Aaron Locksley	West of Sandiacre	Response-00711	Traffic Congestion	Construction traffic will struggle to navigate the busy narrow streets, which the vital bus service struggles with already, often having to get out and knock on people's doors to ask them to move their vehicle, the bus doesn't even go up Cloudside Road. With the addition of 180-360 cars passing by these quiet roads multiple times a day, and the construction traffic, what are the plans for road maintenance?
Aaron Locksley	West of Sandiacre	Response-00711	Road Safety	I worry about my children playing on the street, which is a key reason we purchased a property in a quiet neighborhood, with all the extra traffic about.
Aaron Locksley	West of Sandiacre	Response-00711	Air Quality	With the proximity to the motorway, what analysis of the air quality has been done? I worry residents of the new houses could be moving into ill health. What measures will be put in place to mediate this? Could the planning permission require the houses to be fitted with a mechanical ventilation system that contains air filtration?
Aaron Locksley	West of Sandiacre	Response-00711	Wildlife / Biodiversity	There is no doubt wildlife of the neighboring Stoney Clouds nature reserve will be affected. I personally am pragmatic and see the dire need for new houses, but what are the mitigating factors? Will there be a large green space left between the housing plots and nature reserve? What noise restrictions could be put in place?
Aaron Locksley	West of Sandiacre	Response-00711	Bus Services	The bus service itself will struggle with the traffic, especially when heavy goods vehicles and the buses cross paths. Apart from that does the bus service around peak usage have the capacity to cater for 180 new homes?
Aaron Locksley	West of Sandiacre	Response-00711	School Capacity	I have heard the nearby schools are already at capacity, what is being done around the local area to increase capacity of the education system?
Aaron Locksley	West of Sandiacre	Response-00711	Number of Houses	We live on Cloudside Road in a house that directly butts onto the proposed land, it's currently a lovely view of horses and green open space. I can see that perhaps the land is a good use for houses but 180 is excessive. We are increasingly becoming aware of the need for green spaces in our lives, inevitably with that many houses their private gardens will be tiny and due to the overcrowding they won't feel private, has anyone thought about the long term impacts on mental health this will have for the new build residents? Plonking them right next to the motorway with basically no garden is a recipe for ill health. I would think if the number was lowered to ~100, you would meet much lower opposition, especially if you provision for current residents (i.e. afford a nice gap between current houses and the new builds with a nice long garden), you might not reach the numbers sought after, but they might actually get built this decade.
Aaron Locksley	West of Sandiacre	Response-00711	Landscape	Obviously this will affect the landscape and thus property values, is there any remediation for current residents affected?
Aaron Locksley	West of Sandiacre	Response-00711	Flooding / Drainage	Has analysis been done of how loss of natural drainage could affect the current flooding issues experienced around the canal in Sandiacre?
Aaron Locksley	West of Sandiacre	Response-00711	Other	Personally, I would consider dropping my opposition if: - the number of houses was more in keeping with the neighbouring area (and allowing the new builds to have decent sized gardens) - new build houses that would be directly adjacent to current residents are required to have a long garden - financial restitution for those whose property values will be affected by the new builds
Abbie quinn	North of Breadsall Hill Top	Response-00616	Wildlife / Biodiversity	This will destroy the wildlife behind our house that backs onto the greenway. A lovely part of nature kept between us and Breadsall.
Abbie quinn	North of Breadsall Hill Top	Response-00616	School Capacity	As a teacher I am aware that local primary and secondary schools are almost if not at capacity from new housing in the area including Durose and Persimmon across from Breadsall.
Abbie quinn	North of Breadsall Hill Top	Response-00616	Landscape	Totally ruin the landscape, we have a few of fields which would turn to houses. Also gives all of the housing around easy access to walk routes and nature trails which will be destroyed.
Abbie quinn	North of Breadsall Hill Top	Response-00616	Flooding / Drainage	One purchasing our house we were told there couldn't be any building behind us due to it being a flood/ drainage area. This will impact on all houses around if built on.
Adam Garner	North of Breadsall Hill Top	Response-00613	Traffic Congestion	Durose park is already busy enough with vehicles daily. There are often queues at peak times to get on and off the durose estate without adding more. Most homes are 2 cars therefore the increase could be 320 extra cars.
Adam Garner	North of Breadsall Hill Top	Response-00613	Road Safety	Same reason as traffic congestion.
Adam Garner	North of Breadsall Hill Top	Response-00613	Wildlife / Biodiversity	The area this goes up is used daily by the community for walking and cycling etc, and the area is full of wildlife. Local Green spaces are what attracts to the area. access is currently granted through the middle of the proposed plot toward the green way and surrounding fields.
Adam Garner	North of Breadsall Hill Top	Response-00613	Healthcare Facilities	Already limited in the area are Oakwood and Chadeston are at capacity now. It's very difficult to get an appointment today, and often need to use the walk in town or A&E.
Adam Garner	North of Breadsall Hill Top	Response-00613	Type of Housing	Social housing, whilst necessary brings trouble to what's a nice area.
Adam Govan	North of Breadsall Hill Top	Response-01416	Wildlife / Biodiversity	Objection to Proposed Development ? Conflict with Policy CP18 (Green Wedges) I note that this application has been amended to exclude the development adjacent to the A61. However I still wish to raise strong objections to the proposed development (both in its amended form and original form) on the grounds that it conflicts with Policy CP18 concerning Green Wedges. Although the site lies just outside the designated green belt surrounding Breadsall, it directly abuts existing woodland and open countryside, forming an important part of the green corridor along the Great Northern Greenway. The application site provides valuable habitat for wildlife and functions as an essential green buffer. Its loss would significantly reduce ecological connectivity and visual amenity, impacting local biodiversity and the quality of life for residents, walkers, and cyclists who currently use and enjoy this open space. The site is actively appreciated by the community as a visual break in built development and as a wildlife corridor connecting to other open areas. While the outline proposal includes the retention of woodland, there are serious concerns that development will increase pressure on these areas, potentially leading to degradation over time. I am concerned that the proposed development does not provide an adequate buffer to the woodland corridor and built development will sit too close and will detrimentally impact the existing woodland. There is no BNG Assessment listed in the application documents on the portal so it appears that it hasn't yet been done. How can there be any confidence that the proposal would be able to satisfy the statutory requirement to deliver 10% net gain. Any BNG delivery off site or through the purchase of biodiversity units elsewhere, dilutes the benefit of 10% net gain as the biodiversity is lost here in this locality and the significant environmental impact is here. Crucially, the proposed development sits adjacent to land at Breadsall recently released from the green belt, which Erewash Borough Council is considering for housing allocation. If both sites are developed, the cumulative impact will be substantial?leading to the loss of meaningful green space, erosion of the rural character of the Great Northern Greenway, and the elimination of the settlement gap between Breadsall and the wider Derby conurbation. For these reasons, I urge the Council to reject the proposal in order to uphold the principles of Policy CP18 and protect the integrity of this important green wedge.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Adam Millward	North of Breadsall Hill Top	Response-00418	Traffic Congestion	Traffic is already bad on the A608 in the mornings for the daily commute into Derby, already made worse with the existing new build houses that have been built recently. You will be standstill already up to and past the round about all the way to Brian clough way.
Adam Millward	North of Breadsall Hill Top	response-00418	Air Quality	Currently people walk the trail to get away from homes and roads and seek better air quality. Building more housing and roads near this literally un does all the effort and money spent into making this trail / old railway line attractive again.
Adam Millward	North of Breadsall Hill Top	response-00418	Wildlife / Biodiversity	There is so much wildlife in this area I grew up walking these fields, to get onto the old railway lines. First thing developers do is tear down trees near to building plots. It happened further up the A608 on the other new build site, they tore all the old chestnut trees down that lined the road for an attenuation pond. Those trees were hundreds of years old and housed so much wildlife and created much bio diversity. There is also bog land if memory serves me right which is absolutely vital for bio diversity.
Adam Millward	North of Breadsall Hill Top	response-00418	Bus Services	Plenty of bus services, but come on, no body that affords to live in these areas will use public transport much. They will still drive to work in their electric car.
Adam Millward	North of Breadsall Hill Top	response-00418	School Capacity	Are you planning to build more schools as part of this expansion? At the very least a nursery and primary / junior school should be built.
Adam Millward	North of Breadsall Hill Top	Response-00418	Healthcare Facilities	Again, my parents live in Oakwood and they already can't get in at Oakwood dentist or doctors surgery, they have to travel to city centre to access both if these services. New dentist, gp and health Centre would needed to be included in this project.
Adam Millward	North of Breadsall Hill Top	response-00418	Type of Housing	Again an affluent area does not want social housing next to 600k homes. Developers are forced to build social housing next to affluent homes and all that happens is you get anti social behaviour in what could be a very nice estate. Speaking from experience here where in my housing estate the council recently decided a piece of green field could be used for some social housing, anti social behaviour is now rife in what was a nice neighbourhood.
Adam Millward	North of Breadsall Hill Top	response-00418	Number of Houses	No doubt homes will be crammed in like there's no tomorrow with tiny gardens and extremely inconvenient to use drives ways (one car in front of another) claiming its a 2 car driveway. All while councils are completely powerless to stop this it seems, or they just don't care, or are paid off not to care, whichever one its true. This means people park all over the streets and it becomes a crammed narrow space.
Adam Millward	North of Breadsall Hill Top	response-00418	Green Belt	It should be all green belt and used for farming. Why not regenerate one of the old brown field sites like stanton iron works? You could build a whole new community on that wasteland.
Adam Millward	North of Breadsall Hill Top	response-00418	Landscape	It will be ruined obviously.
Adam Millward	North of Breadsall Hill Top	response-00418	Flooding / Drainage	Again all trees will be cut down for attenuation ponds getting rid of all natural drainage and ground stability provided by the trees. Probably cause more mass flooding downhill into Breadsall village.
Adam Shooter	West of Sandiacre	Response-01925	Traffic Congestion	As has been proven by various potholes and small sinkholes opening along Stanton Road our current infrastructure cannot handle current traffic levels let alone more. Traffic can already build on many streets due to car width streets.
Adam Shooter	West of Sandiacre	response-01925	Road Safety	The proposed access roads are steep and not wide enough for the construction proposal nor for the increased traffic when complete. I expect accidents when snowy/icy with this proposal.
Adam Shooter	West of Sandiacre	Response-01925	Air Quality	We already have the M1 and A52 on our doorstep and due to the green belt we have acceptable air quality. Removal of this and construction processes will disrupt this.
Adam Shooter	West of Sandiacre	response-01925	Wildlife / Biodiversity	Existing green belt land is critical to maintaining biodiversity which has been suffering across the UK for decades. The land also serves as a corridor connecting green areas that support biodiversity. The M1 has limited crossing points between green spaces, I expect removal of just one as this proposes would cause lasting impact to healthy biodiversity of the area.
Adam Shooter	West of Sandiacre	Response-01925	Healthcare Facilities	It is already challenging to get drs appointments and pharmacy lines are often into the street. Current services are insufficient for this increase.
Adam Shooter	West of Sandiacre	response-01925	Landscape	This green area is an attraction for dog walkers and visitors. The horizons in Stoney Clouds are fantastic. Personally I find it to be a great anxiety reliever and will be so disappointed to lose it.
Adam Spencer	South of West Hallam	Response-00054	Traffic Congestion	Traffic during school times and at weekends when the football pitches are in use is already a nightmare, adding this extra development will make the problem even worse especially during the building phase of the development. Having plant machines and artic lorries driving through an area which there are already restrictions in place on the roads for certain types of vechiles is unsafe and especially directly opposite the school
Adam Spencer	South of West Hallam	response-00054	Road Safety	Adding additional traffic from 90 houses and its vistors is going to add more cars on an already conjested road directly outside of the school and childrens play area
Adam Spencer	South of West Hallam	Response-00054	Healthcare Facilities	Healthcare facilities in the village are already overstretched and are often having to send people to alternative GPs, the additional 90 homes with no extra healthcare provision is going to have a negative impact on both the current and potential new residents
Adam Spencer	South of West Hallam	response-00054	Number of Houses	The number of houses on the proped development is too many, many of the houses are likely to go unsold or be unaffordable, we already have new houses in the village which have not been sold since they were built
Adam Spencer	South of West Hallam	response-00054	Landscape	The proposed new development will alter the landscape of the village and will impede on the picturesque countryside vies which attracted so many people to the village in the first place
Adam Spencer	South of West Hallam	response-00054	Flooding / Drainage	The development will result in an increased risk of flooding within the village and surrounding area of the development
Adam willetts	South of West Hallam	Response-00083	Traffic Congestion	Already to busy in the village
Adam willetts	South of West Hallam	response-00083	School Capacity	The parking outside the school is horrendous as it is
Adele Pinkney	West of Borrowwash	Response-01456	Traffic Congestion	Borrowwash village centre already becomes very congested where Victoria Avenue meets Derby/Nottingham Road. Extra traffic feeding on to Derby Road, particularly during rush hour, will add to this heavy congestion, cause additional pollution and increase risk of accidents.
Adele Pinkney	West of Borrowwash	response-01456	Road Safety	Derby Road is already very busy in rush hour. Additional vehicles joining from a large new estate would add to this and increase the risk of accidents and air pollution.
Adele Pinkney	West of Borrowwash	Response-01456	Air Quality	The number of vehicles in Borrowwash centre already has a detrimental effect on air quality, especially as traffic backs up Victoria Avenue waiting to turn onto Derby/Nottingham Road. Additional traffic coming in to and through the village at peak times from a new , large housing development will add to these emissions and cause further decrease in air quality.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Adelle Pinkney	West of Borrowwash	response-01456	Wildlife / Biodiversity	Development of this exclusively Green Belt land would have a devastating impact on flora and fauna habitat and biodiversity. It is a relatively narrow strip of land between the Derby City boundary and Borrowwash village. As such it is part of an essential wildlife corridor. Protected Skylarks nest in the open fields of the proposed development site, just one example of the importance of this natural habit.
Adelle Pinkney	West of Borrowwash	Response-01456	Healthcare Facilities	Our local GP surgeries are already stretched beyond capacity. I believe they objected to similar development plans ten or so years ago on such grounds, and accessing appointments for current patients has become much more difficult since then. The local dentist has not had any NHS spaces for several years, only taking new patients on for private treatment.
Adelle Pinkney	West of Borrowwash	response-01456	Green Belt	This narrow stretch of green belt land is immensely important in its role of preventing the urban sprawl of Derby City as it is all that separates the city boundary from the villages of Erewash. Its development would open the door to the merging of Derby and Nottingham in to one urban conurbation As green belt this land forms part of an essential wildlife corridor. It's destruction would cause loss of habitat and biodiversity, hugely disrupting the local ecosystem This is agricultural land which has been, and can again be farmed. The proposed park area is not an alternative to greenbelt land. It would not maintain the rural, village character of Borrowwash, nor would a managed park with public access provide a comparable habitat to the current open green belt land. Once developed, green belt land has gone forever. Short sighted aims cannot be allowed to destroy our essential ?green lungs?. To build on such precious areas when previously developed land, brownfield sites and empty properties are available is immoral.
Adelle Cavanagh	North of Breadsall Hill Top	Response-00392	Traffic Congestion	The A608 is regularly congested during peak times as it is without extra housing contributing more traffic
Adelle Cavanagh	North of Breadsall Hill Top	response-00392	Wildlife / Biodiversity	We have already lost huge parts of our local green spaces to make way for new housing. The impact on local wildlife cannot be underestimated.
Adelle Cavanagh	North of Breadsall Hill Top	response-00392	Healthcare Facilities	It is almost impossible to get an appointment with our GP as it is. I cannot contemplate how the current healthcare services can begin to consider taking on more patients
Adelle Cavanagh	North of Breadsall Hill Top	response-00392	Green Belt	More of our green belt land is being lost. This is impacting on residents of Derby rather than Erewash
Adelle Cavanagh	North of Breadsall Hill Top	response-00392	Flooding / Drainage	The flooding that occurred in Breadsall in 2023 was exceptional, but was clearly exasperated by the Durose development and the fact that water is not being drained away as efficiently as prior to the building of the new homes
adrian leeming	South West of Draycott	Response-01249	Traffic Congestion	The roads through Draycott are already an accident hotspot. There is daily speeding past the proposed site and at least 2 fatal accidents in recent years. 190+ more road users will certainly add to this. The Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic. A transport assessment needs to be undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This passes through Draycott and Borrowwash. Passing busy junctions, Doctor?s surgeries, public car parks, Primary schools, local cricket club as well as numerous resident?s homes. Noise from the construction (including vehicle movements) and operational phases of the proposed development need to be adequately addressed. The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead and will cause significant congestion issues throughout the village and increase accidents within this overburdened area. It will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. "NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic." NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and t
adrian leeming	South West of Draycott	Response-01249	Traffic Congestion	he current roads would not cope with the volume of traffic.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
adrian leeming	South West of Draycott	response-01249	Road Safety	The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents. A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents. "NPPF 109. States that transport issues should be considered from the earliest stages of plan-making and development proposals, using a vision-led approach to identify transport solutions that deliver well-designed, sustainable and popular places. This should involve identifying, assessing and taking into account the environmental impacts of traffic and transport infrastructure ? including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains. Yet no traffic survey has been undertaken. If it had it would have highlighted that along A6005 (Derby Road) and exactly adjacent the proposed development. The peak traffic hours on Fridays are between 4 PM and 6 PM, with the highest average vehicle count observed from 4 PM to 5 PM. The average number of cars per day in the traffic data is approximately 3,861 vehicles. The highest recorded traffic day in the data is June 11, 2023, with a total of 4,779 vehicles. The maximum speed recorded in the traffic data is 106 mph and the number of times 70 mph is exceeded in the traffic data is 174." The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment. NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic. NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development wou
adrian leeming	South West of Draycott	response-01249	Road Safety	ld require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic.
adrian leeming	South West of Draycott	response-01249	Wildlife / Biodiversity	If there are no other options housing people is ultimately a priority however whilst other sites are available green belt land needs to be held to protect wildlife and biodiversity. This is a national/global policy and essential for the survival of our ecosystem. I have regularly spotted a bird of prey on this site as well as bats and a fox. Across the road the canal was blocked to protect a water vole. I'm amazed that developing this site is seen as viable given the wildlife it supports and will of course be killed if the work takes place. This site is a mature natural habitat which can not be replaced. It will create unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. The taking away of grazing/arable land and the disruption for the wildlife. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. Planners must recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. There is an opinion that the deer fencing would devalue the area of open farmland and public right of way. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. There us a historical badger sett on part of the site to the Victorian tip at the bridge of Nooning Lane. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. This area forms a green corridor and houses a number of RED LIST species The proposed site will lead to removal of several TPO trees which contribute to the visual amenity of the ar

Name of Responder	Consultation Site	Response ID	Response Category	Detail
adrian teeming	South West of Draycott	response-01249	Wildlife / Biodiversity	ea. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt. "NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite. "
adrian teeming	South West of Draycott	response-01249	Bus Services	It is also a Government ambition to reduce unnecessary/extra vehicle journeys. By building substantial numbers of houses miles away from commercial centres and supermarkets this will encourage more journeys. Draycott does have a bus service but the reality is that most of the 190 new families will jump in the car rather than catch a bus because that's the society we now live in.
adrian teeming	South West of Draycott	response-01249	Healthcare Facilities	Draycott does not have the infrastructure, shops, restaurants, dentists, doctors or schools to support 190 new families and from experience it has been proven that developers don't do anything to remedy this, why would they, there is no profit in doing this? It has also been proven that the local economy does not address this, there is a chronic shortage of all of these things, even more critically in rural area and the demand doesn't prompt supply to the detriment of society.
adrian teeming	South West of Draycott	response-01249	Type of Housing	My belief is that the existing brownfield sites are seen as not attractive enough to attract developers however the objective is to address the housing crisis, not maximise developer returns. The developers want the work so the UK authorities and government need to play a bit harder with them and oblige them to develop sites which will earn them revenue, but not convert new sites in order to maximise their profits. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000. The intention of the government push for more housing is an intention to resolve the housing shortage created by enabling too high borrowing levels, leading to house price inflation and building mostly 4 and 5 bedroom homes isn't the right approach. Building cheaper 3 bedroom houses on the edge of a town which would be reasonably priced and attractive to new buyers is more in line with this requirement.
adrian teeming	South West of Draycott	response-01249	Number of Houses	NPPF 223. States that planning policies should set out criteria or requirements to ensure that permitted and proposed operations do not have unacceptable adverse impacts on the natural and historic environment or human health, taking into account the cumulative effects of multiple impacts from individual sites and/or a number of sites in a locality. The EBC are proposing a combined number of nearly 700 houses in the locality of Draycott, Borrowwash and Breaston which is significantly overbearing and unrealistic when considering infrastructure, road networks and amenity. The scale of the development is completely NOT in keeping with the character of the village. The proposed development should follow existing settlement patterns. New buildings and the volume of housing should harmonise with the neighbourhood. Retain local character and the retention of open spaces as is the character of the village. Views into and out of the village should be preserved. Clear lines of hills and spatial openness must be preserved. NPPF 61. States that to support the Government's objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay. The overall aim should be to meet an area's identified housing need, including with an appropriate mix of housing types for the local community. The land identified south west of Draycott is Green Belt and Grade 2 quality land. This development neither looks to protect the BMV nor does it look to bring forward the 109 existing Brownfield sites within the EBC that has full planning consent.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
adrian teeming	south west of Draycott	response-01249	Green Belt	<p>NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. Understand there is need for new housing but there are an abundance of brownfield, previously developed sites that the developers and council should explore before this location. Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is c.8H. These 8 sites alone will allow 514 net dwelling to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever. It was previously thought that the land of the former Stanton Ironworks was taken out of the EBCs core strategy due to contamination that rendered the site unusable. Yet a recent Freedom of Information (FOI) request which was answered by EBC has advised the site is indeed to be utilised and has been allocated 1000 houses. Can EBC please advise if the status of the Stanton Ironworks sites and if this is included within the Core Strategy and how the planned 1000 houses impacts the Greenbelt review and use of Greenbelt land. "NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greybelt land does not meet this objective and will actually achieve the total opposite. NPPF 4. States that local planning authorities should approach decisions on proposed development in a positive and creative way. They should use the full range of planning tools available, including brownfield registers and permission in principle, and work proactively with applicants to secure developments that will improve the economic, social and environmental conditions of the area. EBC needs to demonstrate what appraisals have been undertaken on the 109 Brownfield sites as detailed within their own Brownfield Register, and why these sites have not been prioritised for development over the identified Green Belt land. NPPF 13. Protecting Green Belt Land:- The government attaches great importance to Green Belts. The fundamental aim of Green Belt is to keep land permanently open; the essential characteristics of Green Belts are their openness and their permanence. This is an inappropriate development in the Green Belt and there is NO evidence of the appraisals that have been undertaken</p>
adrian teeming	South West of Draycott	response-01249	Green Belt	<p>on existing Brownfield sites within EBC which there are 109 with 8 of these giving over 51H and the opportunity to develop over 500 dwellings. NPPF 20. States that the target level of housing development within the plans should be capped in line with the capacity of Brownfield sites to accommodate it, to protect Green Belt yet these plans significantly exceed it. NPPF 143. The Green Belt serves 5 purposes: 1) To stop urban sprawl 2) To stop towns merging 3) To safeguard from encroachment onto the countryside 4) To preserve special settings, character and history 5) To ensure the recycling of derelict or Brownfield land. The proposals being made by EBC to reclassify existing Green Belt land to the south west of Draycott does not meet any of these 5 purposes and actually looks to achieve the total opposite. Furthermore, no apparent attempt has been made by EBC to demonstrate why the 109 existing Brownfield sites within EBC have not been prioritised over this Green Belt land. NPPF 144. States before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. No attempt has been made by the authority to explore existing Brownfield sites or underutilised land within the EBC. NPPF 146. The applicant and authority MUST make as much use as possible of Brownfield Sites and underutilised land; AND PROVE that there is nothing left before encroaching on the Green Belt. ? There is no PROOF of the authority discussing with neighbouring authorities about whether they could accommodate some of the identified need for this development, in order not to use the Green Belt. NPPF 150. Once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, to retain and enhance landscapes, visual amenity and biodiversity. NPPF 152. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances. This application does not demonstrate any exceptional circumstances. NPPF 153. 'Very Special Circumstances' have to be proven i.e. all other options exhausted to classify this application as a ?very special circumstance?. We cannot see any evidence that this has taken place. Therefore, it is an inappropriate application and proposal and does not demonstrate exceptional circumstances. NPPF 156. The proposed development of 190 houses to the land south west of Draycott when located in the Green Belt, must demonstrate exceptional circumstances and are inappropriate unless very special circumstances can be demonstrated. "</p>
adrian teeming	south west of Draycott	response-01249	Landscape	<p>There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development of this size. NPPF 207. States in determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets' importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation. Yet development on the land south west of Draycott will significantly impact and later the heritage of the Village including the destruction of unspoilt Green Belt land, the adjacent conservation site of the canal and other listed heritage sites that surround the identified area.</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
adrian leeming	South West of Draycott	Response-01249	Flooding / Drainage	<p>It's common knowledge that this site floods regularly. As such it seems a wholly unsuitable site for residential development. The developers will attempt to mitigate this however nature has a habit of besting them, especially as our climate changes and flooding becomes more of a risk so no doubt these new homes will flood and established houses will also be adversely affected as the water is re-directed to them. If this happens we will be seeking redress from the Council as we have highlighted that the new development will be the cause. From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issue. NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.</p>
adrian leeming	South West of Draycott	Response-01249	Other	<p>As simple matter of principal please recognise that people move to rural village locations in order to escape the city and towns, it's not possible to develop hundreds of new homes in these villages and retain or extend the rural escape, instead it inevitably removes this benefit. The British village concept is one worth protecting for mental health and cultural benefit. Rather than destroy village life new housing developments should be adjacent to existing towns, like Long Eaton or Ilkeston, to strengthen their position and would have less negative impact than adjacent to a smaller village. It is also a Government ambition to reduce unnecessary/extra vehicle journeys. By building substantial numbers of houses miles away from commercial centres and supermarkets this will encourage more journeys. Draycott does have a bus service but the reality is that most of the 190 new families will jump in the car rather than catch a bus because that's the society we now live in. I strongly object to the Sustainability Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local residents resulted in a score of -6 placing this land 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 &amp; 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should receive a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed. I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do</p>
adrian leeming	South West of Draycott	Response-01249	Other	<p>not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBC's hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter half term and the consultation window included 4 Bank Holidays. This when much of the information required was not available and FOI requests were submitted and took 20 working days for a response to be received, when the government agencies contacted themselves did not work the said Bank Holidays. This has meant important information has not been received by residents when developing objections. This action by the EBC was irresponsible, some may say planned, and not acting in the interests of the local communities this plan impacts.</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Adrian Randall	West of Sandiacre	Response-00463	Traffic Congestion	The proposed location is totally unsuited to further development. The site is only accessed via several small roads at the end of a large estate, the final access road being the smallest. The local already congested roads will not be able to cope with more traffic from 180 new houses crammed into a small space.
Adrian Randall	West of Sandiacre	Response-00463	Wildlife / Biodiversity	The site is existing green belt next to a local beauty spot, higher density housing than already exists in the area. We need to protect and cherish our green belt, not build on it!
Adrian Randall	West of Sandiacre	Response-00463	Number of Houses	The number of houses proposed is ridiculous, and not in keeping with the existing property in the area.
Adrian Randall	West of Sandiacre	Response-00463	Flooding / Drainage	The site is known to have poor drainage, adding a large number of houses will put a huge strain on existing drainage systems
A Harby	West of Sandiacre	Response-01684	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
A Harby	West of Sandiacre	Response-01684	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
A Harby	West of Sandiacre	Response-01684	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
A Harby	West of Sandiacre	Response-01684	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
A Harby	West of Sandiacre	Response-01684	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
A Harby	West of Sandiacre	Response-01684	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
A Harby	West of Sandiacre	Response-01684	Type of Housing	High density housing is preposterous not in keeping with current housing.
A Harby	West of Sandiacre	Response-01684	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
A Harby	West of Sandiacre	Response-01684	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
A Harby	West of Sandiacre	Response-01684	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Aimee	West of Sandiacre	Response-00952	Traffic Congestion	Getting out of Sandiacre during rush hour in the morning is already difficult enough as it is. With all these additional homes it will get even worse. There's only a few roads out of Sandiacre and the main routes all have schools along them which make it very difficult to get out. There's long queues of traffic which mean i have to leave much earlier that I should have to just to get to work on time. All these additional homes will have people also needing to commute to work and school which will make the morning congestion unbearable.
Aimee	West of Sandiacre	Response-00952	Wildlife / Biodiversity	There's not many green belt areas left in this area and if planning is approved here it will open the gates to further destruction of green belt land. We need to protect the green belt as it homes thousands of plants, animals and insects. Once it is lost to housing, it's lost forever. There's birds of prey and bats in this area that need green areas to roost and to find food.
Aimee	West of Sandiacre	Response-00952	Type of Housing	We don't need any more properties in Sandiacre being lost to house illegal migrants. We already have many properties owned by private landlords that are being leased to Serco to house these people. Further housing should not be given to these people. It's putting the residents of Sandiacre at great risk of sexual assault, violence and terrorism.
Aimee	West of Sandiacre	Response-00952	Green Belt	The green belt land needs protecting, our green belt land provides local residents with green spaces to walk surrounded by nature. It's one of the reasons I decided to buy a property here with easy access to countryside pathways and woodland. If this land is used for housing what's to stop further green belt land being used in the same way. It will ruin the area and those who can afford to move away from here will leave. The wildlife that lives in these green belt areas will be left without a home and may die as a result of this. We have birds of prey, many other species of birds, bats and countless insects. Our land is being sold off to foreign owned businesses and shell companies. Our country will not benefit from this nor will our people.
