busy and hard to see from that direction the increase in cars would make the issue worse
1.10	North of West Hallam	Traffic Congestion	Thomas Edward Tyler	Response-01079	Traffic on High Lane West is notoriously busy especially as vehicles approaching from Stanley Common have already entered a 40 mph limit before the crossroads.This means traffic emerging from Station Road heading towards Ilkeston have a tricky job getting out,and need to accelerate to avoid vehicles coming around the bend.There has been a speed indicator device fitted further along near the 'blue fly' entrance.We live opposite to Millhouse Garage and some traffic can be heard accelerating hard at times towards Ilkeston,it sounds almost like a speed test to see how fast they can reach before slowing down at the indicator.
1.10	North of West Hallam	Traffic Congestion	Tina Jay	Response-01802	When these sites have been approached previously, Highways have raised problems at both the junctions of Millhouse and Mapperley Crossroads, as well as those at Beech Lane, Station Road, and the T junction at Cat and Fiddle Lane. It is therefore difficult to understand how these sites could now be considered suitable, when traffic problems have only increased and brought more difficulties. These additional housing developments, and with the high number of houses involved is not suitable for a village location, and would cause a further unacceptable influx of traffic/parking which the village would not be able to cope with.
1.10	North of West Hallam	Traffic Congestion	Varley	Response-00290	The long bend causes people to drive at speed. Locals park their cars on the bend causing near misses. There is always car horns going off due to the long bend.
1.10	North of West Hallam	Traffic Congestion	Victoria noble	Response-00107	Already a lot of heavy traffic
1.10	North of West Hallam	Type of Housing	Charles Brooks	Response-00933	West Hallam is a reasonably affluent community. All properties are privately owned. I would not be against some new housing in West Hallam to appeal to our young people who want to stay in the village and buy a first property but not the location proposed. Totally inappropriate. West Hallam does not need any more large properties in the £300k plus range.
1.10	North of West Hallam	Type of Housing	Claire Dean	Response-00068	The character and appearance of the houses on high lane pose great quality and it is a well known road for its up market value homes. People have worked hard to live on a road like this and to build new homes, several to affordable housing would not only reduce the value of these homes people have worked hard to create but the new housing would also have a detrimental effect on the positive reputation high lane holds!
1.10	North of West Hallam	Type of Housing	Claire Hunter	Response-00709	We moved to this affluent area for the peace and beautiful surroundings. We didn't move to the area to be surrounded by affordable housing that potentially could bring residents that could have a negative impact in the area
1.10	North of West Hallam	Type of Housing	David Whitehead	Response-01051	This is not social housing and only for making money for the private developers.
1.10	North of West Hallam	Type of Housing	Helen Patenall	Response-00872	Type of housing is irrelevant. Whichever 'type' is proposed is not required and would lead to a drain on already strained local services.
1.10	North of West Hallam	Type of Housing	Jayne Trueman	Response-00427	There used to be already a wide range of housing types in the area. Including empty new build properties on station road.
1.10	North of West Hallam	Type of Housing	Kerry Middleton	Response-00265	We are not in need of an further housing within this already overpopulated area.
1.10	North of West Hallam	Type of Housing	laura slater	Response-01540	West Hallam is a lovely quiet, close nit community with people that have been here their whole lives or have moved here to avoid such busy neighbourhoods and the centre of town life. The children around here are all able to play out in the community with everyone knowing everyone. It is a safe environment. This will no longer be the case if we have hundreds of new people being placed here
1.10	North of West Hallam	Type of Housing	Lee Hunter	Response-00176	We moved out of an area with affordable housing and anti social behaviour, how is this going to be policed?
1.10	North of West Hallam	Type of Housing	Lewis Tyler	Response-01104	There is no need for affordable housing in this location. People have worked hard and purchased property for the country side views
1.10	North of West Hallam	Type of Housing	M. Morten	Response-00399	The Development should contain a mix of housing, both affordable and smaller open market dwellings so that young people can get onto the housing ladder.
1.10	North of West Hallam	Type of Housing	Matt Haddon	Response-00098	A new high volume estate in the proposed location is not in keeping with the current area and would be detrimental to the current rural environment
1.10	North of West Hallam	Type of Housing	Melanie Lawson	Response-00848	I am unsure why there is a need for 40 % affordable housing ?

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Type of Housing	Mr and Mrs Wood	Response-01825	And my last point is in regards to the algorithm, if indeed one even exists and I am being too kind that determine the percentage of affordable housing which I have heard could be as high as 4 in every 10 households; this an unprecedented high proportion compared to other nearby developments and it is a question, even though it's an uncomfortable one to ask that needs to be answered.
1.10	North of West Hallam	Type of Housing	Nick Craddock	Response-00144	A lot of the housing is not affordable for first time buyers. Also there are so many housing estates being built, who is actually buying these houses? Investors!
1.10	North of West Hallam	Type of Housing	Nicola Elkington-Horridge	Response-00082	We don't want anymore cheap houses ruining the village and then being left empty because in reality people do not agree with the development and the developers are of poor quality as are the houses they have already been built and ruined other areas of the village.
1.10	North of West Hallam	Type of Housing	Paula Piggott	Response-01044	You can't keep destroying the countryside destroying habitats, killing wildlife and it all not have a knock on effect. You are destroying the air we breathe. We need flowers, we need bees these things the world can't exist without. The wildlife will seriously be impacted. You will destroy the habitats of many animals needed for the world to survive. This is a small village. With lots of precious animals, insects, flowers, trees etc you will kill these insects and animals when you destroy their habitats thus destroying the air we breathe. There is a school and many bungalows with pensioners. It is a accident waiting to happen. Also dog walkers, horse riders and lots of wildlife. Seriously someone will get hurt or worse killed! It is a small village without the capacity for more houses. The roads are not built for so many extra residents. You will totally destroy the area and you will totally destroy the clean air killing lots of wildlife and their habitats in the process. Keep building over land will cause flooding and lead to drainage problems as natural soakaway will be destroyed.
1.10	North of West Hallam	Type of Housing	Pauline Wood	Response-01099	We need affordable homes but how many will be housing association
1.10	North of West Hallam	Type of Housing	P Newton	Response-00773	More bungalows are needed in the village to help current house owners downsize to then provide larger housing for families, we don't need more houses in the village, just more bungalows.
1.10	North of West Hallam	Type of Housing	Sarah James	Response-01086	Housing should be meeting the needs of local young people. I suspect these won't.
1.10	North of West Hallam	Type of Housing	Simon Reeve	Response-01059	The types of housing isn't touch of a concern, that said all housing developed anywhere in the UK should be legislated to have solar, heat pump etc to ensure self sufficiency as the grid is at breaking point. As are the sewers and refuse collection services that often aren't considered. There needs to be more affordable housing £120k - £280k but not more social housing; more needs to be done for working people on lower wages as they are the group missed out when housing strategy is planned and yet they're working hard and paying taxes
1.10	North of West Hallam	Type of Housing	Thomas Edward Tyler	Response-01079	Our concerns here relate to if the proposed development results in a high proportion of properties which are quickly degraded by residents who simply don't care about how they conduct themselves or maintain their surroundings. If you insist on building on the Green Belt, then the properties must surely reflect this? You have to pay a premium to live in a nice area, West Hallam along with Stanley and Stanley Common have some lovely areas of natural beauty, please don't take these away.
1.10	North of West Hallam	Type of Housing	Tracey Knighton	Response-01228	Social housing is required.
1.10	North of West Hallam	Type of Housing	Varley	Response-00290	Social housing = homing individuals who are known to abuse, neglect their property, local surroundings, the public because the property is given to them at a discounted rate or for free. You will turn a prestigious area of living in to homing those who have no pride or respect. There is a lot of beautiful homes on the road. Affordable housing will look visually out of place. There is plenty of brown sites around Ilkeston where affordable housing will be better suited with better local amenities. If you can't afford to live in your own property, surely you struggle to pay bills, pay for a car. North West Hallam is at least 30 mins walk to the nearest shop, doctors and on a very poor bus route.
1.10	North of West Hallam	Wildlife / Biodiversity	Alesha Johnson	Response-01122	The area north of West Hallam includes valuable greenfield land that supports a variety of wildlife, including birds, small mammals, and important plant species. Development here would result in the irreversible loss of natural habitats and corridors essential for biodiversity. With increasing awareness of ecological decline and climate challenges, preserving this natural environment should be a planning priority.
1.10	North of West Hallam	Wildlife / Biodiversity	Alison Bull	Response-00238	We need to provide more support to our wildlife and taking away an area such as this will be to theirs and our detriment
1.10	North of West Hallam	Wildlife / Biodiversity	Alistair	Response-01139	Building on field, it's a farm land area, don't need horrendous new builds in the area
1.10	North of West Hallam	Wildlife / Biodiversity	Andy Williams	Response-00184	The areas of green belt around this area supports the breeding area for local wildlife including uncommon butterflies (eg Brimstone), Buzzards, Red Kites, Barn Owls and Jays
1.10	North of West Hallam	Wildlife / Biodiversity	Anita Lawrence	Response-00660	Development would have a negative effect on the biodiversity of the proposed and surrounding areas during and after build. Badgers are protected under the 1992 Protection of Badgers Act. There are a number of badger setts on land behind High Lane West/Park Hall Lane, there are regular incidents involving death of badgers near this junction. Development of their habitat increases risk to badgers including road traffic accidents, as they are pushed out of established areas. The latest road death of a badger was reported to Mid Derbyshire Badger Group today (21/04/2025).
1.10	North of West Hallam	Wildlife / Biodiversity	Asha Haynes	Response-00059	The area has significant trees which should be left.
1.10	North of West Hallam	Wildlife / Biodiversity	Bruce Broughton	Response-01533	There is notable badger and other wildlife activity in this area. The proposals do not appear to address this, so a thorough investigation should be conducted before any development potential is considered to avoid harm or disruption to protected species.
1.10	North of West Hallam	Wildlife / Biodiversity	Carty Denham	Response-00291	This is one of our green spaces. I have noticed a huge amount of wildlife. Badger set, barn owl, foxes, birds of prey

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Wildlife / Biodiversity	Caroline Tew	Response-01021	This area is a natural wildlife habitat for butterflies and wild flowers. I walk my dog here and walking in this peaceful environment is good for my mental health. The natural habitat with foxes, badgers and rabbits, plus the rich variety of birds should be conserved and protected for future generations. The area changes with the seasons, it is beautiful in summer with the wildlife meadow. Too much natural habitat is being lost to development when many previous industrial landscapes like Stanton Ironworks could be utilized for housing.
1.10	North of West Hallam	Wildlife / Biodiversity	Charles Brooks	Response-00933	As the proposed lane id effectively green belt any building will destroy the current wildlife and the varied biodiversity. When you go for a walk along Park Hall Lane towards Shipley Park the sights and sounds are glorious. I moved to West Hallam to be in the country and the countryside experience starts as soon as you walk onto Park Hall Lane. More often than not you can walk along Park Hall lane, through Mapperley Village and back to West Hallam without seeing or hearing a moving vehicle. In todays pressurised world, this has to be good for human wellbeing.
			Chloe Parkin	Response-00153	Similar to the green spaces comment, destruction of green spaces is not good for local wildlife.
1.10	North of West Hallam	Wildlife / Biodiversity	Chris Reid	Response-00137	This is near fields that have wildlife
1.10	North of West Hallam	Wildlife / Biodiversity	Christine Barnes	Response-00639	Home to badgers as can be seen by the entrances to badger setts on Park Hall Lane.
1.10	North of West Hallam	Wildlife / Biodiversity	Claire Dean	Response-00068	The area in question has a substantial amount of wildlife, we have often witnessed badgers, foxes, bats not to mention the horses that occupy the field at present. I hope you can appreciate that wildlife is a vital component of this diversity, playing essential roles in maintaining ecological balance. Building on this area would cause a significant biodiversity loss, threatening wildlife populations and ecosystems.
1.10	North of West Hallam	Wildlife / Biodiversity	Claire Hunter	Response-00709	Being a resident on high lane west next to this field we see the amount of wildlife there is. Owls, many species of birds, bats, rabbits etc. it's beautiful surroundings by a which will be spoilt by the building of these houses and many animal habitats being destroyed.
1.10	North of West Hallam	Wildlife / Biodiversity	Cory page	Response-01425	I enjoy watching the badgers at night, foxes can be found here. Birds nesting in the trees.
1.10	North of West Hallam	Wildlife / Biodiversity	Daniel Clark	Response-01091	We live in a village for the views and wildlife and more houses should not be approved to this beautiful area
1.10	North of West Hallam	Wildlife / Biodiversity	Danielle Tyler	Response-01121	Loss of habitat for lots of wildlife in the area
1.10	North of West Hallam	Wildlife / Biodiversity	David Whitehead	Response-01051	The site is home to a badger sett, and mature hedgerows with a wide range of species supported. Bats also roost in the trees on the site of the proposed development.
1.10	North of West Hallam	Wildlife / Biodiversity	E bayley	Response-00080	Area of natural growth and animals
1.10	North of West Hallam	Wildlife / Biodiversity	Francesca Dean	Response-00220	Badgers, bats, sparrowhawks, rabbits & horses
1.10	North of West Hallam	Wildlife / Biodiversity	Gary Hamson	Response-00055	The field is under water for three months of the year and very possibly a site for newts
1.10	North of West Hallam	Wildlife / Biodiversity	Hannah	Response-00252	The area of beauty, there are brand new houses standing empty at bottom of station road been empty for 2 years plus! If you walk into Mapperley it is always full of wildlife walkers
1.10	North of West Hallam	Wildlife / Biodiversity	Helen Blackwell	Response-00457	This is a field used for horses. You can see where animals have made tracks. Building on greenfield sites will always have a negative impact on wildlife. It is only yesterday we found a dead owl near a building being extended on High Lane West. What other life will be lost?
1.10	North of West Hallam	Wildlife / Biodiversity	Helen Patenall	Response-00872	The proposed area for development is teeming with wildlife, it is currently a field covered in grass with horses grazing. Birds, insects and other wildlife will be lost by developing the area. I walk on a very regular basis past the proposed site and the area is constantly frequented by birds and where would the horses have to be moved to?
1.10	North of West Hallam	Wildlife / Biodiversity	Helen Stanley	Response-01558	This is part of the greenbelt and should not be built on. Loss of habitat in trees and hedgerows
1.10	North of West Hallam	Wildlife / Biodiversity	Jade Harland-Toomer	Response-00218	Lots of animals live in this land
1.10	North of West Hallam	Wildlife / Biodiversity	James Morris	Response-01061	Destroys the wildlife in that area
1.10	North of West Hallam	Wildlife / Biodiversity	Jane Garner	Response-01076	I walk in that area - I have seen Hares, birds and other wildlife on the field.
1.10	North of West Hallam	Wildlife / Biodiversity	Jayne Trueman	Response-00427	The proposed site is a habitat for a wide range of wildlife. Including bats, red kites, barn owls and hawks, frogs and newts. Those fields support these and creatures and the ones required in the food chain.
1.10	North of West Hallam	Wildlife / Biodiversity	Jessica Starling	Response-00259	Around West Hallam is a habitat for many wild species, with Derbyshire Wildlife Trust land in close proximity to the area.
1.10	North of West Hallam	Wildlife / Biodiversity	Joanne Vickerton	Response-00251	There is danger to wildlife
1.10	North of West Hallam	Wildlife / Biodiversity	Jonie Centro	Response-00729	building houses - reduces natural space
1.10	North of West Hallam	Wildlife / Biodiversity	Julie Harbon	Response-00026	Reduced air quality is detrimental in a rural area used for farming, camping and people out enjoying the area (it's a popular walking/running/horse riding route) Biodiversity is blooming around Mapperley with it backing on to the reservoir and Shipley Park and this would also be affected by air quality.
1.10	North of West Hallam	Wildlife / Biodiversity	Kath Crolla	Response-00070	Every effort should be made to care for the wildlife there.
1.10	North of West Hallam	Wildlife / Biodiversity	Kathryn McCartney	Response-01042	Bit by bit the surrounding pasture land is being eroded putting pressure on local wildlife, flora and fauna, development will destroy hedgerows and disrupt local wildlife pushing it into an ever decreasing environment with little chance of any wildlife highways and connectivity.
1.10	North of West Hallam	Wildlife / Biodiversity	kelly centro	Response-00203	This is a site with lots of wildlife and is yet another piece of green land to disappear
1.10	North of West Hallam	Wildlife / Biodiversity	Kerry Middleton	Response-00265	This would be detrimental to the wonderful wildlife within the vicinity.
			Kristen Hamilton	Response-00208	This will affect local wildlife
1.10	North of West Hallam	Wildlife / Biodiversity	Laura Slater	Response-01540	I am a nature photographer and I see so much wildlife around Park Hall Lane and also the walk through the fields. I have seen many badgers, rabbits and a lot of birds of prey. This area is so green and the wildlife is just stunning. This new build will obviously kill a lot of wildlife and destroy their habitat
1.10	North of West Hallam	Wildlife / Biodiversity	Lee Hunter	Response-00176	We have mice, bats, rabbits, owls, foxes and even ducks all visiting the field next to our family home

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.10	North of West Hallam	Wildlife / Biodiversity	Lewis Tyler	Response-01104	The land is green belt. Houses will be an eye sore
1.10	North of West Hallam	Wildlife / Biodiversity	Lyndsey Taylor	Response-00250	Losing wildlife in that area
1.10	North of West Hallam	Wildlife / Biodiversity	Marie cox	Response-00105	There is an active badger set on the site as well as the wildlife What will happen to the badgers I thought they were protected
1.10	North of West Hallam	Wildlife / Biodiversity	Mark	Response-00166	hedges trees and meadow destroyed = no wildlife Owls rabbits hares etc all gone. Can you live with that? do you want to ruin the world
1.10	North of West Hallam	Wildlife / Biodiversity	Matt Haddon	Response-00098	The proposed site is currently used for horses, and there is significant wildlife that is often seen in the field such as rabbits, birds, butterflies, bees, and also birds of prey can often be seen sitting on the fences at the proposed site. This would be decimated by building on the proposed new site.
1.10	North of West Hallam	Wildlife / Biodiversity	Melanie Johnson	Response-01134	I have lived here for 45 years these areas are essential for wildlife kid exploring dog walking the road is always congested and the area needs protection for social well-being
1.10	North of West Hallam	Wildlife / Biodiversity	Melanie Lawson	Response-00848	The area is a natural area and should be left like this. There are badgers in the land and it is my understanding that they are protected
			Mia Foulkes	Response-01072	We live close by and back on to the green belt land and the birds/wildlife are amazing! I worry this will disrupt them.
1.10	North of West Hallam	Wildlife / Biodiversity	Molly	Response-01071	Loss of fields and natural habitat for wildlife.
1.10	North of West Hallam	Wildlife / Biodiversity	Natalie Jones	Response-00249	Too much wildlife will be destroyed and displaced
1.10	North of West Hallam	Wildlife / Biodiversity	Natalie Payne	Response-01520	The building of new houses will surely affect the wildlife in the area . We are blessed to have a diverse amount of wildlife that habits this area
1.10	North of West Hallam	Wildlife / Biodiversity	Nick Craddock	Response-00144	Will take away wild habitats for flora and fauna. Wildlife will threatened as well.
1.10	North of West Hallam	Wildlife / Biodiversity	Nicola Elkington-Horridge	Response-00082	This is a beautiful dog walking and mush needed green space, it's full of birds bees and insects and just be left alone. The council could try planting wild flowers here to encourage wildlife instead!
			Nigel Wright	Response-00101	The field is home to rabbits, used by Woodpeckers, and migratory birds.
1.10	North of West Hallam	Wildlife / Biodiversity	Patrick Barber	Response-00279	The proposed site has a badger set in its vicinity and is used by badgers, plus a range of other protected species including buzzards, hares and stouts. The development will remove these species habitat. The proposed development site has a number of TPO's on it and a protected hedge would have to be destroyed to allow the entrance to the proposed development.
1.10	North of West Hallam	Wildlife / Biodiversity	Paula Piggott	Response-01044	You can't keep destroying the countryside destroying habitats, killing wildlife and it all not have a knock on effect. You are destroying the air we breathe. We need flowers, we need bees these things the world can't exist without. The wildlife will seriously be impacted. You will destroy the habitats of many animals needed for the world to survive. This is a small village. With lots of precious animals, insects, flowers, trees etc you will kill these insects and animals when you destroy their habitats thus destroying the air we breathe. There is a school and many bungalows with pensioners. It is an accident waiting to happen. Also dog walkers, horse riders and lots of wildlife. Seriously someone will get hurt or worse killed! It is a small village without the capacity for more houses. The roads are not built for so many extra residents. You will totally destroy the area and you will totally destroy the clean air killing lots of wildlife and their habitats in the process. Keep building over land will cause flooding and lead to drainage problems as natural soakaway will be destroyed.
1.10	North of West Hallam	Wildlife / Biodiversity	Pauline Lawson	Response-00314	Any loss of land to housing will adversely harm the wildlife. Hares rabbit and numerous birds can be found in this field. Insects pollinators will be affected which will give a knock on effect to any crops grown whether commercially or just in our garden's.
1.10	North of West Hallam	Wildlife / Biodiversity	Pauline Wood	Response-01099	I thought we were all supposed to be conserving nature
1.10	North of West Hallam	Wildlife / Biodiversity	Richard Elks	Response-01422	Both badgers and foxes are frequently seen on this proposed site.
1.10	North of West Hallam	Wildlife / Biodiversity	REDACTED	Response-00178	REDACTED
1.10	North of West Hallam	Wildlife / Biodiversity	Simon Reeve	Response-01059	The fields between High Lane, West Hallam and Shipley/Heanor Road, Ilkeston support a diverse population of wildlife with open fields, woodlands, marsh land, lakes and streams/rivers. Removing any part of this environment for housing should be banned on this basis alone, there be no home for nature and "not cutting the grass verges" (to save money) won't make a difference.
			Sophy Cunningham	Response-00211	We need to maintain the green areas we have around the village to protect the diverse wildlife we have in the area.
1.10	North of West Hallam	Wildlife / Biodiversity	Teresa Faulkner-Day	Response-00240	We all pay a lot of money in council tax and rent/the price of property to live in the countryside. The rural walks are fantastic for locals mental health. There is a wealth of nature/habitat for wildlife that will be completely destroyed and lost forever if the area is to be concreted over. Not to mention the risk of flooding.
1.10	North of West Hallam	Wildlife / Biodiversity	Thomas Edward Tyler	Response-01079	The area to the rear of our property currently supports any wildlife and biodiversity that can and should be allowed to flourish on what is after all designated as Green Belt. There are also horses on this and adjoining areas which would without doubt be displaced should the development proceed.
1.10	North of West Hallam	Wildlife / Biodiversity	Victoria Noble	Response-00107	West Hallam is a haven of wildlife
1.11	North of Borrowash	Air Quality	Anita Gorman	Response-01245	Pollution of all the extra cars
1.11	North of Borrowash	Air Quality	Ann Daykin	Response-01443	The increase in the number of cars will affect the air quality around this area.. This will cause more pollution
1.11	North of Borrowash	Air Quality	Ashley Stafford	Response-01135	More vehicles is always going to lower the air quality.
1.11	North of Borrowash	Air Quality	David Tyler	Response-00836	The proposed site is very close to the A52. Air and noise pollution must be an issue
1.11	North of Borrowash	Air Quality	Helen Shaw	Response-00521	The houses are going to be very close to the A52 so air quality will be poor!
1.11	North of Borrowash	Air Quality	Kirsty Murray	Response-01004	Houses this close to this road will be breathing horrible air
1.11	North of Borrowash	Air Quality	Laura Mellott-Batty	Response-00517	Increased car use due to unnecessary housing will impact air quality
1.11	North of Borrowash	Air Quality	Mr Paul Rigby	Response-00880	With all the extra traffic from this site and the other site at the other end of the village the carbon emissions will be much increased and a danger to the environment and those who suffer with asthma
			Mrs Sheila Hardington	Response-01233	The Air Quality for people in the proposed new houses will be poor with being so close to the busy A52.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.11	North of Borrowash	Air Quality	Mr Timothy Shepherd	Response-01336	Air quality so close to the A52 will not be good for the new residents.
1.11	North of Borrowash	Air Quality	PETER HINKLEY	Response-00776	Borrowash has the A52 Corridor running parallel to the A6005, the rat runs in all directions it seems to me. We need the greenbelt more than ever.
1.11	North of Borrowash	Air Quality	Phil self	Response-00758	These houses will be next to the A52 where noise and pollution will be a major factor
1.11	North of Borrowash	Air Quality	Susan Johnstone	Response-00174	Building on this land will affect the air quality of the residents of the neighbouring houses. 1. From contaminates in the land itself. 2. From the dust that the building work will create. 3. From the increased emissions from the increased traffic.
1.11	North of Borrowash	Air Quality	Tanya caldbeck	Response-00918	More traffic and household fumes
1.11	North of Borrowash	Bus Services	Ashley Stafford	Response-01135	Again, capacity will be stretch. More buses will be needed, again creating more traffic
1.11	North of Borrowash	Bus Services	Mr Paul Rigby	Response-00880	All these extra houses from both proposed sites in the village will put pressure on our limited bus service
1.11	North of Borrowash	Bus Services	Mr Timothy Shepherd	Response-01336	These houses will be a long walk away from local bus services.
1.11	North of Borrowash	Bus Services	Sarah Cresswell	Response-01208	The i4 which stops at the bottom of Cole Lane has a 20 mins service to Derby & Nottingham. The local 9a service between Borrowash and Derby stops on Priorway Avenue close to the footpath running through the proposed site.
1.11	North of Borrowash	Flooding / Drainage	Ann Daykin	Response-01443	The development would put extra pressure on the drainage of this area. At the moment the Ock brook does flood areas of Borrowash and this development will just add even more pressure to a system that's already struggling.
1.11	North of Borrowash	Flooding / Drainage	Chris Archer	Response-01141	This area of Borrowash has historically had issues with flooding and water drain off, by removing this green land it will only contribute to worsen the issue
1.11	North of Borrowash	Flooding / Drainage	David Tyler	Response-00836	This land provides drainage for the A52, as does the adjoining lands
1.11	North of Borrowash	Flooding / Drainage	Denis Woodcock	Response-00930	Flooding will increase, Borrowash has problems now it will not cope with the extra capacity,
1.11	North of Borrowash	Flooding / Drainage	Geoff Whittaker	Response-01806	There appears to be no mention of surface water attenuation for these sites. The will contribute to the flow going into the Derwent which already floods several times a year. They will add to the flow initially in the two brooks. The Ockbrook already is close to causing flooding to properties lower down its cause and has flooded housing on Kimberley Drive once the past years. the other brook also appears in a poor state of repair and lacks maintenance.
1.11	North of Borrowash	Flooding / Drainage	Helen Shaw	Response-00521	The A52 gets a lot of surface water from the nearby fields especially on the other side going towards Nottingham. Many cars get caught out and aqua plane with many a nasty accident (landing in the boundary hedges). So if houses are built the water will have to go somewhere and that somewhere will be the road surface which will result in more accidents as motorists don't slow down in bad conditions.
1.11	North of Borrowash	Flooding / Drainage	Ian Frearson	Response-00719	Any development of this nature should have a restricted drainage run off based on a maximum impermeability factor of 0.5% of the development area to take into account dramatic change in uses and the capacity of downstream sites. it is considered that this would be very difficult to achieve so render the development proposal unviable. Discharges from this site would put additional pressure on the already stretched land bordering the current main river site of the Ock Brook. Current flooding events from the Ock already threaten existing residential homes in the area.
1.11	North of Borrowash	Flooding / Drainage	Kirsty murray	Response-01004	Where do you think all the water will go when this country is just houses and concrete, stop building and allow natural drainage
1.11	North of Borrowash	Flooding / Drainage	Laura Mellott-Batty	Response-00517	Houses will impact drainage currently completed by field
1.11	North of Borrowash	Flooding / Drainage	Maria Fowkes	Response-00455	I'm deeply concerned about flooding in the village. In recent years we have seen flooding in areas never seen before. There needs to be areas of green to allow drainage of elrain water. Concreting over this area could lead to further flooding on the roads and housing.
1.11	North of Borrowash	Flooding / Drainage	PETER HINKLEY	Response-00776	This area is liable to flooding and I have seen plenty of water running on to the A6005
1.11	North of Borrowash	Flooding / Drainage	Phil self	Response-00758	The brook nearly flooded a few years ago when the torrential rains came and building more houses will not help the situation when this happens again
1.11	North of Borrowash	Flooding / Drainage	Sarah Davies	Response-01136	Flooding is a big problem in the area, damage to properties every year due to bad drainage, poor upkeep of drains and sewer system.
1.11	North of Borrowash	Flooding / Drainage	Sheralyn Pattison	Response-01250	There are already flooding and drainage issues in the lower parts of the village, this will only increase
1.11	North of Borrowash	Flooding / Drainage	Tanya caldbeck	Response-00918	Estates already flooding due to drainage issues
1.11	North of Borrowash	Green Belt	Anita Gorman	Response-01245	All green belt will be decimated and wildlife on the decline
1.11	North of Borrowash	Green Belt	Ann Daykin	Response-01443	Borrowash and Ockbrook have always had areas of green around the village which has provided the residents with areas of green belt and has helped with the mental wellbeing of the residents. The pressure of more housing will add extra stress to the locals who live on the current housing estate, which will be closest to the development. This development will be detrimental to the mental health and wellbeing of the current residents who are a low socioeconomic group.
1.11	North of Borrowash	Green Belt	Ashley Stafford	Response-01135	We must protect the green belt. Far too often this land is being given up for housing.
1.11	North of Borrowash	Green Belt	Helen Shaw	Response-00521	Green belt should never be built on when there are plenty of brown field sites which could be used instead. Once it's gone it's gone forever!
1.11	North of Borrowash	Green Belt	Ian Frearson	Response-00719	This proposal would naturally affect the local and surrounding Green Belt and potentially affect any Red Book species present

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.11	North of Borrowash	Green Belt	John Malcolm Kerr	Response-00254	I am Hon Sec of Erewash Valley Model Engineering Society. On behalf of the Society I am registering our opposition to the re-designation of our site, immediately to the west of the Ockbrook, as "safeguarded" land, liable for use as building land in the future. Our facilities have been developed over decades of membership participation and to have that hard work and dedication destroyed would be heartbreaking to many of our members. To have to re-locate, if any suitable land was available and not already designated for development, and start again from scratch would be an enormous task. Our membership profile is mature in age and the physical work on re-erecting our existing on-site facilities would be beyond our limited capabilities. What is the point of evicting existing occupants (and this also applies to the tenants of the allotments next to our site) and building over already developed and fully utilised land when other sites with only grazing animals are available? If any of the land between the Ockbrook and Victoria Avenue was only grassland or brownfield then you might have a better argument for re-designation but the current proposal doesn't take into consideration the already highly developed nature of this area. Are you fully aware of the nature of the facilities already extant on this site? If you need any further information about our activities and facilities we would welcome you to visit the site so you would get a full appreciation of the Society and its membership profile.
1.11	North of Borrowash	Green Belt	Kirsty murray	Response-01004	We can't keep building on green spaces it is not sustainable
1.11	North of Borrowash	Green Belt	Laura Mellott-Batty	Response-00517	Building on green belt land- unnecessary
1.11	North of Borrowash	Green Belt	Lesley Eccles	Response-00812	Should not be built on green belt
1.11	North of Borrowash	Green Belt	Lynda Gamble	Response-00909	When Green Belt land is gone then that's it forever. There are so many empty houses and disused buildings around the local areas that it would make far more sense to renovate those first. Recycling and reusing what is currently available extends to everything, not just household waste!
1.11	North of Borrowash	Green Belt	Marcus Smith	Response-00310	Green belt already been build on adjacent by redefining farmland grey belt
1.11	North of Borrowash	Green Belt	Margaret Irene Wheatley	Response-00913	It is worrying that these developments will have an impact on the Green Belt which is important on safe guarding communities.
1.11	North of Borrowash	Green Belt	Mr Timothy Shepherd	Response-01336	Green Belt land should be protected and preserve. Brown Belt land should always be used in preference wherever it is available.
1.11	North of Borrowash	Green Belt	Peter John Ball	Response-00704	The site is an important separation between Borrowash and Ockbrook. The western end of the site is currently allotment gardens which are in short supply in the Parish of Ockbrook and Borrowash. The Parish Council has always a waiting list for allotments in the village and while this land is owned by the church the gardens provide an important addition to the availability of allotment land in the Parish.
1.11	North of Borrowash	Green Belt	Robert Mee	Response-01788	My main reason for objecting to these developments is that I do not believe that the criteria set out in the NPPF has been met justifying any encroachment into the Green Belt at this time. The Core Strategy and this Amendment are developed in order to meet the housing targets allocated to the council by central government. I do not believe that the number of houses required by government constitutes, in itself, the 'exceptional circumstances' which are required under the Framework. This is particularly so in view of there being no published objective basis for the numbers allocated to each authority. The term 'exceptional circumstances' does include 'instances where an authority cannot meet its identified need for homes'. The waiting list for social housing in the general area might suggest that this is the case, but I do not accept that these plans will go far to address this issue. The vast majority of the planned housing allocations are not even for affordable housing, let alone social housing. Additionally, I do not remember seeing evidence that Erewash has specifically quantified local (i.e. Erewash) housing needs. I also do not believe that much, if any, of the Green Belt selected for development would fit the definition of 'Grey Belt'. As a concept, I can support the idea of Grey Belt as originally reported, i.e. pieces of land within the Green Belt which have previously been developed. Indeed, I can think of a few locally, though they are all fairly small. I find the arguments that I have heard over distances between the edge of Derby and the edge of other towns, and how these distances will still be maintained, extremely spurious. The Green Belt in its entirety exists to prevent Nottingham and Derby from merging. While building on any of these sites does not immediately make the two cities any closer to each other, it does reduce the green space between the two cities, which is precisely what the Green Belt was established to prevent. The Green Belt is a regional initiative, covering two counties and several local authorities. With Erewash having such a high proportion of its land earmarked as Green Belt it is incumbent on the region as a whole to find a solution to the housing shortage, rather than to expect our authority to have to sacrifice its green spaces.
1.11	North of Borrowash	Green Belt	Susan Johnstone	Response-00174	Every piece of green land is important for our wildlife and biodiversity, not to mention our mental health. Build houses on brown land and protect the beautiful green spaces for the wildlife that enriches our lives.
1.11	North of Borrowash	Green Belt	Tanya caldbeck	Response-00918	Should not build on greenbelt and change policy to suit yourselves
1.11	North of Borrowash	Healthcare Facilities	Anita Gorman	Response-01245	Can not see a doctor easily now. Even with the promise of extra surgeries where will the GP's come from
1.11	North of Borrowash	Healthcare Facilities	Ann Daykin	Response-01443	Borrowash has two doctor surgeries and one dentist. All these facilities are oversubscribed and could not support the extra residents that this development would bring.
1.11	North of Borrowash	Healthcare Facilities	Ashley Stafford	Response-01135	I personally have to visit a Drs outside of our parish to get an appointment already. I also have to go to a private dentist on the other side of Derby because of the same reason.
1.11	North of Borrowash	Healthcare Facilities	Catherine Fox Charlton	Response-00658	Borrowash has difficulty servicing medical appointments for current residents and the one pharmacy has very little stock available.
1.11	North of Borrowash	Healthcare Facilities	Denis Woodcock	Response-00930	Our healthcare facilities are poor now additional capacity is the last thing we need.
1.11	North of Borrowash	Healthcare Facilities	Helen Shaw	Response-00521	Building more houses without the infrastructure such as doctors and dentists is madness!
1.11	North of Borrowash	Healthcare Facilities	Ian Frearson	Response-00719	This proposal would put increased pressure on the already stretched facilities available.
1.11	North of Borrowash	Healthcare Facilities	Joanne briggs	Response-01251	It's almost impossible to get a doctor's appointment now without having another 120 plus people!
1.11	North of Borrowash	Healthcare Facilities	Joy Cordwell	Response-01292	Both surgeries are oversubscribed and exhausted resources. We cannot cater for more houses! It is already near impossible to get a doctor appointment

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.11	North of Borrowwash	Healthcare Facilities	Kirsty murray	Response-01004	It's already impossible to get an appointment at the doctors already
1.11	North of Borrowwash	Healthcare Facilities	Laura Mellott-Batty	Response-00517	Healthcare facilities already under massive strain, impossible to get GP appointment as it is. Where is the proposal for increasing support services
1.11	North of Borrowwash	Healthcare Facilities	Lesley Eccles	Response-00812	Doctors full to capacity Already severe problems getting appointments This will certainly add to the problems
1.11	North of Borrowwash	Healthcare Facilities	Margaret Irene Wheatley	Response-00913	Both of the Doctors' Surgeries appear to not have any spare capacity at the moment, based on the difficulty in getting an appointment
1.11	North of Borrowwash	Healthcare Facilities	Mr Paul Rigby	Response-00880	Our GP? s are already overloaded and difficult to get appointments. Extra patients will not help
1.11	North of Borrowwash	Healthcare Facilities	Mrs Sheila Hardington	Response-01233	Extra patients for what seems to already be an overloaded system.
1.11	North of Borrowwash	Healthcare Facilities	Mr Timothy Shepherd	Response-01336	Local doctors and dentists are already under strain and would be unable to cope with additional patients.
1.11	North of Borrowwash	Healthcare Facilities	Mr W Barton	Response-00892	The proposal would put a significant strain on our existing Health care facilities which are already over stretched.
1.11	North of Borrowwash	Healthcare Facilities	Pamela Bloor	Response-00777	It is already difficult to get appointments at the local doctors surgeries , the influx of more households would exuberate this
1.11	North of Borrowwash	Healthcare Facilities	PETER HINKLEY	Response-00776	Existing GP Services will come under additional strain I assume - I do not have any numbers.
1.11	North of Borrowwash	Healthcare Facilities	Peter Howell	Response-00830	no new doctors surgery
1.11	North of Borrowwash	Healthcare Facilities	Phil self	Response-00758	Doctors and dentist will be over run as in many other areas ruining it for future generations
1.11	North of Borrowwash	Healthcare Facilities	Sarah Davies	Response-01136	I understand demand for the NHS and services are high everywhere but it?s almost impossible to gain an appointment at the local surgeries. This would be unimaginable if we then had hundreds more new patients. The local pharmacy will also be impacted yes, at present there?s normally a 20/30 minute wait for a prescription, often the stock isn?t available due to demand so a wait of a day or two is often expected. No room in the dentist for NHS patients, this has been the case for years.
1.11	North of Borrowwash	Healthcare Facilities	Sheralyn Pattison	Response-01250	It is already a nightmare getting appointments at both surgeries - any increase in houses will put even more pressure on to services
1.11	North of Borrowwash	Healthcare Facilities	Susan Johnstone	Response-00174	We already struggle to get Doctors appointments in Borrowwash, I have had to wait 2 weeks for my appointment, the surgery?s can?t cope with an influx of new patients. The NHS dentist in the village retires in June and they don?t have a replacement yet, they are at full capacity for NHS patients.
			Tanya caldbeck	Response-00918	No GP place - under pressure
1.11	North of Borrowwash	Landscape	Ashley Stafford	Response-01135	When housing is built it undoubtedly has an impact on the landscape. We need to keep large green spaces.
1.11	North of Borrowwash	Landscape	Mr Timothy Shepherd	Response-01336	The open landscape should be preserved wherever possible for the health of all residents.
1.11	North of Borrowwash	Landscape	Sarah Davies	Response-01136	It will change the make up of the village, it will no longer be a village, it will combine spondon with Borrowwash
1.11	North of Borrowwash	Landscape	Susan Johnstone	Response-00174	This isn?t a muddy brown field, it?s a beautiful green, full of life field that enriches the lives of local residents.
1.11	North of Borrowwash	Number of Houses	Ashley Stafford	Response-01135	Too many house in one small area
1.11	North of Borrowwash	Number of Houses	Denis Woodcock	Response-00930	Borrowwash has a good amount of green spaces, when these are gone they?re gone forever. Our open spaces should be protected for everyone to benefit. Borrowwash will loose one of its main assets and become another urban sprawl.
1.11	North of Borrowwash	Number of Houses	Kirsty murray	Response-01004	Too many
1.11	North of Borrowwash	Number of Houses	Mark Burrow	Response-00656	Too many houses to a nice quiet village. Strongly disagree with this project.
1.11	North of Borrowwash	Number of Houses	Mr Paul Rigby	Response-00880	A lot of houses proposed for a small area
1.11	North of Borrowwash	Number of Houses	Mr Timothy Shepherd	Response-01336	The capacity and capability of the local schools, doctors and dentists should be used as a limit with regard to building additional housing. Too many new houses will be detrimental to all residents.
1.11	North of Borrowwash	Number of Houses	Phil self	Response-00758	Why cram so many houses in to a relatively small area, makes no sense
1.11	North of Borrowwash	Number of Houses	Susan Johnstone	Response-00174	60 new houses is too many and it won?t stop there as the rest of the field is safe guarded for further development, it will end up with hundreds of houses, Borrowwash is a village that?s being turned into a town but without the infrastructure.
1.11	North of Borrowwash	Other	David Tyler	Response-00836	The council should be looking at all the empty properties across Erewash borough and bring them back into occupancy. Possibly look at council/housing association properties with 2 or more bedrooms with a single person living there and offer an alternative 1 bedroom property to free up a larger property. Offer some kind of incentive, lower rent or something.
1.11	North of Borrowwash	Other	Denis Woodcock	Response-00930	Over the years there has been too much infilling and it seems to be a policy to keep on doing this. People need space, cramming houses in any space will always be counterproductive. Have you not learned from previous mistakes. The character of our village destroyed.
1.11	North of Borrowwash	Other	Gary Mortimer	Response-01147	The quality of life for inhabitants of this development will be very poor as the houses are immediately adjacent to the A52 dual carriageway
1.11	North of Borrowwash	Other	Iain Pendry	Response-01185	I am in favour of these proposals. Borrowwash and Ockbrook desperately need additional housing stock to enable young people and young families to be able to afford their first homes. I hope that the council find some way to; a. Ensure that a substantial number of houses are deemed affordable, smaller homes in order to address this need, and that b. Some kind of provision is made that housing is preferentially offered to local people.
1.11	North of Borrowwash	Other	Margaret Irene Wheatley	Response-00913	This area is already going to be affected by the current National Grid Upgrade without having the effects of development to contend with.
1.11	North of Borrowwash	Other	Peter John Ball	Response-00704	The western end of the site is currently allotment gardens which are in short supply in the Parish of Ockbrook and Borrowwash. The Parish Council has always a waiting list for allotments in the village and while this land is owned by the church the gardens provide an important addition to the availability of allotment land in the Parish.
1.11	North of Borrowwash	Other	Philip Archer	Response-01391	Whilst I?m not in favour of building in the green belt, if it is accepted that housing needs to be provided somewhere then this seems logical infilling.
		Road Safety	Anita Gorman	Response-01245	Speed is 40 miles per hour, incline and bend to the road is not good access

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.11	North of Borrowash	Road Safety	Ann Daykin	Response-01443	The proposed development will affect the roads around the site. Those roads are important routes, especially the A52, Cole Lane and Nottingham Road, Borrowash. The concern is that the increased traffic will cause safety issues through the increase in the number of cars pulling onto/off these major routes through Borrowash.
1.11	North of Borrowash	Road Safety	Ashley Stafford	Response-01135	The increased amount of vehicles undoubtedly raises the local risk of serious accidents. Especially when entering the A52 or heading towards Elvaston castle via station road. Station road is highly congested at times already and I have witnessed multiple RTCs in the area with the current capacity.
1.11	North of Borrowash	Road Safety	David Tyler	Response-00836	Is the access off Cole lane ? If so it will be very close to the A52 Junction
1.11	North of Borrowash	Road Safety	Geoff Whittaker	Response-01806	There is talk about the need for suitable and safe routes for pedestrians and cyclists, but no account is taken about the amount of work that will be needed to meet this requirement or the significant costs this will incur. This could involve work by Derby City Council on its network.
1.11	North of Borrowash	Road Safety	Helen Shaw	Response-00521	The actual junction off the A52 is a nightmare. Even though you indicate to say you're pulling off cars behind you don't slow down which in turn if there are cars wanting to turn right into the new houses (when built) could mean accidents as you're having to maintain your fast speed to get off the A52 so no one runs into the back of you. If there is a vehicle waiting it's going to be very dangerous. Likewise joining the A52 from Cole Lane is also dangerous and the more cars the more people will pull out when not safe to do so resulting in more accidents. It is an accident black spot! The entrance is also too close to the footbridge and the A52.
1.11	North of Borrowash	Road Safety	Ian Frearson	Response-00719	previous comments on the safety of the unacceptable proposal should be noted and repeated here.
1.11	North of Borrowash	Road Safety	Joy Cordwell	Response-01292	Cole Lane already has its share of boy racers, which the police do nothing about. No more traffic!
1.11	North of Borrowash	Road Safety	Kirsty murray	Response-01004	This junction with the A52, will become very dangerous, you have to leave the A52 at some speed due to the very short run off at the exit, having a junction to a housing estate so close will cause problems
1.11	North of Borrowash	Road Safety	Laura Mellott-Batty	Response-00517	Increased traffic on the road will impact road safety
1.11	North of Borrowash	Road Safety	Margaret Irene Wheatley	Response-00913	I am concerned about the close proximity of the vehicular access so close to the A52. Access onto the A52 at present is extremely difficult with vehicles having to rely on vehicles travelling along the A52 moving into the outside lane; such cooperation is often lacking during busy periods.
1.11	North of Borrowash	Road Safety	Maria Fowkes	Response-00455	There has been several accidents and many more near misses in this area due to the slip road not being adequate to build up speed. There's also a lot of congestion around work and school travel times
1.11	North of Borrowash	Road Safety	Mr Paul Rigby	Response-00880	Extra traffic from this site and the one at the other end of the village gives an increased risk of accidents and danger to people crossing the road
1.11	North of Borrowash	Road Safety	Mr Timothy Shepherd	Response-01336	The A52 junction is already hazardous, additional traffic here will only increase the accident risk. The addition of another junction close to the A52 will exacerbate the problem further. Consideration should also be given to the number of small children living close to the A52.
1.11	North of Borrowash	Road Safety	Mr W Barton	Response-00892	The junction onto the A52 at Cole Lane has very limited slipways which causes inadequate time to accelerate into the fast moving traffic. The proposal of 60 houses would increase the traffic using this junction adding to the danger of collisions. In the past a number of pedestrians have been killed. For this reason the pedestrian bridge was built. This junction needs to be closed or considerably improved before allowing any more development.
1.11	North of Borrowash	Road Safety	PETER HINKLEY	Response-00776	An already busy road between Risley and Borrowash and from Spondon and A52 bypass, increased traffic will increase risk to road safety
1.11	North of Borrowash	Road Safety	Sarah Cresswell	Response-01208	The proposed site is adjacent to the junction with the A52 westbound and within a very short distance of the main exit for Borrowash and Ockbrook. In addition to these two junctions, there is also a vehicle entrance to an allotment site, just a few metres before the main exit point. In recent years there have been a high number of road traffic accidents around both these junctions and the two on the northbound carriageway. An extension to the 50mph speed restriction between Derby and Spondon, to cover all four junctions for Borrowash and Ockbrook would achieve the following: 1. reduce the number of accidents at these pinch points 2. make it safer and easier for vehicles accessing the proposed site from the A52 eastbound 3. reduce due noise pollution for residents.
1.11	North of Borrowash	Road Safety	Susan Johnstone	Response-00174	The access to this site is dangerously close to the A52 junction. This is a notoriously dangerous junction that has seen numerous accidents over the years, including cars crashing into the barrier by the foot bridge. This cannot be deemed safe for approximately 120 cars turning in and out of a new access so close to that junction.
		School Capacity	Anita Gorman	Response-01245	Traffic to schools and be horrendous. School capacity
1.11	North of Borrowash	School Capacity	Ashley Stafford	Response-01135	The local schools are already working capacity if not already above capacity
1.11	North of Borrowash	School Capacity	Ben Foster	Response-00837	Under subscribed at Ashbrook
1.11	North of Borrowash	School Capacity	Catherine Fox Charlton	Response-00658	I am concerned about the spaces available within schools and nursery places.
1.11	North of Borrowash	School Capacity	Ian Frearson	Response-00719	This proposal will put more pressure on the already overcapacity schools available.
1.11	North of Borrowash	School Capacity	Joy Cordwell	Response-01292	There are no places at the local school
1.11	North of Borrowash	School Capacity	Laura Mellott-Batty	Response-00517	Both local schools at capacity and which secondary school will these feed into as also at capacity
1.11	North of Borrowash	School Capacity	Lesley Eccles	Response-00812	Schools already quite full Any more children may have to travel out of village
1.11	North of Borrowash	School Capacity	Molly Pettitt	Response-00721	Schools are already struggling
1.11	North of Borrowash	School Capacity	Mr Paul Rigby	Response-00880	We only have one school where are all these extra children supposed to go
1.11	North of Borrowash	School Capacity	Mr Timothy Shepherd	Response-01336	Additional funding will be required for the building of new classrooms and staff for the new children.
1.11	North of Borrowash	School Capacity	PETER HINKLEY	Response-00776	Sandicare and Spondon schools in addition to the local primary school do not have capacity for ever more students from increased housing.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.11	North of Borrowwash	School Capacity	Peter Howell	Response-00830	no new school in the programme.
1.11	North of Borrowwash	School Capacity	Sarah Cresswell	Response-01208	Ashbrook Nursery, Infant & Junior Schools have capacity according to recent data and both can be accessed safely via the footpath linking the proposed site to Priorway Avenue. Redhill School can be reached via the accessible footbridge crossing the A52 adjacent to the site.
1.11	North of Borrowwash	School Capacity	Sarah Davies	Response-01136	The local schools are already at capacity, a new primary school would be required to facilitate the extra potential new residents.
1.11	North of Borrowwash	School Capacity	Tanya caldbeck	Response-00918	No school capacity
1.11	North of Borrowwash	Traffic Congestion	Anita Gorman	Response-01245	Roads will be congested with the amount of traffic through the village of Borrowwash
1.11	North of Borrowwash	Traffic Congestion	Ann Daykin	Response-01443	The proposed site will have to have access to Cole Lane which is a busy route, especially in the mornings where cars pull onto the A52. The prospect of more cars trying to pull onto Cole Lane in the mornings/evenings will cause a lot of traffic issues and potential problems for existing car users. Also the cars will have to cross the pavement and that could affect the pedestrians especially children that walk to school in Ockbrook..
			Ashley Cartlidge	Response-01414	There is already times when congestion hinders movement around the area.
1.11	North of Borrowwash	Traffic Congestion	Ashley Stafford	Response-01135	It's hard enough entering the A52 during rush hour, another few hundred vehicles will make this even harder.
1.11	North of Borrowwash	Traffic Congestion	David Tyler	Response-00836	How is going to be safe to access the site so close to the A52 junction
1.11	North of Borrowwash	Traffic Congestion	Denis Woodcock	Response-00930	Infilling will only compound the issues of parking. People are parking on pavements more and more. Extra traffic at peak times around Victoria road, Nottingham road and Station road will make life unbearable for residence.
1.11	North of Borrowwash	Traffic Congestion	Geoff Whittaker	Response-01806	There is talk about the need for work to adjacent junctions but this is not detailed and what the costs will be. There is talk about a new junction on the A6005 but no costs are given. It would be reckless to not consider the overall costs within the proposals.
1.11	North of Borrowwash	Traffic Congestion	Helen Shaw	Response-00521	There is already an influx of cars cutting up Cole Lane meaning queues on to the A52. It is also a dangerous junction - getting on and getting off. There has been many accidents at this junction.
1.11	North of Borrowwash	Traffic Congestion	Iain Pendry	Response-01185	Don't believe this will be a significant issue
1.11	North of Borrowwash	Traffic Congestion	Ian Frearson	Response-00719	This proposal would generate an unacceptable volume of traffic from and to the adjacent Arterial route A52 (T) as well as the unacceptable and unsafe below current standard for the proposed access into the site that would itself contravene current site development requirements. The numbers of dwellings of around 60 will generate some 100 vehicles from new residents making the access and egress on and off the A52 an unacceptable risk.
1.11	North of Borrowwash	Traffic Congestion	Joy Cordwell	Response-01292	With one entry/exit, Cole Lane (already very busy) will be unrecognisable. This beautiful and historic lane cannot withstand more traffic
1.11	North of Borrowwash	Traffic Congestion	Kirsty murray	Response-01004	The junction there joining the A52 will become very congested.
1.11	North of Borrowwash	Traffic Congestion	Laura Mellott-Batty	Response-00517	Heavy traffic use already on this road. This will add to it unnecessarily
1.11	North of Borrowwash	Traffic Congestion	Lesley Eccles	Response-00812	Won't be able to get out of site directly so will impact in increase of traffic in borrowwash
1.11	North of Borrowwash	Traffic Congestion	Marcus Smith	Response-00310	Spondon already in gridlock and new proposed developments elsewhere to this will make it worse
1.11	North of Borrowwash	Traffic Congestion	Mark Burrow	Response-00656	Will add too much congestion to those small village.
1.11	North of Borrowwash	Traffic Congestion	Mr Paul Rigby	Response-00880	Borrowwash is a busy traffic area already and with the proposed building of 280 houses at the other end of the village the traffic will be unbearable
1.11	North of Borrowwash	Traffic Congestion	Mrs Sheila Hardington	Response-01233	There will be queuing traffic on Cole Lane for entry onto the A52, particularly during the rush hour.
1.11	North of Borrowwash	Traffic Congestion	Mr Timothy Shepherd	Response-01336	The Cole Lane/ A52 junction is already hazardous. Additional traffic here will increase the accident risk significantly.
1.11	North of Borrowwash	Traffic Congestion	PETER HINKLEY	Response-00776	Increased traffic flows right in the heart of Borrowwash at crossroads of Station Road, A6005 and Victoria Ave and pelican controlled traffic lights and ensuing traffic congestion. That's right now and not if additional housing to the North side of Borrowwash not a 1/2 mile from this busy junction.
1.11	North of Borrowwash	Traffic Congestion	Sarah Davies	Response-01136	Parking is already a problem in the village, there are not enough spaces in the main carpark for the local shops that surrounding streets are then used as in overflow which then impacts local residents who have limited parking on the road. The public are already using creative parking to find spaces putting pedestrians in danger.
1.11	North of Borrowwash	Traffic Congestion	Sheralyn Pattison	Response-01250	There is already a lot of traffic on Cole Lane and off the A52. It is a hazardous junction already - an increase in traffic will cause an accident
1.11	North of Borrowwash	Traffic Congestion	sophy peacock	Response-00677	Borrowwash can't handle more traffic
1.11	North of Borrowwash	Traffic Congestion	Susan Johnstone	Response-00174	60 houses means approximately another 120 cars using roads that already aren't fit for purpose, full of potholes, plus, the heavy plant traffic that will be coming in and out of the village will wreck the roads even more.
1.11	North of Borrowwash	Traffic Congestion	Tanya caldbeck	Response-00918	Too much traffic around the area already.
1.11	North of Borrowwash	Type of Housing	Ashley Stafford	Response-01135	Borrowwash is lucky enough to being my traditional style housing with with generous gardens. The new builds are built on such a way that triple the amount of housing is built on the same sized land. The housing should be in keeping with the area.
1.11	North of Borrowwash	Type of Housing	Iain Pendry	Response-01185	The area is in desperate need of affordable housing and hence this proposal must require the developer to make provision for substantial numbers of affordable houses / starter homes
1.11	North of Borrowwash	Type of Housing	Ian Frearson	Response-00719	This should not need consideration since the entire proposal should not be considered further.
1.11	North of Borrowwash	Type of Housing	Joy Cordwell	Response-01292	New homes will ruin the unique character of Cole Lane
1.11	North of Borrowwash	Type of Housing	Kirsty murray	Response-01004	I do t think more social housing is needed, if anything we need larger homes for families to grow into the village, moving out of the terraced houses into 3 and 4 bed homes, freeing up terraces for younger people
1.11	North of Borrowwash	Wildlife / Biodiversity	Mr Timothy Shepherd	Response-01336	Small affordable houses are required. Building larger houses will not solve the housing problem.
1.11	North of Borrowwash	Wildlife / Biodiversity	Anita Gorman	Response-01245	Where will our wildlife go , all our green space will be decimated