Aimee	West of Sandiacre	Response-00952	Landscape	The green belt land around sandiacre offers residents a place to escape the urban sprawl of concrete, tarmac and pollution. Our countryside is beautiful and should be protected. Local residents need green spaces to relax , walk and use for leisure and sporting activities. As the space available for these sort of activities is reduced it will impact people's mental health and wellbeing. The area has in recent years suffered from severe flooding, building further homes and concrete will reduce the area rain can soak into. Especially with current trends of paving over entire gardens or having artificial grass. The flooding will continue to get worse.
Aimee	West of Sandiacre	Response-00952	Flooding / Drainage	Flooding in recent years has been a significant problem in this area, all the concrete and impermeable surfaces all contribute to this and further housing will mean a further reduction in land that rain can soak into. The flooding causes devastating impact on individuals and families in the area leaving them homeless and paying rent for properties not safe or fit to inhabit. These residents will be further impacted by the run off water.
Alastair Dundas	South West of Draycott	Response-01200	Traffic Congestion	The road that would need to be created for this development of 190 houses, would cause traffic buildup as you enter Draycott. Also Draycott has very little parking facilities.
Alastair Dundas	South West of Draycott	Response-01200	Road Safety	The location of the proposed development I believe would be dangerous due to the speed of traffic entering the village.
Alastair Dundas	South West of Draycott	Response-01200	Wildlife / Biodiversity	The development will negatively impact the ecology/wildlife and beauty of the area.
Alastair Dundas	South West of Draycott	Response-01200	Green Belt	We need to prioritise brown field and grey belt for the development before the green belt is taken from our village.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Alesha Johnson	South of West Hallam	Response-01200	Flooding / Drainage	There is already a risk of flooding in the area, and the erosion of soil and plants will increase the risk of flooding and I live very near to this, so concerns me greatly.
Alesha Johnson	South of West Hallam	Response-00783	Traffic Congestion	The traffic and congestion through the village at peak times is already dangerous. I'm a resident in West Hallam and my daughter attends Scargill School. The roads and infrastructure in the village will not be adequate enough for this many houses to be built opposite the village school.
Alesha Johnson	South of West Hallam	Response-00783	Road Safety	I fear for children and the elderly in our village. The roads are not adequate for a new housing estate opposite the school.
Alesha Johnson	South of West Hallam	Response-00783	Healthcare Facilities	We live in the village and can see that the health care provider is already overwhelmed. We struggle to get the help we need from the healthcare services available.
Alesha Johnson	South of West Hallam	Response-00783	Number of Houses	90 new homes is too much for the infrastructure of the village. If each home then also has two cars this will overwhelm the roads and access to the school.
Alesha Johnson	North of West Hallam	Response-01122	Traffic Congestion	West Hallam's roads, particularly those leading into and out of the village, are not designed for high volumes of traffic. Additional housing will significantly increase vehicle numbers, leading to congestion, longer journey times, and heightened risks to pedestrians and cyclists, particularly around schools and village centres.
Alesha Johnson	North of West Hallam	Response-01122	Road Safety	This road is enjoyed as a quiet road for local residents to bike with small children. Currently, it feels very safe, but if more houses were to be built on this land, this would quickly become dangerous. This cross road is very badly congested already at peak times of day.
Alesha Johnson	North of West Hallam	Response-01122	Air Quality	Air quality in the area is of vital importance to the residents. A lot of people who live in West Hallam already feel the effects of air pollution on especially on High Lane. We all know how dangerous the side effects can be.
Alesha Johnson	North of West Hallam	Response-01122	Wildlife / Biodiversity	The area north of West Hallam includes valuable greenfield land that supports a variety of wildlife, including birds, small mammals, and important plant species. Development here would result in the irreversible loss of natural habitats and corridors essential for biodiversity. With increasing awareness of ecological decline and climate challenges, preserving this natural environment should be a planning priority.
Alesha Johnson	North of West Hallam	Response-01122	Bus Services	The proposed development area is poorly served by public transport, meaning most residents will be dependent on cars. This not only increases emissions and road use but also highlights the unsustainable nature of this development. No substantial infrastructure improvements appear to be included in the application to address this.
Alesha Johnson	North of West Hallam	Response-01122	School Capacity	Local schools and GP surgeries are already under considerable pressure, with limited capacity to absorb a large influx of new residents. No clear or deliverable plan has been provided to show how these essential services will be expanded to meet additional demand. Without this, the development would reduce the quality and accessibility of local education and healthcare for existing residents.
Alesha Johnson	North of West Hallam	Response-01122	Healthcare Facilities	Local schools and GP surgeries are already under considerable pressure, with limited capacity to absorb a large influx of new residents. No clear or deliverable plan has been provided to show how these essential services will be expanded to meet additional demand. Without this, the development would reduce the quality and accessibility of local education and healthcare for existing residents.
Alex	South of West Hallam	Response-01026	Road Safety	This stretch of Beech Lane is already super busy, especially with Scargill being here and being a main route to the shops and getting out of the village.
Alex	South of West Hallam	Response-01026	Landscape	What makes living in West Hallam so special is the green space that surrounds us and the beautiful rolling landscapes that you can view from our village. We don't agree that these houses should be built here and it's people who don't live here that get to make the decision to build these houses but you aren't the ones who have to live with them on your door step and have them built on your dog walking routes.
Alex	South of West Hallam	Response-01026	Flooding / Drainage	This particular field is good at absorbing rainwater and holding it as groundwater which has been evident when walking through it when it has rained. If we build on top of it and tarmac it then we lose all the natural drainage and at greater risk of flooding to the village.
Alexander lee	North of Breadsall Hill Top	Response-01439	Traffic Congestion	Traffic is already awful during rush hours with the air feeling polluted. This will be made even worse !
Alexander lee	North of Breadsall Hill Top	Response-01439	Wildlife / Biodiversity	Objection to Proposed Development ? Conflict with Policy CP18 (Green Wedges) I note that this application has been amended to exclude the development adjacent to the A61. However I still wish to raise strong objections to the proposed development (both in its amended form and original form) on the grounds that it conflicts with Policy CP18 concerning Green Wedges. Although the site lies just outside the designated green belt surrounding Breadsall, it directly abuts existing woodland and open countryside, forming an important part of the green corridor along the Great Northern Greenway. The application site provides valuable habitat for wildlife and functions as an essential green buffer. Its loss would significantly reduce ecological connectivity and visual amenity, impacting local biodiversity and the quality of life for residents, walkers, and cyclists who currently use and enjoy this open space. The site is actively appreciated by the community as a visual break in built development and as a wildlife corridor connecting to other open areas. While the outline proposal includes the retention of woodland, there are serious concerns that development will increase pressure on these areas, potentially leading to degradation over time. I am concerned that the proposed development does not provide an adequate buffer to the woodland corridor and built development will sit too close and will detrimentally impact the existing woodland. There is no BNG Assessment listed in the application documents on the portal so it appears that it hasn't yet been done. How can there be any confidence that the proposal would be able to satisfy the statutory requirement to deliver 10% net gain. Any BNG delivery off site or through the purchase of biodiversity units elsewhere, dilutes the benefit of 10% net gain as the biodiversity is lost here in this locality and the significant environmental impact is here. Crucially, the proposed development sits adjacent to land at Breadsall recently released from the green belt, which Erewash Borough Council is considering for housing allocation. If both sites are developed, the cumulative impact will be substantial leading to the loss of meaningful green space, erosion of the rural character of the Great Northern Greenway, and the elimination of the settlement gap between Breadsall and the wider Derby conurbation. For these reasons, I urge the Council to reject the proposal in order to uphold the principles of Policy CP18 and protect the integrity of this important green wedge.
Alexander lee	North of Breadsall Hill Top	Response-01439	School Capacity	Quite frankly it is becoming a joke to get a school place at a 1st or even 2nd choice. This will only make the problem worse.
Alexander lee	North of Breadsall Hill Top	Response-01439	Healthcare Facilities	Practically non-existent due to staffing shortages. Again this will make it worse.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Alexander lee	North of Breadsall Hill Top	Response-01439	Green Belt	Objection to Proposed Development ? Conflict with Policy CP18 (Green Wedges) I note that this application has been amended to exclude the development adjacent to the A61. Alexander lee	North of Breadsall Hill Top	Response-01439	Flooding / Drainage	Breadsall already floods. Adding two developments on top of a hill above Breadsall, which will massively increase water run off, will certainly exacerbate the flooding issues
Alexander Love	West of Sandiacre	Response-00626	Traffic Congestion	More congestion Rushy Lane
Alexander Love	West of Sandiacre	Response-00626	Wildlife / Biodiversity	Wildlife will be destroyed
Alexander Love	West of Sandiacre	Response-00626	School Capacity	Schools full already
Alexander Love	West of Sandiacre	Response-00626	Type of Housing	Social housing, already housing ex convicts at the old red lion pub
Alexander Love	West of Sandiacre	Response-00626	Green Belt	Building on the green belt
Alexander Love	West of Sandiacre	Response-00626	Landscape	Ruining scenery of sandiacre
Alex Cargill	North of Breadsall Hill Top	Response-01834	Healthcare Facilities	*GP surgeries .Already overloaded
Alex Cargill	North of Breadsall Hill Top	Response-01834	Flooding / Drainage	*Water and potentially sewage overload
Alex Cargill	North of Breadsall Hill Top	Response-01834	School Capacity	*Schools Further overloading
Alex Cargill	North of Breadsall Hill Top	Response-01834	Traffic Congestion	* further road congestion on Croft lane, and Brookside road Breadsall already gridlocked at rush hours
Alex Cargill	North of Breadsall Hill Top	Response-01834	Green Belt	*further intrusion on Green Belt
Alex Corns	West of Sandiacre	Response-01151	Wildlife / Biodiversity	The built environment is described as a major contributor to biodiversity loss and climate change due to the large volume of resources consumed by the construction industry. The built environment presents a serious threat to the protection of biodiversity if an urgent action towards a more sustainable built environment across the globe is not implemented. The Built Environment rarely considers the connection between the biodiversity and human wellbeing when delivering infrastructure and housing projects; little attention is paid to the integration of the relevant biodiversity strategies for sustainable urban development.
Alex Corns	West of Sandiacre	Response-01151	Bus Services	With potentially 180 houses being built, will the local bus service be required to put extra services on ? This again will add to compromised safety/traffic congestion as they already struggle to navigate around the streets of Sandiacre.
Alex Corns	West of Sandiacre	Response-01151	Healthcare Facilities	Healthcare facilities will of course be affected. Sandiacre has one small drs and dentist, which are already stretched as it is. Residents will struggle to get appointments with at least 500 extra residents needing appointments.
Alex Corns	West of Sandiacre	Response-01151	Number of Houses	Of course 180 houses is going to bring in potentially 700 odd people to Sandiacre. There are few facilities in the area, no major supermarket, small drs, small dentist, NO CHEMIST, hardly any public parking and very very little room for further development to expand, the schools are full to capacity. Many people already have to travel outside the area for schools.
Alex Corns	West of Sandiacre	Response-01151	Traffic Congestion	I believe traffic to be the biggest issue; far too many vehicles already, even more now with the new development at Stanton. The roads up to Larch Drive and very narrow, steep, with tight bends. You do have to drive mostly on the other side of the road on cloudside road and there is a blind bend which people park on so you are turning without knowing what is coming the other way. If you encounter vehicles larger than you average car, you have to mount the pavement to get through, not ideal at all for the amount of houses being proposed, i assume more people walking up and down the hill. When it snows everyone struggles to get down or up the hill. People end up abandoning their vehicles. It is very tight for the buses, they have to mount the pavement regularly to get past parked vehicles.
Alex Corns	West of Sandiacre	Response-01151	Road Safety	Road safety will be compromised. How on earth will all the construction traffic get upto the proposed development with the amount of traffic/parked vehicles already on the road and when the children are coming out/going to school i believe it is an accident waiting to happen.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Alex Collins	West of Sandiacre	Response-00946	Air Quality	The harmful impact of air pollution caused by diesel exhaust fumes on our health is well known. It's responsible for causing everything from respiratory problems to dementia and even certain types of cancers. Up to 55% of roadside traffic pollution is made of non-exhaust particles, with around 20% of that pollution coming from brake dust, these particles may be just as damaging to our lungs as exhaust fumes. Composed of iron particles, brake dust is caused by friction between the iron brake rotor grinding on the brake pads when a vehicle slows down. This brake dust is then worn away and becomes airborne. And as recent research shows, brake dust triggers inflammation in the lung cells with the same severity as diesel particles. By adding brake dust particles to macrophages ? the cells responsible for clearing the lungs of invading germs, waste and debris, nearly 185% increase in the cell's inflammatory activity. Brake dust prevents the immune cells from destroying Staphylococcus aureus ? a species of bacteria responsible for pneumonia. With 180 houses being built, lets say 1.5 per house. so at least over 300 cars and all the additional deliveries, construction traffic the air quality is of course going to suffer terribly and therefore peoples health.
Alex Lord	West of Sandiacre	Response-00946	Traffic Congestion	The roads around there already have parking issues and are tight to maneuver through [Stanton, Beech & Coronation] adding an entire housing estate that would have to pass through these roads, will increase congestion, and exceed the capacity for traffic on the road
Alex Lord	West of Sandiacre	Response-00946	Road Safety	Likewise: The roads around there already have parking issues and are tight to maneuver through [Stanton, Beech & Coronation] adding an entire housing estate that would have to pass through these roads, will increase the dangers of the road as people dart in and around parked cars, near a school, & school walking route.
Alex Lord	West of Sandiacre	Response-00946	Wildlife / Biodiversity	I would like to protect the wildlife that still lives here, as that wildlife reserve is the main livable area for a lot of birds/ hedgehogs & otters. It is lovely walk and an important part of our community, especially for dog walkers
Alex Lord	West of Sandiacre	Response-00946	Healthcare Facilities	Adam's House is already at capacity, and terrible to fit appointments in, and are clearly over worked. Adding new patients for the area, would see an increase health care issues for the locals, especially the elderly.
Alex Lord	West of Sandiacre	Response-00946	Green Belt	I would like to keep the greenbelt as it a nice break away form the built up area Sandiacre finds itself to be now. And it is important to our community.
Alex Lord	West of Sandiacre	Response-00946	Landscape	This Green Belt and Reserve are the only thing that separates us form the M1, and filters a lot of noise from it and stops us from seeing the industrial complex on the other side of the M1, it allows us to feel at peace in nature, taking that away would ruin the good feeling of staring at the trees. I bet it would also affect how much our houses cost on the market too.
Alex Lowe	West of Borrowwash	Response-00707	Traffic Congestion	Traffic around peak and school times along the A52 and Victoria Avenue is already incredibly high, especially with all cars parked outside houses. This will increase it
Alex Lowe	West of Borrowwash	Response-00707	Healthcare Facilities	We already struggle to get appointments at the Borrowwash park medical site and it's 2 minutes walk from our house. Capacity will not keep up
Alex Lowe	West of Borrowwash	Response-00707	Type of Housing	It's high density housing all in a very small space 40% allocation to affordable housing will decrease the value of the surrounding area
Alex Lowe	West of Borrowwash	Response-00707	Number of Houses	The number of houses planned to fit onto the small space of land would change the dynamic of the surrounding area
Alex Lowe	West of Borrowwash	Response-00707	Landscape	This will significantly reduce the one small part of non-residential land that a significant number of houses already look out on to. In turn reducing the value of the houses and surrounding area
Alex Lowe	West of Borrowwash	Response-00707	Flooding / Drainage	The land currently acts as a flood plain which stops a large amount of water flooding local houses. I would have major concerns if this was turned into a building site
Alex Pilcher	North of Breadsall Hill Top	Response-00792	Traffic Congestion	Already a bottleneck of traffic coming from Heanor direction towards the Meteor centre and vice versa and fast traffic coming off the main road onto another housing estate will only exacerbate the issue.
Alex Pilcher	North of Breadsall Hill Top	Response-00792	Wildlife / Biodiversity	Building even closer to the Greenway which has / did have an area of biodiversity not commonly found in other areas will only negatively impact the conservation.
Alice Cooper	West of Sandiacre	Response-01721	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Alice Cooper	West of Sandiacre	Response-01721	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Alice Cooper	West of Sandiacre	Response-01721	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Alice Cooper	West of Sandiacre	Response-01721	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Alice Cooper	West of Sandiacre	Response-01721	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Alice Cooper	West of Sandiacre	Response-01721	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Alice Cooper	West of Sandiacre	Response-01721	Type of Housing	High density housing is preposterous not in keeping with current housing.
Alice Cooper	West of Sandiacre	Response-01721	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Alice Cooper	West of Sandiacre	Response-01721	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Alice Cooper	West of Sandiacre	Response-01721	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Alice Fitzpatrick	West of Borrowwash	Response-00543	Traffic Congestion	For each house built there is potential for at least 2 x cars plus delivery vans, waste collectors etc etc. The access roads to the A52 (Victoria Avenue & Borrowwash Road) cannot cope with current traffic or parking outside houses with no off-street parking and I seriously worry about the impact of further traffic on the foundations and structure of the existing old houses. Pollution will be increased ? electric cars not withstanding! The surrounding roads notably the A52, Derby Road, Victoria Avenue and Borrowwash Road are already overloaded with far too much traffic, especially at peak times. Both Victoria Avenue and Borrowwash Road have schools which cause huge traffic problems already ? more homes will only increase this problem with potentially fatal results. The proposed exit onto Derby Road is a black spot with poor visibility as is access from Borrowwash Road onto the A52 ? more traffic cannot logistically and safely be accommodated. I am a cyclist as I chose not to drive where possible. The roads are already unsafe for cyclists so more traffic means more danger likewise to pedestrians and existing motorists. Victoria Avenue was built for horse and cart - it already has far too much heavy traffic such as car transporters, container lorries etc The old Bemrose site on the edge of Spondon is less than a mile from Borrowwash; the extensive development of this site has already increased traffic congestion in the area to an unacceptable level - we do not need any more vehicles!
Alice Fitzpatrick	West of Borrowwash	Response-00543	Road Safety	or each house built there is potential for at least 2 x cars plus delivery vans, waste collectors etc etc. The access roads to the A52 (Victoria Avenue & Borrowwash Road) cannot cope with current traffic or parking outside houses with no off-street parking and I seriously worry about the impact of further traffic on the foundations and structure of the existing old houses. Pollution will be increased ? electric cars not withstanding! The surrounding roads notably the A52, Derby Road, Victoria Avenue and Borrowwash Road are already overloaded with far too much traffic, especially at peak times. Both Victoria Avenue and Borrowwash Road have schools which cause huge traffic problems already ? more homes will only increase this problem with potentially fatal results. The proposed exit onto Derby Road is a black spot with poor visibility as is access from Borrowwash Road onto the A52 ? more traffic cannot logistically and safely be accommodated. I am a cyclist as I chose not to drive where possible. The roads are already unsafe for cyclists so more traffic means more danger likewise to pedestrians and existing motorists. Victoria Avenue was built for horse and cart - it already has far too much heavy traffic such as car transporters, container lorries etc
Alice Fitzpatrick	West of Borrowwash	Response-00543	Air Quality	The pre-mentioned traffic congestion is ultimately going to cause a serious reduction of the already poor air quality. It will be like living in a city which, if this development proceeds is exactly what we shall be. This is supposed to be a rural area but it is becoming increasingly urban!
Alice Fitzpatrick	West of Borrowwash	Response-00543	Wildlife / Biodiversity	The Green areas and farmland need to be protected. We need wildlife. We need pollinators. We need a clear demarcation between the city and the borough and ANY development on this land would mean Borrowwash feeling part of the sprawling Metropolis of Derby city! I studied Countryside Management at Broomfield but we are no longer living in the countryside - we have a responsibility to wildlife as without it we could not survive - it's their home too. The council should only be using Brown sites for more housing in the borough! There must be plenty of vacant properties in the towns that could be converted to housing - especially affordable housing!
Alice Fitzpatrick	West of Borrowwash	Response-00543	Bus Services	The bus services would be seriously challenged especially at school times. more buses would mean more traffic (objection raised under Traffic)
Alice Fitzpatrick	West of Borrowwash	Response-00543	School Capacity	The schools are at capacity already!
Alice Fitzpatrick	West of Borrowwash	Response-00543	Healthcare Facilities	The practice I use is at capacity. I can usually get an appointment eventually but any further load and this will not be the case. The other practice however this is not the case. Everyone I speak with who is registered complains that they cannot get through on the phone let alone get an appointment! This practice is causing more stress than it is easing! Ironic that the landowner for this proposed site is or was connected with this practice. As you can see above we have very limited healthcare facilities now and certainly cannot accommodate any further strain.
Alice Fitzpatrick	West of Borrowwash	Response-00543	Type of Housing	As I am objecting to the proposal I obviously do not want ANY housing on this green site!
Alice Fitzpatrick	West of Borrowwash	Response-00543	Number of Houses	No houses please.
Alice Fitzpatrick	West of Borrowwash	Response-00543	Green Belt	The Green areas and farmland need to be protected whatever designation they are given. We need wildlife. We need pollinators. We need a clear demarcation between the city and the borough and ANY development on this land would mean Borrowwash feeling part of the sprawling Metropolis of Derby city! One field, whether it is designated as parkland or whatever is NOT ENOUGH to divide Borrowwash from Spondon! The council should only be using Brown sites for more housing in the borough! There must be plenty of vacant properties in the towns that could be converted to housing - especially affordable housing!
Alice Fitzpatrick	West of Borrowwash	Response-00543	Landscape	The question of landscape is irrelevant - there should be no housing and the landscape should remain as it is!
Alice Fitzpatrick	West of Borrowwash	Response-00543	Flooding / Drainage	I am seriously concerned about drainage. We already experience flooding (Derby Road in particular) and more concrete means less drainage. What about sewage? Climate change has increased rainfall which has raised the water table. My garden flooded badly last year for the first time (I've lived here 30 years) - it was literally standing it water with no place for it to go. This also impacted on the road drains - Victoria Avenue can look like a canal at times.
Alice Fitzpatrick	West of Borrowwash	Response-00543	Other	(Application Reference: ERE/0914/0013 Location Land West of 23 to 195 Victoria Avenue & Land North of 12 to 72 Derby Road Borrowwash DE72 3HB) The above 2014 proposal went to full planning. I attended the above public meeting and the proposal was unanimously rejected ? not one member of the committee was in favour! This should stand indefinitely. I am sympathetic to the need for good housing however I have lived in this village all my life and I have witnessed the loss of many old houses, recreational sites and green areas ? I think Borrowwash has done enough. I am also curious to know why Ockbrook seems to have avoided being included in the revised plan?
Alice Ilett	West of Sandiacre	Response-00571	Traffic Congestion	The area is already heavily congested and I see the i4 get stuck regularly because of the parking/traffic and general lack of infrastructure for the traffic we already have.
Alice Ilett	West of Sandiacre	Response-00571	Road Safety	The roads are dangerous already especially around school times. More houses will lead to more chaos and I'm really concerned that it's only a matter of time before this leads to terrible accidents. I'm not sure how the lorries will get anywhere near the site with limits one side and a school the other. We already can't cope with the traffic we have in the area.
Alice Ilett	West of Sandiacre	Response-00571	Air Quality	The greenbelt is a well loved and respected area of Sandiacre we feel very lucky to have. Living close to the M1 this area acts as a green space and filter for the air quality and noise.
Alice Ilett	West of Sandiacre	Response-00571	Wildlife / Biodiversity	The greenbelt and stoney clouds in general is home to so much wildlife. Once it's gone we've lost it forever, I have beautiful memories of walking on stoney clouds to see the horses and wildlife as a child and it upsets me that my daughter won't have the same experience. There's so many alternative places to build but please please leave our beloved greenbelt alone. It means a lot to a lot of people.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Alice liett	West of Sandiacre	response-00571	Bus Services	The bus service generally around Sandiacre is great. However around this area of Sandiacre due to the bad traffic already can take a while. The parking and traffic in general- especially around school hours is dangerous and the bus can't always get through.
Alice liett	West of Sandiacre	response-00571	School Capacity	My daughter is too young to know too much about the school capacity. However building that amount of houses in a small area without any infrastructure improvements is concerning.
Alice liett	West of Sandiacre	response-00571	Healthcare Facilities	I had free dental throughout my pregnancy but couldn't get a NHS dentist anywhere in Nottingham. I complained to PALS and was told that they were unable to assist and are telling people to call 111 if they are in pain. I've called the local doctors for my daughter and been sent to sawley as they have no appointments when the appointment line opened at 8am and I get through at 8.04. We don't have a pharmacy and often struggle to get local healthcare. What infrastructure will be in place to support the new houses? We can't get healthcare now!
Alice liett	West of Sandiacre	response-00571	Type of Housing	We were told that the houses were being built on greenbelt as we were in need of social housing and there wasn't anywhere else. To then find out there was an alternative site behind Lidl that was proposed and they won't all be used for social housing. There's so many empty houses and alternatives that should be prioritised for this. The development isn't for "social housing needs" it's to make developers rich.
Alice liett	West of Sandiacre	response-00571	Number of Houses	180 houses on our greenbelt in such a small area is ludicrous. It's massively out of keeping with the rest of the area.
Alice liett	West of Sandiacre	response-00571	Green Belt	Greenbelt is cherished and used by locals. It's our green space to use and enjoy nature as it should be used. Once this is gone it cannot be reversed. This area is incredibly treasured by locals and visitors and the horse field for me contains many beautiful memories. It upsets me that I can't protect this for my daughter to enjoy.
Alice liett	West of Sandiacre	response-00571	Landscape	This area is beautiful landscape filled with greenery and nature. It's used and loved- please don't take this away from us and our future generations.
Alice liett	West of Sandiacre	response-00571	Flooding / Drainage	I live on Spencer avenue and my home has already been highlighted as a flood risk on the Sandiacre neighbourhood plan. I find it incredibly concerning that your looking at building houses on the boggy horse field that contains a lot of the water. There won't be anywhere for that water to go and my home is at the bottom of the hill putting us at an increased flood risk.
Alice liett	West of Sandiacre	response-00571	Other	Please reconsider this area, it's loved and used by locals and has been for generations. There's far more suitable options for social housing and many empty houses.
Alice Johnson	South of West Hallam	Response-00093	Traffic Congestion	traffic is already awful on this road during school pick up and drop off hours also at weekends when football tournaments are on
Alice Johnson	South of West Hallam	Response-00093	Road Safety	traffic is already awful on this road during school pick up and drop off hours also at weekends when football tournaments are on
Alice Johnson	South of West Hallam	Response-00093	School Capacity	i believe the school will struggle capacity wise with possibly adding 200 children
Alice Johnson	South of West Hallam	Response-00093	Healthcare Facilities	impossible to get an appt at the doctors as it is. never mind adding potentially 300-400 people into the surgeries
Ali Harrison	West of Sandiacre	Response-00947	Traffic Congestion	This proposed development is positioned off a very small access road that will become clogged with vehicles whilst being built and also after with residents cars
Ali Harrison	West of Sandiacre	response-00947	Wildlife / Biodiversity	Stoney Clouds is a beautiful nature reserve with a multitude of biodiversity and wildlife that needs protecting, not disturbed or destroyed by a huge building development!!
Ali Harrison	West of Sandiacre	response-00947	Green Belt	Green belt land should be protected and preserved for now and for future generations
Alison Bowley	South West of Draycott	Response-01174	Traffic Congestion	The A6005 Derby Rd is the main thoroughfare through the village from Borrowwash to Breaston. It carries a large volume of traffic, and the increased number of cars from a new housing estate will really impact both the safety and bring along environmental issues such as air pollution. ( Will all 190 households be able to afford electric vehicles?).
Alison Bowley	South West of Draycott	Response-01174	Road Safety	Derby road is known to have had accidents, including fatalities. Many vehicles speed into the village over the railway line. A road junction at that point will undoubtedly increase the accident rate. Sadly, as I type this I've just read that there has been a fatal road traffic accident in Draycott last evening, which involved the air ambulance having to land, i.e needing a green space. EBC should listen to the electorate and not destroy our beloved villages forever.
Alison Bowley	South West of Draycott	response-01174	Wildlife / Biodiversity	Any development will hugely impact the local wildlife and biodiversity which the area currently has. As I understand it, if developments go ahead, builders have to incorporate biodiversity conservation measures through Biodiversity Net Gain(BNG). Can you inform me of any such measures currently occurring in Derbyshire please? If our local green space is replaced by 190 houses, what will happen to the local wildlife? The Covid pandemic illustrated just how important our green spaces are in helping with mental well being.
Alison Bowley	South West of Draycott	response-01174	Healthcare Facilities	Draycott has little in the way of facilities, no doctor's surgery, no dental surgery. People have to travel to obtain the increasingly sought after NHS services. Potentially, there could be approximately another extra 800 people from Draycott alone requiring GP/Dental appointments. It is difficult enough now trying to obtain NHS care. I say this as a retired NHS worker, so speak from years of experience.
Alison Bowley	South West of Draycott	response-01174	Type of Housing	Interestingly, as I write this objection, there are 50 houses for sale in Draycott, 25 of them having been reduced in price, so obviously not selling. Would people want to buy a house in a known flood risk area? Affordable housing would certainly not be in keeping with the type of houses along Derby Rd. Draycott already has a large number of EMH social housing developments, including Wallis Close, The Green, St Mary's Court, Queen's Court , Walter St, Elvaston St and many houses/flats on Cowslip Meadow, Mapleton Rd and in Victoria Mill are let as social housing.
Alison Bowley	South West of Draycott	Response-01174	Number of Houses	The proposal by EBC To build 700 houses in Draycott, Borrowwash and Breaston will absolutely change the village's look and it will become combined with Borrowwash hugely impacting Draycott's rural identity.
Alison Bowley	South West of Draycott	response-01174	Green Belt	I wasn't aware during the general election that Green Belt land was under threat. (My vote would have been very different if I had). Existing brownfield sites (109 within EBC), must be prioritised for future housing needs. When people deliberately choose to settle permanently in a rural area they do not expect the rules to be literally torn up and Green Belt land destroyed.