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.11	North of Borrowwash	Wildlife / Biodiversity	Ann Daykin	Response-01443	The proposed development is to be built on fields surrounded by hedges, with the Ockbrook flowing on the Western side. The area is varied and supports wildlife, the hedges are extremely important for biodiversity.
1.11	North of Borrowwash	Wildlife / Biodiversity	Ashley Cartlidge	Response-01414	Our native wildlife is under threat and are being squeezed in terms of habitat, once it's gone it will not be able to bring it back.
1.11	North of Borrowwash	Wildlife / Biodiversity	Ashley Stafford	Response-01135	Remove trees, grass, hedges it will push our wildlife away. Borrowwash is lucky to have the diversity of wildlife it has, especially the native song birds.
1.11	North of Borrowwash	Wildlife / Biodiversity	Gary Mortimer	Response-01147	The area is full of wildlife which would be negatively impacted by this development
1.11	North of Borrowwash	Wildlife / Biodiversity	Helen Shaw	Response-00521	Erewash are losing too much green spaces which has a knock on effect to the wildlife. My children and my now grandchildren loved/love to look for the horses in the field when we walk over the bridge. It will be a shame to build houses on the field.
1.11	North of Borrowwash	Wildlife / Biodiversity	Iain Pendry	Response-01185	Given this area is directly adjacent to the A52 only concern would be management of noise and air pollution for those living in the site
1.11	North of Borrowwash	Wildlife / Biodiversity	Ian Frearson	Response-00719	a diminution of the available space for use for biodiversity will be reduced by the whole development area and as such will threaten the viability of red book species.
1.11	North of Borrowwash	Wildlife / Biodiversity	Kirsty murray	Response-01004	Losing any greenspace to housing is of detriment to wildlife.
1.11	North of Borrowwash	Wildlife / Biodiversity	Laura Mellott-Batty	Response-00517	Unnecessary destruction of wildlife
1.11	North of Borrowwash	Wildlife / Biodiversity	Lesley Eccles	Response-00812	Will impact on this
1.11	North of Borrowwash	Wildlife / Biodiversity	Lynda Gamble	Response-00909	Where will the wildlife go when everywhere is completely built up? How will future generations ever learn about nature and biodiversity?
1.11	North of Borrowwash	Wildlife / Biodiversity	Margaret Irene Wheatley	Response-00913	This should be protected at all costs. Any losses should be kept to a minimum. Presumably Biodiversity Net Gain applies to these proposed developments and should be implemented in our areas. Points should not be bought to mitigate these responsibilities.
1.11	North of Borrowwash	Wildlife / Biodiversity	Susan Johnstone	Response-00174	We are all being told to protect our wildlife and bird species. This is a beautiful green field, full of wildlife, foxes, squirrels, hedgehogs, not to mention the plethora of wild birds, Buzzards, Kestrels, Sparrowhawks, Pheasants, Bullfinches, Jays, Green Woodpeckers, I could go on, this is a bird watchers paradise and a haven for pollinators when the buttercups are out. This is a field full of wildlife !! Please leave it that way.
1.11	North of Borrowwash	Wildlife / Biodiversity	Tanya caldbeck	Response-00918	Destroying greenbelt land and nature
1.12	West of Borrowwash	Air Quality	Adele Pinkney	Response-01456	The number of vehicles in Borrowwash centre already has a detrimental effect on air quality, especially as traffic backs up Victoria Avenue waiting to turn onto Derby/Nottingham Road. Additional traffic coming in to and through the village at peak times from a new, large housing development will add to these emissions and cause further decrease in air quality.
1.12	West of Borrowwash	Air Quality	Alice Fitzpatrick	Response-00543	The pre-mentioned traffic congestion is ultimately going to cause a serious reduction of the already poor air quality. It will be like living in a city which, if this development proceeds is exactly what we shall be. This is supposed to be a rural area but it is becoming increasingly urban!
1.12	West of Borrowwash	Air Quality	Ann Daykin	Response-01453	The sheer volume of new cars on the roads of Borrowwash and Ockbrook, following on from the proposed development being established, would have a detrimental affect on the air quality of the area.
1.12	West of Borrowwash	Air Quality	Ashley Cartlidge	Response-01417	More traffic as a result of so many homes must impact air quality.
1.12	West of Borrowwash	Air Quality	Ashley Dunn	Response-01560	Additional cars along Victoria Avenue will create bigger air quality issues. I already regard air quality on Victoria Avenue to be unacceptable, especially for children attending Ashbrook Infants School. Additional traffic from this site would endanger children's young lungs.
1.12	West of Borrowwash	Air Quality	Barry Shaw	Response-01482	Air quality is generally poor, this will not be improved
1.12	West of Borrowwash	Air Quality	Bella Kelsey	Response-00739	Air quality in our area is already high risk due to the A52 - more traffic and industrial work will make this even worse
1.12	West of Borrowwash	Air Quality	Britton	Response-00877	We have lived on Derby Road near the proposed site for 17 years, the traffic has increased drastically since we moved here and the proposed site will only increase the traffic and impact air quality
1.12	West of Borrowwash	Air Quality	Carmen Buckley	Response-00737	With the airports and busy A52 and M1 being so close the air quality is poor. This area acts as a barrier between Borrowwash and Spondon.
1.12	West of Borrowwash	Air Quality	Carol Shaw	Response-00797	Increased traffic from the new development will likely lead to higher emissions, negatively impacting air quality in the area. The additional vehicles on the A6005 Derby Road will contribute to air pollution, which is contrary to the goals of the NPPF to promote sustainable development and reduce air pollution. Impact on Ashbrook School: The extra road traffic forced past Ashbrook school on Victoria Avenue will exacerbate air pollution levels, posing a significant health risk to school children. Children are particularly vulnerable to air pollution as their lungs are still developing, and they are more likely to be exposed to higher levels of pollutants due to their proximity to traffic. Increased traffic can lead to higher concentrations of particulate matter (PM2.5 and PM10) and nitrogen dioxide (NO2), which are known to cause respiratory issues and other health problems.
1.12	West of Borrowwash	Air Quality	Dale Harlow	Response-00887	Less farm land and fields, more cars and traffic causing much more air pollution
1.12	West of Borrowwash	Air Quality	Dan Pilgrim	Response-00932	Protect natural areas, avoiding pollution
1.12	West of Borrowwash	Air Quality	David Modrovic	Response-00803	More traffic means more pollution
1.12	West of Borrowwash	Air Quality	David Steare	Response-01300	1 I suspect that around 280 commuters will have a detrimental effect on the air quality of the surrounding area including neighbouring houses and the farm during commuting periods. 2 I suspect that this detrimental air quality will be exacerbated by the development near to the A52 dual carriageway and its heavy traffic at commuter times.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Air Quality	Dr Sarah Mee	Response-01320	The main concerns on air quality relate to the construction period. During piling and with haulage vehicles entering and leaving the proposed housing allocation site daily there will be an unacceptable volume of air particle debris and traffic fumes for the existing residents of Derby Road which must be contained and monitored so this does not cause damage to the health of existing residents or impact the quality of their living standards such as being able to use their gardens safely. Clean air is a fundamental human right. The Clean Air Act debated on 19 March 2024 aims to establish a legal right for citizens to breathe clean air and abide by WHO clean air guidelines. Air pollution is a national health emergency in the UK and targets within the Environment Act for fine particulate matter should be complied with during the construction of any housing or industrial development at this site West of Borrowwash. It is without doubt that the current air quality around the current Greenbelt designated land will be negatively impacted during the construction phase at this proposed housing allocation site for the existing village residents and potentially following construction, even when taking into account the currently enhanced building regulations and energy efficiency technologies for the houses, the traffic flow and related fumes will be hugely increased.
1.12	West of Borrowwash	Air Quality	Emma Gregory	Response-01454	See traffic congestion
1.12	West of Borrowwash	Air Quality	Eve barker	Response-00443	A main road already runs through the village, air pollution is a real concern
1.12	West of Borrowwash	Air Quality	Gillian Fitzpatrick	Response-00482	The pre-mentioned traffic congestion is ultimately going to cause a serious reduction of the already poor air quality. It will be like living in a city which, if this development proceeds is exactly what we shall be.
1.12	West of Borrowwash	Air Quality	Gillian Hitchcock	Response-00446	Need we keep repeating that the increase I. Traffic will greatly affect the air quality
1.12	West of Borrowwash	Air Quality	Helena Lucas	Response-00644	There is lots of evidence that 280 new build houses will significantly increase air pollution, during the construction phase and ongoing due to increased energy consumption from residents. Construction activities will generate dust, fumes, and emissions from vehicles, while the increased number of residents leads to more traffic, and consequently, higher levels of pollutants from vehicle exhaust, as well as increased demand for energy, potentially leading to more emissions from power plants. This will put increased pressure on healthcare services, but more worryingly, affect those living nearby who are affected by respiratory illnesses. I personally know several residence who live on adjacent streets and roads. I have worked at the nearby GP surgery and can tell you it is already overwhelmed with patients, without unnecessarily increasing demand as a direct impact of the new builds.
1.12	West of Borrowwash	Air Quality	Ian Frearson	Response-01267	The additional construction and subsequent developed site will generate far more pollution to the area than is currently generated by the agricultural site thereby affecting adversely the existing wildlife.
1.12	West of Borrowwash	Air Quality	James Dean	Response-00553	More traffic, less tress, less open space... a far worse air quality. This will no double have negative effect on the community and people's health.
			Jane Rothon	Response-00042	Air quality is poor here now and will be even worse especially whilst houses are being built.
1.12	West of Borrowwash	Air Quality	Jane Shepherd	Response-01333	More traffic will lead to poorer air quality
1.12	West of Borrowwash	Air Quality	Jennifer Sutton	Response-00518	The development will worsen local air quality, already impacted by vehicles on Derby Road. Brake dust, tyre particles, and NOx emissions especially affect children's lungs. These pollutants are not mitigated by one park or tree buffer. Residents on the school run or daily commute will pass Ashbrook School, further exposing children to airborne toxins. The huge increase in traffic this development will bring shall permanently impact the air pollution of the village; car engines, brake dust and noise will massively increase past our village schools.
1.12	West of Borrowwash	Air Quality	John & Anna Mead	Response-00772	Because more traffic, housing will affect the air quality
1.12	West of Borrowwash	Air Quality	Julie Margaret Smith	Response-01090	Increased traffic can only decrease the air quality of those walking along increasingly busy roads and for those whose properties line Derby Road and Victoria Avenue, as well as pedestrians using the facilities in the village centre.
1.12	West of Borrowwash	Air Quality	Ken Hardy	Response-00928	Development of this scale would inevitably result in recorded increases in all types of pollution. Efforts to mitigate this would reduce the levels omitted by buildings, occupants and the introduction of vehicular trips to a previously undeveloped site. However, construction and the occupancy of on-site buildings would see a rise in pollution omissions.
1.12	West of Borrowwash	Air Quality	Kevin Highton	Response-00506	This will be terrible during and aftr the proposed building works
1.12	West of Borrowwash	Air Quality	Kirsty Murray	Response-01003	Of course this will be detrimental, we are losing green space and adding houses and cars will further damage air quality
1.12	West of Borrowwash	Air Quality	Laura Dewsnap	Response-00936	The air quality in Borrowwash will be negatively impacted by the removal of vegetation, the construction of buildings and an increase in motor vehicles which will emit air pollution. During construction of buildings, large construction vehicles will be frequently present emitting pollution and following the builds, the houses themselves will negatively impact on the air quality as soon as they are inhabited. In addition to this, the construction of buildings and removal of vegetation will increase the temperature of the area by creating an urban heat island. It is known that building materials hold their heat for longer than vegetation a consequence of this being an increase in the average temperature of the area.
1.12	West of Borrowwash	Air Quality	Lauren Fardoe	Response-00039	The dust/ pollution from the building site whilst being built
1.12	West of Borrowwash	Air Quality	Lesley Eccles	Response-00814	Will impact on air quality as more emissions on cars

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Air Quality	Lewis Sutton	Response-00415	Increased traffic will exacerbate air pollution, which contradicts the government's air quality targets. The area is semi-rural, currently benefitting from clean air, and development will increase NOx and particulate emissions especially troubling given the proximity to homes and schools. The huge increase in traffic this development will bring shall permanently impact the air pollution of the village; car engines, brake dust and noise will massively increase past our village schools. Impact on Children Lung Development: Exposure to NO? can impair lung growth and function in children, particularly in polluted urban areas like London, Birmingham, and Manchester. Asthma: Higher NOx levels are linked to increased asthma incidence and attacks in children. It can also worsen existing respiratory conditions. School Performance: Poor air quality, including NO? exposure, is associated with reduced cognitive performance and school absenteeism. Infant Health: Prenatal and early-life exposure to NOx pollution is linked to low birth weight, premature birth, and developmental issues.
1.12	West of Borrowwash	Air Quality	Lindsay Hodson	Response-01434	More traffic means more pollution. Obviously this should be taken into consideration.
1.12	West of Borrowwash	Air Quality	Lucas Hodson	Response-01435	More traffic will mean more pollution which will cause even more damage to the wildlife than the building on green land.
1.12	West of Borrowwash	Air Quality	Maisie Hartow	Response-00963	More houses = more people = more traffic = more vehicle emissions. Contributing to the existing problem of the high air pollution in the area caused by heavy traffic on the A52 / M1.
1.12	West of Borrowwash	Air Quality	Mandy Dickens	Response-00590	Due to extra traffic which will be bumper to bumper the air pollution will increase and there are Nurseries and schools in which the young children will be affected
1.12	West of Borrowwash	Air Quality	Mark Fearn	Response-00507	The amount of cars and building works will cause a significant impact to regular air quality for local residents
1.12	West of Borrowwash	Air Quality	Mary-Jo McDermott	Response-01437	Roads in Borrowwash are already exceptionally congested and busy. Air quality is already poor. Building on green fields will eliminate a vital buffer that helps absorb pollutants from surrounding roads. Increased vehicle emissions and loss of plant cover will further degrade local air quality, affecting respiratory health in vulnerable populations and causing increased levels of noise and disruption.
1.12	West of Borrowwash	Air Quality	Maxwell Sutton	Response-01093	Max aged 5 already finds Derby road nasty, and believes 1000 more cars will worsen the environment
1.12	West of Borrowwash	Air Quality	Mrs Kay Rigby	Response-00876	With all the extra cars they will be any increase in carbon emissions especially when they are waiting in the traffic jams that will happen in peak times
1.12	West of Borrowwash	Air Quality	Mrs M McCroft	Response-00532	Pollution from all these extra cars would be damaging to our health I have COPD and my husband has gas and lung cancer.
1.12	West of Borrowwash	Air Quality	Mr Timothy Shepherd	Response-01334	Increased traffic in traffic jams will have a detrimental effect on air quality in the Nottingham Road and Victoria Avenue.
1.12	West of Borrowwash	Air Quality	Nicholas Parr	Response-01253	The pre-mentioned traffic congestion is ultimately going to cause a serious reduction of the already poor air quality. We are one of the most inland and industrial counties and need to maximise any opportunity to improve our air quality ? this development would have the opposite effect.
1.12	West of Borrowwash	Air Quality	Nick Coates	Response-00393	Already high flow of traffic no more needed
1.12	West of Borrowwash	Air Quality	Nicola Ashton	Response-00081	With all the traffic now through the village you only need to look at our front windows to see the amount of pollution that is visible, it's not pleasant to have your windows open in the summer.
1.12	West of Borrowwash	Air Quality	P. Hart	Response-00623	More traffic will increase pollution of air and environment in general eg residue from tyres.
1.12	West of Borrowwash	Air Quality	Paul Barker	Response-00800	Air quality will suffer extra slow moving traffic
1.12	West of Borrowwash	Air Quality	Peter HINKLEY	Response-00775	Increased car usage, we're not all electric yet, will increase poor air quality levels
1.12	West of Borrowwash	Air Quality	Phil Self	Response-00759	Far too many cars coming through the area
1.12	West of Borrowwash	Air Quality	Raoul Pinkney	Response-01457	Increased vehicles will cause a further reduction in air quality, especially in the village centre where congestion already causes fumes to build up
1.12	West of Borrowwash	Air Quality	Simon Shaw	Response-01152	Poor air quality currently, imagine living between the A52 and Derby road, a whirlpool of bad air, especially by the school
1.12	West of Borrowwash	Air Quality	Sophy Peacock	Response-00678	Poor air quality whilst the build is on going but also the added pollution from that many extra homes and the extra traffic it will cause
1.12	West of Borrowwash	Air Quality	Stephen Peat	Response-01793	The land is a link to the opposite side of the A52 to move animals once a year between Spondon and Ockbrook to land within Meynell Farm. This is also explained in the next chapter of this letter, in section A, 'New developments, face high levels of air and noise pollution from the A52?', including dangers to and from animals passing through the area. (1) The land west of Borrowwash is close to a very busy A52, and since the planned 280-housing development would be subjected to high levels of air and noise pollution from high volumes of passing vehicles travelling to and from Derby. (2) Around 200 metres from the A52 would be affected by noise and air pollution because the A52 is very noisy with heavy lorries passing through the area. After noise and air pollution, this area could put children at risk of being close to the A52, and the rights of way to transfer animals from the opposite side of the A52 to Meynell Farm, who have sheep and other livestock within their Farm. This means hundreds of sheep would pass through the planned 280 housing estate, posing a risk to animals and householders who live on the 280-home estate. In law, the farmer can walk their animals through this site and across the A52 to Meynell Farm. This law is over 100+ years old, and is still the law today. The farmer can order the closure of the A52 twice or three times a year to move animals to different sides of the A52. The building of houses could create a risk in the movement of animals to and from the A52, including noise of construction, noise and traffic from the new neighbourhood.
1.12	West of Borrowwash	Air Quality	Steven Hoolan	Response-00912	Air quality will be significantly impacted with the additional traffic these homes will bring
1.12	West of Borrowwash	Air Quality	Suzanne Prior	Response-00907	The increase in population from the new housing, combined with more traffic which will be idling due to congestion at the Victoria Avenue will increase pollution for those living on Derby Road Borrowwash
1.12	West of Borrowwash	Bus Services	Alice Fitzpatrick	Response-00543	The bus services would be seriously challenged especially at school times. more buses would mean more traffic (objection raised under Traffic)
1.12	West of Borrowwash	Bus Services	Angela Chapman	Response-01331	Poor bus service, damaged roads, neither will get better, only worse, making safety issues worse.
1.12	West of Borrowwash	Bus Services	Anthony Clarke	Response-00559	We have no bus services in Borrowwash, the two flyovers were ended years ago, just those that pass through available

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Bus Services	Carol Shaw	Response-00797	While the development includes provisions for pedestrian links to surrounding facilities and bus services, the increased population may strain existing public transport services. The current infrastructure may not be sufficient to accommodate the additional demand, leading to overcrowded buses and reduced service quality.
1.12	West of Borrowwash	Bus Services	David Modrovic	Response-00803	Bus service already poor, more people adding to this wouldn't help
1.12	West of Borrowwash	Bus Services	Dr Sarah Mee	Response-01320	Public transport provision for the new residents of a development at this site would impact the volume of traffic on an already busy road and additional buses would need to be provided for the route to and from Derby and Nottingham and allocations to from schools. At peak times the service is already at capacity and the impact of additional traffic on congestion, pollution and road safety must be factored in to decision making
1.12	West of Borrowwash	Bus Services	Gillian Fitzpatrick	Response-00482	At peak times there will be a need for more buses and therefore more traffic which has previously been objected to.
1.12	West of Borrowwash	Bus Services	Gillian Hitchcock	Response-00446	Bus service is rubbish now, being more people to the area and make it worse, that's a great idea not!
1.12	West of Borrowwash	Bus Services	Helena Lucas	Response-00644	The bus services to Derby and Nottingham will become more overcrowded, especially during peak times.
1.12	West of Borrowwash	Bus Services	Ian Frearson	Response-01267	The proposals would put more pressure on the existing public transport services and yet does not lend itself to the provision of a 7.3m carriageway highway within the development proposal.
1.12	West of Borrowwash	Bus Services	Jane Shepherd	Response-01333	Will there be a new bus route? Will the roads planned allow buses to manoeuvre easily?
1.12	West of Borrowwash	Bus Services	Jennifer Sutton	Response-00518	Public transport is inadequate, with poor links to Nottingham and limited rail access.
1.12	West of Borrowwash	Bus Services	John & Anna Mead	Response-00772	Obviously these will get more crowded and busier
1.12	West of Borrowwash	Bus Services	Julie Margaret Smith	Response-01090	Bus services would need to be increased at peak times to accommodate an increased population.
1.12	West of Borrowwash	Bus Services	Laura Dewsnap	Response-00936	Borrowwash does have bus services but one of these has been replaced by a small minibus which isn't accessible for wheelchairs. The services are not reliable and an increase in population would mean there is a further strain on these services.
1.12	West of Borrowwash	Bus Services	Lewis Sutton	Response-00415	There is limited bus service provision along the A6005. The development risks becoming car-dependent, especially for commuting, school runs, and accessing amenities? further increasing emissions, traffic, and isolation for those without private transport. Public transport is inadequate, with poor links to Nottingham and limited rail access.
1.12	West of Borrowwash	Bus Services	Lindsay Hodson	Response-01434	Bus services are adequate but can be very busy at certain times. Bus services need to be extended to accommodate more people. Borrowwash connects people from Derby to Nottingham. More traffic will slow this service down.
1.12	West of Borrowwash	Bus Services	Lucas Hodson	Response-01435	The i4 and indigo bus service which run through Borrowwash are key bus lines as they connect Nottingham and Derby so by building in Borrowwash you will be significantly slowing down the two bus services which will have may knock on effects like people possibly being late to work.
1.12	West of Borrowwash	Bus Services	Mark Birkinshaw	Response-00046	With dedicated school buses to West Park School at capacity already, the potential increase on current scaled down public transport will jeopardise availability for other users.
1.12	West of Borrowwash	Bus Services	Mark Fearn	Response-00507	Bus services in Borrowwash are already in high demand and do not cater to the local population as it is meaning it would not be able to sustain such influx of regular passengers.
1.12	West of Borrowwash	Bus Services	Mrs Kay Rigby	Response-00876	We have a fairly good bus service which is used a lot the extra residents in Borrowwash will mean full buses and longer waiting times
1.12	West of Borrowwash	Bus Services	Mrs M McCroft	Response-00532	Bus service would not be able to cope with all these extra people
1.12	West of Borrowwash	Bus Services	Nicholas Parr	Response-01253	Bus services would need to be increased at peak times to accommodate an increased population leading to further traffic congestion and reduced air quality.
1.12	West of Borrowwash	Bus Services	Paul Barker	Response-00800	Bus service. Direct to Derby would be needed
1.12	West of Borrowwash	Bus Services	Virginia Locke	Response-00580	We have no buses in Borrowwash
1.12	West of Borrowwash	Flooding / Drainage	Alex Lowe	Response-00707	The land currently acts as a flood plain which stops a large amount of water flooding local houses. I would have major concerns if this was turned into a building site
1.12	West of Borrowwash	Flooding / Drainage	Alice Fitzpatrick	Response-00543	I am seriously concerned about drainage. We already experience flooding (Derby Road in particular) and more concrete means less drainage. What about sewage? Climate change has increased rainfall which has raised the water table. My garden flooded badly last year for the first time (I've lived here 30 years) - it was literally standing in water with no place for it to go. This also impacted on the road drains - Victoria Avenue can look like a canal at times.
1.12	West of Borrowwash	Flooding / Drainage	Amy Brown	Response-00514	On said ground, during heavy downpour, this area does tend to get very boggy and flood. How will this be managed? Draycott, Borrowwash & surrounding areas all have the same type of issues. This is not managed as it is let alone adding however many houses on top. How does this affect local homes/businesses?
1.12	West of Borrowwash	Flooding / Drainage	Angela Chapman	Response-01331	There are issues with flooding along the Derby Road already during prolonged or heavy rain fall, how can they be sure that the works will not exacerbate the issue, making the homes already there unlivable.
1.12	West of Borrowwash	Flooding / Drainage	Ann Daykin	Response-01453	More development will just add pressure to an already weak drainage system.. Borrowwash has the Ock brook running through the village and it flows into the Dereent. This area floods yearly and is getting worse. I have lived in the village for 57 years and can see a decline in this area. It's getting worse and that's because the system can't cope now.. and building this development will only add to the pressure on local systems.
1.12	West of Borrowwash	Flooding / Drainage	Anne Anderson	Response-00980	That land has always flooded and still floods. I have a friend who backs onto that field and during heavy rain his garden is literally under water. It was so bad last winter that he had to get sand bags to prevent the water entering the air bricks.
1.12	West of Borrowwash	Flooding / Drainage	Barry Shaw	Response-01482	The roads already flood often. This will make things worse.
1.12	West of Borrowwash	Flooding / Drainage	Breanne Rodda	Response-00708	The green area is always flooded when it is heavy rain, I suspect likely protecting a lot of houses in the area from more severe flooding

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Flooding / Drainage	Carol Shaw	Response-00797	The proximity of the development to the Ock Brook watercourse raises concerns about flooding and drainage. While the site is in Flood Zone 1, appropriate landscaping and drainage measures must be implemented to prevent adverse impacts on natural drainage patterns as Derby road floods from these fields currently, and often.
1.12	West of Borrowwash	Flooding / Drainage	Catherine Casartelli	Response-01428	Derby Road near the proposed access already suffers from flood water running through onto Derby Road during excessively heavy rainfall. Covering fields with roads and houses can only add to this rain run off.
1.12	West of Borrowwash	Flooding / Drainage	Chris Archer	Response-01142	Borrowwash has a historical issue with rain water and flooding due to the run off from the A52 and fields to Spondon. By removing such natural drainage locations such as fields this will exacerbate this issue
1.12	West of Borrowwash	Flooding / Drainage	Craig Hydes	Response-00782	The bulk earthworks in the surrounding areas are built up of significant quantities of clay. Drainage is poor for existing property owners on Field Close and Victoria Avenue. Flooding is a problem and we personally suffer every year.
1.12	West of Borrowwash	Flooding / Drainage	Dale Harlow	Response-00887	Losing fields which are used as natural flood banks and soak aways will cause more surface water, larger puddles and cause long term flooding issues
1.12	West of Borrowwash	Flooding / Drainage	David House	Response-01489	The area to the south of the proposed site is susceptible to flooding. We live at 60 Derby rd, Borrowwash. Our garden and garage have been flooded in recent years. We are concerned that the development will exacerbate this.
1.12	West of Borrowwash	Flooding / Drainage	David Modrovic	Response-00803	Where would any rain water go? Currently the land absorbs it, building would increase flooding!
1.12	West of Borrowwash	Flooding / Drainage	David Smith	Response-01115	Living close to the area in recent years our garden has remained flooded almost throughout the winter months. I am not sure but there may be some parts of this land which is likely to flood. Many of the houses in Field close have required new flooring which is an indicator that the area is low lying.
1.12	West of Borrowwash	Flooding / Drainage	David Tyler	Response-00835	This land is close to a brook that occasionally floods derby road, if the land is built on , there will be less natural soakaway and the possibility of regular flooding of derby road
1.12	West of Borrowwash	Flooding / Drainage	Deborah young	Response-01306	Since they built the house next to field it has flooded more . If they build on the land were will the water go . ?
1.12	West of Borrowwash	Flooding / Drainage	Dianne Simmons	Response-00401	I live on Field Close and our garden floods even with the lightest of rain, another 200 plus houses will surely make this worse.
1.12	West of Borrowwash	Flooding / Drainage	Dr Sarah Mee	Response-01320	There is a field drainage ditch and an underground spring behind the existing properties on Derby Road. The ditch fills rapidly after rain and existing flood defences are frequently overwhelmed causing Derby Road to become a running stream which has closed Derby Road in the last few years at times. The Flood Prevention Officer at Matlock has been involved in site assessment and Erewash Council have been made aware of this flood water and potential risk of flooding on several occasions by several residents of Derby Road. At times the flood water prevents exit from driveways on Derby Road which has been a major safety concern for access to emergency vehicles to properties and exit of residents in an emergency or even just to take the bins down to the road . Recent enquiry by a resident found drains and sewers to be at capacity already along Derby Road for existing houses so additional housing is a major concern on the flooding risk.
1.12	West of Borrowwash	Flooding / Drainage	Ellen Young	Response-01357	Since the creation of Covent Garden Close and a house/building on some land off Derby Road, the field to the south of Covent Garden Close now floods in places it didn't in the past. The field to the north east of this has always been waterlogged on rainy days. There was a little stream that ran along the border of some of the fields. This has since become clogged and no longer flows like it used to. 20+ years ago, the farmer dug a ditch around the perimeter of at at least one of the fields on the plan. This prevented the field from becoming water logged and from run off entering gardens. This ditch hasn't been maintained for many years but it could prevent crops from being waterlogged, which is a current problem with growing crops. Building on fields that becomes waterlogged is going to increase the chances of existing gardens and the new houses of flooding as the water has nowhere to go. Drainage can only take so much water away before it's overwhelmed. Maybe it's time we should start looking at the correlation of the increase in flooding with the amount fields being built on and stop blaming the situation solely on global warming. We're lucky in Borrowwash, we rarely flood but when we do it tends to be in places near a source of water, e.g. brooks, or at the bottom of hills. I fear that building on land that becomes waterlogged in heavy rain is going to cause flooding in places we don't normally see it.
1.12	West of Borrowwash	Flooding / Drainage	Emma Gregory	Response-01454	This land is a flood plain and regularly floods.
1.12	West of Borrowwash	Flooding / Drainage	Geoff Whittaker	Response-01805	There appears to be no mention of surface water attenuation for these sites . The will contribute to the flow going into the Derwent which already floods several times a year. They will add to the flow initially in the two brooks. The Ockbrook already is close to causing flooding to properties lower down its cause and has flooded housing on Kimberley Drive once the past years. the other brook also appears in a poor state of repair and lacks maintenance.
1.12	West of Borrowwash	Flooding / Drainage	Gillian Fitzpatrick	Response-00482	I am seriously concerned about drainage. We already experience flooding (Derby Road in particular) and more concrete means less drainage. What about sewage? Climate change has increased rainfall which has raised the water table. My garden flooded last year for the first time since I have lived here (42 years!).
1.12	West of Borrowwash	Flooding / Drainage	Gillian Hitchcock	Response-00446	Whilst currently a fields we don't suffer from flooding but take that away and it'll increase, if my property were to be as a result of this build I wouldnt be amused
1.12	West of Borrowwash	Flooding / Drainage	Hayley Dexter	Response-00519	As we are seeing year on year, with more land disappearing for houses there is no where for rain and flood water to go as there is less and less natural drainage. The houses that back on to the land already have an issue with flooding and in heavy rain the water floods there gardens and drives and runs of into the main road causing hazards and issues to the properties already there
1.12	West of Borrowwash	Flooding / Drainage	Helena Lucas	Response-00644	Borrowwash and the surrounding main roads are already subject to significant flooding and flash floods. Adding 280 new build houses over this greenbelt area, a significant feature in helping to manage heavy rainfall, will significantly and worryingly compound this issue further. As the field itself is prone to retaining a lot of water through periods of wet weather, the water run off to the remaining field will beside the new build will cause dangerous flooding to the ground and stream flowing to the edge of the field.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Flooding / Drainage	Helen Pearce	Response-01550	Borrowwash has seen an increase in flooding over the recent years. Our house on Victoria Avenue has usually been unaffected due to the natural drainage that the fields and nearby brooks provide. The new plans will destroy this provision for all of the houses on Victoria Avenue, increasing our flood risk which our Victorian pipework is not equipped to deal with.
1.12	West of Borrowwash	Flooding / Drainage	Ian Frearson	Response-01267	The proposal would generate additional pressure on and already busy sewerage system as follows. Firstly an increase in the flood potential from surface water generation discharged into the boundary brook between Derby and Erewash. This proposal has the potential to see an additional discharge of surface water approaching 1,000 litres / sec influencing the crossing of the Derby Road at a low point already a potential for flooding and forward to the railway and on to the adjacent development before its discharge into the River Derwent. The proposal would affect the provision of Foul sewerage provision onto an already overloaded system
1.12	West of Borrowwash	Flooding / Drainage	James Dean	Response-00553	Naturally... building on all this natural drainage will be detrimental to the local area that has already experiences issues during wet weather with flooding. Again... house values will reduce ruining the area for all involved.
1.12	West of Borrowwash	Flooding / Drainage	Jane Rothern	Response-00042	Our village already gets flooded quite badly at times. We don't know how building on this land will affect this but can only imagine it will get worse. Derby Road has been flooded quite a lot over the last few years became sure this will get worse
1.12	West of Borrowwash	Flooding / Drainage	Jane Shepherd	Response-01333	Careful planning needed, the land near Elvaston already floods. If land is less green where will rainwater go?
1.12	West of Borrowwash	Flooding / Drainage	Jennifer Sutton	Response-00518	The local water table and pluvial floodplain must be assessed. The area is poorly drained, and the introduction of impermeable surfaces will worsen flood risks, this is true for housing and road infrastructure. Derby Road already floods during heavy rainfall due to poor drainage and runoff. The proposal will cover fields in impermeable surfaces, making this worse. The plan mentions Sustainable Drainage Systems (SuDS) in general ? but fails to specify how they'll prevent flooding or what the downstream consequences may be. This conflicts with NPPF para 167 on flood risk.
1.12	West of Borrowwash	Flooding / Drainage	Judith Anderson	Response-00934	Flooding likely to happen
1.12	West of Borrowwash	Flooding / Drainage	Julie Margaret Smith	Response-01090	In this area, we are already under threat of flooding every winter; gardens, housing and roads (especially Derby Road) as well as land close to watercourses. Our garden (off Victoria Avenue) is still saturated from winter 23/24 flooding. A reduction in natural absorption of run-off will exacerbate the problems. Land drains can be poorly installed or easily disturbed. Housing will only increase flooding problems - where will the excess water go? How will it affect land miles away?
1.12	West of Borrowwash	Flooding / Drainage	Ken Hardy	Response-00928	I would like to register my concerns about the high risk of flooding if the proposed plans are submitted reference to the housing development on green belt land at the back of Derby Road Borrowwash. Behind our property (64 Derby road) is an area of about an acre which for the past two years has become more and more like marsh land. when we originally move in this used to be farmed and the ditch at the bottom of our garden (which is higher than the house) always used to be dry, however now it always contains a high level of water and when it rains it fills rapidly. The farmer tried to drain the area into the ditch by digging channels in the field but without success making the ditch fill even higher and quicker, he has also tried to dig out the ditch making it extremely deep. The farmer no longer farms this land as a few years ago he actually sunk the combine harvester and had to get several machines to pull it out! The problem as I see it is the water has nowhere to go and I believe there is a spring which constantly runs to add to the problem. When it rains heavily water runs down our garden into land drains we had to have put in, it is also noticeable that several of the houses on the street have a flow of water running down the drives into Derby road itself which now becomes like a flowing river after just a short downfall as the drains cannot cope. The water seems to appear from under the driveways for some strange reason. Most concerning is how our Neighbour actually tries to control the level of the ditch to try to protect the houses either side. He has installed a manual system which is like an adjustable lock gate which he can adjust to try and control the level of the water in the ditch, this runs into a small man-made stream which feeds into the drain at the front of his house, the only problem when it rains the flow is too great and it overflows and runs down the side of our house against our wall which is a bit worrying. As a possible solution I spoke to someone who knows about water tables and he suggested that a balance pond needs to be installed in the area of the field but still believes this would not solve the problem fully as the ditches which used to be in place around the field have since been filled. The water has to go somewhere and water being water it finds it's own way to the lowest point, which happens to be the houses along Derby road. We have since checked the ditch itself and there unbelievably is no run off for the water either end other than our neighbors "invention". Over the past few years this has become an increasing concern as the farmer has since abandoned the idea of trying to do something about it, and now we have the threat of this proposed green belt development, which for a number of reasons seems wrong, however my concern now is how it will effect our house and the potential risk of flooding. You or any of your colleagues who would deal with this matter are more than welcome to come and view the area of concern and I know my neighbour would be more than happy to show off his flood defense. I am as you have probably gathered one of many of the villages against this proposed development but feel this is a genuine concern regardless of what decisions are made. Many Thanks Ken Hardy 64 Derby Road Borrowwash
1.12	West of Borrowwash	Flooding / Drainage	Kevin Highton	Response-00506	There is a small underground waterway on this land
1.12	West of Borrowwash	Flooding / Drainage	Kirsty Murray	Response-01003	The whole country is flooding more as we buil more, which prevents natural drainage
1.12	West of Borrowwash	Flooding / Drainage	Laura Dewsnap	Response-00936	Whilst the site is not a flood plain, the act of building on this land will significantly increase the risk and likelihood of flooding in the area. Building in this area will replace permeable surfaces such as soil and vegetation with impermeable surfaces like concrete and tarmac. This will increase flood risk by altering natural drainage patterns and reducing the land's ability to absorb rainfall, leading to increased surface runoff and potentially overwhelming drainage systems.
1.12	West of Borrowwash	Flooding / Drainage	Lesley Eccles	Response-00814	Have been problems with flooding due to brook in Borrowwash but not in this area

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Flooding / Drainage	Lesley Young	Response-00902	Houses are already suffering from flooding in this anrea and our weather is getting worse where rainfall is concerned. Housing destroys any protection against this and Wii result in water in houses and on the road which will cause damage and contribute to extra traffic issues on the Derby Road.
1.12	West of Borrowwash	Flooding / Drainage	Lewis Sutton	Response-00415	The local water table and pluvial floodplain must be assessed. The area is poorly drained, and the introduction of impermeable surfaces will worsen flood risks, this is true for housing and road infrastructure. The site is prone to road flooding during heavy rainfall due to poor drainage infrastructure along the A6005. Developing the land would increase impermeable surfaces, worsening flood risks locally and downstream. This contradicts climate resilience and sustainable drainage requirements.
			Lindsay Hodson	Response-01434	Borrowwash and Ockbrook suffer with flooding the fields are needed for drainage. Housing in green belt will impact houses elsewhere.
1.12	West of Borrowwash	Flooding / Drainage	Maisie Hartow	Response-00963	We had to move house because a new building estate caused flooding in our previous neighbourhood in Trowell. Building large new housing estates reduce the land's ability to absorb rainwater and then increases the surface runoff. The field they plan to build on will no longer be able to absorb any rain and the surface water will be forced in to the surrounding homes instead.
			Mandy Dickens	Response-00590	This land is constantly flooded as the property , previously called Queens Hall could testify.
1.12	West of Borrowwash	Flooding / Drainage	Mark Fearn	Response-00507	Derby Road is known for flooding when we have increased rainfall and the adding of houses will not only increase this likelihood and level of flooding but the damage it will do to the new development and existing buildings and infrastructure.
1.12	West of Borrowwash	Flooding / Drainage	Mary-Jo McDermott	Response-01437	These fields act as a natural drainage basin. Paving over them will exacerbate flood risks in surrounding areas, especially with climate change increasing rainfall variability. Existing drainage infrastructure cannot cope as it is.
1.12	West of Borrowwash	Flooding / Drainage	Mrs Kay Rigby	Response-00876	This area is a natural drainage area for Borrowwash when we have heavy rainfall. If it is concreted over there will be no where for the water to go and could cause flooding around the area
			Mrs M McCroft	Response-00532	This has been flood area for the last 11 yrs
1.12	West of Borrowwash	Flooding / Drainage	Mrs Sheila Hardington	Response-01232	More houses means more strain on the system.
1.12	West of Borrowwash	Flooding / Drainage	Nicholas Parr	Response-01253	I have noticed far more flooding locally since I started trading in Borrowwash in 2012 eg. Derby Road. More concrete means less drainage. What about sewage?
1.12	West of Borrowwash	Flooding / Drainage	Nicola Ashton	Response-00081	The proposed site always floods in the winter and residents have been dealing with this for years
1.12	West of Borrowwash	Flooding / Drainage	Paul Barker	Response-00800	Flooding already occurred regularly on to derby road.
1.12	West of Borrowwash	Flooding / Drainage	Peter HINKLEY	Response-00775	This area is liable to flooding and I have seen plenty of water running on to the A6005, not sure what the recent SevernTrent work has done to prevent this. Probably naught as was possibly just large diameter pipes 'passing through a field, albeit underground, rather than a drainage solution. Borrowwash and 'Floods' are never a good thing for Borrowwash
1.12	West of Borrowwash	Flooding / Drainage	P Fisher	Response-01175	I am concerned that a development of this size could lead not only to a flood risk in the area, but also problems with drainage and sewage.
1.12	West of Borrowwash	Flooding / Drainage	Phil Self	Response-00759	I pass that area on my way to work cycling and water pours off of that field when raining hard
			Ray Kirk	Response-01378	Anyone with any sense knows the new drainage systems running into old systems can't work.
1.12	West of Borrowwash	Flooding / Drainage	Sarah Davies	Response-01137	Flooding is a big problem in the area, damage to properties every year due to bad drainage, poor upkeep of drains and sewer system.
1.12	West of Borrowwash	Flooding / Drainage	Sarah McAuslan	Response-01248	Our villages already flood during flash rain which we are seeing more of. With increased concrete builds the water will have nowhere to go. Our current village homeowners must be protected from flooding and not just considering expansion to solve one problem but make another
1.12	West of Borrowwash	Flooding / Drainage	Steph Archer	Response-01140	If houses are built on this area then it will push the water to the original houses causing damp and other flooding issues.
1.12	West of Borrowwash	Flooding / Drainage	Stephen Peat	Response-01793	The Site is a flood Risk Zone (1) The map below shows that a river runs through the site that travels from Locko Park, through Spondon Wood development, Wood Road, to Dale Road Park, which connects 4 water courses and two underground streams that travel through the Dale Road Park area down the fields across the A52 into the plan site for 280+ houses. (2) When you examine the map above, you can see how close the River Derwent is to the planned development, meaning during a period of hefty rainfall, the River Derwent is likely to flood and affect housing on both sides of the road. (3) Within the development, several streams enter the development site and could overflow and affect new properties built on the site. (4) The second concern is that the extra water flow into the streams within the Spondon would travel towards the new site, increasing the risk of flooding in the land west of Borrowwash. (5) In the last few years, many insurance companies have paid millions of pounds to repair properties caused by flooding. These companies have decided not to insure properties that face the risk of flooding or damage by water. The Environmental Agency is working on new flood patterns to cover climate change weather patterns, meaning preventing the development of new houses close to areas of water, streams, and rivers. For example, the six large 6 insurance companies want to decide on housing and commercial development, including independent flood and environmental surveys, to ensure new developments do not face flood risk resulting from climate change. (6) I have spoken to the Environmental Agency at Derby City Council last November 2024 with Derby Climate Action and senior staff at Derby City Council. All parties at the meeting, including Derby City Council, Derby Climate Action, and the East Midlands Environment Agency, are rewriting the flood risks of the East Midlands, Derby, and Derbyshire. The updated data with the latest climate modelling will be available to Councils and developers from the end of 2027. The present data used by housing developers is expired, and should not be used in the submission and decision-making for the location of new developments. In section B, I listed that this land could be a flood risk from the effects of the River Derwent being a couple of metres away on the opposite side of the road, and the land has several streams passing through the site that could overflow into new houses during heavy storms or periods of heavy rain. This would be an insurance nightmare for areas at risk of flooding by preventing householders from purchasing flood or housing insurance, knowing the River Derwent has flooded several times in the last three years. The risk of flooding would worsen from the effects of climate change listed in Section B of this letter.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Flooding / Drainage	Steven Hoolan	Response-00912	This field floods with every heavy downpour. As a homeowner backing onto this site I know this for a fact as my garden floods from the run off and water can be seen running off the field onto Derby Road. The drains cannot cope with the amount of water. Pumping tons of concrete into the ground is only going to exaggerate this issue
1.12	West of Borrowwash	Flooding / Drainage	Sue Higginbottom	Response-01143	Borrowwash is known for flooding and the area you ?intend? to build on is flooded regularly!
1.12	West of Borrowwash	Flooding / Drainage	Suzanne Prior	Response-00907	Will measures be implemented to prevent the existing flooding of that area becoming worse because of building on a natural soak away surface?
1.12	West of Borrowwash	Flooding / Drainage	Tanya caldbeck	Response-00917	Fields already flood
1.12	West of Borrowwash	Flooding / Drainage	T McKinnon	Response-01368	We occasionally have flooding on Derby Road, this is likely to hit us more often with the planned development west of Borrowwash, which would hit a main route into the city.
1.12	West of Borrowwash	Green Belt	Adele Pinkney	Response-01456	This narrow stretch of green belt land is immensely important in its role of preventing the urban sprawl of Derby City as it is all that separates the city boundary from the villages of Erewash. Its development would open the door to the merging of Derby and Nottingham in to one urban conurbation As green belt this land forms part of an essential wildlife corridor. It's destruction would cause loss of habitat and biodiversity, hugely disrupting the local ecosystem This is agricultural land which has been, and can again be farmed. The proposed park area is not an alternative to greenbelt land. It would not maintain the rural, village character of Borrowwash, nor would a managed park with public access provide a comparable habitat to the current open green belt land. Once developed, green belt land has gone forever. Short sighted aims cannot be allowed to destroy our essential ?green lungs?. To build on such precious areas when previously developed land, brownfield sites and empty properties are available is immoral.
1.12	West of Borrowwash	Green Belt	Alice Fitzpatrick	Response-00543	The Green areas and farmland need to be protected whatever designation they are given. We need wildlife. We need pollinators. We need a clear demarcation between the city and the borough and ANY development on this land would mean Borrowwash feeling part of the sprawling Metropolis of Derby city! One field, whether it is designated as parkland or whatever is NOT ENOUGH to divide Borrowwash from Spondon! The council should only be using Brown sites for more housing in the borough! There must be plenty of vacant properties in the towns that could be converted to housing - especially affordable housing!
1.12	West of Borrowwash	Green Belt	Alison Vine	Response-01813	It is also a concern that eventually all of this land will be built on and there will then be no distinction between Borrowwash and Spondon. Borrowwash should remain under Erewash and not become part of Derby city, which has been mentioned.
1.12	West of Borrowwash	Green Belt	Amy Brown	Response-00514	It seems you have chosen the area that disrupts the most people also - where the 'park' section is allocated would of been less disruption to others due to only being opposite a football ground. Why is this the case? If you really thought about the people surrounding these areas, you could have minimised this. You are practically wanting to build around my whole home, up to my back date and down the side of my home amongst many others.
1.12	West of Borrowwash	Green Belt	Angela Chapman	Response-01331	This area was designated green belt, by the monarchy long before any of us were born, this was done for a reason, to help prevent the spread of disease. If allowed, it will not matter how many doctors or health centres pop up, disease will spread rapidly, mother nature always wins in the end, why stack the cards in her favour. Aside from this, the identity of the village will be lost in the sprall of Derby City.
1.12	West of Borrowwash	Green Belt	Ann Daykin	Response-01453	The green belt in Borrowwash needs to be protected for future generations and their wellbeing. This development brings the boundaries between urban and green belt into conflict and leaves precious little green space between Borrowwash and Spondon . It needs to be stopped before it encroaches this precious area..
1.12	West of Borrowwash	Green Belt	Anne Anderson	Response-00980	Green belt is green belt and once it has gone it cannot be retrieved.
1.12	West of Borrowwash	Green Belt	Anthony Clarke	Response-00559	Further reducing the gap between Spondon and Borrowwash.
1.12	West of Borrowwash	Green Belt	Ashley Dunn	Response-01560	The National Planning Policy Framework (NPPF) states in paragraph 138 that: "The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence." Furthermore, the NPPF sets out five purposes of the Green Belt in paragraph 138, including: ? to check the unrestricted sprawl of large built-up areas; ? to prevent neighbouring towns merging into one another; ? to assist in safeguarding the countryside from encroachment. The proposed allocation directly contradicts these aims. The land west of Borrowwash plays a critical role in maintaining the physical and visual separation between Derby City and the settlements within Erewash. The area in question is one of the narrowest sections of Green Belt between Derby and the wider Erewash Borough. Development here would not only compromise the openness of the Green Belt but would also materially contribute to the coalescence of Borrowwash with the urban edge of Derby, undermining the purpose of the Green Belt in a fundamental and irreversible way. The proposed allocation also risks setting a precedent for future erosion of the Green Belt in this strategically sensitive area, threatening the long-term integrity of the boundary between city and borough.
1.12	West of Borrowwash	Green Belt	Barry Shaw	Response-01482	Erosion of the greenbelt is national policy protected against. Removing the greenbelt is absolutely abhorrent.
1.12	West of Borrowwash	Green Belt	Bella Kelsey	Response-00739	The green belt needs expanding not building on
1.12	West of Borrowwash	Green Belt	Britton	Response-00877	Green belt should be protected due to habitat loss - there are surely other sites in and around the area that could be developed without impacting precious green belt
1.12	West of Borrowwash	Green Belt	Carmen Buckley	Response-00737	I object to the proposed planning at the bottom of my garden. There are many solutions to the housing crisis that don't involve building on the Green Belt land.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Green Belt	Carol Shaw	Response-00797	The development west of Borrowwash involves the destruction of green belt land, which is protected under the NPPF. The green belt serves to prevent urban sprawl and maintain the openness of the countryside. Developing this land contradicts the NPPF's aim to protect green belt areas except in exceptional circumstances. Renaming Green Belt to Grey Belt: The renaming of green belt to grey belt is an attack on the protections the green belt is supposed to provide. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. The NPPF states that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified. Renaming and reclassifying these areas undermines the purpose of the Green Belt and threatens the long-term sustainability and environmental health of the region.
			Dale Harlow	Response-00887	Losing natural green belt
1.12	West of Borrowwash	Green Belt	Dan Pilgrim	Response-00932	Protect green belt areas
1.12	West of Borrowwash	Green Belt	David House	Response-01489	The proposed development consumes green belt when we think there are more suitable sites in the borough. The development represents a further step towards a continuous built up area, encroaching into Derby.
1.12	West of Borrowwash	Green Belt	David Modrovic	Response-00803	Green belt needs to be retained for farming! No farmers no food!
1.12	West of Borrowwash	Green Belt	David Smith	Response-01115	It should always be protected particularly when it is already a narrow strip of land. A footpath is not a defensible barrier and so would not be an obstacle to further developments.
1.12	West of Borrowwash	Green Belt	David Steare	Response-01300	The biodiversity of the land and the wilderness appearance should be considered as outstanding natural beauty situated so close to Derby.
1.12	West of Borrowwash	Green Belt	David Tyler	Response-00835	This working agricultural land not baron land
1.12	West of Borrowwash	Green Belt	Deborah young	Response-01306	Why has green belt been changed . Once this beautiful green piece of land is built on it can never be green again . I find that so sad .
1.12	West of Borrowwash	Green Belt	Denise Ball	Response-01291	The site is in a very sensitive part of the Green Belt, being part of a small area separating Erewash villages from the developed areas of Derby City. The few fields between Borrowwash and Spondon protect and retain the individual character of Borrowwash. This piece of the Green Belt is long established and people living in Borrowwash greatly appreciate the openness of the agricultural fields to the west of their village. I ask that Erewash Borough Council protect the Green Belt with respect to this site. The Green Belt around Borrowwash is clearly defined and none of this application site should be developed for housing, small industry and other built structures. A public right of way exists alongside the site. This means that the site will be very visible from public points as well as from the large number of houses neighbouring the site. The development will be a very visible intrusion into the openness of the Green Belt. There are undeveloped sites in Borrowwash that have planning permission. This goes against any idea that there is a shortage of housing in Borrowwash. I am aware that Erewash Borough has been allocating brownfield sites for development and hope that it will continue this policy. I reject strongly, the argument that short-term issues of land supply, if they exist, could be solved by breaking the long-term policy of the Green Belt. Erewash Borough should not allocate housing development to land between Spondon and Borrowwash.
1.12	West of Borrowwash	Green Belt	Denise Illsley	Response-00056	It is vital that we maintain our green belt. Once lost it will never return. Borrowwash will become a concrete jungle with no where for nature to flourish.
1.12	West of Borrowwash	Green Belt	Dr Sarah Mee	Response-01320	Release of Greenbelt land for housing allocation at this site is a complete reversal of the original decision making process which recognised the designated land as fulfilling the purposes of Greenbelt and is without new evidence to underpin revisiting the original decision. There is no new evidence or data submitted within the consultation documents entitled Greenbelt Review Jan 2025 - only a subjective opinion that vistas from the site are semi-urban. The same vistas were present at time of Greenbelt designation so this has not changed and floodlights at the sportsground are used rarely at night and when partially lit, the footpath within the Greenbelt has enhanced safety. It is my counter view from the Greenbelt review report that walking on the footpath at this site provides a real sense of space and countryside with the fields on either side allowing for existing residents and visitors to enjoy a countryside view and feel and exercise themselves and their dogs in fresh air and an open space. There are adequate non- Greenbelt spaces for housing allocation in Erewash. Eroding Greenbelt at this site will fundamentally destroy the village feel to Borrowwash and this open space which prevents the village merging with the Derby City boundary and thus current not feeling like part of the town. We note that the footpath is to be retained however walking on a footpath bordered by a housing estate on one side and a busy parkland area on the other is far from the current experience of space and countryside so my view is that loss of Greenbelt here fundamentally impinges the countryside. Having a new major road in and out of the housing allocation site will also destroy any remaining benefit of the footpath for residents.
1.12	West of Borrowwash	Green Belt	Elizabeth	Response-01215	Joins Borrowwash to the City
			Ellen Young	Response-01357	Once Green belt is gone, it's gone. We can never get it back.
1.12	West of Borrowwash	Green Belt	Emma Gregory	Response-01454	I object to the proposed development being built on Green Belt land within Erewash. There are plenty of brownfield sites in Erewash without building on our precious Green Belt in Borrowwash. I object to this development being built on the last open green space between Derby, Spondon and Borrowwash travelling along the A6005. I object because this is inappropriate development which by definition is harmful to the Green Belt. Last piece of Green Belt lost would lead to urban spread. The village wants to keep its village status and not be joined to Derby
1.12	West of Borrowwash	Green Belt	Eve barker	Response-00443	This land has always been protected greenbelt. As a 40+ year resident, it's essential it stays protected. Borrowwash is a village, not a town. We need these fields for wildlife, protect us from merging into neighbouring villages
1.12	West of Borrowwash	Green Belt	Fiona Richards	Response-00020	Need a fire breaker between Borrowwash and Spondon

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Green Belt	Gillian Fitzpatrick	Response-00482	The Green areas and farmland need to be protected whatever designation they are given. We need wildlife. We need pollinators. We need a clear demarcation between the city and the borough and ANY development on this land would mean Borrowwash feeling part of the sprawling Metropolis of Derby city! The council should only be using Brown sites for more housing in the borough! There must be plenty of vacant properties in the towns that could be converted to housing - especially affordable housing!
1.12	West of Borrowwash	Green Belt	Gillian Hitchcock	Response-00446	Keep green belt for farming!
1.12	West of Borrowwash	Green Belt	Hayley Dexter	Response-00519	Should not be building on green belt land. It should be and is supposed to be protected for a reason!
1.12	West of Borrowwash	Green Belt	Helena Lucas	Response-00644	This area is a precious greenbelt marking a divide between the next village of Spondon and Derby. To disrupt this area would be immoral and deeply upset residence within the village of Borrowwash. It is also a concern that other greenbelt areas would be built upon once this estate has been rolled out.
1.12	West of Borrowwash	Green Belt	Ian Frearson	Response-01267	This site is an important provision of green belt and buffer between the City of Derby and Erewash and as such should be retained and maintained either as agricultural land or managed open space in order to increase the quality and area of land available to wildlife.
1.12	West of Borrowwash	Green Belt	Jacky Kinirey	Response-01209	Greenbelt is called that for a reason not to be built on. We need this stretch of land .
1.12	West of Borrowwash	Green Belt	James Dean	Response-00553	This should be protected at all costs and should be criminal to even consider building on it. Out countryside, open space and green belt is what makes the area so special and what separates us from spondon and the city. Borrowwash feels more rural and building on all this beautiful land will ruin that and ruin the are... depreciating house value and damaging the local quality of life. Making everyone's lives more miserable.
1.12	West of Borrowwash	Green Belt	Jane Rothern	Response-00042	Should not be built on. We need to keep our green spaces. Would be a much better idea to plant trees in the land to help the environment.
1.12	West of Borrowwash	Green Belt	Jane Shepherd	Response-01333	Need to protect this. Need to ensure biodiversity. Why are Derby and Derbyshire not looking at using brown belt sites? Old factories, disused shops etc rather than digging up green spaces
1.12	West of Borrowwash	Green Belt	Jayne Bennett	Response-01519	This area separates us from Spondon and Ockbrook and is one of the reasons that I purchased my house as I like living in a village and the views of open space. It is already a narrow piece of land which would become an even more narrow area should the development be allowed to go ahead. I believe that sufficient land has been identified for the provision of current housing in more suitable areas.
1.12	West of Borrowwash	Green Belt	Jennifer Sutton	Response-00518	The proposal fundamentally contradicts the National Planning Policy Framework (NPPF) and the clearly stated five purposes of Green Belt. This site is Green Belt, which the NPPF protects ?to prevent urban sprawl and safeguard the countryside.? Labour nationally pledged to protect the Green Belt ? reclassifying it as ?safeguarded? land is a sleight of hand and a political betrayal. True sustainable planning starts with brownfield reuse, not expansion into protected land. he Borough should prioritise brownfield redevelopment ? like Stanton Ironworks ? before sacrificing green space. These sites are harder to develop, but more sustainable and in line with both the Core Strategy (2025) and the NPPF?s brownfield-first policy (Para 119).
1.12	West of Borrowwash	Green Belt	Julie Margaret Smith	Response-01090	There should be no housing in the Green Belt. It would compromise the distance between the Borough/County boundary and the city of Derby. We do not want to be absorbed by the city; this proposal, if granted, would set a precedent and soon there would be no Green Belt at all. It is also vital that we protect the Green Belt for ecological reasons, including the protection of wildlife and agriculture.
1.12	West of Borrowwash	Green Belt	kelvin cross	Response-01187	What is the point of having a green belt, which was created with considered due care, to take into consideration/restrict inappropriate future develeopment if all you are going to do is ignore it anyway ? Where is the information collated as part of impact assesments, on the use of already existing brownfield sites ?
1.12	West of Borrowwash	Green Belt	Ken Hardy	Response-00928	This is greenbelt land which was farmed but has clearly been left to make it look suitable for development, there are other area's where houses could be built to help towards the housing targets for example : the old Borrowws site, the Wilmot Arms site and the garage site in the center of the village.
1.12	West of Borrowwash	Green Belt	Kevin Highton	Response-00506	Never build on green belt
1.12	West of Borrowwash	Green Belt	Kevin Palmer	Response-01894	The land west of Borrowwash is farmland in the Green Belt, and therefore development should not be allowed unless there are special circumstances. It has traditionally been left as long as I can remember (72 years) as an open gap between Spondon and Borrowwash to prevent urban sprawl of the two villages and indeed Derby City and Erewash. Previous attempts to develop there have been resisted by local people and turned down by planners. Even with an element of parkland it will still mean that the green boundary between the two communities will be narrowed.
1.12	West of Borrowwash	Green Belt	Kirsty Millward	Response-01327	Loss of vital green belt land with long established hedgerows. You should explore unused brownfield sites before destroying our ecosystem.
1.12	West of Borrowwash	Green Belt	Kirsty Murray	Response-01003	No one appears to care about the green belt anymore
1.12	West of Borrowwash	Green Belt	Laura Dewsnap	Response-00936	The fundamental aim of green belt policy is to prevent urban sprawl by keeping land permanently open. By reallocating the proposed site from green belt land to an area available for development, (grey belt) Borrowwash will have no separation from Spondon and Derby. The site is in a very sensitive part of the Green Belt, being part of a small area separating Erewash villages from the developed areas of Derby City. The few fields between Borrowwash and Spondon protect and retain the individual character of Borrowwash. By taking much of the agricultural land between Borrowwash and Spondon, the remaining land could become unviable leading to further pressure for development. This piece of the Green Belt is long established and people living in Borrowwash greatly appreciate the openness of the agricultural fields to the west of their village.
1.12	West of Borrowwash	Green Belt	Lauren Fardoe	Response-00039	Will the remaining green belt be available for housing in time