Alison Bowley	South West of Draycott	Response-01174	Flooding / Drainage	Draycott's proposed building site is adjacent to the River Derwent's flood plain, as is well known to anyone who lives here knows and has seen all the surface flooding that occurs regularly each year. Where will all the excess surface water which will undoubtedly accrue, go to? Even more flooding down Lime Grove, Wine Rd, to begin with, I would suggest.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Alison Bowley	South West of Draycott	Response-01174	Other	Draycott has little in the way of facilities no large supermarket, just a few independent coffee shops, hairdressers, a newsagents and small corner shops. I attended the meeting held at Long Eaton Town Hall when the proposals first came to light in March. It was obvious that EBC had already pre-determined to limit the public consultation period to an absolute minimum. Our local Parish council, never mind the residents, were completely unaware of the magnitude of the proposed changes. I found out about that meeting through social media, but as you know, many people choose not to use, or do not have access to social media, so it appeared that EBC did not want to engage with the public, i.e. the people who had voted them in. The meeting itself was shameful, with party politics being played out in full. It has been a very rushed consultation process, especially considering two Bank Holidays have occurred during the 6 week period. I feel the whole so-called consultation process has been a box-ticking exercise by EBC. The proposals will undoubtedly get the green light despite how the majority of residents (VOTERS) feel. Many people have already witnessed workmen measuring up/surveying the proposed land and I know of a company who have already been approached regarding the site. The Government are going to railroad these proposals through no matter what and I strongly suspect I have wasted the last few weeks trying to find out facts.
Alison Bull	North of West Hallam	Response-00238	Traffic Congestion	Traffic is heavy enough already without adding to it
Alison Bull	North of West Hallam	Response-00238	Wildlife / Biodiversity	We need to provide more support to our wildlife and taking away an area such as this will be to theirs and our detriment
Alison Bull	North of West Hallam	Response-00238	Healthcare Facilities	Our healthcare facilities are stretched already without adding to their burden
Alison Bull	North of West Hallam	Response-00238	Green Belt	We should preserve our green areas such as this - they are something to be proud of and are becoming less and less unfortunately. If we continue to build on them the appeal of living in areas such as West Hallam will diminish
Alison Fletcher	South of West Hallam	Response-00198	Traffic Congestion	Beech Lane is already busy with increased traffic during peak times. Parking is hazardous at school start and finish times and further increased traffic will pose serious risk of incidents at this time.
Alison Fletcher	South of West Hallam	Response-00198	Road Safety	Risks particularly around school start and finish times with increased vehicular and pedestrian activity., access to the proposed site and road crossing from the school into the development.
Alison Fletcher	South of West Hallam	Response-00198	Wildlife / Biodiversity	Damage to the environment, open green space and the natural habitat of flora and fauna .
Alison Fletcher	South of West Hallam	Response-00198	Bus Services	If affordable housing is to be planned then improved bus services will be a requirement
Alison Fletcher	South of West Hallam	Response-00198	Green Belt	Open green spaces, countryside and village community are reasons why people choose to live in West Hallam.
Alison Milner	South of West Hallam	Response-00120	Traffic Congestion	The traffic situation is already terrible now, especially at school drop off and collection times. The infrastructure just isn't there to support this.
Alison Reynolds	South of West Hallam	Response-00243	Traffic Congestion	Congestion due to school and sports clubs already make it dangerous pulling out of Pavilion Court and driving along Beech lane
Alison Reynolds	South of West Hallam	Response-00243	Road Safety	Cars parked currently on Beech Lane and end of Pavilion Court already an issue without adding burden of additional housing and junction.
Alison Reynolds	South of West Hallam	Response-00243	School Capacity	Local schools cannot cope as it is, and with pressure from other local planned housing projects (e.g. in Kirk Hallam)
Alison Reynolds	South of West Hallam	Response-00243	Healthcare Facilities	Already cannot support current housing
Alison Reynolds	South of West Hallam	Response-00243	Number of Houses	Facilities already struggle to support current housing
Alison Reynolds	South of West Hallam	Response-00243	Green Belt	Taking away from area of natural beauty
Alison Stills	South of West Hallam	Response-01057	Road Safety	This area already causes safety issues for local residents with the current usage especially with the school traffic.
Alison Stills	South of West Hallam	Response-01057	Wildlife / Biodiversity	The area is home to deer and many other flora and fauna.
Alison Stills	South of West Hallam	Response-01057	Healthcare Facilities	Reducing the ability to access timely appointments for healthcare
Alison Stills	South of West Hallam	Response-01057	Number of Houses	90 houses could mean up to 2-3 times that of vehicles on the local roads straining the already neglected facilities.
Alison Stills	South of West Hallam	Response-01057	Green Belt	We need to maintain all green belt areas and use brown belt or rejuvenate empty properties
Alison Stills	South of West Hallam	Response-01057	Flooding/ Drainage	West Hallam already has continued issues with water maintenance and leaks
Alison Thirlwall	South West of Draycott	Response-01390	Traffic Congestion	The roads in and around the proposed housing development South-West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead. The A6005 (Derby Road) is an already busy road at peak times during the week and weekend which currently experiences over 3,861 cars a day. Adding 190 additional houses will cause significant congestion issues throughout the village and increase accidents within this overburdened area. The current road network between Borrowwash and Draycott, which includes Derby Road, Hopewell Road and Gypsy Lane, already struggles to handle current traffic demand let alone the potential for at least 190 more cars. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment.
Alison Thirlwall	South West of Draycott	Response-01390	Road Safety	The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents. The increased road and traffic to the area will have a detrimental impact for pedestrians using the Draycott canal and footpath recreations areas. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment.
Alison Thirlwall	South West of Draycott	Response-01390	Air Quality	The increased number of vehicles in the area being driven by the additional residents and deliveries once the work is complete will negatively affect the air quality, and as a result, people with respiratory issue will suffer.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Alison Thirlwall	South West of Draycott	response-01390	Wildlife / Biodiversity	The loss of the ecology in the area and the impact on the flora, fauna and wildlife is a serious concern as is the unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. It will result in the taking away of grazing/arable land and the disruption for the wildlife. These decisions are irreversible, and our residents will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites. I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance. and cause psychological distress for residents.
Alison Thirlwall	South West of Draycott	response-01390	Bus Services	Currently, the bus service is well used and will be insufficient to support the large number of additional residents. It is also expensive to use.
Alison Thirlwall	South West of Draycott	response-01390	Healthcare Facilities	Loss of open space and green spaces ? this is vital for our community's wellbeing. Primary School affected with noise and traffic. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would not benefit from the current sprawling Greenbelt views as it will be gone forever. It will have a detrimental effect on the wellbeing of people who enjoy the countryside, not to mention wildlife habitats, which are already under extreme pressure. The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the small villages surrounding it of Borrowwash and Breaston. It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of development on this green belt. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant lengths of footpaths that will be affected by the development of 190 houses on land south west of Draycott. Promoting healthy and safe communities the effect on our healthy lifestyles, especially our local health and well-being needs ? taking away our green space and facility would be detrimental to our community and our day to day needs would fall short by the loss of our valued facilities Open space and recreation. NPPF102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development To improve local accessibility to healthcare, educat
Alison Thirlwall	South West of Draycott	response-01390	Healthcare Facilities	ion, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health, including mental and emotional wellbeing.
Alison Thirlwall	South West of Draycott	response-01390	Type of Housing	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village's strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Alison Thirtwall	South West of Draycott	Response-01390	Number of Houses	The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. NPPF 73. States that the authority should identify, through the development plan and brownfield registers, land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC there are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. If the issue with brownfield sites is cost, this issue should be raised with the government and additional funding sought.
Alison Thirtwall	South West of Draycott	Response-01390	Green Belt	NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF 143. The Green Belt serves 5 purposes: 1) To stop urban sprawl 2) To stop towns merging 3) To safeguard from encroachment onto the countryside 4) To preserve special settings, character and history 5) To ensure the recycling of derelict or Brownfield land. The proposals being made by EBC to reclassify existing Green Belt land to the south west of Draycott does not meet any of these 5 purposes and actually looks to achieve the total opposite. Furthermore, no apparent attempt has been made by EBC to demonstrate why the 109 existing Brownfield sites within EBC have not been prioritised over this Green Belt land.
Alison Thirtwall	South West of Draycott	Response-01390	Landscape	Our local surroundings will become dominated by housing estates and will blight the local walks along the Public Right of Way which connect the village. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents who rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. Footpaths, the amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. This unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. These plans, plus the plans for National Grid to install super pylons only circa 600 meters away, means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. The development of the 190 homes will also have a significantly negative impact on the spatial openness of the area, impacting both the physical and geographical characteristics of the open land, which prevents urban sprawl and maintains the separation between settlements. It will overwhelmingly impact the natural and undeveloped nature of the Green Belt area. Protecting public rights of way and access, footpaths would be affected by this development.
Alison Thirtwall	South West of Draycott	Response-01390	Flooding / Drainage	Increase flooding risk to the area. The houses that back onto the land South-West of Draycott have experienced significant flooding and this development will further compound this flooding. There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact. When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built next to high to medium risk flood and risks compounding the flood risk in the area.
Alison Thirtwall	South West of Draycott	Response-01390	Other	Noise and Vibration consultation should be undertaken to consider impacts during construction on nearby noise sensitive properties and ongoing management of a solar farm and the impact of noise and disturbance. An environment noise assessment needs to be carried out, particularly for the residents directly opposite the site entrance; but also the whole route that the construction traffic will take. This passes through Draycott, Borrow ash and Beaston villages. Passing busy junctions, Doctor's surgeries, public car parks, Primary schools, local cricket clubs as well as numerous resident's homes.
Alison Vine	West of Borrowwash	Response-01813	Traffic Congestion	There will be a huge increase in traffic using roads that are already in poor condition. Victoria Avenue, leading to and from the A52, is already very busy and it is possible that the majority of cars from the Derby Road site will use this road. This will also affect the school crossing.
Alison Vine	West of Borrowwash	Response-01813	Number of Houses	The amenities in the village are already very busy and may not be able to support further housing.
Alison Vine	West of Borrowwash	Response-01813	Green Belt	It is also a concern that eventually all of this land will be built on and there will then be no distinction between Borrowwash and Spondon. Borrowwash should remain under Erewash and not become part of Derby city, which has been mentioned.
Alistair	South of West Hallam	Response-01138	Traffic Congestion	Already such a busy road and even more busy on school times
Alistair	South of West Hallam	Response-01138	Wildlife / Biodiversity	Building on fields
Alistair	South of West Hallam	Response-01138	School Capacity	Schools are already full and we are fighting for a spot
Alistair	North of West Hallam	Response-01139	Traffic Congestion	Busy T junction
Alistair	North of West Hallam	Response-01139	Wildlife / Biodiversity	Building on field, it's a farm land area, don't need horrendous new builds in the area
Alistair	North of West Hallam	Response-01139	Green Belt	Building on green belt and will build awful new builds that are crammed in with no gardens
Alistair	North of West Hallam	Response-01139	Landscape	Destroying the landscape

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Alistair Crawford	North of Breadsall Hill Top	Response-01404	Traffic Congestion	The traffic levels at Peak times have considerably increased following the recent housing developments on the A608, making it difficult and unsafe to enter onto the road in either direction. Any further traffic load will only exasperate this situation in both directions and through the village of breadsall a ?rat run? for traffic heading for the A38
Alistair Crawford	North of Breadsall Hill Top	Response-01404	Wildlife / Biodiversity	Green Belts are important for wildlife as they provide crucial habitats and act as corridors connecting various wildlife sites. As residents within the so-called ?safeguarded? area we witness the everyday environmental and ecological benefits. The area hosts and sustains a variety of species such as bats, nesting partridge, migrating swallows, stoats, owls, buzzards, foxes and is a regular hunting ground for the Derby peregrine falcons. They also offer green spaces for urban dwellers to enjoy nature using the various footpaths. Which if this development is allowed will turn footpaths in nature to a mere commute from one side of the urbanisation to the other. Enjoying country walks is a well documented supplement to mental health. Part of this Green Belts which has been ?safeguarded? for housing under this latest review has previously under government grants been segregated from cattle grazing land to provide a nature reserve with a wide range of species and floodplains which have been needed due to the added flood danger following the previous housing developments on the A608.
Alistair Crawford	North of Breadsall Hill Top	response-01404	School Capacity	I work in education and have led specialist schools across the East Midlands and also sit on a number of national groups advising DfE policy. Derby currently has a significant lack of specialist School places meaning that many learners with significant level of needs are placed outside of the city which is most importantly less than ideal for the young person and their family and secondly comes at a significant cost to the LA and therefore tax payer (please take time to look at High needs block funding and the significant deficits and debt in both Derby city and Derbyshire). Clearly no thought to additional provision is in place which means more young people / families will suffer and already huge (tens of millions of pounds) of debt will continue to spiral.
Alistair Crawford	North of Breadsall Hill Top	response-01404	Healthcare Facilities	There is no provision to support the extra housing in terms of schools, dentists, doctors, drainage and sewers. Previous reviews stated this land is unsuitable for residential building and was conducted with due diligence by the planning department and councillors who actually visited the site at the time. This has now been overturned by this latest amendment without the same due diligence or physical visits. The details on the maps published for consultation are incorrect and out of date in respect of access roads and complete development of the Manor Farm Development.
Alistair Crawford	North of Breadsall Hill Top	response-01404	Green Belt	The purpose of the green belt is to check the unrestricted sprawl of large built-up areas EBC previous reviews and assessment stated that the built extent of the City has a very clear edge along the northern periphery of Oakwood along Hill Top and Lime Lane. The Green Belt in this location helps to define the edge of the City and prevents sprawl to the north. The previous Green Belt Review also stated that the area immediately between Derby and the areas immediately north are generally the most important areas of Green Belt and that as such little development should be directed there. The Green Belt is therefore important in this location to prevent sprawl into the open countryside between the separate settlements such as the village of Breadsall As such, the Green Belt is performing this role in this location and I can see nothing that could have changed the result of the previous review, other than an opportunistic attempt to override clear protections. Housing should only be allowed in the Green Belt in ?exceptional circumstances? ie. when all brownfield sites have been exhausted. I have lived at Manor Farm Barns for the past 9 years which is in the area indicated safeguarded for future housing. The residents at Manor Farm Barns have had for 20 years restrictions imposed on them by way of permitted development rights being removed and the strict specifications of material used on the properties such as wooden windows, cast iron guttering etc. These restrictions were imposed for the reason being to protect the interest of the amenity of the green belt and keeping the character and visual impact of these buildings in the rural Green Belt. The view of this area and buildings within the landscape being considered very important. Which now will be completely obliterated by an uninspiring mass generic urban sprawl. The loss of this important amenity cannot be underestimated as it can be seen from afar and cannot be replicated once lost. The residents knowingly bought into this planning concept and have accepted the restrictions as being positive for the openness of the greenbelt amenity. Previous reviews state the ?safeguarding valued countryside? which ironically now states ?safeguarded land?on the map Shouldn't the latter have stated ?earmarked for future housing?. This I know has caused misunderstanding and apathy within the community.. Developers will always opt and put pressure on the more profitable greenbelt development, rather than more challenging brownfield sites such as the Stanton Steelworks. Your amended study states that the area is not performing well as a greenbelt, although to date it has prevented urban sprawl into the village of breadsall, sustained the openness of the rural amenity.
Alistair Crawford	North of Breadsall Hill Top	Response-01404	Other	The status of the six dwellings within the farm complex that only have ?right of way? to Mansfield Rd via the farm entrance. It is understood from the planning office that the farm will be unviable without the land and will be part of the complete development which at this stage, details are unknown. It is understood that the dwellings are not marked as remaining as per the other houses and businesses with their own access to Mansfield Road. Possible options which at this stage are unknown. a) If the dwellings remain and are encroached by the new development and with a change in terms of a rural access to Mansfield Rd the result will be a significant devaluation of the property. This devaluation will need to be addressed by adequate financial compensation. b) or compulsory purchase at market value based on property values before the development. Allowing the developer freedom to develop the properties or land as they wish. Also note this uncertainty regarding the future of the six dwellings is causing a considerable amount of mental stress. If these issues are not addressed I/we will be putting our case in person to the Planning Inspectorate.
A Malinski	West of Sandiacre	Response-00620	Traffic Congestion	Any additional traffic heading for the motor way would only impact further on the already congested and at times dangerous numbers. No additional routes showing the traffic flow and therefore none given for comment!
A Malinski	West of Sandiacre	Response-00620	Air Quality	Placing home so close to the motorway cannot be healthy! Also this band of land provides some buffer space for the existing home close by.
A Malinski	West of Sandiacre	Response-00620	Number of Houses	This number of homes in such a small area will impact on the local character and infrastructure. Schools, doctors, dentists to name but a few resources are already stretched and as I don't see any allowance for additional services I can only assume that the planner is placing the additional numbers on the existing services.
A Malinski	West of Sandiacre	Response-00620	Green Belt	Whilst I agree we need more homes for our families building on Green Belt should be the last resort!
Amanda Leech	West of Sandiacre	Response-01625	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Amanda Leech	West of Sandiacre	Response-01625	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Amanda Leech	West of Sandiacre	Response-01625	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Amanda Leech	West of Sandiacre	Response-01625	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Amanda Leech	West of Sandiacre	Response-01625	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Amanda Leech	West of Sandiacre	Response-01625	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Amanda Leech	West of Sandiacre	Response-01625	Type of Housing	High density housing is preposterous not in keeping with current housing.
Amanda Leech	West of Sandiacre	Response-01625	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Amanda Leech	West of Sandiacre	Response-01625	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Amanda Leech	West of Sandiacre	Response-01625	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Amber	North of Breadsall Hill Top	Response-00329	Healthcare Facilities	Cannot get appointment now in Oakwood let alone with two further huge developments!
Amber	North of Breadsall Hill Top	Response-00329	Other	Erewash council will be taking resource from Derby council paying residents! Outrageous.
Amber Hubbard	North of Breadsall Hill Top	Response-00845	Road Safety	Mansfield Rd is already much busier following the redrow and lime lane estates. This is adding more traffic without addressing congestion, road safety, reducing the speed limit, fencing off the existing play area from the road or additional crossing points
Amber Hubbard	North of Breadsall Hill Top	Response-00845	School Capacity	Local schools are already at capacity there is no plan to address this. Also no additional pre school capacity
Amber Hubbard	North of Breadsall Hill Top	Response-00845	Healthcare Facilities	Local GP practices are beyond capacity with long waits to even get an appointment. Additional development will only make this worse. Same applies to lack of dentist or pharmacy provision
Amber Hubbard	North of Breadsall Hill Top	Response-00845	Flooding / Drainage	Increased development will increase the flooding risk/ severity/ frequency on Breadsall village without providing any solution or support. The people in existing houses will be disproportionately affected while the newcomers are unlikely to see much impact
Amelia Loosemore	West of Sandiacre	Response-00537	Traffic Congestion	It will cause more traffic and congestion in the town, which is already a busy town
Amelia Loosemore	West of Sandiacre	Response-00537	Wildlife / Biodiversity	Building here will mean less green land. The nature needs protecting. Children need somewhere to play. This is a little bit of green area where I walk my dogs.
Amelia Loosemore	West of Sandiacre	Response-00537	Flooding / Drainage	More flooding because more houses are being built
Amy	South of West Hallam	Response-01031	Traffic Congestion	Already nowhere to park for school drop off and pick up leaving Beech lane a one lane road. Lots of congestion on Beech lane at school times.
Amy	South of West Hallam	Response-01031	Road Safety	Beech lane already heavily congested at school times and football matches at weekends.
Amy Brown	West of Borrowwash	Response-00514	Traffic Congestion	I live on Covent Garden Close and can safely say that traffic within Borrowwash as a whole can be rather daunting at the best of times. Whilst there is no planned road route from my street in particular, having further vehicles parking on this street to access a pedestrian access would cause such havoc. We already struggle twice a day during school hours due to people parking here for school pick up/drop off and sometimes we can't even access our own driveways due to this. Where a pedestrian route would go here, I can only imagine would be down the side of our home (number 3) in the corner which leaves us exposed from our driveway, garage and garden which I find very intruding. This is a small cul de sac in which we struggle already so putting more traffic through here would be catastrophic. I also feel that the heavy traffic from any building works/access would be very detrimental via Nottingham Road - again this is a thorough route for many, especially with the A52 close by and being in between schools and other local towns would cause further congestion. Victoria Avenue is a hazard as it is most of the day due to parked cars but when we have the high traffic time (school hours/work commutes) alongside traffic coming off the A52 especially when accidents have occurred, I can confidently say this will cause a lot of distress to a small village that is only just getting by.
Amy Brown	West of Borrowwash	Response-00514	Wildlife / Biodiversity	At the back of my home (Covent garden close) as you are aware is a very large green space with plenty of wildlife through it. Horses, foxes, birds, pheasants, cats. It's a lovely open space for wildlife and to take this away is simply cruel. We must have some green space left for our wildlife.
Amy Brown	West of Borrowwash	Response-00514	Healthcare Facilities	The 2 local doctor surgeries are bursting at the seams and many residents are finding it super difficult to even get through to a GP let alone see one. We are a village made up of many elderly residents alongside Ockbrook and some of these are not getting access to the care they need. People are moving surgeries purely due to the impact already being had on our surgeries and this isn't acceptable. To bring in a whole new neighbourhood of people to an area where these surgeries will take a further beating is madness. Whilst homing people is super important and one I advocate for, I don't believe taking away from current residents is a fair option. We also have a small dental surgery alongside an eye surgery which again would not cope with the impact of a wider community. Borrowwash is not in a position to be extended with the facilities we have available.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Amy Brown	West of Borrowwash	response-00514	Number of Houses	280 homes!!! Sounds lovely to house that many people but again, the impact on a small village is only going to have poor consequences. The time it would take you to build which in turn affects me in my own home is just frightening to say the least. I have dogs, a young child and their lives too affected. And that is just one household - think of how many others you will affect by installing all of these homes putting strain on our village, our facilities, our green space which we are entitled to have! 280 homes, so let's say 3 people on average in each home - that's nearly 1000 more people. We just don't have the room or capabilities.
Amy Brown	West of Borrowwash	response-00514	Green Belt	It seems you have chosen the area that disrupts the most people also - where the 'park' section is allocated would of been less disruption to others due to only being opposite a football ground. Why is this the case? If you really thought about the people surrounding these areas, you could have minimised this. You are practically wanting to build around my whole home, up to my back date and down the side of my home amongst many others.
Amy Brown	West of Borrowwash	response-00514	Flooding / Drainage	On said ground, during heavy downpour, this area does tend to get very boggy and flood. How will this be managed? Draycott, Borrowwash & surrounding areas all have the same type of issues. This is not managed as it is let alone adding however many houses on top. How does this affect local homes/businesses?
Amy Brown	West of Borrowwash	Response-00514	Other	As mentioned, I live at 3 Covent Garden Close and the impact of building works to the left of my home to the back would be hugely catastrophic. I work from home which entails working with vulnerable customers and with the level of traffic, noise, disruption and chaos it would bring would be super detrimental to my work alongside others. We chose to live here based on the green belt at the rear and the lack thereof now days and it's a peaceful environment - you would be destroying this. Not only that, we are a cul de sac. You cannot have pedestrians/further traffic up and down this street to gain access - we would suffer hugely due to this. Look at the street at 9am & 3pm daily and you'll get a rough idea. Now imagine all those extra people you house trying to get to that school or the doctors down the road - it will simply not work. You are effectively disrupting a lot of lives for some houses that have a better chance of being accepted elsewhere with much less disruption. You are interrupting a village, our facilities, our lives, our mental health and our green space.
Amy Cartwright	South of West Hallam	Response-01017	Traffic Congestion	The residential roads in this area are already overloaded with traffic both in the week and at weekends. It would be a safety issue and an accident waiting to happen should more traffic be using this road
Amy Cartwright	South of West Hallam	Response-01017	Road Safety	Due to the narrowness of the current road there is already congestion at weekends and on weekdays. This additional traffic will cause safety issues for all road users
Amy Cartwright	South of West Hallam	response-01017	Air Quality	West Hallam has some lovely green spaces, losing one of these spaces and putting more cars on the roads will have an impact on our air quality in the village.
Amy Cartwright	South of West Hallam	response-01017	Healthcare Facilities	The local drs surgeries are already at capacity with regular appointments taking at least 2 weeks to get in, another nearly 200 people trying to access this already stretched service is wrong
Amy Cray	West of Sandiacre	Response-01223	Air Quality	More cars equals yet more pollution
Amy Cray	West of Sandiacre	response-01223	Wildlife / Biodiversity	This is a nature reserve!
Amy Cray	West of Sandiacre	response-01223	Bus Services	There?s no bus?.
Amy Cray	West of Sandiacre	response-01223	School Capacity	My kids school is already oversubscribed
Amy Cray	West of Sandiacre	response-01223	Healthcare Facilities	Minimal GPs - it's 2 months for a phone call from a doctors currently!!
Amy Cray	West of Sandiacre	Response-01223	Green Belt	It should be kept gelesen but yet more houses stacked up everywhere
Amy Cray	West of Sandiacre	response-01223	Landscape	It will ruin the lovely landscape, walls and view as well as destroy habitats
Amy Cray	West of Sandiacre	Response-01223	Flooding / Drainage	It floods all over this area already!
Amy Govan	North of Breadsall Hill Top	Response-01419	Traffic Congestion	Durose country park is already heavily congested due to narrow roads and resident parking, I am concerned about adding extra traffic to this and the safety of other road users and pedestrians
Amy Govan	North of Breadsall Hill Top	Response-01419	Wildlife / Biodiversity	Objection to Proposed Development ? Conflict with Policy CP18 (Green Wedges) I note that this application has been amended to exclude the development adjacent to the A61. However I still wish to raise strong objections to the proposed development (both in its amended form and original form) on the grounds that it conflicts with Policy CP18 concerning Green Wedges. Although the site lies just outside the designated green belt surrounding Breadsall, it directly abuts existing woodland and open countryside, forming an important part of the green corridor along the Great Northern Greenway. The application site provides valuable habitat for wildlife and functions as an essential green buffer. Its loss would significantly reduce ecological connectivity and visual amenity, impacting local biodiversity and the quality of life for residents, walkers, and cyclists who currently use and enjoy this open space. The site is actively appreciated by the community as a visual break in built development and as a wildlife corridor connecting to other open areas. While the outline proposal includes the retention of woodland, there are serious concerns that development will increase pressure on these areas, potentially leading to degradation over time. I am concerned that the proposed development does not provide an adequate buffer to the woodland corridor and built development will sit too close and will detrimentally impact the existing woodland. There is no BNG Assessment listed in the application documents on the portal so it appears that it hasn't yet been done. How can there be any confidence that the proposal would be able to satisfy the statutory requirement to deliver 10% net gain. Any BNG delivery off site or through the purchase of biodiversity units elsewhere, dilutes the benefit of 10% net gain as the biodiversity is lost here in this locality and the significant environmental impact is here. Crucially, the proposed development sits adjacent to land at Breadsall recently released from the green belt, which Erewash Borough Council is considering for housing allocation. If both sites are developed, the cumulative impact will be substantial?leading to the loss of meaningful green space, erosion of the rural character of the Great Northern Greenway, and the elimination of the settlement gap between Breadsall and the wider Derby conurbation. For these reasons, I urge the Council to reject the proposal in order to uphold the principles of Policy CP18 and protect the integrity of this important green wedge.
Amy Govan	North of Breadsall Hill Top	response-01419	Number of Houses	Durose country park and Limetree court already add a significant number of houses to this area, there are a lack of local amenities already and I would have severe concerns about adding more houses to this without adding any extra amenities

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Amy Skinner	West of Sandiacre	Response-01447	Traffic Congestion	Traffic in and around the Sandiacre estates up to and including the roads surrounding the green belt land often suffer congestion. Cars are often parked along narrow streets that make it difficult for traffic to get through. This congestion would only get worse with the proposed changes, both during the work being carried out (heavy vehicles travelling to and from the site continually throughout the day) and once the development is complete. Even if each of the 180 households owned just one car that is still far too many to be travelling via Cloudside and Larch Drive. It is folly. This congestion would negatively impact both the residents already living in the area and those that would potentially be moving to the development. It is a logistical nightmare and I fear the consequences should any emergency vehicles need to gain access to any of the affected roads.
Amy Skinner	West of Sandiacre	Response-01447	Road Safety	Increased traffic congestion both during and after the works would significantly increase the safety of the roads in the area especially for the many children and elderly who live here. Currently some of the streets such as Larch Drive are relatively quiet but this would change dramatically with heavy vehicles going in and out of the site. This would most certainly make the roads less safe.
Amy Skinner	West of Sandiacre	Response-01447	Air Quality	Due to the proximity to the M1 many of the roads/streets around the green belt land already suffer with poor air quality due to the traffic pollution. The green belt and Stoney Clouds at least act as a buffer against this but by destroying the green belt, turning it into grey and building many houses there would only add to the poor air quality. The dust and dirt that would result from the works in addition to the massively increased flow of traffic would be highly detrimental to residents and visitors. Even moreso for those with existing respiratory conditions. During the Covid pandemic we were encouraged to make the most of green belt areas, to improve our mental and physical health and to get fresh air, being close to nature. This land needs to be preserved for the sake of the people here now and the generations to come.
Amy Skinner	West of Sandiacre	Response-01447	Wildlife / Biodiversity	The green belt land and the adjacent Stoney Clouds nature reserve is home to a plethora of native flora and fauna. It is a sanctuary for many species of birds and mammals such as buzzards, kestrels, foxes, badgers, moles, shrews and rabbits not to mention the countless, vital, pollinators that thrive there. Even if the proposed plans didn't directly impinge upon Stoney Clouds itself, there is no way that the works wouldn't have a hugely negative impact on the wildlife and biodiversity in Stoney Clouds and the green belt area. The noise, disruption and destruction of natural habitats would be catastrophic for the many animals that call the land their home. There are far too few green spaces left as it is. Furthermore, it would be detrimental to the people that regularly visit in order to be around nature. It is good for our mental health and well-being.
Amy Skinner	West of Sandiacre	Response-01447	Bus Services	The bus services that operate in and around Sandiacre estates already struggle at times to navigate through narrow roads which have cars parked either side. This makes the running of the service difficult and in fact it simply doesn't serve some streets after 7pm due to the lack of road access. I firmly believe that the works and the huge increase in traffic will make this service nigh on impossible to operate as frequently as it does, which would thus negatively impact the many many people who are dependent upon it. If the bus was no longer able to serve the estates at all due to the increased congestion many people would struggle as it is a long walk into Sandiacre town, one which for the elderly and those with reduced mobility would be unable to undertake.
Amy Skinner	West of Sandiacre	Response-01447	School Capacity	Schools in the area are, I believe at or close to full capacity and potential residents would struggle to find places for their children at the local schools.
Amy Skinner	West of Sandiacre	Response-01447	Healthcare Facilities	There are very few healthcare facilities in Sandiacre itself, with the only pharmacy having recently closed. GP surgeries and dentists are at full capacity and even further afield in Stapleford you would be hard pressed to be able to register with any. Furthermore, it is already often extremely difficult to get a GP appointment and I fear this would only get worse with 180+ new households who would be needing to use these facilities.
Amy Skinner	West of Sandiacre	Response-01447	Number of Houses	The proposal of 180 houses for this space is ridiculous - the infrastructure simply isn't there and there is not enough space for vehicular access. There is not enough room to house that many people especially when the only access into the site is at the end of a very small drive.
Amy Skinner	West of Sandiacre	Response-01447	Green Belt	Green belt land should be protected at all costs. There are already existing brown and grey lands that would be far more suitable for this proposal. Green belt land is necessary for the sake of the environment - both for the wildlife and for the people that reside here. It is beneficial to our physical, mental and emotional health and this became much more apparent during the Covid pandemic.
Amy Skinner	West of Sandiacre	Response-01447	Flooding / Drainage	The site is at risk of flooding due to poor drainage.
Anastasia Anthony	West of Sandiacre	Response-01865	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic. NPPF Paragraph 11: Development should be refused if there is an impact on highway safety. A52 + B5010 get backed up as it is.
Anastasia Anthony	West of Sandiacre	Response-01865	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions. Highways Act 1980 Section 41: Imposes duty on local authorities to maintain safety. With the primary school + post office it is difficult and dangerous as it is, nevermind having to accommodate an additional 100+ vehicles.
Anastasia Anthony	West of Sandiacre	Response-01865	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour. More traffic = more NO2 = poor air quality, especially if we no longer have a greenbelt to mitigate this. Poor air quality contradicts Environment Act (2021) + NPPF para. 186
Anastasia Anthony	West of Sandiacre	Response-01865	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat. Presence of bluebells in the wood warrants a classification of 'ancient' (Gloves et al 2009). Would probably frighten Stoney Clouds wildlife away.
Anastasia Anthony	West of Sandiacre	Response-01865	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Anastasia Anthony	West of Sandiacre	Response-01865	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available. Town + Country Planning Act 1990 indicates planning authorities must ensure developments are supported by adequate infrastructures. GPs, Dentists are already overcrowded but the public hasn't been presented with plans to combat this.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Anastasia Anthony	West of Sandiacre	Response-01985	Type of Housing	High density housing is preposterous not in keeping with current housing.
Anastasia Anthony	West of Sandiacre	Response-01985	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future. NPPF Para. 60-62 warrants a Strategic Housing Market Assessment (SHMA). Will the houses meet the needs of our community? What impact will they have on crime + cultural identity?
Anastasia Anthony	West of Sandiacre	Response-01985	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites. The Countryside Charity (in regard to Erewash Core Strategy Review) contends more robust Green Belt Assessments are necessary prior to building (via Google). Planning + Compulsory Purchases Act 2004 requires local plans to be justified, effective + consistent with National Policy. Most up-to-date evidence has been produced by residents, not the council. Ultimately, are circumstances exceptional enough to justify housing, when other sites are available? I would argue not. (NPPF para. 141). Sandiacre Cloudside Conservation Area was designated in 1984 to protect the landscape. The proposed building site is a historic + visual backdrop to the town, something our predecessors shared a sentiment with when giving it greenbelt status. On 2%. of new addresses in 2021/22 were built on greenbelt land and it would be unfortunate to see Erewash be an exception to the nationwide commitment in preventing the urban sprawl. 1 Ministry of Housing 2023-2024 Statistical Release Accessed via gov.uk
Anastasia Anthony	West of Sandiacre	Response-01985	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out. According to Forestry Commission (2022) Natural England wants a 15m buffer between development + woodland. National Planning Policy Framework: section 16 paragraph 202 mandates authorities to record an advanced knowledge of heritage assets.
Anastasia Anthony	West of Sandiacre	Response-01985	Flooding / Drainage	No ground to absorb water, so it'll probably eventually flood the M1.
Anastasia Anthony	West of Sandiacre	Response-01985	School Capacity	Town + Country Planning Act 1990 indicates planning authorities must ensure developments are supported by adequate infrastructures. Schools are already overcrowded but the public hasn't been presented with plans to combat this.
Andrea Cochrane	South of West Hallam	Response-01485	Traffic Congestion	The road is already at full capacity, especially during school drop-off/collection times. Trying to leave Hallam Way and travel along Beech Lane is nearly impossible at the moment without adding in extra vehicles from the proposed development and another junction opposite the school. If you add in to this the delivery vehicles heading into the estate at these times, nobody will be able to move. What then will happen if an emergency vehicle needs to get into the estate?
Andrea Cochrane	South of West Hallam	Response-01485	Road Safety	Siting another junction so close to the school will not improve safety for parents/carers and pupils accessing Scargill School. Or for other road users needing to leave the estate. Visibility at school drop off and pick up times is already difficult due to parked cars and adding further vehicles plus another road junction will make the situation more hazardous. I have already seen many near misses over recent years .
Andrea Cochrane	South of West Hallam	Response-01485	Air Quality	Adding extra vehicles onto already busy roads will impact the air quality especially around the school. Scargill School has a wonderful new sensory garden and play area for pupils to improve the health and wellbeing of everyone and especially those with SEND. Also, Beech Lane recreation ground is extensively used for football training and matches. Current thinking is to encourage more time outdoors to improve mental health and well-being. Sadly, this will not be achieved if this development is allowed to go ahead. In addition, research has shown that pollutants from vehicles adversely impact health and have led to an increase in childhood asthma.
Andrea Cochrane	South of West Hallam	Response-01485	Wildlife / Biodiversity	The proposed development site contains a number of mature trees, hedgerows and open space. These together act as a buffer zone between the estate and open country and house an array of different birds and wildlife. I have seen bats in the area, and tawny owls, plus foxes, rabbits and badgers. If these are lost due to development, another valuable learning resource will disappear.
Andrea Cochrane	South of West Hallam	Response-01485	Bus Services	The current bus service is very limited. There are two buses an hour during the daytime (approx 6am to 6pm) on weekdays. Evening services are almost non-existent. At weekends, there is a limited service during the daytime on Saturdays and hardly anything at all on a Sunday.
Andrea Cochrane	South of West Hallam	Response-01485	School Capacity	The primary school is currently at capacity and will struggle to cope with an influx of new pupils. Should the development go ahead, this will either mean adding to the school buildings and thereby losing the play areas on the school grounds which benefit pupils, or families having to take children into Kirk Hallam or Ilkeston to other schools with space. This will add further to the road congestion and pollution.
Andrea Cochrane	South of West Hallam	Response-01485	Healthcare Facilities	The current healthcare services in the village are too limited to meet the needs of a proposed large influx of new patients. If the proposed development goes ahead, there will be further delays for anyone seeking medical treatment who is unable to travel outside West Hallam. Or alternatively, it will mean new residents having to travel for treatment, and so adding to the congestion on the roads.
Andrea Cochrane	South of West Hallam	Response-01485	Number of Houses	Looking at the area for the proposed development and the number of houses intended to be built on the site, I think the density will be too great for the size of plot. This will mean limited space for gardens and open areas around the houses to allow for residents' enjoyment of their property and also to allow for surface water run off. There is likely to be limited parking space per plot so adding to congestion on the site and on adjoining roads. thereby adding to the traffic issues mentioned before.
Andrea Cochrane	South of West Hallam	Response-01485	Flooding / Drainage	During periods of heavy rainfall, Beech Lane suffers from surface water flooding and this is eased through runoff onto the proposed development area. If this land is built on, this runoff capacity will be lost. In addition, paving over more land will only intensify surface water flooding further down the slope onto the Station Road/ Cat and Fiddle junction.
Andrea Lambert	Acorn Way, Derby	Response-00357	Traffic Congestion	Acorn Way suffers enough congestion without building more houses and causing more congestion
Andrea Lambert	Acorn Way, Derby	Response-00357	Road Safety	Acorn Way has regular collisions without more traffic having to use the road to exit Oakwood
Andrea Lambert	Acorn Way, Derby	Response-00357	Air Quality	Added traffic will add to pollution from the number of vehicles using it
Andrea Lambert	Acorn Way, Derby	Response-00357	Wildlife / Biodiversity	Will have an adverse effect on the wildlife
Andrea Lambert	Acorn Way, Derby	Response-00357	Bus Services	Oakwood has limited bus services and the building of more houses will make the matter worse.
Andrea Lambert	Acorn Way, Derby	Response-00357	School Capacity	The current school in Oakwood can't cope with the residents it has now and parent have to travel to get children in schools out of the area. More houses will make the matter worse
Andrea Lambert	Acorn Way, Derby	Response-00357	Healthcare Facilities	Not enough health care facilities without adding to the problem
Andrea Lambert	Acorn Way, Derby	Response-00357	Green Belt	If housing keeps being built we'll have no green belt left to enjoy

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Andrea Lambert	Acorn Way, Derby	Response-00357	Flooding / Drainage	Acorn Way is prone to flooding in heavy rain and the road has been closed due to this on numerous occasions. Building more houses and all the extra traffic that will create will make getting out of Oakwood a nightmare
Andrea Reed	South of West Hallam	Response-00123	Traffic Congestion	Beech lane is terrible at school pick up time and when football is on as it is
			Road Safety	There are multiple cars parked on beech lane as it is at school pick up and drop off and when they play football it is extremely dangerous already
Andrea R Rowley	North of Breadsall Hill Top	Response-01230	Traffic Congestion	This development will affect Breadsall Village and surrounding roads. The Lime Lane junction onto the A608 and Brookside Road is a dangerous junction, and there have been several fatalities here since the initial application to build more houses in the area. Breadsall Village has seen a huge increase of traffic coming through the village during the day and night as a result of housing development along the Mansfield Road and Breadsall Hilltop area. The village 30mph speed limit is frequently not adhered to by drivers passing through, and we have had an increased number of road traffic accidents, some of which have required emergency services presence. Information about these accidents can be obtained from the Local Breadsall Parish Council. It is already very difficult (especially during peak rush hour times) to get out of Croft Lane on to the A61. At the very least before any further housing development is considered, a new road should be built from the Mansfield Road A608 down to the Morrisons Island on to the A61 to try and stop Breadsall Village being the rat run from the A38/A61 to the Mansfield Road area and beyond
Andrea R Rowley	North of Breadsall Hill Top	Response-01230	Road Safety	See comments on Traffic congestion. At peak times it is very difficult and unsafe to venture out from Croft Lane on to the A61. Traffic is backed up on Croft Lane to the village triangle near to Damsons coffee shop. It's not just the extra cars per household, its delivery vans and houses having work done on their property that adds to the overall traffic volume in the proposed housing development site and the surrounding roads affected by the development.
Andrea R Rowley	North of Breadsall Hill Top	Response-01230	Wildlife / Biodiversity	This sizeable housing development will destroy part of the Green Wedge and cause disruption to nature and woodland areas. It is important to preserve these areas as once they are destroyed and built upon, they are never replaced and wildlife habitats are lost.
Andrea R Rowley	North of Breadsall Hill Top	Response-01230	School Capacity	Existing education resources and facilities are already very over stretched. What plans are in place to increase capacity to accommodate the extra people coming into the area?
Andrea R Rowley	North of Breadsall Hill Top	Response-01230	Healthcare Facilities	Existing healthcare facilities are already very over stretched. What plans are in place to increase capacity to accommodate the extra people coming into the area?
Andrea R Rowley	North of Breadsall Hill Top	Response-01230	Green Belt	See comment on wildlife. Brown and grey sites MUST be built on first before greenbelt areas.
Andrea R Rowley	North of Breadsall Hill Top	Response-01230	Flooding / Drainage	Flood Risk & Sewage - The proposed development will increase the water surface drainage coming down into the Breadsall Village. The village already suffers from flooding and the devastating effects on households when this occurs. The ancient culverts are not able to take the strain of excess water coming down Brookside Road hill now, let alone when an extra houses are added. above the village. Breadsall village will be directly downstream from this housing development. There is already a considerable constant water flow from the up hill fields of this area down on to Croft Lane Road and has been getting worse as more houses are added. This water flow is all year round not just in heavy rainfall times. The sewage pipes that run under the road are ancient and have little capacity to take an increase in volume. This fact was established a few years ago during Breadsall Village Flood Defences investigations and discussions.
Andrea R Rowley	North of Breadsall Hill Top	Response-01230	Other	Broadband is a necessity of modern life. Breadsall is fortunate to have an Open Reach Exchange on Rectory Lane however we do not have access to fibre to the premises (FTTP). Priority for fibre installation always seems to be given to newly built housing development sites with little consideration given to enhance the services for existing residents.
Andrea Valentine	East of Breaston	Response-01525	Air Quality	Derbyshire's air quality is already poorer than many other parts of the UK and increasing the amount of homes on greenbelt land will only add to this. More, not less, green spaces are needed in order to fight the air pollution, therefore any new homes being considered should be built on brownfield land only.
Andrea Valentine	East of Breaston	Response-01525	Wildlife / Biodiversity	The destruction of natural habitats in this area would contribute to habitat loss & environmental degradation. Green Belt land plays a crucial role in flood prevention, air quality, and local biodiversity, all of which would be compromised by unnecessary urban sprawl.
Andrea Valentine	East of Breaston	Response-01525	Bus Services	Building on greenbelt land will lead to urban sprawl? high carbon development, car-dependent development. What we really need is compact cities, where people can live near to amenities, where older people and people on low incomes are not isolated by lack of public transport, where teenagers and even younger children can get about independently, where we are not all choked by pollution, congestion and facing constant noise and road danger.
Andrea Valentine	East of Breaston	Response-01525	Green Belt	The fifth purpose of the greenbelt policy is ?to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.? so rather than developing on our greenfield land, regenerating pre-used land and buildings, often left neglected and decaying anyway, should be the priority.
Andrea Valentine	East of Breaston	Response-01525	Landscape	Many people value the countryside and with mental health and welfare being one of this generations top priorities the need to plant forests, to tackle climate change, to grow food locally to cities, to help manage rainfall, to moderate the urban heat island effect, to provide habitat to address species decline is required more than ever.
Andrea Valentine	East of Breaston	Response-01525	Flooding / Drainage	The proposed site in Breaston is already prone to flooding and although it may be intended to build flood defences there is no guarantee these will be adequately effective. Given that new homes built since 2009 are not covered by the Flood Re insurance scheme this would leave the new homeowners and tenants at risk.
Andrea wightman	North of Breadsall Hill Top	Response-00354	Wildlife / Biodiversity	It is absolutely disgusting to be building more houses in this area, the wildlife will be hugely affected.
Andrea wightman	North of Breadsall Hill Top	Response-00354	School Capacity	So what schools are all of these children supposed to go to? All schools in the area, with the exception of da Vinci, are full
Andrea wightman	North of Breadsall Hill Top	Response-00354	Healthcare Facilities	Where are the healthcare facilities ?? This is an erewash development and it appears the facilities of Oakwood are expected to be used. It is extremely difficult to get access to the local doctors in Oakwood, a few hundred more people trying to access an already stretched service is not acceptable. A new doctors, dentist and pharmacy are needed as the existing ones are not able to cope with more demand
Andrea wightman	North of Breadsall Hill Top	Response-00354	Flooding / Drainage	Breadsall village is already prone to flooding, these properties will make the flooding worse
Andrea wightman	North of Breadsall Hill Top	Response-00354	Other	I strongly object to Erewash bolting a housing estate onto Oakwood, Derby city.. It is very convenient to have the estate away from the facilities in Erewash and expect Oakwood to cater for all of the extra people, children, traffic..
Andrea wightman	Acorn Way, Derby	Response-00358	Traffic Congestion	Acorn Way is already extremely busy, especially at the start and end of the day. It will be dangerous to have hundreds more vehicles using the road.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Andrea Wightman	Acorn Way, Derby	Response-00358	Road Safety	More traffic on acorn way will be extremely dangerous. There are no footpaths so pedestrians will have to walk on a grass verge that is not maintained or along the edge of a 60mph busy road
Andrea Wightman	Acorn Way, Derby	Response-00358	School Capacity	Schools are full, what schools will the children go to, Heanor gate, Kirk Hallam, Stanley Village Primary etc... no there will be an expectation that the children are educated in Derby, our schools are full..
Andrea Wightman	Acorn Way, Derby	Response-00358	Healthcare Facilities	There are no suitable local health services. Dr's are impossible to access without over 1000 more patients. There is no NHS dentist available.
Andrea Wightman	Acorn Way, Derby	Response-00358	Number of Houses	A ridiculous amount of houses, that are not needed in this area
Andrea Wightman	Acorn Way, Derby	Response-00358	Flooding / Drainage	Flooding on Acorn Way has got worse over the years. The road has been closed on numerous occasions over the past couple of years and with this development will only get worse
Andrew and Jane Gilmour	South West of Draycott	Response-01329	Traffic Congestion	The Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopwell Road which cannot take the current volume of traffic. A transport assessment needs to be undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This will have to travel through Draycott and Borrowash, using busy junctions, passing by busy shopping centres, public car parks, primary schools, as well as numerous residents' homes. Noise from the construction (including vehicle movements) and operational phases of the proposed development need to be adequately addressed. The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 cars per day, Gypsy Lane and Hopwell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 vehicles if this development goes ahead. The A6005 (Derby Road) is an already busy road at peak times during the week and weekend which currently experiences over 3,861 cars a day. Adding 190 additional houses will cause significant congestion issues throughout the village and increase accidents within this overburdened area. The current road network between Borrowash and Draycott, which includes Derby Road, Hopwell Road and Gypsy Lane, already struggles to handle current traffic demand let alone the potential for at least 190 more vehicles. The increased road traffic to the area will have a detrimental impact on the local environment when considering the close proximity of Green Belt land, the River Derwent and the partially restored canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align with the NPPF sustainable location assessment. "NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of vehicles. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowash. This is totally unrealistic and the current roads would not cope with the volume of traffic." NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served
Andrew and Jane Gilmour	South West of Draycott	Response-01329	Traffic Congestion	ved by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowash. This is totally unrealistic and the current roads would not cope with the volume of traffic.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Andrew and Jane Gilmour	South West of Draycott	response-01329	Road Safety	The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean at least an additional c.380 vehicles in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents considering the proposed siting of a pedestrian crossing near the development access road at the start of the 30mph zone on Derby Road A6005. A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional vehicles will further compound this danger and increase likely road traffic accidents. "NPPF 109. States that transport issues should be considered from the earliest stages of plan-making and development proposals, using a vision-led approach to identify transport solutions that deliver well-designed, sustainable and popular places. This should involve identifying, assessing and taking into account the environmental impacts of traffic and transport infrastructure ? including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains. Yet no traffic survey has been undertaken. If it had it would have highlighted that along A6005 (Derby Road) and exactly adjacent the proposed development safety issues would arise. The peak traffic hours on Fridays are between 4 PM and 6 PM, with the highest average vehicle count observed from 4 PM to 5 PM. The average number of vehicles per day in the traffic data is approximately 3,861. The highest recorded traffic day in the data is June 11, 2023, with a total of 4,779 vehicles. The maximum speed recorded in the traffic data is 106 mph and the number of times 70 mph is exceeded in the traffic data is 174. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the River Derwent and the partially restored canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment. NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of vehicles. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic. NPPF 89. States that planning policies and decisions should recognise that sites meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure
Andrew and Jane Gilmour	South West of Draycott	response-01329	Road Safety	that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic. It has been proposed that a pedestrian crossing should be put in place linking this proposed development to the bus route going into Nottingham. Such a pedestrian crossing would be an accident waiting to happen, visibility as you come into Draycott from Borrowwash is limited by two road bridges crossing the canal and railway lines and has been pointed out elsewhere in the document the speed limit is routinely ignored by many.
Andrew and Jane Gilmour	South West of Draycott	response-01329	Bus Services	The Indigo, the bus service serving Draycott is often full even outside the normal "rush-hours". This is a service widely used by many of the more elderly population of Draycott and provides their only access to shopping and healthcare appointments as well as social engagements. The addition of people living in this proposed development would severely affect the availability of such services. The bus stop proposed for use by the new development does not have a bus shelter and the pavement in place is single track and the queuing of more than one or two people would prevent the route of people walking into Draycott to either shops or schools,
Andrew and Jane Gilmour	South West of Draycott	response-01329	Healthcare Facilities	The proposed development of 580 houses across Draycott, Borrowwash and Breaston will have a significant effect on the access to Doctors surgery appointments. There are 3 surgeries serving these areas that might have to accommodate a further 1000 to 1500 patients with car parking and access already an issue. This is without taking into account further development taking place on the four safeguarded areas.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Andrew and Jane Gilmour	South West of Draycott	Response-01329	Green Belt	NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. "NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels of land as identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. " It was previously thought that the land of the former Stanton Ironworks was taken out of the EBCs core strategy due to contamination that rendered the site unusable. Yet a recent Freedom of Information (FOI) request which was answered by EBC has advised the site is indeed to be utilised and has been allocated 1000 houses. Can EBC please advise of the status of the Stanton Ironworks sites and if this is included within the Core Strategy and how the planned 1000 houses impacts the Greenbelt review and use of Greenbelt land. NPPF 153. "Very Special Circumstances? have to be proven i.e. all other options exhausted to classify this application as a ?very special circumstance?. We cannot see any evidence that this has taken place. Therefore, it is an inappropriate application and proposal and does not demonstrate exceptional circumstances. NPPF 156. The proposed development of 190 houses to the land south west of Draycott when located in the Green Belt, must demonstrate exceptional circumstances and are inappropriate unless very special cir
Andrew and Jane Gilmour	South West of Draycott	Response-01329	Green Belt	cumstances can be demonstrated.
Andrew and Jane Gilmour	South West of Draycott	Response-01329	Flooding / Drainage	It would seem that EBC have had little if any communication with Severn Trent. the gardens in Lime Grove adjacent to the proposed development annually flood leading to water ingress to gardens and potentially the drainage system, The field where the proposed development is planned also floods annually leading to the farmer only using this field for grazing for 6 months of the year. We can see on national media the threat of global warming will increase flooding risk. The houses on Lime Grove that back onto the land South West of Draycott have experienced significant flooding, the River Derwent lies just a couple of hundred metres away and land to the north of it borders the proposed development site and currently ranks as flood zone risk level 2/3. Given there is already a risk of flooding in the area the removal of soil, trees and plants will increase the risk of floods to other areas in the local community. Although the proposed development falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issues. "NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout the year with many residents on Lime Grove not able to obtain flood risk damage cover as a consequence. NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. Environment Agency Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should
Andrew and Jane Gilmour	South West of Draycott	Response-01329	Flooding / Drainage	not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone 3.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Andrew and Jane Calmou	South West of Draycott	Response-01193	Other	I strongly object to the consultation process which as best can be described as limited and not fully transparent when engaging with the local community. EBC has only given local residents 6 weeks to submit objections to what is an incredibly important change to the original Local Plan and Core Strategy. This is simply not enough time for residents to review and analyse the magnitude of information and formulate objections, this when significant information is also missing which includes the master plan for the land south west of Draycott. The manner in which EBC has undertaken the 6 week consultation is not inclusive and does not allow non internet users to be aware of the consultation and changes to the Core Strategy. The average age within Draycott and Church Wilne Parish is 58 and there is a large proportion of the community that was not aware of this important change. We fully object to the whole process and in particular the 6 week consultation period. I do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenities. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being approx. 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land.
Andrew and Julie Douglas	South of West Hallam	Response-00146	Traffic Congestion	Beech Lane is very congested already. Cars mount the pavement to get by parked cars. At school time and when there is football on the park the lane virtually comes to a stand still. Buses have to wait for cars to move before continuing their journey. Children have to cross the road between parked cars
Andrew and Julie Douglas	South of West Hallam	Response-00146	Road Safety	The site is opposite the school entrance of which is already very congested. This will be very dangerous as this is only a Lane
Andrew and Julie Douglas	South of West Hallam	Response-00146	Wildlife / Biodiversity	We will see the demise of the barn owl who often hunts in the field
Andrew and Julie Douglas	South of West Hallam	Response-00146	School Capacity	The school is over subscribed as it is
Andrew and Julie Douglas	South of West Hallam	Response-00146	Healthcare Facilities	The doctors in the village are more than busy. No appointments are available and there will be even less with at least another 180 patients This will be a dangerous situation
Andrew and Julie Douglas	South of West Hallam	Response-00146	Number of Houses	90 houses is beyond a joke especially with the expectation of even more. The village cannot cope with this
Andrew and Julie Douglas	South of West Hallam	Response-00146	Green Belt	This is green belt land
Andrew and Julie Douglas	South of West Hallam	Response-00146	Flooding / Drainage	Natural spring in the field building over this will cause flooding
Andrew Bishop	West of Sandiacre	Response-01186	Traffic Congestion	We currently live on Town street and already the volume of traffic is excessive following the industrial site development at Stanton therefore anymore building in the area will only lead to further issues of congestion, road safety and emissions to residents of Sandiacre.
Andrew Bishop	West of Sandiacre	Response-01186	Road Safety	The volume of traffic, especially HGV?s, at all times of day and night is excessive for a residential area and needs to be reduced, not increased with additional housing - the current road structure cannot cope.
Andrew Bishop	West of Sandiacre	Response-01186	Air Quality	Any increase in traffic will affect suit quality due to HGV and car emissions in a residential area
Andrew Bishop	West of Sandiacre	Response-01186	Bus Services	The current service already has difficulty navigating the volume of free flowing and parked traffic therefore any increase will add more burden.
Andrew Bishop	West of Sandiacre	Response-01186	Healthcare Facilities	The local facility already cannot cope with the population within Sandiacre therefore we?re sent to other areas - how can increasing the volume of housing help this?.
Andrew charge	North of Breadsall Hill Top	Response-01538	Number of Houses	Concerned about the number of houses and the road being able to cope as too many new houses already built in the last few years.
Andrew Corban	South West of Kirk Hallam	Response-01496	Road Safety	The roads linking to this site are not suitable for this development causes many accidents
Andrew Corban	South West of Kirk Hallam	Response-01496	Wildlife / Biodiversity	Would destroy lots of wonderful wildlife in the area
Andrew Corban	South West of Kirk Hallam	Response-01496	Landscape	This would spoil the beauty of the place and ruin a piece of greenbelt land
Andrew David Williams	North of Breadsall Hill Top	Response-00796	Traffic Congestion	Any increase in housing in this area will mean further increase in traffic through Breadsall village as traffic finds ways through to the A61 and A38. The croft lane /A61 intersection is completely jammed with traffic at peak times between 7am and 9-30am every weekday and sometimes weekends. Furthermore the road through Breadsall village is already takes significant traffic and speeding is an increasing issue. The junction at Brookside Road and Church Lane has seen many near misses due to speeding and general visibility issues and the footpaths are extremely narrow for walking giving increased risk of accidents especially with Mums and children accessing the school and for disabled vehicles
Andrew David Williams	North of Breadsall Hill Top	Response-00796	Road Safety	Road safety is a key issue with increased traffic through Breadsall village and lack of wide enough footpaths , speeding traffic and junction layouts.
Andrew David Williams	North of Breadsall Hill Top	Response-00796	Air Quality	Increased traffic will further degrade the air quality especially with increased traffic queuing at Croft lane and through Breadsall village. As more children now walk to school along Brookside road the increased levels of pollution is not acceptable or conducive to improved health.
Andrew David Williams	North of Breadsall Hill Top	Response-00796	Wildlife / Biodiversity	Building on land already identified as greenbelt has a negative impact on wildlife and biodiversity. Before any consultation on greenbelt land is considered all brown and grey belt land should be utilised. The land being evaluated in this proposal is alongside the Derby greenway which is a natural habitat for many different fauna and flora. Any further damage to the greenbelt land will natural have a major impact on the local wildlife .
Andrew David Williams	North of Breadsall Hill Top	Response-00796	Type of Housing	If housing is to be built then this must be housing which considers all aspects of the local community and includes bungalows and quality family accommodation. It is not an area that is suitable for housing associations and must be used for private ownership. .
Andrew David Williams	North of Breadsall Hill Top	Response-00796	Green Belt	Breadsall village provided EBC with a Breadsall Neighbourhood Plan about 3 yrs ago setting out planning consideration and setting out protection of the greenbelt land around the village. This is a legal document that safeguards all aspects of greenbelt , wildlife and planning issues. There should be no more building on this land as set out in the neighbourhood plan.
Andrew David Williams	North of Breadsall Hill Top	Response-00796	Flooding / Drainage	Breadsall village has seen increased flooding over the last few years mainly as a result of increased run off from developments at lime land and between the A609 and the greenway. Further development to the north of the A609 and south of the greenway will exacerbate this issue with increased run off and increased seepage through the land strata.