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	West of Borrowwash	Green Belt	Lesley Eccles	Response-00814	Presumably this is currently green belt so we will have less now
1.12	West of Borrowwash	Green Belt	Lesley Young	Response-00902	Green belt was established for good reasons so why are they now being ignored. There needs to be a break between borrowwash and Spondon.
1.12	West of Borrowwash	Green Belt	Lewis Sutton	Response-00415	The proposal fundamentally contradicts the National Planning Policy Framework (NPPF) and the clearly stated five purposes of Green Belt. Under the NPPF, Green Belt land is to be protected from inappropriate development unless exceptional circumstances can be demonstrated. The proposed allocation for 280 homes on 14 hectares at West of Borrowwash contradicts multiple key aims of Green Belt policy and raises significant concerns. The development site is currently designated as Green Belt, which serves critical functions: preventing urban sprawl, safeguarding the countryside from encroachment, and preserving the setting and character of nearby settlements. Releasing this land for development undermines the permanence and purpose of the Green Belt, especially when alternative brownfield sites or lower-quality land have not been exhausted.
1.12	West of Borrowwash	Green Belt	Lindsay Hodson	Response-01434	Completely reject the plans to build on any green belt land. Breaston has derelict warehouses etc. Why not knock them down and build there. Do not ruin the environment unnecessarily.
1.12	West of Borrowwash	Green Belt	Lynda Gamble	Response-00910	As more and more land is taken for house building it won't be long before the concept of green belt land means absolutely nothing at all. Wouldn't it be awful if all towns and villages just became one giant sprawling housing estate with no apparent boundaries or green spaces to distinguish one area from the next? That is the way things appear to be turning out around here with these new housing developments planned.
1.12	West of Borrowwash	Green Belt	Mandy Dickens	Response-00590	This is prized greenbelt land between Erewash and Derby and as such should not be built on
1.12	West of Borrowwash	Green Belt	Margaret Irene Wheatley	Response-00915	The Greenbelt needs to be preserved to protect the Villages identity.
1.12	West of Borrowwash	Green Belt	Mark Fearn	Response-00507	The building of houses on vital green belt area will be detrimental to local wildlife and ecosystems which already struggle with the growing building projects in nearby areas.
1.12	West of Borrowwash	Green Belt	Mary-Jo McDermott	Response-01437	This land is designated Green Belt for good reason. It provides a buffer against urban sprawl, but more importantly, it offers sanctuary to wildlife, including raptors that rely on these open fields for both feeding and breeding. Building on green belt land sets a dangerous precedent, eroding protections designed to preserve nature. Once developed, this habitat cannot be recovered. It would lead to irreversible harm to the environment, the wildlife, and the identity of the area.
1.12	West of Borrowwash	Green Belt	Matt Harvey	Response-01312	This is our only green belt between Borrowwash and Spondon. Every effort should be made to build elsewhere first and protect this green belt.
	West of Borrowwash	Green Belt	Maxwell Sutton	Response-01093	Max aged 5 loves the greenery and fields of Borrowwash, without this we may as well live in the city.
1.12	West of Borrowwash	Green Belt	Middleton	Response-00893	I thought it was green belt, either way its a lovely walking area
1.12	West of Borrowwash	Green Belt	Mike Casartelli	Response-01211	Brown belt before green belt. Before long we will lose all of our green spaces.
1.12	West of Borrowwash	Green Belt	Mrs Kay Rigby	Response-00876	This has always been green belt and should be protected from this housing estate
1.12	West of Borrowwash	Green Belt	Mrs M McCroft	Response-00532	This area is supposed to be green belt?
1.12	West of Borrowwash	Green Belt	Mr Timothy Shepherd	Response-01334	Green Belt land needs to be protected. No green Belt land should be sacrificed while there are still alternative sites that are not being redeveloped. More city sites should be developed where shops have closed and are empty in recent years.
1.12	West of Borrowwash	Green Belt	Neil Raistrick	Response-01365	The land to the west of Borrowwash is considered as part of Green Belt; the Erewash Green Belt Review (page 79) is being very disingenuous by suggesting the current housing along between Derby / Nottingham Road should define the westerly boundary of Borrowwash, this is a single row of housing along a road as the mority of the housing that defines this boundary are on Victoria Road.
1.12	West of Borrowwash	Green Belt	Nicholas Parr	Response-01253	This piece of land was declared Green Belt with a classification of 3a so is ideal for livestock and crops and therefore should never be offered for housing. Any building on this land would lead to CONURBATION with the village being extended too closely to Derby City boundary. Previous planning applications have been unanimously rejected on the above grounds plus, a full survey of the land was conducted and found that the village simply does not have the infrastructure to support the development. This was before the sites that were the Burrows/William Barron's house, Wilmot Arms, Harrington Avenue etc were granted permission to build! The council should only be using Brown sites for more housing in the borough with an emphasis on affordable housing! There must be many vacant properties in the towns that could be converted to housing without impacting on the Green Belt.
1.12	West of Borrowwash	Green Belt	Nick Coates	Response-00393	Need to protect green belt land
1.12	West of Borrowwash	Green Belt	Nicola Ashton	Response-00081	This has been classified as green belt and was agreed by council last time this was proposed. We need to preserve our green belt as a fantastic source of habitat for our local wildlife, if we lose these animals we will never be able to get them back. The green belt is so important for people health and well-being, if we build on it where is our food going to grown , trees take in so much Co2 out of our atmosphere and provide homes for wildlife they are amazing
	West of Borrowwash	Green Belt	P. Hart	Response-00623	Loss of this green wedge will be most felt by people living on the edge of the area.
1.12	West of Borrowwash	Green Belt	Paul and Dawn Davison	Response-01804	The divide between Spondon and Borrowwash would be closer to becoming just one area.
1.12	West of Borrowwash	Green Belt	Paul Barker	Response-00800	All this proposed site should be classed as green belt as this has been used for growing crops up until this year.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowash	Green Belt	Peter John Ball	Response-00703	The area is an important part of the Greenbelt separating the City of Derby from villages in Erewash. It is the only piece of agricultural land between the village of Borrowash and the centre of Derby City. On previous appeals against development of this land, planning inspectors have refused development as it would destroy the open nature of the area between Borrowash and Spondon. The proposed park will not give that openness that is so vital to the character of the land. There are other areas of land in the Derby and Nottingham Greenbelt in Erewash that would not have the same impact as building on the land west of Victoria Avenue. While the development will spoil the views of the residents on Victoria Avenue, that is not the main reason for my objection. The development of this land will remove the last agricultural separation of Borrowash from Spondon. The land is graded as 3a, which is above average for UK agricultural land and should be kept for agriculture and not be developed.
	West of Borrowash	Green Belt	P Fisher	Response-01175	We need to protect our green spaces, before there are none left.
1.12	West of Borrowash	Green Belt	Philip Archer	Response-01392	I'm concerned about building on the green belt however this is not prime agricultural land as it is very wet with poor drainage so in principle I am happy with this site. However it should be noted to maintain the boundary on the western side as per the recommendations
1.12	West of Borrowash	Green Belt	Phil Self	Response-00759	That is a large walking area for people and for wildlife to thrive
1.12	West of Borrowash	Green Belt	Raoul Pinkney	Response-01457	The proposed housing development and park would take up the entire green belt separating Derby City from Borrowash village. Without this green belt Borrowash would become part of the Derby urban sprawl and lose its identity as a village. The Green Belt is also vital for biodiversity and wildlife. It is agricultural grade land which could be used for food production, as it has done in the past.
1.12	West of Borrowash	Green Belt	Ray Kirk	Response-01378	It appears the term Green Belt means nothing nowadays, it looks like its all about money and housing anyone.!!!
1.12	West of Borrowash	Green Belt	Rebecca Peach	Response-00404	The reason we moved here was for our health benefits and building on more and more green belts is disgraceful to the local area.
	West of Borrowash	Green Belt	Richard hodgkinson	Response-00530	We object strongly to the buildings on green belt and the disappearance of Borrowash as an individual village
1.12	West of Borrowash	Green Belt	Robert Mee	Response-01504	My main reason for objecting to these developments is that I do not believe that the criteria set out in the NPPF has been met justifying any encroachment into the Green Belt at this time. The Core Strategy and this Amendment are developed in order to meet the housing targets allocated to the council by central government. I do not believe that the number of houses required by government constitutes, in itself, the ?exceptional circumstances? which are required under the Framework. This is particularly so in view of there being no published objective basis for the numbers allocated to each authority. The term ?exceptional circumstances? does include ?instances where an authority cannot meet its identified need for homes?. The waiting list for social housing in the general area might suggest that this is the case, but I do not accept that these plans will go far to address this issue ? the vast majority of the planned housing allocations are not even for affordable housing, let alone social housing. Additionally, I do not remember seeing evidence that Erewash has specifically quantified local (i.e. Erewash) housing needs. I also do not believe that much, if any, of the Green Belt selected for development would fit the definition of ?Grey Belt?. As a concept, I can support the idea of Grey Belt as originally reported, i.e. pieces of land within the Green Belt which have previously been developed ? indeed, I can think of a few locally, though they are all fairly small. I find the arguments that I have heard over distances between the edge of Derby and the edge of other towns, and how these distances will still be maintained, extremely spurious. The Green Belt in its entirety exists to prevent Nottingham and Derby from merging ? while building on any of these sites does not immediately make the two cities any closer to each other, it does reduce the green space between the two cities, which is precisely what the Green Belt was established to prevent. The Green Belt is a regional initiative, covering two counties and several local authorities. With Erewash having such a high proportion of its land earmarked as Green Belt it is incumbent on the region as a whole to find a solution to the housing shortage, rather than to expect our authority to have to sacrifice its green spaces.
1.12	West of Borrowash	Green Belt	Sarah Cresswell	Response-01206	The proposed allocation completely contradicts the Green Belt Policy within The National Planning Policy Framework - "The fundamental aim of Green Belt Policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence." The land west of Borrowash plays a critical role in maintaining the physical and visual separation between Derby City and the settlements within Erewash. The area in question is one of the narrowest sections of Green Belt between Derby and the wider Erewash Borough. The proposed development would not only compromise the openness of the Green Belt but would also materially contribute to the coalescence of Borrowash with the urban edge of Derby, undermining the purpose of the Green Belt in a fundamental and irreversible way.
1.12	West of Borrowash	Green Belt	Sarah McAuslan	Response-01248	Our green belt is precious and it's provides the future for our children to enjoy. By having villages become towns we remove all the amazing reason green belt was created in the first place. We need it for wildlife and fresh air . We cannot destroy our villages . Greenbelt rules must remain
1.12	West of Borrowash	Green Belt	Simon Shaw	Response-01152	Green belt building is against the NPPF. It's much easier (cheaper) to build on green belt land, but we should not be doing it, especially if we respect our land and our children. It's very shameful what ahs been proposed.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Green Belt	Stephen Peat	Response-01793	According to the Daily Express article, Erewash Core Strategy and the Amendment Strategy could see the merger of Derbyshire and Nottinghamshire into a major City. The development in Erewash could see Derby and Nottingham become the largest cities in the UK outside London and Birmingham. The Daily Express listed the area between Derby and Nottingham, including land at the location, which would lead to the merger of the two cities, forming one new conurbation. In the plan, over 280 houses could be built on green belt land, leaving no greenbelt between Spondon and Borrowwash, which would affect wildlife in the area, and with reduced Greenbelt Land available. The loss of land would affect the greenbelt's lung capacity to reduce air pollution and climate change. This includes reducing agricultural land for food production, and given the effects of climate change on future farm yields, has been reduced across the UK and Europe. When the government announced the grey belt for new developments of houses, it was land that had been built on, including disused homes that had not been occupied for 20+ years, farm buildings, and old industrial land reclaimed by nature. The land west of Borrowwash has been farmed for 250 years in a crop rotation with year 1 wheat crops, year 2 Barley, year 3 animal feed or beans, and a fallow year to help improve the soil for cropping in the following year. When you look at the history of the land at Borrowwash Library, this land would not be classed as a grey belt area because, according to the history of Spondon, Ockbrook and Borrowwash, the land has been farmed to grow crops for the food industry from bread making to producing straw to feed horses and animals within the East Midlands. In conclusion, when you look at the pros and cons of this plan development, I think this location is unsuitable because it will merge Derby and Nottingham into a new conurbation covering the East Midlands. The greenbelt has been classed as a grey belt, but when you examine the site, there has been no grey belt terminology because the site has been farmland for hundreds of years. In the introduction of my first part of the letter, highlight that this location is not a grey belt but a greenbelt zone. For example, when engineers examine the land area, they would notice that this area has been farmed for over 250 years. There is no evidence of a building constructed on the site or housing of animals or farm equipment. This means this land is a greenbelt and not a grey belt in the land identification of the land listed in the introduction and Section A
1.12	West of Borrowwash	Green Belt	Steve Brown	Response-01153	WHY?
1.12	West of Borrowwash	Green Belt	Steven Hoolan	Response-00912	This is the last remaining area of Greenbelt between Spondon and Borrowwash. It is criminal to build on greenbelt. It is designated greenbelt for a reason
1.12	West of Borrowwash	Green Belt	Sue Higginbottom	Response-01143	Leave our green belt alone! You are ruining our community our Children's welfare and countless other things!
1.12	West of Borrowwash	Green Belt	Suzanne Prior	Response-00907	The green belt land to the west of the area is an important corridor for the environment. The impact of new housing with all the construction vehicles and noise is going to have a significant impact on the wildlife in this area.
1.12	West of Borrowwash	Green Belt	Tanya caldbeck	Response-00917	Should not be built on greenbelt land
1.12	West of Borrowwash	Green Belt	T McKinnon	Response-01368	Corridor for wildlife is being narrowed. Borrowwash in danger of being absorbed into Derby whilst Ockbrook with its wider gap between village and city gets a park! Seems very unfair, Why not reverse this design, convert the field west of Borrowwash into a park, and use some of the much larger open space west of Ockbrook for development.
1.12	West of Borrowwash	Green Belt	Wayne Henderson	Response-01207	The designated green belt land in and around the villages of Borrowwash, Risely, Draycott, and Breaston serves the communities that live in those settlements in many ways. The land naturally plays host to thriving wildlife and biodiversity which often spills over into the gardens and green spaces in those settlements. This in turn gives the inhabitants benefits of positive mental health and wellbeing. It's a well known fact that natural spaces and places play a huge role in people's quality of life. The green belt and green wedges help to promote individual identity between each settlement and yet helps to weave a common thread and interest in the environment that we live in. Local initiatives such as village in bloom? bring people from different villages together forming a common goal of wanting to improve the place where we live?. There is no doubt that there is a need for housing nationwide, but it should not take the place of green belt and wedges. Careful due consideration needs to be applied to ensure that urban sprawl does not take precedence over nature and its precious wildlife. Due process needs to also be applied when identifying fertile farm land to prevent it easily falling into the lap of developers just because the landowner wants to cash in?. The Core Strategy Policy? in my opinion needs to observe the need for housing development in conjunction with those communities and their quality of life it wishes to impose on. As inhabitants of Erewash we place our trust in those making very important decisions that will affect our quality of life and wellbeing, and not just bow to that that Central government dictates.
1.12	West of Borrowwash	Healthcare Facilities	Adele Pinkney	Response-01456	Our local GP surgeries are already stretched beyond capacity. I believe they objected to similar development plans ten or so years ago on such grounds, and accessing appointments for current patients has become much more difficult since then. The local dentist has not had any NHS spaces for several years, only taking new patients on for private treatment.
1.12	West of Borrowwash	Healthcare Facilities	Alex Lowe	Response-00707	We already struggle to get appointments at the Borrowwash park medical site and it's 2 minutes walk from our house. Capacity will not keep up
1.12	West of Borrowwash	Healthcare Facilities	Alice Fitzpatrick	Response-00543	The practice I use is at capacity. I can usually get an appointment eventually but any further load and this will not be the case. The other practice however this is not the case. Everyone I speak with who is registered complains that they cannot get through on the phone let alone get an appointment! This practice is causing more stress than it is easing! Ironical that the landowner for this proposed site is or was connected with this practice. As you can see above we have very limited healthcare facilities now and certainly cannot accommodate any further strain.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Healthcare Facilities	Amy Brown	Response-00514	The 2 local doctor surgeries are bursting at the seams and many residents are finding it super difficult to even get through to a GP let alone see one. We are a village made up of many elderly residents alongside Ockbrook and some of these are not getting access to the care they need. People are moving surgeries purely due to the impact already being had on our surgeries and this isn't acceptable. To bring in a whole new neighbourhood of people to an area where these surgeries will take a further beating is madness. Whilst homing people is super important and one I advocate for, I don't believe taking away from current residents is a fair option. We also have a small dental surgery alongside an eye surgery which again would not cope with the impact of a wider community. Borrowwash is not in a position to be extended with the facilities we have available.
1.12	West of Borrowwash	Healthcare Facilities	Ann Daykin	Response-01453	Borrowwash has two surgeries and one dentist. Both surgeries are oversubscribed and find patients complain that it's difficult to get an appointment. The dentist practice is also struggling with patient numbers.
1.12	West of Borrowwash	Healthcare Facilities	Anne Anderson	Response-00980	It is virtually impossible to even get through to The Park Medical Practice on the telephone never mind get an appointment. I see the Surgery have applied to extend into the house next door but are not going to increase their staff so what is the point.
1.12	West of Borrowwash	Healthcare Facilities	Anthony Clarke	Response-00559	What a joke an additional 280 houses , average 2.5 people per house. Both doctors surgeries already at full capacity, can't get an appointment as it is now
1.12	West of Borrowwash	Healthcare Facilities	Ashley Dunn	Response-01560	The ability to get a doctor's appointment in Borrowwash via Park Medical Practice or Overdale is already incredibly difficult and frustrating for everyone. More houses would exacerbate this unacceptably.
1.12	West of Borrowwash	Healthcare Facilities	Barry Shaw	Response-01482	It is currently hard to impossible to see NHS services, this will be exacerbated.
1.12	West of Borrowwash	Healthcare Facilities	Breanne Rodda	Response-00708	I can never get an appointment at Park Medical Practice Borrowwash as it stands. I routinely can't get an appointment or get sent to Chaddesden . This would just make the problem worse
1.12	West of Borrowwash	Healthcare Facilities	Britton	Response-00877	Trying to get a doctors appointment is already extremely difficult, the surgery phone lines are frequently full to capacity and people queue daily to wait for opening- the proposed site will only add to the pressures and lack of appointments
1.12	West of Borrowwash	Healthcare Facilities	Carol Shaw	Response-00797	The strategy does not specify enhancements to local healthcare facilities to accommodate the increased population. The influx of new residents will put pressure on existing struggling healthcare services, leading to longer wait times and reduced access to care
1.12	West of Borrowwash	Healthcare Facilities	Catherine Casartelli	Response-01428	The doctors are already overstretched with the current village population. There is only 1 NHS dentist and they are full to capacity.
1.12	West of Borrowwash	Healthcare Facilities	Catherine Fox Charlton	Response-00659	Difficult to get medical appointments for current population and the chemist has difficulty servicing pharmaceuticals
1.12	West of Borrowwash	Healthcare Facilities	Chris Archer	Response-01142	The two doctor surgeries and dentist surgery are already over subscribed and appointments are impossible to get at the minute with the population as it is without increasing this issue with a larger population
1.12	West of Borrowwash	Healthcare Facilities	Christine Cole	Response-01254	There are already reports of the local health care system creaking under the capacity to cope? What additional costs does this put on that system?
1.12	West of Borrowwash	Healthcare Facilities	Craig Hydes	Response-00782	The local NHS dentist is full to capacity, and I have been on the waiting list for several years.
1.12	West of Borrowwash	Healthcare Facilities	Dale Harlow	Response-00887	The doctors has applied for an extension but is under staffed regardless
1.12	West of Borrowwash	Healthcare Facilities	Daniel Lang	Response-00322	The local GP practices are already massively oversubscribed. It is virtually impossible to get an appointment. There will be a desperate need to bring in another surgery or expand the current one
1.12	West of Borrowwash	Healthcare Facilities	David House	Response-01489	The local GP practices are unlikely to cope with the increase in numbers of people.
1.12	West of Borrowwash	Healthcare Facilities	David Modrovic	Response-00803	Doctors facilities are already pushed to the brink!
1.12	West of Borrowwash	Healthcare Facilities	Deborah young	Response-01306	We can't get in the doctors now . What would it be like with another 500 + people . Dentist is full .
1.12	West of Borrowwash	Healthcare Facilities	Denise Ball	Response-01291	Borrowwash is well served with services including doctor's surgeries, chemists, a dentist, library, junior and infant schools and a shopping area supplying most daily needs. The size of the proposed development would put pressure on these services. The Practitioners Surgery on Derby Road is already reported to be at full capacity and is being extended to cope with existing demand for health care. There would need to be further expansion of services to cope with a population increase from the houses in this development.
1.12	West of Borrowwash	Healthcare Facilities	Denise Illsley	Response-00056	We have two medical practices in Borrowwash and it is becoming increasingly difficult to get appointments to see a GP or nurse. It's near impossible to get a blood test. Not everyone has transport to enable them to travel to get a test. The situation has just got worse and this will make it even more difficult.
1.12	West of Borrowwash	Healthcare Facilities	Dianne Simmons	Response-00401	The Dr's Surgery on Victoria Avenue and Derby Road already struggle to provide appointments, with over 200 new homes it will be impossible to get an appointment and with an aging population in Borrowwash and Ockbrook this is very concerning
1.12	West of Borrowwash	Healthcare Facilities	Dr Sarah Mee	Response-01320	Emergency secondary access to the proposed allocation site must be robustly designed otherwise access to emergency services will remain a major concern for the people living in the proposed development of 280 houses. Access to healthcare facilities is already extremely restricted for existing residents due to staffing issues and size of the GP practices serving Borrowwash and the nearest A and E and other secondary care facilities. Increasing the housing allocation safely must be accompanied by increasing the access to healthcare facilities and be proven to not just add further strain on existing resources.
1.12	West of Borrowwash	Healthcare Facilities	Elizabeth	Response-01215	Dr's are already over prescribed
1.12	West of Borrowwash	Healthcare Facilities	Ellen Young	Response-01357	We have 2 GP surgeries. These struggle to process the current population of Borrowwash without an extra influx of people. As a patient at Overdale Medical Practice, I recently struggled to get an appointment as they were fully booked. Likewise, people often voice their frustration with not being able to book appointments at both Medical Practices on the community Facebook group. The dentist often stops accepting NHS patients as they're full. If residents of the affordable housing require dental appointments then they'll likely need NHS appointments due to the high cost of appointments.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Healthcare Facilities	Emma Gregory	Response-01454	Great difficulty in getting appointments now. With 268 new houses, to say 4 people to a new house, that is approximately 1064 people needing to be registered to a new GP practice. Even though Park Medical Practice in Borrowwash has an extended building, they will still have to get more staff when as we know it is not easy to recruit.
1.12	West of Borrowwash	Healthcare Facilities	Eve barker	Response-00443	I've rang 5 times this week to get a doctors appointment and each time, no appointments available. Too many people, too few spaces
1.12	West of Borrowwash	Healthcare Facilities	Francesca Hope	Response-00528	Our 2 GP surgeries are already full to capacity and obtaining an appointment is a struggle without additional residents to include also
1.12	West of Borrowwash	Healthcare Facilities	Gillian Fitzpatrick	Response-00482	Our doctor's practices are full and one of the practices already has a very poor reputation for answering the phone and providing appointments.
1.12	West of Borrowwash	Healthcare Facilities	Gillian Hitchcock	Response-00446	Wow health care is a massive problem locally, lack of appointments, so unless a new facility is being built it?s going to be awful
1.12	West of Borrowwash	Healthcare Facilities	Hayley Dexter	Response-00519	The doctors are already struggling and patients can't get appointments!! This will impact this hugely in a negative way
1.12	West of Borrowwash	Healthcare Facilities	Helena Lucas	Response-00644	I have worked at the local GP Practice on Nottingham Road in Borrowwash, It is always fully booked with appointments. One way to facilitate increased numbers of patients would be to increase the number of appointments buy reducing appointment times and/or increasing the number of appointments per GP or other Healthcare Professionals. This leads to burnout and staff leaving the role. I understand that the surgery is extending to the neighbouring property, however increasing and retaining staff numbers would remain a challenge. This will put Borrowwash Residence at risk, as access to the GP surgeries will become more difficult. Furthermore, this puts pressure on other healthcare services affecting patient outcomes.
1.12	West of Borrowwash	Healthcare Facilities	Helen Pearce	Response-01550	The doctors and dentists are already oversubscribed. No new provision is being made for the influx of new homeowners.
1.12	West of Borrowwash	Healthcare Facilities	Henrietta heron	Response-01354	Getting a doctors appointment is already very difficult add into this another 200 houses with multiple occupants it will add extra pressure
1.12	West of Borrowwash	Healthcare Facilities	Iain Pendry	Response-01188	Healthcare provision in Borrowwash is already very significant stretched, with it being almost impossible to get a Dr or Dental appointment at the local practices. Whilst I support the additional houses in the villages, very serious consideration needs to be given to how the additional population will not further degrade these already stretched health services. I would expect to see statements from these local health providers laying out how they will meet these challenges, and what support is to be provided to them to enable them to do so.
1.12	West of Borrowwash	Healthcare Facilities	Ian Bloor	Response-00778	It is already difficult to get appointments at the local doctors surgeries , an influx of so many new households would make this extremely difficult
1.12	West of Borrowwash	Healthcare Facilities	Ian Frearson	Response-01267	The proposal would require the provision of an additional health facility for Doctors and Dentist practices without which the existing provision would be overwhelmed
1.12	West of Borrowwash	Healthcare Facilities	Ian Wood	Response-00987	Additional housing will inevitably have a detrimental effect on the current inhabitants being able to access doctors and other healthcare provision.
1.12	West of Borrowwash	Healthcare Facilities	Jacky Kinirey	Response-01209	Our NHS is over stretched at the moment we need more local services for example doctors, dentists, facilities for the elderly to go to,so they do not feel isolated or alone. Building more houses without planning long term for an ageing population is shortsighted and irresponsible.
1.12	West of Borrowwash	Healthcare Facilities	Jaime Grant	Response-00512	As with schools, how has the impact of these homes been considered? What solutions have been provided?
1.12	West of Borrowwash	Healthcare Facilities	James Dean	Response-00553	This will certainly have dire consequences to our local health care. Our local GP practices are set up to deal with a relatively small town and are already stretched with long wait times... more houses will be a mistake and impact the community in a negative way. Not to mention the fact it is already impossible to sign up to an NHS dentist anywhere locally.
1.12	West of Borrowwash	Healthcare Facilities	Jane Rothern	Response-00042	Our doctors are already stretched and this will get even worse with another 500+ residents in the village.
1.12	West of Borrowwash	Healthcare Facilities	Jane Shepherd	Response-01333	I have huge problems whenever I need a doctor's appointment. This will only be exaggerated by more families settling in the area. As for NHS dentists, will these also be made available. As with education the NHS budgets are already stretched, how will these cope? It's a nightmare trying to get a doctors appointment at this moment in time. Will extra doctors be part of the plan? Also NHS dentists? ?
1.12	West of Borrowwash	Healthcare Facilities	Jayne Bennett	Response-01519	Doctors and dentists are at full capacity and people living in the village may have the inconvenience of having to go elsewhere.
1.12	West of Borrowwash	Healthcare Facilities	Jennifer Sutton	Response-00518	Healthcare services are already overburdened. Borrowwash currently lacks an NHS dentist and faces excessive GP waiting times. There are no proposals in the policy to add or fund health services. The strategy relies on Section 106 contributions ? but with multiple strategic developments across the borough, this stretches resources thinner, not wider. It directly contravenes Strategic Policy 1.1 (Point 8) of ensuring sufficient healthcare contributions.
1.12	West of Borrowwash	Healthcare Facilities	Joanne	Response-01252	Have you tried getting a doctors appointment in Borrowwash???
1.12	West of Borrowwash	Healthcare Facilities	Jodie Brown	Response-01213	The local GP surgeries are already oversubscribed, getting an appointment is near on impossible
1.12	West of Borrowwash	Healthcare Facilities	John & Anna Mead	Response-00772	It is difficult to get to see your gp at the moment without more people coming
1.12	West of Borrowwash	Healthcare Facilities	Judith Anderson	Response-00934	Our present doctor surgeries are already over subscribed, this will worsen with increased number of inhabitants.
1.12	West of Borrowwash	Healthcare Facilities	Julie Margaret Smith	Response-01090	Healthcare provision is underfunded everywhere and the NHS is in crisis. Additional housing of this amount will put increasing pressure on local services, leading to worse provision for all.
1.12	West of Borrowwash	Healthcare Facilities	kelvin cross	Response-01187	Where is the viewable impact assessment that has been carried out(?) in relation to the effect of another 1000'ish people on the already stretched local medical services ?

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Healthcare Facilities	Kirsty Millward	Response-01327	Both doctors surgeries in Borrowwash are already at full capacity and are incredibly difficult to get appointments at. I have had several instances where I have been unable to get my 10 month old to see a gp for several days, causing me resort to seeing help at emergency care. Adding more people to the village will add further demand for our two gp services that are already overburdened and struggling to support the local community. The dental practice in the village is also full and not accepting any nhs patients. Adding more residents to the village will only make access to a dentist more difficult for the existing residents. You will need to accommodate the new patients or build the houses elsewhere.
1.12	West of Borrowwash	Healthcare Facilities	Kirsty Murray	Response-01003	It is already almost impossible to get a doctors appointment , unless you know weeks in advance you are going to be ill, so ofcourse more families will have a negative impact.
1.12	West of Borrowwash	Healthcare Facilities	Laura Dewsnap	Response-00936	There is currently one dentist in Borrowwash and they are currently not accepting new NHS patients. There are 2 GP surgeries in Borrowwash but unfortunately, it is very difficult to get an appointment at either. There are long call waiting times to speak to reception and it is difficult to get a place in the call queue in the first place. I understand that one of the surgeries is currently planning an extension to make the building larger but unfortunately, the building they already have is not filled to capacity as there are not enough GPs employed there to serve the client database they have. An extension to the building will not generate more appointments, it will just generate more space. There are not sufficient healthcare facilities in Borrowwash to serve the existing population. An increase in the population will put further strain on the services currently offered.
1.12	West of Borrowwash	Healthcare Facilities	Lauren Fardoe	Response-00039	With 280 houses where do the council propose they register for doctors ?
1.12	West of Borrowwash	Healthcare Facilities	Lesley Eccles	Response-00814	Will impact on both doctors surgeries and will make it even harder to get an appointment
1.12	West of Borrowwash	Healthcare Facilities	Lesley Young	Response-00902	We are really struggling to get any appointments at the Park Medical faculty and they are clearly unable to take any more people. Overdale is the same.
1.12	West of Borrowwash	Healthcare Facilities	Lewis Sutton	Response-00415	Local GP surgeries and healthcare facilities are already under pressure. An influx of residents from 280 new homes (plus future expansion) would stretch resources further, potentially reducing care quality and accessibility for existing residents. Currently I have personally been unable to get a doctors appointment for days. Even with a slight expansion to meet current needs this number of extra people will destroy any capacity.
1.12	West of Borrowwash	Healthcare Facilities	Lindsay Hodson	Response-01434	Both Borrowwash doctors are very busy. I have moved from one to the other to try and get better service but it did not help. More doctors would be absolutely necessary.
1.12	West of Borrowwash	Healthcare Facilities	Lucas Hodson	Response-01435	The only 2 local doctors are in borrowwash so by bringing more people into the area there will be more pressure on the doctors than there already is.
1.12	West of Borrowwash	Healthcare Facilities	Mandy Dickens	Response-00590	It is already nigh on impossible to get a Doctors appointment in this area. The additional people coming to this area would make the situation impossible
			Margaret Irene Wheatley	Response-00915	Both Doctors are struggling with the needs of the Village as it stands.
1.12	West of Borrowwash	Healthcare Facilities	Mark Birkinshaw	Response-00046	With availability of appointments almost impossible to secure at The Park Medical Centre how will this be addressed to ensure that all residents have the correct levels of access to medical care required and if this facility is at or close to capacity then where will 280-1000 more residents be supported?
1.12	West of Borrowwash	Healthcare Facilities	Mark Fearn	Response-00507	Local medical practices (doctors and dentists) are already nearing or are at (in the case of the local dentists) at full NHS capacity meaning not only can it not provide a service to new residents but it will diminish what little current ones get.
1.12	West of Borrowwash	Healthcare Facilities	Mark Green	Response-00940	Assuming that the majority of these homes (and the ones at the rear of Hawthorne Avenue,) will have at least 2 people living in them, will mean that additional GP healthcare facilities will be needed as the current services are already struggling with an ever increasing demand. On the current plan, no such facilities have been accounted for.
1.12	West of Borrowwash	Healthcare Facilities	Mary-Jo McDermott	Response-01437	GP surgeries and dental practices in the area are already stretched, with long waiting times. This development would add further pressure, compromising access to essential health services.
1.12	West of Borrowwash	Healthcare Facilities	Matt Harvey	Response-01312	I can't get in now never mind building another 100+ houses! No chance.
1.12	West of Borrowwash	Healthcare Facilities	Middleton	Response-00893	Already cannot get to see a doctor
1.12	West of Borrowwash	Healthcare Facilities	Mike Casartelli	Response-01211	The medical and dental practices in the village are already under incredible strain, which is impacting the quality of service being offered. A development this size will only worsen the situation.
1.12	West of Borrowwash	Healthcare Facilities	Mr N D NICHOLLS	Response-01192	It is virtually impossible to get a doctors appointment now
1.12	West of Borrowwash	Healthcare Facilities	Mrs.A.Pickard	Response-00802	Health care is stretched as it is, further development of housing to the extent being voiced surely requires further services being included for new practices to be built.
1.12	West of Borrowwash	Healthcare Facilities	Mrs Kay Rigby	Response-00876	All our GP's are full with trouble getting an appointment now so how can they cope with all the extra patients they will have to take on
1.12	West of Borrowwash	Healthcare Facilities	Mrs M McCroft	Response-00532	Doctors can't cope with what they have at the moment without hundreds of more people
1.12	West of Borrowwash	Healthcare Facilities	Mrs Sheila Hardington	Response-01232	GP Practices in Borrowwash are difficult enough to access for appointments without extra potential patients.
1.12	West of Borrowwash	Healthcare Facilities	Mr Timothy Shepherd	Response-01334	The local doctors practices are already under strain. It is already difficult to obtain doctors or nurse appointments. The local practices could not cope with so many more patients.
1.12	West of Borrowwash	Healthcare Facilities	Nathan Thomson	Response-01328	Already hard to get medial appointments due to the numbers registered, adding more houses would require the need for more providers
1.12	West of Borrowwash	Healthcare Facilities	Nicholas Parr	Response-01253	Healthcare provision is a challenge nationwide. Additional housing of this amount will put increasing pressure on local services, leading to worse provision for all.
			Nick Coates	Response-00393	Limited health care around the area

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Healthcare Facilities	Nicola Ashton	Response-00081	You can't get an appointment at our local doctors, dentist now as they are so overwhelmed with the amount of residents registered now
			P. Hart	Response-00623	It is difficult to get appointments already.
1.12	West of Borrowwash	Healthcare Facilities	Paul Barker	Response-00800	Doctor appointments are already difficult to arrange without more people trying to access the service
1.12	West of Borrowwash	Healthcare Facilities	Peter HINKLEY	Response-00775	Existing GP Services will come under additional strain I assume - I do not have any numbers.
1.12	West of Borrowwash	Healthcare Facilities	Peter Howell	Response-00829	no new doctors surgery current at bursting point
1.12	West of Borrowwash	Healthcare Facilities	P Fisher	Response-01175	It is hard enough to get a GP appointment as it is, without adding several hundred more patients to practice lists.
1.12	West of Borrowwash	Healthcare Facilities	Phil Adcock	Response-01488	These services are already stretched to our detriment.
			Phil Self	Response-00759	More unnecessary queues and problems for doctors and dentists, just ruin it for everyone why not !
1.12	West of Borrowwash	Healthcare Facilities	Raoul Pinkney	Response-01457	The GPs surgeries in Borrowwash are already struggling to provide an accessible service to the current population. The demand from a large increase in homes in the area would be too much for the surgeries to absorb. The one dentist in the village has not taken on new NHS patients for some years
1.12	West of Borrowwash	Healthcare Facilities	Ray Kirk	Response-01378	Unless another doctors surgery is going to be built you could be looking at another 1000+ people putting pressure on an already pressured system.
1.12	West of Borrowwash	Healthcare Facilities	Richard hodgkinson	Response-00530	Healthcare in the village is good at the moment but additional housing will threaten this
1.12	West of Borrowwash	Healthcare Facilities	Sarah Davies	Response-01137	I understand demand for the NHS and services are high everywhere but it's almost impossible to gain an appointment at the local surgeries. This would be unimaginable if we then had hundreds more new patients. The local pharmacy will also be impacted yes, at present there's normally a 20/30 minute wait for a prescription, often the stock isn't available due to demand so a wait of a day or two is often expected. No room in the dentist for NHS patients, this has been the case for years.
1.12	West of Borrowwash	Healthcare Facilities	Sarah McAuslan	Response-01248	We struggle already to book appointments at our local surgery and parking at the surgery is minimal . It can take over 200 calls to make an appointment. We can't add more staff to the surgery as there is no capacity for individuals to visit via parking
			Simon Shaw	Response-01152	I can't get an appointment now....
1.12	West of Borrowwash	Healthcare Facilities	sophy peacock	Response-00678	Limited access to local health due to over population anyway, this will make it worse
1.12	West of Borrowwash	Healthcare Facilities	Steph Archer	Response-01140	It is already incredibly difficult to get a GP appointment at our local surgery's. I often have to travel out of borrowwash for a doctors appointment which is not the surgery's fault, they are over subscribed.
1.12	West of Borrowwash	Healthcare Facilities	Stephen Peat	Response-01793	(1) In the approval of the Spondon Wood Development, there have been hundreds of complaints against the Spondon Wood application regarding the lack of health, GP and Dental services within and around the Spondon and Borrowwash areas. (2) In our neighbourhood, all medical services in the Spondon and Borrowwash area are oversubscribed, with new patients unable to register with a GP when moving to a new house, compared to older established neighbourhoods. (3) Borrowwash and Spondon have no dental services to cope with the present population, and Erewash planning will need to set up plans with the developer and NHS Derbyshire to construct a new dental and GP practice to cope with the housing squeeze within the Borrowwash and Ockbrook area. An estimated cost to build a new GP and Dental Practice would be over £4 m to cope with the housing developments planned under the amended Erewash Amendment Core Strategy. (4) When you examine the full costs in all sections, the total cost could exceed £30 million to cover Schools, GP, Dental Services, flood prevention and protection, including changes to the highway to reduce traffic congestion and air pollution affecting Spondon and Borrowwash.
1.12	West of Borrowwash	Healthcare Facilities	Steve Brown	Response-01153	Any provisions for this in proposal already difficult to get appointments.
1.12	West of Borrowwash	Healthcare Facilities	Steven Hoolan	Response-00912	Currently impossible to get a doctors appointment in Borrowwash. No dentist taking on new NHS patients
			Sue Higginbottom	Response-01143	God help us! Getting a gp appointment is near impossible as it is! How is it going to be if you build more houses!
1.12	West of Borrowwash	Healthcare Facilities	Suzanne Prior	Response-00907	As a resident of Borrowwash it is difficult to get a doctor's appointment, you could be waiting a month for a telephone appointment. The dentist has no capacity for NHS patients. The chemist is overwhelmed to the point where it can take a week to get medication once you have handed over your prescription. An increase in population is going to make these services unavailable for the majority.
1.12	West of Borrowwash	Healthcare Facilities	Tanya caldbeck	Response-00917	No GP places services under pressure
1.12	West of Borrowwash	Healthcare Facilities	Virginia Locke	Response-00580	I can't get an appointment as it is
1.12	West of Borrowwash	Landscape	Alex Lowe	Response-00707	This will significantly reduce the one small part of non-residential land that a significant number of houses already look out on to. In turn reducing the value of the houses and surrounding area
1.12	West of Borrowwash	Landscape	Alice Fitzpatrick	Response-00543	The question of landscape is irrelevant - there should be no housing and the landscape should remain as it is!
			Barry Shaw	Response-01482	People live here because the way it looks and feels, once it becomes basically Mackworth estate people will leave.
1.12	West of Borrowwash	Landscape	Bella Kelsey	Response-00739	The area is a lovely little village - new builds always ruin an area
1.12	West of Borrowwash	Landscape	Breanne Rodda	Response-00708	The area of land is one of the last bits of nice greenery that a lot of houses can look out on to. It will massively impact our enjoyment and house prices if built over - especially as it will likely be a building site for a long time
1.12	West of Borrowwash	Landscape	Carmen Buckley	Response-00737	This area acts as a much needed barrier between Spondon and Borrowwash. I bought my house because of the Green Belt land to the back meant I could be closer to nature and enjoy the west setting sun. Hedgerows are in decline and these fields serve as the perfect habitat for migrating birds and winter visitors inc redwings and field fares.
1.12	West of Borrowwash	Landscape	Carol Shaw	Response-00797	The development will alter the landscape character of the area, transforming open green spaces into residential areas. This change will negatively impact the visual appeal and natural beauty of the countryside surrounding Borrowwash.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	landscape	Craig Hydes	Response-00782	The change of landscape will significantly impact Borrowwash, west. The new house builds will no doubt promote social housing or provide accommodation for legal immigrants. This will lower the quality of people in the area as Derby City has quickly deteriorated over a few short years. The house prices will be heavily impacted driving long time residents away which would leave a bad taste in people's mouth.
1.12	West of Borrowwash	landscape	Dan Pilgrim	Response-00932	Protect green belt areas, avoiding so call eye sores such as affordable housing
1.12	West of Borrowwash	landscape	David Modrovic	Response-00803	I like the view from my house! I don't want to look at more houses!
1.12	West of Borrowwash	landscape	Dr Sarah Mee	Response-01320	Comments related to landscape value of the site relate to the original Greenbelt designation and lack of new evidence to reverse the decision on preserving this site for countryside use of current residents and future generations and concerns about forever altering the village status of Borrowwash.
1.12	West of Borrowwash	landscape	Francesca Hope	Response-00528	We currently have the most beautiful view from our house which will be spoilt to be filled with a building site for years and eventually housing
1.12	West of Borrowwash	landscape	Gillian Fitzpatrick	Response-00482	The question of landscape is irrelevant - there should be no housing and the landscape should remain as it is!
1.12	West of Borrowwash	landscape	Gillian Hitchcock	Response-00446	The landscape is beautiful as fields! I do t wish to look at a concrete jungle
1.12	West of Borrowwash	landscape	Hayley Dexter	Response-00519	Building on this land will make Borrowwash blend into the next village. It will no longer be a village and more like a small town it will replace the natural land that has been there for hundreds of years that is needed
1.12	West of Borrowwash	landscape	Helena Lucas	Response-00644	The new development will cause the disruption of natural habitats, including wildlife corridors, leading to fragmented ecosystems and significantly reduced biodiversity. The construction activities will disturb the soil, leading to erosion and pollution of water sources. Increased Runoff and Flooding The new surfaces such as roads and rooftops increase the amount of rainwater runoff, potentially leading to flooding in certain areas. Nottingham Road and the A52 are already impacted by dangerous flash flooding which will worsen and cause increased risk of collisions, injuries, death and damage to property and roads. The new buildings will alter the visual landscape, impact the privacy of residence living on Victoria Road particularly, and surrounding area. It will affect increased noise levels and light pollution, disrupting wildlife and residence quality of Life further.
1.12	West of Borrowwash	landscape	James Dean	Response-00553	This should be protected at all costs and should be criminal to even consider building on it. Out countryside, open space and green belt is what makes the area so special and what separates us from spondon and the city. Borrowwash feels more rural and building on all this beautiful land will ruin that and ruin the are... depreciating house value and damaging the local quality of life. Making everyone's lives more miserable.
1.12	West of Borrowwash	landscape	Jennifer Sutton	Response-00518	Borrowwash is chosen for its tranquil, rural character. This proposal urbanises pleasant countryside, contradicting the Core Strategy's vision for sustainable, character-respecting growth. Landscapes take centuries to mature ? this would be erased for profit-motivated, uniform housing, typically lacking in architectural value, greenery, or sustainability.
1.12	West of Borrowwash	landscape	Julie Margaret Smith	Response-01090	We need to preserve the narrow, agricultural landscape and footpaths between city and county. Nobody wants their open views to be blighted by more tarmac and monotonous grey buildings, or to lose the freedoms of footpaths in open countryside. The narrow Green Belt is precious and its integrity needs to be preserved.
1.12	West of Borrowwash	landscape	Ken Hardy	Response-00928	Strategic development at this site would undoubtedly alter to a substantial degree the landscape character evident in this part of the Borough, currently an interconnecting network of agricultural fields separating the settlements of Borrowwash and Spondon. Development of the site would have a notable impact on visual amenity to the current appearance consisting of enclosed agricultural fields. The development would have the potential to make a negative impact visually, the thoughtful and creative landscaping of green spaces, creation of new habitat and positive design of new buildings can help create a positive layout. Some properties which back on to the site date back as far as the early-c20th including mine, good master planning and design would be required to minimise the impact of development on the surrounding built environment.
1.12	West of Borrowwash	landscape	Kevin Highton	Response-00506	Enjoy the view at all times, this will be ruined by housing, including the proposed new road
1.12	West of Borrowwash	landscape	Kirsty Murray	Response-01003	If this area has to be built on, it should be of benefit to the village an attraction, not some mini slum
1.12	West of Borrowwash	landscape	Laura Dewsnap	Response-00936	The site is very large compared to the existing settlement. It covers an area the size of the Priorway Estate on the east side of the village. It is also the size of the development to the south of Derby Road bounded by Station Road. It would be a significant increase in the size of Borrowwash village and thus significantly change the landscape. Many of the houses that border this land would have their outlook negatively impacted and many mature hedgerows would be lost.
1.12	West of Borrowwash	landscape	Lesley Young	Response-00902	The fields offer a beautiful quiet lanscape to enjoy and this would disappear. There were plans at one stage to make this area a wild flower area. This would be far more beautiful than housing.
1.12	West of Borrowwash	landscape	Lewis Sutton	Response-00415	Many residents have deliberately chosen to live near open countryside and green space. Development would significantly alter views and character, removing visual access to open fields and reducing the area's tranquillity and rural appeal. This degrades both landscape quality and residential amenity.
1.12	West of Borrowwash	landscape	Maisie Harlow	Response-00963	Borrowwash and Spondon currently have their own identities. Building in-between them will join them up and therefore they will lose their own identities, character and sense of place.
1.12	West of Borrowwash	landscape	Margaret Irene Wheatley	Response-00915	It would be nice to see landscaping in the public areas but it needs to be maintained so that it can be enjoyed for many years to come.
1.12	West of Borrowwash	landscape	Mary-Jo McDermott	Response-01437	The proposed development would permanently scar the rural landscape. These open fields offer natural beauty, historical character, and are an essential part of the area's identity. The loss would be deeply felt by current and future generations. The negative impact of such a development for Victoria Avenue residents cannot be understated - 50% of us have a garden that backs on to these fields. I speak for many when I say this would be disastrous for our collective health and well-being as a community.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail

1.12	West of Borrowwash	Landscape	Mrs Kay Rigby	Response-00876	We have a lovely view from the back of our house with the greenery and wildlife that would completely disappear with this development
1.12	West of Borrowwash	Landscape	Mrs M McCroft	Response-00532	Need some park land
1.12	West of Borrowwash	Landscape	Mr Timothy Shepherd	Response-01334	Open landscapes should be preserved wherever possible. These areas are important to the well-being of the residents.
1.12	West of Borrowwash	Landscape	Nicholas Parr	Response-01253	The landscape should remain as it is now - unchanged!
1.12	West of Borrowwash	Landscape	Nicola Ashton	Response-00081	Borrowwash is a village we are looking at losing our identity and being swallowed up and being part of Derby city. As a resident for over 40 years this is a special village. We need to preserve our green belt and utilise the brown sites for building. Pride park built so many large warehouses and there's so many sitting empty wouldn't it have been better to build homes there when there is an Road infrastructure already in place
1.12	West of Borrowwash	Landscape	Peter John Ball	Response-00703	The open nature of the land to the West of Victoria Avenue is an important landscape adjacent to the village. It should be kept as open land for the enjoyment of the residents of Borrowwash (and Spondon). Housing and the creation of woodland would remove the open nature of the current land use. The Greenbelt area to the south of Derby Road in Borrowwash does not provide that essential open aspect.
1.12	West of Borrowwash	Landscape	Sarah Davies	Response-01137	It will change the make up of the village, it will no longer be a village, it will combine spondon with Borrowwash
1.12	West of Borrowwash	Landscape	Steph Archer	Response-01140	We need more greenery not less!!
1.12	West of Borrowwash	Landscape	Steven Hoolan	Response-00912	The landscape will be significantly altered for the worst. There are nit many open spaces left in Borrowwash as it is
1.12	West of Borrowwash	Landscape	Suzanne Prior	Response-00907	The current proposal for the amount of housing and land given to this proposed site will almost merge Borrowwash into Spondon. It is beneficial to have a clear demarcation of boundaries and not merge Derbyshire into Derby city
1.12	West of Borrowwash	Landscape	Tanya caldbeck	Response-00917	Too many buildings around and no green space
1.12	West of Borrowwash	Number of Houses	Alex Lowe	Response-00707	The number of houses planned to fit onto the small space of land would change the dynamic of the surrounding area
1.12	West of Borrowwash	Number of Houses	Alice Fitzpatrick	Response-00543	No houses please.
1.12	West of Borrowwash	Number of Houses	Alison Vine	Response-01813	The amenities in the village are already very busy and may not be able to support further housing.
1.12	West of Borrowwash	Number of Houses	Amy Brown	Response-00514	280 homes!!! Sounds lovely to house that many people but again, the impact on a small village is only going to have poor consequences. The time it would take you to build which in turn affects me in my own home is just frightening to say the least. I have dogs, a young child and their lives too affected. And that is just one household - think of how many others you will affect by installing all of these homes putting strain on our village, our facilities, our green space which we are entitled to have! 280 homes, so let's say 3 people on average in each home - that's nearly 1000 more people. We just don't have the room or capabilities.
			Andrew Hozack	Response-01322	There is already a difficulty in getting a doctors or dentist appointment without adding more people to the waiting list.
1.12	West of Borrowwash	Number of Houses	Ann Daykin	Response-01453	The number of houses is just too much .The local infrastructure just can't cope with housing on this scale.. Borrowwash has always had a village identity.. the scale of the proposed housing developments will create issues for the local community and resentment towards the residents of the new proposed developments.
1.12	West of Borrowwash	Number of Houses	Barry Shaw	Response-01482	Far far too many. With a single entry and exit it's amusing it has even been proposed.
1.12	West of Borrowwash	Number of Houses	Britton	Response-00877	Borrowwash is a village, the number of houses proposed in and around Borrowwash will impact traffic, schools, doctors and other facilities
1.12	West of Borrowwash	Number of Houses	Carol Shaw	Response-00797	The number of proposed houses represents a huge additional percentage of the size of the current village. Borrowwash is a small village, and adding 280 homes will significantly increase its size, potentially by a substantial percentage. This significant increase will change village life negatively and permanently. The influx of new residents will alter the close-knit community feel, increase demand on local services, and potentially lead to overdevelopment.
1.12	West of Borrowwash	Number of Houses	David Modrovic	Response-00803	No houses wanted here! One is one too many
1.12	West of Borrowwash	Number of Houses	Dr Sarah Mee	Response-01320	Although it is the trajectory of travel in modern property development to maximise land use and minimise privacy, 280 houses is a large allocation for the space and surrounding village infrastructure to accommodate safely in terms of emergency access, road safety, and healthcare service provision. Please also see my comments on the flood risk. I am very concerned about the flooding from the site which has been severe enough to close the A6005 after rainfall when the road and particularly that road area at the allocation site access which can become a stream.
1.12	West of Borrowwash	Number of Houses	Ellen Young	Response-01357	280 houses is a lot of to add to a small village. It's going to feel cramped having so many houses so close to our gardens.
1.12	West of Borrowwash	Number of Houses	Emma Gregory	Response-01454	Borrowwash is only a small village - 268 houses (approximately) is a lot for a small village. With natural wastage of older people, within the next 10 years there will be a large number of houses becoming available.
1.12	West of Borrowwash	Number of Houses	Eve barker	Response-00443	The sheer number of houses is insane and not needed or wanted. Already developed sites are available, wilmot site, Burrows yard
1.12	West of Borrowwash	Number of Houses	Gary Mortimer	Response-01148	280 houses is extremely high. This would add over 500 cars on the road in the area.
1.12	West of Borrowwash	Number of Houses	Gillian Fitzpatrick	Response-00482	There should be no housing! That field/ green space needs to be preserved. The proposed remaining green area is insufficient to separate Borrowwash from Spondon in other words the city from the borough!
1.12	West of Borrowwash	Number of Houses	Gillian Hitchcock	Response-00446	We don't need any
1.12	West of Borrowwash	Number of Houses	Hayley Dexter	Response-00519	Far too many houses for a village that doesn't have enough amenities for the people who already live there

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Number of Houses	Helena Lucas	Response-00644	280 house will take approximately 3 years to complete, taking into account possible additional complications such material shortages, weather and unforeseen complication. Taking into account other building projects within the village nearby, the disruption will be unbearable for residence living in and around the village. The scale of the project will bring in potentially 1000 new residence into the village, it will be far too overcrowded putting pressure on the already pressured local services.
1.12	West of Borrowwash	Number of Houses	Ian Hamilton	Response-01325	The size of of the proposed development is completely unrealistic and would overburden already inadequate infrastructure and services such as roads, dentists and doctors.
1.12	West of Borrowwash	Number of Houses	James Dean	Response-00553	No kore houses... it is already over populated for the facilities and space available.
1.12	West of Borrowwash	Number of Houses	Jane Rotheron	Response-00042	Far too many houses are being proposed. Our village will lose its identity.
1.12	West of Borrowwash	Number of Houses	Jane Shepherd	Response-01333	A smaller number of houses that are affordable for young people (first time buyers). A proper home 2 or 3 bedrooms with adequate parking, solar panels, electric charging points. Any building should be future proof. Some housing us needed but we should be looking at making of good quality at a decent price rather than always thinking about maximum profit. Some social concern with help from government or councils is needed
1.12	West of Borrowwash	Number of Houses	Jennifer Sutton	Response-00518	Scale Relative to Borrowwash Borrowwash currently has approximately 2,800?3,000 homes. An additional 280 homes is nearly a 10% increase in housing stock ? in a single development. This is not ?rounding off? ? it's a major urban-style expansion, out of keeping with the settlement?s scale, identity, and infrastructure capacity. Such a dramatic population increase will strain local services, alter the village?s character, and contribute to urban sprawl, directly conflicting with the NPPF's goal of sustainable, proportional growth. Density and Infrastructure Mismatch The proposed site is 14 hectares, which equates to 20 homes per hectare ? relatively high for an edge-of-village location and more suited to urban environments. This amount of housing would: Overwhelm the single access junction on the A6005. Generate significant new car journeys daily ? estimated well over 500 vehicle movements. Stretch local services like schools, GP surgeries, and public transport well beyond their intended capacity. No genuine assessment is provided of whether existing infrastructure ? roads, sewers, flood defences ? can support such a jump in usage. This development does not exist in a vacuum. Strategic Policies 1.11 and 1.12 combined propose 340+ homes in Borrowwash alone. Adding further pressure to roads, services, and countryside buffers. And safeguarded land to the north all but guarantees future expansion ? meaning 280 homes is just the beginning. It sets a precedent for the complete erosion of the western green belt boundary, inviting future developers to push for even more ? in contradiction to public pledges to protect these areas. This proposal conflicts with several key principles of sustainable planning: NPPF Paragraph 11(c): development must be "sustainable" and respond to local capacity. Strategic Policy 0 ? Settlement Hierarchy: notes that rural area growth should be modest and proportional. This is not. Core Strategy Spatial Portrait: describes Borrowwash as a key settlement with village character. That character would be lost under such a large-scale addition.
1.12	West of Borrowwash	Number of Houses	Joanne	Response-01252	Borrowwash is a small village, it will be ruined.
1.12	West of Borrowwash	Number of Houses	Jodie Brown	Response-01213	The amount of houses for size of land seems impractical
1.12	West of Borrowwash	Number of Houses	John & Anna Mead	Response-00772	As before, the area cannot cope with increase in numbers of oeople
1.12	West of Borrowwash	Number of Houses	Julie Margaret Smith	Response-01090	280 houses and the population it will bring, with all its needs and environmental footfall is far too great for Borrowwash to support.
1.12	West of Borrowwash	Number of Houses	Kirsty Millward	Response-01327	The number of houses allocated to this area is very unbalanced compared to other areas in Erewash and moves us ever closes to merging with the edge of spondon. I can accept that a much smaller number of houses could be built, but not this many. The number of houses needs to be more evenly distributed accross Erewash including areas such as Stanley who appear to get preferential treatment over Borrowwash
1.12	West of Borrowwash	Number of Houses	Kirsty Murray	Response-01003	Fewer larger houses with decent gardens and plenty of parking, and some open spaces or play areas would be better not lots of small crammed in houses
1.12	West of Borrowwash	Number of Houses	Laura Dewsnap	Response-00936	No more houses are needed in Borrowwash, there are currently 77 houses listed for sale and 6 for rent within a 1 mile radius of the proposed site. Within a 3 mile radius of the site, there are currently 459 properties for sale and 102 properties for rent. There is no need for further properties to be built in Borrowwash.
1.12	West of Borrowwash	Number of Houses	Lewis Sutton	Response-00415	280 homes represent a disproportionate expansion of Borrowwash, risking overburdening local services, fundamentally altering the character of the settlement, and contradicting strategic planning principles of sustainable, proportionate growth.
1.12	West of Borrowwash	Number of Houses	Margaret Irene Wheatley	Response-00915	Will 40 per cent be affordable housing? Any developer will seek to reduce this number
1.12	West of Borrowwash	Number of Houses	Mark Burrow	Response-00655	Far too many houses introduced into this village. Strongly disagree with the project.
1.12	West of Borrowwash	Number of Houses	Mary-Jo McDermott	Response-01437	The volume of houses proposed is excessive and out of scale with the existing community.
1.12	West of Borrowwash	Number of Houses	Mike Casartelli	Response-01211	This is a huge development which believe will negatively impact the ?village feel? of Borrowwash and essentially merge us with Spondon and Chaddesden.
1.12	West of Borrowwash	Number of Houses	Mrs Kay Rigby	Response-00876	This seems far too many houses for the area on land and for the village of Borrowwash
1.12	West of Borrowwash	Number of Houses	Mrs M McCroft	Response-00532	A lot less than 280
1.12	West of Borrowwash	Number of Houses	Mr Timothy Shepherd	Response-01334	Far too many houses for the road network, schools doctors and dentist services.
1.12	West of Borrowwash	Number of Houses	Nicholas Parr	Response-01253	There should be no housing for the reasons given in other categories!
1.12	West of Borrowwash	Number of Houses	Nicola Ashton	Response-00081	We need to look at the brown field site?s first before destroying our natural landscape
1.12	West of Borrowwash	Number of Houses	Paul and Dawn Davison	Response-01804	There is also the extra pressure on the local infrastructure. Doctors, Dentists and sewage management.
1.12	West of Borrowwash	Number of Houses	Paul Barker	Response-00800	To many for size of site
1.12	West of Borrowwash	Number of Houses	Phil Self	Response-00759	Again. just cram as many unsightly houses in as possible with no thought to the residents all looking in each others windows and ruin a decent village.
1.12	West of Borrowwash	Number of Houses	Simon Shaw	Response-01152	A huge amount, current population is ~7,000, this number of housing will add ~1000 people, this is a crippling number

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Number of Houses	Stephen Peat	Response-01793	(1) According to Erewash Council, they are writing to over 1800 homes that have been empty for more than two years, but another 1500 empty homes that have been empty for 6 months or a year will need tenants or be sold to new householders. (2) The management of Erewash Council could reach its housing targets within the Erewash Amended Core Strategy plans to include empty homes, which could provide accommodation in a shorter time than building new houses. Erewash Council and the main house builder should take over these empty homes by compulsory purchase of the property, then refurbish the property to be sold or rented. For example, when I was in the Hospital, a BBC programme called Homes under the Hammer showed empty homes could be refurbished and back on the market between 6 weeks and 3 months, compared to 1 year when building a new property. (3) Erewash could reach its target of houses faster if it purchased empty homes with house builders, more houses would become available to the population of Erewash, so more of the greenbelt could be used to farm and grow crops. (4) With the Reform Party taking Derbyshire County Council a few weeks ago, Reform could take Erewash and Derby City Council by electing Reform Councillors at the next election. Erewash Council will need to make a greater effort to protect the greenbelt and keep the separation between Derby and Erewash and Erewash and Nottingham.
1.12	West of Borrowwash	Number of Houses	Steven Hoolan	Response-00912	Too many houses for the site. Other much more suitable areas are available
1.12	West of Borrowwash	Number of Houses	Sue Higginbottom	Response-01143	0
1.12	West of Borrowwash	Other	Alice Fitzpatrick	Response-00543	(Application Reference: ERE/0914/0013 Location Land West of 23 to 195 Victoria Avenue & Land North of 12 to 72 Derby Road Borrowwash DE72 3HB) The above 2014 proposal went to full planning. I attended the above public meeting and the proposal was unanimously rejected ? not one member of the committee was in favour! This should stand indefinitely. I am sympathetic to the need for good housing however I have lived in this village all my life and I have witnessed the loss of many old houses, recreational sites and green areas ? I think Borrowwash has done enough. I am also curious to know why Ockbrook seems to have avoided being included in the revised plan?
1.12	West of Borrowwash	Other	Amy Brown	Response-00514	As mentioned, I live at 3 Covent Garden Close and the impact of building works to the left of my home to the back would be hugely catastrophic. I work from home which entails working with vulnerable customers and with the level of traffic, noise, disruption and chaos it would bring would be super detrimental to my work alongside others. We chose to live here based on the green belt at the rear and the lack thereof now days and it's a peaceful environment - you would be destroying this. Not only that, we are a cul de sac. You cannot have pedestrians/further traffic up and down this street to gain access - we would suffer hugely due to this. Look at the street at 9am & 3pm daily and you'll get a rough idea. Now imagine all those extra people you house trying to get to that school or the doctors down the road - it will simply not work. You are effectively disrupting a lot of lives for some houses that have a better chance of being accepted elsewhere with much less disruption. You are interrupting a village, our facilities, our lives, our mental health and our green space.
			Barry Shaw	Response-01482	No enough community consolation, even this is abstract and hidden.
1.12	West of Borrowwash	Other	Craig Hydes	Response-00782	Accessibility on and off the A52 will be massively impacted. Historic dog walking routes will be ruined.
1.12	West of Borrowwash	Other	Dan Pilgrim	Response-00932	1000's of houses are being built just down the road at Boulton Moor site, why destroy another green belt area for MORE houses. Better to develop existing project plots.
1.12	West of Borrowwash	Other	David Modrovic	Response-00803	It seems an utterly stupid idea and probably just for the land owner to cash in rather than sell for agricultural, all empty houses or my old barracks should be repurposed rather than build more houses
1.12	West of Borrowwash	Other	David Tyler	Response-00835	More should be done to reduce the number of empty properties across the whole of erewash before building on farm land
1.12	West of Borrowwash	Other	Deborah young	Response-01306	WHEN THE GREEN LAND HAS GONE THERE'S NO BRINGING IT BACK . I know people need houses but there must be more none green areas to build on .
1.12	West of Borrowwash	Other	Dr Sarah Mee	Response-01320	Many existing residents of Derby Road and Victoria Avenue are older people who have expressed significant concern about the construction phase of any housing allocation development at the Greenbelt site on pollution, traffic congestion, road safety and noise and disruption to village life. My Mum is 80 and has lived in the village, raising a family and contributing in her paid working life to the village of Borrowwash for most of her adult existence. Mum has enjoyed the Greenbelt and countryside vistas with friends and family and visitors and dogs over the years and greatly appreciated the space and peaceful village feel this area of countryside affords . Due to physical ill health and mobility issues my Mum is virtually house bound now but enjoys the sanctuary of her well kept garden which would be directly adjacent to the road in and out of any planned development. The impact of a major construction project on the doorstep is a huge concern for my Mum and I am very concerned about the impact on her mental health and well being and ask that this is not overlooked by any human involved in decision making. The development will bring relentless noise and poor air quality at a time in my Mum's life where peace and clean air should be prioritised. I am very concerned that the current housing allocation review is already having an impact on her sleep and is causing her a great amount of worry about the future of the quality of her life in her own home and garden. There is a lot of fear that when construction gets underway existing residents of Derby Road will have no access to peaceful greenspaces in their gardens which could have devastating mental health consequences especially for those who are elderly and house bound by physical illness.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Other	Ellen Young	Response-01357	The planted fields haven't been maintained well. There doesn't seem to have been a rotation of crops. There hasn't been any signs of the fields being fertilised. Drainage hasn't been maintained. It feels as if the fields have been neglected on purpose so the owner has an argument for selling it for development. They'll probably get more money selling the land for development than agriculture. Residents understand the need for more housing but there are better places in Derbyshire to build than green belt in a small village. An adjustment to the proposal that may see less objections is putting the park/woodland on the land by the Victoria Avenue houses with access via Covent Garden Close and put the houses on the land off Derby Road, where the park is allocated. Regardless of whether they put an objection in, residents don't want 280 houses on their backdoor but they may not feel so strongly about it if there is a barrier between the new and existing houses. There is a bigger benefit to the community with this change as more locals can access the park as it's closer to the centre of the village but people on the development and residents on the south of the village can still access it.
1.12	West of Borrowwash	Other	Emma Gregory	Response-01454	This development would severely and detrimentally impact on my privacy and quality of life, making use of my garden virtually impossible due to noise and air pollution. Air pollution is a real worry to me from the building work and also vehicle movement. Please build on brownfield sites in Erewash, not on Green Belt areas. Green belt areas serve a purpose.
1.12	West of Borrowwash	Other	Fiona Richards	Response-00020	New houses next to the busy A52. Pedestrian safety, air pollution and aesthetics.
1.12	West of Borrowwash	Other	Francesca Hope	Response-00528	Noise pollution. We currently live in a lovely quiet cul de sac and this will be spoilt if a housing estate is built with construction vehicles, building noise etc right next to our houses for years until completion
1.12	West of Borrowwash	Other	Gillian Fitzpatrick	Response-00482	(Application Reference: ERE/0914/0013 Location Land West of 23 to 195 Victoria Avenue & Land North of 12 to 72 Derby Road Borrowwash DE72 3HB) The above 2014 proposal for this development went to full planning. My daughter and I attended the public meeting and the proposal was unanimously rejected ? not one member of the committee was in favour! This should stand indefinitely! I am sympathetic to the need for good housing however I have lived in this village all my life and I have witnessed the loss of many old houses, recreational sites and green areas ? I think Borrowwash has done enough.
1.12	West of Borrowwash	Other	Gillian Hitchcock	Response-00446	I really cannot see why we need housing to this scale nationwide, surely former barrack sites where houses still stand could be repurposed back for the general population! New hoses these days are not affordable on todays wages
1.12	West of Borrowwash	Other	Hayley Dexter	Response-00519	There is hardly any parking in Borrowwash and one pub. There aren't enough amenities to those that already live in Borrowwash and adding all these houses will add and impact this in a negative way! Borrowwash is no longer a village and is large enough without building all these houses on land that shouldn't be built on anyway
1.12	West of Borrowwash	Other	Helena Lucas	Response-00644	On a final note, myself and husband have been residents for 18 years on Princess Drive, we have raised pur family in peace, within this proud and hard working community. An influx of such a high number of new residents will alter the atmosphere of the village, cause years of distress, upset, ill health, damage to property and cars, and cause social issues affecting school admissions, and put pressure on local services. It would also be devastating to see an area of greenbelt land demolished forever where there are many properties or derelict buildings that could be renovated instead. With the cost of living and food bank issues, poor quality food and goods being brought into the country, or being poisoned with pesticides, this space should be used as a community hub to grow food, encourage bees and wildlife and be a place the community can gather to improve health, and wellbeing, and foster learning how to become self sufficient again like the preceding generations. This would significantly set Borrowwash apart. Not just be another village vanishing into the large scale building site that Derby is becoming.
1.12	West of Borrowwash	Other	Helen Pearce	Response-01550	The houses on Victoria Avenue are over 200 years old, the views across the fields from our gardens have been unspoilt for centuries and these new plans will spoil the peacefulness and history of our small village street. We feel that the space allocated for parkland would be better suited to housing and leave the space behind Victoria Avenue as parklands. This would cause much less disruption to the residents, protect much of the wildlife living in the hedgerows etc and protect the privacy and peace of the residents of Victoria Avenue.
1.12	West of Borrowwash	Other	Iain Pendry	Response-01188	The consultation makes no recommendations on the lack of cultural or sporting facilities in the village. It would be good to see that - in addition to this housing stock - thought is given to releasing more property for local services, pubs, exercise and sporting facilities. For example, Borrowwash is served by only one public house, at the opposite end of the village, whilst the Wilmot Arms is abandoned and an eyesore. The "Three Chefs" shop is boarded up and blocks the use of valuable retail or recreational use. These issues need to be addressed.
1.12	West of Borrowwash	Other	James Dean	Response-00553	Just no... please no. Reconsider, we love our local area, love out countryside and love our open space. The town cannot deal with further housing for all the reasons I have mentioned... this will be a diabolical decision and cause damage for so many people's lives.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Other	Jennifer Sutton	Response-00518	The proposal threatens the rural and historic character of Borrowwash. There will be a loss of privacy and green views for existing residents, as well as a permanent loss of valuable of green space. There has been a lack of transparency and insufficient community engagement, this has already been thoroughly debated previously. Trying again every few years is simply not democratic. No updated assessments for ground conditions or ecological impacts. Planning should be based on current, complete evidence. The proposed development of 280 homes west of Borrowwash is inappropriate, unsustainable, and fundamentally harmful to the local community, environment, and infrastructure. It represents an excessive scale of growth for a village settlement, amounting to a nearly 10% increase in housing with no proportional investment in roads, healthcare, education, or drainage infrastructure. This plan will exacerbate existing traffic congestion on the A6005, introduce serious road safety risks at a poorly placed single access point, and worsen air pollution, particularly for children walking to local schools. The loss of this Green Belt land will result in the permanent destruction of wildlife habitats and biodiversity that cannot be replaced by token green spaces or tree planting. Meanwhile, local GP surgeries are already overstretched, there is no NHS dentist, and schools are near or at capacity. The development does not deliver genuinely affordable, sustainable, or community-enhancing housing? instead, it prioritises volume and profit over village character, environmental protection, and public wellbeing. It directly conflicts with the National Planning Policy Framework (NPPF), the Erewash Core Strategy, and national political promises to protect the Green Belt. This proposal should be rejected in full, and future growth should be directed to brownfield sites, with true consideration for infrastructure, biodiversity, and the needs of existing communities.
1.12	West of Borrowwash	Other	Ken Hardy	Response-00928	Crime. As a result of this incidences of crime are very likely to increase and with it the fear of crime in the locality as would be expected with an expanded population. The opportunity to reduce incidences and fear of rural crime is outweighed by the effects of urbanising the land, particularly when considering the site is already in a largely urban environment.
1.12	West of Borrowwash	Other	Lewis Sutton	Response-00415	The proposal threatens the rural and historic character of Borrowwash. There will be a loss of privacy and green views for existing residents, as well as a permanent loss of valuable of green space. There has been a lack of transparency and insufficient community engagement, this has already been thoroughly debated previously. Trying again every few years is simply not democratic. No updated assessments for ground conditions or ecological impacts. Planning should be based on current, complete evidence.
1.12	West of Borrowwash	Other	Lucas Hodson	Response-01435	Borrowwash is a key village between Nottingham and Derby and by building in borrowwash you will be not only putting more pressure on key services but also harming the environment and overpopulating borrowwash. As a student who will be soon taking important exams I have to study while multiple children loudly play outside on the road due to lack of facilities and places to play so I reject the idea of building unless you also build more services to accommodate for the population increase.
1.12	West of Borrowwash	Other	Margaret Irene Wheatley	Response-00915	A careful thought out plan can only be achieved if the planners make the appropriate representations. It must not be allowed to go through on the "nod" and needs to be fully scrutinised so that the developers are not allowed to dictate for profit.
1.12	West of Borrowwash	Other	Mary-Jo McDermott	Response-01437	This green space is essential not only for the wellbeing of local residents, providing a buffer against noise, air pollution, and overdevelopment, but also for supporting environmental resilience. At a time when climate change demands urgent action, protecting natural land is critical. Green spaces like this help absorb CO?, support biodiversity, reduce flood risk, and mitigate urban heat effects. Their destruction undermines local and national environmental commitments. Brownfield sites, vacant industrial land, and derelict buildings, especially in the city centre, are far more appropriate for development and would meet housing needs without sacrificing precious remaining greenbelt. Once lost, these natural assets cannot be replaced. This is the wrong location, at the wrong time, for this kind of development.
1.12	West of Borrowwash	Other	Maxwell Sutton	Response-01093	The Core Strategy Review does not provide sufficient evidence that all suitable brownfield sites and underutilised land have been fully examined and utilized before proposing alterations to Green Belt boundaries . This is a critical requirement under the NPPF . There is no clear demonstration that the density of development has been optimized in line with the policies in the NPPF . The strategic policies do not show significant efforts to increase minimum density standards in town and city centres or other locations well served by public transport The proposed alterations to Green Belt boundaries do not clearly promote sustainable patterns of development . The strategic policies should align with the development plan's strategy for sustainable development, which is not sufficiently evidenced in the Core Strategy Review The Core Strategy Review lacks evidence of thorough discussions with neighbouring authorities about whether they could accommodate some of the identified need for development 3. This is essential to demonstrate that all other reasonable options have been considered before altering Green Belt boundaries. Sustainable Development: The Core Strategy Review does not provide detailed plans for compensatory improvements to the remaining Green Belt land. This is necessary to mitigate the impact of removing land from the Green Belt and to enhance accessibility, biodiversity, and landscape quality.
1.12	West of Borrowwash	Other	Mrs M McCroft	Response-00532	Planning on this area was thrown out as ludicrous in 2015 how can you build on it when there is only one entrance on to a very busy road? Need to maintain the open spaces between villages.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Other	Nicholas Parr	Response-01253	I operate a local business which would be negatively impacted by further development in the village ? why was I not notified? To post on Facebook and the EBC website is not enough! My company does not use Social Media and why would I check the website if I have no inkling that I need to? The same applies to our local Parish Council who have not even displayed details on their notice boards! Everyone in the village should have been notified. It is only by pure chance that I heard about the Public Consultation and I found the Core Strategy Amendment link very hard to locate. This is not Open and Transparent it is Closed and Obscure and makes a Mockery of Democracy. How can the Council offer a Public Consultation of which many of the public is unaware? This consultation has been rushed through and poorly considered. The Government should not be imposing impossible quotas on the local councils and encouraging salami tactics on the Green Belt but developing new towns where the infrastructure can be incorporated during development, choosing areas with the least possible impact on the ecology. I trust that I shall receive a full report on the consultation findings.
1.12	West of Borrowwash	Other	Nicola Ashton	Response-00081	We need to preserve our green belt for future generations, do we really want our legacy to be the generation that concreted over every blade of grass and killed off our wildlife forever, I don't want that to be done in my name
1.12	West of Borrowwash	Other	P. Hart	Response-00623	Their seems be no mention of childcare facilities. Presumably these houses are intended mostly for families.
1.12	West of Borrowwash	Other	Peter John Ball	Response-00703	Development of this land to the west of Borrowwash will complete the ribbon of development along Nottingham Road Spondon and Derby Road Borrowash. There will be no clear break between the City of Derby and Borrowash.
1.12	West of Borrowwash	Other	P Fisher	Response-01175	We are a small village and the infrastructure just isn't there for an expansion on this scale.
1.12	West of Borrowwash	Other	Sarah Cresswell	Response-01206	The NPPF is clear that inappropriate development in the Green Belt should not be approved except in 'very special circumstances?' (paragraph 147). Paragraph 119 of the NPPF further directs that: 'Planning policies and decisions should promote an effective use of land in meeting the need for homes and other uses, while safeguarding and improving the environment and ensuring safe and healthy living conditions. Strategic policies should set out a clear strategy for accommodating objectively assessed needs, in a way that makes as much use as possible of previously developed or 'brownfield' land.' The Core Strategy must prioritise sustainable development patterns that make full use of brownfield and underutilised infill sites elsewhere in the Borough, particularly in areas less constrained by Green Belt designation. There is no evidence that all reasonable opportunities for such development have been exhausted. The proposed allocation at Borrowash is premature, disproportionate, and inconsistent with national policy guidance.
1.12	West of Borrowwash	Other	Stephen Peat	Response-01793	(1) When deciding on a new development, including approving an application for the new construction of houses, planning within the Council must follow the principle of the Equality Act 2010 and the Disability Discrimination Act. This means planners must check that the development is ideal for the disabled, the elderly and people with mobility problems. (2) This includes the design of houses, the road layout and whether the design is suitable for public transport access, which is required by law to be between 200 and 250 metres from a bus stop. For example, this development for 280+ houses will require two bus stops within the site for each direction to comply with the Equality Act 2010, and other disabled acts that influence the ruling that a development must cater for different groups of the local community, including the disabled and elderly. Erewash Council should examine the full cost-benefit analysis, including the benefits and cons of a new development within the local neighbourhood. The cost-benefit analysis would provide the real cost of a development, including forcing the developer to pay the real costs added to S106 payments to compensate for the development on the local community. ? When you examine the S106 payment for Spondon Wood, only £275,000 was offered from the developer for medical services, knowing that 1 doctor costs £140,000 a year, a nurse costs around £50,000 a year, and other staff costs around £25,000 to £45,000 a year. The £275,000 was too small a payment by the developer, and you add the real costs the developer would need to pay, around £1 million to cover health costs of a large new development.
1.12	West of Borrowwash	Other	Sue Higginbottom	Response-01143	Please please think of our lovely little community we do not want it to be ruined by more people using roads gp,s school local amenities, let us keep Our country side
1.12	West of Borrowwash	Road Safety	Adele Pinkney	Response-01456	Derby Road is already very busy in rush hour. Additional vehicles joining from a large new estate would add to this and increase the risk of accidents and air pollution.
1.12	West of Borrowwash	Road Safety	Alice Fitzpatrick	Response-00543	or each house built there is potential for at least 2 x cars plus delivery vans, waste collectors etc etc. The access roads to the A52 (Victoria Avenue & Borrowash Road) cannot cope with current traffic or parking outside houses with no off-street parking and I seriously worry about the impact of further traffic on the foundations and structure of the existing old houses. Pollution will be increased ? electric cars not withstanding! The surrounding roads notably the A52, Derby Road, Victoria Avenue and Borrowash Road are already overloaded with far too much traffic, especially at peak times. Both Victoria Avenue and Borrowash Road have schools which cause huge traffic problems already ? more homes will only increase this problem with potentially fatal results. The proposed exit onto Derby Road is a black spot with poor visibility as is access from Borrowash Road onto the A52 ? more traffic cannot logistically and safely be accommodated. I am a cyclist as I chose not to drive where possible. The roads are already unsafe for cyclists so more traffic means more danger likewise to pedestrians and existing motorists. Victoria Avenue was built for horse and cart - it already has far too much heavy traffic such as car transporters, container lorries etc
1.12	West of Borrowwash	Road Safety	Angela Chapman	Response-01331	With the issues of speeding through the village, the lack of any support from council or police to the west of the village, this will increase the abysmal safety already seen along the Derby Road section of the village.
1.12	West of Borrowwash	Road Safety	Ann Daykin	Response-01453	The extra traffic and access from the development pulling onto the A6005 would create road safety issues and problems for the residents of Borrowash . The road is difficult and easily congested, outside of the peak traffic flows. with traffic weaving in and out of stationary traffic. The development would make this situation a lot worse..and cause potential road safety issues for both pedestrians and drivers alike. The pavement on the side of the proposed development is narrow and is consistently used, with not a lot of space for traffic to pull out into a fairly narrow road. This would definitely be a potential hazard and road safety issue.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Road Safety	Ashley Dunn	Response-01560	Additional traffic from the development will create additional risk for young children attending Ashbrook Infants School. New infrastructure directing additional traffic away from Victoria Avenue would need to be installed prior to any development.
1.12	West of Borrowwash	Road Safety	Barry Shaw	Response-01482	The road is not very wide, the pavements are thin. This is a dangerous road as is.
1.12	West of Borrowwash	Road Safety	Breanne Rodda	Response-00708	The car safety coming off of the a52 already feels quite dangerous this will create more drivings coming off a busy slip road
1.12	West of Borrowwash	Road Safety	Britton	Response-00877	We live on Derby Road - cars speed daily and do not stick to 30mph - the proposed housing will only add to the traffic and amount if cars in derby Rd- there are no speed cameras or speed sensors to slow speeding cars
1.12	West of Borrowwash	Road Safety	Carol Shaw	Response-00797	The development of around 280 homes west of Borrowwash will create significant traffic congestion on the A6005 Derby Road. The creation of a new vehicular access and pedestrian crossing point will increase traffic flow and potentially lead to congestion at peak times. This could also impact road safety, especially with the increased number of vehicles entering and exiting the development. Bottleneck Without Direct A52 Access: Without direct access to the A52, the development will force additional traffic onto local roads, creating a bottleneck. Stationary traffic is already a common issue on Victoria Avenue and Station Road, and the increased volume from the new development will exacerbate this problem. This will lead to longer travel times, increased frustration for drivers, and higher risks of accidents. Impact of Events at Elvaston Castle: Events at Elvaston Castle, which attract large numbers of visitors, will have huge implications for traffic in the area. The additional traffic from the development will compound the congestion during these events, making it difficult for residents and visitors to navigate the area. National Policy Context: The National Planning Policy Framework (NPPF) emphasizes that transport issues should be considered from the earliest stages of plan-making and development proposals. It encourages developments that limit the need to travel and promote sustainable transport modes to reduce congestion and improve road safety. The NPPF also highlights the importance of designing schemes that contribute to making high-quality places and ensuring patterns of movement, streets, parking, and other transport considerations are integral to the design. Narrow Derby Road and Pavements: Derby Road is already narrow with very narrow pavements, increasing the chances of fatalities, especially for children who may be forced to use this as an alternative to motor transport. The increased traffic from the development will exacerbate these safety concerns, making it more dangerous for pedestrians, particularly school children.
1.12	West of Borrowwash	Road Safety	Catherine Casartelli	Response-01428	The proposed access point is in a 40mph speed limit. At peak times traffic through Borrowwash is already high. This plan could add 280- 560 additional cars moving through the village. When there are issues with A52, A50 or M1 then village traffic is very high causing road safety issues. The village has already suffered from fatal accidents.
1.12	West of Borrowwash	Road Safety	Christine Cole	Response-01254	Infrastructure before site construction is started needs to be addressed. Possible widening of the road at site entrance with speed being reduced from 40mph? The entrance is after an incline in the road.
1.12	West of Borrowwash	Road Safety	Craig Hydes	Response-00782	Road safety on Derby Road and Victoria Avenue will be severely increased.
1.12	West of Borrowwash	Road Safety	Dale Harlow	Response-00887	There is only one pedestrian crossing at the coop crossroad. There is not enough infrastructure for people's safety when crossing busy areas and the small shopping area of coop and birds will be heavily populated with cars which already has limited child spots and very few disabled bays
1.12	West of Borrowwash	Road Safety	Dan Pilgrim	Response-00932	Limited access road to area,
1.12	West of Borrowwash	Road Safety	David Modrovic	Response-00803	Increase in traffic brings more pollution and increased risk of road traffic accidents
1.12	West of Borrowwash	Road Safety	David Steare	Response-01300	1 If there is only one road entrance and exit, and if there are two entrances and exits this increases the risk of collision when speeding vehicles meet other vehicles manoeuvring to enter or leave the development. 2 The development being located near to a brow of a hill on the A6005 reduces visibility and reaction time for speeding vehicles to avoid crashing into queues into and out of the development. 3 West Park School pupils walking home to Borrowwash will have to cross an additional road junction. This increased risk also applies to parents with pushchairs and the elderly walking to/from Borrowwash and Spondon. 4 There is no pavement after Borrowwash House on the A6005 going from Borrowwash to Spondon. Crossing the road at the top of the hill already seems difficult without additional traffic from the development. 5 If a Pelican Crossing is installed this will decrease traffic flow, increase traffic density and if placed to the Spondon side of the development entrance/exit may lead to difficulties associated with the brow of the hill and speeding vehicles.
1.12	West of Borrowwash	Road Safety	David Tyler	Response-00835	Accessing the proposed site from Derby road will have safety concerns
1.12	West of Borrowwash	Road Safety	Deborah young	Response-01306	If cars are allowed to come out of road opposite ashbrook school it will be an accident waiting to happen .
1.12	West of Borrowwash	Road Safety	Dr Sarah Mee	Response-01320	The proposed housing allocation site sits on the crest of a hill with the prevailing traffic speed often exceeding the designated 30mph limit on the entry to the village by cars and motorbikes with poor visibility of existing turnings into driveways of houses on on Derby Road. The increased traffic volumes could lead to an increased potential for collisions. The entry to the housing allocation site must incorporate a bell mouth design to allow for adequate visual splays and this is a challenge without significantly impinging on the property to the East of the allocation at number 72 or the parkland on the West boundary of the proposed housing allocation site. I am very concerned about the lack of robust proposals for secondary emergency access to the proposed housing allocation site. It is currently unclear how this is to be accommodated and a major objection on both road and public health and safety grounds. I note the proposal for new pedestrian access but this alone will not be adequate and must be supported by revisions to the prevailing traffic speeds and adequate visibility splays at the proposed housing allocation site.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Road Safety	Ellen Young	Response-01357	Covent Garden Close would turn into one of the main roads out of the development. This road is opposite the school and the increased traffic increases the danger to children and parents. School times are already dangerous as parents park anywhere without care, limiting the view of the road when trying to cross. Extra traffic coming from a side street would make it more hazardous. Speeding is also a big issue on Derby Road and Victoria Avenue. There have been many collisions on the Kimberly Road junctions due to the people turning out of the junction not being able to judge the speed of oncoming vehicles as they're either speeding or doing the speed limit. If we had more traffic coming out of another side street then it adds to the risk of collisions. Something needs to be done about the speeding issue in the village. Trying to cross the road safely is difficult; one car could be doing 60mph but the car in the opposite direction could be doing 20mph. Judging the speed of the cars can be difficult when everyone is doing whatever speed they want. The extra cars will only add to the dangers.
1.12	West of Borrowwash	Road Safety	Emma Gregory	Response-01454	Too much traffic already going through Borrowwash.
1.12	West of Borrowwash	Road Safety	Eve barker	Response-00443	Speeding is a problem in the village, the sheer amount of vehicles is already too much for borrowwash to cope with
			Gary Mortimer	Response-01148	The narrow pavements already put pedestrians at risk and any additional traffic will increase this risk unacceptably
1.12	West of Borrowwash	Road Safety	Geoff Whittaker	Response-01805	There is talk about the need for suitable and safe routes for pedestrians and cyclists, but no account is taken about the amount of work that will be needed to meet this requirement or the significant costs this will incur. This could involve work by Derby City Council on its network.
1.12	West of Borrowwash	Road Safety	Gillian Fitzpatrick	Response-00482	The surrounding roads notably the A52, Derby Road, Victoria Avenue and Borrowwash Road are already overloaded with far too much traffic, especially at peak times. Both Victoria Avenue and Borrowwash Road have schools which cause huge traffic problems already ? more homes will only increase this problem with potentially fatal results. The proposed exit onto Derby Road is a black spot with poor visibility as is access from Borrowwash Road onto the A52 ? more traffic cannot logistically and safely be accommodated.
1.12	West of Borrowwash	Road Safety	Gillian Hitchcock	Response-00446	Again there are many boy racers using Derby Road and Victoria Avenue as a racing track! More traffic when the kids are going to school would be horrendous
			Hayley Dexter	Response-00519	A lot more traffic and people will have an impact on road safety in a negative way
1.12	West of Borrowwash	Road Safety	Helena Lucas	Response-00644	Increased traffic as a result of 280 new builds without a plan to update access infrastructure, will mean more vehicles on the already over used roads. This will mean increased congestion, particularly during peak hours, and will increase the risk of accidents. There are no safety features in place as it is running through Borrowwash. Cars frequently speed down Nottingham road, and use our road Princess Drive as a cut through, a double parked street. My car has been damaged twice by careless drivers cutting through. I am deeply concerned that this will increase the frequency of traffic taking this option to cut through furthermore, and put mine and other families at risk who live along Princess Drive/Manor Road at risk.
1.12	West of Borrowwash	Road Safety	Henrietta heron	Response-01354	Already far too many cars
1.12	West of Borrowwash	Road Safety	Ian Frearson	Response-01267	The additional pressure generated by this proposal on the existing highway network will lead to a less safe access and egress to Derby Road and potentially increase accidents substantially
1.12	West of Borrowwash	Road Safety	Ian Hamilton	Response-01325	The A52 junctions in Borrowwash, Spondon and Ockbrook are already very busy and result in queues. The number of houses proposed will result in issues in safely accessing and exiting the road.
1.12	West of Borrowwash	Road Safety	James Dean	Response-00553	Again... this will be a mistake. We have schools and many elderly residents and the roads are already too congested let alone with extra houses.
1.12	West of Borrowwash	Road Safety	Jane Shepherd	Response-01333	More people, including children could cause more road traffic accidents. People may become impatient and less considerate of pedestrians and cyclists. Cole Lane junction with A52 is already a nightmare- very small run off and extremely tricky to get on. I fear there will be traffic accidents unless this is improved massively
1.12	West of Borrowwash	Road Safety	Jayne Bennett	Response-01519	Most properties own two vehicles so this will definitely increase the flow of traffic in the area. I already have to deal with traffic congestion going to and from work with the usual amount of traffic within this village so any extra vehicles would certainly generate a lot more traffic. Also we have traffic that cuts through Manor Rd and up Princess Drive out onto Derby Rd all the time especially during working hours which makes our road busy and unsafe and I have myself to have an accident along this route. Victoria Avenue is also very congested during school terms and if there are any accidents on the A52 then all traffic comes through Borrowwash bringing it to a standstill. It will increase pressure further on the parking provision for the local shops because people do not always walk.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Road Safety	Jennifer Sutton	Response-00518	A development of this scale will increase traffic on a proven dangerous road that children use to attend school. The proposed new junction location is poorly placed and poses safety risks. Emergency vehicle access could be delayed. No provision for active travel infrastructure, the space simply is not there to make this safe on our existing local road network. Permanent speed enforcement and a reduced speed to 20mph should be considered. This location is inherently unsafe for the following reasons: Limited Visibility: Drivers pulling out of the new estate will struggle to see oncoming traffic, especially during low light or bad weather. This significantly increases the risk of collisions. Speeding Risk: Despite being within a 30mph zone, speeding is not uncommon on this stretch. A single junction will not safely accommodate increased traffic flows, especially during peak hours. No Alternative Entry/Exit: The lack of a second access point raises serious concerns for emergency services access and evacuation routes. In the event of a crash, blockage, or fire, residents could be trapped or cut off. Conflict with Pedestrians and Cyclists: Introducing more turning vehicles at a single junction increases the risk of conflict with pedestrians (especially children walking to school) and cyclists who use Derby Road as a commuting route. The development's plan to install a pedestrian crossing point adjacent to this junction only adds complexity ? vehicles slowing or stopping for pedestrians at the same location where others are accelerating or turning creates a dangerous mix of competing movements. This aspect of the proposal conflicts with the National Planning Policy Framework (NPPF), paragraph 110(b), which states: ?Safe and suitable access to the site can be achieved for all users.? It also fails to satisfy paragraph 111 of the NPPF: ?Development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety.? Given the increase in vehicle numbers, limited sight lines, and lack of alternative access, this clearly constitutes an unacceptable safety risk.
1.12	West of Borrowwash	Road Safety	Jodie Brown	Response-01213	The bend on the main road is not ideal for exit/entry point to the site
			John & Anna Mead	Response-00772	Safety will also be compromised
1.12	West of Borrowwash	Road Safety	Julie Margaret Smith	Response-01090	As current routes experience increased traffic and the centre of the village additional footfall, in an area where crossing the road on foot is already hazardous, safety concerns for both pedestrians and motorists will increase. The area around Ashbrook School is already fraught with dangers of badly and thoughtlessly parked vehicles at peak times. It is already an accident waiting to happen, with no provision in place for children to safely cross alone.
1.12	West of Borrowwash	Road Safety	Kirsty Murray	Response-01003	More traffic will always be of detriment to road safety
1.12	West of Borrowwash	Road Safety	Laura Dewsnap	Response-00936	In Borrowwash, there is currently an insufficient number of safe crossing places. There is one traffic light controlled pedestrian crossing near to the Co op on Nottingham road, one further down Nottingham road near to the Nags Head pub and one on Station road on the approach to the bridge. There are no safe crossing points anywhere on Victoria Avenue which is where the infant and junior schools are located. This is where the main flow of traffic to and from the A52 Brian Clough Way can be found. In addition to the lack of safe crossing points, there is no school crossing patrol employed on Victoria Avenue outside of the school. At school drop off and collection times, the road gets very busy and visibility is limited due to parent's cars being parked close by. An increase in traffic will compound this issue and increase the risk of a serious accident taking place. Road safety in Borrowwash seems to rely heavily on chance.
1.12	West of Borrowwash	Road Safety	Lauren Fardoe	Response-00039	What pedestrian facilities will be implemented to ensure derby road users are safe.
1.12	West of Borrowwash	Road Safety	Lewis Sutton	Response-00415	Introducing a new access point and pedestrian crossing on the A6005 could create new hazards, particularly for pedestrians, school children, and cyclists. The road already has a high traffic volume and limited visibility in places, raising real safety concerns for existing and future road users. The last few years has seen some serious accidents, this will only increase with throughput and congestion. A development of this scale will increase traffic on a proven dangerous road that children use to attend school. The proposed new junction location is poorly placed and poses safety risks. Emergency vehicle access could be delayed. No provision for active travel infrastructure, the space simply is not there to make this safe on our existing local road network. Permanent speed enforcement and a reduced speed to 20mph should be considered.
1.12	West of Borrowwash	Road Safety	Lindsay Hodson	Response-01434	Already a concern and these developments would add to the issues Borrowwash already faces.
1.12	West of Borrowwash	Road Safety	Maisie Harlow	Response-00963	The increase in traffic will therefore increase the amount of speeding vehicles next to Ashbrook infant and nursery school.
1.12	West of Borrowwash	Road Safety	Mandy Dickens	Response-00590	Due to extra traffic it's obviously going to have an adverse effect on road safety
1.12	West of Borrowwash	Road Safety	Mary-Jo McDermott	Response-01437	More traffic will endanger pedestrians, especially children and the elderly. Current road crossings are insufficient, and more cars will heighten the risk of accidents, especially near bus stops and school zones.
1.12	West of Borrowwash	Road Safety	Maxwell Sutton	Response-01093	Max aged 5 already finds Derby road intimidating with loud vehicles hurting his ears and the smell of fumes. Not to mention the fear that the vehicles on a very narrow road may hit him as they are already very close to the slim pavement.
1.12	West of Borrowwash	Road Safety	Mike Casartelli	Response-01211	A development this size is going to cause a huge spike in traffic flow that inevitably will have an impact on safety.
1.12	West of Borrowwash	Road Safety	Mrs.A.Pickard	Response-00802	Victoria Avenue is a dangerous rat run to the A52 as it is with standing traffic every evening at rush hour.It is also narrow and extra traffic would be an absolute disaster,passing the local primary school.Also only one entrance road to the site would also cause congestion .
1.12	West of Borrowwash	Road Safety	Mrs Kay Rigby	Response-00876	All the extra traffic could be very dangerous to the public of Borrowwash and our children going to and from school
1.12	West of Borrowwash	Road Safety	Mrs M McCroft	Response-00532	With lots of extra people in the houses and little children going to school it would get very congested
1.12	West of Borrowwash	Road Safety	Mrs Sheila Hardington	Response-01232	Traffic often difficult in the area already.
1.12	West of Borrowwash	Road Safety	Mr Timothy Shepherd	Response-01334	Additional road crossings will be required at two point on Victoria Avenue, close to the school and close to Nottingham Road.
1.12	West of Borrowwash	Road Safety	Nathan Thomson	Response-01328	As above

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Road Safety	Neil Raistrick	Response-01365	The addition 250 dwellings will bring an expected 336 cars (average to access to cars 1.2 per dwelling *) the estate has a single entrance on Nottingham Road. This will vastly increase the traffic along this road and Victoria Avenue as the easiest option to go to Derby / Nottingham / A38 / A50. This additional traffic congestion needs to be considered in addition to the traffic generated by the new housing that is being built in Spondon along Nottingham Road. This traffic is likely to be heaviest at rush hour in the morning this will increase the danger to children at the Ashbrook School, there is currently a crossing person here; however it would be even better if the scheme also included crossing provision on Victoria Avenue. * Average value from National Travel Survey 2022 (Updates 14th Dec 2023) <a href="https://www.gov.uk/government/statistics/national-travel-survey-2022/national-travel-survey-2022-household-car-availability-and-trends-in-car-trips#household-car-access">https://www.gov.uk/government/statistics/national-travel-survey-2022/national-travel-survey-2022-household-car-availability-and-trends-in-car-trips#household-car-access</a> . Other sources have suggested it's as high as 1.29 per dwelling if London is excluded.
1.12	West of Borrowwash	Road Safety	Nicholas Parr	Response-01253	The surrounding roads notably the A52, Derby Road, Victoria Avenue and Borrowwash Road are already overloaded with far too much traffic, especially at peak times. Both Victoria Avenue and Borrowwash Road have schools which cause huge traffic congestion already ? more homes will only increase this problem with potentially fatal results. The proposed entrance/exit onto Derby Road is a blind spot with poor visibility as is access from Borrowwash Road onto the A52 ? more traffic cannot logistically and safely be accommodated. Parking space in the village is very restricted and inconsiderate parking outside the schools, opposite junctions etc is rife. Illegal parking at the top of Ladysmith Road makes it very difficult to enter and exit safely. The village is very hazardous for cyclists. I myself cycle to work at times and it is outright dangerous. (See also Traffic Congestion)
1.12	West of Borrowwash	Road Safety	Nick Coates	Response-00393	Paths around the area are very small additional traffic would increase risk
1.12	West of Borrowwash	Road Safety	Nicola Ashton	Response-00081	Roads round Borrowwash are completely grid locked if there is an accident on the A52 or the M1 With the issue around the school it's absolutely chaos at school time
1.12	West of Borrowwash	Road Safety	Paul and Dawn Davison	Response-01804	The Derby / Nottingham road would become especially dangerous, having to have a brand new road and junction forced upon it. Also Victoria Avenue has a School which would have even more traffic effecting it's safety.
1.12	West of Borrowwash	Road Safety	Paul Barker	Response-00800	Extra vehicles causing traffic problems is bound to have an impact on road safety.
1.12	West of Borrowwash	Road Safety	Paul collinge	Response-00941	It would be great if you included cycle lanes around Borrowwash and ockbrook to improve road safety of cyclists in the area as the traffic will be increased because of the development.
1.12	West of Borrowwash	Road Safety	Peter HINKLEY	Response-00775	An increased risk to all wishing to cross the A6005 in Borrowwash. School children and shoppers at this busy junction of Station Road/Victoria Ave. Cars coming from all directions, run on and off the A52 at peak travel times and school runs.
1.12	West of Borrowwash	Road Safety	Phil Adcock	Response-01488	An increasingly busy road for it's size, and indeed causing increased use of Station Rd to A6.
1.12	West of Borrowwash	Road Safety	Phil Self	Response-00759	As above getting busier and busier
1.12	West of Borrowwash	Road Safety	Raoul Pinkney	Response-01457	Vehicles exiting the proposed housing estate on to Derby Road would be joining an already busy road, and right hand turns would be particularly difficult and potentially dangerous. Extra vehicles from the proposed site means more traffic going through the village and likely past the primary school in the morning on the way to the A52.
1.12	West of Borrowwash	Road Safety	Rebecca Peach	Response-00404	Derby Road is an accident waiting to happen as it is. Victoria Avenue too. My children go to Ashbrook and the lack of traffic management is going to end in an accident at some point
1.12	West of Borrowwash	Road Safety	Sarah Cresswell	Response-01206	The section of the A6005 from Spondon to Borrowwash which passes the proposed site is within a 40mph zone which would make access to and from the site extremely dangerous. This section of road is also very narrow, in part due to an existing building. There is no provision or alternative route available for cyclists travelling between Borrowwash and Spondon and the pavement, which for part of this route only runs on the north side of the road, is already dangerously narrow and frequently overgrown forcing pedestrians to walk in single file. It is also the only available route for parents who walk their children to either Ashbrook Infant & Junior Schools in Borrowwash, or Asterdale School in on the eastern edge of Spondon and one that I used for years with my own children.
1.12	West of Borrowwash	Road Safety	Sarah McAulan	Response-01248	Our roads are narrow and hard for pedestrians to cross. Additional traffic will cause large implications
1.12	West of Borrowwash	Road Safety	Simon Shaw	Response-01152	Unsafe currently
1.12	West of Borrowwash	Road Safety	sophy peacock	Response-00678	Increased traffic poses more risk
1.12	West of Borrowwash	Road Safety	Steven Hoolan	Response-00912	Speed and volume of traffic along this stretch of road is a big cause for concern. Having young children and hearing and seeing the speed of traffic along the road worries me
1.12	West of Borrowwash	Road Safety	Sue Higginbottom	Response-01143	My grandchildren live in a relatively safe community and it won't be
1.12	West of Borrowwash	Road Safety	Suzanne Prior	Response-00907	Much of the existing traffic travelling along Derby Road between Victoria Avenue Spondon exceeds the speed limits, particularly within the Borrowwash Boundary. The pavements are very narrow towards the Spondon boundary, which necessitates walking onto the road when overtaking slower pedestrians. If there is an increase in both pedestrians and motorists, this will result in a more dangerous road.
1.12	West of Borrowwash	School Capacity	Alice Fitzpatrick	Response-00543	The schools are at capacity already!
1.12	West of Borrowwash	School Capacity	Anthony Clarke	Response-00559	We only have one infant school in Borrowwash, where are they all going to go
1.12	West of Borrowwash	School Capacity	Ben Foster	Response-00838	Under subscribed at ash rook
1.12	West of Borrowwash	School Capacity	Breanne Rodda	Response-00708	With the number of houses planned, if no further educational facilities are built I struggle to see how the current capacity would keep up
1.12	West of Borrowwash	School Capacity	Carmen Buckley	Response-00737	As a parent and also someone who works in the local education system the development will negatively affect our local school's ability to provide efficient education to all students. The schools are already struggling.
1.12	West of Borrowwash	School Capacity	Chris Archer	Response-01142	With only one infant and junior school an increase of such a large scale will create further issues for over sized classes

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	School Capacity	Craig Hydes	Response-00782	The two primary schools located in Borrowwash and Ockbrook are at full capacity and there is an annual difficulty on getting a child place in catchment. I had this issue with both my children.
			Daniel Lang	Response-00322	There will need to be additional places available to go with the increase in population.
1.12	West of Borrowwash	School Capacity	David Modrovic	Response-00803	Schools already at capacity and in need of repair, where you putting those extra children?
1.12	West of Borrowwash	School Capacity	Dr Sarah Mee	Response-01320	The housing development at this site will bring families and children who will need adequate educational provision. There are two small state funded primary schools near the housing allocation site and adequate resourcing of these schools and the secondary schools some distance away must be considered.
1.12	West of Borrowwash	School Capacity	Elizabeth	Response-01215	Schools especially West park will struggle to provide
			Gary Mortimer	Response-01148	There is already capacity issues at local schools which would be made much worse by this development
1.12	West of Borrowwash	School Capacity	Gillian Fitzpatrick	Response-00482	The schools are already at capacity
			Gillian Hitchcock	Response-00446	The schools in the area are pretty full now, why bring yet more people traffic and chaos to them?
1.12	West of Borrowwash	School Capacity	Hayley Dexter	Response-00519	There is one school for the whole of Borrowwash and adding this many houses will seriously impact this
1.12	West of Borrowwash	School Capacity	Helena Lucas	Response-00644	West Park and the local Borrowwash Ashbrook school are oversubscribed. Placing this housing estate between West Park and the existing village will prioritise children in the new estate who will become closer in proximity to the school, potentially forcing families out of the original village in order to fall closer to the catchment area. This will cause families significant costs or force families to transport their children to alternative schools, causing increased pressure and stress on families, and again increasing road pollution and congestion.
1.12	West of Borrowwash	School Capacity	Henrietta heron	Response-01354	West park is already at capacity where are kids meant to go to school ??
1.12	West of Borrowwash	School Capacity	Ian Frearson	Response-01267	This proposal is unsuitable for the existing school provision and would generate a potentially estimated 300 school placements based on similar developments. It would overwhelm the existing school provision and should not be considered as a suitable site for development without a serious commitment for increasing the school placements available.
1.12	West of Borrowwash	School Capacity	Jaime Grant	Response-00512	As with all public facilities - has the impact of adding an additional 280 homes been considered on local schools and GP surgeries?
1.12	West of Borrowwash	School Capacity	James Dean	Response-00553	School places are again already at a premium... this will lead to over crowding and reduction in the quality of education delivered.
1.12	West of Borrowwash	School Capacity	Jane Shepherd	Response-01333	Any increase in housing must be matched by funding for extra school placement. Will additional classrooms/ teachers etc be funded fully. Education budgets are already stretched to the limit. We do not want class sizes to increase. If both of the Borrowwash schemes go through we will need at least another local primary school. School budgets are stretched as it is 'class sizes must not increase. Where will the extra funding come from?
1.12	West of Borrowwash	School Capacity	Jayne Bennett	Response-01519	The schools in Borrowwash and Spondon are at full capacity so where would the additional children go. During school drop offs the roads are filled with parked cars especially on Victoria Avenue and we do not also have a traffic warden.
1.12	West of Borrowwash	School Capacity	Jennifer Sutton	Response-00518	The policy assumes that housing = school-aged children, but does not guarantee funding or infrastructure expansion. Realistically, families may have to commute out, adding to congestion, or face denial of places ? an issue observed across Derbyshire.
1.12	West of Borrowwash	School Capacity	Joanne	Response-01252	Schools are already full, are they going to be building another one?
1.12	West of Borrowwash	School Capacity	John & Anna Mead	Response-00772	One school cannot cope with the input of local housing as it is, 34 to a class !
1.12	West of Borrowwash	School Capacity	Judith Anderson	Response-00934	Schools don't have enough places for the increased number of inhabitants.
1.12	West of Borrowwash	School Capacity	Julie Margaret Smith	Response-01090	There is apparently capacity at Ashbrook School but an increased school population will inevitably increase traffic congestion and surrounding issues on Victoria Avenue.
1.12	West of Borrowwash	School Capacity	Kirsty Millward	Response-01327	As a local parent to two young children who will be starting school in the next 3/4 years. The additional housing will mean that both local primary schools in Borrowwash become oversubscribed. This is grossly unfair to families who already live in the area and within close proximity to the schools. You should build these houses elsewhere in an area that is either having a new school built or a major extension to an existing school. Adding this many houses puts families already living in Borrowwash at risk of having our children sent to school outside of the village. This is not fair and will damage our children's ability to make friends and socialise within the village, another move away from community cohesion.
1.12	West of Borrowwash	School Capacity	Laura Dewsnap	Response-00936	Whilst Ashbrook infant and junior school is often under subscribed, it is also under staffed. Often year groups are joined together in the same class which presents a difficulty for teaching age/stage appropriate lessons and providing an education which is reflective of the children's needs according to their age. The other primary school which serves Borrowwash is Redhill primary school. This school is one of the most over subscribed schools in Derbyshire. An increase in population in the area will have a negative impact on both schools. If Ashbrook school receives a sudden influx in numbers due to a surge in the local population, they will have difficulty in recruiting enough high quality teachers to meet a sudden rise in demand within a short time frame.
			Lesley Eccles	Response-00814	Will impact on school as currently only one school in borrowwash.
1.12	West of Borrowwash	School Capacity	Lewis Sutton	Response-00415	National birth-rates continue to fall, building houses to attract "children" is myopic and simply a plaster for the wound.
1.12	West of Borrowwash	School Capacity	Lindsay Hodson	Response-01434	Ashbrook might be able to accommodate more students but the surrounding secondary schools are often fully subscribed. Buses to secondary schools are always very busy and if students have to travel further for a place this would be a future concern.
1.12	West of Borrowwash	School Capacity	Maisie Harlow	Response-00963	New homes attract young families, increasing the number of children in borrowwash. This will put a strain on our local schools and make it difficult to accommodate everyone. Therefore children will struggle to get places or overcrowding and hindering learning environments for children.
1.12	West of Borrowwash	School Capacity	Margaret Irene Wheatley	Response-00915	Capacity of the School needs to adequately cater for future demands.
1.12	West of Borrowwash	School Capacity	Mark Birkinshaw	Response-00046	Will the schools need to reduce the catchment areas to ensure that more local children can be accommodated in the primary and secondary offerings closest to Borrowwash?

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
	West of Borrowwash	School Capacity	Mark Burrow	Response-00655	Not enough placements to support this level of population increase
1.12	West of Borrowwash	School Capacity	Mark Fearn	Response-00507	Schools in the local area are already at full capacity of all age groups so an increase of families wishing to move in will not only put even more strain on the local education system but also result in children having to go dangerously far away for schooling.
	West of Borrowwash	School Capacity	Middleton	Response-00893	Another maybe 300 children to go to ashbrook school crazy, would need another 50% capacity
1.12	West of Borrowwash	School Capacity	Mrs.A.Pickard	Response-00802	This proposal would stretch school facilities to it's limit - and cause congestion on the already busy Victoria Avenue.
	West of Borrowwash	School Capacity	Mrs Kay Rigby	Response-00876	We only have one school in Borrowwash which is full at the moment so where will all the extra children go
1.12	West of Borrowwash	School Capacity	Mrs M McCroft	Response-00532	I doubt there would be any more room in the schools nearby
1.12	West of Borrowwash	School Capacity	Mr Timothy Shepherd	Response-01334	Significant additional investment will be required to build additional classrooms and fund additional staff at local primary schools to accommodate children from the new houses.
1.12	West of Borrowwash	School Capacity	Nathan Thomson	Response-01328	The schools are already serving a large number of families in the local area adding more houses the schooling would need to be provided as well
1.12	West of Borrowwash	School Capacity	Nicholas Parr	Response-01253	Whether or not the schools are at capacity, an increase in children attending the Ashbrook Schools will increase the already serious traffic congestion and surrounding issues on Victoria Avenue.
1.12	West of Borrowwash	School Capacity	Nick Coates	Response-00393	Not enough school to meet additional demands
1.12	West of Borrowwash	School Capacity	Nicola Ashton	Response-00081	I believe the school is also at full capacity
1.12	West of Borrowwash	School Capacity	Peter Howell	Response-00829	no new school in the development.
1.12	West of Borrowwash	School Capacity	P Fisher	Response-01175	The last time this application was proposed, the school was at capacity which was one of the reasons for it being turned down.
1.12	West of Borrowwash	School Capacity	Phil Self	Response-00759	Schools will be overwhelmed
	West of Borrowwash	School Capacity	Sarah Davies	Response-01137	The local schools are already at capacity, a new primary school would be required to facilitate the extra potential new residents.
1.12	West of Borrowwash	School Capacity	Simon Shaw	Response-01152	Adding houses does not necessarily help our schools or teachers. UK birth-rate is falling, these houses wont help that.
1.12	West of Borrowwash	School Capacity	Stephen Peat	Response-01793	(1) When you look at the Spondon Wood Planning Application, you are aware that the Schools in Spondon and the Borrowwash area are full, especially West Park School, which will need over £20 million in new buildings and a yearly payment of £1 million to maintain the school. The primary schools will require additional buildings to be constructed, but there is limited land within the primary school sites. This could mean the loss of the sports field or playground to build a new building. (2) The majority of the schools in Spondon are built on narrow roads, with high traffic congestion and excessive parking around the schools, and neighbouring homes, and traffic would cause difficulty for passing traffic, including public transport to access the area during the school run. Households will be angry if they cannot leave their driveways because parked cars block their access to the road. (3) New schools will need to be built to cope with the development around Borrowwash because schools in Borrowwash cannot expand further without losing sports fields or playgrounds. I believe building too many homes in one location will cause excessive pressure on the local neighbourhood. Houses could be built across the Erewash area, including old industrial and parking areas, and the Erewash Council should look at smaller-scale developments with around 50 houses to reduce pressure on schools and the local neighbourhood.
1.12	West of Borrowwash	School Capacity	Steve Brown	Response-01153	Will obviously increase capacity no mention of provisions for this.
1.12	West of Borrowwash	School Capacity	Steven Hoolan	Response-00912	Schools are currently at maximum capacity. Additional housing will put extra stress on already stretched resources
1.12	West of Borrowwash	School Capacity	Sue Higginbottom	Response-01143	Parents struggle to get their children into schools now , this is going to make matters much worse
1.12	West of Borrowwash	School Capacity	Tanya caldbeck	Response-00917	No school places
1.12	West of Borrowwash	School Capacity	T McKinnon	Response-01368	Children in our area have waited months to get a place locally , capacity seems to be an issue already
	West of Borrowwash	School Capacity	Virginia Locke	Response-00580	One school joke
1.12	West of Borrowwash	Traffic Congestion	Adele Pinkney	Response-01456	Borrowwash village centre already becomes very congested where Victoria Avenue meets Derby/Nottingham Road. Extra traffic feeding on to Derby Road, particularly during rush hour, will add to this heavy congestion, cause additional pollution and increase risk of accidents.
1.12	West of Borrowwash	Traffic Congestion	Alex Lowe	Response-00707	Traffic around peak and school times along the A52 and Victoria Avenue is already incredibly high, especially with all cars parked outside houses. This will increase it
1.12	West of Borrowwash	Traffic Congestion	Alice Fitzpatrick	Response-00543	For each house built there is potential for at least 2 x cars plus delivery vans, waste collectors etc etc. The access roads to the A52 (Victoria Avenue & Borrowwash Road) cannot cope with current traffic or parking outside houses with no off-street parking and I seriously worry about the impact of further traffic on the foundations and structure of the existing old houses. Pollution will be increased ? electric cars notwithstanding! The surrounding roads notably the A52, Derby Road, Victoria Avenue and Borrowwash Road are already overloaded with far too much traffic, especially at peak times. Both Victoria Avenue and Borrowwash Road have schools which cause huge traffic problems already ? more homes will only increase this problem with potentially fatal results. The proposed exit onto Derby Road is a black spot with poor visibility as is access from Borrowwash Road onto the A52 ? more traffic cannot logistically and safely be accommodated. I am a cyclist as I chose not to drive where possible. The roads are already unsafe for cyclists so more traffic means more danger likewise to pedestrians and existing motorists. Victoria Avenue was built for horse and cart - it already has far too much heavy traffic such as car transporters, container lorries etc The old Bemrose site on the edge of Spondon is less than a mile from Borrowwash; the extensive development of this site has already increased traffic congestion in the area to an unacceptable level - we do not need any more vehicles!
1.12	West of Borrowwash	Traffic Congestion	Alison Vine	Response-01813	There will be a huge increase in traffic using roads that are already in poor condition. Victoria Avenue, leading to and from the A52, is already very busy and it is possible that the majority of cars from the Derby Road site will use this road. This will also affect the school crossing.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Traffic Congestion	Amy Brown	Response-00514	I live on Covent Garden Close and can safely say that traffic within Borrowwash as a whole can be rather daunting at the best of times. Whilst there is no planned road route from my street in particular, having further vehicles parking on this street to access a pedestrian access would cause such havoc. We already struggle twice a day during school hours due to people parking here for school pick up/drop off and sometimes we can't even access our own driveways due to this. Where a pedestrian route would go here, I can only imagine would be down the side of our home (number 3) in the corner which leaves us exposed from our driveway, garage and garden which I find very intruding. This is a small cul de sac in which we struggle already so putting more traffic through here would be catastrophic. I also feel that the heavy traffic from any building works/access would be very detrimental via Nottingham Road - again this is a thorough route for many, especially with the A52 close by and being in between schools and other local towns would cause further congestion. Victoria Avenue is a hazard as it is most of the day due to parked cars but when we have the high traffic time (school hours/work commutes) alongside traffic coming off the A52 especially when accidents have occurred, I can confidently say this will cause a lot of distress to a small village that is only just getting by.
			Andrew Hozack	Response-01322	The area is heavily congested with traffic as it is without adding to the problem.
1.12	West of Borrowwash	Traffic Congestion	Angela Chapman	Response-01331	Borrowwash already has begun to have severe traffic issues, the building of the by-pass some 40 years ago is no longer viable, with many people using the village as a way through to Spondon, with a significant rise of vehicles on the road network as a whole, small narrow roads through and around the village only make the matters worse. At an average of 2 cars per household, this will increase traffic with some 500 cars onto an already suffocating road network.
1.12	West of Borrowwash	Traffic Congestion	Ann Daykin	Response-01453	Despite the creation of new road to the development, the number of potential cars that would be accessing the A6005 would be overwhelming. The road is currently congested at rush hour, so the extra traffic would cause massive issues and traffic congestion throughout Borrowwash.
1.12	West of Borrowwash	Traffic Congestion	Anne Anderson	Response-00980	It is already difficult to cross the road if you are not in the vicinity of the crossing and the traffic noise will make life unbearable for residents living on the main road.
			Anthony Clarke	Response-00559	Already a very busy village which could not accept the added traffic
1.12	West of Borrowwash	Traffic Congestion	Ashley Cartledge	Response-01417	Borrowwash already suffers with gridlock at times.
1.12	West of Borrowwash	Traffic Congestion	Ashley Dunn	Response-01560	The junction of the A52 and Victoria Avenue is already busy during peak times and there is a lot of congestion around Ashbrook Infants School. Without significant improvements to infrastructure (e.g. entire new junction), this development would unacceptably exacerbate these problems.
1.12	West of Borrowwash	Traffic Congestion	Barry Shaw	Response-01482	impossible to cross the road currently let alone with 1000 more cars
			Breanne Rodda	Response-00708	Too much traffic already through Borrowwash, even with a new road built people visiting the amenities will drive up rush hour traffic
1.12	West of Borrowwash	Traffic Congestion	Britton	Response-00877	We struggle daily to get on and off driveway due to increasing traffic- the proposed amount of housing will only increase the traffic
1.12	West of Borrowwash	Traffic Congestion	Carmen Buckley	Response-00737	Traffic is already bad in the area due to the A52 and M1 being close by. The East Midlands is becoming known as one of the most polluted counties.
1.12	West of Borrowwash	Traffic Congestion	Carol Shaw	Response-00797	The development of around 280 homes west of Borrowwash will create significant traffic congestion on the A6005 Derby Road. The creation of a new vehicular access and pedestrian crossing point will increase traffic flow and potentially lead to congestion at peak times. This could also impact road safety, especially with the increased number of vehicles entering and exiting the development. Bottleneck Without Direct A52 Access: Without direct access to the A52, the development will force additional traffic onto local roads, creating a bottleneck. Stationary traffic is already a common issue on Victoria Avenue and Station Road, and the increased volume from the new development will exacerbate this problem. This will lead to longer travel times, increased frustration for drivers, and higher risks of accidents. Impact of Events at Elvaston Castle: Events at Elvaston Castle, which attract large numbers of visitors, will have huge implications for traffic in the area. The additional traffic from the development will compound the congestion during these events, making it difficult for residents and visitors to navigate the area. National Policy Context: The National Planning Policy Framework (NPPF) emphasizes that transport issues should be considered from the earliest stages of plan-making and development proposals. It encourages developments that limit the need to travel and promote sustainable transport modes to reduce congestion and improve road safety. The NPPF also highlights the importance of designing schemes that contribute to making high-quality places and ensuring patterns of movement, streets, parking, and other transport considerations are integral to the design.
1.12	West of Borrowwash	Traffic Congestion	Catherine Casartelli	Response-01428	The plans could add 280-560 additional cars moving through the village. At peak times traffic is already high. With only one road access road to the development has congestion on that development been considered at peak times?
1.12	West of Borrowwash	Traffic Congestion	Catherine Fox Charlton	Response-00659	This will no doubt cause traffic congestion on Derby Road
1.12	West of Borrowwash	Traffic Congestion	Chris Archer	Response-01142	The traffic on Victoria is already a problem for the village due to the lack of off street parking for residents there. By adding a large number of houses in this area is will create and even greater issue
1.12	West of Borrowwash	Traffic Congestion	Christine Cole	Response-01254	I see it says the necessary road adjustment will be made but does not specify how that A6005 will cope with the additional potential traffic (+500 vehicles) that an estate this size will generate? The entrance is on an incline and currently 40mph. It is also the route many children take walking and on bikes to West Park school in Spondon. There is only 1 small path. During construction this will be a major problem. Infrastructure needs to be adjusted before site is constructed.
1.12	West of Borrowwash	Traffic Congestion	Craig Hydes	Response-00782	This site will heavily impact accessibility to the nearby coop and local amenities.
1.12	West of Borrowwash	Traffic Congestion	Dale Harlow	Response-00887	Traffic onto the A52, Victoria avenue leading to ockbrook, at borrowwash cross roads and leading into spondon will be more hectic, especially in peak travel times causing major disruptions to travel and infrastructure along with the school traffic already causing delays and issues. More housing will cause major delay.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Traffic Congestion	Daniel Lang	Response-00322	At peak times there are already queues around borrowwash junction. The additional traffic will only make this worse. Additionally there will need to be yellow lines on Derby road as parked cars often exacerbate the problem.
1.12	West of Borrowwash	Traffic Congestion	Dan Pilgrim	Response-00932	Traffic in Borrowwash is already busy on a day to day basis. The village comes to a standstill when m1 or a52 is shut, this project will only increase the demand on the roads
1.12	West of Borrowwash	Traffic Congestion	David House	Response-01489	The development will exacerbate congestion in Borrowwash, especially at the busy junction by the Coop.
1.12	West of Borrowwash	Traffic Congestion	David Modrovic	Response-00803	Borrowwash and Victoria Ave particularly already congested
1.12	West of Borrowwash	Traffic Congestion	David Smith	Response-01115	I am particularly concerned about the quantity of increased traffic , pollution and danger especially around school opening and closing times. As things stand the crossing of children across Victoria avenue is an accident waiting to happen. Increase of traffic heading to Derby and the M1 via the A52 is already a problematic area.
1.12	West of Borrowwash	Traffic Congestion	David Steare	Response-01300	1 The A6005 road from Spondon to Borrowwash is already very busy at commuter times. When there are lane closures due to repairs or cabling the delays can already cause a queue backing up into the village. The proposed house building will exacerbate this (especially during the construction phase) and as I live on Princess Drive this will cause further delay to my car journeys. 2 Currently there are no parking restrictions on the A6005 near to the proposed site. Visitors to this development may use the A6005 for parking leading to delays when traffic has to give way. 3 The proposed site is near a brow of a hill on the A6005. There are no traffic cameras in the vicinity and speeding motorists risk collision to traffic queuing to enter or leave the site. 4 Currently any diversion because of an A52 closure already causes gridlock in Borrowwash village and along the A6005. The proposed house building will exacerbate this.
1.12	West of Borrowwash	Traffic Congestion	David Tyler	Response-00835	Access will be poor without considerable road realignment on Derby road
1.12	West of Borrowwash	Traffic Congestion	Deborah young	Response-01306	At least 200 to 300 more cars coming out on to Nottingham road . Traffic bad enough as it is
1.12	West of Borrowwash	Traffic Congestion	Denise Ball	Response-01291	The large size of the development will require a complete review of the capacity of the surrounding road system. There are already delays at peak times and any extra traffic caused by the development would increase traffic congestion
1.12	West of Borrowwash	Traffic Congestion	Denise Illsley	Response-00056	The traffic in the village has increased substantially over the past few years and this development will only increase the problem further.
1.12	West of Borrowwash	Traffic Congestion	Dianne Simmons	Response-00401	When there is an issue on the A52 which is regular, the village of Borrowwash is gridlocked, with an additional 200 plus houses this will be a disaster
1.12	West of Borrowwash	Traffic Congestion	Dr Sarah Mee	Response-01320	Whilst I note the proposals for off-site highway investment; the scale of this must be determined in the context of existing volume of traffic on the A6005 Derby Road which is frequently at capacity and traffic is completely grid-locked when the A52 is closed. The A6005 was designed to support traffic into and out of the village and access to the village homes. The road is not designed for high volume urban or construction traffic. Additional public transport upgrades will add to the congestion and traffic increases related to school access must be balanced with the need to provide adequate pavement for children to also walk to and from the proposed housing allocation site and the local schools. Pavements are already narrow and often difficult to access due to hedges overhanging and this must be factored in when proposals for easing existing and future traffic congestion worsening are developed. .
1.12	West of Borrowwash	Traffic Congestion	Elizabeth	Response-01215	There will be a huge increase in traffic along Nottingham Road causing queues between Borrowwash and Spondon
1.12	West of Borrowwash	Traffic Congestion	Ellen Young	Response-01357	280 houses could see 560 more cars in the village. This would make congestion in the village worse particularly during rush hour and school times. Borrowwash is one of the main diversions when there has been an incident on the A52. An increase in cars within the village will add to the traffic jams caused by the diversion. Likewise, the village will also see an increase in queues caused by local events, such as the County Show, due to an increase in cars in general around the neighbourhood and cars going to the event.
1.12	West of Borrowwash	Traffic Congestion	Emma Gregory	Response-01454	I object because the development would substantially increase the volume of traffic with added noise and air pollution. All traffic leaving and entering the site travelling along the A6005 in an easterly direction to Nottingham would have to go through the village centre creating further congestion. Cars, lorries, buses, vans, cyclists and e-scooters would be increased hugely. All this is detrimental to village life.
1.12	West of Borrowwash	Traffic Congestion	Eve barker	Response-00443	Traffic through Borrowwash and ockbrook is awful. Pot holes, from the wear and weight of too many vehicles already.
1.12	West of Borrowwash	Traffic Congestion	Francesca Hope	Response-00528	Victoria Avenue is already busy without extra traffic coming into the village
1.12	West of Borrowwash	Traffic Congestion	Gary Mortimer	Response-01148	The road is already heavily congested and a development of this size will have a horrendous effect on the already congested A6005
1.12	West of Borrowwash	Traffic Congestion	Geoff Whittaker	Response-01805	There is talk about the need for work to adjacent junctions but this is not detailed and what the costs will be. There is talk about a new junction on the A6005 but no costs are given. It would be reckless to not consider the overall costs within the proposals.
1.12	West of Borrowwash	Traffic Congestion	Gillian Fitzpatrick	Response-00482	For each house built there is potential for at least 2 x cars plus delivery vans, waste collectors etc etc. The access roads to the A52 (Victoria Avenue & Borrowwash Road) cannot cope with current traffic or parking outside houses with no off-street parking and I seriously worry about the impact of further traffic on the foundations and structure of the existing old houses. Pollution will be increased ? electric cars not withstanding! The surrounding roads notably the A52, Derby Road, Victoria Avenue and Borrowwash Road are already overloaded with far too much traffic, especially at peak times. Both Victoria Avenue and Borrowwash Road have schools which cause huge traffic problems already ? more homes will only increase this problem with potentially fatal results. The proposed exit onto Derby Road is a black spot with poor visibility as is access from Borrowwash Road onto the A52 ? more traffic cannot logistically and safely be accommodated.
1.12	West of Borrowwash	Traffic Congestion	Gillian Hitchcock	Response-00446	Victoria Avenue is already a nightmare for parking, why isn't there an access road so people who back onto this ? allocation ? could use their gardens as off road parking option.
1.12	West of Borrowwash	Traffic Congestion	Hayley Dexter	Response-00519	There is already heavy traffic and terrible potholes on the main roads in Borrowwash