Andrew David Williams	North of Breadsall Hill Top	Response-00796	Other	Since the land at Lime lane and at Breadsall hilltop has been developed the greenway has seen significant increase in anti social behaviour. There have been many instances of motorbikes using the Greenway , stones being thrown from the greenway into peoples properties in Breadsall and increased levels of noise late at night. Increased building will increase this and must be dissuaded at all costs.
Andrew Davies	West of Sandiacre	Response-01295	Traffic Congestion	There is a danger that this will lead to congestion not only on Larch but also on Stanton Rd with implications for the junctions with Rushy Lane & Town St
Andrew Davies	West of Sandiacre	Response-01295	Road Safety	See above the junctions between Stanton Rd and Rushy Lane also Stanton Rd and Town St could become more hazardous, the latter especially can already be problematic.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Andrew Davies	West of Sandiacre	response-01295	Air Quality	Increased traffic will affect air quality as those in employment will be travelling either towards Derby, Ilkeston, Long Eaton or Nottingham. Those going towards the latter three could well be putting more traffic & pollution as they pass Cloudside school
Andrew Davies	West of Sandiacre	response-01295	Wildlife / Biodiversity	This could be easily effected as it is an area of wildlife
Andrew Davies	West of Sandiacre	response-01295	Bus Services	It will require an increase in the frequency of 14b for those travelling toward Ilkeston so that have an alternative public transport service offered. Also to access public transport toward Derby would require walk through to Derby Rd
Andrew Davies	West of Sandiacre	response-01295	Healthcare Facilities	To access these would need journeys to Ilkeston, Long Eaton or Derby. The 14b will give access to the Community hospital and is a good hourly service however does not start until 9:30
Andrew Davies	West of Sandiacre	response-01295	Green Belt	Any development will put extra pressure on Cloudside and other open spaces
Andrew Davies	West of Sandiacre	response-01295	Landscape	The development could very easily, unless very carefully designed, have an effect upon the village and it's identity
Andrew Davies	West of Sandiacre	response-01295	Other	As outlined above with the pressure on the facilities in the village would not be a forward step. Many of our facilities are in Borrowwash, Long Eaton and Ilkeston (or travelling into Derby) and extra housing will put extra stress on these facilities, also as outlined above for a number of these journeys it could lead to additional car journeys
Andrew Gotheridge	North of West Hallam	Response-00195	Traffic Congestion	The road (park hall lane) is already a dangerous road and the junction will not cope with the increased traffic.
Andrew Gothenidge	North of West Hallam	response-00195	Road Safety	Park hall lane is commonly used by horses and pedestrians as a quiet country lane. I cannot see what changes can be made to make the entrance to the proposed site safe for these users. There's no pavement now and no room to widen the road.
Andrew Hozack	West of Borrowwash	Response-01322	Traffic Congestion	The area is heavily congested with traffic as it is without adding to the problem.
Andrew Knight	East of Breaston	Response-01824	Number of Houses	There is already a difficulty in getting a doctors or dentist appointment without adding more people to the waiting list.
Andrew Knight	East of Breaston	Response-01824	Number of Houses	Local infrastructure is already under pressure. GP services, schools, and roads are near or at capacity. An increase in population would worsen access to healthcare, limit school places, and create traffic congestion and safety issues. A large-scale housing development would undermine Breaston's distinct rural character and sense of community, turning it into a suburban extension of neighbouring settlements.
Andrew Knight	East of Breaston	response-01824	Flooding / Drainage	The proposed site regularly becomes waterlogged and currently acts as a natural soakaway. Replacing this with hard surfaces would significantly increase flood risk for surrounding properties?particularly in light of severe local flooding in late 2023 and early 2024. During the last flood the sewage system could not cope with the surface water, this flooded drives and properties in Holly Avenue. SANDBAGS were delivered by Erewash Council. This is a serious issue. I note that monitoring wells have been installed in the graveyard next to the proposed development. This reading will not be REPRESENTATIVE as we current have one of the driest springs on record. Also although the drainage channels have been cleaned this year? this has never happened in the past decade! Once the building work is complete -its unlikely the drainage channels will be cleaned again. If a further development down stream is added to the sewer load the system will back up further as the capacity cannot be increased through the culvert.
Andrew Knight	East of Breaston	Response-01824	Green Belt	The site is designated Green Belt for good reason: to prevent urban sprawl, protect natural habitats, and maintain the character of rural communities. This development would cause permanent environmental damage and biodiversity loss. The proposal contradicts the National Planning Policy Framework, which allows changes to Green Belt boundaries only in exceptional circumstances?none of which have been clearly demonstrated. There is also insufficient evidence that brownfield or non-Green Belt alternatives have been exhausted.
Andrew Marvin	West of Sandiacre	Response-00255	Traffic Congestion	Traffic is already an issue, turning into Coronation Avenue and the bend going into Cloudside Road is shocking !! Based on the amount of houses and potential for an extra 250 cars causing more pollution and driving past Cloudside Road everyday is disgusting! 100% accidents will happen I have no idea how the construction traffic will navigate these roads !!!!!
Andrew Marvin	West of Sandiacre	response-00255	Road Safety	Massive concern regarding Road safety The roads are not wide enough So many parked cars already on the road and pavement, driving into coronation Road and Cloudside Road ?.. madness !!
Andrew Marvin	West of Sandiacre	response-00255	Air Quality	All the additional cars with the motorway already so close will have an impact on air quality and noise Outrageous
Andrew Marvin	West of Sandiacre	response-00255	Wildlife / Biodiversity	Stoneyclouds is lovely 180 houses and people will have a massive impact on the area and wildlife !!!!!!! Again disgusting
Andrew Marvin	West of Sandiacre	response-00255	Bus Services	Many elderly people rely on this bus service which is already a challenging route for the buses based on the local parking and traffic It's going to be very dangerous!!!!
Andrew Marvin	West of Sandiacre	response-00255	School Capacity	I have no ideas how the three local schools can cope with this capacity !!! The parking outside the schools is already so dangerous So much illegal parking when children are being dropped off and collected at present causes gridlock
Andrew Marvin	West of Sandiacre	response-00255	Healthcare Facilities	We already have huge problems with doctors and dental appointments the area cannot cope now Its an absolute disgrace
Andrew Marvin	West of Sandiacre	response-00255	Type of Housing	Be nice to know what the type of housing is Yes 10% affordable so what are the other houses going to be ??????
Andrew Marvin	West of Sandiacre	response-00255	Number of Houses	180 houses = approx 250 Cars The amount of houses in that plot is disgusting
Andrew Marvin	West of Sandiacre	response-00255	Green Belt	So so sad to even think of this lovely green belt area disappearing Shame on this Government and Erewash borough Council
Andrew Marvin	West of Sandiacre	response-00255	Landscape	The impact on the Landscape will be devastating The construction traffic alone is going to be horrendous So Wrong !!
Andrew Marvin	West of Sandiacre	Response-00255	Other	I seriously don't think you understand how bad the traffic around this area is now I suggest you take some time to monitor traffic at school Time at all 3 schools it's horrendous Also the entry point into coronation avenue and Cloudside Road is horrendous the corner turning into Cloudside Road is also very dangerous now 2. Cars CANNOT PASS EACH OTHER ITS A BLIND CORNER !!!!!!!!!!! Very dangerous
Andrew Meadwell	West of Sandiacre	Response-01654	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Andrew Meadwell	West of Sandiacre	Response-01654	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Andrew Meadowell	West of Sandiacre	response-01654	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Andrew Meadowell	West of Sandiacre	response-01654	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Andrew Meadowell	West of Sandiacre	response-01654	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Andrew Meadowell	West of Sandiacre	Response-01654	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Andrew Meadowell	West of Sandiacre	response-01654	Type of Housing	High density housing is preposterous not in keeping with current housing.
Andrew Meadowell	West of Sandiacre	Response-01654	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Andrew Meadowell	West of Sandiacre	response-01654	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Andrew Meadowell	West of Sandiacre	response-01654	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Andrew Solloway	West of Sandiacre	Response-00958	Traffic Congestion	Houses without new roads?
Andrew Solloway	West of Sandiacre	response-00958	Number of Houses	Small area, large number of houses, poor concept
Andrew Solloway	West of Sandiacre	response-00958	Green Belt	No more local countryside
Andrew Solloway	West of Sandiacre	Response-00958	Other	Infrastructure is poor now, will be even worse with these houses
Andrew Zielinski-Raynor	South of West Hallam	Response-00135	Traffic Congestion	Beech Lane is already very busy especially at school drop off and collecting times. Because of parked cars traffic it is already limited to a single lane causing extensive congestion as cars wait to get through adding more traffic coming from a third way would make this bad situation even worse.
Andrew Zielinski-Raynor	South of West Hallam	response-00135	Road Safety	It is opposite a large school with very young children. Before and after school already seems fraught with danger adding more traffic into the mix will make an already dangerous situation much worse for both pedestrians and motorists. I have personally witnessed a number of car accidents on this stretch of road.
Andrew Zielinski-Raynor	South of West Hallam	response-00135	Air Quality	Adding further traffic (and congestion) to an already busy road is going to cause an increase in pollution right opposite a school. We know the risks that pollution poses to developing children.
Andrew Zielinski-Raynor	South of West Hallam	Response-00135	Wildlife / Biodiversity	The proposed site is what gives West Hallam its village/countryside feel. There are vast numbers of birds including birds of prey, woodpeckers, pheasants, jays etc that daily frequent and feed in this area. Plus all the other wildlife that you would expect to see in a rural area.
Andrew Zielinski-Raynor	South of West Hallam	response-00135	Healthcare Facilities	From personal experience I know that it is already frustratingly hard to get a Doctors appointment in the Village. An increase in population will simply result in an increased burden on an already overstretched service. Potentially putting people's lives at risk.
Andrew Zielinski-Raynor	South of West Hallam	response-00135	Number of Houses	As a Father and Grandfather I fully understand and agree with the need to build more houses. However the proposed site is far from ideal for the reasons already provided. Would a compromise be to limit building to a single row of roadside houses along the edge of Beech Lane?
Andrew Zielinski-Raynor	South of West Hallam	response-00135	Landscape	The proposed site is essentially along a ridge overlooking rolling countryside. In building here the countryside aspect from miles around will be gone forever .
Andrew Zielinski-Raynor	South of West Hallam	Response-00135	Flooding / Drainage	The proposed site becomes very waterlogged in all but the Summer months due to clay soil.
Andria Nylasi	West of Sandiacre	Response-00672	Traffic Congestion	The roads to access the site are narrow and winding and would cause major disruption getting up to the site. The main access road is also extremely narrow for heavy plant machinery and lorries causing difficulties for the residents to access and leave their property.
Andria Nylasi	West of Sandiacre	Response-00672	Road Safety	The volume of traffic this site would create would overwhelm the local area. There is only one proposed access route which would put an immense strain on the surrounding roads, particularly during term time and rush hour. The local schools are minutes away and are already experiencing extreme traffic congestion. This would exacerbate the problem and cause danger to the students and elderly residents.
Andria Nylasi	West of Sandiacre	response-00672	Air Quality	As previously stated, the sheer volume of extra vehicles would increase the air pollution tremendously and affect all local residents.
Andria Nylasi	West of Sandiacre	response-00672	Wildlife / Biodiversity	The wildlife in the immediate and the surrounding area of Stoney clouds would be directly impacted by the building, the longevity of the project, the noise and air pollution, not to mention the new population living on the site and all that brings with it. The land could never be returned to what it was and species using the Stoney cloud nature reserve may leave or be wiped out.
Andria Nylasi	West of Sandiacre	response-00672	Bus Services	The local bus service would be put under tremendous strain by the sheer volume of extra passengers. It would not be able to reach the new estate due to the narrow roads and lack of turning points.
Andria Nylasi	West of Sandiacre	response-00672	School Capacity	Local schools are full and there are no plans for a school in this development, which will increase parents' need to drive to other areas.
Andria Nylasi	West of Sandiacre	response-00672	Healthcare Facilities	We are currently struggling to access GP appointments as it is in Sandiacre, so unless a surgery is being built there, new residents will also have to travel elsewhere to access health services.
Andria Nylasi	West of Sandiacre	response-00672	Type of Housing	House prices will be too expensive for local young people, as only 10% is being considered for social housing.
Andria Nylasi	West of Sandiacre	response-00672	Number of Houses	The volume of housing on the site is ridiculous and will mean that the houses are extremely close together. If every house had two cars to each property, there would be close to an extra 400 cars in the area and at least that many extra people, although I suspect we'd be probably looking at closer to an extra 1000, with a minimum of 4 per family.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Andra Nyilasi	West of Sandiacre	Response-00672	Green Belt	There are many brown sites available in our local area which could be used instead of this site. A Green site could never return to its original status once its been built on. An example of this is currently happening next to the canal in Sandiacre, where a factory has been demolished and a housing development is currently being constructed. It is having very little impact on local wildlife, as it's self contained and wasn't originally green belt. If you build on this site you'll be disturbing badgers and bats, amongst many others forms of wildlife and the entire ecosystem connected with them. Once it's gone, it's gone forever.
Andra Nyilasi	West of Sandiacre	Response-00672	Landscape	The landscape isn't suitable for a project of this size and scale. The land regularly floods in wet weather and slopes down to a point in the far corner. It backs up to the motorway where there's extreme noise and the possibility of subsidence. Residents whose property is adjacent to the field often experience flooding, particularly during extremely wet weather conditions and the added infrastructure will definitely exacerbate that.
Andra Nyilasi	West of Sandiacre	Response-00672	Flooding / Drainage	Extreme lengths to ensure the field has decent drainage and will not impact on residents already living in the area will be needed. The impact of so many houses will have a negative effect on flooding for those already living there and will put considerable pressure onto the local services. Sandiacre has been overwhelmed recently with extreme weather due to climate change and it has been evident that our current infrastructure cannot cope with flash flooding and very wet weather. The extra housing would put even more pressure on our poor drains and would see flooding further down the hill in our neighbourhood.
Andra Nyilasi	West of Sandiacre	Response-00672	Other	It's just a ridiculous proposal in a very hard to reach backwater. None of it has been thought through enough and the councillors proposing it are trying to tick a box to make the Labour Party look good in their target to build more houses. None of the councillors proposing the development live near the site and have no idea how detrimental it would be to those already living there.
Andy Flindatt	South of West Hallam	Response-01013	Traffic Congestion	Traffic is already busy near the school adding more traffic that this site will do is an accident waiting to happen and smacks of greed over common sense
Andy Flindatt	South of West Hallam	Response-01013	Road Safety	Traffic is already busy near the school adding more traffic that this site will do is an accident waiting to happen and smacks of greed over common sense
Andy Madeley	North of Breadsall Hill Top	Response-00381	Traffic Congestion	The A608 is already incredibly busy, with a lot of accidents, during rush hour traffic, it clogs up traffic coming out of Oakwood ( Bishops drive) so additional traffic will just compound the issue.
Andy Madeley	North of Breadsall Hill Top	Response-00381	Road Safety	Plenty of accidents on A608
Andy Madeley	North of Breadsall Hill Top	Response-00381	Air Quality	Will be impacted by additional traffic, but also building work. You also need to consider the numerous developments being proposed around oakwood, and the fact that this building work will have on residents.
Andy Madeley	North of Breadsall Hill Top	Response-00381	Wildlife / Biodiversity	There is a green wedge between chaddesden woods and breadsil, this development will impact on that and also further reduce the habitat further of the wildlife.
Andy Madeley	North of Breadsall Hill Top	Response-00381	School Capacity	Schools are already overcrowded, with all these developments, where will the kids be educated.
Andy Madeley	North of Breadsall Hill Top	Response-00381	Healthcare Facilities	I am unable to get on to a NHS dentist practice, and it took 30 days to see a nurse at the surgery. Increasing houses will reduce the capacity of local services.
Andy Madeley	North of Breadsall Hill Top	Response-00381	Number of Houses	To many houses either too many developments in the area.
			Flooding / Drainage	Oakwood is regularly flooding, building more houses will just worsen the problems
Andy Martin	West of Sandiacre	Response-01761	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Andy Martin	West of Sandiacre	Response-01761	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Andy Martin	West of Sandiacre	Response-01761	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Andy Martin	West of Sandiacre	Response-01761	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Andy Martin	West of Sandiacre	Response-01761	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Andy Martin	West of Sandiacre	Response-01761	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Andy Martin	West of Sandiacre	Response-01761	Type of Housing	High density housing is preposterous not in keeping with current housing.
Andy Martin	West of Sandiacre	Response-01761	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Andy Martin	West of Sandiacre	Response-01761	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Andy Martin	West of Sandiacre	Response-01761	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Andy Williams	North of West Hallam	Response-00184	Traffic Congestion	This area already has significant traffic volume & frequent control issues around Millhouse garage crossroads with limited vision at the junctions.
Andy Williams	North of West Hallam	Response-00184	Road Safety	Frequent near misses due to poor visibility around the Millhouse Garage crossroads. Speed issues on main High Lane add to this.
Andy Williams	North of West Hallam	Response-00184	Air Quality	This area is on the edge of the country parks & nature reserves and the air quality is clearly going to be affected with built up area.
Andy Williams	North of West Hallam	Response-00184	Wildlife / Biodiversity	The areas of green belt around this area supports the breeding area for local wildlife including uncommon butterflies (eg Brimstone), Buzzards,, Red Kites, Barn Owls and Jays

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Andy Williams	North of West Hallam	Response-00184	Bus Services	Bus services in this area are already limited and do not operate in the evenings. Therefore necessary for increase in car journeys and cars parked causing congestions and safety concerns
Andy Williams	North of West Hallam	Response-00184	School Capacity	The local schools & pre-schools are already operating at capacity and increase in the community will further exacerbate the issues
Andy Williams	North of West Hallam	Response-00184	Number of Houses	We are continually seeing large numbers of houses being developed on plots that provide minimal space for each property to maximise return on investment to property developers.
Andy Williams	North of West Hallam	Response-00184	Green Belt	There are several brown belt areas that could be developed to ensure protection of the green belt in this area which has been reduced significantly over recent decades
Andy Williams	North of West Hallam	Response-00184	Flooding / Drainage	This area already has significant drainage issues and any increase in water volume in existing drainage system will push beyond design capacity
Andy Williams	North of West Hallam	Response-00184	Other	Why are we allowing development of extraordinarily large properties on High Lane & St Wilfred's instead of insisting development of two smaller (but still large) properties. This negating the need for additional groups of housing.
Angela Chapman	West of Borrowwash	Response-01331	Traffic Congestion	Borrowwash already has begun to have severe traffic issues, the building of the by-pass some 40 years ago is no longer viable, with many people using the village as a way through to Spondon, with a significant rise of vehicles on the road network as a whole, small narrow roads through and around the village only make the matters worse. At an average of 2 cars per household, this will increase traffic with some 500 cars onto an already suffocating road network.
Angela Chapman	West of Borrowwash	Response-01331	Road Safety	With the issues of speeding through the village, the lack of any support from council or police to the west of the village, this will increase the abysmal safety already seen along the Derby Road section of the village.
Angela Chapman	West of Borrowwash	Response-01331	Wildlife / Biodiversity	The suggested area ear-marked for this development is home to many species of wildlife. Most notably there are breeding pairs of barn owl in the area marked for construction of over 200 houses. Being the most protected bird in the UK, it is imperative that these are not torn from their home.
Angela Chapman	West of Borrowwash	Response-01331	Bus Services	Poor bus service, damaged roads, neither will get better, only worse, making safety issues worse.
Angela Chapman	West of Borrowwash	Response-01331	Green Belt	This area was designated green belt, by the monarchy long before any of us were born, this was done for a reason, to help prevent the spread of disease. If allowed, it will not matter how many doctors or health centres pop up, disease will spread rapidly, mother nature always wins in the end, why stack the cards in her favour. Aside from this, the identity of the village will be lost in the sprall of Derby City.
Angela Chapman	West of Borrowwash	Response-01331	Flooding / Drainage	There are issues with flooding along the Derby Road already during prolonged or heavy rain fall, how can they be sure that the works will not exasperate the issue, making the homes already there unlivable.
Angela Clarke	North of Breadsall Hill Top	Response-01400	Traffic Congestion	Being only one way in and out of Durose site and the proposed news site will cause residents of both sites difficulty in particular certain times of the day exiting and entering the site. The roads are narrow so passing parked cars will also increase residents difficulty getting round the site, and if this is only proposed way to access the new site it means construction traffic driving and potentially parking up in residential streets increasing risk to the residents and ability to access their properties.
Angela Clarke	North of Breadsall Hill Top	Response-01400	Road Safety	Having construction traffic accessing the new proposed site I feel will increase the safety for residents already on Durose Park, including children entering and exiting the site particularly at school times.
Angela Clarke	North of Breadsall Hill Top	Response-01400	Air Quality	A worsening of air quality in particular with increased traffic and construction work
Angela Clarke	North of Breadsall Hill Top	Response-01400	Wildlife / Biodiversity	Increased risk to the wildlife with decreased habitat and disruption from building work.
Angela Clarke	North of Breadsall Hill Top	Response-01400	Healthcare Facilities	Access to already busy Drs, Dentists in the local area , no planning evident for new or extra services becoming available for increased population numbers in local area.
Angela Clarke	North of Breadsall Hill Top	Response-01400	Flooding / Drainage	Impact of increased local flooding to nearby village already know to flood.
Angela Reid	South of West Hallam	Response-00134	Traffic Congestion	Beech Lane and surrounding roads are already very busy and congested
Angela Reid	South of West Hallam	Response-00134	Road Safety	No school crossing on Beech Lane
Angela Reid	South of West Hallam	Response-00134	Air Quality	More pollution
Angela Reid	South of West Hallam	Response-00134	Wildlife / Biodiversity	Impacting the natural environment in the area
Angela Reid	South of West Hallam	Response-00134	Healthcare Facilities	No appointments
Angela Reid	South of West Hallam	Response-00134	Landscape	Views and walking taken away
Angela Roberts	West of Sandiacre	Response-00681	Traffic Congestion	The area is already congested and more houses will make the situation worse.
Angela Roberts	West of Sandiacre	Response-00681	Air Quality	More houses means more pollution . The greenbelt area must be maintained to protect air quality in the area which already has more than its fair share of Lorrys/ cars/ industry.
Angela Roberts	West of Sandiacre	Response-00681	Wildlife / Biodiversity	Stones clouds nature reserve is a very special place. I visit regularly to enjoy the environment and nature. I believe there are bats there. I used to see bats in my garden before the Longmoor lane development but not any more. Please don't destroy more habitat .
Angela Smyth	North of Breadsall Hill Top	Response-00296	Traffic Congestion	The roads around the area are congested already due to the two new housing estates already built in the area by Derby City Council - one at the end of Bishops drive and one at the top of Mansfield and lime lane.
Angela Smyth	North of Breadsall Hill Top	Response-00296	Air Quality	Increased housing means increased air pollution due to cars and construction.
Angela Smyth	North of Breadsall Hill Top	Response-00296	Wildlife / Biodiversity	This housing is being built on a Green belt where multiple creatures live including hare's, hedgehogs, foxes and many bird species.
Angela Smyth	North of Breadsall Hill Top	Response-00296	Bus Services	There is only one bus service running in that area. It's already busy.
Angela Smyth	North of Breadsall Hill Top	Response-00296	School Capacity	There are two schools in Breadsall and Oakwood. They both have a small catchment and are at capacity.
Angela Smyth	North of Breadsall Hill Top	Response-00296	Healthcare Facilities	The doctor surgery in Oakwood is already at capacity. No new housing should be built in the area until this is sorted. New GP surgeries and dentists are needed for Oakwood and the two additional housing estates already built.
Angela Smyth	North of Breadsall Hill Top	Response-00296	Green Belt	The council should use all brown belt areas before attempting to build on the green belt.
Angela Smyth	North of Breadsall Hill Top	Response-00296	Flooding / Drainage	Breadsall village is already subject to more flooding due to the building of Redrow and lime court estates. An additional housing estate would make this worse.
Angela Whitehead	West of Sandiacre	Response-00544	Traffic Congestion	Access is restricted to the development and increases existing traffic issues in and around Sandiacre roads especially given the new Stanton Ironworks housing increase. No more traffic through Sandiacre

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Angela Whitehead	West of Sandiacre	Response-00544	Road Safety	In a tight housing development where cars park wherever they can this inly increases traffic accidents. I'd also be concerned about access for emergency vehicles
Angela Whitehead	West of Sandiacre	Response-00544	Wildlife / Biodiversity	Inevitably it will destroy the birds and fauna
Angela Whitehead	West of Sandiacre	Response-00544	School Capacity	The schools in Sandiacre have not increased in size in the 50years I have lived in Sandiacre we've seen the Springfield Park development, Bridge Street development how much more can these schools absorb
Angela Whitehead	West of Sandiacre	Response-00544	Healthcare Facilities	You can't get doctors or dentist appointments now this only increases the difficulty for existing residents
Angela Whitehead	West of Sandiacre	Response-00544	Green Belt	The people of Sandiacre do not live by the sea or the Peak District etc so we have to make the most of what greenery and countryside we have got. We are sandwiched between the A52 and the M1 we cannot continue to erode on the little bit of greenery we have left to walk dogs children and stroll across to local villages. This is our pleasures you seem fit to destroy despite the fact they have already been deemed as conservation already. What has changed!
Angela Whitehead	West of Sandiacre	Response-00544	Landscape	The historic site of Stoney Clouds is essential for Sandiacre residents it's reminiscent of our childhoods and what's left after the the M1 has cut through our countryside. It's our history it's what resonates with the locals. Such a shame to destroy and take that away
Anita Gorman	North of Borrowwash	Response-01245	Traffic Congestion	Roads will be congested with the amount of traffic through the village of Borrowwash
Anita Gorman	North of Borrowwash	Response-01245	Road Safety	Speed is 40 miles per hour, incline and bend to the road is not good access
Anita Gorman	North of Borrowwash	Response-01245	Air Quality	Pollution of all the extra cars
Anita Gorman	North of Borrowwash	Response-01245	Wildlife / Biodiversity	Where will our wildlife go , all our green space will be decimated
Anita Gorman	North of Borrowwash	Response-01245	School Capacity	Traffic to schools and be horrendous. School capacity
Anita Gorman	North of Borrowwash	Response-01245	Healthcare Facilities	Can not see a doctor easily now . Even with the promise of extra surgeries where will the GP?s come from
Anita Gorman	North of Borrowwash	Response-01245	Green Belt	All green belt will be decimated and wildlife on the decline
Anita Lawrence	North of West Hallam	Response-00660	Traffic Congestion	The A609 through West Hallam is already very busy with frequent speeding. Additional traffic on the A609 will also affect residents of Belper Road, Stanley Common, which has frequent problems with speeding traffic.
Anita Lawrence	North of West Hallam	Response-00660	Road Safety	The proposed site is very close to a blind bend and crossroads (A609/Park Hall Lane/Station Road). This is already a concern for locals and regular users of this junction. The A609 is frequently used by emergency vehicles proceeding at high speed, positioning a further exit at this site, so close to a blind bend and difficult crossroads: a. increases risk of accidents to emergency services b. increases risk to other road users from speeding emergency vehicles, including pedestrians who may cross to use the bus stop, post box, attend school, shops, doctor, play area, community hall etc. c. increases potential delay for emergency vehicles to arrive where needed.
Anita Lawrence	North of West Hallam	Response-00660	Air Quality	Increased pollution. More vehicles accessing High Lane West will raise pollution levels unless public transport is improved and utilised. Levels of pollution along High Lane West and onto Belper Road, Stanley Common are high, especially particulate matter which can be clearly seen as it settles onto windows, vehicles and penetrates into homes, this together with less visible pollution is a considerable health risk especially to the very young, elderly and other vulnerable people.
Anita Lawrence	North of West Hallam	Response-00660	Wildlife / Biodiversity	Development would have a negative effect on the biodiversity of the proposed and surrounding areas during and after build. Badgers are protected under the 1992 Protection of Badgers Act. There are a number of badger setts on land behind High Lane West/Park Hall Lane, there are regular incidents involving death of badgers near this junction. Development of their habitat increases risk to badgers including road traffic accidents, as they are pushed out of established areas. The latest road death of a badger was reported to Mid Derbyshire Badger Group today (21/04/2025).
Anita Lawrence	North of West Hallam	Response-00660	Bus Services	The bus service along the A609 is poor, quite unsuitable for further developing the village and incompatible for those needing to travel. The existing service will not reduce the use of fossil fuels from private vehicles.
Anita Lawrence	North of West Hallam	Response-00660	Healthcare Facilities	Services such as childcare and doctors are already unable to meet resident's needs. Addition of more housing within the village will put further strain on these services.
Anita Lawrence	North of West Hallam	Response-00660	Flooding / Drainage	The A609 is known to flood in the proposed area.
Anita Lawrence	North of West Hallam	Response-00660	Other	The Labour Party Manifesto 2024 states that 'Labour is committed to preserving the greenbelt which has served England's towns and cities'. Labour was elected on the basis of this manifesto, please leave this area to nature for the benefit of all.
Anita Lawrence	South of West Hallam	Response-00726	Traffic Congestion	Traffic is a nightmare during school drop-off and pick up times, with vehicles, reducing Beech Lane to single track causing considerable delays for those entering and exiting the village. I have myself been very late for medical appointments due to the weight of traffic already using this Lane. Traffic outside peak school times is often backed up by the volume of parked vehicles using the playing fields and recreation area. It can be very difficult to enter or leave the village. I have witness some very frustrated residents trying to access their homes. The Dales shopping centre has limited parking causing congestion and difficulties for those wishing to use the centre facilities or visit the doctor.