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Traffic Congestion	Helena Lucas	Response-00644	280 new houses will bring an additional one or two, if not more vehicles per household moving in and out of the villages as well as an increase in maintenance vehicles and rubbish lorries, polluting the environment further and increasing noise and road damage. Increased difficulty turning onto Nottingham Road and the back up of traffic onto the A52 will increase risk of road traffic collisions, putting more pressure on the emergency services, and putting more lives at risk. Damage to roads will increase, and in turn damage to cars, as a result will be costly for everyone.
1.12	West of Borrowwash	Traffic Congestion	Helen Pearce	Response-01550	Roads are already too busy and it takes a minor accident on the A52 to cause disruption for our small village.
1.12	West of Borrowwash	Traffic Congestion	Henrietta heron	Response-01354	Already Victoria Avenue and getting on and off the A52 can be very busy, with that amount of extra car it will make the village into a large car park!
1.12	West of Borrowwash	Traffic Congestion	Iain Pendry	Response-01188	I would have a significant concern about vehicle access onto and off the site. Both adjacent roads are very heavily congested, and clear provision will need to be made to ensure that site access is safe, and maintains the flow of traffic on the Nottingham Road, and on Victoria avenue.
1.12	West of Borrowwash	Traffic Congestion	Ian Frearson	Response-01267	A development of around 280 dwellings as proposed will generate far more traffic movements on and off the Derby road than currently that will put more pressure on the the existing highway network and make the routes to and from the village less safe. the proposal does not allow for a secondary access to the site and this would mean a main route into and from the site of Distributor standard. Traffic movements to and from the Derby road would put additional pressure on the existing route that is already extremely busy at peak times
1.12	West of Borrowwash	Traffic Congestion	Ian Hamilton	Response-01325	The roads through and around the village are already in poor state of repair and clearly cannot handle the current volume of traffic. The size of the proposed development is unrealistic.
1.12	West of Borrowwash	Traffic Congestion	Jacky Kinirey	Response-01209	The build up of traffic along Nottingham/Derby Road during peak times. The A52 has traffic problems then Borrowwash and surrounding areas are gridlocked. Access to a new housing estate would cause if more traffic chaos
1.12	West of Borrowwash	Traffic Congestion	Jaime Grant	Response-00512	I am concerned about the impact an additional 280 homes will have upon congestion through the area and onto the estate.
1.12	West of Borrowwash	Traffic Congestion	James Dean	Response-00553	This town cannot handle more traffic. We have seen the state of the road already and in ockbrook this has been dire... this will only get worse. The roads are small and already over congested at peak times with parking in the area already at a premium. This will be an appalling decision to add further houses here.
1.12	West of Borrowwash	Traffic Congestion	Jane Rothern	Response-00042	Traffic through the village will be badly affected.
1.12	West of Borrowwash	Traffic Congestion	Jane Shepherd	Response-01333	The proposed new road/junction will lead to long queues. Whether there traffic lights or not it will cause congestion. There be more pollution from traffic. Extra houses will inevitably lead to more traffic at a difficult junction and therefore more congestion leading to poorer air quality and probably more road traffic accidents
1.12	West of Borrowwash	Traffic Congestion	Jayne Bennett	Response-01519	Most properties own two vehicles so this will definitely increase the flow of traffic in the area. I already have to deal with traffic congestion going to and from work with the usual amount of traffic within this village so any extra vehicles would certainly generate a lot more traffic. Also we have traffic that cuts through Manor Rd and up Princess Drive out onto Derby Rd all the time especially during working hours which makes our road busy and unsafe and I have myself to have an accident along this route. Victoria Avenue is also very congested during school terms and if there are any accidents on the A52 then all traffic comes through Borrowwash bringing it to a standstill. It will increase pressure further on the parking provision for the local shops because people do not always walk.
1.12	West of Borrowwash	Traffic Congestion	Jennifer Sutton	Response-00518	Borrowwash already faces notorious traffic bottlenecks, especially along the A6005 Derby Road, which regularly backs up during rush hours and particularly during A52 closures or incidents. Adding 280 homes (10% more than current Borrowwash housing stock) means a significant increase in daily vehicle trips ? conservatively over 500 new car journeys per day, including school drop-offs, commutes, deliveries, and service vehicles. A link should be put into Field Close or similar, to access the A52 directly to alleviate the massive increase in village traffic this proposal will cause. The plan includes a single point of access on a sweeping, poorly visible bend of the A6005. This is inherently dangerous. The installation of one pedestrian crossing does not mitigate the issue ? it may exacerbate tailbacks, especially in peak hours. A link should be put into Field Close or similar, to access the A52 directly to alleviate the massive increase in village traffic this proposal will cause. The Core Strategy (2025 update) promises ?network resilience,? yet this site deliberately avoids it. It creates a bottleneck, not a solution.
1.12	West of Borrowwash	Traffic Congestion	Joanne	Response-01252	Traffic is terrible already without another 300 plus cars
		Traffic Congestion	Jodie Brown	Response-01213	Concerned about the traffic with one entry and exit onto nottingham road.
1.12	West of Borrowwash	Traffic Congestion	John & Anna Mead	Response-00772	There will be an increase in traffic - the potholes are bad enough with it at the current moment
1.12	West of Borrowwash	Traffic Congestion	Judith Anderson	Response-00934	Traffic through Borrowwash will increase considerably.
1.12	West of Borrowwash	Traffic Congestion	Julie Margaret Smith	Response-01090	The housing allocation of 280 dwellings will put increased traffic pressure on Victoria Avenue and its west-bound junction with the A52. This junction is a notorious blackspot as vehicles speed downhill towards it, making peak traffic very difficult to join. This danger has increased since the slip road onto it was shortened, and queues occur which will only increase. Peak times on Victoria Avenue already see huge congestion around Ashbrook school where the road begins to narrow, leading to dangers for both pedestrians and motorists, and there has been no pedestrian crossing approved on what is already a very difficult route to negotiate. The southern end of this road, leading to the centre of Borrowwash, is narrower and its older housing has no off-road parking provision, thus the road is further narrowed by permanent parking on the west side. This leads to instances where there is only sufficient road width for two passing vehicles or only one in (frequent) instances of wide vehicles (eg buses and lorries) passing. Many of the junctions, especially Ladysmith Road) are occluded, presenting possible collisions. No pedestrian crossing is provided for those needing to safely cross the road in the busy centre of the village, where footfall and vehicle numbers would increase.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Traffic Congestion	kelvin cross	Response-01187	280 new houses is going to add approx another 560 + extra cars into the village area, into roads which are already heavily used (and poorly maintained!) . A single entrance/exit from the A6005 is going to cause considerable congestion on that road which will certainly tail back into the cross roads at the village centre, which is already congested at peak times. Where can the impact assessment that was carried out (?) for all this extra traffic be seen ?
1.12	West of Borrowwash	Traffic Congestion	Ken Hardy	Response-00928	Traffic along Derby Road is always very heavy my concern would be the massive increase due to only having one way in and out of the site?
1.12	West of Borrowwash	Traffic Congestion	Kirsty Murray	Response-01003	Borrowwash village is already congested and the council are unable to care for the current roads and fill the potholes we have now and they would be damaged further by more traffic
1.12	West of Borrowwash	Traffic Congestion	Laura Dewsnap	Response-00936	The increased traffic on Victoria Avenue would be a particular problem with the conflicting movements between cars and pedestrians being an issue outside of the Infant and Junior schools. There will problems exiting towards Derby as the junction at Spondon Lane End is already at capacity causing significant congestion at peak times. There is a restriction on the capacity on Station Road caused by the traffic light control on the bridge over the River Derwent, this causes frequent bottle necks in and around the village with traffic at current levels. An increase in traffic would create even more frequent bottleneck situations. The centre of Borrowwash has a traffic light controlled pedestrian crossing. This crossing is well used and creates a further bottleneck. This bottleneck affects traffic flows on Victoria Avenue, Derby Road, Nottingham Road and Station Road. The junctions with Victoria Avenue from and to the A52 Brian Clough Way are often congested causing tailbacks at peak periods. Increased traffic flows from the development would make these queues worse. This problem relates to the junction just to the north of the flyover and to the south of the bridge. The entry slip roads to Brian Clough Way are substandard in both the east and west directions. Increased traffic flows from this development would increase the accident risk at both slip roads.
	West of Borrowwash	Traffic Congestion	Lauren Fardoe	Response-00039	Extra vehicles on derby road will create greater pollution and disruption to community
1.12	West of Borrowwash	Traffic Congestion	Lesley Eccles	Response-00814	Will greatly increase traffic congestion as homes will have 2 car parking spaces and thus will impact on parking in centre of village
1.12	West of Borrowwash	Traffic Congestion	Lesley Young	Response-00902	I live by where this housing is being suggested. Many times it takes me at least 10 mins to get out now. The increased amount of traffic will make this far worse. Also, if there are accidents on the A52, and motor way, traffic is diverted down the Derby Road and the standing traffic will be untenable with the extra vehicles.
1.12	West of Borrowwash	Traffic Congestion	Lewis Sutton	Response-00415	The development will create a significant increase in vehicular traffic accessing the A6005 Derby Road. This is already a busy route, and the added traffic from 280 homes (and future safeguarded land development) will intensify congestion at peak times, particularly near key junctions. A link should be put into Field Close or similar, to access the A52 directly to alleviate the massive increase in village traffic this proposal will cause.
1.12	West of Borrowwash	Traffic Congestion	Lindsay Hodson	Response-01434	Traffic along derby road has already significantly increased in past few years this would ruin village of Borrowwash further. Making it both unsafe and unpleasant.
1.12	West of Borrowwash	Traffic Congestion	Lucas Hodson	Response-01435	There are lost of children in borrowwash and some roads are difficult to cross especially to the village so by using the roads many pedestrians will be at risk especially cyclists and children.
1.12	West of Borrowwash	Traffic Congestion	Lynda Gamble	Response-00910	Isn't there enough traffic already causing congestion in Borrowwash already? Derby Road just seems to get busier and busier without additional housing traffic.
1.12	West of Borrowwash	Traffic Congestion	Maisie Harlow	Response-00963	The increased volume of traffic from construction vehicles and new residents will worsen the existing rush hour congestion, impact commute times, fuel consumption, greenhouse gas emissions and traffic noise for locals.
1.12	West of Borrowwash	Traffic Congestion	Mandy Dickens	Response-00590	The traffic in the morning is already very bad along Nottingham Road, any additional traffic would make the journey into Borrowwash and A52 nigh on impossible
1.12	West of Borrowwash	Traffic Congestion	Margaret Irene Wheatley	Response-00915	This is a problem which needs constant monitoring
1.12	West of Borrowwash	Traffic Congestion	Mark Birkinshaw	Response-00046	With only one access to circa 280 homes, each with potential for a minimum of 1 vehicle per household this will negatively impact the ease of travel into Spondon for school travel and critically up Victoria Avenue to access an already busy commuting routes into Derby and Nottingham via the A52.
1.12	West of Borrowwash	Traffic Congestion	Mark Burrow	Response-00655	No doubt Borrowwash will become far more congested of this were to go ahead. I strongly object.
1.12	West of Borrowwash	Traffic Congestion	Mark Fearn	Response-00507	This will bring far too many vehicles into an area with roads that are both already congested and not suitable for such a level of regular traffic.
1.12	West of Borrowwash	Traffic Congestion	Mark Green	Response-00940	The traffic congestion along Derby Road is already troublesome at peak times and the creation of these homes will significantly increase the problem.
1.12	West of Borrowwash	Traffic Congestion	Mary-Jo McDermott	Response-01437	This development would significantly increase traffic on already congested and noisy local roads, particularly during peak school and commuting hours. Our infrastructure is not equipped to handle a large influx of vehicles, which would worsen bottlenecks and increase journey times for residents and emergency services.
1.12	West of Borrowwash	Traffic Congestion	Matt Harvey	Response-01312	The village is busy enough with vehicles queuing at the T-junction from the A52. It can't handle anymore.
1.12	West of Borrowwash	Traffic Congestion	Maxwell Sutton	Response-01093	Max aged 5 already finds Derby road intimidating with loud vehicles hurting his ears and the smell of fumes. Not to mention the fear that the vehicles on a very narrow road may hit him as they are already very close to the slim pavement.
1.12	West of Borrowwash	Traffic Congestion	Middleton	Response-00893	Another 350 cars trying to get on a6005
1.12	West of Borrowwash	Traffic Congestion	Mike Casartelli	Response-01211	This is such a huge development and with traffic flow at times in the area already being high, I believe this will have a negative impact on the area.
1.12	West of Borrowwash	Traffic Congestion	Mr N D NICHOLLS	Response-01192	The junction at Victoria ave. And Derby road is already a bottle neck

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Traffic Congestion	Mrs.A.Pickard	Response-00802	There isn't enough parking at the moment never mind with an increase of traffic this proposal would bring, around the village, school and facilities.
1.12	West of Borrowwash	Traffic Congestion	Mrs Kay Rigby	Response-00876	Derby Road is a busy road already and gets very busy at peak times and when any accidents happen on the M1. We live on Derby road and have trouble getting off our drive at these times now. With all the extra traffic from these houses it will cause too much traffic and chance of more accidents
1.12	West of Borrowwash	Traffic Congestion	Mrs M McCroft	Response-00532	Derby Road is a busy enough Road without another 280 cars at least coming on to it
1.12	West of Borrowwash	Traffic Congestion	Mrs Sheila Hardington	Response-01232	Too much traffic in the village already.
1.12	West of Borrowwash	Traffic Congestion	Mr Timothy Shepherd	Response-01334	A single exit for 280 houses would be a significant bottleneck even if additional traffic lights were installed. Traffic flow along Nottingham Road, Victoria Avenue and Station Road would also be severely hampered by the level of increased traffic.
1.12	West of Borrowwash	Traffic Congestion	Nathan Thomson	Response-01328	Traffic around that area is already congested we also had a road accident in the area very close to the planned development where a life was lost adding to this would only cause a higher risk of this.
1.12	West of Borrowwash	Traffic Congestion	Neil Raistrick	Response-01365	The addition of 250 dwellings will bring an expected 336 cars (average of access to cars 1.2 per dwelling *) the estate has a single entrance on Nottingham Road. This will vastly increase the traffic along this road and Victoria Avenue as the easiest option to go to Derby / Nottingham / A38 / A50. This additional traffic congestion needs to be considered in addition to the traffic generated by the new housing that is being built in Spondon along Nottingham Road. This traffic is likely to be heaviest at rush hour in the morning this will increase the danger to children at the Ashbrook School. * Average value from National Travel Survey 2022 (Updates 14th Dec 2023) <a href="https://www.gov.uk/government/statistics/national-travel-survey-2022/national-travel-survey-2022-household-car-availability-and-trends-in-car-trips#household-car-access">https://www.gov.uk/government/statistics/national-travel-survey-2022/national-travel-survey-2022-household-car-availability-and-trends-in-car-trips#household-car-access</a> . Other sources have suggested it's as high as 1.29 per dwelling if London is excluded.
1.12	West of Borrowwash	Traffic Congestion	Nicholas Parr	Response-01253	Every new house will have one and possibly two vehicles along with delivery vans, waste collectors, visitors etc etc. The access roads to the A52 (Victoria Avenue & Borrowwash Road) already cannot cope with current traffic, especially at peak times, or with parking outside houses with no off-street facility. Both these roads have schools which exacerbate the problem. The proposed exit onto Derby Road is a black spot with poor visibility as is access from Borrowwash Road onto the A52 ? more traffic cannot logistically and safely be accommodated. As well as cars, there are already far too many wide vehicles (eg buses and lorries) using these roads which were not built for this purpose. Many of the junctions, especially Ladysmith Road, Kimberley Road and Elm Street are occluded, presenting possible collisions. Pollution will be increased ? electric cars notwithstanding! (See also Road Safety
1.12	West of Borrowwash	Traffic Congestion	Nick Coates	Response-00393	Borrowwash is busy enough at peak time as it is we don't need any additional traffic. There are a number of people who break the speed limit as it is.
1.12	West of Borrowwash	Traffic Congestion	Nicola Ashton	Response-00081	Borrowwash is already gridlocked at busy times morning & evening, school times you have parked cars everywhere. To add another 200 plus cars through the village will just cause even more problems. We have lorries thundering up the roads already. The roads weren't designed to cope with the amount of traffic we have now just look at the potholes we already have in the village.
1.12	West of Borrowwash	Traffic Congestion	P. Hart	Response-00623	Borrowwash already has heavy congestion at various times of day, and inevitably suffers any problems on A52 and/or M1.
1.12	West of Borrowwash	Traffic Congestion	Paul and Dawn Davison	Response-01804	Our main concern is the traffic situation on the Derby / Nottingham road and the Victoria Avenue Road. Both of these roads would become even more congested.
1.12	West of Borrowwash	Traffic Congestion	Paul Barker	Response-00800	More vehicles through already very busy village is not desirable.
1.12	West of Borrowwash	Traffic Congestion	Peter HINKLEY	Response-00775	Increased traffic flows right in the heart of Borrowwash at crossroads of Station Road, A6005 and Victoria Ave and pelican controlled traffic lights and ensuing traffic congestion. That's right now and not if additional housing comprising sites to both West and North Borrowwash not 1/2 a mile in either direction. Access to the housing from A6005 will reduce speed limit from 40mph to 30mph because of limited sighting from new access road and subsequent slowing of traffic flow and being backed-up to centre of Borrowwash
1.12	West of Borrowwash	Traffic Congestion	P Fisher	Response-01175	The traffic through the village is already very heavy and this proposed development would seriously slow the flow of traffic even further.
1.12	West of Borrowwash	Traffic Congestion	Phil Self	Response-00759	Traffic is constantly getting busier year on year due to ridiculous amounts of new houses in the Chellaston area, and people using Victoria Ave as a rat run to the A52 and Ilkeston.
1.12	West of Borrowwash	Traffic Congestion	Raoul Pinkney	Response-01457	Borrowwash already has significant problems with traffic congestion, especially at rush hour and around the junction of Victoria Avenue and Derby/Nottingham Road. More cars joining Derby Road will make this problem even worse
1.12	West of Borrowwash	Traffic Congestion	Ray Kirk	Response-01378	The traffic through Borrowwash is already increasing, 280 homes with at least 1 car each but more likely 2+ cars can only be bad news.
1.12	West of Borrowwash	Traffic Congestion	Rebecca Peach	Response-00404	It is already very busy around this area and with small children I am very concerned to the amount of extra traffic this will cause.
1.12	West of Borrowwash	Traffic Congestion	Richard Hodgkinson	Response-00530	Traffic is already bad on Victoria Ave and can only worsen with additional housing
1.12	West of Borrowwash	Traffic Congestion	Sarah Cresswell	Response-01206	Borrowwash already experiences significant traffic pressure, particularly around its central junction which serves as a key route from the Nottingham-bound A52 to neighbouring villages such as Draycott, Elvaston and on to the A50. The dog-leg junction is congested at peak times on a daily basis and a road traffic incident on the M1, A50 or A52 quickly results in the roads through Borrowwash being completely gridlocked as drivers look for alternative routes. There is limited capacity and few options for meaningful upgrade due to the location of the junction within the village centre.
1.12	West of Borrowwash	Traffic Congestion	Sarah Davies	Response-01137	Parking is already a problem in the village, there are not enough spaces in the main carpark for the local shops that surrounding streets are then used as an overflow which then impacts local residents who have limited parking on the road. The public are already using creative parking to find spaces putting pedestrians in danger.
1.12	West of Borrowwash	Traffic Congestion	Sarah McAuslan	Response-01248	The village is already heavily congested with narrow roads that would not cope with additional traffic. We have seen the impact before for example when download is on and traffic diverts to our village the roads are gridlocked

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Traffic Congestion	Simon Shaw	Response-01152	Victoria Avenue and Derby road are already overwhelmed easily with current numbers at rush hour. If the A52 was to close temporarily the village would be gridlocked for days
			sophy peacock	Response-00678	Borrowwash can't handle more traffic
1.12	West of Borrowwash	Traffic Congestion	Stephen Peat	Response-01793	(1) The land west of Borrowwash would have around 260 to 300 houses, creating between 700 and 900 extra car movements during the day, excluding visitors to the site. (2) The 700-900 extra car movements would cause higher congestion in Borrowwash and Spondon along the Nottingham and Derby Road. The problem with this location the road is a single carriageway towards the Willowcroft Road traffic island. The traffic around this island is highly congested, with large amounts of traffic entering this location from places like Ilkeston and Kirk Hallam. The extra traffic from Borrowwash through this island area towards Derby and Asda would lead the road to be highly congested with major traffic delays at peak times of the day and slow traffic at off-peak times. The people of Spondon and households living along this route are fed up with the pollution from heavy traffic coming from places like Borrowwash, along the A52, and from places like Spondon North, Kirk Hallam, and the Ilkeston area. (3) There is evidence from the Department of Health that air pollution has caused an increased number of deaths, lung disorders, cancers, heart disease, including affecting children's health, caused by heavy traffic and congestion between Borrowwash, the A52, and around the Willowcroft area. (4) A couple of weeks ago, Erewash Council approved the Spondon Wood development, meaning over 900 extra car movements will travel through Spondon into the Willowcroft Traffic Island, adding to the traffic from land west of Borrowwash and developments around Borrowwash would cause a bottleneck on roads into Spondon and towards Asda and Asda Island. The road network in Spondon has now reached capacity with the development of the Smart Park, new housing built since 2010, new housing from Spondon Wood, and the future housing from the Borrowwash areas will cause a shutdown of the present road capacity around and into Spondon. (5) On May 10th, 2025, Derby Telegraph has an article with Spondon Councillors and Derby City Council Traffic Department regarding the heavy traffic and high number of heavy lorries passing through the narrow roads of Spondon, cited on Derby Telegraph. Investigation starts over plans to limit HGVs in gridlocked Derby suburb - Derbyshire Live (6) In the discussion with councillors, a weight limit could be introduced for HGVs travelling through Spondon, looking at a congestion charge to reduce traffic volumes and traffic passing through Spondon. (7) Erewash Council and Derbyshire County Council must look at ways to reduce congestion and traffic flows by making new developments have access to buses within 250 metres of each house, by changing the design for the Spondon Wood development to have a bus to circulate within the development to and from Ilkeston. Building new homes in and around Spondon with no extra road capacity will cause our roads to become car parks with stationary traffic, which could delay buses, and affect emergency vehicles' reaching their destination on time. (8) When examining the effects of your chosen house building locations in the Erewash Amendment Core Strategy, including Borrowwash, it could be detrimental to the local community with a greater risk of flooding, air pollution and traffic congestion.
			Steve Brown	Response-01153	Will obviously increase congestion also combined with proposed developments in Spondon.
1.12	West of Borrowwash	Traffic Congestion	Steven Hoolan	Response-00912	Derby Road is already very congested at peak times. When there is an accident on A52 or M1 traffic is at a standstill on Borrowwash, Ockbrook and Elvaston/Thulston. The speed limit on Derby Road is also often ignored as it goes from 40 to 30mph
			Sue Higginbottom	Response-01143	Far too much traffic now!
1.12	West of Borrowwash	Traffic Congestion	Suzanne Prior	Response-00907	Currently there is a huge amount of traffic through Borrowwash past the suggested site. Creating that huge amount of housing will seriously impact the road network. It will create gridlocked roads towards the junction to the east, which currently and constantly has traffic cutting through from the A52 to the A50.
1.12	West of Borrowwash	Traffic Congestion	Tanya caldbeck	Response-00917	Too much traffic in and around area
1.12	West of Borrowwash	Traffic Congestion	T McKinnon	Response-01368	Already busy road, especially at centre of Borrowwash , and Victoria Av, Station road commuter route
			Virginia Locke	Response-00580	Too many cars already
1.12	West of Borrowwash	Traffic Congestion	Wayne Henderson	Response-01207	As a long term resident of Borrowwash I strongly object to this proposed housing development to the west of Borrowwash; based on the inevitable increase in traffic movements and congestion on both Victoria Avenue, Borrowwash and Borrowwash Road, Spondon which both lead to the A52. These roads have infant and primary schools situated on them. The inevitable increase in car movements using either one of these roads to gain quick access to the A52 carriage ways east and west will severely impact the safety of school children and their carers. The congestion in the morning and afternoon is already chaotic with double parking along Victoria Avenue coupled with irresponsible parking on the Avenue and side roads such as Deans Drive and Covent Garden. Given the high volume of traffic at these times, it is clear to see that a very low percentage of children attending the schools actually walk to and from school with the remainder using parent/ carer transport. Working parents driving their children to school have added stress and pressure to be at the school on time. This in turn leads to rash decision making, dangerous and selfish parking that we see on a daily basis. I see it as a recipe for disaster. I am reliably informed by friends living in the vicinity of Asterdale School, Borrowwash road and surrounding roads suffers similar situations. In the past I have highlighted this issue on a number of occasions to the relevant department at the Council with regards to traffic enforcement officer patrols, only to be told that the officers " cannot be in two places at once?. I assume from that comment they are already over stretched with similar issues in other areas around the Borough. My fear is that this problem of traffic congestion will get worse exponentially resulting in somebody getting seriously hurt if not killed. Furthermore, the junction layout connecting to the A52 for both roads is woefully inadequate. in particular, I am aware of at least five collisions / accidents on those junctions in the past few years. The residents of Victoria Avenue have to also contend with high volume of traffic throughout the day from commuters using the road as a cut through from the A52 to A50 and visa versa. All adding to an already very busy Avenue.
			Wendy Coulton	Response-00752	Already too much traffic

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Type of Housing	Alex Lowe	Response-00707	It's high density housing all in a very small space 40% allocation to affordable housing will decrease the value of the surrounding area
			Alice Fitzpatrick	Response-00543	As I am objecting to the proposal I obviously do not want ANY housing on this green site!
1.12	West of Borrowwash	Type of Housing	Ashley Dunn	Response-01560	The borough needs more affordable housing not market housing (which historically have always catered for the luxury or executive market too much). Notwithstanding my wish for the development to not be within this green belt at this location for given reasons, social housing much be priorities in the borough.
1.12	West of Borrowwash	Type of Housing	Bella Kelsey	Response-00739	New builds are not affordable or built to last
1.12	West of Borrowwash	Type of Housing	Breanne Rodda	Response-00708	40% affordable housing is huge and would cause issues in the wider area
1.12	West of Borrowwash	Type of Housing	Carol Shaw	Response-00797	The development proposes 280 homes, with 40% designated as affordable housing. While this addresses housing needs, the scale of the development is not in line with the character of Borrowwash and will lead to overdevelopment. Only 10% social housing will cure none of the homeless issues we have nationally. The number of proposed houses represents a huge additional percentage of the size of the current village. This significant increase will change village life negatively and permanently. The influx of new residents will alter the close-knit community feel, increase demand on local services, and potentially lead to overdevelopment
1.12	West of Borrowwash	Type of Housing	Catherine Casartelli	Response-01428	I am not sure that 40% affordable housing is what I would want. Homes sized and priced for first time buyers to enable first time buyers to stay in the village.
1.12	West of Borrowwash	Type of Housing	Craig Hydes	Response-00782	A new housing estate and quality will not be with in keeping of the local heritage of the area. The new houses of recent are built of poor quality and will look an eyesore.
1.12	West of Borrowwash	Type of Housing	Dale Harlow	Response-00887	New Housing will not be fitting for the area
1.12	West of Borrowwash	Type of Housing	Daniel Lang	Response-00322	Borrowwash is a peaceful and quiet village. Assurances will need to be made that the 40% of affordable houses are in keeping with the area. Nobody wants anti social behaviour.
1.12	West of Borrowwash	Type of Housing	David Modrovic	Response-00803	If you were to build it would need to be affordable and in keeping with the area! But it never is!
1.12	West of Borrowwash	Type of Housing	David Smith	Response-01115	it is always a concern about quality of housing and different types of housing. Sadly I believe that developments of this kind rarely if ever stick to the original plans for mixed housing.
1.12	West of Borrowwash	Type of Housing	Denise Ball	Response-01291	It has been suggested that the housing is needed for the high number of children living in sub-standard accommodation. The building of £300,000 houses does not address the needs of these people in need. Part of the problem is the low level of support for families with children. These families are more likely to be helped by low cost housing in Ilkeston and Long Eaton where flexible employment is more likely to be found rather than Borrowwash as there is now little local employment opportunities. The employment was available in the past at work places such GIC, narrow fabrics, Bains Drive bedding/ lace works, and the nearby Celanese works at Spondon. The local sites are now housing for commuters to other locations. The type of commuter housing proposed is satisfying the need of the Derby planning area which already has plans to expand housing to the west of Derby. These commuter type houses are not improving the needs of Erewash residents.
1.12	West of Borrowwash	Type of Housing	Dr Sarah Mee	Response-01320	I am concerned that the proposed 280 houses will be overlooking one another with small garden areas and won't be in keeping with the design of the majority of the properties in the village which are older style with larger gardens and privacy and influence the village character so well. I am concerned that housing allocation of Greenbelt at this site might include industrial development and that the parkland designation area will be further developed and the character of the current village lost completely for existing residents and future generations.
1.12	West of Borrowwash	Type of Housing	Gary Mortimer	Response-01148	ONLY 40% of the new homes would be affordable housing, this is very low
1.12	West of Borrowwash	Type of Housing	Gillian Fitzpatrick	Response-00482	There should be no housing! That field/ green space needs to be preserved. The proposed remaining green area is insufficient to separate Borrowwash from Spondon in other words the city from the borough!
1.12	West of Borrowwash	Type of Housing	Gillian Hitchcock	Response-00446	No housing of any variety is welcome!
1.12	West of Borrowwash	Type of Housing	Helena Lucas	Response-00644	The average new build home has a lifespan of just 40-60 years. This highlights they are not a sustainable or cost efficient way to house people long term. It is a shortsighted solution to a bigger issue. They are an eyesore and will not fit in with the surrounding environment, particularly against the Victorian cottages along Victoria Road. Wear and tear of these houses will increase maintenance costs, again increasing waste and traffic pollution.
1.12	West of Borrowwash	Type of Housing	Iain Pendry	Response-01188	Given the lack of affordable housing in the villages, serious consideration must be given to ensuring that a substantial number of houses are affordable, starter homes suitable for young people and young families.
			Ian Frearson	Response-01267	This site should not be considered as it reduces the division buffer between the City of Derby and Erewash.
1.12	West of Borrowwash	Type of Housing	Jacky Kinirey	Response-01209	Houses for 1st time buyers is absolutely essential. Maybe part owned. Not 5/6 bedroom houses they're are plenty in Borrowwash.
			James Dean	Response-00553	Just NO to any new houses. Especially on our precious open space and green belt that make our beautiful town what it is.
1.12	West of Borrowwash	Type of Housing	Jane Shepherd	Response-01333	I would welcome a smaller number of houses, aimed at first time buyers and young families. We do not need any more fancy 4 and 5 bedroom large houses or gated communities! We do need decent housing, but it needs to be of good quality and future proof with solar panels, car charging points, high quality insulation etc. Also with good gardens, green space but MORE IMPORTANTLY it should be affordable! Aimed at first time buyers or young families. We DO NOT need large 4 or 5 bedroom places, we certainly don't need any more gated communities.
1.12	West of Borrowwash	Type of Housing	Jennifer Sutton	Response-00518	The policy offers 40% affordable housing, yet this often equates to smaller, lower quality homes with no long-term affordability guarantee. Developers typically build the minimum standard, not community-enhancing homes. There's no green energy mandate, no requirements for low-carbon builds, or social sustainability.
1.12	West of Borrowwash	Type of Housing	John & Anna Mead	Response-00772	Doesn't matter what type of housing, there is not sufficient scope to cope

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Type of Housing	Julie Margaret Smith	Response-01090	How will a target of 40% 'affordable' housing work? Once planning permission is approved, developers will maximise their profits by eschewing the lower cost properties they once agreed to build. Modern housing developments lead to poor environment, lacking character with monotonous exterior design. How will this fit in to a village environment which is varied and relatively pleasing to the eye, making it a pleasant place to live?
1.12	West of Borrowwash	Type of Housing	Kirsty Murray	Response-01003	We currently manage to keep a village feel, if houses have to be built I feel they should be bigger houses with good gardens and sufficient parking allowing people to stay in the village as their families grow, which in turn frees up the smaller starter homes for younger people
1.12	West of Borrowwash	Type of Housing	Laura Dewsnap	Response-00936	Whilst I agree that affordable housing is needed across the country in general, it is not needed in the area in question. At the time of commenting, there are 77 houses listed for sale on Rightmove within a 1 mile radius of the area in question, 10 of which are under £200,000 and there are 6 properties listed for rent within the same 1 mile radius. In addition to this, there are alternative sites within Borrowwash which have previously been developed and are now derelict and empty. It would be more beneficial to the area if these sites were developed rather than building on green belt land.
1.12	West of Borrowwash	Type of Housing	Lewis Sutton	Response-00415	The proposed number of homes (280 on 14 hectares) represents a high density for a semi-rural location. This is inconsistent with the character of Borrowwash and the surrounding countryside. Furthermore, there is little clarity on the type of housing? whether it truly meets local needs (e.g., bungalows for elderly residents, small affordable homes for young families) rather than simply meeting numerical housing targets.
1.12	West of Borrowwash	Type of Housing	Lindsay Hodson	Response-01434	I am in shared ownership accommodation. Is this an option in the new housing site? I don't approve of the site but if you must I think shared ownership should be considered.
1.12	West of Borrowwash	Type of Housing	Mark Birkinshaw	Response-00046	With 40% of the homes being affordable housing then although this ticks a huge box in one respect but this will surely negatively impact the average selling price within the area. In addition, driving away families who live in the adjacent streets who have bought homes based on the outlook and privacy.
			Mrs M McCroft	Response-00532	Need to be inkeeping with the area
1.12	West of Borrowwash	Type of Housing	Mr Timothy Shepherd	Response-01334	What is meant by "affordable housing"? Would this be two bed houses? Would it mean houses sold for less than £150,000?
1.12	West of Borrowwash	Type of Housing	Nicholas Parr	Response-01253	There should be no housing for the reasons given in other categories!
1.12	West of Borrowwash	Type of Housing	P. Hart	Response-00623	These should be of most affordable for the average person/family.
1.12	West of Borrowwash	Type of Housing	Paul Barker	Response-00800	More affordable housing should be made available.
1.12	West of Borrowwash	Type of Housing	Peter Howell	Response-00829	on site affordable homes, affordable to who!!!!
			Phil Adcock	Response-01488	40% to affordable housing is a huge figure which to be fair will lower the value of current neighbouring mature properties.
1.12	West of Borrowwash	Type of Housing	Phil Self	Response-00759	Affordable housing to who ?
			Ray Kirk	Response-01378	Affordable for who? We don't our kids being in that position anytime soon even though they have full time jobs.
1.12	West of Borrowwash	Type of Housing	Steven Hoolan	Response-00912	Proposed housing will no doubt be crammed in with as many as possible in a small space with no consideration for how this will affect existing homeowners around this site
			Sue Higginbottom	Response-01143	None needed
1.12	West of Borrowwash	Wildlife / Biodiversity	Adele Pinkney	Response-01456	Development of this exclusively Green Belt land would have a devastating impact on flora and fauna habitat and biodiversity. It is a relatively narrow strip of land between the Derby City boundary and Borrowwash village. As such it is part of an essential wildlife corridor . Protected Skylarks nest in the open fields of the proposed development site, just one example of the importance of this natural habit .
1.12	West of Borrowwash	Wildlife / Biodiversity	Alice Fitzpatrick	Response-00543	The Green areas and farmland need to be protected. We need wildlife. We need pollinators. We need a clear demarcation between the city and the borough and ANY development on this land would mean Borrowwash feeling part of the sprawling Metropolis of Derby city! I studied Countryside Management at Broomfield but we are no longer living in the countryside - we have a responsibility to wildlife as without it we could not survive - it's their home too. The council should only be using Brown sites for more housing in the borough! There must be plenty of vacant properties in the towns that could be converted to housing - especially affordable housing!
1.12	West of Borrowwash	Wildlife / Biodiversity	Amy Brown	Response-00514	At the back of my home (Covent garden close) as you are aware is a very large green space with plenty of wildlife through it. Horses, foxes, birds, pheasants, cats. It's a lovely open space for wildlife and to take this away is simply cruel. We must have some green space left for our wildlife.
1.12	West of Borrowwash	Wildlife / Biodiversity	Angela Chapman	Response-01331	The suggested area ear-marked for this development is home to many species of wildlife. Most notably there are breeding pairs of barn owl in the area marked for construction of over 200 houses. Being the most protected bird in the UK, it is imperative that these are not torn from their home.
1.12	West of Borrowwash	Wildlife / Biodiversity	Ann Daykin	Response-01453	Currently the proposed site is to be built on farmland which has deliberately laid barren. Previously this was an area where wildlife could be found and seen. There is still wildlife there despite this and it needs to be saved for future generations.
1.12	West of Borrowwash	Wildlife / Biodiversity	Ashley Cartlidge	Response-01417	Yet more squeezing of our native wildlife.
1.12	West of Borrowwash	Wildlife / Biodiversity	Barry Shaw	Response-01482	Diverse wildlife use the field, this cannot simply be moved to elsewhere. In-depth consultation and investigations shall be required.
1.12	West of Borrowwash	Wildlife / Biodiversity	Bella Kelsey	Response-00739	We need to be preserving the green corridor
1.12	West of Borrowwash	Wildlife / Biodiversity	Britton	Response-00877	We live on Derby Rd close to proposed site - we have numerous bird species currently visit the garden along with amphibians/bats - the huge habitat loss will greatly impact the wildlife
1.12	West of Borrowwash	Wildlife / Biodiversity	Carmen Buckley	Response-00737	The fields are home to various ground nesting birds including skylarks and lapwings. Hedgehogs are endangered and the area is home to this now red listed species. Now is not the time to be cresting habitat loss. This would disrupt wildlife corridors and impact on protected species.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Wildlife / Biodiversity	Carol Shaw	Response-00797	The development will require safeguarding the route of Ockbrook Footpath 41 and creating new parkland and woodland. However, the construction and increased human activity could disrupt local wildlife habitats and biodiversity. The area west of Borrowwash may contain important habitats that could be adversely affected by the development. Current Wildlife: The area is home to various species, including bats, birds of prey, water voles, newts, frogs, and birds. These species rely on the existing habitat for shelter, food, and breeding grounds. Simply moving them to a new park is not a viable solution as it disrupts their established ecosystems and can lead to a decline in their populations. Protected Species: Bats: All bat species in the UK are protected under the Wildlife and Countryside Act 1981 and the Conservation of Habitats and Species Regulations 2017. Disturbing or destroying their roosts is illegal. Water Voles: Protected under the Wildlife and Countryside Act 1981, it is an offense to intentionally kill, injure, or take water voles, or to damage, destroy or obstruct access to any structure or place used by them for shelter or protection. Great Crested Newts: Protected under the Wildlife and Countryside Act 1981 and the Conservation of Habitats and Species Regulations 2017. It is illegal to capture, kill, disturb or trade great crested newts, or to damage or destroy their habitat.
			Craig Hydes	Response-00782	Nesting barn owls, bats, lapwing, will all be affected.
1.12	West of Borrowwash	Wildlife / Biodiversity	Dale Harlow	Response-00887	Losing fields will risk wildlife to reduce massively
			Dan Pilgrim	Response-00932	Protect nature, currently areas being used for farm land, full of animals
1.12	West of Borrowwash	Wildlife / Biodiversity	David House	Response-01489	The development will consume what has become a wildlife haven in recent years.
1.12	West of Borrowwash	Wildlife / Biodiversity	David Modrovic	Response-00803	The impact of the wildlife would be detrimental, has anyone actually done a proper survey?
1.12	West of Borrowwash	Wildlife / Biodiversity	David Smith	Response-01115	The size of the green belt is already quite limited .With the most recent developments in Spondon leading to the City boundary it has left a very narrow portion of land for wildlife which is already being seriously affected by climate change and loss of habitat. There is a considerable variety of bird, mammals and insect life that need to be allowed this channel of green belt.
1.12	West of Borrowwash	Wildlife / Biodiversity	David Steare	Response-01300	1 The proposed development will destroy a wildlife habitat corridor between Spondon and Borrowwash and between the A52 dual carriageway and the A 6005. The land is home to many species of insects, reptiles, birds, and small mammals let alone the wild flowers and the grasses. 2 The land is currently only used when occasional dog walkers and the occasional hiker use the footpath. The current occasional footpath use maintains the habitat.
1.12	West of Borrowwash	Wildlife / Biodiversity	David Tyler	Response-00835	This is farmed land , cropped annually not a brown field site, as well as wildlife and biodiversity being present
1.12	West of Borrowwash	Wildlife / Biodiversity	Deborah young	Response-01306	The site has bats, foxes hedgehogs, large bird population including pheasants buzzards,wrens , plus insects bees , butterflies .
1.12	West of Borrowwash	Wildlife / Biodiversity	Denise Illsley	Response-00056	I am really concerned about the loss of more green spaces and the threat to our wildlife that this will bring.
1.12	West of Borrowwash	Wildlife / Biodiversity	Dr Sarah Mee	Response-01320	The current Greenbelt designated land at this location supports a rich variety of wildlife which will inevitably be destroyed and not re-accommodated in the small strip of parkland proposed as substitute area of demarcation of the village of Borrowwash from the Derby City boundary. This wildlife and area of biodiversity will be forever lost and replaced with some form of manufactured Biodiversity Net Gains to meet guidelines but the original habitat for many existing species will be destroyed forever. In line with my comments on the Greenbelt review in the relevant section of this submission, what constitutes countryside is perception based and highly subjective to individuals. Taking away another natural green space will always negatively impact the original wildlife and biodiversity.
1.12	West of Borrowwash	Wildlife / Biodiversity	Ellen Young	Response-01357	The fields have a wealth of biodiversity. The well established hedgerow allow a place for insects and animals to hide, nest and eat. The brambles within the hedges supply food for insects and birds. When the fields haven't been planted, the flowers in the fields provide food for insects, particularly bees. The equally established trees within the border provide places for birds to nest and perch. Bats have been observed flying in the field proposed to be built on. Whilst they could be nesting anywhere within a 10Km radius, they would lose a food source and potentially a place to roost. Bats have sensitive eyes and prefer darkness, they may not relocate to the park due to light pollution from the houses and street lights. Pheasants, foxes and hedgehogs have a home in these fields. There's a wide variety of insects and songbirds. Birds of prey hunt in these fields. Some of the wildlife found in the fields prefer fields and not woodland. According to the 2023 State of Nature report, the UK is one of the most nature depleted countries on Earth. According to the report, there has been a 19% decline in 753 species studied since 1970 and the distributions of 54% of flowering plant species and 59% of mosses and liverworts have decreased across Britain. Removing the proposed land from the wild is contributing to the depletion of biodiversity.
1.12	West of Borrowwash	Wildlife / Biodiversity	Emma Gregory	Response-01454	Loss of precious wildlife and protected wildlife on the Green Belt field. Badgers Water Voles Bats - all species are protected Rabbits Birds - many bird species are protected Doormice - protected species Foxes are commonly found Kingfishers and Herons Frogs and fish are also known to inhabit the area Hedgehogs are plentiful in Borrowwash Birds - Sparrow, Hawks and Birds of Prey come to the field each day
1.12	West of Borrowwash	Wildlife / Biodiversity	Eve barker	Response-00443	This field is home to foxes, sparrow hawks, a wide range of wild birds, bats feed here also. Greenbelt is fast disappearing and we'll never get it back
1.12	West of Borrowwash	Wildlife / Biodiversity	Fiona Richards	Response-00020	A bee road is needed!
1.12	West of Borrowwash	Wildlife / Biodiversity	Francesca Hope	Response-00528	I live at the back of the field and see a whole variation of wildlife who at present have no where else to go as land is borrowwash is continually being built on
1.12	West of Borrowwash	Wildlife / Biodiversity	Gillian Fitzpatrick	Response-00482	The Green areas and farmland need to be protected. We need wildlife. We need pollinators. We need a clear demarcation between the city and the borough and ANY development on this land would mean Borrowwash feeling part of the sprawling Metropolis of Derby city! The council should only be using Brown sites for more housing in the borough! There must be plenty of vacant properties in the towns that could be converted to housing - especially affordable housing!