Anita Lawrence	South of West Hallam	Response-00726	Traffic Congestion	There are also large delivery lorries servicing Tesco in The Dales causing further congestion and reducing available parking. Vehicles park on neighbouring roads adding to the general congestion of the area and again causing difficulties for those accessing their doctor or collecting medication. There are frequent lengthy delays at the crossroads at the top of St Wilfrid's Road with A609 and Mapperley Lane.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Anita Lawrence	South of West Hallam	Response-00726	Road Safety	Beech Lane is narrow and unsuitable for both access of groundworks and building vehicles and for the additional residential traffic that would ensue should housing be built on this site. Congestion causes some very frustrated delivery drivers to go over pavements and put pedestrians at risk. There are three ways to exit the village: a. Beech Lane meets Station Road on a blind bend, it is a very awkward junction with poor road surface. a/1. via Station Road towards Stanley Village (opposite new build houses that front the road of which some are unsold) Station Road leads to a T-junction over a humped backed bridge which has some visibility problems, turning left would take you towards the Cat and Fiddle Lane which is in very poor repair in places, turning right would take you through Stanley Village which is narrow, winding, is often reduced to single track due to parking and which struggles with drivers speeding. This is already a hazard to those crossing the road to access shop, post office, school, church, other. b. Via Station Road towards High Lane West/A609, this road gets very busy, vehicles are usually parked here creating a slalom course which some drivers negotiate in an extremely inconsiderate manner. Where Station Road meets High Lane West at a cross roads with Park Hall Lane is another blind bend from the direction of Stanley Common, even off-peak it is a difficult junction. b/1 The A609 is frequently used by emergency vehicles going at speed, increased traffic at this junction puts the emergency vehicles, other road users and pedestrians at risk and increases the likelihood of emergency vehicles being delayed in attending an incident. c. To exit the village by going through the West Hallam via The Village and St Wilfrid's Road: c/1 The Village is very narrow with parking on one or both sides reducing the road to single track slalom. c/2 at the junction with St Wilfrid's Road there is an extremely tight bend with poor visibility. c/3 at the top of St Wilfrid's road is a cross-roads with A609 and Mapperley Lane. There is very poor visibility from the Ilkeston direction due to the road dipping
Anita Lawrence	South of West Hallam	Response-00726	Air Quality	For a proposed development of 90 houses potentially 180+ vehicles all coming and going, increasing not only the road safety risk but the air pollution in the area to which the young, elderly and those in poor health would be particularly susceptible to - is this really appropriate opposite a school, recreation ground and park? The additional use of personal vehicles would also negatively effect the intention to reduce emissions from fossil fuels.
Anita Lawrence	South of West Hallam	Response-00726	Wildlife / Biodiversity	The development would have a negative effect on the biodiversity of the proposed and surrounding areas during and after build.
Anita Lawrence	South of West Hallam	Response-00726	Bus Services	Bus services are wholly inadequate for the existing population, there is no evening service at all.
Anita Lawrence	South of West Hallam	Response-00726	Healthcare Facilities	Services such as childcare and doctors are already unable to meet residents' needs, the addition of more housing within the village will put further strain on these services. It can take 4+ weeks to obtain an appointment with a GP and recently took 5 weeks for even a telephone consultation with the practice pharmacist . Increased housing will only exacerbate this problem.
Anita Lawrence	South of West Hallam	Response-00726	Number of Houses	The proposed development would be for 90 houses - with the potential for more houses to be built encroaching on safeguarded land - the above problems would be further exacerbated and have a seriously negative impact on the Conservation Area.
Anita Lawrence	South of West Hallam	Response-00726	Green Belt	The Labour Party Manifesto 2024 states that 'Labour is committed to preserving the greenbelt which has served England's towns and cities'. Labour was elected on the basis of this manifesto, please leave this area to nature for the benefit of all. It is my understanding that the owner of the land concerned has had planning permission refused previously for an agricultural building, how could this now be considered as suitable for the development of housing?
Anna	South of West Hallam	Response-00112	Traffic Congestion	It's already a heavily congested area that can't cope with any additional traffic that these new homes will bring
Anna	South of West Hallam	Response-00112	Wildlife / Biodiversity	West Hallam is a pretty village that is home to many nice walkways and wildlife, it will be spoilt by by builders trashing the landscape
Anna	South of West Hallam	Response-00112	Healthcare Facilities	We don't have enough of anything anymore! Why aren't doctors / schools and leisure facilities being built instead of all this ridiculous housing? Where are the people supposed to go?
Annabel Marriott	West of Sandiacre	Response-00760	Traffic Congestion	The roads around the site are already busy especially due to the amount of parked cars making it difficult to navigate around the roads. An increase in traffic will not help this situation. The main road (stanton Road) is chaos when it's school times and when Sandiacre town football club is in use. Accidents will happen, people are forced to drive onto the pavements which is also of risk to pedestrians.
Annabel Marriott	West of Sandiacre	Response-00760	Air Quality	Is this housing development practical being so close to the M1? Surely the air quality is going to be poor without these new houses/occupants adding to it?
Annabel Marriott	West of Sandiacre	Response-00760	School Capacity	Cloudside Academy's current new year 3 group is at full capacity. Will extra residents in this small town be able to cope with the pressure of more children? Will my children's education be negatively affected by this increase?
Annabel Marriott	West of Sandiacre	Response-00760	Healthcare Facilities	The local GP surgery is very small and doesn't offer a great service which is knowledge from local residents reviews/opinions. Many residents of Sandiacre actually use GP surgeries in surrounding areas. A good local health service is not what Sandiacre has to offer. We have no pharmacy either.
Annabel Marriott	West of Sandiacre	Response-00760	Number of Houses	The amount of houses is just unimaginable in the proposed area. It ruins the suburban town we are this side of Sandiacre. It feels like these houses are being squeezed into the most ridiculous space.
Annabel Marriott	West of Sandiacre	Response-00760	Green Belt	Me and my family enjoy this space to exercise and is good for our mental wellbeing. We often use this space to walk up through to stanton by Dale and Dale Abbey. If the plans go ahead i don't think we would have the desire to no longer walk in this space we enjoy! Because who would choose an housing estate over green space to go walk?
Ann Ainsworth	South of West Hallam	Response-01096	Traffic Congestion	Only two roads out of the village including the road where the development will take place. Frequent traffic jams on Beech Lane
Ann Ainsworth	South of West Hallam	Response-01096	Road Safety	Proximity to school on an already congested road
Ann Ainsworth	South of West Hallam	Response-01096	Bus Services	Poor transport links from the village especially in the evening
Ann Ainsworth	South of West Hallam	Response-01096	Healthcare Facilities	Already inadequate to meet the needs of existing population
Ann Ainsworth	South of West Hallam	Response-01096	Green Belt	Area well used and appreciated by walkers
Anna Richardson	South of West Hallam	Response-00162	Traffic Congestion	There is already a very dangerous situation outside the primary school. There have been multiple accidents due to traffic levels outside the school which is directly opposite the site
Anna Richardson	South of West Hallam	Response-00162	Road Safety	The situation outside the primary school directly opposite this site is already very dangerous at school drop off and pick up time. Due to the volume of traffic there have been multiple accidents with cars damaged and two children run over in the last few years. We need to reduce the volume of traffic in this area.
Anna Richardson	South of West Hallam	Response-00162	Healthcare Facilities	Healthcare facilities in west hallam are at maximum capacity and there are no NHS dentist places available at all locally
Anna Richardson	South of West Hallam	Response-00162	Type of Housing	Housing has been built nearby and has been standing empty for over two years. This planning decision was unbelievably poor, no consideration was taken regarding road safety or flooding. The front garden of one is already sinking. This site needs investigating and all homes should be occupied before any further new homes are built in the area. I would like to call for a full investigation into the mistakes that were made regarding this development.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Anna Richardson	South of West Hallam	Response-00162	Flooding / Drainage	The development on the old White Hart Pub site just round the corner has caused huge flooding problems along station road. This development would just exacerbate that,
Ann Daykin	North of Borrowwash	Response-01443	Traffic Congestion	The proposed site will have to have access to Cole Lane which is a busy route, especially in the mornings where cars pull onto the A52. The prospect of more cars trying to pull onto Cole Lane in the mornings/evenings will cause a lot of traffic issues and potential problems for existing car users. Also the cars will have to cross the pavement and that could affect the pedestrians especially children that walk to school in Ockbrook..
Ann Daykin	North of Borrowwash	Response-01443	Road Safety	The proposed development will affect the roads around the site. Those roads are important routes, especially the A52, Cole Lane and Nottingham Road, Borrowwash. The concern is that the increased traffic will cause safety issues through the increase in the number of cars pulling onto/off these major routes through Borrowwash.
Ann Daykin	North of Borrowwash	Response-01443	Air Quality	The increase in the number of cars will affect the air quality around this area.. This will cause more pollution
Ann Daykin	North of Borrowwash	Response-01443	Wildlife / Biodiversity	The proposed development is to be built on fields surrounded by hedges, with the Ockbrook flowing on the Western side. The area is varied and supports wildlife, the hedges are extremely important for biodiversity.
Ann Daykin	North of Borrowwash	Response-01443	Healthcare Facilities	Borrowwash has two doctor surgeries and one dentist. All these facilities are oversubscribed and could not support the extra residents that this development would bring.
Ann Daykin	North of Borrowwash	Response-01443	Green Belt	Borrowwash and Ockbrook have always had areas of green around the village which has provided the residents with areas of green belt and has helped with the mental wellbeing of the residents. The pressure of more housing will add extra stress to the locals who live on the current housing estate, which will be closest to the development. This development will be detrimental to the mental health and wellbeing of the current residents who are a low socioeconomic group.
Ann Daykin	North of Borrowwash	Response-01443	Flooding / Drainage	The development would put extra pressure on the drainage of this area. At the moment the Ockbrook does flood areas of Borrowwash and this development will just add even more pressure to a system that's already struggling.
Ann Daykin	West of Borrowwash	Response-01453	Traffic Congestion	Despite the creation of new road to the development, the number of potential cars that would be accessing the A6005 would be overwhelming. The road is currently congested at rush hour, so the extra traffic would cause massive issues and traffic congestion throughout Borrowwash.
Ann Daykin	West of Borrowwash	Response-01453	Road Safety	The extra traffic and access from the development pulling onto the A6005 would create road safety issues and problems for the residents of Borrowwash . The road is difficult and easily congested, outside of the peak traffic flows. with traffic weaving in and out of stationary traffic. The development would make this situation a lot worse..and cause potential road safety issues for both pedestrians and drivers alike. The pavement on the side of the proposed development is narrow and is consistently used, with not a lot of space for traffic to pull out into a fairly narrow road. This would definitely be a potential hazard and road safety issue.
Ann Daykin	West of Borrowwash	Response-01453	Air Quality	The sheer volume of new cars on the roads of Borrowwash and Ockbrook, following on from the proposed development being established, would have a detrimental affect on the air quality of the area.
Ann Daykin	West of Borrowwash	Response-01453	Wildlife / Biodiversity	Currently the proposed site is to be built on farmland which has deliberately laid barren. Previously this was an area where wildlife could be found and seen. There is still wildlife there despite this and it needs to be saved for future generations.
Ann Daykin	West of Borrowwash	Response-01453	Healthcare Facilities	Borrowwash has two surgeries and one dentist. Both surgeries are oversubscribed and find patients complain that it's difficult to get an appointment. The dentist practice is also struggling with patient numbers.
Ann Daykin	West of Borrowwash	Response-01453	Number of Houses	The number of houses is just too much .The local infrastructure just can't cope with housing on this scale.. Borrowwash has always had a village identity.. the scale of the proposed housing developments will create issues for the local community and resentment towards the residents of the new proposed developments.
Ann Daykin	West of Borrowwash	Response-01453	Green Belt	The green belt in Borrowwash needs to be protected for future generations and their wellbeing. This development brings the boundaries between urban and green belt into conflict and leaves precious little green space between Borrowwash and Spondon . It needs to be stopped before it encroaches this precious area..
Ann Daykin	West of Borrowwash	Response-01453	Flooding / Drainage	More development will just add pressure to an already weak drainage system.. Borrowwash has the Ock brook running through the village and it flows into the Dereent. This area floods yearly and is getting worse. I have lived in the village for 57 years and can see a decline in this area. It's getting worse and that's because the system can't cope now.. and building this development will only add to the pressure on local systems.
Anne Anderson	West of Borrowwash	Response-00980	Traffic Congestion	It is already difficult to cross the road if you are not in the vicinity of the crossing and the traffic noise will make life unbearable for residents living on the main road.
Anne Anderson	West of Borrowwash	Response-00980	Healthcare Facilities	It is virtually impossible to even get through to The Park Medical Practice on the telephone never mind get an appointment. I see the Surgery have applied to extend into the house next door but are not going to increase their staff so what is the point.
Anne Anderson	West of Borrowwash	Response-00980	Green Belt	Green belt is green belt and once it has gone it cannot be retrieved.
Anne Anderson	West of Borrowwash	Response-00980	Flooding / Drainage	That land has always flooded and still floods. I have a friend who backs onto that field and during heavy rain his garden is literally under water. It was so bad last winter that he had to get sand bags to prevent the water entering the air bricks.
Anne Butler	West of Sandiacre	Response-00385	Traffic Congestion	Site access through the back streets of Sandiacre will be a nightmare for anyone living in that area of the town. As it is the narrow streets are difficult to negotiate with all the on road parking that goes on, because when the estate was built, people did not have the amount of cars they have now.
Anne Butler	West of Sandiacre	Response-00385	Road Safety	The on road parking leading up to the site means there is poor visibility for a motorist negotiating the roads. Children on the pavements cannot be seen. Poor parking often means people have to walk in the road. Increased traffic will mean an increase in likelihood of accidents.
Anne Butler	West of Sandiacre	Response-00385	Air Quality	The site is next to the motorway where lorries are doing the uphill run, churning out diesel fumes. Not healthy for anyone living next to it.
Anne Butler	West of Sandiacre	Response-00385	Wildlife / Biodiversity	Any impingement on to the stoney clouds site, including the children in these 300 houses using it as a playground will be detrimental to the wildlife there.
Anne Butler	West of Sandiacre	Response-00385	Bus Services	Bus services to it will be non-existent as the buses will not be able to negotiate the surrounding streets.
Anne Butler	West of Sandiacre	Response-00385	School Capacity	Local schools are already full.
Anne Butler	West of Sandiacre	Response-00385	Healthcare Facilities	There are no full-time doctors in Sandiacre, the local Pharmacy run by Boots has shut down, There are no local dentists taking on NHS patients. Ambulance access to the site will be slow.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Anne Butler	West of Sandiacre	response-00355	Green Belt	This is green belt and should not be built on. There are poor quality buildings in Long Eaton that should and could be demolished to provide site for social housing, with better facilities for those without transport in the town centre.
Anne Butler	West of Sandiacre	response-00355	Flooding / Drainage	This is the top of the hill so will not be flooded. However as we have learnt from the building on Springfield house, ripping out the trees which sucked up water before, and the wall to wall tarmac and concrete caused flooding to surrounding houses, because all the rain water that landed on the site was not absorbed and ran off causing flooding to gardens either side of the site, flooding to my garage, water running under my house and coming out at the bottom of my drive. Silt running off the site blocked drains, so excess rain water then ran down Longmoor lane and flooded under the A52 bridge. Reporting blocked drains meant that after 8 weeks I got them cleared. Extra drains on the site had to be put in, and a soakaway all the way along the side of my property to ameliorate the nuisance caused by this water. The old quarry had so much water land in it that all the trees in the middle died due to standing water. This has caused annihilation of the wildlife on this site.
Anne Castledine	West of Sandiacre	Response-00499	Traffic Congestion	Stanton Road isn't wide enough for the traffic we have now. Often buses can't get through, and cars often drive on pavements to get through on school pick up and drop offs.
Anne Castledine	West of Sandiacre	response-00499	Road Safety	As a pedestrian difficult as cars are often parked on pavements, if they didn't roads would be at a standstill.
Anne Castledine	West of Sandiacre	response-00499	Air Quality	Without the green belt between Linden and the motorway, the air pollution would be much greater.
Anne Castledine	West of Sandiacre	response-00499	Wildlife / Biodiversity	The variety of wild life is amazing, I've watched foxes playing and the different types of birds, including buzzards and sparrow hawks, blue tits and coal tits, robins to name just a few.
Anne Castledine	West of Sandiacre	response-00499	Bus Services	Buses have problems getting around because of parking, the roads are those of a village; extra traffic from the proposed house builds will cause mayhem.
Anne Castledine	West of Sandiacre	response-00499	School Capacity	The schools are full of now, dropping off and picking up times on Stanton Road should be avoided now.
Anne Castledine	West of Sandiacre	response-00499	Healthcare Facilities	One doctors surgery for Sandiacre, try getting an appointment.
Anne Castledine	West of Sandiacre	response-00499	Type of Housing	It's green belt land, there are other brown areas more suitable.
Anne Castledine	West of Sandiacre	Response-00499	Number of Houses	Far too many for the infrastructure that there is. Heavy rain causes flooding from the main sewer on Derby Road, it's struggling now.
Anne Castledine	West of Sandiacre	Response-00499	Green Belt	It's green belt and can be boggy in places, not large enough to take the amount of houses planned. Why not use other areas with easier access roads?
Anne Castledine	West of Sandiacre	Response-00499	Landscape	The landscape will be lost forever if this goes through, a small area being packed with housing.
Anne Castledine	West of Sandiacre	Response-00499	Flooding / Drainage	In heavy rain, Poplar, Sycamore and Coronation become flooded. There have also been problems with the water supply, Severn Trent have had to repair pipes many times, and residents have been without water at times.
Anne Castledine	West of Sandiacre	response-00499	Other	The small access road on Larch Drive and Cloutside are not large enough to take heavy lorries carrying building materials, let alone the probable extra 400 cars that would come with 180 new hoses.
Anne Jenkins	West of Sandiacre	Response-00350	Traffic Congestion	The area proposed cannot support any construction traffic.
Anne Jenkins	West of Sandiacre	Response-00350	Road Safety	There are many families living in the area and the possibility of more traffic particularly construction traffic is very dangerous
Anne Jenkins	West of Sandiacre	Response-00350	Air Quality	Air quality will suffer due to the amount of dust and mud that will be created
Anne Jenkins	West of Sandiacre	Response-00350	Wildlife / Biodiversity	Stoney clouds is a wonderful facility which supports many types of wildlife and offers a natural environment for us to enjoy
Anne Jenkins	West of Sandiacre	Response-00350	Bus Services	There would be no opportunity to extend the bus route and extra traffic would make it difficult for buses to cope
Anne Jenkins	West of Sandiacre	Response-00350	School Capacity	Scrolls are already over subscribed
Anne Jenkins	West of Sandiacre	Response-00350	Healthcare Facilities	It's already to get appointments at the one gp surgery that serves the area. D the same goes for dentists
Anne Jenkins	West of Sandiacre	Response-00350	Type of Housing	Houses would overwhelm the bungalows already built on larch avenue
Anne Jenkins	West of Sandiacre	Response-00350	Number of Houses	No houses should be built there
Anne Jenkins	West of Sandiacre	Response-00350	Green Belt	Green belt land is exactly that . There are brown field sites which could be used
Anne Jenkins	West of Sandiacre	Response-00350	Landscape	The landscape would be changed forever and how can we be sure the building wouldn't extend further
Anne Jenkins	West of Sandiacre	Response-00350	Flooding / Drainage	I live on a hill and my garden gets flooded from water draining down from the woods. Disruption to the water table is only going to make it worse. The drains couldn't cope without a massive upgrade which would impact on the whole area
Anne Jenkins	West of Sandiacre	Response-00350	Other	This is a ridiculous scheme and I am appalled that the council have tried to push this through with no proper investigation or consultation
Annette Jones	West of Sandiacre	Response-00961	Traffic Congestion	Traffic congestion is already a problem getting to and from this area. I live on Chestnut Grove and there's not enough parking on the street as it is so parking on the pavement has become a norm. I have a driveway but getting off the drive because cars are parked at the front is a regular problem. What about the push chairs and mobility scooters nobody takes this into consideration. The school on Stanton Road causes parking and access issues to neighbouring streets. Commuting to work when it is school time or football club events has been a major issue and a 20 minute drive to work as to be planned carefully. The buses also have difficulty getting to and around the estate as accessibility is not always easy and because of the number of cars per home and space to manoeuvre or pull in is limited at times.
Annette Jones	West of Sandiacre	response-00961	Road Safety	Road safety is getting worse and an accident waiting to happen on Stanton Road especially during school and football club events. Road safety awareness is not a priority in schools now and lollipop people are rare to see now. The knock on effect is that it causes drivers to speed up the neighbouring roads and not taking care posing even more risk to safety. Parking on the pavement is normal because not enough parking spaces and people don't want to risk their car being damaged so also a hazard to pedestrians and people with limited mobility. Emergency services have had difficulty accessing certain parts of the roads and parking close to the actual address. Cyclists have to take into account the current state of the roads which is getting harder and extra traffic. Don't see the cycling proficiency tests now near the school as it's not safe.
Annette Jones	West of Sandiacre	response-00961	Air Quality	The air quality is already getting worse in this area and the extra traffic on the motorway is only adding to the problem. We are aware that the widening of the motorway took us close to the threshold of high pollution and the addition of electric cars is not as green as we are led to believe - bigger and heavier loads on the roads not to mention tyre dust. The industrial development at Stanton also adds to this and regularly dust covers cars carried by the wind - this was also an issue when Stanton Ironworks was there and caused on-going health issues therefore green space is important to this area and should be protected.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Annette Jones	West of Sandiacre	response-00961	Wildlife / Biodiversity	We should protect the existing wildlife and continue to encourage old and new species. Having lived in the same area all my life and seeing what happened when the new housing was built previously it has taken many years to correct or never be able to replace. Do we not learn what impact this can have.
Annette Jones	West of Sandiacre	response-00961	Bus Services	The bus service already struggles with access at times. In winter this is made even worse because of the steepness and tight manoeuvres that have to be contemplated. The snow and ice is very hazardous and doesn't melt as quick at the top so some people are house bound during this period.
Annette Jones	West of Sandiacre	response-00961	School Capacity	The schools are already to capacity in this area and further influx is bound to impact on the quality of education delivered. It is not right that children have to be split up to go to different schools of the same age group.
Annette Jones	West of Sandiacre	response-00961	Healthcare Facilities	The doctors surgery cannot cope with the population this area. I already go the Stapleford Health Centre as the Sandiacre/Stapleford doctors formed a community medical service for Stapleford and Sandiacre many years ago. I cannot even see a doctor now at the surgery as bottom of the postcode list and should be using a doctors in the Derbyshire area. I was going to change over to the Sandiacre surgery but no joy. No good saying that a new surgery will be part of the deal as no doctors to fill the positions.
Annette Jones	West of Sandiacre	response-00961	Type of Housing	How high are these houses supposed to be? Bungalows are not suitable if you are getting older as the hills are too steep and will have to depend on a car or other transport. Will they accommodate the need for average two cars per household? Will they just be houses with a drive and no garden so further impact on the environment? Other areas within Sandiacre should be considered closer to amenities and easier access to transport.
Annette Jones	West of Sandiacre	response-00961	Number of Houses	Too many to start with as more than the street I live on which backs directly onto the proposed site! How high are these houses supposed to be and will they accommodate two cars per household or will they end up parking on the pavement. Bungalows are not suitable due to the steep hills and therefore older or people with limited mobility will be dependent on a car or other transport. Will they be just a house with a drive with no garden so further impact on the environment.
Annette Jones	West of Sandiacre	Response-00961	Green Belt	You should be protecting this area even more so now that the widening of the motorway which no one was compensated for and the industrial development at Stanton. There are other areas more suitable in the area and should be looked at first. This is a special place for many people of Sandiacre and somewhere we can escape to and enjoy the surroundings. Why were areas/buildings that were council owned especially residential not earmarked to be re-developed or does that have a special clause.
Annette Jones	West of Sandiacre	response-00961	Landscape	This would change the landscape considerably and replaced with buildings and more traffic. The horses in the fields, wildlife, woodland will be gone and before we have time to voice our concern the next field will be built on and gradually that landscape will be eroded away.
Annette Jones	West of Sandiacre	response-00961	Flooding / Drainage	Flooding off the fields is getting worse and as someone who lives on the higher level this is quite concerning and feel for those on lower ground. The drainage is bad and not cleared as it should be so the system cannot cope with the extreme weather we have been experiencing. Water bursts are getting worse particularly on Stanton Road and the last time this happened we were without water almost a day. No plans to do major works so it won't get any better and more bursts likely. Sink holes are also starting to appear and the time it takes to repair is far too long and not safe to the public.
Annette Jones	West of Sandiacre	response-00961	Other	The road conditions are already strained and will only be added with to the additional heavy vehicles if this goes ahead as it will not be able to cope with the stress. No funds are allocated to improve road conditions on the surrounding roads so developers should be made to contribute to this. We should not be made to accept these proposals if not done fairly and proper consultation has not been made with the people it impacts on.
Anne Vanstone	South of West Hallam	Response-01216	Traffic Congestion	Beech Lane is not equipped to handle more traffic. The road is narrow, often reduced to a single lane due to parked cars. Local shops at The Dales are already oversubscribed, and the car park is often gridlocked. This puts additional strain on surrounding streets, many of which aren't built to support overflow parking. We lack a reliable bus service, and the nearest train connections are not easily accessible. This makes it almost certain that new households would rely on private vehicles for everything from commuting to basic errands. The knock-on effect on traffic and pollution cannot be ignored.
Anne Vanstone	South of West Hallam	response-01216	Road Safety	Beech Lane is already dangerous during school drop-off and pick-up times as well as when any other events such as football etc are using the playing fields or Powtrel Pavilion. With additional cars from a large development, the risk to pedestrians ? especially school children ? will only increase. There is no mention of substantial upgrades to the road network to offset these risks. Without that, this plan feels reckless.
Anne Vanstone	South of West Hallam	response-01216	Wildlife / Biodiversity	This site supports a range of wildlife ? including protected and rare species. Pushing ahead with this build would destroy an important ecological space and chip away at our village's green character.
Anne Vanstone	South of West Hallam	response-01216	Bus Services	We lack a reliable bus service, and the nearest train connections are not easily accessible.
Anne Vanstone	South of West Hallam	response-01216	Healthcare Facilities	Healthcare is another worry ? waiting times for GP appointments now regularly exceed five weeks. Patients are frequently offered appointments out of area. The current medical infrastructure simply isn't coping.
Anne Vanstone	South of West Hallam	response-01216	Number of Houses	It's puzzling that this land, once considered inappropriate even for a single house, is now being pushed forward for a major development. That shift raises serious concerns about consistency and planning integrity.
Anne Vanstone	South of West Hallam	Response-01216	Green Belt	Greenbelt land should be protected, there is no excuse to use it at this present time. The risk of further development creeping onto nearby fields is also very real with it being ?safeguarded? on the plans. Once the precedent is set, the surrounding greenbelt becomes vulnerable. We must ask why more appropriate, better-connected locations have not been prioritised.
Ann Foxall	West of Sandiacre	Response-00748	Traffic Congestion	overloading already very busy roads through Sandiacre
Ann Foxall	West of Sandiacre	response-00748	Wildlife / Biodiversity	spoiling a nature reserve/ beauty spot
Ann Foxall	West of Sandiacre	response-00748	School Capacity	overloading facilities such as schools
Ann Foxall	West of Sandiacre	response-00748	Flooding / Drainage	overloading facilities such as sewage
Ann Harrison	West of Sandiacre	Response-01602	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Ann Harrison	West of Sandiacre	response-01602	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Ann Harrison	West of Sandiacre	response-01602	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Ann Harrison	West of Sandiacre	response-01602	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Ann Harrison	West of Sandiacre	response-01602	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Ann Harrison	West of Sandiacre	Response-01602	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Ann Harrison	West of Sandiacre	response-01602	Type of Housing	High density housing is preposterous not in keeping with current housing.
Ann Harrison	West of Sandiacre	Response-01602	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Ann Harrison	West of Sandiacre	response-01602	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Ann Harrison	West of Sandiacre	response-01602	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Ann Sherlock	North of Breadsall Hill Top	Response-00410	Traffic Congestion	The map used is out of date and there is already increased traffic due to the Alport Heights estate and Durose estate (both estates and established roads connected to them are conveniently missing off the map used, and perhaps intentionally misleading).
Ann Sherlock	North of Breadsall Hill Top	Response-00410	Road Safety	The map used is out of date and there is already increased traffic and concerns around road safety due to the Alport Heights estate and Durose estate (both estates and established roads connected to them are conveniently missing off the map used, and perhaps intentionally misleading). There have been a number of accidents already on Mansfield Road around that area, and Breadsall village struggles with the traffic load already.
Ann Sherlock	North of Breadsall Hill Top	response-00410	Air Quality	The map used is out of date and there is a lack of green space and air quality associated already, due to the Alport Heights estate and Durose estate (both estates and established roads connected to them are conveniently missing off the map used, and perhaps intentionally misleading). Adding the current proposal will be extremely detrimental to the air quality, and it is disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the area.
Ann Sherlock	North of Breadsall Hill Top	response-00410	Wildlife / Biodiversity	The map used is out of date and the wildlife has already been negatively impacted in recent years due to the Alport Heights estate and Durose estate (both estates and established roads connected to them are conveniently missing off the map used in this proposal, and perhaps intentionally misleading the public who would presume there is a larger green space left than actually is). Adding the current housing proposal to the already overloaded housing in the area will be extremely detrimental to the wildlife and biodiversity, and it is extremely disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the area. There is not the green space available that is being portrayed, and this will have an even bigger impact on the local wildlife and biodiversity than is currently being displayed on the proposal.
Ann Sherlock	North of Breadsall Hill Top	response-00410	Bus Services	Bus services will undoubtedly be negatively impacted due to the increase in traffic volume
Ann Sherlock	North of Breadsall Hill Top	Response-00410	School Capacity	The map used is out of date and the local schools are already at capacity, with one local school having a waiting list for every single year. Adding the current proposal will be extremely detrimental to the local schools, and it is disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the area, missing two extremely large housing estates and falsely portraying a smaller population and impact the housing proposal will have.
Ann Sherlock	North of Breadsall Hill Top	response-00410	Healthcare Facilities	The map used is out of date and the local healthcare facilities are already at capacity. Adding the current proposal will be extremely detrimental to the local healthcare facilities, and it is disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the area, missing two extremely large housing estates and falsely portraying a smaller population and impact the housing proposal will have.
Ann Sherlock	North of Breadsall Hill Top	response-00410	Type of Housing	The map used is out of date. Adding the current proposal will be extremely detrimental to the local area no matter what housing is built, and it is disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the area, missing two extremely large housing estates and falsely portraying a smaller population and impact the housing proposal will have.
Ann Sherlock	North of Breadsall Hill Top	response-00410	Number of Houses	The map used in this proposal is out of date. Adding the current proposal will be extremely detrimental to the local area, and it is disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the area, missing two extremely large housing estates and falsely portraying a smaller population and impact the housing proposal will have.
Ann Sherlock	North of Breadsall Hill Top	Response-00410	Green Belt	The map used in this proposal is out of date, and fails to show the impact various housing estates have already had on the green belt and surrounding area. Adding the current proposal will be extremely detrimental to the local green belt, and it is disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the green belt area, missing two extremely large housing estates and falsely portraying a larger area of unused land and impact the housing proposal will have on the green belt area.
Ann Sherlock	North of Breadsall Hill Top	response-00410	Landscape	The map used in this proposal is out of date, and falsely shows a more minimal effect on the landscape than is true. Adding the current proposal will be extremely detrimental to the landscape left due to the current Durose estate, and it is disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the landscape, missing two extremely large housing estates (Durose and Alport Heights) and falsely portraying a smaller population and impact the housing proposal will have on the local landscape.
Ann Sherlock	North of Breadsall Hill Top	Response-00410	Flooding / Drainage	The map used in this proposal is out of date. Adding the current proposal will be extremely detrimental to the drainage of the area. Breadsall village has flooded most years since the Durose estate has been built, and it is disappointing that the public have been intentionally lied to in relation to how the current proposal will affect the area, missing two extremely large housing estates and falsely portraying a smaller population and impact the housing proposal will have, especially on the local drainage and flooding issues.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Ann Toplis	North of Breadsall Hill Top	Response-00410	Other	Why has the proposal been intentionally misleading? Why hasn't a current map been used instead of the out of date map that misses several hundred houses? Is it to display a lesser impact to push through a housing proposal that will undoubtedly cause severe harm to the already strained infrastructure of Oakwood and Breadsall? Is it to minimise the damage this proposal will have on the local area, wildlife and little green space we currently have left? Either way, it is disgraceful and the person in charge of the proposal, and whoever signed off on the maps used should be sacked and investigated for falsely misleading the public and authorities around this housing proposal.
Ann Toplis	South of West Hallam	Response-00271	Traffic Congestion	Building here will make the traffic worse on Beech Lane near the school where it is already very bad at school times.
Ann Toplis	South of West Hallam	Response-00271	Road Safety	Again building here would make the roads unsafe due to more traffic around the school area
Ann Toplis	South of West Hallam	Response-00271	Air Quality	More houses near the school would make the air quality worse for the children while at school.
Ann Toplis	South of West Hallam	Response-00271	School Capacity	The school is already full so more houses would make it harder to get into this school
Ann Toplis	South of West Hallam	Response-00271	Landscape	Building more houses here would spoil the countryside round this area.
A Northeast	South West of Draycott	Response-01848	Traffic Congestion	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will exacerbate traffic volume, impacting road safety and increasing the risk of accidents. Increased traffic can lead to congestion, longer travel times, and heightened frustration among drivers, which may result in more aggressive driving behaviours. The road infrastructure may not be equipped to handle the additional load, leading to potential bottlenecks and increased wear and tear on the road surface.
A Northeast	South West of Draycott	Response-01848	Road Safety	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will increase traffic volume, impacting road safety and increasing the risk of accidents. A transport assessment needs to be undertaken, particularly for the residents opposite and adjoining the proposed site entrance. Moreover, the increased traffic will pose a significant risk to pedestrians and cyclists. The A6005 is a key route for local residents, including children walking to school and elderly residents. Higher traffic volumes increase the likelihood of accidents involving these vulnerable road users. Implementing traffic calming measures such as speed bumps, pedestrian crossings, and improved signage could mitigate some risks, but these measures need to be carefully planned and executed. A comprehensive transport assessment is essential to understand the full impact of the proposed development on road safety. This assessment should consider current traffic levels, projected increases, and the capacity of existing road infrastructure. It should also evaluate the potential need for new traffic control measures and improvements to pedestrian and cyclist safety.
A Northeast	South West of Draycott	Response-01848	Flooding / Drainage	Minimal liaison has been undertaken by EBC with Severn Trent regarding drainage and water management arrangements for the Draycott site. Draycott residents experience multiyear flooding events, and this development will further compound flooding issues. More investigation is needed to determine why this known flood location site is suitable for development. A Flood Risk Assessment should be requested for developments within a Flood Zone.
A Northeast	South West of Draycott	Response-01848	Wildlife / Biodiversity	The area has an abundance of wildlife, including protected species such as bats and many migrating birds. These animals and birds will lose their habitats and nesting sites, which is not protecting our fragile environment or providing for biodiversity in our green spaces. The development will damage the biodiversity of the site and adjoining Green Belt. The area has an abundance of wildlife, including protected species. This development will remove grazing land, a valuable asset for horses, and scatter local wildlife, leading to the loss of habitats.
A Northeast	South West of Draycott	Response-01848	Other	We strongly object to the consultation process, which has been limited and not fully transparent. Erewash Borough Council (EBC) has only given local residents the minimum six-week period to submit objections to this significant change to the Local Plan and Core Strategy. This timeframe is insufficient for residents to review and understand the magnitude of the change and formulate objections, especially given the missing details such as the master plan for the land south west of Draycott. These plans do not align with the National Planning Policy Framework (NPPF) 2024 and EBC Local Plan 2022. Furthermore, adequate consultation has not been undertaken with the Draycott Local Parish Council or residents regarding the impact of these plans on the local community, village, and amenity. Noise from construction and operational phases of the development has not been adequately addressed. An environmental noise assessment needs to be carried out, particularly for residents living adjacent and opposite the site entrance.
A Northeast	South West of Draycott	Response-01848	Type of Housing	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing, particularly the houses along Derby Road. Careful consideration must be given to ensure similar housing is developed to maintain the neighborhood and village character.
A Northeast	South West of Draycott	Response-01848	Number of Houses	EBC is proposing nearly 700 houses in Draycott, Borrowwash, and Breaston, which is significantly overbearing and unrealistic considering infrastructure, road networks, and amenities. The proposal for 190 houses will change the villages look and feel, impacting its rural identity and risking morphing into a combined town with Breaston and Borrowwash.
A Northeast	South West of Draycott	Response-01848	Green Belt	EBC should be protecting Green Belt land. The Green Belt and green fields should remain open and safe, preserving public rights of way and access to local green spaces. The Draycott footpaths are in constant use, providing villagers easy access to a countryside environment. This land is rural in character, offering a tranquil and transitional landscape between Daycott Parish, Borrowwash, and Breaston. All these villages are impacted by the proposal to reclassify Green Belt to Grey Belt for housing development. While there is a need for housing, the NPPF states that existing Brownfield and Grey Belt sites should be prioritized over Green Belt sites. There are 109 existing Brownfield sites within EBC, equating to 81 hectares, with 103 of these having full planning permission. These sites should be prioritized for development before Green Belt land is considered. The NPPF states that Green Belt is to be protected and requires exceptional circumstances for development. There is nothing exceptional about the council plans to build on unspoilt Green Belt land to meet their housing target when existing Brownfield sites are available. The land south west of Draycott meets all the criteria for Green Belt purposes, preventing urban sprawl, preserving the countryside's open character, and enhancing recreational opportunities for local residents. Changing this land to Grey Belt and developing 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density.
A Northeast	South West of Draycott	Response-01848	Landscape	The existing footpaths and access to the small wood bring great enjoyment to all who walk these trails, providing substantial benefits for physical and mental health. The development will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The proposal is far too big and overpowering for the village, impacting its heritage and cherished greenbelt landscape.
Anthony Bradley	South West of Draycott	Response-01442	Air Quality	The air quality will be compromised during the build making dust and noise for residents, then the extra vehicles from new home owner will make more pollution
Anthony Bradley	South West of Draycott	Response-01442	Healthcare Facilities	The current practices can not support so many extra houses, which will effect the current residents care.
Anthony Bradley	South West of Draycott	Response-01442	Number of Houses	Far too many houses, almost a quarter the size of the village the roads and services in the village cannot support this.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Anthony Clarke	West of Borrowwash	Response-00559	Green Belt	This is designated green belt, use the grey sites that are Erewash before compromising green belt.
Anthony Bradley	South West of Draycott	Response-01442	Flooding / Drainage	Too many house would flooding worse in the village, these field fields are already flood yearly
Anthony Clarke	West of Borrowwash	Response-00559	Traffic Congestion	Already a very busy village which could not accept the added traffic
Anthony Clarke	West of Borrowwash	Response-00559	Bus Services	We have no bus services in Borrowwash, the two flyers were ended years ago, just those that pass though available
Anthony Clarke	West of Borrowwash	Response-00559	School Capacity	We only have one infant school in Borrowwash, where are they all going to go
Anthony Clarke	West of Borrowwash	Response-00559	Healthcare Facilities	What a joke an additional 280 houses , average 2.5 people per house. Both doctors surgeries already at full capacity, can't get an appointment as it is now
Anthony Clarke	West of Borrowwash	Response-00559	Green Belt	Further reducing the gap between Spondon and Borrowwash.
Anthony Ford	West of Sandiacre	Response-01921	Traffic Congestion	I already struggle to get out of my drive because of the traffic. Kings Road is a prime route for drivers. There has already been a tragic accident this year, additional cars will not make things easier or safer. It will increase traffic flow on Kings Road & impact adversely on our life on this road.
Anthony Ford	West of Sandiacre	Response-01921	Air Quality	Increased traffic will increase the air pollution outside of my house.
Anthony Ford	West of Sandiacre	Response-01921	Wildlife / Biodiversity	It is a lovely walk through & round the horse field to get to the golf course. An escape of natural beauty & biodiversity.
Anthony Ford	West of Sandiacre	Response-01921	Healthcare Facilities	I already struggle to get a doctors appointment, despite having serious illnesses. Extra pressure on the surgery will make it worse.
Anthony Ford	West of Sandiacre	Response-01921	Flooding / Drainage	The field absorbs water, if it is built on rain has to go somewhere & I am downhill. Kings Road suffers because the drains cannot cope. They are not deep enough & have insufficient fall. We regularly get blockages & overflows. The Severn cannot take any more sewage without causing us major health problems.
Anthony Lawton-Reeve	South West of Draycott	Response-00971	Traffic Congestion	The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead.
Anthony Lawton-Reeve	South West of Draycott	Response-00971	Road Safety	The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment.
Anthony Lawton-Reeve	South West of Draycott	Response-00971	Wildlife / Biodiversity	This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife.
Anthony Lawton-Reeve	South West of Draycott	Response-00971	Healthcare Facilities	Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter. This action by the EBC was irresponsible and not acting in the interests of the local communities this plan impacts.
Anthony Lawton-Reeve	South West of Draycott	Response-00971	Type of Housing	The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village's strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.
Anthony Lawton-Reeve	South West of Draycott	Response-00971	Number of Houses	NPPF 223. States that planning policies should set out criteria or requirements to ensure that permitted and proposed operations do not have unacceptable adverse impacts on the natural and historic environment or human health, taking into account the cumulative effects of multiple impacts from individual sites and/or a number of sites in a locality. The EBC are proposing a combined number of nearly 700 houses in the locality of Draycott, Borrowwash and Breaston which is significantly overbearing and unrealistic when considering infrastructure, road networks and amenity. The proposal for 190 houses to begin, which will increase to c. 240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate.
Anthony Lawton-Reeve	South West of Draycott	Response-00971	Green Belt	Protecting Green Belt land, this land should be kept open and unharmed. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate.
Anthony Lawton-Reeve	South West of Draycott	Response-00971	Landscape	Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape when existing Brownfield sites within EBC should be prioritised before the Greenbelt land south west of Draycott.
Anthony Lawton-Reeve	South West of Draycott	Response-00971	Other	As residents living next to the site of the proposed change in Green Belt status and future housing development, we are of the view that these proposals will have a serious negative impact on the village, visual openness, spatial openness, the local community and our standard of living. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Anthony Pearson	West of Sandiacre	Response-01760	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Anthony Pearson	West of Sandiacre	Response-01760	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Anthony Pearson	West of Sandiacre	Response-01760	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Anthony Pearson	West of Sandiacre	Response-01760	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Anthony Pearson	West of Sandiacre	Response-01760	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Anthony Pearson	West of Sandiacre	Response-01760	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Anthony Pearson	West of Sandiacre	Response-01760	Type of Housing	High density housing is preposterous not in keeping with current housing.
Anthony Pearson	West of Sandiacre	Response-01760	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Anthony Pearson	West of Sandiacre	Response-01760	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Anthony Pearson	West of Sandiacre	Response-01760	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Anthony Smedlewick	West of Sandiacre	Response-01877	Traffic Congestion	I stay at my girlfriends house several times a week & struggle to get out of Taft Avenue now, without more traffic.
Anthony Smedlewick	West of Sandiacre	Response-01877	Road Safety	There are too many bends on these roads around here & are dangerous because of the school.
Anthony Smedlewick	West of Sandiacre	Response-01877	Wildlife / Biodiversity	We go up there to see all the different animals up there, it's lovely.
Anthony Smedlewick	West of Sandiacre	Response-01877	School Capacity	Lady down the road says her kids class is already stretched.
Anthony Smedlewick	West of Sandiacre	Response-01877	Number of Houses	No houses should be on this little site.
Anthony Smedlewick	West of Sandiacre	Response-01877	Green Belt	We need spaces to walk & destress in.
Anthony Walsh	South West of Draycott	Response-00992	Traffic Congestion	The Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic. The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead. NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowash. This is totally unrealistic and the current roads would not cope with the volume of traffic.
Anthony Walsh	South West of Draycott	Response-00992	Road Safety	The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents. A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents.
Anthony Walsh	South West of Draycott	Response-00992	Air Quality	If granted there will be a massive increase on the carbon footprint building and habitation via gas and electricity along with transport exhaust pollution

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Anthony Walsh	South West of Draycott	Response-00992	Wildlife / Biodiversity	The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance. "NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite. "
Anthony Walsh	South West of Draycott	Response-00992	Bus Services	Busses are currently few and far between
Anthony Walsh	South West of Draycott	Response-00992	School Capacity	The local school is currently under performing (OFSTED) and is not suitably equipped for any additional influx of children
Anthony Walsh	South West of Draycott	Response-00992	Healthcare Facilities	I have just tried for four days to get an appointment Our current doctors availability is not fit for purpose. Adding to this will literally collapse this 'not fit for purpose' system
Anthony Walsh	South West of Draycott	Response-00992	Type of Housing	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing,
Anthony Walsh	South West of Draycott	Response-00992	Number of Houses	The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. NPPF 61. States that to support the Government?s objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay. The overall aim should be to meet an area?s identified housing need, including with an appropriate mix of housing types for the local community. The land identified south west of Draycott is Green Belt and Grade 2 quality land. This development neither looks to protect the BMV not does it look to bring forward the 109 existing Brownfield sites within the EBC that has full planning consent. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.

Anthony Walsh	south west of Draycott	response-00992	Green Belt	Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The taking away of grazing/arable land and the disruption for the wildlife. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The taking away of grazing/arable land and the disruption for the wildlife. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt. "NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite. "
Anthony Walsh	south West of Draycott	response-00992	Landscape	The taking away of grazing/arable land and the disruption for the wildlife. Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. There is an opinion that the deer fencing would devalue the area of open farmland and public right of way.
Anthony Walsh	south west of Draycott	response-00992	Flooding / Drainage	Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact. NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issues.
Anthony Walsh	South West of Draycott	response-00992	Other	Loss of open space and green spaces ? this is vital for our community?s wellbeing Primary School affected with noise and traffic The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would not benefit from the current sprawling Greenbelt views as it will be gone forever. It will have a detrimental effect on the wellbeing of people who enjoy the countryside, not to mention wildlife habitats, which are already under extreme pressure. The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the small villages surrounding it of Borrowash and Breaston. It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of development on this green belt. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant lengths of footpaths that will be affected by the development of 190 houses on land south west of Draycott. Promoting healthy and safe communities the effect on our healthy lifestyles, especially our local health and well-being needs ? taking away our green space and facility would be detrimental to our community and our day to day needs would fall short by the loss of our valued facilities Open space and recreation. NPPF102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development Only the bare minimum consultation has been undertaken

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Anthony Weston	South West of Draycott	Response-00992	Other	by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across Easter. This action by the EBC was irresponsible and not acting in the interests of the local communities this plan impacts. To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing. To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools.
Antony M Ingram	West of Sandiacre	Response-01626	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Antony M Ingram	West of Sandiacre	Response-01626	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Antony M Ingram	West of Sandiacre	Response-01626	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Antony M Ingram	West of Sandiacre	Response-01626	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Antony M Ingram	West of Sandiacre	Response-01626	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Antony M Ingram	West of Sandiacre	Response-01626	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Antony M Ingram	West of Sandiacre	Response-01626	Type of Housing	High density housing is preposterous not in keeping with current housing.
Antony M Ingram	West of Sandiacre	Response-01626	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Antony M Ingram	West of Sandiacre	Response-01626	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Antony M Ingram	West of Sandiacre	Response-01626	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Antony Weston	West of Sandiacre	Response-00438	Traffic Congestion	Traffic along Coronation road is already congested due to parked cars, the bus struggles to get up on a daily basis also surrounding roads are very tight due to lack of off road parking, I live on Chestnut grove and we see refuse collectors and emergency services struggling to get up this and surrounding streets. Stanton road also sees congestion outside the school and football club. And you seriously want to add more misery on the roads to the established residents
Anya andrews	North of Breadsall Hill Top	Response-00605		Traffic in and around the area is already so congested. This is going to make the roads even more busy.
Anya andrews	North of Breadsall Hill Top	Response-00605	Air Quality	Air Quality is going to be further ruined and pollution increased causing affects to health.
Anya andrews	North of Breadsall Hill Top	Response-00605	Wildlife / Biodiversity	Local wildlife is going to be continued to be destroyed.
Anya andrews	North of Breadsall Hill Top	Response-00605	Number of Houses	The number of housing is to many for the area intended.
Anya andrews	North of Breadsall Hill Top	Response-00605	Landscape	Local landscape is going to be destroyed and out views from houses is going to be destroyed.
A O Smith	North of Breadsall Hill Top	Response-01798	Traffic Congestion	Traffic levels and volume have and will increase ,particularly at commuter and school times with long queues at both A61 and A608 exits. Speeding traffic is also prevalent.
A O Smith	North of Breadsall Hill Top	Response-01798	Flooding / Drainage	Existing developments at Breadsall Hilltop have adversely affected Brookside Road , the main unclassified road through Breadsall which takes the increased traffic, by flooding. Torrents of water have cascaded down the jitty bringing it with associated debris and blocking the road. The Victorian pipework and sewerage network that runs through the village is insufficient to handle increased load. Climate change increases this risk. There is no provision in the proposals to support the infrastructure needed , such as drainage systems.
A O Smith	North of Breadsall Hill Top	Response-01798	Road Safety	The junctions and traffic calming are insufficient to minimise this increasing risk in Breadsall.
A O Smith	North of Breadsall Hill Top	Response-01798	Green Belt	The impact of extending residential development on this scale is to reduce the biodiversity of this area, with a negative effect on wildlife In particular, the blackcaps, the chiffchaffs, and other migrant birds habitat would be removed,let alone the resident nuthatches ,treecreepers, tawny owls and bats that live in and around Breadsall Village
A O Smith	North of Breadsall Hill Top	Response-01798	School Capacity	There is no provision in the proposals to support the infrastructure needed , such as schools
A O Smith	North of Breadsall Hill Top	Response-01798	Healthcare Facilities	There is no provision in the proposals to support the infrastructure needed , such as doctors surgeries.
April	West of Sandiacre	Response-00469	Traffic Congestion	One of the most immediate and pressing concerns with the development of a high-population state in our area is the inevitable increase in traffic congestion. Our current infrastructure is not designed to accommodate a significant surge in vehicular activity, and without substantial upgrades, residents will face longer commute times, increased air pollution, and a higher risk of accidents. Local roads and intersections, already experiencing periodic bottlenecks, will become overwhelmed, negatively impacting the daily lives of existing residents. Introducing thousands of new vehicles into the area without a comprehensive traffic management and public transportation plan will strain emergency response times and reduce overall quality of life.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
April	West of Sandiacre	response-00469	Road Safety	The proposed development poses serious concerns regarding road safety. A significant population increase will lead to more vehicles on the road, amplifying the risk of traffic accidents, especially in areas not built to handle high volumes of traffic. Narrow roads, limited pedestrian crossings, and insufficient traffic control measures could become hazardous, particularly for children, the elderly, and cyclists. Without proper investment in safety infrastructure?such as sidewalks, street lighting, and speed regulation?the likelihood of collisions and injuries will rise, putting both new and existing residents at greater risk.
April	West of Sandiacre	response-00469	Air Quality	As a parent of a child with health issues, I am deeply concerned about the impact this proposed high-density development will have on local air quality. Increased traffic and construction will inevitably lead to higher levels of pollution, which can severely affect individuals with respiratory conditions and other health vulnerabilities. My son's well-being depends on clean air, and any rise in pollutants such as car exhaust and dust particles could trigger serious health complications. It is not just an environmental issue?it is a direct threat to the health and quality of life for families like mine in this community.
April	West of Sandiacre	response-00469	School Capacity	An influx of new residents will place a serious strain on our local schools, many of which are already operating near or at full capacity. Without significant investment in new facilities, staff, and resources, the quality of education will decline as classrooms become overcrowded and teachers are stretched too thin. This impacts not only the incoming families but also the current students, who may face larger class sizes, reduced individual attention, and fewer extracurricular opportunities. For families like mine who are already part of the school system, this raises serious concerns about the long-term educational outcomes for our children.
April	West of Sandiacre	response-00469	Healthcare Facilities	The current healthcare infrastructure in our area is not equipped to handle the demands of a rapidly growing population. Local clinics and hospitals already face long wait times and limited availability of specialists and emergency services. Adding a large number of new residents without a parallel expansion of medical facilities and staffing will only worsen access to essential care. This is especially concerning for families like mine, where ongoing health issues require consistent and timely medical attention. Overburdening our healthcare system puts both new and existing residents at risk and threatens the overall well-being of the community.
April	West of Sandiacre	response-00469	Flooding / Drainage	The development of a high-population state in this area raises serious issues around flooding and inadequate drainage. Urban expansion often leads to the replacement of natural ground with concrete and asphalt, which greatly reduces the land?s ability to absorb rainwater. Without a well-planned and upgraded drainage system, this can result in frequent flooding, property damage, and even health hazards due to standing water. Our community has already experienced drainage challenges during heavy rains, and additional pressure from new construction could make the situation far worse. Responsible development must prioritize sustainable water management to protect both the environment and residents.
A Redshaw	South of West Hallam	Response-00287	Traffic Congestion	The area is not suitable due to The road infrastructure
A Redshaw	South of West Hallam	Response-00287	Wildlife / Biodiversity	This area is a natural wildlife field without disturbances from any current interference
A Redshaw	South of West Hallam	Response-00287	School Capacity	The school does not have capacity
A Redshaw	South of West Hallam	Response-00287	Healthcare Facilities	It is already impossible to register with a local doctor
A Redshaw	South of West Hallam	Response-00287	Flooding / Drainage	The site is a wetland in winter
A R Gregory	West of Sandiacre	Response-01918	Traffic Congestion	
A R Gregory	West of Sandiacre	Response-01918	Road Safety

A R Gregory	West of Sandiacre	Response-01918	School Capacity	
A R Gregory	West of Sandiacre	Response-01918	Healthcare Facilities	
A R Gregory	West of Sandiacre	Response-01918	Type of Housing	
A R Gregory	West of Sandiacre	Response-01918	Number of Houses	
A R Gregory	West of Sandiacre	Response-01918	Green Belt	
A R Gregory	West of Sandiacre	Response-01918	Landscape	
A R Gregory	West of Sandiacre	Response-01918	Flooding / Drainage	
A R Gregory	West of Sandiacre	Response-01918	Other	Very concerned about the amount of traffic using Derby Road, way to like M1, also getting to see the doctor.
Arleen Corns	West of Sandiacre	Response-01146	Traffic Congestion	The roads around Sandiacre are already in a terrible state and there are far too many vehicles traveling through, even more than ever due to the new development @ Stanton. Huge lorries thundering through a very small town. Sandiacre is called a town but is much smaller than say Long Eaton. The roads upto the proposed development are narrow, steep; they twist and turn with blind bends. The buses and other larger vehicles struggle around the streets, they often have to pull up and ask residents to move their vehicles or mount the pavement. At school opening and closing times it is utter bedlam with cars parked on pavements forcing other drives to pull out onto roads, driving blind as they cannot see what is coming. Also, if it snows is causes a big problem; if residents can get down they cant get back up. Lots of residents park on the road further down but if another potentially 300+ vehicles are trying to do the same, how will that work. There will be abandoned cars every where.
Arleen Corns	West of Sandiacre	Response-01146	Road Safety	As mentioned previously, road safety is compromised because of the volume of traffic and where people park, especially at school opening/closing time. People are literally pulling out blind as vehicles park on the pavement. I once witnessed a vehicle try to reverse back up the hill on Beech Avenue because a large vehicle was struggling to get through and it hit another parked car on the street.
Arleen Corns	West of Sandiacre	Response-01146	Air Quality	I would believe that will all the extra traffic the air quality will worsen.
Arleen Corns	West of Sandiacre	Response-01146	Wildlife / Biodiversity	If you take away the green belt up near Larch drive the wildlife will suffer, there are many creatures living up there, foxes, badgers, snakes, bats, owls and numerous birds. I have identified over 30 different types using an app, of which some are rare such as an Eurasian Siskin.
Arleen Corns	West of Sandiacre	response-01146	Healthcare Facilities	I am concerned that the healthcare facilities will suffer, we have one small drs and one small dentist, that are already stretched. Very difficult to get appointments at either.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Arthur Boulton	Acorn Way, Derby	Response-01097	Traffic Congestion	Living on Morley rd I am well aware of the cogestion caused by traffic both to and from acorn way the suggestion only tinker with what will be major congestion problems in the area caused by this development
Arthur Boulton	Acorn Way, Derby	Response-01097	Bus Services	There will be no improvement in public transport
Arthur Boulton	Acorn Way, Derby	Response-01097	Healthcare Facilities	Where are the improvements to the already overworked dental,medical and education facilities
Arthur Boulton	Acorn Way, Derby	Response-01097	Flooding / Drainage	Acorn way already has flooding issues this development will only make it worse
Arthur Boulton	Acorn Way, Derby	Response-01097	Other	It would seem to me that the developer is making an enormous impact on the area and giving very little back to the local community and making an enormous profit at the expense of the local community
Asha Haynes	North of West Hallam	Response-00059	Traffic Congestion	There isn't capacity for any more traffic on a 40 mile an hour road. The drives already on the road find it difficult enough to get out.
			Road Safety	The position is very close to a cross road and traffic travels on this blind spot. Any additional traffic will be dangerous.
Asha Haynes	North of West Hallam	Response-00059	Wildlife / Biodiversity	The area has significant trees which should be left.
			Bus Services	There isn't a bus service after 6 so unless the new owners have cars they will be isolated. The bus service that exists is limited.
Asha Haynes	North of West Hallam	Response-00059	Healthcare Facilities	You can't get an appointment now so more residents will add to an already stretched service.
Asha Haynes	North of West Hallam	Response-00059	Number of Houses	Far too many for the plot.
Asha Haynes	North of West Hallam	Response-00059	Green Belt	The area is green belt and should be left as this.
			Flooding / Drainage	To my understanding the area floods and the field has a large area of flooding for most of the year. This can be seen from my bedroom window.
Ashley	Acorn Way, Derby	Response-00426	Traffic Congestion	The infrastructures are not in place to accept the level of traffic that would come down acorn way the works being done at the roundabout at Nottingham Road near Asda are clear evidence of the trouble that will cause.. build the roads first .. don't let the developer build first
Ashley	Acorn Way, Derby	Response-00426	Road Safety	The roads are unsafe you would need a dual carriage down acorn way for this to work
Ashley	Acorn Way, Derby	Response-00426	Air Quality	The congestion around the area will cause pollution to the local wildlife
			Wildlife / Biodiversity	We have lots of animals and birds visit our garden on Morley Road this would be taken away
Ashley	Acorn Way, Derby	Response-00426	Bus Services	Morley Road is a bus road however it is already a problem as the roads are not wide enough
Ashley	Acorn Way, Derby	Response-00426	School Capacity	There is not enough school places .. we live on Morley Road in Oakwood and our children could not get into Oakwood school so it's not difficult to work out you would need another school building ??
Ashley	Acorn Way, Derby	Response-00426	Healthcare Facilities	Already at stretch need a new surgery
Ashley	Acorn Way, Derby	Response-00426	Type of Housing	Poor quality houses being built in a rush.. it your going to build build some 5/6 bedroomed luxury houses
Ashley	Acorn Way, Derby	Response-00426	Number of Houses	You need to build more bungalows the benefits would be that older people in Oakwood would downsize to the bungalow freeing up the other properties ..