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Wildlife / Biodiversity	Gillian Hitchcock	Response-00446	Building on this land would be detrimental to the wildlife in the area. Surely there are enough empty houses in the area that could be do up rather than keep building on greenbelt!
1.12	West of Borrowwash	Wildlife / Biodiversity	Hayley Dexter	Response-00519	A large area of brown and green belt which is home to lots of wildlife who will be affected. They are already struggling and have lost many homes and habitats
1.12	West of Borrowwash	Wildlife / Biodiversity	Helena Lucas	Response-00644	The field in which the buildings are proposed has offered a crucial biodiverse sanctuary for a variety of birds, including owls, insects, bees, hedgehogs and other wildlife. It has been a well needed open space to allow separation to the next village and a place for these wild creatures a place to thrive. In recent years wildflowers had been planted. We walked through this field almost daily as saw first hand the positive impact on the flourishing wildlife.
1.12	West of Borrowwash	Wildlife / Biodiversity	Helen Pearce	Response-01550	The proposed building plans will destroy the habitats of the bats, owls and many other threatened species which have had a safe home in our fields for many years.
1.12	West of Borrowwash	Wildlife / Biodiversity	Ian Frearson	Response-01267	The proposal would adversely affect the wildlife of the area by both displacement to that using the current site and that using the adjacent site
1.12	West of Borrowwash	Wildlife / Biodiversity	Ian Hamilton	Response-01325	The hedgerows bordering the proposed development are home to a wide range of birds. The destruction of habitats and disruption caused by a long period of development would be catastrophic to the wildlife in the area.
1.12	West of Borrowwash	Wildlife / Biodiversity	Ian Wood	Response-00987	The reduction in open space/green belt will inevitably have a negative impact on existing wildlife and biodiversity
1.12	West of Borrowwash	Wildlife / Biodiversity	Jacky Kinirey	Response-01209	We need green spaces wildlife has to live and thrive.
1.12	West of Borrowwash	Wildlife / Biodiversity	Jane Rothern	Response-00042	Wildlife will be affected if this land is built on. Many birds and wild animals will be lost due to lack of fields and hedges.
1.12	West of Borrowwash	Wildlife / Biodiversity	Jane Shepherd	Response-01333	Every bit of green lost will obviously impact biodiversity- right from small insects, pollinators to birds, small mammals such as hedgehogs. We need to be mindful of the diversity of creatures that will be massively impacted. Losing even small amounts if greenspace is harmful to our environment. We need to ensure hedgerows and trees are left to endure biodiversity.
1.12	West of Borrowwash	Wildlife / Biodiversity	Jennifer Sutton	Response-00518	This land, currently greenfield and Green Belt, is home to bats, amphibians (frogs, toads, newts), birds of prey, and hedgehogs ? all species that rely on low light levels, mature hedgerows, and wild patches. Development will permanently fragment and destroy these habitats. The site includes a small but vital wildlife corridor behind the houses on Derby Road [52°54'31"N 1°23'08"W], which is home to a range of important species. Smooth newts, frogs, hedgehogs, bats, little owls, buzzards, and red kites all rely on this habitat. There has been no credible effort to include a buffer zone or retain the existing wildlife corridor. The development would increase air, noise, and light pollution, especially harmful considering the compounding proximity to the A52. This is true for humans and wildlife. Parks and woodland cannot replace lost biodiversity. New planting won't re-establish populations or replicate existing microhabitats. This breaches NPPF 180(a-c): ?if significant harm to biodiversity cannot be avoided (through locating on an alternative site)... then planning permission should be refused.?
1.12	West of Borrowwash	Wildlife / Biodiversity	Julie Margaret Smith	Response-01090	Once gone, land is gone forever, including its biodiversity and the ecosystems it supports. Where will the already endangered yellowhammers which flock to our boundary hedgerow in late winter and early spring go? How will food chains and pollinators be affected? This is an area completely ignored by planners, while none of us can understand what resulting effects there will be over time. Modern developments have little space for gardens or natural green spaces. What will you tell your grandchildren when our increasingly enlarging settlements become totally sterile and hostile? What effect will stamping out the natural world have on the mental health of populations and food security? Why build on green, agricultural land when there is plenty of brownfield and disused buildings which would be ideal places to develop the 'affordable' housing needed?
1.12	West of Borrowwash	Wildlife / Biodiversity	Ken Hardy	Response-00928	This land is currently agricultural land, greenfield in classification within the green belt, therefore its development would not make efficient use of brownfield land. Development of the site could pose a threat to biodiversity interests and assets present on or adjacent to it. However, the land's current arable usage could likely lead to a reduction of the impacts on biodiversity arising from the site's possible development. Development of the site would have a notable impact on the current biodiversity and ecological species. New housing across the entirety of the site could threaten a diverse range of species.
1.12	West of Borrowwash	Wildlife / Biodiversity	Kevin Highton	Response-00506	Lots of natural hedgerows will be lost, these hedgerows are a haven to wildlife including nesting birds, hedgehog and foxes
1.12	West of Borrowwash	Wildlife / Biodiversity	Kirsty Murray	Response-01003	Losing green space for further housing will have a negative impact on wildlife.
1.12	West of Borrowwash	Wildlife / Biodiversity	Laura Dewsnap	Response-00936	The proposed development will result in loss of habitat for wildlife and therefore, a significant decrease in biodiversity. We will see a sharp decline in the number of pollinators as a result of this development as vegetation in the area will cease to exist. This area of land is crucial for wildlife, it provides food sources, breeding grounds and shelter as well as providing a green corridor for wildlife movement. By reducing and fragmenting the habitat of wildlife, disrupting the ecological network, and potentially increasing pollution we will no doubt see a decline in biodiversity.
1.12	West of Borrowwash	Wildlife / Biodiversity	Lauren Fardoe	Response-00039	Will the park area have a nature reserve to conserve insects/ bees/ birds
1.12	West of Borrowwash	Wildlife / Biodiversity	Lesley Eccles	Response-00814	Could affect wildlife as this was previously a field which attracted wildlife
1.12	West of Borrowwash	Wildlife / Biodiversity	Lesley Young	Response-00902	There is quite a large pond in the area under discussion which has been there for 40 years plus and has a plethora of amphibian and nesting as well as being a haven for wildlife. Badgers have been seen as well as badgehogs and birds also nest on the field grounds. All of this will be lost with any new building development.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.12	West of Borrowwash	Wildlife / Biodiversity	Lewis Sutton	Response-00415	Wildlife and Biodiversity Loss The proposed site is home to rich biodiversity, including protected and priority species such as: Buzzards, red kites, and kestrels ? all either Schedule 1 or protected under the Wildlife and Countryside Act 1981. Hedgehogs ? listed as a species of principal importance under the NERC Act. Newts and frogs, potentially including great crested newts, a strictly protected species under UK and European law. Water voles ? a priority species under the UK Biodiversity Action Plan (BAP). Foxes and other woodland mammals ? important for maintaining local ecosystem balance. The site includes a small but vital wildlife corridor behind the houses on Derby Road [52°54'31"N 1°23'08"W], which is home to a range of important species. Smooth newts, frogs, hedgehogs, bats, little owls, buzzards, and red kites all rely on this habitat. There has been no credible effort to include a buffer zone or retain the existing wildlife corridor. The development would increase air, noise, and light pollution, especially harmful considering the compounding proximity to the A52. This is true for humans and wildlife. The destruction of this habitat through development is permanent and irreversible. Once bulldozed, the unique and interconnected ecosystem cannot be relocated, recreated, or adequately protected elsewhere. The loss of this natural space will fragment critical green corridors and have a lasting negative impact on wildlife populations. To date, no credible evidence has been provided that sufficient mitigation or compensation measures can be delivered to offset this loss.
1.12	West of Borrowwash	Wildlife / Biodiversity	Lindsay Hodson	Response-01434	People of Borrowwash respect and love the nature that surrounds the village and do not wish to stand back and watch it being destroyed.
1.12	West of Borrowwash	Wildlife / Biodiversity	Lynda Gamble	Response-00910	House building will disturb wildlife habitats. There are enough derelict and unused houses and business premises around and they should be renovated and made habitable again before even thinking about taking away more land for building.
1.12	West of Borrowwash	Wildlife / Biodiversity	Maisie Harlow	Response-00963	We have only lived in Borrowwash for 1 month and we have already seen a stork, a parakeet, a pheasant and an owl in our garden. Wildlife will be killed and injured during this construction, I can?t imagine how many animals will be disturbed and therefore ran over on the A52. Blocking their movement, losing access to food and breeding. Not to mention the direct destruction of the homes for many badgers, foxes, deer, birds, rabbits etc.
			Mandy Dickens	Response-00590	This land has been farmed for many years and is the habitat of many of our native creatures. Many of which are already endangered
1.12	West of Borrowwash	Wildlife / Biodiversity	Margaret Irene Wheatley	Response-00915	It's good that parkland has been set aside but will this fulfil the developers obligations under Bio Diversity Net Gain or be separate to that.
			Mark Fearn	Response-00507	The removal of valuable established green belt will be detrimental to the local wildlife in this area of Erewash.
1.12	West of Borrowwash	Wildlife / Biodiversity	Mary-Jo McDermott	Response-01437	These fields are an essential ecological corridor and a vital habitat for a wide variety of species, including foxes, hedgehogs, voles, badgers, bats, pollinators and multiple species of birds - including birds of prey, which use the area for both hunting and mating. Over the years, I have personally witnessed kestrels and buzzards regularly circling and perching in these fields - a clear sign of established territory. Destroying this habitat would not only displace these apex species but would also destabilize the broader ecological balance. The loss of these fields would represent a direct attack on local biodiversity and is inconsistent with national and local conservation priorities.
1.12	West of Borrowwash	Wildlife / Biodiversity	Maxwell Sutton	Response-01093	Max aged 5 loves his local nature and believes this is a destructive unnecessary process
1.12	West of Borrowwash	Wildlife / Biodiversity	Middleton	Response-00893	Area is perfect for birds
1.12	West of Borrowwash	Wildlife / Biodiversity	Mrs Kay Rigby	Response-00876	This area has a natural animal community that will have no where to live when trees are cut down and the ground is disturbed
1.12	West of Borrowwash	Wildlife / Biodiversity	Mrs M McCroft	Response-00532	Wouldn't see any anymore.
1.12	West of Borrowwash	Wildlife / Biodiversity	Nicholas Parr	Response-01253	The Green areas and farmland need to be protected. We need wildlife. We need pollinators. Once gone, land is gone forever, including its biodiversity and the ecosystems it supports. This is an area completely ignored by planners and none of us can understand what resulting effects there will be over time ? but it will definitely be at our cost.
1.12	West of Borrowwash	Wildlife / Biodiversity	Nick Coates	Response-00393	This would impact wildlife by taking away more of there natural habitat
1.12	West of Borrowwash	Wildlife / Biodiversity	Nicola Ashton	Response-00081	The proposed site supports a wide variety of wildlife including many birds species, it?s wonderful to see the buzzards circling on the thermals looking for prey of which there is a whole selection from mice, voles , shrews . We also have pheasants, goldfinch, blue tits , sparrows and many I don?t know We also have foxes , hedgehogs who live in this beautiful wild green belt land.
1.12	West of Borrowwash	Wildlife / Biodiversity	P. Hart	Response-00623	The area has considerable wildlife which use it to get around as well as general habitat.
1.12	West of Borrowwash	Wildlife / Biodiversity	Paul Barker	Response-00800	Fields are home to badges foxes all bird life . At night bats and owls are active
1.12	West of Borrowwash	Wildlife / Biodiversity	Peter HINKLEY	Response-00775	Building on greenbelt does not hep wildlife, there must be a strategy for this at Erewash Council
1.12	West of Borrowwash	Wildlife / Biodiversity	Peter John Ball	Response-00703	The open nature of the land west of Victoria Avenue is important for the biodiversity of the village of Borrowwash. Development and the planting of Woodland will change the nature of the site and hence the wildlife that it supports.
1.12	West of Borrowwash	Wildlife / Biodiversity	Raoul Pinkney	Response-01457	The Green Belt provides an important habit for wildlife & biodiversity which would be wiped out by the proposed development
			Simon Shaw	Response-01152	We have so few wild spaces left, this should be preserved at all costs
1.12	West of Borrowwash	Wildlife / Biodiversity	Steven Hoolan	Response-00912	Current open fields and forest area currently house bats, birds of prey, and other endangered species
			Sue Higginbottom	Response-01143	We have a lot of wildlife in those fields , we don?t need anymore houses in Borrowwash
1.12	West of Borrowwash	Wildlife / Biodiversity	Tanya caldbeck	Response-00917	Green belt land needed and not for building
1.12	West of Borrowwash	Wildlife / Biodiversity	Wayne Henderson	Response-01207	As a long term resident of Borrowwash and keen supporter of wildlife and biodiversity in my local area, I have witnessed a vast array of wildlife from garden birds to migrating birds to small mammals up to large mammals such as foxes and badgers. In particular, during late spring through summer and into early Autumn ?Pipistrel? bats visit our gardens feeding and roosting in the mature trees that are situated on and around the edge of the proposed development site. Short to medium term disruption during the proposed building of houses on the land in question; I feel will severely impact if not destroy the delicate habitat that these creatures rely on. Any established colonies in or around the site could be lost forever.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Air Quality	Wendy Coulton	Response-00752	This is green space , NOT to be built on ,
1.13	East of Breaston	Air Quality	Andrea Valentine	Response-01525	Derbyshire's air quality is already poorer than many other parts of the UK and increasing the amount of homes on greenbelt land will only add to this. More, not less, green spaces are needed in order to fight the air pollution, therefore any new homes being considered should be built on brownfield land only.
1.13	East of Breaston	Air Quality	Beverley Ann Ratcliffe	Response-01098	There will be a risk to Health and Safety through air pollution, air quality (including emissions), dust and noise levels due to the increase in traffic and building work which will take place through the amount of time to complete this project. As close to the M1, air quality is already not of the best.
1.13	East of Breaston	Air Quality	Christopher Baddiley	Response-01132	This land also serves as a necessary buffer zone from the noise and pollution generated by the (recently widened) M1 motorway.
1.13	East of Breaston	Air Quality	Christopher Baddiley	Response-01816	This land also serves as a necessary buffer zone from the noise and pollution generated by the (recently widened) M1 motorway.
1.13	East of Breaston	Air Quality	Dean Corcoran	Response-00798	The proximity of the M1 already impacts this area any increase in users will obviously impact this
1.13	East of Breaston	Air Quality	Diane Corsham	Response-00225	Air quality is going to be going downhill if you build anymore houses because of the traffic congestion it will cause! Air quality is not good really if you think about the proximity of the motorway to where you are proposing to build these houses, it's not going to be a good idea to place more people in that area because the quality of life will suffer!
1.13	East of Breaston	Air Quality	Graham Elliott	Response-00413	M1 Noise & Air Quality - This has been an ongoing issue for residents of Heath Gardens, with little help from the Highways Agency to resolve, leading to difficulties in selling properties in this area.
1.13	East of Breaston	Air Quality	Judith Ratcliffe	Response-00490	50 additional houses using Heath Gardens for access will adversely impact the air quality with pollution of car fumes/ construction
1.13	East of Breaston	Air Quality	Kevin Hopkinson	Response-01126	Increase traffic equals poorer air quality. Medically, air quality in Breaston was considered better than that in Long Eaton. This will be significantly reduced if this was to go ahead.
1.13	East of Breaston	Air Quality	Lauren Davis	Response-00474	Being so close to the m1 the air quality is not ideal so more cars would not help
1.13	East of Breaston	Air Quality	Linda Shaw	Response-00511	There would be a huge impact on the air quality during the building work itself and the increased traffic involved, and from the increased traffic from the new development. Poor air quality is linked with increased health risks, asthma, respiratory conditions, dementia etc. There are a number of elderly residents currently living on Heath Gardens whose health is likely to deteriorate, causing further demands on local health services etc. The development will require the cutting down of trees in the area, further impacting on the local air quality as this will release major greenhouse gases.
1.13	East of Breaston	Air Quality	Lindsey Trueman	Response-01878	Residents of any new development would be subjected to poor quality air from the M1 motorway. My house is currently two fields away from the motorway and we face pollution in terms of fumes and airborne particles on a daily basis. This has increased significantly since the proposed site was cleared of natural wooded vegetation by the current landowner approximately fifteen years ago.
1.13	East of Breaston	Air Quality	Lucy Corcoran	Response-00097	Air quality in the area close to the M1 is already poor so additional road congestion will add to this.
1.13	East of Breaston	Air Quality	Lynette Ratcliffe	Response-00779	Pollution is a concern
1.13	East of Breaston	Air Quality	Melvin Clive Shaw	Response-00513	There would be a huge impact on the air quality during the building work itself and the increased traffic involved, and from the increased traffic from the new development. Poor air quality is linked with increased health risks, asthma, respiratory conditions, dementia etc. There are a number of elderly residents currently living on Heath Gardens whose health is likely to deteriorate, causing further demands on local health services etc. The development will require the cutting down of trees in the area, further impacting on the local air quality as this will release major greenhouse gases.
1.13	East of Breaston	Air Quality	Mr s e Taylor mrs j p tayloe	Response-01288	It's bad enough with the motorway besides anything else. Traffic noise is already a problem it doesn't require adding too.
1.13	East of Breaston	Air Quality	Mrs M Rigby	Response-00808	Poor air quality with more traffic.
1.13	East of Breaston	Air Quality	Nicholas Trueman	Response-01879	Residents of any new development would be subjected to poor quality air from the M1 motorway. My house is currently two fields away from the motorway and we face pollution in terms of fumes and airborne particles on a daily basis. This has increased significantly since the proposed site was cleared of natural wooded vegetation by the current landowner approximately fifteen years ago.
1.13	East of Breaston	Air Quality	Nicola Connell	Response-00731	The proposal conflicts with the UK's Climate Change Act 2008 undermining efforts to reduce carbon emissions
1.13	East of Breaston	Air Quality	Roger Day	Response-00027	Air quality due to the M1 is already poor. adding more homes and the added traffic would make matters worse.
1.13	East of Breaston	Air Quality	S M Corcoran	Response-01319	There will be a significant increase in both noise and air pollution to a level which will be unacceptable to the current residents of Heath Gardens or Holly Avenue in relation to their health both physical and mental well-being. This additional pollution will occur during both construction and after its completion. The removal of all or some of the existing trees on the proposed site (currently in excess of 100 trees ) will reduce the air quality of residents on both Holly Ave and Heath Gardens that are facing the Motorway. Currently these trees not only help block the noise from the motorway but also reduce the car emissions pollution
1.13	East of Breaston	Air Quality	Stephen Hooley	Response-00774	It is obvious from the start of construction that site traffic pollution, eventual increased residency traffic pollution and the growth in traffic on the adjacent M1 motorway ,will have a detrimental impact on the local air quality.
1.13	East of Breaston	Air Quality	Sylva Jolliffe	Response-01512	The new houses will be very close to M1 and may suffer air pollution
1.13	East of Breaston	Air Quality	Terence Corcoran	Response-00318	The removal of the trees on the proposed site (in excess of 120 trees ) will reduce the air quality of residents on both Holly Ave and Heath Gardens that are facing the Motorway. These trees not only help block the noise from the motorway but also reduce the car emissions pollution
1.13	East of Breaston	Bus Services	Andrea Valentine	Response-01525	Building on greenbelt land will lead to urban sprawl ? high carbon development, car-dependent development. What we really need is compact cities, where people can live near to amenities, where older people and people on low incomes are not isolated by lack of public transport, where teenagers and even younger children can get about independently, where we are not all choked by pollution, congestion and facing constant noise and road danger.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Bus Services	Diane Corsham	Response-00225	The bus service provided is not even enough to deal with the traffic congestion that is experienced already and they took off a really useful bus service which connected the village to all surrounding areas! The old and the vulnerable needs aren't being met either!
1.13	East of Breaston	Bus Services	Graham Elliott	Response-00413	Currently a reasonable service and bus stops at the end of the street, however a long walk from the proposed end of the street, particularly for the elderly.
1.13	East of Breaston	Bus Services	Judith Ratcliffe	Response-00490	Bus Services from Breaston are already poor and unreliable
1.13	East of Breaston	Bus Services	KARL BARROW	Response-00793	This development is close to the bus stop at the junction of Richmond Avenue and Wilsthorpe Road. Long Eaton bound buses stopping here, predictably, slow following Long Eaton bound traffic leading to congestion and dangerous overtakes as vehicles overtaking accelerate to pass the bus immediately before the proposed entrance to this development via Heath Gardens. This is just creating more opportunities for vehicle to vehicle conflict. That said, the fact that Wilsthorpe Road is served by regular frequent bus services to Long Eaton, Nottingham and Derby is appreciated. Unfortunately those loving on Holly Avenue and Longmoor Lane are completely denied this opportunity as there is no footpath through to Wilsthorpe Road. If this development does go ahead, it should include a footpath for Holly Avenue into the new development to enable more people to use the bus rather than private cars.
1.13	East of Breaston	Bus Services	Linda Shaw	Response-00511	Heath Gardens is not wide enough to facilitate extensions of any existing bus services and would not be promoting sustainable transportation. There would be insufficient space for a bus turning area and it would be difficult to integrate a bus service with other modes of transport, cycling, walking etc. due to the narrow road.
1.13	East of Breaston	Bus Services	Lindsey Trueman	Response-01878	Heath Gardens has access to Wilsthorpe Road which is serviced by bus routes. Access from Longmoor Lane is not convenient for main bus routes without at least a 15 minute walk, leading to a dependency on vehicle ownership.
1.13	East of Breaston	Bus Services	Lynette Ratcliffe	Response-00779	Bus services area already limited on Wilsthorpe road
1.13	East of Breaston	Bus Services	Melvin Clive Shaw	Response-00513	Heath Gardens is not wide enough to facilitate extensions of any existing bus services and would not be promoting sustainable transportation. There would be insufficient space for a bus turning area and it would be difficult to integrate a bus service with other modes of transport, cycling, walking etc. due to the narrow road.
1.13	East of Breaston	Bus Services	Mrs M Rigby	Response-00808	There use to be a bus service from Breaston to Nottingham the 5A what happened to that.?
1.13	East of Breaston	Bus Services	Nicholas Trueman	Response-01879	Heath Gardens has access to Wilsthorpe Road which is serviced by bus routes. Access from Longmoor Lane is not convenient for main bus routes without at least a 15 minute walk, leading to a dependency on vehicle ownership.
1.13	East of Breaston	Bus Services	Roger Day	Response-00027	The only bus service to my knowledge takes you to Nottingham or Derby, getting north or south is an issue.
1.13	East of Breaston	Flooding / Drainage	Andrea Valentine	Response-01525	The proposed site in Breaston is already prone to flooding and although it may be intended to build flood defences there is no guarantee these will be adequately effective. Given that new homes built since 2009 are not covered by the Flood Re insurance scheme this would leave the new homeowners and tenants at risk.
1.13	East of Breaston	Flooding / Drainage	Andrew Knight	Response-01824	The proposed site regularly becomes waterlogged and currently acts as a natural soakaway. Replacing this with hard surfaces would significantly increase flood risk for surrounding properties?particularly in light of severe local flooding in late 2023 and early 2024. During the last flood the sewage system could not cope with the surface water, this flooded drives and properties in Holly Avenue. SANDBAGS were delivered by Erewash Council. This is a serious issue. I note that monitoring wells have been installed in the graveyard next to the proposed development. This reading will not be REPRESENTATIVE as we current have one of the driest springs on record. Also although the drainage channels have been cleaned this year ? this has never happened in the past decade! Once the building work is complete -its unlikely the drainage channels will be cleaned again. If a further development down stream is added to the sewer load the system will back up further as the capacity cannot be increased through the culvert.
1.13	East of Breaston	Flooding / Drainage	Beverley Ann Ratcliffe	Response-01098	There is very limited Green belt in this area and in addition you are trying to put new houses in a small plot which already floods so increasing the risk of flooding to the neighboring cemetery and grounds also residents on nearby streets.
1.13	East of Breaston	Flooding / Drainage	Caroline Okeowo	Response-01814	Recent flooding events in late 2023 and early 2024 demonstrated the village's vulnerability to extreme weather. The proposed site, which currently functions as a natural soakaway and is often waterlogged, plays a key role in managing surface water. Development would replace permeable land with hard surfaces, significantly raising flood risk for both existing and future properties at a time when climate unpredictability is on the rise.
1.13	East of Breaston	Flooding / Drainage	Charlotte Fennemore	Response-01536	That area is already subject to flooding and drainage issues. More houses will only make that worse
1.13	East of Breaston	Flooding / Drainage	Christopher Baddiley	Response-01132	LANDSCAPING / FLOODING Storms in late 2023 and early 2024 have highlighted Breaston's vulnerability to flooding. Many properties in Holly Avenue suffered external and internal flood damage as a result of that weather. The proposed development site is a natural soakaway and is frequently waterlogged. The fields provide essential drainage and relief against further flooding. Replacing this green belt with hard surfaces would increase surface water run-off, raising the flood risk even further for homes on Holly Avenue and Heath Gardens. It would be irresponsible to compromise this natural buffer with 50 new homes.
1.13	East of Breaston	Flooding / Drainage	Christopher Baddiley	Response-01816	Storms in late 2023 and early 2024 have highlighted Breaston's vulnerability to flooding. Many properties in Holly Avenue suffered external and internal flood damage as a result of that weather. The proposed development site is a natural soakaway and is frequently waterlogged. The fields provide essential drainage and relief against further flooding. Replacing this green belt with hard surfaces would increase surface water run-off, raising the flood risk even further for homes on Holly Avenue and Heath Gardens. It would be irresponsible to compromise this natural buffer with 50 new homes.
1.13	East of Breaston	Flooding / Drainage	Claire Cherry	Response-01817	Recent events, including severe storms in late 2023 and early 2024, have highlighted Breaston's vulnerability to flooding, with many properties suffering internal damage. The proposed development site acts as a natural soakaway and is frequently waterlogged, as evidenced by photos and videos taken by local residents. Replacing this land with hard surfaces would increase surface water runoff, raising the flood risk for both existing homes and new properties, especially given the increasingly unpredictable climate.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Flooding / Drainage	Dean Corcoran	Response-00798	As mentioned numerous times in previous answers this area is known to flood regularly and often remaining underwater for many weeks with birds such as Egrets seen on many occasions the previously mentioned change of water runoff from the M1 and water table means that you are considering providing housing for people in the knowledge that any development will be prone to these issues
1.13	East of Breaston	Flooding / Drainage	Debbie Hunt	Response-01803	Recent flooding events in late 2023 and early 2024 demonstrated the village's vulnerability to extreme weather. The proposed site, which currently functions as a natural soakaway and is often waterlogged, plays a key role in managing surface water. Development would replace permeable land with hard surfaces, significantly raising flood risk for both existing and future properties at a time when climate unpredictability is on the rise. Our house will be directly affected by this and I am very concerned about our garden and house flooding.
1.13	East of Breaston	Flooding / Drainage	Diane Corsham	Response-00225	This area is known as flood plain and why would you want to build on this area as it already floods massively without any more drainage problems being brought into this area it's not fair to the residents who already live there and complete lack of thought to anyone else that lives in the area as I'm sure that the residents of Holly Avenue have already sent in their videos of the area under water when they have had recent flooding occur!
1.13	East of Breaston	Flooding / Drainage	Ed Huntley	Response-01120	This is an area which regularly floods. We would have reduced flood protection and the people living in the new houses might be subject to flooding.
1.13	East of Breaston	Flooding / Drainage	Geoff Potts	Response-01205	The report on the site attributes the poor drainage to unauthorised ground works. However the water table has always been high, when we moved into our property in the mid 1980's the field behind was uncultivated brush land yet the house next door was left with standing water in the rear garden after periods of heavy rain. For the reason above I am opposed to any development which could increase the flood risk.
1.13	East of Breaston	Flooding / Drainage	Graham Elliott	Response-00413	The adjacent 'Flood Alleviation Ditch' running from Longmoor Lane to Wilsthorpe Road has often proved inadequate to protect this area from flooding. Storm rainwater from the hills in Risley to the North, runs down past the Cemetery and floods Holly Avenue and the proposed site, making it totally unsuitable for residential properties, particularly as the reduction in natural soakaway land will make any potential flooding even worse.
1.13	East of Breaston	Flooding / Drainage	Greg Cherry	Response-01818	Recent events, including severe storms in late 2023 and early 2024, have highlighted Breaston's vulnerability to flooding, with many properties suffering internal damage. The proposed development site acts as a natural soakaway and is frequently waterlogged, as evidenced by photos and videos taken by local residents. Replacing this land with hard surfaces would increase surface water runoff, raising the flood risk for both existing homes and new properties, especially given the increasingly unpredictable climate.
1.13	East of Breaston	Flooding / Drainage	Hilary M McCullagh	Response-00804	Our garden has suffered a number of episodes of flooding up to the house, but fortunately not inside - yet. The first occurred in 1986 but there were no further major episodes here until 2019. Since then there have been at least three occurrences following severe storms in the 2020s. They have highlighted Breaston's vulnerability to flooding, with many properties suffering internal damage. The development site acts as a natural soakaway and is frequently waterlogged, as evidenced by photos and videos taken by local residents. Replacing this land with hard surfaces would increase surface water runoff, raising the flood risk for both existing homes and new properties, especially given the increasingly unpredictable climate.
1.13	East of Breaston	Flooding / Drainage	Ian Burton	Response-00194	The area is prone to flooding and has done so many times
1.13	East of Breaston	Flooding / Drainage	Jack Collins	Response-00908	Recent flooding events in late 2023 and early 2024 demonstrated the village's vulnerability to extreme weather. The proposed site, which currently functions as a natural soakaway and is often waterlogged, plays a key role in managing surface water. Development would replace permeable land with hard surfaces, significantly raising flood risk for both existing and future properties at a time when climate unpredictability is on the rise.
1.13	East of Breaston	Flooding / Drainage	Jessica Collins	Response-00899	The land in question is entirely unsuitable for development. It suffers from frequent and severe flooding, which we have personally witnessed on numerous occasions. Breaston is already prone to flooding, as evidenced by recent severe weather events in 2023 and 2024. The proposed development site is frequently waterlogged and currently serves as a natural soakaway, helping to manage surface water. Developing this site with impermeable surfaces would only increase the flood risk, endangering existing homes as well as new ones, especially considering the unpredictable nature of future climate conditions.
1.13	East of Breaston	Flooding / Drainage	Judith Ratcliffe	Response-00490	You will turn the current area into a flood risk by concreting over the land. the 'ditch' the runs at the side of Heath gardens already fills with water during heavy rain
1.13	East of Breaston	Flooding / Drainage	Julie Yelland and Ed Huntley	Response-00904	Perhaps even more concerning is the fact that the intended fields are often flooded in the winter. Water will be displaced if more housing is built, possibly endangering the existing houses on Holly Avenue and other surrounding streets.
1.13	East of Breaston	Flooding / Drainage	KARL BARROW	Response-00793	This area of Breaston is already experiencing increasing frequency of flooding incidents due to increased intensity of rainfall from anthropogenic climate change. Adjacent Holly Avenue and Longmoor Lane now experience road flooding every year with residents forced to build ad hock walls of sandbags across Holly Avenue. Adding more hard impermeable paving on this new development will mean the water has to go elsewhere. There is no where for it to go without extensive on site SUDS schemes including swales and river garden systems which will consume land reducing the numbers of houses.
1.13	East of Breaston	Flooding / Drainage	Kelly Steed	Response-00444	Recent extreme weather has highlighted our village's vulnerability to flooding. The proposed site is often waterlogged and acts as a natural soakaway. Replacing this with impermeable surfaces increases flood risk for both new and existing homes.
1.13	East of Breaston	Flooding / Drainage	Kevin Hopkinson	Response-01126	In recent years flooding has been a significant issue in this area and I suspect that the infrastructure which will be put in place will only serve to push the issue further down the line, giving someone else the problem to sort. Short term developers gain at the long term expense of the established local community.
1.13	East of Breaston	Flooding / Drainage	Lauren Davis	Response-00474	Flooding issues are present

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Flooding / Drainage	Lee Hargreaves	Response-01184	The land already floods
1.13	East of Breaston	Flooding / Drainage	Linda Shaw	Response-00511	New housing developments come with an increased risk of flooding in the local area. Breaston is a known risk area for flooding and the area proposed for a change from greenbelt is known to have an extremely high water table and is prone to frequent flooding. Current flood alleviation methods have proved insufficient for this area and the building of a housing estate here and the consequent removal of natural soak-aways and replacement with hard surfaces is likely to only increase the flooding risk, potentially widening or diverting the flooding risk to other residential housing and roads in the area. The removal of trees and the change of status of the area from greenbelt will have an adverse impact upon water levels. Sustainable drainage systems would need to be an essential for a much wider area than just for any potential housing development in order to alleviate flooding risks. The properties on Heath Gardens are high risk as they are all bungalows and mostly accommodating elderly and infirm residents.
1.13	East of Breaston	Flooding / Drainage	Linda Sheppard	Response-01321	This field is often flooded with quite deep water. Holly Avenue has increasing had water flowing down the street with some homes needing to use sand bags. Longmoor Road also has a section which regularly floods. It seems insane to build on a natural sink for the water.
1.13	East of Breaston	Flooding / Drainage	Lindsey Trueman	Response-01878	Since the land was cleared of more dense trees and vegetation as outlined previously, I have observed regular waterlogging over the subsequent years. As climatic changes have become more extreme in recent years, severe flooding has occurred several times since 2023. During one particular storm in October 2023, the current and depth of water flowing across the field was sufficient to move a plastic pallet containing two hay bales across the length the field. Building on this land with associated hard surfaces will only increase the surface water run off leading to increased flood risk for new and existing homes. My own property stands approximately 0.7 metres above the height of my garden, which is level with the proposed development site. The garden border adjacent to the field frequently floods during periods of heavy rain.
1.13	East of Breaston	Flooding / Drainage	Lisa Patrick	Response-00085	This land floods and has insufficient drainage and this causes problems for the local area
1.13	East of Breaston	Flooding / Drainage	Lucy Corcoran	Response-00097	The land in ear marked regularly floods to due run off from the M1 and lack of sufficient drainage. Land is below the water table and is used as flood plains during which Egrets and water wildlife are sited.
1.13	East of Breaston	Flooding / Drainage	Lynette Ratcliffe	Response-00779	The area has been prone to flooding. Surely concreting over the greenbelt will only make this worse.
1.13	East of Breaston	Flooding / Drainage	Melvin Clive Shaw	Response-00513	New housing developments come with an increased risk of flooding in the local area. Breaston is a known risk area for flooding and the area proposed for a change from greenbelt is known to have an extremely high water table and is prone to frequent flooding. Current flood alleviation methods have proved insufficient for this area and the building of a housing estate here and the consequent removal of natural soak-aways and replacement with hard surfaces is likely to only increase the flooding risk, potentially widening or diverting the flooding risk to other residential housing and roads in the area. The removal of trees and the change of status of the area from greenbelt will have an adverse impact upon water levels. Sustainable drainage systems would need to be an essential for a much wider area than just for any potential housing development in order to alleviate flooding risks. The properties on Heath Gardens are high risk as they are all bungalows and mostly accommodating elderly and infirm residents.
1.13	East of Breaston	Flooding / Drainage	Michael Sidebottom	Response-01807	The land in question is a FLOOD PLAIN. I have witnessed this with my own eyes on numerous occasions. The land i believe acts a natural soakaway for surrounding areas so is often waterlogged in times of extreme weather. Any development would take this natural occurrence away and this water has to go somewhere. I fear it will impact Holly Avenue also which again i have witnessed flooding on numerous occasions. I am very concerned for the future threat of flooding for my property. Please talk to your own Erewash grave diggers who tend the neighbouring Cemetery. They often struggle with waterlogged graves at present. If development were to go ahead then this would surely escalate the problem.
			Molly Allison	Response-01528	Constant flooding in breaston
1.13	East of Breaston	Flooding / Drainage	Mr s e Taylor mrs j p tayloe	Response-01288	You are planning to build on a flood plain area which is counter productive. A more suitable site would prove the best option.
1.13	East of Breaston	Flooding / Drainage	MRS JULIE ROWLINSON	Response-01000	Breaston has suffered a lot of flooding in recent years. Building on land that is meant to be fields is only going to make things worse. We must keep the existing landscape to avoid further flooding , especially as this land has trees that will take up excess water.
1.13	East of Breaston	Flooding / Drainage	Mrs M Rigby	Response-00808	Holly Avenue suffers with flooding this project will make it worse.
1.13	East of Breaston	Flooding / Drainage	Nicholas Trueman	Response-01879	Since the land was cleared of more dense trees and vegetation as outlined previously, I have observed regular waterlogging over the subsequent years. As climatic changes have become more extreme in recent years, severe flooding has occurred several times since 2023. During one particular storm in October 2023, the current and depth of water flowing across the field was sufficient to move a plastic pallet containing two hay bales across the length the field. Building on this land with associated hard surfaces will only increase the surface water run off leading to increased flood risk for new and existing homes. My own property stands approximately 0.7 metres above the height of my garden, which is level with the proposed development site. The garden border adjacent to the field frequently floods during periods of heavy rain.
1.13	East of Breaston	Flooding / Drainage	Nicola Connell	Response-00731	Recent events, including severe storms in late 2023 and early 2024, have highlighted Breaston's vulnerability to flooding, with many properties suffering internal damage. The proposed development site acts as a natural soakaway and is frequently waterlogged, as evidenced by photos and videos taken by local residents. Replacing this land with hard surfaces would increase surface water runoff, raising the flood risk for both existing homes and new properties, especially given the increasingly unpredictable climate.
1.13	East of Breaston	Flooding / Drainage	Pauline Wilcox	Response-00839	Flooding is a major concern for this area, despite work being carried out to clear ditches. The building of more houses is only going to exacerbate the problem and how on earth do people get insurance!?
1.13	East of Breaston	Flooding / Drainage	Paul Wells	Response-00284	The area regularly floods and landowners including EBC have failed to maintain flood defences, clear ditches and manage the land in its current state. What commitment will be given that more will be done if/when 50 more houses are built
1.13	East of Breaston	Flooding / Drainage	Rachel Lacey	Response-00784	The area floods regularly and there is already danger to houses. This will only create more flooding risk.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Flooding / Drainage	Rafik Fanous	Response-01161	This area is already at significant flood risk and the nearby brook into which drainage occurs has seen record high levels and flooding over the last few years. Additional housing draining into this will lead to significant increase in water levels and flooding
			Robert Mee	Response-01502	I am concerned about the flood risk at this site
1.13	East of Breaston	Flooding / Drainage	Roger and Iris Woodward	Response-00302	I understand that residents on Heath Gardens are aware that the land is liable to flooding and this has happened on a several occasions to the rear of my property. Any removal of trees which help to dissipate the water would potentially lead to more flooding.
1.13	East of Breaston	Flooding / Drainage	Samantha Honeybell	Response-01815	Recent events, including severe storms in late 2023 and early 2024, have highlighted Breaston's vulnerability to flooding, with many properties suffering internal damage. The proposed development site acts as a natural soakaway and is frequently waterlogged, as evidenced by photos and videos taken by local residents. Replacing this land with hard surfaces would increase surface water runoff, raising the flood risk for both existing homes and new properties, especially given the increasingly unpredictable climate. The old chapel has sustained severe damage from flooding due to waterlogged land on all sides. Despite claims that flood defences would be put in place by the developers, the risk of moving the flood problems to other housing areas and roads is high.
1.13	East of Breaston	Flooding / Drainage	Simon Hartopp	Response-01201	The brooks that run along the bungalows back gardens regularly fill high with run off water during times of heavy rain. With more areas that are presently fields being turned into hard standing surfaces, the potential for flooding will be greatly increased, as the extra run off will be directed into these brooks that are not designed or have the capacity for the extra water that 50 homes would cause.
1.13	East of Breaston	Flooding / Drainage	S M Corcoran	Response-01319	The proposed site and the area surrounding it is know to flood regularly with a high water table in the whole area. The change of use and " concreting over "of the land will only cause increased flooding and water damage to the properties on both Holly Ave and Heath Gardens plus the surrounding area. Although work as been done recently on the draining / run off in the area this as only been in the form of cleaning-up and general maintenance to the drainage systems already there rather than providing another outlet or water-course. The fact that the current system required such a large amount of work to bring it back to ?fit for purpose? only illustrates the fact that such maintenance work is low down on the councils priorities particularly in times of budget cut and reduced government funding. A Flood Risk Assessment should be requested for developments within or so close to a Flood Zone, this development will only further exacerbate existing flooding areas Having walked around the cemetery during many of these periods of flooding I can only imagine the upset and distress this causes to the relatives and friends of people buried there to see their loved ones graves literally under water so frequently.
1.13	East of Breaston	Flooding / Drainage	Stacey lester	Response-01239	My garden and part of my house flooded last year , Breaston is known for poor drainage and this would further that issue
1.13	East of Breaston	Flooding / Drainage	Stephen Hooley	Response-00774	The land within the proposed site has an extremely high water-table and is prone to frequent flooding during adverse weather conditions. It is understood the current flood alleviation measures are proven insufficient. Recent flooding of Breaston Church and the Cemetery bare witness. The building of 50 houses on the proposed site does not appear to consider natural soak-away. How is all the rain-water going to be absorbed when the land is covered with bricks, concrete and tarmac!
1.13	East of Breaston	Flooding / Drainage	Stephen Lacey	Response-00785	The area floods regularly and has caused damage to homes. Further building will only increase this risk to new and existing houses.
1.13	East of Breaston	Flooding / Drainage	Sylva jolliffe	Response-01512	This land floods regularly why would you put houses here????
1.13	East of Breaston	Flooding / Drainage	Terence Corcoran	Response-00318	The proposed site and the area surrounding it is know to flood regularly with a high water table in the whole area. The change of use and " concreting over "of the land will only cause increased flooding and water damage to the properties on both Holly Ave and Heath Gardens plus the area around it. Although work as been done recently on the draining / run off in the area this as only been in the form of cleaning-up and general maintenance to the drainage systems already there rather than providing another outlet or water-course. The fact that the current system required such a large amount of work to bring it back into use only illustrates the fact that such maintenance work is low down on the councils priorities particularly in times of budget cut and reduced government funding. Having walked around the cemetery during one of these periods of flooding I can only imagine the upset and distress this causes to the relatives and friends of people buried there to see their loved ones graves literally under water.
1.13	East of Breaston	Green Belt	Andrea Valentine	Response-01525	The fifth purpose of the greenbelt policy is ?to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.? so rather than developing on our greenfield land, regenerating pre-used land and buildings, often left neglected and decaying anyway, should be the priority.
1.13	East of Breaston	Green Belt	Andrew Knight	Response-01824	The site is designated Green Belt for good reason: to prevent urban sprawl, protect natural habitats, and maintain the character of rural communities. This development would cause permanent environmental damage and biodiversity loss. The proposal contradicts the National Planning Policy Framework, which allows changes to Green Belt boundaries only in exceptional circumstances?none of which have been clearly demonstrated. There is also insufficient evidence that brownfield or non-Green Belt alternatives have been exhausted.
1.13	East of Breaston	Green Belt	Beverley Ann Ratcliffe	Response-01098	Absolutely disgusting that you can change the Green Belt to Grey Belt. There is very limited Green belt in this area and in addition you are trying to put new houses in a small plot which already floods so increasing the risk of flooding to the neighboring cemetery and grounds also residents on nearby streets.
1.13	East of Breaston	Green Belt	Caroline Okeowo	Response-01814	Contradiction with Planning Policy and Legislation Under the National Planning Policy Framework (NPPF 2023): ? Paragraph 140 states that changes to Green Belt boundaries should only be made in exceptional circumstances. ? Paragraphs 149?150 highlight that inappropriate development in the Green Belt should only be permitted under very special circumstances. No compelling justification has been presented to meet these thresholds. Additionally: ? The Council is required to demonstrate a five-year housing land supply before Green Belt release is considered. There is no clear evidence that all brownfield and non-Green Belt options have been fully explored.
			Charlotte Fennemore	Response-01536	Greenbelt land is that for a reason and should be protected

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Green Belt	Christopher Baddiley	Response-01132	There are more appropriate, sustainable locations for housing development which do not involve sacrificing protected green belt and countryside. Once lost, these green spaces and their ecological value cannot be replaced.
1.13	East of Breaston	Green Belt	Christopher Baddiley	Response-01816	I feel there are more appropriate, sustainable locations for housing development which do not involve sacrificing protected green belt and countryside. Once lost, these green spaces and their ecological value cannot be replaced.
1.13	East of Breaston	Green Belt	Claire Cherry	Response-01817	Conflict with National and Local Planning Policy According to the National Planning Policy Framework (NPPF 2023): ? Paragraph 140 states that Green Belt boundaries should only be altered in exceptional circumstances. ? Paragraphs 149-150 confirm that inappropriate development in the Green Belt should not be approved except in very special circumstances. No compelling justification has been provided to demonstrate that these criteria have been met. Furthermore: ? The Council must first demonstrate a five-year housing land supply before considering Green Belt release. No clear evidence has been presented to confirm that all suitable brownfield and non-Green Belt options have been exhausted.
1.13	East of Breaston	Green Belt	Claire Matthews	Response-01203	Green belt means green belt, no development. Erewash is not following the rules and wrecking the green belt, very gradually. If this development goes ahead, the adjoining land is certainly in danger of being developed.
1.13	East of Breaston	Green Belt	Dawn Fish	Response-01165	The houses are being built on greenbelt land. Once it's gone, it's gone forever. Why are brownfield sites not being used
1.13	East of Breaston	Green Belt	Dean Corcoran	Response-00798	This area was designated as Green belt for a reason it acts as both a place for wildlife , presents a break between homes and the M1 and a flood plain ( flooding increased when pipework was removed from central reservation in the next field over ( between The proposed development and M1 the farmer that uses this land can confirm that the flooding that now occurs each year is exacerbated as a result of this with the flooding impacting both his fields and tge fields where work is being proposed
1.13	East of Breaston	Green Belt	Debbie Hunt	Response-01803	Contradiction with Planning Policy and Legislation Under the National Planning Policy Framework (NPPF 2023): ? Paragraph 140 states that changes to Green Belt boundaries should only be made in exceptional circumstances. Why is this proposal exceptional circumstances when there are other locations available? ? Paragraphs 149?150 highlight that inappropriate development in the Green Belt should only be permitted under very special circumstances. No compelling justification has been presented to meet these thresholds. Additionally: ? The Council is required to demonstrate a five-year housing land supply before Green Belt release is considered. There is no clear evidence that all brownfield and non-Green Belt options have been fully explored.
1.13	East of Breaston	Green Belt	Diane Corsham	Response-00225	Green belt areas should just be that green belt and be left alone!
1.13	East of Breaston	Green Belt	Ed Huntley	Response-01120	This is an area which regularly floods. We would have reduced flood protection and the people living in the new houses might be subject to flooding.
1.13	East of Breaston	Green Belt	Graham Elliott	Response-00413	We strongly object to this Development , particularly the use of Protected ?Green Belt Land?, which was a key reason for us purchasing this property and we are particularly concerned as to the precedence it may set for other Green Belt land around us.
1.13	East of Breaston	Green Belt	Greg Cherry	Response-01818	Conflict with National and Local Planning Policy According to the National Planning Policy Framework (NPPF 2023): ? Paragraph 140 states that Green Belt boundaries should only be altered in exceptional circumstances. ? Paragraphs 149-150 confirm that inappropriate development in the Green Belt should not be approved except in very special circumstances. No compelling justification has been provided to demonstrate that these criteria have been met. Furthermore: ? The Council must first demonstrate a five-year housing land supply before considering Green Belt release. No clear evidence has been presented to confirm that all suitable brownfield and non-Green Belt options have been exhausted.
1.13	East of Breaston	Green Belt	Hilary M McCullagh	Response-00804	This proposed development would have a deeply damaging impact on Breaston?s Green Belt, infrastructure, natural environment, flood resilience, and community identity. There are more appropriate, sustainable locations for housing development that do not involve sacrificing protected countryside
1.13	East of Breaston	Green Belt	Jack Collins	Response-00908	The land in question is designated Green Belt, protected to limit urban sprawl, safeguard the countryside, and preserve biodiversity. Development here would lead to the permanent loss of vital green space. Contradiction with Planning Policy and Legislation. Under the National Planning Policy Framework (NPPF 2023): ? Paragraph 140 states that changes to Green Belt boundaries should only be made in exceptional circumstances. ? Paragraphs 149?150 highlight that inappropriate development in the Green Belt should only be permitted under very special circumstances. No compelling justification has been presented to meet these thresholds. Additionally: ? The Council is required to demonstrate a five-year housing land supply before Green Belt release is considered. There is no clear evidence that all brownfield and non-Green Belt options have been fully explored. More appropriate, sustainable sites should be prioritised - sites that do not require sacrificing protected countryside and the long-term wellbeing of our community
1.13	East of Breaston	Green Belt	Jessica Collins	Response-00899	The land earmarked for development is currently designated as Green Belt, intended to limit urban expansion, protect the countryside, and preserve important natural habitats. Allowing development here would result in the permanent loss of valuable green space, irreversibly disrupting wildlife habitats and the biodiversity they support, including birds, bats, and small mammals. The National Planning Policy Framework (NPPF 2023) clearly states: ? Paragraph 140, which emphasises that Green Belt boundaries should only be altered in exceptional circumstances. ? Paragraphs 149?150, which assert that inappropriate development in the Green Belt should only occur under very special circumstances. The proposal fails to meet these exceptional criteria. Furthermore: ? The Council must demonstrate a five-year housing land supply before considering the release of Green Belt land. There is insufficient evidence that all other options, including brownfield sites, have been fully explored.
1.13	East of Breaston	Green Belt	Judith Ratcliffe	Response-00490	Please do not remove more Greenbelt in the area. Very sad to do this.
1.13	East of Breaston	Green Belt	Judy Arcy	Response-01167	There are plenty of brown field sites ! We should not be building on green belt - which is being gradually being eroded

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Green Belt	Kelly Steed	Response-00444	The National Planning Policy Framework (NPPF) emphasises the importance of prioritising brownfield (previously developed) land for new housing developments. Despite this, the current proposal targets valuable green space while numerous brownfield sites across the borough remain underutilised. Before considering Green Belt release, the Council must exhaust all brownfield land opportunities. Yet multiple such sites remain neglected: ? The derelict industrial units on Longmoor Lane, scheduled for demolition before the Covid pandemic, remain untouched more than five years on. These buildings continue to deteriorate, attract vandalism and visually blight the area ? a missed opportunity for sustainable housing. ? The former Wilmot Arms site in Borrowash, another derelict and underutilised location, could feasibly accommodate part of the proposed housing, if properly considered. These sites offer viable alternatives that preserve precious countryside while contributing to local regeneration. Furthermore, all the links to the Council's own brownfield land register on the website appear to be broken. This raises serious concerns about the transparency of the site selection process and whether all brownfield alternatives have been properly assessed and ruled out. Without this evidence, the proposal is not in line with national planning guidance. According to the National Planning Policy Framework (NPPF 2023): ? Paragraph 140: Green Belt boundaries should only be altered in exceptional circumstances. ? Paragraphs 149?150: Development on Green Belt land is inappropriate unless justified by very special circumstances ? none of which have been demonstrated. Further, the Council must demonstrate a five-year housing land supply and confirm that all non-Green Belt alternatives have been explored ? including the sites mentioned above. The proposal also undermines targets under the Climate Change Act 2008 and Environment Act 2021, particularly the goal of 10% Biodiversity Net Gain.
1.13	East of Breaston	Green Belt	Kevin Hopkinson	Response-01126	Conversion of green belt to brown belt land is an underhanded way of opening the door for developers to make a profit at the expense of the local community. They will develop to profit off the local community and then just move on to the next development with little or no respect for the damage they have caused to both the environment and the local community.
1.13	East of Breaston	Green Belt	Lauren Davis	Response-00474	Must be protected
1.13	East of Breaston	Green Belt	Lee Hargreaves	Response-01184	We need to protect our green belt areas
1.13	East of Breaston	Green Belt	Linda Shaw	Response-00511	Changing the status of this area from greenbelt to allow a development of housing would cause numerous issues which are highlighted in other sections of this submission ? road safety, traffic congestion, air quality, effect upon wildlife, increased risk of flooding etc. etc. It adversely impacts upon the prevailing status of the current housing on Heath Gardens and Holly Avenue as well as the entire natural beauty and character of the Breaston area.
1.13	East of Breaston	Green Belt	Lindsey Trueman	Response-01878	Loss of this designated Green Belt land is my prime objection to this development. The purpose of Green Belt is to prevent urban sprawl and safeguard the countryside. This Green Belt provides a clear open space between the Breaston and Long Eaton. Degradation of this Green Belt into Grey Belt is in direct conflict with National and Local Policy, as already clearly pointed out by Breaston Parish Council. Furthermore I feel that alternative Brown Field and non-Green Belt options within the Borough have not been sufficiently considered. It appears that the reclassification of Green Belt is very much the easy option. The description of 'rounding off' the eastern fringe of Breaston as described in one of the draft proposals of the Core Strategy is at the cost of precious and irreplaceable Green Belt. This was both annoying to read and makes light of the loss of Green Belt. This terminology implies the proposal is a 'tidying up' exercise of the eastern village border and is totally inappropriate.
1.13	East of Breaston	Green Belt	Lisa Patrick	Response-00085	This is green belt and not building land it frequently floods
1.13	East of Breaston	Green Belt	Lucy Corcoran	Response-00097	Removal of green belt will bring Breaston closer together with Long Eaton, destroy wildlife, increase congestion and pollution to the area.
1.13	East of Breaston	Green Belt	Lynette Ratcliffe	Response-00779	Its Green belt land - what more is there to say?
1.13	East of Breaston	Green Belt	Matt Tovey	Response-00840	There are other brown field sites that should be developed before green belt.
1.13	East of Breaston	Green Belt	Melvin Clive Shaw	Response-00513	Greenbelt Changing the status of this area from greenbelt to allow a development of housing would cause numerous issues which are highlighted in other sections of this submission ? road safety, traffic congestion, air quality, effect upon wildlife, increased risk of flooding etc. etc. It adversely impacts upon the prevailing status of the current housing on Heath Gardens and Holly Avenue as well as the entire natural beauty and character of the Breaston area.
1.13	East of Breaston	Green Belt	Michael Sidebottom	Response-01807	Loss of our Green Belt Land and long term environmental impact. The land in question is designated Green Belt. This is currently preventing us from the urban sprawl which identifies the village boundaries, its rural character and protects the natural beauty of the land. The land allows peace and tranquility for the neighbouring cemetery and its regular visitors who tend there loved ones graves. Contradiction with Planning Policy and Legislation Under the National Planning Policy Framework ? Paragraph 140 states that changes to Green Belt boundaries should only be made in exceptional circumstances. Why is this proposal exceptional circumstances when there are other locations available? ? Paragraphs 149?150 highlight that inappropriate development in the Green Belt should only be permitted under very special circumstances. No compelling justification has been presented to meet these thresholds. Additionally: ? The Council is required to demonstrate a five-year housing land supply before Green Belt release is considered. There is no clear evidence that all brownfield and non-Green Belt options have been fully explored.
1.13	East of Breaston	Green Belt	Mr s e Taylor mrs j p tayloe	Response-01288	Designated green belt land . Should remain exactly that regardless of political manipulation.
1.13	East of Breaston	Green Belt	MRS JULIE ROWLINSON	Response-01000	Green belt should be kept sacrosanct. There is plenty of brown land that is not used. We must retain our Green belt.
1.13	East of Breaston	Green Belt	Mrs M Rigby	Response-00808	Green belt should not be built on.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Green Belt	Nicholas Trueman	Response-01879	Loss of this designated Green Belt land is my prime objection to this development. The purpose of Green Belt is to prevent urban sprawl and safeguard the countryside. This Green Belt provides a clear open space between the Breaston and Long Eaton. Degradation of this Green Belt into Grey Belt is in direct conflict with National and Local Policy, as already clearly pointed out by Breaston Parish Council. Furthermore I feel that alternative Brown Field and non-Green Belt options within the Borough have not been sufficiently considered. It appears that the reclassification of Green Belt is very much the easy option. The description of 'rounding off' the eastern fringe of Breaston as described in one of the draft proposals of the Core Strategy is at the cost of precious and irreplaceable Green Belt. This was both annoying to read and makes light of the loss of Green Belt. This terminology implies the proposal is a 'tidying up' exercise of the eastern village border and is totally inappropriate.
1.13	East of Breaston	Green Belt	Nicola Connell	Response-00731	The proposed site lies within designated Green Belt land, which is protected to prevent urban sprawl, safeguard the countryside, and preserve natural habitats. Once lost, these green spaces and their ecological value cannot be replaced. According to the National Planning Policy Framework (NPPF 2023): Paragraph 140 states that Green Belt boundaries should only be altered in exceptional circumstances. Paragraphs 149-150 confirm that inappropriate development in the Green Belt should not be approved except in very special circumstances. No compelling justification has been provided to demonstrate that these criteria have been met. Furthermore: The Council must first demonstrate a five-year housing land supply before considering Green Belt release. No clear evidence has been presented to confirm that all suitable brownfield and non-Green Belt options have been exhausted. There are more appropriate, sustainable locations for housing development that do not involve sacrificing protected countryside.
1.13	East of Breaston	Green Belt	Oliver Lowe	Response-01162	Should stay green belt
1.13	East of Breaston	Green Belt	Pauline Wilcox	Response-00839	Yes! It's green belt, what does that mean, I wonder? There are dozens of more suitable sites for building new houses which are brownfield. Why aren't they used?
1.13	East of Breaston	Green Belt	Paul Wells	Response-00284	Why is the green belt being proposed to be removed/built on when grey and brownfield sites are not being utilised. In Breaston the old Litho factory site on Longmoor. lane has remained empty/derelict for years. This sits, witching th village could support many new homes. Why not utilise that instead (perhaps the owner, Richard Lesger is happy to have the site derelict while he?s busy sorting Long Eaton?s derelict sites.
1.13	East of Breaston	Green Belt	Rachel Lacey	Response-00784	This is prime Green belt land that should be protected.
1.13	East of Breaston	Green Belt	Rafik Fanous	Response-01161	This land is green belt and should not be used for housing
1.13	East of Breaston	Green Belt	Richard Whitehead	Response-01182	I strongly object to building on green belt land in the uk. There is no need for this development in this area and would be a great shame to loose such beautiful green fields to pointless houses when redevelopment in other areas would be more beneficial.
1.13	East of Breaston	Green Belt	Robert Mee	Response-01502	My main reason for objecting to these developments is that I do not believe that the criteria set out in the NPPF has been met justifying any encroachment into the Green Belt at this time. The Core Strategy and this Amendment are developed in order to meet the housing targets allocated to the council by central government. I do not believe that the number of houses required by government constitutes, in itself, the ?exceptional circumstances? which are required under the Framework. This is particularly so in view of there being no published objective basis for the numbers allocated to each authority. The term ?exceptional circumstances? does include ?instances where an authority cannot meet its identified need for homes?. The waiting list for social housing in the general area might suggest that this is the case, but I do not accept that these plans will go far to address this issue ? the vast majority of the planned housing allocations are not even for affordable housing, let alone social housing. Additionally, I do not remember seeing evidence that Erewash has specifically quantified local (i.e. Erewash) housing needs. I also do not believe that much, if any, of the Green Belt selected for development would fit the definition of ?Grey Belt?. As a concept, I can support the idea of Grey Belt as originally reported, i.e. pieces of land within the Green Belt which have previously been developed ? indeed, I can think of a few locally, though they are all fairly small. I find the arguments that I have heard over distances between the edge of Derby and the edge of other towns, and how these distances will still be maintained, extremely spurious. The Green Belt in its entirety exists to prevent Nottingham and Derby from merging ? while building on any of these sites does not immediately make the two cities any closer to each other, it does reduce the green space between the two cities, which is precisely what the Green Belt was established to prevent. The Green Belt is a regional initiative, covering two counties and several local authorities. With Erewash having such a high proportion of its land earmarked as Green Belt it is incumbent on the region as a whole to find a solution to the housing shortage, rather than to expect our authority to have to sacrifice its green spaces.
1.13	East of Breaston	Green Belt	Samantha Honeybell	Response-01815	The proposed site lies within designated Green Belt land, which is protected to prevent urban sprawl, safeguard the countryside, and preserve natural habitats. The site is home to many animals which are already being impacted by the pre-work that has been taking place over the last few months, with trees and hedgerows being destroyed. Once lost, these green spaces and their ecological value cannot be replaced. The small amount of planting that house builders are required to complete is nothing in comparison to the natural habitat that has been destroyed to pave the way for housing developments. According to the National Planning Policy Framework (NPPF 2023): ? Paragraph 140 states that Green Belt boundaries should only be altered in exceptional circumstances. ? Paragraphs 149-150 confirm that inappropriate development in the Green Belt should not be approved except in very special circumstances. No compelling justification has been provided to demonstrate that these criteria have been met. Furthermore: ? The Council must first demonstrate a five-year housing land supply before considering Green Belt release. No clear evidence has been presented to confirm that all suitable brownfield and non-Green Belt options have been exhausted.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Green Belt	S M Corcoran	Response-01319	The Green Belt areas in the village of Breaston are of both environmental, social and mental health well-being importance to all its residents. Any loss of these areas will have a negative affect on all who live in the village and are a limited resource, so once they have gone they cannot be replaced and the negative impact of their loss will be felt not only today but also by all the future generations to come. Green Belt Areas matter. I believe that there are in excess 100 existing Brownfield sites within Erewash Borough Council control the vast majority of which have full planning permission. Surely these sites should be prioritized for development before Green Belt land is considered.
1.13	East of Breaston	Green Belt	Stacey lester	Response-01239	Leave beautiful green belts alone to be enjoyed by locals and wildlife
1.13	East of Breaston	Green Belt	Stephen Hooley	Response-00774	What Green Belt?.....Now Grey Belt!! A decision rushed through by Erewash Borough Council without informing or consulting with residents of Holly Avenue and Heath Gardens.
1.13	East of Breaston	Green Belt	Stephen Lacey	Response-00785	The land proposed is protected green belt land. Why can this now be classified as other?
1.13	East of Breaston	Green Belt	Susan Holliday	Response-01577	Green belt land was designated as green belt for a reason- it should be fiercely protected at all costs and brownfield sites used instead. This is more expensive but is essential. Otherwise we may as well just build on all green belt sites! Let's protect this planet and build responsibly.
1.13	East of Breaston	Green Belt	Sylva jolliffe	Response-01512	There is lots of land such as the old factory that has been derelict for years. We do not need to destroy our green belt
1.13	East of Breaston	Green Belt	Terence Corcoran	Response-00318	The Green Belt areas in the village of Breaston are of both environmental, social and mental health well-being importance to all its residents. Any loss of these areas will have a negative affect on all who live in the village and are a limited resource, so once they have gone they cannot be replaced and the negative impact of their loss will be felt not only today but also by all the future generations to come. Green Belt Areas matter.
1.13	East of Breaston	Healthcare Facilities	Beverley Ann Ratcliffe	Response-01098	Again, you are planning homes in both Breaston and Draycott. In Breaston, there is only one small Dental practice, which only takes on Private Patients, one Doctor's surgery which also covers Draycott and also has a surgery in Borrowash, which serves all three parishes. Getting an appointment into my doctors in Breaston is very difficult, how they are going to manage with an influx of around 200 new homes, equalling approx 400 people not including children? Quality of care would be highly impacted.
1.13	East of Breaston	Healthcare Facilities	Caroline Okeowo	Response-01814	Local GP surgeries and dental practices are under significant strain, and any increase in population would make access to timely care even more difficult.
1.13	East of Breaston	Healthcare Facilities	Christopher Baddiley	Response-01132	The existing infrastructure in Breaston is already under considerable pressure. The local GP surgery is in high demand. The local dentist is now private, not NHS. Both practices are overstretched, and this proposed development would make it harder to access timely medical and dental care.
1.13	East of Breaston	Healthcare Facilities	Claire Cherry	Response-01817	Local GP surgeries and dental practices are overstretched, and this development would exacerbate difficulties in accessing timely medical and dental care. Accessing GP services for primary health care provision for both children and adults is a significant challenge, within an already overstretched catchment. Adding further housing to the locality will further exacerbate this situation, reducing access to primary care, putting lives at risk and putting further stresses on already stretched A&E departments. Dental care is unavailable for those not already under the care of the Breaston Dental Surgery, and waiting lists exceed the lifespan of many residents within the village.
1.13	East of Breaston	Healthcare Facilities	Dawn Fish	Response-01165	Local doctors and nhs dentists are at capacity
1.13	East of Breaston	Healthcare Facilities	Dean Corcoran	Response-00798	Availability of health care is a known issue countrywide Breaston is no different - any increase in residential development will of course impact this
1.13	East of Breaston	Healthcare Facilities	Debbie Hunt	Response-01803	Healthcare: Local GP surgeries and dental practices are under significant strain, and any increase in population would make access to timely care even more difficult.
1.13	East of Breaston	Healthcare Facilities	Debra Martin	Response-01469	You can't get a GP or hospital appointment very easy in this area as it is. The schools are also full to capacity. I could have ticked every option for my objection
1.13	East of Breaston	Healthcare Facilities	Diane Corsham	Response-00225	There isn't enough healthcare facilities in the area for people who reside in this area never mind draining the resources even further to accommodate more people in an area that cannot offer proper healthcare facilities for the people living in the village already!
1.13	East of Breaston	Healthcare Facilities	Ed Huntley	Response-01120	There are no available NHS Dentists and Doctors as it is.
1.13	East of Breaston	Healthcare Facilities	Graham Elliott	Response-00413	Breaston Chemists and Surgery are some distance away at the other end of the village and they are already very busy so its often difficult getting a prompt appointment. Also a problem for anyone that doesn't drive, particularly the elderly.
1.13	East of Breaston	Healthcare Facilities	Greg Cherry	Response-01818	Local GP surgeries and dental practices are overstretched, and this development would exacerbate difficulties in accessing timely medical and dental care. Accessing GP services for primary health care provision for both children and adults is a huge challenge, within an already overstretched catchment. Adding further housing to the locality will further exacerbate this situation, reducing access to primary care, putting lives at risk and putting further stresses on already stretched A&E departments - no such solution is offered or suggested as part of the plans, I find it alarming that this would be overlooked. Dental care is unavailable for those not already under the care of the Breaston Dental Surgery, and waiting lists exceed the lifespan of many residents within the village.
1.13	East of Breaston	Healthcare Facilities	Jack Collins	Response-00908	Local GP surgeries and dental practices are under significant strain, and any increase in population would make access to timely care even more difficult.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Healthcare Facilities	Jessica Collins	Response-00899	The local GP surgeries and dental clinics are already struggling to keep up with demand, and any additional residents would make it even harder to access healthcare services in a timely manner. Dental services are similarly overstretched. I have been forced to pay for private dental care since the age of 18 due to a complete lack of NHS dental provision in the area. Access to essential services is already limited: I was unable to secure an appointment with my local GP for four months due to capacity issues. Even after the wait, I was not able to see the required doctor. Eventually, another GP saw me and urgently referred me to the hospital for a potential skin cancer diagnosis. If there had been more housing and increased demand, how much longer would I have had to wait for potentially life-saving care?
1.13	East of Breaston	Healthcare Facilities	Joanne Parkin	Response-01163	Unable to get an urgent GP appointment
1.13	East of Breaston	Healthcare Facilities	Judith Ratcliffe	Response-00490	Again .. where are the 50+ new housing residents supposed to get in at Doctors when they are already full?
1.13	East of Breaston	Healthcare Facilities	Judy Arcy	Response-01167	Struggling for GP appointments now so more residents will just impact the already existing extremely busy service - so wait times will be even longer to see GP
1.13	East of Breaston	Healthcare Facilities	Kelly Steed	Response-00444	GP and dental services are already overstretched, and this development would further delay access to care.
1.13	East of Breaston	Healthcare Facilities	Kevin Hopkinson	Response-01126	The Doctors Surgery in Breaston is exceptionally responsive, this could well be affected with the possible increase of the population.
1.13	East of Breaston	Healthcare Facilities	Lauren Davis	Response-00474	As is with everywhere these are stretched but I cannot get appointments at our local gp I have to go to borrowwash. There is no dentist that will take me and my 1 year old daughter on within miles so more people joining the community would make matters worse not better
1.13	East of Breaston	Healthcare Facilities	Linda Shaw	Response-00511	These are inadequate already and an increased population in this area will hugely exacerbate this issue.
1.13	East of Breaston	Healthcare Facilities	Lindsey Trueman	Response-01878	Local GP Surgeries and dental practices are already overstretched. An increase in population from an additional 50 houses will inevitably add further strain.
1.13	East of Breaston	Healthcare Facilities	Lisa Patrick	Response-00085	Our doctors and dentists are at capacity
1.13	East of Breaston	Healthcare Facilities	Lucy Corcoran	Response-00097	As a resident of Breaston I have been unable to register with the surgery due to lack of space so continue to be supported by an alternative practice.
1.13	East of Breaston	Healthcare Facilities	Lynette Ratcliffe	Response-00779	Local Doctors are already full and very difficult to get appointments
1.13	East of Breaston	Healthcare Facilities	Melvin Clive Shaw	Response-00513	These are inadequate already and an increased population in this area will hugely exacerbate this issue.
1.13	East of Breaston	Healthcare Facilities	Michael Sidebottom	Response-01807	Local GP surgeries and dental practices are under significant strain, and any increase in population would make access to timely care even more difficult.
1.13	East of Breaston	Healthcare Facilities	Mrs s e Taylor mrs j p tayloe	Response-01288	They are over subscribed already.
1.13	East of Breaston	Healthcare Facilities	MRS JULIE ROWLINSON	Response-01000	GP and Dental services will be even more in demand and this will affect the provision for existing patients.
1.13	East of Breaston	Healthcare Facilities	Mrs M Rigby	Response-00808	Doctors surgery struggle to get an appointment. My dentist has gone private. I am struggling to find a NHS dentist . Not had a dentist for 6 months
1.13	East of Breaston	Healthcare Facilities	Nicholas Trueman	Response-01879	Local GP Surgeries and dental practices are already overstretched. An increase in population from an additional 50 houses will inevitably add further strain.
1.13	East of Breaston	Healthcare Facilities	Nicola Connell	Response-00731	Local GP surgeries and dental practices are overstretched, and this development would exacerbate difficulties in accessing timely medical and dental care
1.13	East of Breaston	Healthcare Facilities	Oliver Lowe	Response-01162	Surgery's already busy

1.13	East of Breaston	Healthcare Facilities	Pauline Wilcox	Response-00839	Are you providing additional Healthcare Facilities? The existing ones are stretched to breaking point.
1.13	East of Breaston	Healthcare Facilities	Rachel Lacey	Response-00784	The Breaston surgery is already at capacity and will be forced to take more patients.
1.13	East of Breaston	Healthcare Facilities	Roger Day	Response-00027	There is not mention of increasing any health care support in the strategy review.
1.13	East of Breaston	Healthcare Facilities	Samantha Honeybell	Response-01815	The local GP surgery is already overstretched and struggling to accommodate the residents of the 3 villages it supports. It is important to note that all 3 villages have proposed development sites, how the surgery is expected to provide timely and urgent medical care with the proposed increase of inhabitants is completely unknown and there does not appear to be any review of this situation. In addition to the GP surgery concerns, the dental practises are overstretched and it is already impossible to receive NHS dental treatment locally.
1.13	East of Breaston	Healthcare Facilities	S M Corcoran	Response-01319	As with the schools in the area the Healthcare facilities in Breaston are already stretched beyond acceptable levels with residents having great difficulty in getting appointments with both Doctors and Dentists. The further addition of approx. 200 people would take the Healthcare system beyond breaking point to the detriment of all Breaston residents. This, of course, does not take into consideration that the main surgery in Breaston caters for patients from both Draycott and Borrowwash other neighbouring areas which are also being targetted with a further 600 houses.
1.13	East of Breaston	Healthcare Facilities	Stacey lester	Response-01239	No local doctors
1.13	East of Breaston	Healthcare Facilities	Stephen Lacey	Response-00785	Breaston surgery is already overwhelmed by demand. More housing will not help this.
1.13	East of Breaston	Healthcare Facilities	Sylva jolliffe	Response-01512	Local doctors are oversubscribed and offer appointments for 3 weeks later already, and nhs dentists are not taking on new clients.
1.13	East of Breaston	Healthcare Facilities	Terence Corcoran	Response-00318	As with the schools in the area the Healthcare facilities in Breaston are already stretched beyond acceptable levels with residents having great difficulty in getting appointments with both Doctors and Dentists . The further addition of approx. 200 people would take the Healthcare system beyond breaking point to the detriment of all Breaston residents.
1.13	East of Breaston	Landscape	Andrea Valentine	Response-01525	Many people value the countryside and with mental health and welfare being one of this generations top priorities the need to plant forests, to tackle climate change, to grow food locally to cities, to help manage rainfall, to moderate the urban heat island effect, to provide habitat to address species decline is required more than ever.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Landscape	Beverley Ann Ratcliffe	Response-01098	There will be implications, felling of trees, loss of habitat for wildlife including foxes, rabbits, birds and all the smaller species due to this being a natural area for their habitat. This has always been a green belt, with no pollution, which has allowed the animals, trees and flora to develop and grow naturally. Also there is a high risk of flooding on this land which is proposed to build on.
			Dean Corcoran	Response-00798	The view from entering the village from Longmore Lane will be impacted destroying the wildlife that currently live and feed there
1.13	East of Breaston	Landscape	Diane Corsham	Response-00225	The houses would be a blot on the landscape as once they go up the fields would be changed forever!
			Graham Elliott	Response-00413	No comment until detail of the location, type of housing and landscaping is known.
1.13	East of Breaston	Landscape	Judith Ratcliffe	Response-00490	Trees and vegetation will surely be removed
			Kevin Hopkinson	Response-01126	If this development was to proceed Breaston would lose the charm and individuality the village currently enjoys.
1.13	East of Breaston	Landscape	Lauren Davis	Response-00474	Is beautiful and building around our village would impact our landscape
1.13	East of Breaston	Landscape	Linda Shaw	Response-00511	Changing the status of this area from greenbelt will completely alter the local landscape for the worse. Local wildlife and local habitats will be affected whilst the replacement of a green area with hard surfaces and additional demands on drainage etc. will cause an increased flooding risk for Breaston as a whole. It will also impact upon the environment of Breaston Cemetery which is very close to this area. A new development would completely change the character and existing aesthetics of the area.
1.13	East of Breaston	Landscape	Lindsey Trueman	Response-01878	The two fields in question have a unique landscape and provide a backdrop that is compatible with the various rewilding projects within the Borough.
1.13	East of Breaston	Landscape	Lucy Corcoran	Response-00097	The land is visible from the M1 and as you enter the village via Longmoor Lane, removing this landscape would destroy current wildlife and habitats for numerous species including bats.
1.13	East of Breaston	Landscape	Melvin Clive Shaw	Response-00513	Changing the status of this area from greenbelt will completely alter the local landscape for the worse. Local wildlife and local habitats will be affected whilst the replacement of a green area with hard surfaces and additional demands on drainage etc. will cause an increased flooding risk for Breaston as a whole. It will also impact upon the environment of Breaston Cemetery which is very close to this area. A new development would completely change the character and existing aesthetics of the area.
			Mr s e Taylor mrs j p tayloe	Response-01288	The outlook from our property is idyllic and has been so since the 12 bungalows were built on a market garden.
1.13	East of Breaston	Landscape	Nicholas Trueman	Response-01879	The two fields in question have a unique landscape and provide a backdrop that is compatible with the various rewilding projects within the Borough.
			Paul Wells	Response-00284	The road is opposite the M1 and so will be noisy for any future residents
1.13	East of Breaston	Landscape	Rachel Lacey	Response-00784	The development will spoil the local area - there is a lovely view across the fields and this will be destroyed.
			Stephen Lacey	Response-00785	The Landscape will be damaged beyond repair. It is a lovely natural area currently.
1.13	East of Breaston	Number of Houses	Andrew Knight	Response-01824	Local infrastructure is already under pressure. GP services, schools, and roads are near or at capacity. An increase in population would worsen access to healthcare, limit school places, and create traffic congestion and safety issues. A large-scale housing development would undermine Breaston's distinct rural character and sense of community, turning it into a suburban extension of neighbouring settlements.
1.13	East of Breaston	Number of Houses	Caroline Okeowo	Response-01814	Breaston is a historic rural village with a strong sense of identity and community. Introducing a large-scale development of 50 houses would significantly alter the village's scale and character, pushing it toward becoming a suburban extension rather than a distinct settlement. This would undermine the very qualities that make Breaston a desirable place to live.
1.13	East of Breaston	Number of Houses	Christopher Baddiley	Response-01132	The proposed development of 50 homes would fundamentally change the look and feel of the east side of the village, undermining the very reason why I (and many of my neighbours) choose to live here in the first place. At the north edge of the proposed new development is the cemetery / burial ground. This should be a quiet place to pay respect to our loved ones. While the cemetery is already close to the (recently widened) M1 motorway, building 50 new homes on the adjacent green belt will introduce even more noise and disturbance not just to the cemetery, but also to the residents of Holly Avenue who back directly onto the proposed new development.
1.13	East of Breaston	Number of Houses	Claire Cherry	Response-01817	Breaston is a historic, rural village with a distinct character and strong sense of community. The proposed development of 50 houses would fundamentally alter the scale and character of the village, threatening to turn it into a town and undermining the reasons many residents choose to live here.
1.13	East of Breaston	Number of Houses	Dawn Fish	Response-01165	Breaston and Draycott are lovely villages with a good community feel. More and more houses being added will take that away and make it more of a town and ruin the community feel.
			Dean Corcoran	Response-00798	This land floods so it is foolish to even be considering building any number of houses here
1.13	East of Breaston	Number of Houses	Debbie Hunt	Response-01803	Breaston is a historic rural village with a strong sense of identity and community. Introducing a large-scale development of 50 houses would significantly alter the village's scale and character, pushing it toward becoming a suburban extension rather than a distinct settlement. This would undermine the very qualities that make Breaston a desirable place to live, undermine our house prices and essentially connect Breaston to Long Eaton.
1.13	East of Breaston	Number of Houses	Diane Corsham	Response-00225	Also the number of homes that you are proposing to build, if this is passed then what usually happens is that more houses are built than previously planned and I think that would be unfair to the residents who already live near that area!
1.13	East of Breaston	Number of Houses	Ed Huntley	Response-01120	50 houses seems greedy. 5 or 10 houses would raise no objections. The noise and disruption will be awful for years.
			Graham Elliott	Response-00413	No comment until detail of the location and type of housing is known.
1.13	East of Breaston	Number of Houses	Greg Cherry	Response-01818	Breaston is a historic, rural village with a distinct character and strong sense of community. The proposed development of 50 houses would fundamentally alter the scale and character of the village, threatening to turn it into a town and undermining the reasons many residents choose to live here.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Number of Houses	Jack Collins	Response-00908	Breaston is a historic rural village with a strong sense of identity and community. Introducing a large-scale development of 50 houses would significantly alter the village's scale and character, pushing it toward becoming a suburban extension rather than a distinct settlement. This would undermine the very qualities that make Breaston a desirable place to live.
1.13	East of Breaston	Number of Houses	Jessica Collins	Response-00899	Breaston is a charming, rural village with a unique character and a strong sense of community. The introduction of a development of 50 new homes would drastically alter the scale and character of the village, turning it from a close-knit community into something more akin to a suburban town. This change would diminish the reasons many residents, myself included, choose to live here. Numerous empty properties across the wider area remain unused, why is green belt land being targeted instead of addressing these?
1.13	East of Breaston	Number of Houses	Judith Ratcliffe	Response-00490	As per previous comments - you cannot turn a small cul-de-sac which currently gets very little traffic and is small and narrow into a through-road for a 50 house new development.
1.13	East of Breaston	Number of Houses	Lauren Davis	Response-00474	No houses built at all
1.13	East of Breaston	Number of Houses	Linda Shaw	Response-00511	Heath Gardens is currently a narrow cul de sac and the increased road usage from a new development would cause numerous issues which are highlighted in other sections of this submission ? road safety, traffic congestion, air quality, effect upon wildlife, increased risk of flooding etc. etc. Currently Heath Gardens is the home of many elderly residents, some of whom have severe health conditions. Their way of life would be adversely affected by the complete change in the character of the cul de sac on which they live.
1.13	East of Breaston	Number of Houses	Lindsey Trueman	Response-01878	50 additional houses concentrated on the area proposed is totally disproportionate to the size of Breaston. Any additional housing on the proposed scale will erode the character of this historic village and strong sense of community.
1.13	East of Breaston	Number of Houses	Lucy Corcoran	Response-00097	50 houses too excessive due to aforementioned comments.
1.13	East of Breaston	Number of Houses	Lynette Ratcliffe	Response-00779	Please do not extend Heath Gardens and make it into housing estate. Its currently a small, peaceful community of bungalows - which by the nature of the cut-de-sac is occupied by elderly retired people. Its a peaceful and currently a safe environment. Opening it up to a housing estate will ruin this.
1.13	East of Breaston	Number of Houses	Melvin Clive Shaw	Response-00513	Heath Gardens is currently a narrow cul de sac and the increased road usage from a new development would cause numerous issues which are highlighted in other sections of this submission ? road safety, traffic congestion, air quality, effect upon wildlife, increased risk of flooding etc. etc. Currently Heath Gardens is the home of many elderly residents, some of whom have severe health conditions. Their way of life would be adversely affected by the complete change in the character of the cul de sac on which they live.
1.13	East of Breaston	Number of Houses	Michael Sidebottom	Response-01807	Breaston is a historic rural village with a strong sense of identity and community. Introducing a large scale development of 50 houses would significantly alter the village's scale and character, pushing it toward becoming a suburban extension rather than a distinct settlement. This would undermine the very qualities that make Breaston a desirable place to live, undermine our house prices which residents have worked hard to achieve and essentially connect Breaston to Long Eaton.
1.13	East of Breaston	Number of Houses	Mr s e Taylor mrs j p tayloe	Response-01288	No houses as far as we are concerned. Certainly not accessed via Heath gardens.
1.13	East of Breaston	Number of Houses	MRS JULIE ROWLINSON	Response-01000	Breaston is a very large village and very stretched out. To build at the end of the village will add houses we don't need, but also it will increase the feeling of us and them that already exists in the 2 ends of the village. Any number of houses on this land is too many.
1.13	East of Breaston	Number of Houses	Nicholas Trueman	Response-01879	50 additional houses concentrated on the area proposed is totally disproportionate to the size of Breaston. Any additional housing on the proposed scale will erode the character of this historic village and strong sense of community.
1.13	East of Breaston	Number of Houses	Nicola Connell	Response-00731	Breaston is a historic, rural village with a distinct character and strong sense of community. The proposed development of 50 houses would fundamentally alter the scale and character of the village, threatening to turn it into a town and undermining the reasons many residents choose to live here.
1.13	East of Breaston	Number of Houses	Paul Wells	Response-00284	50 is too many houses on that road
1.13	East of Breaston	Number of Houses	Roger Day	Response-00027	What is the supporting data to say that more housing is required in this area? Having people on a housing list does not mean that there are no houses just that they are looking for social housing.
1.13	East of Breaston	Number of Houses	Simon Hartopp	Response-01201	An increase of 50 homes on the same road as 12 long standing bungalows would be detrimental to the character and quality of life to those presently living on Heath Gardens. The majority of the residents are in their post retirement years and chose to live here for the peacefulness living on the road offers. This would be shattered if the proposed development went ahead!!
1.13	East of Breaston	Number of Houses	S M Corcoran	Response-01319	EBC is proposing nearly 700 houses in Draycott, Borrowwash, and Breaston, which is significantly overbearing and unrealistic considering infrastructure, road networks, and amenities. The proposal for 50 houses will change the village's look and feel, impacting its rural identity and risking amalgamating into a single unit with Long Eaton, Draycott and Borrowwash.
1.13	East of Breaston	Other	Beverley Ann Ratcliffe	Response-01098	This site if build on would cause a high increase in foot flow, traffic and noise through Heath Gardens causing a risk to Health & Safety to residents and other members of the public, as there are no pavements and limited access due to comments already submitted earlier. Also, please bear in mind the ages of residents currently residing in Heath Gardens, who your proposals would have impact on.
1.13	East of Breaston	Other	Christopher Baddiley	Response-01132	NOISE AND DISTURBANCE RESULTING FROM PROPOSED USE At the north edge of the proposed new development is the cemetery / burial ground. This should be a quiet place to pay respect to our loved ones. While the cemetery is already close to the (recently widened) M1 motorway, building 50 new homes on the adjacent green belt will introduce even more noise and disturbance not just to the cemetery, but also to the residents of Holly Avenue who back directly onto the proposed new development. OVERLOOKING / LOSS OF PRIVACY Residents of Holly Avenue backing directly onto the proposed new development (and homes such as mine which overlook the green belt) would suffer overlooking from the new development and experience a massive loss of privacy. Many residents on Holly Avenue (myself included) chose to live here because of the open aspect across the fields. The proposed development of 50 homes would fundamentally change the look and feel of the east side of the village, undermining the very reason why I (and many of my neighbours) choose to live here in the first place.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Other	Christopher Baddiley	Response-01816	At the north edge of the proposed new development is the cemetery / burial ground. This should be a quiet place to pay respect to our loved ones. While the cemetery is already close to the (recently widened) M1 motorway, building 50 new homes on the adjacent green belt will introduce even more noise and disturbance not just to the cemetery, but also to the residents of Holly Avenue who back directly onto the proposed new development. Residents of Holly Avenue backing directly onto the proposed new development (and homes such as mine which overlook the green belt) would suffer overlooking from the new development and experience a massive loss of privacy. Many residents on Holly Avenue (myself included) chose to live here because of the open aspect across the fields. The proposed development of 50 homes would fundamentally change the look and feel of the east side of the village, undermining the very reason why I (and many of my neighbours) choose to live here in the first place.
1.13	East of Breaston	Other	Dean Corcoran	Response-00798	I strongly object to this proposal
1.13	East of Breaston	Other	Geoff Potts	Response-01205	Have any checks been undertaken to ensure that there is no hazardous waste on the sight? There is a raised area of land just west of the row of trees and north of the perpendicular row of trees dividing the propose sight. This raised area is the result of something being emptied from tipper trucks several years ago ago.
1.13	East of Breaston	Other	Graham Elliott	Response-00413	Infrastructure - As with Heath Gardens, the potential occupants are likely to be elderly, retired and with some non-drivers. Hence remoteness from shops, medical care, transport and the village centre is likely to be a major problem. Anyone having to walk down the street, particularly in the area with no pavement, would be at significant risk of harm.
1.13	East of Breaston	Other	Hilary M McCullagh	Response-00804	The Holly Avenue end of Breaston suffers from wind affected noise pollution from the M1, exacerbated by the 4 lane running now in operation. The proposed development would be even nearer to the motorway and would require some form of noise mitigation measures.
1.13	East of Breaston	Other	Jessica Collins	Response-00899	As residents of Holly Avenue, my husband and I chose Breaston as the place to raise our future family, drawn by its green surroundings, community feel, and access to nature. We are deeply concerned that the development of new houses directly behind our home will not only destroy the character of the area, but will also significantly reduce the value of our property a devastating blow for a young couple who have invested in their future here.
1.13	East of Breaston	Other	Judith Ratcliffe	Response-00490	Please do not use Heath Gardens as access - as previously stated Heath Gardens is a very small cul-de-sac of Bungalows, that is occupied by retired/elderly residents. The reason why they live there is because it is a quiet, peaceful and supportive community of residents. Heath Gardens is narrow (its not even a proper road), and 2 cars cannot pass side by side. This is not an issue currently due to the small number of traffic that Heath gardens is currently used for. Opening up Heath Gardens to allow through traffic for a 50 house housing development is NOT viable. You will adversely impact the lives of the residents that currently live there (noise, stress, pollution, ambiance of the cul-de-sac, access etc etc) , and turn what is currently a pleasant cut-de-sac where elderly residents enjoy living into a noisy, un-safe through road.
1.13	East of Breaston	Other	Kelly Steed	Response-00444	Our village maintains a distinct rural identity and sense of community. This scale of development would fundamentally alter its character, threatening to urbanise a cherished countryside setting.
1.13	East of Breaston	Other	Kevin Hopkinson	Response-01126	There are within the village, currently developed areas which could be repurposed to fulfil the additional housing requirement without the need to build on existing green belt.
1.13	East of Breaston	Other	Linda Shaw	Response-00511	The development will have a detrimental effect upon current residents of Heath Gardens and Holly Avenue. Their quality of life, particularly for the elderly residents of Heath Gardens, will be severely impacted and lead to stress and potential health problems.
1.13	East of Breaston	Other	Lindsey Trueman	Response-01878	Motorway Noise - I do not feel that any additional new build should be any closer to the M1 Motorway as the noise levels we are subjected to have increased over the years and significantly impact my quality of life. Residents in any new houses built even closer to the motorway would inevitably suffer the same unacceptable noise and air pollution levels.
1.13	East of Breaston	Other	Matt Tovey	Response-00840	I don't believe that there is demand for large numbers of new developments. It seems housing developers are driving this to make massive profits.
1.13	East of Breaston	Other	Melvin Clive Shaw	Response-00513	The development will have a detrimental effect upon current residents of Heath Gardens and Holly Avenue. Their quality of life, particularly for the elderly residents of Heath Gardens, will be severely impacted and lead to stress and potential health problems.
1.13	East of Breaston	Other	Mr and Mrs S E Taylor	Response-01888	My wife and I moved into Heath Gardens just over three and a half years ago! after forty four years in Kegworth! Night flying aircraft noise drove the decision! Heath Gardens is a well laid out Cul de Sac. Well spaced out well maintained and detached Bungalows a credit to all of the owners. Its a treat to behold, its a pleasant surprise and its a real pleasure to live here
1.13	East of Breaston	Other	Mr s e Taylor mrs j p tayloe	Response-01288	We were assured 3.5 years ago that the adjacent land to our property was GREEN BELT. This was our first move in 44 years of marriage to a nice secluded location. It was an enforced move due to the continued expansion of East Midlands airport. Which encompasses night time flying every night. We were forced to move out of our family home. So we certainly don't savour the prospect of further upheaval.
1.13	East of Breaston	Other	Mr S E Taylor Mrs J P Taylor	Response-01290	Response no 01288 should read 10 Heath gardens not 17. Also Mrs JP Taylor
1.13	East of Breaston	Other	MRS JULIE ROWLINSON	Response-01000	Please listen to the public on his occasion rather than ask for opinions and then ignore them as has been done many times in the past. We who live in Breaston know what is best for Breaston.
1.13	East of Breaston	Other	Nicholas Trueman	Response-01879	Motorway Noise - I do not feel that any additional new build should be any closer to the M1 Motorway as the noise levels we are subjected to have increased over the years and significantly impact my quality of life. Residents in any new houses built even closer to the motorway would inevitably suffer the same unacceptable noise and air pollution levels.
1.13	East of Breaston	Other	Roger and Iris Woodward	Response-00302	At this stage we do not know what the proposed development consists of other than potentially fifty properties, but clearly. we are concerned about loss of light, overshadowing or overlooking and loss of privacy.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Other	Roger Day	Response-00027	What new jobs are being brought to the area? If jobs are not local it means more traffic, more pollution, less productivity. Just because a piece of land is available does not mean it is a good place to build. Don't be lead by targets, be led by necessity.
1.13	East of Breaston	Other	S M Corcoran	Response-01319	Although this is a long-term issue / concern I believe that consideration should be given to the fact that the building of houses on the proposed site will curtail the councils (both Breaston Parish council and Long Eaton's) ability to expand the cemetery over time as demand for plots increases and will, eventually lead to the earlier closure of the site. I strongly object to the proposed development on Green Belt land east of Breaston due to its impact on the village, residents, environment, and wildlife. Erewash Borough Council should prioritize existing Brownfield sites for development and protect Green Belt land.
1.13	East of Breaston	Other	Terence Corcoran	Response-00318	Although this is a long-term issue / concern I believe that consideration should be given to the fact that the building of houses on the proposed site will curtail the councils (both Breaston Parish council and Long Eaton's) ability to expand the cemetery over time as demand for plots increases and will, eventually lead to the earlier closure of the site.
		Road Safety	Beverley Ann Ratcliffe	Response-01098	As mentioned in previous entry on Road Congestion.
1.13	East of Breaston	Road Safety	Dean Corcoran	Response-00798	The A6005 is already an extremely busy road with access from Heath Gardens already difficult for existing Heath Garden residents - an increase of users would just add to this issue and in my opinion increase the likelihood of accidents particularly for anyone wanting to turn right from Heath Gardens across both cycle lane and against quick moving traffic and school children at peak times
1.13	East of Breaston	Road Safety	Diane Corsham	Response-00225	Road safety is another burning issue as the roads are chocker blocked with traffic and the pedestrians are going to suffer as more and more cars are going to be on the road and the roads are going to be busier if you build more houses. The roads don't need anymore traffic on them!
1.13	East of Breaston	Road Safety	Graham Elliott	Response-00413	The increased traffic and pedestrian footfall would inevitably lead to 'Highway Safety Concerns?', particularly as the rear half of Heath Gardens has no pavement or room to construct one without purchasing land from the householders.
1.13	East of Breaston	Road Safety	Ian Burton	Response-00194	Heath garden is a small culdesac with a very tight S bend that would be unsuitable for large construction type vehicles. I would consider it dangerous due to health and safety.
1.13	East of Breaston	Road Safety	Judith Ratcliffe	Response-00490	Heath Gardens is currently nearly all retired/elderly residents - there is no pavement - which is fine while there are only 11 bungalows with very low traffic as its a cut-de-sac. Allowing access for 50+ houses is not sustainable
1.13	East of Breaston	Road Safety	Judy Arcy	Response-01167	Increased traffic will impact pedestrians and cyclists
1.13	East of Breaston	Road Safety	KARL BARROW	Response-00793	Exit onto the 40mph section of Wilsthorpe Road from this proposed development increases risks of collisions as vehicles entering Breaston are frequently travelling at well over the speed limit off the M1 over bridge whilst those leaving Breaston start their acceleration well before the 40mph sign . Collision risks are also increased because of vehicles entering Breaston turning right into the adjacent Toal energies filling station. This filling station issue already creates problems for vehicles leaving Richmond avenue where we live when turning right onto Wilsthorpe Road. The only way this could be avoided would be to completely remove the 40mph section to Wilsthorpe island and make it a 30mph limit. Inserting a mini roundabout at the entrance to Heath Gardens would also have the effect of slowing traffic and making entry onto Wilsthorpe Road safer.
1.13	East of Breaston	Road Safety	Kelly Steed	Response-00444	The local road network is not equipped to handle the increased volume of traffic that would result from this development. Existing roads have been severely neglected and now consist of a patchwork of potholes and temporary repairs. These refilled holes frequently reopen, leading to even worse road conditions. The cumulative effect of poor maintenance and increased usage from new development poses safety concerns and a further decline in road quality.
1.13	East of Breaston	Road Safety	Kevin Hopkinson	Response-01126	Increased traffic volumes on existing roads in and around the area will significantly increase the health and safety risks to fellow road users and pedestrians.
			Lauren Davis	Response-00474	More cars make it more dangerous for our young children on what is a village!
1.13	East of Breaston	Road Safety	Linda Shaw	Response-00511	There would be a huge impact on the safety of pedestrians, cyclists and other road users, and especially pupils from local schools, at the junction of Heath Gardens and the A6005. Making this junction wider would not help as there are 3 access areas so close together ? the petrol station, the horse field lane and Heath Gardens itself which would become much busier from more houses. Pedestrians on Heath Gardens itself would be extremely vulnerable due to the narrowness of the road and the lack of pavements. Elderly people and those with mobility scooters or wheelchairs, as well as parents with pushchairs and small children would be at particular risk of severe injury. The narrowness of the road and the dogleg bend also makes it difficult for passing vehicles and increases the potential of an accident. When there are wider vehicles on the street e.g. refuse lorries, emergency vehicles and delivery lorries, the road is already impassable due to its narrowness and further development would hugely exacerbate the danger. The narrow road and its increased use by large vehicles would greatly restrict access for emergency vehicles
1.13	East of Breaston	Road Safety	Linda Sheppard	Response-01321	We believe that the person who owns the field owns two houses in Holly Avenue so the concern is that an entrance could potentially be created from Holly Avenue by knocking down the houses. Holly Avenue is a relatively narrow road especially as many people park on the road. It is also a place where children are safe to play because the people driving on it live on the road and drive slowly. I worry about it becoming a rat run with people driving quickly.
1.13	East of Breaston	Road Safety	Lucy Corcoran	Response-00097	Visibility from Heath Gardens is not great due to the motorway bridge and traffic entering the petrol station next to the proposed access point. School children use the pedestrian and cycle paths to and from school and additional turning traffic would be hazardous to them.
1.13	East of Breaston	Road Safety	Lynette Ratcliffe	Response-00779	Heath Gardens is a narrow cut-de-sac - it cannot accommodate access for a housing estate of 50 houses. There is no pavement and will make it dangerous for existing residents. In addition to this, Wilsthorpe Road is already very busy with traffic (near the junction of Heath Gardens) and crossing the road is already difficult. It can also be a bottle-neck with traffic accessing the Petrol station.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Road Safety	Melvin Clive Shaw	Response-00513	There would be a huge impact on the safety of pedestrians, cyclists and other road users, and especially pupils from local schools, at the junction of Heath Gardens and the A6005. Making this junction wider would not help as there are 3 access areas so close together ? the petrol station, the horse field lane and Heath Gardens itself which would become much busier from more houses. Pedestrians on Heath Gardens itself would be extremely vulnerable due to the narrowness of the road and the lack of pavements. Elderly people and those with mobility scooters or wheelchairs, as well as parents with pushchairs and small children would be at particular risk of severe injury. The narrowness of the road and the dogleg bend also makes it difficult for passing vehicles and increases the potential of an accident. When there are wider vehicles on the street e.g. refuse lorries, emergency vehicles and delivery lorries, the road is already impassable due to its narrowness and further development would hugely exacerbate the danger. The narrow road and its increased use by large vehicles would greatly restrict access for emergency vehicles
1.13	East of Breaston	Road Safety	Mr and Mrs S E Taylor	Response-01888	There are several hazards at the entrance to Heath Gardens, it is only four metres wide! Not wide enough for cars to pass safely! in and out? simultaneously. To the left is the exit/entrance to and from the riding school, which is only seven metres away! To the right at just eighteen metres away is the exit from the petrol filling station, with the entrance a few metres further up! This is obviously in constant use! At this Tee junction, crossing all of these potential hazards is the footpath and designated cycle track, not the best location along Wilsthorpe Road? It is a potentially dodgy area. School times etc. People do need houses, may be an alternative way in, and out could be found, there are several safer possibilities!
1.13	East of Breaston	Road Safety	Mr s e Taylor mrs j p tayloe	Response-01288	The junction in and out onto wilsthorpe road . Is crossed by footpath and cycle track. This is compounded both by filling station , car wash, laundrette, convenience store entrance and exit on right hand side. 18.5 metres from Heath gardens entrance. On the opposite side is entrance and exit to riding stables. To increase foot fall and traffic without serious consideration could result in serious incidents.
		Road Safety	Mrs M Rigby	Response-00808	It will not make a safe environment for families.
1.13	East of Breaston	Road Safety	Oliver Lowe	Response-01162	People using Steven?s Lane as a cut through are often travelling at 40mph plus. More houses would mean more of this.
1.13	East of Breaston	Road Safety	Pauline Wilcox	Response-00839	Where is the access to the proposed development? Whichever point is going to seriously impact local roads, causing more congestion and subsequently road safety.
1.13	East of Breaston	Road Safety	Paul Wells	Response-00284	The road is very narrow. It?s not suitable for supporting 50 additional houses or emergency vehicles who may need access
		Road Safety	Rachel Lacey	Response-00784	School children walk along the main road that access is proposed from. This will add more risk to road crossings.
1.13	East of Breaston	Road Safety	Roger and Iris Woodward	Response-00302	The proposed development would generate increasing traffic levels affecting Wilsthorpe Road. There will be a concern for all traffic users as vehicles attempt to turn in or out of the development as well as for pedestrians and cyclists using the footway and cycle lane.
1.13	East of Breaston	Road Safety	Simon Hartopp	Response-01201	Having lived on Heath Gardens for 42+ years, I can say that the width and shape of the road is not suitable for more than one car to go up or down the road at a time. If you meet another car on the part leading from the main road, or on the double bends, one of you has to either reverse to a dropped kerb or drive up the full kerb onto the pavement so you can pass each other without collision. In the past weeks I was a passenger in a friends car going out towards the main road when a car turned off the main road onto Heath Gardens. Even though both cars slowed right down to pass each other, the wing mirrors collided with each other causing some damage to both. With potentially 5 times the amount of cars using the road, this kind of problem will only get worse with possibly more serious accidents as a result. Over half of the road does not have a pavement for pedestrians to use. This means that for a large part, pedestrians and vehicles are forced to use the same space. With potentially 5 times the amount of traffic and pedestrians using the road, there will be a far greater risk of serious accidents happening. At times there are a lot of carers cars parked on the road outside some houses which makes it difficult when cars are passing as well as pedestrians. When trying to drive out the end of Heath Gardens onto the A6005, passing vehicles speed up going in the direction of Long Eaton where the road goes from a 30MPH zone to a 40MPH one. At the same time vehicles travelling in the opposite direction routinely carry their speed from the 40MPH zone into the 30MPH zone. This at times makes getting out the junction a precarious manoeuvre and with potentially 5 times the amount of traffic using the road the risk of more accidents would be significantly increased.
1.13	East of Breaston	Road Safety	S M Corcoran	Response-01319	The proposed entrance road to the new housing estate is via Heath Gardens which is little more than a single track road in places and is totally unsuitable for the increased traffic both during construction and afterward. Should the planned access, via Heath Gardens be changed then the current alternatives, but even less viable solutions could be via Longmoor Lane and Holly Avenue both of which would be unacceptable. unsuitable. Longmoor Lane access would be via a dirt track which runs along the flood gully and adjacent to the cemetery, Holly Avenue like Heath Gardens is not wide enough to deal with the increased traffic and would require two or more houses being demolished to allow access to the site. It should be noted that Holly Avenue is subject to moving and standing water along its length whenever there is a bad storm due to drainage system being unable to cope with the sheer volume of water and that is after the improvements done up to now.
1.13	East of Breaston	Road Safety	Stephen Hooley	Response-00774	Heath Gardens is a very narrow Cul-De-Sac and has no pedestrian walkway after Number 1 H G and before the two ninety degree bends. It is not equipped to deal with the volumes of increased traffic both during and eventual completion of the housing development, this situation must be looked at in conjunction with traffic congestion concerns. No pedestrian walkway, increased footfall and substantial motor vehicle traffic, increase a serious risk of road accidents.
1.13	East of Breaston	Road Safety	Stephen Lacey	Response-00785	Lots of people - elderly and school pupils - use the main road access may be taken from. This adds more risk to the roads.
1.13	East of Breaston	Road Safety	Sylva Jolliffe	Response-01512	The proposed pedestrian crossing will be dangerously as it will be situated in wiring traffic to go to petrol station and proposed housing development. Pedestrians what be obscured by this traffic and get run over. This is especially true of the children from wilsthorpe school walking back to village at rush hour. A really dangerous idea

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Road Safety	Terence Corcoran	Response-00318	The proposed entrance road to the new housing estate is via Heath Gardens which is little more than a single track road in places and is totally unsuitable for the increased traffic both during construction and afterward. Plus there will be an increase in both noise and pollution to a level which will be unacceptable to the current residents of Heath Gardens in relation to their health both physical and mental.
1.13	East of Breaston	School Capacity	Beverley Ann Ratcliffe	Response-01098	There is already an over-subscribed list of pupils for Breaston School and the infra-structure for Breaston will not accommodate any more capacity to increase pupils. In addition, whilst not just Breaston, you are planning new homes in Draycott, (a higher number of homes) and again, there is only one small school, how can both schools accommodate the further increase in capacity? Where do you suggest these young children go to school?
1.13	East of Breaston	School Capacity	Caroline Okeowo	Response-01814	The village primary school already faces constraints in space and facilities, while nearby secondary schools operate near or at full capacity. An influx of families would worsen the situation and could force children to seek school places outside the area.
			Charlotte Fennemore	Response-01536	Firfield School is already oversubscribed.
1.13	East of Breaston	School Capacity	Christopher Baddiley	Response-01132	The existing infrastructure in Breaston is already under considerable pressure. Firfield primary school and surrounding secondary schools are at (or near) capacity. The primary school in particular struggles with limited space and a lack of outdoor facilities already. An increase in population will add unsustainable pressure, likely forcing families to seek school places further afield.
1.13	East of Breaston	School Capacity	Claire Cherry	Response-01817	The village primary school and surrounding secondary schools are at or near capacity. The primary school in particular struggles with limited space and a lack of outdoor facilities already. An increase in population will add unsustainable pressure, likely forcing families to seek school places further afield.
1.13	East of Breaston	School Capacity	Dawn Fish	Response-01165	Local schools are at capacity!
			Dean Corcoran	Response-00798	Schools in the area are already struggling with capacity so further housing development will just exacerbate this issue
1.13	East of Breaston	School Capacity	Debbie Hunt	Response-01803	: The village primary school already faces constraints in space and facilities, while nearby secondary schools operate near or at full capacity. An influx of families would worsen the situation and could force children to seek school places outside the area.
1.13	East of Breaston	School Capacity	Diane Corsham	Response-00225	Schools are going to be fuller as well so are you thinking of offering more classes for the extra students that the schools are going to have to take on!
1.13	East of Breaston	School Capacity	Ed Huntley	Response-01120	The nearest schools, Firfield and Wilsthorpe are currently full.
1.13	East of Breaston	School Capacity	Graham Elliott	Response-00413	I believe all local schools have very limited places.
1.13	East of Breaston	School Capacity	Greg Cherry	Response-01818	The village primary school and surrounding secondary schools are at or near capacity. The primary school in particular struggles with limited space and a lack of outdoor facilities already. An increase in population will add unsustainable pressure, likely forcing families to seek school places further afield. As a teacher at a local school, I can assure you that the pressures on schools is immense and close to breaking point. Adding more pupils into the area, with no extra provision considered, would be very worrying.
1.13	East of Breaston	School Capacity	Jack Collins	Response-00908	The village primary school already faces constraints in space and facilities, while nearby secondary schools operate near or at full capacity. An influx of families would worsen the situation and could force children to seek school places outside the area.
1.13	East of Breaston	School Capacity	Jessica Collins	Response-00899	The village primary school is already experiencing space constraints, and nearby secondary schools are nearing full capacity. An increase in population would place unsustainable pressure on these educational facilities. There is also considerable pressure on local schools, particularly for early years and nursery places, with waiting lists already in place.
1.13	East of Breaston	School Capacity	Judith Ratcliffe	Response-00490	Local schools are full already
1.13	East of Breaston	School Capacity	Judy Arcy	Response-01167	School classes already full
1.13	East of Breaston	School Capacity	KARL BARROW	Response-00793	Breaston's Firfield School is already over subscribed with Breaston parents sometimes struggling to get their children accepted into the school. How will the school accommodate children from this proposed development? Moreover many parents from outside Breaston are sending their children to this school exacerbating the pupil capacity problem and driving to and from the school. This causes significant congestion on Wilsthorpe Road sometimes even stopping buses. it is a certainty that some of the residents of this proposed development will also drive their children to this school adding further congestion.
1.13	East of Breaston	School Capacity	Lauren Davis	Response-00474	Already full! I cannot get my daughter into the preschool as it is
1.13	East of Breaston	School Capacity	Lee Hargreaves	Response-01184	Small village school will be over run and good ofsted rating will be affected
1.13	East of Breaston	School Capacity	Linda Shaw	Response-00511	A housing development in Breaston would put further strain and demand on local schools and nurseries which are already at full capacity. It is likely that the occupants of the new housing would compound the existing issues of road safety and traffic congestion around local schools at the start and end of the school day.
1.13	East of Breaston	School Capacity	Linda Sheppard	Response-01321	My understanding is that if the Hills Road development goes ahead there won't be enough places at the school so has this actually been considered?
1.13	East of Breaston	School Capacity	Lindsey Trueman	Response-01878	I understand that the village primary school is already close to full capacity and lacks both indoor and outdoor space. Secondary schools are also experiencing capacity issues. Any increase in child population will only exacerbate these issues and could lead to children being offered places outside of the immediate locality.
1.13	East of Breaston	School Capacity	Lisa Patrick	Response-00085	Our local school already is at capacity
1.13	East of Breaston	School Capacity	Lucy Corcoran	Response-00097	Families within the catchment area for Breaston schools are already struggling to get places, by adding additional housing will only add to this issue.
1.13	East of Breaston	School Capacity	Lynette Ratcliffe	Response-00779	Presume current schools (especially the primary school) are already full. Traffic congestion on Wilsthorpe Road during school drop off/pick up times is already dangerous.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	School Capacity	Melvin Clive Shaw	Response-00513	A housing development in Breaston would put further strain and demand on local schools and nurseries which are already at full capacity. It is likely that the occupants of the new housing would compound the existing issues of road safety and traffic congestion around local schools at the start and end of the school day.
1.13	East of Breaston	School Capacity	Michael Sidebottom	Response-01807	The village primary school already faces constraints in space and facilities, while nearby secondary schools operate near or at full capacity. An influx of families would worsen the situation and could force children to seek school places outside the area.
1.13	East of Breaston	School Capacity	Molly Allison	Response-01528	Limited primary school capacity for the village
1.13	East of Breaston	School Capacity	Mr s e Taylor mrs j p tayloe	Response-01288	Additional schools are required. If you build more houses.
1.13	East of Breaston	School Capacity	MRS JULIE ROWLINSON	Response-01000	Schools are already overflowing and under funded - this will cause difficulties for staff and children already there as resources will be more stretched.
1.13	East of Breaston	School Capacity	Mrs M Rigby	Response-00808	Schools already overcrowded.
1.13	East of Breaston	School Capacity	Nicholas Trueman	Response-01879	I understand that the village primary school is already close to full capacity and lacks both indoor and outdoor space. Secondary schools are also experiencing capacity issues. Any increase in child population will only exacerbate these issues and could lead to children being offered places outside of the immediate locality.
1.13	East of Breaston	School Capacity	Nicola Connell	Response-00731	The village primary school and surrounding secondary schools are at or near capacity. The primary school in particular struggles with limited space and a lack of outdoor facilities already. An increase in population will add unsustainable pressure, likely forcing families to seek school places further afield.
1.13	East of Breaston	School Capacity	Pauline Wilcox	Response-00839	Is there sufficient capacity in the local schools to accept more pupils?
1.13	East of Breaston	School Capacity	Paul Wells	Response-00284	Can Firfield support a few dozen additional children? If not, how will this be planned for?
1.13	East of Breaston	School Capacity	Rafik Fanous	Response-01161	Schools are already at capacity and no room for further increases
1.13	East of Breaston	School Capacity	Samantha Honeybell	Response-01815	The village primary school and surrounding secondary schools are at or near capacity. Firfield primary school is oversubscribed every year and has limited space and no development area to increase teaching space. I have been on the Parent Teacher Association for 11 years, recently raising funds to purchase outdoor buildings to provide the school with suitable reading space. This would not be necessary if the school had adequate internal space and an increase in local population will add unsustainable pressure. Again, there does not appear to be any consideration of the impact this proposal will have.
1.13	East of Breaston	School Capacity	S M Corcoran	Response-01319	Currently the local schools (nursery, primary and secondary) are already over subscribed and the addition of 50 houses in the Breaston area will only increase pressure on the education system in the area (which is operating "over- capacity" already).
1.13	East of Breaston	School Capacity	Stacey lester	Response-01239	Local school already full. My children Al live in Breaston had to go to a school in long Eaton because Firfield was full
1.13	East of Breaston	School Capacity	Susan Holliday	Response-01577	We live on Holly Avenue and can't get our two primary aged children into the local school (Firfield): the village is already over it's workable capacity and this development will make the situation worse. Are there any plans to increase capacity at the school?
1.13	East of Breaston	School Capacity	Sylva jolliffe	Response-01512	The nearby schools do not have capacity for more children
1.13	East of Breaston	School Capacity	Terence Corcoran	Response-00318	Currently the local schools are already over subscribed and the addition of 50 houses in the Breaston area will only increase pressure on the education system in the area (which is operating "over- capacity" already)
1.13	East of Breaston	Traffic Congestion	Beverley Ann Ratcliffe	Response-01098	Using Heath Garden as an accessible road. The road into Heath Gardens is barely accessible for one vehicle at a time. Should there be two cars wanting to pass, then one vehicle has to reverse backwards to their own drives or to the side of the garage and mount the pavement to enable people to pass. Should a vehicle like a bin lorry, or any other sizeable vehicle come down the gardens, then you have to wait for it to leave before you can exist the Gardens, causing congestion. If drivers of larger vehicles are unaware of the narrowness of the road, they will have difficulty in managing to exist the cul-de-sac as there is limited space to turn around. There is no pavement apart from the top of Heath Gardens by the petrol station. There is also a double dog leg at the entrance to the cul-de-sac which a vehicle similar to a bin lorry which cannot navigate unless it mounts the kurb. The above would all be a Health & Safety risk for all residents due to limited access and no pavements in the cul de sac.
1.13	East of Breaston	Traffic Congestion	Caroline Okeowo	Response-01814	The village road network is not equipped to handle additional traffic volumes. Increased congestion, parking problems, and road safety risks would result in a marked decline in quality of life for both residents and commuters.
1.13	East of Breaston	Traffic Congestion	Chantelle croft	Response-01483	To much traffic already 😞
1.13	East of Breaston	Traffic Congestion	Christopher Baddiley	Response-01132	Breaston's roads are not designed to accommodate additional traffic. 50 new homes will bring approximately 100 extra vehicles into the village, as most households have at least two cars nowadays. Increased congestion, parking issues, and safety concerns would negatively affect residents nearby.
1.13	East of Breaston	Traffic Congestion	Claire Cherry	Response-01817	Breaston's roads are not designed to accommodate additional traffic. Increased congestion, parking issues, and safety concerns would negatively affect both residents and commuters. Breaston Village roads are already damaged to such an extent they are at points impassable. Adding in building and delivery transport and then subsequent further residential traffic would substantially worsen the current situation.
1.13	East of Breaston	Traffic Congestion	D A Wood	Response-01885	Access even now at times to the roadway is that it is a narrow and distorted, creating a major problem in bypassing other vehicles, especially commercial transports. At morning rush hours, school times, and shopping routes, considering 50 new houses with a possible 100 plus travellers would be in chaos especially when the population increases over time.
1.13	East of Breaston	Traffic Congestion	Dean Corcoran	Response-00798	The A6005 is already an extremely busy road especially at peak times , it's already difficult to exit Heath Gardens- adding to the use of this road will only increase the potential for further traffic issues especially for individuals wanting to turn right from Heath Gardens - not helped by the close proximity of the Jet petrol station
1.13	East of Breaston	Traffic Congestion	Debbie Hunt	Response-01803	Traffic and transport: The village road network is not equipped to handle additional traffic volumes. Increased congestion, parking problems, and road safety risks would result in a marked decline in quality of life for both residents and commuters.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Traffic Congestion	Diane Corsham	Response-00225	This will cause a lot more traffic congestion on a road that is not used to traffic congestion and is likely to cause congestion further round the roads leading out of the village which in turn is going to have a knock on effect which is unfair to the people who live there!
1.13	East of Breaston	Traffic Congestion	Ed Huntley	Response-01120	50 households and their cars will increase congestion around the Wilsthorpe roundabout and J25 of the M1.
1.13	East of Breaston	Traffic Congestion	Graham Elliott	Response-00413	We bought our ?new build? Bungalow in Heath Gardens in 1984 due to its quiet location, no through traffic and rural setting in the protected Green Belt. This change to EBC Core Strategy to extend the road and build a further 50 Dwellings goes against everything we cherish and likely to result in the devaluation of our property. Highways Issues ? a) This development would increase the traffic on the road by at least four-fold, with the majority now passing the front of our house, massively increasing noise disturbance and air pollution. b) The access to the potential new development between the land on houses Nos. 10 and 13 is only one vehicle wide, necessitating the purchase of land from the householders to widen it. c) The rest of Heath Gardens is barely wide enough for 2 cars to pass each other, particularly around the ?chicane? in the road and hence totally unsuitable, if not impossible, for regular access for Builders, Commercial or Emergency vehicles. For example, the ?Refuge Collection Lorry? currently has to reverse down the street as there is not enough room for it to turn round.
1.13	East of Breaston	Traffic Congestion	Greg Cherry	Response-01818	Breaston's roads are not designed to accommodate additional traffic. Increased congestion, parking issues, and safety concerns would negatively affect both residents and commuters. Breaston Village roads are already damaged to such an extent they are at points impassable. Adding in building and delivery transport and then subsequent further residential traffic would make all of the above concerns substantially worse.
1.13	East of Breaston	Traffic Congestion	Hilary M McCullagh	Response-00804	Breaston?s roads are not designed to accommodate additional traffic. Increased congestion, parking issues, and safety concerns would negatively affect both residents and commuters. Long queues already occur regularly approaching the Wilsthorpe roundabout and on Longmoor Lane.
1.13	East of Breaston	Traffic Congestion	Ian Burton	Response-00194	Heath gardens is not suitable for this large vehicles.
1.13	East of Breaston	Traffic Congestion	Jack Collins	Response-00908	The village road network is not equipped to handle additional traffic volumes. Increased congestion, parking problems, and road safety risks would result in a marked decline in quality of life for both residents and commuters.
1.13	East of Breaston	Traffic Congestion	Jessica Collins	Response-00899	Traffic congestion in the area is an ongoing issue, and additional housing will only exacerbate the problem. The village?s road network was not designed to accommodate the additional traffic that this development would bring. It would lead to increased congestion, parking problems, and a decline in road safety for both residents and commuters.
1.13	East of Breaston	Traffic Congestion	Joanne Parkin	Response-01163	The local roads are already far too busy with impatient road users.
1.13	East of Breaston	Traffic Congestion	Judith Ratcliffe	Response-00490	Heath Gardens is a narrow cut-de-sac. It cannot accommodate traffic for additional 50 houses to utilise its narrow road -which is currently for a small number of bungalows. There is not enough room for 2 cars to pass each way.
1.13	East of Breaston	Traffic Congestion	Judy Arcy	Response-01167	Traffic in that area will be bad- and the parking in the village centre is chaotic now with limited parking spots
1.13	East of Breaston	Traffic Congestion	Julie Yelland and Ed Huntley	Response-00904	In addition are worried about the possibility that Holly Avenue or Heath Gardens will be the entrance to the new housing. This will cause either one of the quiet streets to be ruined by construction traffic. Holly Avenue and Heath Gardens are both lovely, quiet cul-de-sacs and we object to the way that construction and accessing of more houses would alter them.
1.13	East of Breaston	Traffic Congestion	KARL BARROW	Response-00793	As proposed entry to this new development will be through Heath Gardens. This is completely inappropriate due to congestion in future because the existing road is very narrow and it is very difficult already for vehicles passing in opposite directions to pass without slowing almost to a standstill. Furthermore on entering Heath Gardens there are no footpaths so pedestrians have to avoid moving vehicles and vice versa. The only way this could be solved would be for a completely new access road to be provided using the track through the adjacent field to loop round to the rear of Heath Gardens. This would also provide users of the field with safer access than is presently the case from Wilsthorpe Road.
1.13	East of Breaston	Traffic Congestion	Kevin Hopkinson	Response-01126	Whilst I appreciate that additional infrastructure will be part of the works which may address the issue in the immediate vicinity of the development, i am more concerned about how the increase traffic flow is diversifised on the current roads which will not necessarily be upgraded as part of the work. This increase in traffic on existing narrow roads is a serious health and safety issue and one that must be taken in to consideration when determining the outcome of the review.
1.13	East of Breaston	Traffic Congestion	Lauren Davis	Response-00474	Traffic and parking are already a big problem here in Breaston. There are lots of potholes to be fixed and lots of off street parking making it dangerous to cross roads
1.13	East of Breaston	Traffic Congestion	Lee Hargreaves	Response-01184	Whichever way the access roads approach will cause traffic disruption as roads are already not maintained well enough
1.13	East of Breaston	Traffic Congestion	Linda Shaw	Response-00511	The development will cause a substantial increase in traffic congestion at the junction of Heath Gardens and the A6005, an already very busy and dangerous junction due to its proximity with the hidden lane to the horse field and the heavily used petrol station with its constant egress and ingress of vehicles. It is highly likely that there would be frequent queuing of traffic on the main A6005 causing further potential for accidents due to blind spots on the motorway bridge. When there are wider vehicles on the street e.g. refuse lorries, emergency vehicles and delivery lorries, the road is already impassable due to its narrowness and further development would hugely exacerbate the danger. The narrow road and its increased use by large vehicles would greatly restrict access for emergency vehicles.
1.13	East of Breaston	Traffic Congestion	Lindsey Trueman	Response-01878	Whatever access point is finally decided, be it Heath Gardens as specified ,or alternative existing access via Longmoor Lane, the additional traffic from residents of 50 new houses will give rise to increased traffic volumes when entering or leaving the proposed development site. Both access points named above have obvious individual constraints - e.g. narrow access road. Existing roads were not designed to accommodate such a concentration of additional traffic leading to congestion, parking, and safety concerns.
			Lisa Patrick	Response-00085	The roads in that area especially Heath Gardens is not suitable

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Traffic Congestion	Lucy Corcoran	Response-00097	Access from Heath Gardens into Wilsthorpe Road is already congested more so at peak times to the roundabout at Eaton Farm island which links to roads to Long Eaton, Sawley and the motorway. Turning right the visibility is not great due to the motorway bridge.
1.13	East of Breaston	Traffic Congestion	Lynette Ratcliffe	Response-00779	Heath Gardens is not a standard road - it is NOT adequate for access for additional cars for 50 houses. Heath Gardens does not have room for more than 2 cars to pass at the same time - not an issue for only 12 Bungalows but cannot be allowed for access to a new housing estate for safety reasons. In addition to this you cannot allow commercial/industrial vehicles to use Heath Gardens for access -this would be extremely dangerous.
1.13	East of Breaston	Traffic Congestion	Matt Tovey	Response-00840	Roads are already horrendously congested in the mornings and evenings (rush hour). Taking 20 mins to travel up Boston's lane currently. Building far too many houses will make this even worse.
1.13	East of Breaston	Traffic Congestion	Melvin Clive Shaw	Response-00513	The development will cause a substantial increase in traffic congestion at the junction of Heath Gardens and the A6005, an already very busy and dangerous junction due to its proximity with the hidden lane to the horse field and the heavily used petrol station with its constant egress and ingress of vehicles. It is highly likely that there would be frequent queuing of traffic on the main A6005 causing further potential for accidents due to blind spots on the motorway bridge. When there are wider vehicles on the street e.g. refuse lorries, emergency vehicles and delivery lorries, the road is already impassable due to its narrowness and further development would hugely exacerbate the danger. The narrow road and its increased use by large vehicles would greatly restrict access for emergency vehicles.
1.13	East of Breaston	Traffic Congestion	Michael Sidebottom	Response-01807	Traffic and transport: The village road network is not equipped to handle additional traffic volumes. Increased congestion, parking problems, and road safety risks would result in a marked decline in quality of life for both residents and commuters. The authorities struggle to main the roads they are currently responsible for is evident all around the area. Why we should want more roads and encourage more traffic to an already failing road system is ludicrous.
1.13	East of Breaston	Traffic Congestion	Mr and Mrs S E Taylor	Response-01888	The access from Wilsthorpe Road is not fit for purpose of access to Heath Gardens for heavy builders traffic! Even the bin lorry has to come in backwards to negotiate the narrow dog leg section just past the first bungalow! No cars can get out until they have finished the whole road? It would probably be prudent to choose an alternative access to said land, or choose a more readily accessible site! 50 houses could generate potentially between 100/150 cars, vans etc! in and out at peak times I think not, the refuse truck alone, stops any flow in or out, now!
1.13	East of Breaston	Traffic Congestion	Mr s e Taylor mrs j p tayloe	Response-01288	Road not wide enough for through traffic.so unsuitable for builders vehicles.
1.13	East of Breaston	Traffic Congestion	MRS JULIE ROWLINSON	Response-01000	Wilsthorpe road is already extremely busy and any access from it to the new houses will be just over the bridge and the garage which is going to mean more speeding and more accidents.
1.13	East of Breaston	Traffic Congestion	Mrs M Rigby	Response-00808	It will cause more traffic congestion on the road that I live on
1.13	East of Breaston	Traffic Congestion	Nicholas Trueman	Response-01879	Whatever access point is finally decided, be it Heath Gardens as specified ,or alternative existing access via Longmoor Lane, the additional traffic from residents of 50 new houses will give rise to increased traffic volumes when entering or leaving the proposed development site. Both access points named above have obvious individual constraints - e.g. narrow access road. Existing roads were not designed to accommodate such a concentration of additional traffic leading to congestion, parking, and safety concerns.
1.13	East of Breaston	Traffic Congestion	Nicola Connell	Response-00731	Breaston's roads are not designed to accommodate additional traffic. Increased congestion, parking issues, and safety concerns would negatively affect both residents and commuters.
1.13	East of Breaston	Traffic Congestion	Oliver Lowe	Response-01162	Already a busy village
1.13	East of Breaston	Traffic Congestion	O'Connor	Response-01514	Struggling now with traffic congestion, air quality
1.13	East of Breaston	Traffic Congestion	Pauline Wilcox	Response-00839	There is already far too much traffic around Long Eaton, especially during rush hours.
1.13	East of Breaston	Traffic Congestion	Rachel Lacey	Response-00784	This is already a busy area and will drive even more traffic into this area.
1.13	East of Breaston	Traffic Congestion	Rafik Fanous	Response-01161	Increased traffic congestion on roads already worn out and riddled with pot holes
1.13	East of Breaston	Traffic Congestion	Roger and Iris Woodward	Response-00302	The proposed development would generate increasing traffic levels affecting Wilsthorpe Road which is already an extremely busy road. Where currently we enjoy peace and quiet the proposed development would result in more traffic noise from resident's vehicles, delivery vehicles, utility vehicles etc.
1.13	East of Breaston	Traffic Congestion	Roger Day	Response-00027	Wilsmore Island is already a bottle neck and likewise the small island where Petersham Rd, Longmoor Lane and Bostocks Lane meet. Building on this site would potentially increase traffic on these roads and into Long Eaton where long queues are often formed leading to pollution and wasted time.
1.13	East of Breaston	Traffic Congestion	Samantha Honeybell	Response-01815	Breaston's roads are not designed to accommodate additional traffic. The proposal will increase congestion, parking issues, and safety concerns that would negatively affect both residents and commuters.
1.13	East of Breaston	Traffic Congestion	Simon Hartopp	Response-01201	Having lived on Heath Gardens for 42+ years, I can say that the width and shape of the road is not suitable for more than one car to go up or down the road at a time. If you meet another car on the part leading from the main road, or on the double bends, one of you has to either reverse to a dropped kerb or drive up the full kerb onto the pavement so you can pass each other without collision. In the past weeks I was a passenger in a friend's car going out towards the main road when a car turned off the main road onto Heath Gardens. Even though both cars slowed right down to pass each other, the wing mirrors collided with each other causing some damage to both. With potentially 5 times the amount of vehicles using the road, this kind of problem will only get worse with possibly more serious accidents as a result.
1.13	East of Breaston	Traffic Congestion	S M Corcoran	Response-01319	The A6005 (Derby Road) is already significantly busy, and the addition of 50 houses will increase traffic volume, impacting road safety and increasing the risk of accidents. A transport assessment needs to be undertaken, particularly for the residents opposite and garage adjoining the proposed site entrance.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Traffic Congestion	Stacey lester	Response-01239	Traffic in the area already a concern
1.13	East of Breaston	Traffic Congestion	Stephen Hooley	Response-00774	The width of road on Heath Gardens requires drivers to take great care when passing on coming traffic. This becomes more challenging when vehicles are parked on the road, especially commercial vehicles. An ageing residency live in the cul-De-Sac of Heath Gardens who rely on medical care vehicles, supermarket and commercial delivery vans. One resident at times can have up to three care professions attending of which two of their vehicles only have road parking options only. Weekly refuse vehicles will add to traffic congestion times! There are two ninety degree bends at the southern end of the Cul-De-Sac within 24 meters (approx) of each other, which should be deemed highly unsuitable for heavy construction vehicles, especially if on low loaders to safely navigate (without mounting residential driveways or front gardens) access to the proposed building site. It is fact that large and heavy construction traffic will seriously impact Heath Gardens Residents peace of mind and considerably impact on their daily routines. The Cut-De-Sac as an 'access road' for the proposed 'East of Breaston' development of 50 new houses, would bring between 50 to 75 (approx) additional vehicles plus commercial vehicles servicing the new properties. This situation would seriously add to traffic congestion throughout the day and air quality surely being impacted.
1.13	East of Breaston	Traffic Congestion	Stephen Lacey	Response-00785	Current road network is not equipped for the increase in traffic.
1.13	East of Breaston	Traffic Congestion	Sylva jolliffe	Response-01512	This will cause congestion as the queue for the petrol station and the upgraded road will block wilsthorpe road
1.13	East of Breaston	Type of Housing	Dean Corcoran	Response-00798	Houses on Holly Avenue which border the fields proposed for development are 1.5 feet above the level of the field ( to ensure we do not flood) it also means that we will be looking down into peoples homes causing a lack of privacy for both existing residents and the proposed houses.
1.13	East of Breaston	Type of Housing	Diane Corsham	Response-00225	You say that it is going to be affordable housing but I can't see that it is affordable housing in Breaston an area where affordable housing would not fit in as you have the likes of Poplar Road and Holly Avenue which would not fit the criteria!
1.13	East of Breaston	Type of Housing	Graham Elliott	Response-00413	40% of Affordable Houses - Any housing in this Village is unlikely to be 'affordable' no matter how its constructed. No comment until detail of the location and type of housing is known.
1.13	East of Breaston	Type of Housing	Judith Ratcliffe	Response-00490	Heath Gardens is a small cut-de-sac of Bungalows - of which all the occupants are retired and/or Elderly. At least one of the bungalows has to have carers attend daily. You will absolutely spoil the quiet living and community of Heath Gardens - you cannot allow a new residential area for 50 houses to have access via Heath Gardens and allow a through-road. This is unacceptable to the current residents of Heath gardens - which is a bungalow development and the nature of the cul-de-sac means they are elderly residents and live there because it is peaceful and quiet. Heath Gardens is not a proper road and does not allow 2 cars to pass side by side - the road will become absolute chaos if family housing is given access via this current quiet and peaceful cut-de-sac.
1.13	East of Breaston	Type of Housing	Judy Arcy	Response-01167	Affordable housing will devalue the prices of the properties that already exists
1.13	East of Breaston	Type of Housing	KARL BARROW	Response-00793	Any housing approved on this development should be built to the highest standards of sustainability, energy efficiency and biodiversity conservation.(ie exceeding Future Homes Standard) This is particularly the case for social housing where energy costs are a significant drain on householder's budgets. All dwellings should be provided with off street parking for at least two vehicles and future proofed with two EV charge points per dwelling. Grid infrastructure should be installed sufficient to meet the increased electrical demand for both EV chargers and air source heat pumps in each dwelling.
1.13	East of Breaston	Type of Housing	Kevin Hopkinson	Response-01126	The proposed development appears to be significantly higher than the minimum government figure.
1.13	East of Breaston	Type of Housing	Linda Shaw	Response-00511	Heath Gardens is an area of bungalows only. A potential housing development is unlikely to be in keeping with the prevailing character of the existing area, causing a detrimental impact. Taller buildings on a potential new estate could adversely affect the light to some bungalows and present an imposing aspect to the existing bungalows and the outlook of the cul de sac, completely changing the aesthetics of the area.
1.13	East of Breaston	Type of Housing	Lindsey Trueman	Response-01878	As a resident of Holly Avenue backing immediately onto the proposed development site, our garden is approximately 8 metres in depth. Any housing will severely affect our current outlook.
1.13	East of Breaston	Type of Housing	Lucy Corcoran	Response-00097	The homes on Holly Avenue are built above ground level, some 1.5ft above the level of the land proposed for development. These homes will be looking down into prospective gardens or living space so lacking in privacy for both. Proposed houses will obstruct any remaining view.
1.13	East of Breaston	Type of Housing	Lynette Ratcliffe	Response-00779	Heath Gardens is a small cut-de-sac of Bungalows occupied by mostly elderly/retired people. Extending Heath Gardens to a housing estate will completely destroy the living conditions of those currently living in Heath Gardens
1.13	East of Breaston	Type of Housing	Melvin Clive Shaw	Response-00513	Heath Gardens is an area of bungalows only. A potential housing development is unlikely to be in keeping with the prevailing character of the existing area, causing a detrimental impact. Taller buildings on a potential new estate could adversely affect the light to some bungalows and present an imposing aspect to the existing bungalows and the outlook of the cul de sac, completely changing the aesthetics of the area.
1.13	East of Breaston	Type of Housing	Mr s e Taylor mrs j p tayloe	Response-01288	Heath gardens are all bungalows. So if it comes to pass they need to be the same. Heath gardens is not a through route.
1.13	East of Breaston	Type of Housing	Nicholas Trueman	Response-01879	As a resident of Holly Avenue backing immediately onto the proposed development site, our garden is approximately 8 metres in depth. Any housing will severely affect our current outlook.
1.13	East of Breaston	Type of Housing	S M Corcoran	Response-01319	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing, particularly the houses along Derby Road . Careful consideration must be given to ensure similar housing is developed to maintain the neighbourhood and village character.
1.13	East of Breaston	Type of Housing	Stacey lester	Response-01239	Type housing and who it will bring to the area

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Wildlife / Biodiversity	Andrea Valentine	Response-01525	The destruction of natural habitats in this area would contribute to habitat loss & environmental degradation. Green Belt land plays a crucial role in flood prevention, air quality, and local biodiversity, all of which would be compromised by unnecessary urban sprawl.
1.13	East of Breaston	Wildlife / Biodiversity	Beverley Ann Ratcliffe	Response-01098	There will be implications, felling of trees, loss of habitat for wildlife including foxes, rabbits, birds and all the smaller species due to this being a natural area for their habitat. This has always been a green belt, with no pollution, which has allowed the animals, trees and flora to develop and grow naturally. Also there is a high risk of flooding on this land which is proposed to build on.
1.13	East of Breaston	Wildlife / Biodiversity	Caroline Okeowo	Response-01814	The land in question is designated Green Belt, protected to limit urban sprawl, safeguard the countryside, and preserve biodiversity. Development here would lead to the permanent loss of vital green space and the destruction of natural habitats supporting a variety of wildlife, including birds, bats, and small mammals. Once developed, this ecological value cannot be restored.
1.13	East of Breaston	Wildlife / Biodiversity	Chantelle croft	Response-01483	We do not want any more houses build we are losing fields and trees the wild life will be come extinct
1.13	East of Breaston	Wildlife / Biodiversity	Charlotte Fennemore	Response-01536	It is important to keep greenbelt land to allow wildlife to thrive
1.13	East of Breaston	Wildlife / Biodiversity	Christopher Baddiley	Response-01132	LOSS OF TREES / HEDGEROWS AND NATURE CONSERVATION This green belt is home to a diverse array of wildlife including: foxes, rabbits, birds, butterflies, bees and bats, all of which enrich the environment and enhance the quality of life for residents of Holly Avenue. The presence of such wildlife is indicative of a healthy ecosystem which must be preserved, not built upon. Developing on this land would result in the destruction of vital wildlife habitats. This land also serves as a necessary buffer zone from the noise and pollution generated by the (recently widened) M1 motorway.
1.13	East of Breaston	Wildlife / Biodiversity	Christopher Baddiley	Response-01816	This green belt is home to a diverse array of wildlife including: foxes, rabbits, birds, butterflies, bees and bats, all of which enrich the environment and enhance the quality of life for residents of Holly Avenue. The presence of such wildlife is indicative of a healthy ecosystem which must be preserved, not built upon. Developing on this land would result in the destruction of vital wildlife habitats.
1.13	East of Breaston	Wildlife / Biodiversity	Claire Cherry	Response-01817	The proposed site lies within designated Green Belt land, which is protected to prevent urban sprawl, safeguard the countryside, and preserve natural habitats. Developing this land would result in the irreversible destruction of vital wildlife habitats, negatively affecting local species such as birds, bats, and small mammals. Once lost, these green spaces and their ecological value cannot be replaced. The proposal also conflicts with the UK's Climate Change Act 2008 and Environment Act 2021, undermining efforts to reduce carbon emissions and achieve the legally required 10% Biodiversity Net Gain.
1.13	East of Breaston	Wildlife / Biodiversity	Dean Corcoran	Response-00798	The land in question has for many years supported a wide variety of wildlife with foxes seen almost everyday (den in the overgrowth at side of field) with fox cubs often seen playing in the sun around the field, bats use the fields to hunt for prey ( again seen regularly at dusk) as well as numerous birds including birds of prey and European green woodpecker, rabbits live in numerous burrows at various points at the sides of the field as well as trees ( including oak trees ) that support a number of squirrels all of which would be lost if this proposal were to go ahead
1.13	East of Breaston	Wildlife / Biodiversity	Debbie Hunt	Response-01803	The land in question is designated Green Belt, protected to limit urban sprawl, safeguard the countryside, and preserve biodiversity. Development here would lead to the permanent loss of vital green space and the destruction of natural habitats supporting a variety of wildlife, including birds, bats, and small mammals. Once developed, this ecological value cannot be restored. As our house backs onto the field in question, we know there is a fox family and rabbits that live in that field. The development also runs counter to the Climate Change Act 2008 and the Environment Act 2021, undermining national commitments to reduce carbon emissions and meet the 10% Biodiversity Net Gain requirement.
1.13	East of Breaston	Wildlife / Biodiversity	Diane Corsham	Response-00225	In an area where wildlife is in abundance as I see plenty of foxes, bats flying up and down Holly Avenue! I think it would have a detrimental effect on the wildlife environment on those fields and I don't think that it is at all fair of the council to expect wildlife to just up sticks and move on to pastures new as where will they go as all potential habitats are being destroyed and developed for mankind!
1.13	East of Breaston	Wildlife / Biodiversity	Ed Huntley	Response-01120	Old hedges and trees are threatened by this proposed development.
1.13	East of Breaston	Wildlife / Biodiversity	Graham Elliott	Response-00413	The development would lead to a tragic loss of trees and shrubland ideal for the current wildlife. I've counted potentially 250 mature trees that would have to be removed, completely against Erewash and the Governments policy to plant millions of trees. Families of Foxes, Rabbits and Hedgehogs, plus a Badger and numerous species of Birds and Ducks have been seen on and around Heath Gardens.
1.13	East of Breaston	Wildlife / Biodiversity	Greg Cherry	Response-01818	The proposed site lies within designated Green Belt land, which is protected to prevent urban sprawl, safeguard the countryside, and preserve natural habitats. Developing this land would result in the irreversible destruction of vital wildlife habitats, negatively affecting local species such as birds, bats, and small mammals. Once lost, these green spaces and their ecological value cannot be replaced. The proposal also conflicts with the UK's Climate Change Act 2008 and Environment Act 2021, undermining efforts to reduce carbon emissions and achieve the legally required 10% Biodiversity Net Gain.
1.13	East of Breaston	Wildlife / Biodiversity	Ian Burton	Response-00194	Wildlife including badgers are on this site.
1.13	East of Breaston	Wildlife / Biodiversity	Jack Collins	Response-00908	Development here would lead to the permanent loss of vital green space and the destruction of natural habitats supporting a variety of wildlife, including birds, bats, and small mammals. Once developed, this ecological value cannot be restored. The development also runs counter to the Climate Change Act 2008 and the Environment Act 2021, undermining national commitments to reduce carbon emissions and meet the 10% Biodiversity Net Gain requirement.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Wildlife / Biodiversity	Jessica Collins	Response-00899	Allowing development here would result in the permanent loss of valuable green space, irreversibly disrupting wildlife habitats and the biodiversity they support, including birds, bats, and small mammals. The land earmarked for development is home to a variety of wildlife which we regularly see from our home. In recent months, we have witnessed the destruction of trees and hedgerows during periods when such work should not be taking place, demonstrating a clear disregard for environmental protections and the local community. This proposal also contradicts the Climate Change Act 2008 and Environment Act 2021, undermining national efforts to reduce carbon emissions and fulfil the legal requirements for a 10% Biodiversity Net Gain.
1.13	East of Breaston	Wildlife / Biodiversity	Judith Ratcliffe	Response-00490	Removing more Green-belt? - not a good thing
1.13	East of Breaston	Wildlife / Biodiversity	Julie Yelland and Ed Huntley	Response-00904	We are residents of Breaston and live on Holly Avenue. We enjoy living in a quiet cul-de-sac with beautiful old trees between our house and the motorway. We are concerned that the trees will be removed if the planned housing goes ahead. It is an excellent area of fields for wildlife and it seems shortsighted to build there. Please give us reassurance that the trees will remain.
1.13	East of Breaston	Wildlife / Biodiversity	Kelly Steed	Response-00444	The proposed development will result in the irreversible loss of greenfield land, which provides important biodiversity, supports wildlife habitats, and contributes to carbon capture. Preserving green space is essential for climate resilience and community wellbeing.
1.13	East of Breaston	Wildlife / Biodiversity	Kevin Hopkinson	Response-01126	The development of housing on existing green belt land will eradicate the flora and fauna which has taken many years to become established and once lost, is irreplaceable. Given the current government led initiatives to drive down our carbon footprint, the loss of a significant amount of established natural regenerative flora should not be taken lightly. The biodiversity of the green belt has developed and established over several decades and is irreplaceable in our lifetime.
1.13	East of Breaston	Wildlife / Biodiversity	Lauren Davis	Response-00474	Very important issue. Wildlife homes are already in short supply so by building here on a protected green belt area we are putting them at risk even further damaging our countryside and its ecosystem
1.13	East of Breaston	Wildlife / Biodiversity	Lee Hargreaves	Response-01184	Trees are already being cut down unnecessarily
1.13	East of Breaston	Wildlife / Biodiversity	Linda Shaw	Response-00511	The removal of trees and the replacement of a green area with a new housing estate would have a massive impact on the local area with the destruction of habitats for wildlife local to the Breaston area ? badgers, hedgehogs, bats, birds, butterflies, bees etc., and for many already vulnerable species. This clearly has a wider impact on general biodiversity.
1.13	East of Breaston	Wildlife / Biodiversity	Linda Sheppard	Response-01321	There are a number of established hedgerows and mature trees in the field. I would hope that any development would be made to leave these in place
1.13	East of Breaston	Wildlife / Biodiversity	Lindsey Trueman	Response-01878	Development of the two fields will lead to irreversible loss of a thriving natural habitat for both natural trees and vegetation that supports a diverse range of wildlife. This includes foxes, rabbits and small mammals and bats. Birdlife includes woodpeckers, hawks, owls and even egrets when the field is flooded.
1.13	East of Breaston	Wildlife / Biodiversity	Lisa Patrick	Response-00085	This area currently has many bird, animals etc
1.13	East of Breaston	Wildlife / Biodiversity	Lucy Corcoran	Response-00097	Bats have been sited by numerous residents of Holly Avenue using the land in question as their feeding territory. The land houses wildlife including foxes, rabbits returning species of birds for nesting and birds of prey, butterflies, insects and bees all support the biodiversity of this land.
1.13	East of Breaston	Wildlife / Biodiversity	Lynette Ratcliffe	Response-00779	Its greenbelt land - loss of trees, shrub land etc The area is also home to rabbits/foxes/hedgehogs etc
1.13	East of Breaston	Wildlife / Biodiversity	Melvin Clive Shaw	Response-00513	The removal of trees and the replacement of a green area with a new housing estate would have a massive impact on the local area with the destruction of habitats for wildlife local to the Breaston area ? badgers, hedgehogs, bats, birds, butterflies, bees etc., and for many already vulnerable species. This clearly has a wider impact on general biodiversity.
1.13	East of Breaston	Wildlife / Biodiversity	Michael Sidebottom	Response-01807	The land provides environments for an abundance of wildlife currently taking advantage of its natural state. Again, I witness this with my own eyes every single day. Once this has gone we can never get it back and the ecological value is lost forever. The development also runs counter to the Climate Change Act 2008 and the Environment Act 2021, undermining national commitments to reduce carbon emissions and meet the 10% Biodiversity Net Gain requirement.
1.13	East of Breaston	Wildlife / Biodiversity	Molly Allison	Response-01528	This is a green belt and shouldn't be built on, we need to preserve the few green areas
1.13	East of Breaston	Wildlife / Biodiversity	Mr s e Taylor mrs j p tayloe	Response-01288	We bought our property 3.5 years ago on the assurance it was green belt. It's a pleasure we enjoy the birds and wild life.
1.13	East of Breaston	Wildlife / Biodiversity	MRS JULIE ROWLINSON	Response-01000	This area is a haven for wildlife as it is not a general public area and so wildlife can live undisturbed. It is long grass and trees that are vital for creatures, especially so close to the motorway which has already take up large amounts of land.
1.13	East of Breaston	Wildlife / Biodiversity	Mrs M Rigby	Response-00808	It will upset the wildlife.
1.13	East of Breaston	Wildlife / Biodiversity	Nicholas Trueman	Response-01879	Development of the two fields will lead to irreversible loss of a thriving natural habitat for both natural trees and vegetation that supports a diverse range of wildlife. This includes foxes, rabbits and small mammals and bats. Birdlife includes woodpeckers, hawks, owls and even egrets when the field is flooded.
1.13	East of Breaston	Wildlife / Biodiversity	Nicola Connell	Response-00731	Developing this land would result in the irreversible destruction of vital wildlife habitats, negatively affecting local species such as birds, bats, and small mammals. The proposal conflicts with the UK's Environment Act 2021, undermining efforts to achieve the legally required 10% Biodiversity Net Gain.
1.13	East of Breaston	Wildlife / Biodiversity	Pauline Wilcox	Response-00839	The suggested area is green belt which seems to be totally ignored these days. There is an abundance of wildlife in the area including bats and most certainly great crested newts?
1.13	East of Breaston	Wildlife / Biodiversity	Rachel Lacey	Response-00784	The area is known for bats and other wildlife. These will be wiped out by the development.
1.13	East of Breaston	Wildlife / Biodiversity	Rafik Fanous	Response-01161	Significant reduction in green belt land and direct effect on wildlife and biodiversity
1.13	East of Breaston	Wildlife / Biodiversity	Roger and Iris Woodward	Response-00302	Apart from the horses using the greenbelt the land is a haven for all wildlife and any potential residential development would decimate the animal population.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.13	East of Breaston	Wildlife / Biodiversity	Roger Day	Response-00027	Loosing green fields will always mean a loss of habitat. This less farmed land must contain large numbers of invertebrates good for the environment. Concrete and tiles do not support such life.
1.13	East of Breaston	Wildlife / Biodiversity	Samantha Honeybell	Response-01815	? The proposal also conflicts with the UK's Climate Change Act 2008 and Environment Act 2021, undermining efforts to reduce carbon emissions and achieve the legally required 10% Biodiversity Net Gain.
1.13	East of Breaston	Wildlife / Biodiversity	Simon Hartopp	Response-01201	The land in question is full of wildlife and is used by startlings Nov-February for roosting. The murmurations are spectacular and get bigger every year. Badgers are frequently seen using the brooks that lead to the area of land as well as weasels. The loss of habitat for all this wildlife would be detrimental to the level of biodiversity in the local area!
1.13	East of Breaston	Wildlife / Biodiversity	S M Corcoran	Response-01319	The trees on the site are a mixture of species and "maturity" and, with the rough grassland in the area, offer both shelter and food to a wide variety of insects, birds and mammals that currently reside in this area. This includes a number of bats which are currently a protected species. Loss of this Green Land Belt land would have a devastating affect on the wild life that use it and would be detrimental / against the Green policy that the District council have and reduce the air quality in general. Also the appropriate landscaped buffer between the site and the cemetery what does this mean the wildlife required ?rough? land to provide the mixture of habitats needed.
1.13	East of Breaston	Wildlife / Biodiversity	Stacey lester	Response-01239	The potential harm of wildlife in the area
1.13	East of Breaston	Wildlife / Biodiversity	Stephen Hooley	Response-00774	The development will result in a significant habitat loss, particularly the number of trees adversely affecting local wildlife. The site of the proposed development serves as a crucial buffer between exsiting residential areas and the M1 motorway, and its loss would have considerable biodiversity impacts, increasing noise disturbance and as previously referenced, air pollution.
1.13	East of Breaston	Wildlife / Biodiversity	Stephen Lacey	Response-00785	The targeted site is green belt land with many species including bats. These will be destroyed.
1.13	East of Breaston	Wildlife / Biodiversity	Susan Holliday	Response-01577	We live on Holly avenue and our house backs onto this greenbelt land. We see fabulous wildlife and would hate to see its habitat destroyed. We should be building on brownfield sites, not taking the easy, cheap option of green belt which serves only to line pockets and destroy our planet. We strongly object to this development.
1.13	East of Breaston	Wildlife / Biodiversity	Terence Corcoran	Response-00318	The trees on the site are a mixture of species and "maturity" and, with the rough grassland in the area, offer both shelter and food to a wide variety of insects, birds and mammals that currently reside in this area. This includes a number of bats which are currently a protected species. Loss of this Green Land Belt land would have a devastating affect on the wild life that use it and would be detrimental / against the Green policy that the District council have and reduce the air quality in general.
1.14	South West of Draycott	Air Quality	Alison Thirlwall	Response-01390	The increased number of vehicles in the area being driven by the additional residents and deliveries once the work is complete will negatively affect the air quality, and as a result, people with respiratory issue will suffer.
1.14	South West of Draycott	Air Quality	Anthony Bradley	Response-01442	The air quality with be compromised during the build making dust and noise for residents, then the extra vehicles from new home owner will make more pollution
1.14	South West of Draycott	Air Quality	Anthony Walsh	Response-00992	If granted there will be a massive increase on the carbon footprint building and habitation via gas and electricity along with transport exhaust pollution
1.14	South West of Draycott	Air Quality	Ben Marshall	Response-01212	Air quality is already poor due to the large amount of traffic on Derby road. An increase in traffic will only add to this, alongside the huge amount of dust and debris that will inevitably occur from sustained building works.
1.14	South West of Draycott	Air Quality	Bradley Peace	Response-01348	Noise from the construction (including vehicle movements) and operational phases of the proposed development have not been adequately addressed. 5 2 An environment noise assessment needs to be carried out, particularly for the residents directly opposite the site entrance; but also the whole route that the construction traffic will take. This passes through Draycott, Borrow ash and Beaston villages. Passing busy junctions, Doctor?s surgeries, public car parks, Primary schools, local cricket clubs as well as numerous resident?s homes. 6 3 Require the submission of an environmental noise assessment, prior to development works commencing, to rate and assess operational sound from all fixed installations comprising mechanical and electrical plant and equipment, with a scheme of mitigation measures where necessary; that all site preparation and construction to comply with specified working hours and limits to noise and dust emissions, waste disposal and lighting; and the submission of proposals, including the design and operating times, of any permanent external lighting on site. 7 4 Access and egress to the proposed housing development on Derby Road raises several issues relating to highway and pedestrian safety, ease of access and disruption from increased traffic. 8 5 The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. This will include Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 and Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963. 9 6 Noise and Vibration consultation to be undertaken to consider impacts during construction on nearby noise sensitive properties and ongoing management of a solar farm and the impact of noise and disturbance.
1.14	South West of Draycott	Air Quality	Colin & Cynthia Green	Response-00922	Additional vehicles on road for 190 + new builds affect air quality.
1.14	South West of Draycott	Air Quality	Dale Longmuir	Response-01543	Reduce greenery and wildlife will change the quality of the air, more traffic and pollution from cars will also reduce air quality, this area is a nice peaceful village with a lot of greenery around you cant change that. People wont have as many areas to go for walks to enjoy their local area and to clear their minds
1.14	South West of Draycott	Air Quality	David and Nicala O'Leary	Response-00822	Adding 190 homes could introduce over 380 additional vehicles to local roads, significantly increasing air pollution
1.14	South West of Draycott	Air Quality	David Webster	Response-01113	The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Air Quality	Dexter Codrington	Response-00986	the additional pollution due to almost 1000 homes by the time the safeguarded land is used up will be terrible. The carbon that would have been absorbed by the trees, grassland and hedgerows will no longer happen as the houses will have been built over and across this valuable greenbelt resource. Testing of the car volumes, the cumulative impact and estimates of the increase in pollution must take place
1.14	South West of Draycott	Air Quality	Diane Webster	Response-01177	The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. "NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowash. This is totally unrealistic and the current roads would not cope with the volume of traffic."
1.14	South West of Draycott	Air Quality	Donna Peace	Response-01344	1 Noise from the construction (including vehicle movements) and operational phases of the proposed development have not been adequately addressed. 5 2 An environment noise assessment needs to be carried out, particularly for the residents directly opposite the site entrance; but also the whole route that the construction traffic will take. This passes through Draycott, Borrow ash and Beaston villages. Passing busy junctions, Doctor's surgeries, public car parks, Primary schools, local cricket clubs as well as numerous resident's homes. 6 3 Require the submission of an environmental noise assessment, prior to development works commencing, to rate and assess operational sound from all fixed installations comprising mechanical and electrical plant and equipment, with a scheme of mitigation measures where necessary; that all site preparation and construction to comply with specified working hours and limits to noise and dust emissions, waste disposal and lighting; and the submission of proposals, including the design and operating times, of any permanent external lighting on site. 7 4 Access and egress to the proposed housing development on Derby Road raises several issues relating to highway and pedestrian safety, ease of access and disruption from increased traffic. 8 5 The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. This will include Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 and Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963. 9 6 Noise and Vibration consultation to be undertaken to consider impacts during construction on nearby noise sensitive properties and ongoing management of a solar farm and the impact of noise and disturbance.
1.14	South West of Draycott	Air Quality	Gail Holdsworth	Response-00937	Draycott is a small village.concern about traffic pollution especially as school in centre of village in the main road.
1.14	South West of Draycott	Air Quality	Garry Hickton	Response-01473	More vehicles will increase pollution to the air from exhaust fumes.
1.14	South West of Draycott	Air Quality	Gary Siddall	Response-01237	No doubt the air quality is going to suffer during the construction stages of such an big development, But afterwards, the increased traffic will undoubtedly have an lasting effect on the air quality too.
1.14	South West of Draycott	Air Quality	Gemma Woolnough	Response-01394	The new housing development would negatively impact air quality in the village due to an increase in traffic due to an increase in vehicles passing through the village. The development work would require the use of heavy machinery which would likely lead to lots of dust & debris negatively impacting the air quality in the village.
1.14	South West of Draycott	Air Quality	Gerri Hickton	Response-01472	Additional traffic will obviously have a detrimental impact upon air quality increasing the risk of higher emissions and the associated health implications If there are 190 homes - many homes are a minimum of 2car families- the impact will be significant
1.14	South West of Draycott	Air Quality	Gill Trickitt	Response-01157	More traffic, more pollution, idling cars, roadworks, construction, increased congestion and the loss of greenbelt countryside all amounts to a negative impact on air quality. We live in a village for a reason. If people want to live in a busy town or city that's fine - build more houses on the edge of these areas.
1.14	South West of Draycott	Air Quality	Gordon Dahill	Response-00690	Is going to cause significant air and noise pollution problems
1.14	South West of Draycott	Air Quality	Graham Wakeling	Response-01238	Air quality will decrease, There will be many more cars and trucks on the roads around Draycott, And new build houses with log burning stoves, garden fires.
1.14	South West of Draycott	Air Quality	Hannah Pritchard	Response-01399	Additional traffic resulting from the development will lead to increased emissions, worsening local air quality. This is particularly concerning near schools and homes where vulnerable populations reside. With national targets to reduce pollution, this development would run counter to environmental and public health goals, particularly in a rural area that currently benefits from relatively clean air.
1.14	South West of Draycott	Air Quality	James Hargreaves	Response-01315	Increased vehicle use will degrade air quality, affecting the Green Belt, the Erewash River, and surrounding ecosystems. Traffic congestion contributes significantly to pollution.
1.14	South West of Draycott	Air Quality	Jonathan Fletcher	Response-01463	Obviously the introduction of many more new homes will severely increase already poor air quality with many new cars and vehicles coming to the area.
1.14	South West of Draycott	Air Quality	Judith Boyle	Response-01418	I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Air Quality	Juliet Macve	Response-01572	As per my comments regarding traffic congestion, any increase in that will obviously lead to reduced air quality and further threats to people's health.
1.14	South West of Draycott	Air Quality	Kerry Naylor	Response-00993	The change in air quality with in excess of possibly 150 vehicles in the area. This cannot be acceptable . What about asthmatic people, children?
1.14	South West of Draycott	Air Quality	Laura Charier	Response-01218	The additional traffic, destruction of green and natural spaces will have a detrimental effect on our children and vulnerable people. The development will negatively impact the air quality and health of the residents.
1.14	South West of Draycott	Air Quality	Lee	Response-00742	1. Pollution - this will introduce hundreds of extra cars to the village and locally. How can enabling large estate and introducing more polluting cars whilst removing greenbelt be of any environmental benefit? 2. It doesn't have to be built here a Greener Policy would be to re-use brown belt sites. Why destroy what is not essential to destroy.
1.14	South West of Draycott	Air Quality	Lee Bunday	Response-00028	I am writing to formally object to the Core Strategy Review on the basis of its failure to adequately address the serious and growing issue of air quality within the area. The strategy's emphasis on large-scale development ? of the increased housing ? poses a significant risk to local air quality. Increased traffic volumes, construction activity, and population density will contribute directly to higher emissions of nitrogen dioxide (NO?), particulate matter (PM10 and PM2.5), and other pollutants. The review lacks a clear air quality impact assessment for the proposed developments and fails to set out enforceable mitigation measures. There is also insufficient integration between the strategy and local Air Quality Management Areas (AQMAS), which are already struggling to meet national and EU standards. Poor air quality is a well-documented public health hazard, contributing to respiratory illnesses, cardiovascular disease, and premature deaths. It is particularly harmful to children, the elderly, and vulnerable populations. Without a meaningful, evidence-based plan to monitor, manage, and reduce emissions, the strategy risks undermining both public health and environmental sustainability. At a minimum, it should include: Comprehensive air quality modelling for all major development zones. Clear limits on emissions and pollution linked to construction and traffic. Investment in green infrastructure and sustainable transport alternatives. Alignment with national targets for net-zero emissions. I urge the council to pause the adoption of the Core Strategy Review until these concerns are properly addressed and the long-term health and well-being of residents is prioritised.
1.14	South West of Draycott	Air Quality	Louise Burnell	Response-00262	Increased traffic and houses will increase the local carbon footprint.
1.14	South West of Draycott	Air Quality	Luke Hatch	Response-00160	More cars mean more emissions. For a small village like Draycott, air quality can get worse quickly, especially near schools and bus stops where people are already exposed.
1.14	South West of Draycott	Air Quality	Maggie Murphy	Response-00833	The increased traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment. The air quality with the additional 700 homes using the main Derby road from Borrowwash to Breaston will be directly impacted with additional pollution. This can be seen by the backlog of cars and trucks that sit with their engines running every time we have roadworks or an accident. It is detrimental to health and bad for the environment
1.14	South West of Draycott	Air Quality	Martin Kilcoyne	Response-01460	Derby Road is already a busy throw ghost route between Derby and Nottingham. At peak times the ait quality drops such that we have to close our front windows to avoid the smell of vehicle fumes. The additional houses will only make this worse and result in poorer health conditions for all residents on the main road.
1.14	South West of Draycott	Air Quality	Melanie Wilson	Response-00974	Increase in traffic / construction processes will have a negative impact on the air quality
1.14	South West of Draycott	Air Quality	Michelle Marks	Response-00924	Air and noise pollution ? Increased construction and traffic will contribute to rising pollution levels, further harming local air quality and diminishing residents? quality of life
1.14	South West of Draycott	Air Quality	Mr R Sykes	Response-00412	Can only make it worse.
1.14	South West of Draycott	Air Quality	Mrs Maria E Hardy	Response-00614	Reason we moved to Draycott was for better air quality . Increase in asthma
1.14	South West of Draycott	Air Quality	Nat	Response-00158	Increased pollution levels due to more traffic
1.14	South West of Draycott	Air Quality	Nigel morton	Response-01351	The building works will affect the air quality dramatically, as an asthmatic I really worry for my health ,as I am close to the proposed site
1.14	South West of Draycott	Air Quality	Nikki Riches	Response-00950	I object to the proposed development, air quality will be ultimately be adversely affected by the increase traffic not only from the proposed new development in Draycott but also those in Borrowwash and Breaston.
1.14	South West of Draycott	Air Quality	Pauline Marks	Response-00927	The development will bring more traffic and construction activity, leading to higher levels of air and noise pollution?damaging both public health and local quality of life. Inadequate Infrastructure for Population Growth
1.14	South West of Draycott	Air Quality	Peter Sutton	Response-00409	It would be expected that an additional 190 cars and likely many more will be on the proposed site. At peak times where these vehicles will be queing to join the main road will increase exhaust gases in the area.
1.14	South West of Draycott	Air Quality	R Fazackerley	Response-01415	Thr development and it's associated traffic will reduce local air quality
1.14	South West of Draycott	Air Quality	Richard Keith Hanbury	Response-01087	We currently enjoy healthy air. With the increased houses both here and on Cole lane there could be an increase in global warming that will make the temperature increase. How many trees will be planted?
1.14	South West of Draycott	Air Quality	Richard Syson	Response-01317	The proposed addition of 190 homes + a potential further 70 homes would add c. 500 cars to an already very busy main road - Derby Road (A6005). This would inevitably worsen air quality / increase pollution in the village. This is in addition to the general emissions / pollution from what I would estimate to be a minimum 20% increase in housing
1.14	South West of Draycott	Air Quality	Ricky fisher	Response-00048	Air quality is going to be affected heavily with the flattening of trees and plants
			Robert Alan Duncanson	Response-00855	MORE TRAFFIC WOULD MEAN WORSE AIR QUALITY

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Air Quality	Roger Brown	Response-00999	Unless the new homes are truly green with solar panels, heat pumps etc. there will inevitably be additional air pollution from a development at the western extreme of the village with prevailing westerly winds carrying this pollution over the remainder of the village. The electrical infrastructure of this area is already strained, power cuts are not infrequent so any such development would require significant improvements in its provision given that they should be running heat pumps and not gas heating. Noise pollution will go hand in hand with increases in residency.
1.14	South West of Draycott	Air Quality	Sarah Hargreaves	Response-01314	Increased traffic will negatively impact the local environment, including Green Belt land, the Erewash River, and local habitats. Air quality deteriorates when traffic builds up due to congestion.
1.14	South West of Draycott	Air Quality	Scott Gardner	Response-01554	The environmental consequences of this development are deeply troubling. This development will contribute to increased nitrous oxide (N <sub>2</sub> O) emissions. Emissions will arise from construction activities and increased residential presence, whilst (N <sub>2</sub> O) levels are falling in Erewash, it should be noted the levels are above national averages.
1.14	South West of Draycott	Air Quality	Sean Peace	Response-01347	1 Noise from the construction (including vehicle movements) and operational phases of the proposed development have not been adequately addressed. 5 2 An environment noise assessment needs to be carried out, particularly for the residents directly opposite the site entrance; but also the whole route that the construction traffic will take. This passes through Draycott, Borrow ash and Beaston villages. Passing busy junctions, Doctor's surgeries, public car parks, Primary schools, local cricket clubs as well as numerous resident's homes. 6 3 Require the submission of an environmental noise assessment, prior to development works commencing, to rate and assess operational sound from all fixed installations comprising mechanical and electrical plant and equipment, with a scheme of mitigation measures where necessary; that all site preparation and construction to comply with specified working hours and limits to noise and dust emissions, waste disposal and lighting; and the submission of proposals, including the design and operating times, of any permanent external lighting on site. 7 4 Access and egress to the proposed housing development on Derby Road raises several issues relating to highway and pedestrian safety, ease of access and disruption from increased traffic. 8 5 The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. This will include Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 and Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963. 9 6 Noise and Vibration consultation to be undertaken to consider impacts during construction on nearby noise sensitive properties and ongoing management of a solar farm and the impact of noise and disturbance.
1.14	South West of Draycott	Air Quality	Simon Jenkins	Response-01287	Again, obviously it will be affected . I realize new homes are now being built as airtight as possible, but the amount of extra cars is bound to lead to higher vehicle emissions, potentially impacting air quality.
1.14	South West of Draycott	Air Quality	Susan Baker	Response-01316	More traffic means more pollution. It's not just about inconvenience?it's about the air we breathe, the health of our children, and the wellbeing of our local environment, including the Green Belt and the Erewash River.
1.14	South West of Draycott	Air Quality	Susan Foster	Response-00824	Health and well being is constantly preached to us all, fresh air, being able to walk in the fresh air is essential for good mental health. We do not want doctor's surgeries full of people who have breathing difficulties because the air they breathe is polluted.
1.14	South West of Draycott	Air Quality	Teresa Batchelor	Response-01240	Its common sense that increased traffic, as would undoubtedly be generated by the new housing, is going to create more air pollution and noise pollution.
1.14	South West of Draycott	Air Quality	Teresa Shaw	Response-01309	1. Pollution - this will introduce hundreds of extra cars to the villages and locally. How can enabling large estate and introducing more polluting cars whilst removing greenbelt be of any environmental benefit? Planting trees elsewhere does not benefit the locals breathing in more toxic fumes. 2. It doesn't have to be built in the proposed plot a Greener Policy would be to re-use brown belt sites. Why destroy what is not essential to destroy its double polluting.
			Tim Hawkins	Response-00661	Increase in population? Decrease in air quality.
1.14	South West of Draycott	Air Quality	Tracey Morton	Response-00968	1 Air quality will be affected by increased traffic 2 Air quality will be effected by construction traffic ie dust and fumes from construction vehicles 3 Will impact people's health especially people with breathing issues 4 residents closest will be effected more by pollution from increased traffic and construction itself
1.14	South West of Draycott	Air Quality	T Shields	Response-00570	We need more housing. With that comes an increase in car use. However, the houses can be built each with their own EV charging point to increase greater uptake so as to minimise carbon based fuels.
1.14	South West of Draycott	Air Quality	Wilfred Boone	Response-01424	The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. "NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Beaston and Borrowash. This is totally unrealistic and the current roads would not cope with the volume of traffic."
1.14	South West of Draycott	Air Quality	William Batchelor	Response-01210	extra traffic will cause more pollution, not everyone will have new electric cars, highly unlikely with 40% of housing being for affordable and most properties will have two cars (or more) meaning potentially nearly 400 extra cars on roads
1.14	South West of Draycott	Bus Services	adrian leeming	Response-01249	It is also a Government ambition to reduce unnecessary/extra vehicle journeys. By building substantial numbers of houses miles away from commercial centres and supermarkets this will encourage more journeys. Draycott does have a bus service but the reality is that most of the 190 new families will jump in the car rather than catch a bus because that's the society we now live in.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Bus Services	Alison Thirlwall	Response-01390	Currently, the bus service is well used and will be insufficient to support the large number of additional residents. It is also expensive to use.
1.14	South West of Draycott	Bus Services	Andrew and Jane Gilmour	Response-01329	The Indigo, the bus service serving Draycott is often full even outside the normal "rush-hours". This is a service widely used by many of the more elderly population of Draycott and provides their only access to shopping and healthcare appointments as well as social engagements. The addition of people living in this proposed development would severely affect the availability of such services. The bus stop proposed for use by the new development does not have a bus shelter and the pavement in place is single track and the queuing of more than one or two people would prevent the route of people walking into Draycott to either shops or schools,
1.14	South West of Draycott	Bus Services	Anthony Walsh	Response-00992	Busses are currently few and far between
1.14	South West of Draycott	Bus Services	Bradley Peace	Response-01348	public transport, which are already overstretched. No adequate plans have been provided to mitigate these concerns.
1.14	South West of Draycott	Bus Services	Colin & Cynthia Green	Response-00922	Trent Barton run bus service to Nottingham & Derby, plus school buses to local nearby schools eg Friesland, etc. crossing this busy road with additional vehicles will mean it unsafe for pedestrians to get to use buses for which I am a concessionary bus pass holder & my husband too. Turning in & out onto this stretch of road where bus stops are pose hazards & unsafe.
1.14	South West of Draycott	Bus Services	David Webster	Response-01113	The use of the bus services is provided by Trent Barton which runs every 20 minutes which at peak times i.e morning and between school leaving at 15 00 hours are normally restricted to standing only for me and my wife both over 70 at the moment any additional traffic in people and children could lead to use waiting for the next bus.
1.14	South West of Draycott	Bus Services	Dexter Codrington	Response-00986	More buses on the road will lead to more pollution and more traffic chaos. There is a good bus service now it does not need changing
1.14	South West of Draycott	Bus Services	Diane Webster	Response-01177	Has a survey been carried out to any addition requirement that will be required during the peak times 8.00 - 9.30 and 15.00 - 17.30
1.14	South West of Draycott	Bus Services	Donna Peace	Response-01344	public transport, which are already overstretched. No adequate plans have been provided to mitigate these concerns.
1.14	South West of Draycott	Bus Services	Francis Ian Scott	Response-01535	The occupants of the 190 houses to be built (with a further 70 houses being built on the identified land adjacent), will undoubtedly put a strain on the current bus services through Draycott - which will not be able to cope with the additional customers.
1.14	South West of Draycott	Bus Services	Gail Holdsworth	Response-00937	I do not drive and rely on this bus service. One bus all the way from Nottingham . Unreliable and not a pleasant experience now . This will not be able to cope with such a large potential rise in population. A lical bus is desperately needed.
1.14	South West of Draycott	Bus Services	Gary Siddall	Response-01237	Draycott currently has an efficient bus service between Nottingham and Derby along the A6005.... this, I expect, *should* be ok - UNLESS you're going to want to start diverting busses down/around the "proposed new housing estate" (which doesn't really happen anywhere else along that route), so that will undoubtedly slow everything down. But even if the busses will stay on the main road, I expect there will have to be a new/additional Bus Stop for the "proposed new estate" with so many new houses to serve... In which case, it needs to be one that is a lay-by type, OFF the road and MUST be carefully assessed for road safety in that area !!!
1.14	South West of Draycott	Bus Services	Gemma Woolnough	Response-01394	Currently there is only one bus service in the village which is already busy at peak times. If the housing development were to go ahead additional buses would be needed to meet demand.
1.14	South West of Draycott	Bus Services	Graham Wakeling	Response-01238	as a sometime(s) bus user the increase in population to the village would make the services busier, less likely to be able to be seated. Also an increase in parking will occur around Draycott, as new residents leave cars on streets, to avoid city parking costs, taking to the buses instead.
1.14	South West of Draycott	Bus Services	Hannah Pritchard	Response-01399	Draycott currently has a very limited and unreliable bus service (Indigo) that are infrequent and not well connected to major employment centres. Without substantial investment in reliable and frequent public transport, new residents will be car-dependent, further worsening congestion and pollution. The development does not appear to include any commitment to improve public transport provision or access.
1.14	South West of Draycott	Bus Services	James Hargreaves	Response-01315	Already limited
1.14	South West of Draycott	Bus Services	Jonathan Fletcher	Response-01463	Will the council be introducing many new extra bus services to cope with the influx of heightened population ? I very much doubt this!
1.14	South West of Draycott	Bus Services	Karla Williams	Response-00077	Buses are regular.
1.14	South West of Draycott	Bus Services	Kayleigh Bonallie	Response-01375	There is one bus service through draycott It is irregular, unreliable and they already removed the I4 and ZOOM services that used to run. Public transport is limited
1.14	South West of Draycott	Bus Services	Lee	Response-00742	1. Schools - will extra buses be put on for transportation to local schools?
1.14	South West of Draycott	Bus Services	Luke Hatch	Response-00160	Public transport in the area is patchy. If the bus service isn't improved alongside the development, new residents will depend entirely on cars, putting more pressure on roads and parking. I'm all for using public transport, but right now it is not affordable and takes an hour to get to Nottingham. Nobody uses it for that reason. Therefore, more people = more cars = more congestion and nothing I have seen so far indicates that it is a concern being taken seriously. It seems the developers has the Council over a barrel and we just take what scraps they give us.
1.14	South West of Draycott	Bus Services	Maggie Murphy	Response-00833	An increase in Bus journeys will increase traffic and pollution negatively
1.14	South West of Draycott	Bus Services	Michael Thirlwall	Response-01196	Existing bus services would not be adequate to cater for the additional journeys of 190 extra households.
1.14	South West of Draycott	Bus Services	Michelle Marks	Response-00924	There is also no evidence of improved public transport provision, making this development wholly unsustainable.
1.14	South West of Draycott	Bus Services	Mr R Sykes	Response-00412	A heavily used service between Villages.
1.14	South West of Draycott	Bus Services	Mrs Maria E Hardy	Response-00614	My daughter attends the bus for secondary school and already leave early in the morning and struggle with traffic
1.14	South West of Draycott	Bus Services	Nigel morton	Response-01351	We have limited bus services ,they were recently cut back ,which means more people will use there cars etc
1.14	South West of Draycott	Bus Services	Pauline Marks	Response-00927	Draycott's existing infrastructure is already under strain and is not equipped to support such a substantial increase in populatio
1.14	South West of Draycott	Bus Services	Richard Keith Hanbury	Response-01087	When I don't cycle I catch the bus. The disruption could make me late for work. Causing stress and anxiety.
1.14	South West of Draycott	Bus Services	Richard Syson	Response-01317	The Trent Barton Indigo bus service would inevitably suffer from overcrowding at peak times
1.14	South West of Draycott	Bus Services	Rick Howden	Response-01421	Access and egress to the proposed housing development on Derby Road raises several issues relating to highway and pedestrian safety, ease of access and disruption from increased traffic.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Bus Services	Sarah	Response-01541	Many being missed or cancelled because lack of drivers so many only standing room or sometimes even too full to stop.
1.14	South West of Draycott	Bus Services	Sean Peace	Response-01347	public transport, which are already overstretched. No adequate plans have been provided to mitigate these concerns.
1.14	South West of Draycott	Bus Services	Simon Jenkins	Response-01287	Should not cause a major issue, other than being busier and needing extra buses.
	South West of Draycott	Bus Services	Susan Baker	Response-01316	The buses are already busy and I struggle to get a seat. Going to Nottingham is far too long a journey for a commuter
1.14	South West of Draycott	Bus Services	Susan Foster	Response-00824	Service is adequate at the moment but who knows how long that will last.
1.14	South West of Draycott	Bus Services	Teresa Shaw	Response-01309	1. Schools - will extra buses be put on for transportation to local schools & the alleged 2000 children?
1.14	South West of Draycott	Bus Services	Tim Hawkins	Response-00661	In the unlikely event that the new residents use the 4 times an hour bus service to Derby (30 minutes) or Nottingham (1 hour) I doubt that this will have too much of an impact. The truth is that it's unlikely to encourage further capacity.
	South West of Draycott	Bus Services	Tom	Response-01477	There is only one bus service that comes through Draycott once every 20 minutes, the buses are already packed as it is.
1.14	South West of Draycott	Bus Services	Tracey Morton	Response-00968	Bus services have not long been reduced and development would increase road traffic volume significantly
	South West of Draycott		T Shields	Response-00570	An increase in residents in Draycott will help support the use of buses and the economic viability of such public transport.
1.14	South West of Draycott	Flooding / Drainage	adrian leeming	Response-01249	It's common knowledge that this site floods regularly. As such it seems a wholly unsuitable site for residential development. The developers will attempt to mitigate this however nature has a habit of besting them, especially as our climate changes and flooding becomes more of a risk so no doubt these new homes will flood and established houses will also be adversely affected as the water is re-directed to them. If this happens we will be seeking redress from the Council as we have highlighted that the new development will be the cause. From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound these issues. NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.
1.14	South West of Draycott	Flooding / Drainage	Alastair Dundas	Response-01200	There is already a risk of flooding in the area, and the erosion of soil and plants will increase the risk of flooding and I live very near to this, so concerns me greatly.
1.14	South West of Draycott	Flooding / Drainage	Alison Bowley	Response-01174	Draycott's proposed building site is adjacent to the River Derwent's flood plain, as is well known to anyone who lives here knows and has seen all the surface flooding that occurs regularly each year. Where will all the excess surface water which will undoubtedly accrue, go to? Even more flooding down Lime Grove, Wilne Rd, to begin with, I would suggest.
1.14	South West of Draycott	Flooding / Drainage	Alison Thirlwall	Response-01390	Increase flooding risk to the area. The houses that back onto the land South-West of Draycott have experienced significant flooding and this development will further compound this flooding. There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact. When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built next to high to medium risk flood and risks compounding the flood risk in the area.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Flooding / Drainage	Andrew and Jane Gilmour	Response-01329	It would seem that EBC have had little if any communication with Severn Trent. the gardens in Lime Grove adjacent to the proposed development annually flood leading to water ingress to gardens and potentially the drainage system. The field where the proposed development is planned also floods annually leading to the farmer only using this field for grazing for 6 months of the year. We can see on national media the threat of global warming will increase flooding risk. The houses on Lime Grove that back onto the land South West of Draycott have experienced significant flooding, the River Derwent lies just a couple of hundred metres away and land to the north of it borders the proposed development site and currently ranks as flood zone risk level 2/3. Given there is already a risk of flooding in the area the removal of soil, trees and plants will increase the risk of floods to other areas in the local community. Although the proposed development falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issues. "NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout the year with many residents on Lime Grove not able to obtain flood risk damage cover as a consequence. NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. Environment Agency Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should
1.14	South West of Draycott	Flooding / Drainage	Andrew and Jane Gilmour	Response-01329	not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone 3.
1.14	South West of Draycott	Flooding / Drainage	A Northeast	Response-01848	Minimal liaison has been undertaken by EBC with Severn Trent regarding drainage and water management arrangements for the Draycott site. Draycott residents experience multiyear flooding events, and this development will further compound flooding issues. More investigation is needed to determine why this known flood location site is suitable for development. A Flood Risk Assessment should be requested for developments within a Flood Zone.
1.14	South West of Draycott	Flooding / Drainage	Anthony Bradley	Response-01442	Too many house would flooding worse in the village, these field fields are already flood yearly
1.14	South West of Draycott	Flooding / Drainage	Anthony Walsh	Response-00992	Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact. NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issues.

1.14	South West of Draycott	Flooding / Drainage	Avice Boyle	Response-01427	NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issues. NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes. "NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where 50 development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout the year with many residents on Lime Grove not able to obtain flood risk damage cover as a consequence. "NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.
1.14	South West of Draycott	Flooding / Drainage	Barbara Crane	Response-00268	This area is already liable to flooding. Gardens on Lime Grove have been underwater in past years. Additional building on these fields will create further problems. The railway line is frequently flooded just beyond the bridge. Surely the Environment Agency cannot support this development. I would like to view their report.
1.14	South West of Draycott	Flooding / Drainage	Ben Kassoul	Response-01024	Draycott sits on a flood plane and regularly floods at the proposed site. The local flood map for planning from gov.uk is conveniently linear along the border to the proposed housing estate which raises questions. The installation of 190 homes will adversely affect the percentage of impermeable area (PIMP) and the catchment areas for the existing surface water drainage and combined sewer running through the village which is only 225mm in diameter. By constructing these homes, the ability for ground infiltration of flooding events will be drastically reduced and cause a dramatic increase to surface water flooding within the village. The combined sewer overflow (CSO) which serves both the Draycott and Breaston Severn Trent sewer system (Draycott sewage pumping station - emergence overflow - [UID 916]) will undoubtedly spill to the River Derwent more frequently as a result of the construction of the new housing estate. This CSO has spilled as recently as 20:26 on Thursday 8th May despite the prolonged dry weather experienced in Derbyshire this month.
1.14	South West of Draycott	Flooding / Drainage	Ben Marshall	Response-01212	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact.
1.14	South West of Draycott	Flooding / Drainage	Bernadette Rothwell	Response-00998	Draycott has experienced significant, damaging, flooding to both residential and commercial properties. These houses are very close to the flood plain. This is not going to ease the problem - quite the opposite. There are no details to indicate how this will be managed, for both the new houses as well as those already prone to flooding.
1.14	South West of Draycott	Flooding / Drainage	Bev Marvell	Response-01892	The newly revised Environment Agency flood plan map for planning, 2025, flood assessment looks less severe than its 2012 map (The Draycott and Church Wilne History Group keeps copies of such maps). 1 cannot see why it should have changed. Draycott is very close to the river Derwent and is low lying on gravel. It is renowned for flooding, flood waters regularly rising quickly (up to 3 times a year) to close proximity of residential homes on the south side of Draycott. We have very old flood banks in place to try to alleviate flooding. Bank Field House, at the centre of this development proposal, sits on the top of bank fields (fields along here have the old name 'Bank Fields' - for a reason). Immediately to the south of the house fields flood, they are particularly prone because the course of the river used to be even closer than it is today, this is evidenced on maps by the line of the parish boundary following the old river line. The house and other fields are on the bank, they do not flood as deeply, but do become sodden, an attempt to drain them uses water courses running around the west side of the wooded area. 'Safeguarded land' is also shown on the proposal. I believe this is land earmarked by the Council which may be required to serve development needs in the longer term? I also believe it is required that it 'should be genuinely capable of development when needed' - but as it is within the flood plain it would never be suitable for development. This safeguarded land is not viable.

PolicyRef	Consultation Site	Response Category	Name of Responder	Response ID	Detail
1.14	South West of Draycott	Flooding / Drainage	Bradley Peace	Response-01348	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. 5 2 Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. 6 3 There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. 7 4 In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. 8 5 NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes. 9 6 Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. 10 7 Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact. 11 8 When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. 12 9 NPPF 162.