			Green Belt	You are ruining another lovely part of Derby
Ashley	Acorn Way, Derby	Response-00426	Landscape	Build bungalows if anything reduce the height so the views are not completely ruined
Ashley	Acorn Way, Derby	Response-00426	Flooding / Drainage	You need to take a real look at acorn way it's been flooded so many time over the past 2 years
Ashley Cartledge	West of Borrowwash	Response-01417	Traffic Congestion	Borrowwash already suffers with gridlock at times.
			Air Quality	More traffic as a result of so many homes must impact air quality.
Ashley Cartledge	West of Borrowwash	Response-01417	Wildlife / Biodiversity	Yet more squeezing of our native wildlife.
Ashley Cartledge	South West of Draycott	Response-01420	Traffic Congestion	The area is already congested.
Ashley Cartledge	South West of Draycott	Response-01420	Wildlife / Biodiversity	Wildlife is being squeezed and many of our native species are under threat.
			Traffic Congestion	There is already times when congestion hinders movement around the area.
Ashley Cartledge	North of Borrowwash	Response-01414	Wildlife / Biodiversity	Our native wildlife is under threat and are being squeezed in terms of habitat, once it's gone it will not be able to bring it back.
Ashley Cartledge	West of Sandiacre	Response-01423	Traffic Congestion	There is already too much traffic in the area.
Ashley Cartledge	West of Sandiacre	Response-01423	Wildlife / Biodiversity	Wildlife is being squeezed and we cannot simply say that it can just all live in the nature reserves.
Ashley Dunn	West of Borrowwash	Response-01560	Traffic Congestion	The junction of the A52 and Victoria Avenue is already busy during peak times and there is a lot of congestion around Ashbrook Infants School. Without significant improvements to infrastructure (e.g. entire new junction), this development would unacceptably exacerbate these problems.
Ashley Dunn	West of Borrowwash	Response-01560	Road Safety	Additional traffic from the development will create additional risk for young children attending Ashbrook Infants School. New infrastructure directing additional traffic away from Victoria Avenue would need to be installed prior to any development.
Ashley Dunn	West of Borrowwash	Response-01560	Air Quality	Additional cars along Victoria Avenue will create bigger air quality issues. I already regard air quality on Victoria Avenue to be unacceptable, especially for children attending Ashbrook Infants School. Additional traffic from this site would endanger children's young lungs.
Ashley Dunn	West of Borrowwash	Response-01560	Healthcare Facilities	The ability to get a doctor's appointment in Borrowwash via Park Medical Practice or Overdale is already incredibly difficult and frustrating for everyone. More houses would exacerbate this unacceptably.
Ashley Dunn	West of Borrowwash	Response-01560	Type of Housing	The borough needs more affordable housing not market housing (which historically have always catered for the luxury or executive market too much). Notwithstanding my wish for the development to not be within this green belt at this location for given reasons, social housing much be priorities in the borough.
Ashley Dunn	West of Borrowwash	Response-01560	Green Belt	The National Planning Policy Framework (NPPF) states in paragraph 138 that: "The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence." Furthermore, the NPPF sets out five purposes of the Green Belt in paragraph 138, including: ? to check the unrestricted sprawl of large built-up areas; ? to prevent neighbouring towns merging into one another; ? to assist in safeguarding the countryside from encroachment. The proposed allocation directly contradicts these aims. The land west of Borrowwash plays a critical role in maintaining the physical and visual separation between Derby City and the settlements within Erewash. The area in question is one of the narrowest sections of Green Belt between Derby and the wider Erewash Borough. Development here would not only compromise the openness of the Green Belt but would also materially contribute to the coalescence of Borrowwash with the urban edge of Derby, undermining the purpose of the Green Belt in a fundamental and irreversible way. The proposed allocation also risks setting a precedent for future erosion of the Green Belt in this strategically sensitive area, threatening the long-term integrity of the boundary between city and borough.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Ashley Stafford	North of Borrowwash	Response-01135	Traffic Congestion	It's hard enough entering the A52 during rush hour, another few hundred vehicles will make this even harder.
Ashley Stafford	North of Borrowwash	Response-01135	Road Safety	The increased amount of vehicles undoubtedly raises the local risk of serious accidents. Especially when entering the A52 or heading towards elvaston castle via station road. Station road is highly congested at times already and I have witnessed multiple RTCs in the area with the current capacity.
Ashley Stafford	North of Borrowwash	Response-01135	Air Quality	More vehicles is always going to lower the air quality.
Ashley Stafford	North of Borrowwash	Response-01135	Wildlife / Biodiversity	Remove trees, grass, hedges it will push our wildlife away. Borrowwash is lucky to have the diversity of wildlife it has, especially the native song birds.
Ashley Stafford	North of Borrowwash	Response-01135	Bus Services	Again, capacity will be stretch. More buses will be needed, again creating more traffic
Ashley Stafford	North of Borrowwash	Response-01135	School Capacity	The local schools are already working capacity if not already above capacity
Ashley Stafford	North of Borrowwash	Response-01135	Healthcare Facilities	I personally have to visit a Drs outside of our parish to get an appointment already. I also have to go to a private dentist on the other side of Derby because of the same reason.
Ashley Stafford	North of Borrowwash	Response-01135	Type of Housing	Borrowwash is lucky enough to being my traditional style housing with with generous gardens. The new builds are built on such a way that triple the amount of housing is built on the same sized land. The housing should be in keeping with the area.
Ashley Stafford	North of Borrowwash	Response-01135	Number of Houses	Too many house in one small area
Ashley Stafford	North of Borrowwash	Response-01135	Green Belt	We must protect the green belt. Far too often this land is being given up for housing.
Ashley Stafford	North of Borrowwash	Response-01135	Landscape	When housing is built it undoubtedly has an impact on the landscape. We need to keep large green spaces.
ASHLEY STOWER	Acorn Way, Derby	Response-01183	Traffic Congestion	We live on Morley Road & suffer from chronic road congestion due to it being used as a rat run into Derby to avoid Acorn way , Lees Brook School Parking and Cavendish school traffic.
ASHLEY STOWER	Acorn Way, Derby	Response-01183	Road Safety	The amount of traffic & school children leads to daily incidents of near miss, with a junction on Morley Road this will be a disaster for traffic accidents , children accidents. There will also be anti-social behaviour due to frustration parking by the school , junction an absolutely ridiculous idea.
ASHLEY STOWER	Acorn Way, Derby	Response-01183	Air Quality	Air Quality will be affected considerably with 600 new homes there will be probably at least one / two per house up to four so realistically between 1200 - 200 cars & new car movements. This will effect air quality & living conditions considerably , increased congestion will lead to poor air quality & reduced health.
ASHLEY STOWER	Acorn Way, Derby	Response-01183	Wildlife / Biodiversity	The natural habitats for animals & plants will be taken away , there are better brown field sites that could be developed.
ASHLEY STOWER	Acorn Way, Derby	Response-01183	School Capacity	Lees Brook School is extremely busy there is unlikely to be enough places even if some are sent to West Park. Again road congestion , pollution , air quality are all effected.
ASHLEY STOWER	Acorn Way, Derby	Response-01183	Healthcare Facilities	It is impossible to get an appointment at Oakwood Lister House now , where are another 2000 + people going to get their health provided for & if it is not within the local capability it means more congestion.
ASHLEY STOWER	Acorn Way, Derby	Response-01183	Type of Housing	It is unclear what is the type of housing, social housing brings crime & anti-social behaviour.
ASHLEY STOWER	Acorn Way, Derby	Response-01183	Number of Houses	Far too many , 600 would mean approximately 2000 new people in an already congested area. It is impossible to navigate via Lees Brook school at opening / closing time. Acorn Way queues back each morning it would be an absolute disaster.
ASHLEY STOWER	Acorn Way, Derby	Response-01183	Green Belt	We should preserve the green belt , there is plenty of opportunities for brown field redevelopment. It increases congestion, increases anti-social behaviour, takes away the well being rights of current residents , add stress to current residents through building. However it is cheap for greedy developers to build on. Erewash council has in effect put the problem on Derby City Council why cant these houses be built at Ilkeston or Long Eaton? they are just pushing to the edge of their area & giving others a problem.
ASHLEY STOWER	Acorn Way, Derby	Response-01183	Landscape	It is a mixed green residential landscape the whole area would suffer from this excess building, what about drainage Morley road often floods? etc
ASHLEY STOWER	Acorn Way, Derby	Response-01183	Other	This is a disgraceful plan & those putting it forward should be ashamed of themselves. It is not thought through properly & will bring congestion & misery to the local area.
Ashley syill	North of Breadsall Hill Top	Response-00397	Traffic Congestion	This will increase traffic through a congested zone, especially for an additional 160 houses. Circa 160-200 cars using an access via hungerhill close (not crescent as described?)
Ashley syill	North of Breadsall Hill Top	Response-00397	Road Safety	Narrow roads to be able to extend to a further development. This directly into a roundabout to oakwood
Ashley syill	North of Breadsall Hill Top	Response-00397	Wildlife / Biodiversity	Severly limits area to south of proposed allocation
Ashley syill	North of Breadsall Hill Top	Response-00397	Healthcare Facilities	What provision to access healthcare, already oversubscribed for healthcare provision prior to additional 160 houses. Access to emergency services and access routes also limited
Ashley syill	North of Breadsall Hill Top	Response-00397	Landscape	This severely limits landscape to east of current development. Access roads and plots built north will not impact, but access to these from current mqin access route already narrow and will not cope with an additional demand
Ashley syill	North of Breadsall Hill Top	Response-00397	Flooding / Drainage	Drainage concerns building on farmland, needs assurance as prone to risk of flooding and drainage concerns. Water aspects to north and east of development and inbetween this and protected area
Aubrey Bacon	South West of Kirk Hallam	Response-01181	Type of Housing	The 10% affordable housing, 'if viable', needs to be explained. It is seen by the general public as a 'get-out-of-jail free card' to be played when no actual affordable housing is included once the build is completed. The criteria should be clearly explained up front not hidden away in legal jargon elsewhere. A council member should champion this and hold the developer's feet to the fire to ensure that it happens and the get-out-of-jail card is not played.. Developers who default should be debarred from tendering for future business.

Avice Boyle	South West of Draycott	Response-01427	Traffic Congestion	NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic. A transport assessment needs to be undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This passes through Draycott and Borrowwash. Passing busy junctions, Doctor's surgeries, public car parks, Primary schools, local cricket club as well as numerous residents' homes. The Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic.
Avice Boyle	South West of Draycott	response-01427	Road Safety	NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic. "NPPF 109. States that transport issues should be considered from the earliest stages of plan-making and development proposals, using a vision-led approach to identify transport solutions that deliver well-designed, sustainable and popular places. This should involve identifying, assessing and taking into account the environmental impacts of traffic and transport infrastructure ? including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains. Yet no traffic survey has been undertaken. If it had it would have highlighted that along A6005 (Derby Road) and exactly adjacent the proposed development. The peak traffic hours on Fridays are between 4 PM and 6 PM, with the highest average vehicle count observed from 4 PM to 5 PM. The average number of cars per day in the traffic data is approximately 3,861 vehicles. The highest recorded traffic day in the data is June 11, 2023, with a total of 4,779 vehicles. The maximum speed recorded in the traffic data is 106 mph and the number of times 70 mph is exceeded in the traffic data is 174." The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents.
Avice Boyle	South West of Draycott	response-01427	Wildlife / Biodiversity	These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. Historical badger sett on part of the site to the Victorian tip at the bridge of Noonng Lane.
Avice Boyle	South West of Draycott	response-01427	Healthcare Facilities	To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools.
Avice Boyle	South West of Draycott	response-01427	Type of Housing	Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing, The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village's strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Avice Boyle	South West of Draycott	response-01427	Number of Houses	The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. NPPF 223. States that planning policies should set out criteria or requirements to ensure that permitted and proposed operations do not have unacceptable adverse impacts on the natural and historic environment or human health, taking into account the cumulative effects of multiple impacts from individual sites and/or a number of sites in a locality. The EBC are proposing a combined number of nearly 700 houses in the locality of Draycott, Borrowwash and Breaston which is significantly overbearing and unrealistic when considering infrastructure, road networks and amenity. The scale and massing of the development, which will begin with 190 houses but will significantly increase when the identified safeguarded land is developed in the future, is completely out of character with its surroundings and would be incredibly overbearing on the village and neighbourhood I strongly believe that there are better suited brownfield sites and genuine Grey Belt sites with land that is of poor quality. The land south west of Draycott is Grade 2 land (very good) and should be protected.
Avice Boyle	South West of Draycott	response-01427	Green Belt	NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl. NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. "NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels of land as identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. " Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. The development on the land south west of Draycott for the people of Draycott and other areas, will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses.
Avice Boyle	South West of Draycott	response-01427	Landscape	Under S106 of the Town and Country Planning Act 1990, as amended, contributions can be sought from developers towards the costs of providing community and social infrastructure, the need for which has arisen as a result of new development taking place. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would feel imprisoned by a housing estate. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development.
Avice Boyle	South West of Draycott	response-01427	Flooding / Drainage	NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issues. NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes. "NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where 50 development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout the year with many residents on Lime Grove not able to obtain flood risk damage cover as a consequence. "NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.

Alice Boya	South West of Draycott	Response-01647	Other	Primary School affected with noise and traffic The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would not benefit from the current sprawling Greenbelt views as it will be gone forever. The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter. This action by the EBC was irresponsible and not acting in the interests of the local communities this plan impacts. To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing.
Awson Wheldon	West of Sandiacre	Response-01649	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Awson Wheldon	West of Sandiacre	Response-01649	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Awson Wheldon	West of Sandiacre	Response-01649	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Awson Wheldon	West of Sandiacre	Response-01649	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Awson Wheldon	West of Sandiacre	Response-01649	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Awson Wheldon	West of Sandiacre	Response-01649	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Awson Wheldon	West of Sandiacre	Response-01649	Type of Housing	High density housing is preposterous not in keeping with current housing.
Awson Wheldon	West of Sandiacre	Response-01649	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Awson Wheldon	West of Sandiacre	Response-01649	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Awson Wheldon	West of Sandiacre	Response-01649	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Barbara and John Morrell	West of Sandiacre	Response-00509	Traffic Congestion	I live on Beech Avenue which is already used heavily by traffic other than residents. It is also a bus route running every 20 minutes and there is a school on Stanton Road at the bottom of the Avenue. During school drop-off and pick-up times there are cars everywhere on the Avenue, including the pavements. Buses sometimes can't get down the avenue because of parked vehicles. Also cars cannot see to get onto Stanton Road because of vehicles parked on the pavements at the bottom. I have been concerned for some time about the amount of traffic, and the speed, on this avenue and am even more concerned now with the proposal to build these houses. Most homes now have 2 cars and this fact will generate far too many cars travelling along Beech Avenue. Beech Avenue was never intended to be the thoroughfare it is today and I fear for the safety of children especially, but adults as well in this residential area. I strongly oppose this proposal to build 180 houses on this land.
Barbara and John Morrell	West of Sandiacre	Response-00509	Wildlife / Biodiversity	The area proposed for this new development of houses is a haven for wildlife and any development on this site would have a profound impact on those animals and birds. The area is very much used by local people to enjoy the wildlife it has and there are very few places left in this locality to enjoy such pleasures.
Barbara and John Morrell	West of Sandiacre	Response-00509	Bus Services	I am greatly concerned about the impact extra traffic will have on the bus route which at the moment runs very near to this proposed development and down Beech Avenue. The area will quite simply not cope with more vehicles.
Barbara and John Morrell	West of Sandiacre	Response-00509	School Capacity	Building these houses will surely have an impact on schools in the area. I hope this factor will be taken into consideration.
Barbara and John Morrell	West of Sandiacre	Response-00509	Healthcare Facilities	As a life long resident of Sandiacre I know how difficult it is to get to see a Doctor in this area! Should this development go ahead it would become more difficult, if not impossible, to get an appointment. I do hope this matter will be addressed.
Barbara and John Morrell	West of Sandiacre	Response-00509	Other	I feel it is totally wrong to build houses on this greenbelt land. The implications of it will cause numerous complications to this area and local residents for various reasons, not least of which is the SAFETY ASPECT of extra traffic, which is of paramount importance.
Barbara Crane	South West of Draycott	Response-00268	Healthcare Facilities	There is no doctors? surgery in Draycott. The Overdale Medical practice serves Draycott, Breaston and Borrowash. It is at capacity.
Barbara Crane	South West of Draycott	Response-00268	Type of Housing	Affordable housing will be bought up by landlords who charge extortionate rents. This does not ease problems for first-time buyers.
Barbara Crane	South West of Draycott	Response-00268	Number of Houses	Draycott has been allocated more housing than other areas yet has fewer facilities. Makes no sense at all.
Barbara Crane	South West of Draycott	Response-00268	Green Belt	Why is green belt being targeted? Brownfield sites should be used first.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Barbara Crane	South West of Draycott	Response-00266	Flooding / Drainage	This area is already liable to flooding. Gardens on Lime Grove have been underwater in past years. Additional building on these fields will create further problems. The railway line is frequently flooded just beyond the bridge. Surely the Environment Agency cannot support this development. I would like to view their report.
Barbara Crane	South West of Draycott	Response-00266	Other	I have no doubt that this will be pushed through to meet the government's target. The public's objections made in the consultation will be treated as nimbyism. Shame on you as a council for not listening to your community. It will rebound on you.
Barbara Glaves	South of West Hallam	Response-01046	School Capacity	Too many overcrowded schools already please don't make West Hallam another one
Barbara Glaves	North of West Hallam	Response-01047	Traffic Congestion	Hard enough to get onto High Lane at peak periods now so would only get worse
Barbara Glaves	North of West Hallam	Response-01047	Healthcare Facilities	Not enough doctors for the current population so dread to think what it will be like if the area grows
Barbara Michell	West of Sandiacre	Response-01787	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Barbara Michell	West of Sandiacre	Response-01787	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Barbara Michell	West of Sandiacre	Response-01787	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Barry Shaw	West of Borrowwash	Response-01482	Traffic Congestion	impossible to cross the road currently let alone with 1000 more cars
Barry Shaw	West of Borrowwash	response-01482	Road Safety	The road is not very wide, the pavements are thin. This is a dangerous road as is.
Barry Shaw	West of Borrowwash	response-01482	Air Quality	Air quality is generally poor, this will not be improved
Barry Shaw	West of Borrowwash	response-01482	Wildlife / Biodiversity	Diverse wildlife use the field, this cannot simply be moved to elsewhere. In-depth consultation and investigations shall be required.
Barry Shaw	West of Borrowwash	response-01482	Healthcare Facilities	It is currently hard to impossible to see NHS services, this will be exacerbated.
Barry Shaw	West of Borrowwash	response-01482	Number of Houses	Far far too many. With a single entry and exit it's amusing it has even been proposed.
Barry Shaw	West of Borrowwash	Response-01482	Green Belt	Erosion of the greenbelt is national policy protected against. Removing the greenbelt is absolutely abhorrent.
Barry Shaw	West of Borrowwash	response-01482	Landscape	People live here because the way it looks and feels, once it becomes basically Mackworth estate people will leave.
Barry Shaw	West of Borrowwash	response-01482	Flooding / Drainage	The roads already flood often. This will make things worse.
Barry Shaw	West of Borrowwash	response-01482	Other	No enough community consolation, even this is abstract and hidden.
Bella Kelsey	West of Borrowwash	Response-00739	Air Quality	Air quality in our area is already high risk due to the a52 - more traffic and industrial work will make this even worse
Bella Kelsey	West of Borrowwash	response-00739	Wildlife / Biodiversity	We need to be preserving the green corridor
Bella Kelsey	West of Borrowwash	response-00739	Type of Housing	New builds are not affordable or built to last
Bella Kelsey	West of Borrowwash	response-00739	Green Belt	The green belt needs expanding not building on
Bella Kelsey	West of Borrowwash	Response-00739	Landscape	The area is a lovely little village - new builds always ruin an area
Ben Foster	North of Borrowwash	Response-00837	School Capacity	Under subscribed at Ashbrook
Ben Foster	West of Borrowwash	Response-00838	School Capacity	Under subscribed at ash rook
Ben Hollins	West of Sandiacre	Response-01651	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Ben Hollins	West of Sandiacre	Response-01651	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Ben Hollins	West of Sandiacre	response-01651	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Ben Hollins	West of Sandiacre	Response-01651	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Ben Hollins	West of Sandiacre	response-01651	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Ben Hollins	West of Sandiacre	response-01651	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Ben Hollins	West of Sandiacre	response-01651	Type of Housing	High density housing is preposterous not in keeping with current housing.
Ben Hollins	West of Sandiacre	response-01651	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Ben Hollins	West of Sandiacre	response-01651	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Ben Hollins	West of Sandiacre	Response-01651	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Benjamin Price	South of West Hallam	Response-00257	Traffic Congestion	Beech Lane is already busy road, with cars parked on both sides of the road often only allowing single file traffic through. There is no pedestrian crossing there and so causes a danger to pedestrians
Benjamin Price	South of West Hallam	response-00257	Road Safety	There is a school just around the corner and a significant number of school children walk around that are with no suitable crossing facilities. Increasing houses would increase vehicles on the road causes a higher danger to young ones
Benjamin Price	South of West Hallam	response-00257	Healthcare Facilities	It is currently a 3-4 week wait to get an appointment at the GP in West Hallam. By increasing the population of the village you're putting a higher strain on those NHS services and reducing the service which they provide the the residents

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Benjamin Price	South of West Hallam	Response-00257	Landscape	I walk my dog through that green field every day, as do a number of other dog walkers. It is local and convenient and a refreshing way for me to clean my mind
Benjamin Price	South of West Hallam	Response-00257	Other	I think reducing the size of the landscape around West Hallam and increasing the population would have a detrimental impact on a number of people's mental health as it is used by people to clean their minds and ensure they're getting out and about to improve their mental health.
Ben Kassoul	South West of Draycott	Response-01024	School Capacity	The additional homes will place a massive strain on the number of available places at the local school for existing residents who are yet to have children.
Ben Kassoul	South West of Draycott	Response-01024	Healthcare Facilities	The additional homes will increase demand to the local doctors in Breaston and make it extremely difficult to get appointments.
Ben Kassoul	South West of Draycott	Response-01024	Green Belt	Reclassifying the green belt to a category suitable for building housing on, rather than utilising existing brownfield sites available to the council, is a permanent detriment to Draycott's biodiversity and local flora and fauna.
Ben Kassoul	South West of Draycott	Response-01024	Flooding / Drainage	Draycott sits on a flood plane and regularly floods at the proposed site. The local flood map for planning from gov.uk is conveniently linear along the border to the proposed housing estate which raises questions. The installation of 190 homes will adversely affect the percentage of impermeable area (PIMP) and the catchment areas for the existing surface water drainage and combined sewer running through the village which is only 225mm in diameter. By constructing these homes, the ability for ground infiltration of flooding events will be drastically reduced and cause a dramatic increase to surface water flooding within the village. The combined sewer overflow (CSO) which serves both the Draycott and Breaston Severn Trent sewer system (Draycott sewage pumping station - emergence overflow - [UID 916]) will undoubtedly spill to the River Derwent more frequently as a result of the construction of the new housing estate. This CSO has spilled as recently as 20:26 on Thursday 8th May despite the prolonged dry weather experienced in Derbyshire this month.
Ben Marshall	South West of Draycott	Response-01212	Traffic Congestion	The existing road network struggles to deal with the amount of traffic already existing in the area. The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars (minimum) if this development goes ahead. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment.
Ben Marshall	South West of Draycott	Response-01212	Road Safety	The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents. A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents. Just this week a very serious accident occurred on the road, the area is in desperate need of a speed camera with further building only putting people further at risk.
Ben Marshall	South West of Draycott	Response-01212	Air Quality	Air quality is already poor due to the large amount of traffic on Derby road. An increase in traffic will only add to this, alongside the huge amount of dust and debris that will inevitably occur from sustained building works.
Ben Marshall	South West of Draycott	Response-01212	Wildlife / Biodiversity	This green space is treasured by many local residence and helps many with their mental health by enjoying and connected with nature. This development is not appropriate for the location chosen and will negatively impact the ecology, wildlife and beauty of the area. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.
Ben Marshall	South West of Draycott	Response-01212	Healthcare Facilities	The area already struggles with health care facilities. The additional burden will further cripple residents ability to get access to health care.
Ben Marshall	South West of Draycott	Response-01212	Type of Housing	The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village's strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Ben Marshall	South West of Draycott	response-01212	Number of Houses	NPPF 223. States that planning policies should set out criteria or requirements to ensure that permitted and proposed operations do not have unacceptable adverse impacts on the natural and historic environment or human health, taking into account the cumulative effects of multiple impacts from individual sites and/or a number of sites in a locality. The EBC are proposing a combined number of nearly 700 houses in the locality of Draycott, Borrowash and Breaston which is significantly overbearing and unrealistic when considering infrastructure, road networks and amenity. The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The potential harm caused by the application far outweighs the potential public benefit. NPPF 73. States that the authority should identify, through the development plan and brownfield registers, land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC there are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and completely reckless.
Ben Marshall	South West of Draycott	response-01212	Green Belt	Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. The development on the land south west of Draycott for the people of Draycott and other areas, will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses.
Ben Marshall	South West of Draycott	response-01212	Landscape	The development of 190 homes will have a significantly negative impact on the spatial openness of the area, impacting both the physical and geographical characteristics of the open land, which prevents urban sprawl and maintains the separation between settlements. It will overwhelmingly impact the natural and undeveloped nature of the Green Belt area.
Ben Marshall	South West of Draycott	response-01212	Flooding / Drainage	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact.
Ben Martin	North of Breadsall Hill Top	Response-00787	Traffic Congestion	The planned access to the site can only be achieved by cutting through 2 designated and widely used public footpaths located in the existing Redrow estate at Breadsall Hilltop from the A608. There are no provisions in place to handle the increase in traffic that the already over congested A608 road will face and nothing to address the safety of children who cross on a daily basis for school access. There are no provisions in place to handle the increase in traffic that the already over congested A608 road will face
Ben Martin	North of Breadsall Hill Top	response-00787	Road Safety	There is nothing to address the safety of children who cross on a daily basis for school access. The road already has excessive congestion. There are no provisions to address the safety of children who cross on a daily basis for school access. The planned access to the site can only be achieved by cutting through 2 designated and widely used public footpaths located in the existing Redrow estate at Breadsall Hilltop from the A608.
Ben Martin	North of Breadsall Hill Top	response-00787	Air Quality	The proposed development will destroy greenbelt land and replace it with tarmac, concrete, brick and 160 houses worth of cars. How can this not have a severe impact on air quality?
Ben Martin	North of Breadsall Hill Top	response-00787	Wildlife / Biodiversity	The proposed development site is also a crucial breeding and feeding ground for, and not limited to Buzzards, Kestrels and Barn Owls. It would also lead to excessive destruction of mature hedgerow that surrounds the proposed site, further negatively impacting the wildlife in the greenbelt area who use these as wild life corridors and increasing pollution in the area.
Ben Martin	North of Breadsall Hill Top	response-00787	Healthcare Facilities	There has been zero improvement to doctor facilities, dentists, public transport, schools, parks etc since the development of the Breadsall Hilltop and Persimmon estates on the already health care stressed area of Oakwood.
Ben Martin	North of Breadsall Hill Top	response-00787	Type of Housing	Breadsall Parish Council neighbourhood plan 2019 to 2029 state that all new developments, replacement buildings and extensions are constructed with high-quality materials, using designs that are compatible with the adjoining development and the parish in general. A new build estate does not fit with this. Erewash also does not have the shortage of housing that is seen elsewhere in the UK.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Ben Martin	North of Breadsall Hill Top	response-00787	Number of Houses	160 houses on a small, 8.2 hectares is unrealistic and will have a further negative impact on the already stressed road. It also flies in the face of the previous Strategic Housing Land Availability Assessment 359 on the site as unsuitable for residential development, plus the continually recurring problems seen on all recent developments including and not limited to, a total lack of intent to upgrade inadequate infrastructure, roads, drainage, social provision etc. but also critically ensures the Breadsall becomes a suburb of Derby. The proposed development completely contradicts the National Planning Policy Framework 13 (NPPF 13) which states: 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.
Ben Martin	North of Breadsall Hill Top	response-00787	Green Belt	The proposed development completely contradicts the National Planning Policy Framework 13 (NPPF 13) which states: 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. The preservation of the greenbelt land is vital in helping to achieve three of the key objectives of the Breadsall Neighbourhood Plan, namely to maintain the rural character of the parish, to avoid urbanisation and to prevent coalescence with the Derby conurbation. It is equally important in achieving the Local Plan objective of 'ensuring the continued separation of neighbouring towns and rural settlements within Erewash Borough?'. The most critical area of the current Green Belt is the land that separates Breadsall from the Derby conurbation is this proposed site.
Ben Martin	North of Breadsall Hill Top	response-00787	Landscape	The proposed development is on Greenbelt land. This is used by walkers, horse riders, cyclists, bird watchers and nature lovers. It's a breeding and feeding ground for Buzzards, Kestrels and Barn Owls. Foxes and rabbits frequent the area and it provides a beautiful and scenic boundary between Breadsall Village and Breadsall Hilltop. A housing development here would utterly destroy the landscape.
Ben Martin	North of Breadsall Hill Top	response-00787	Flooding / Drainage	Breadsall village has seen a vast increase in flooding since the development of the Persimmon estate and Breadsall Hilltop which are situated within the water catchment area. Further urbanisation of the water catchment area will undoubtedly lead to an increase of flooding events within Breadsall Village.
Ben Martin	North of Breadsall Hill Top	response-00787	Other	This extension of the Derby conurbation not only flies in the face of the previous Strategic Housing Land Availability Assessment 359 on the site as unsuitable for residential development, plus the continually recurring problems seen on all recent developments including and not limited to, a total lack of intent to upgrade inadequate infrastructure, roads, drainage, social provision etc. but also critically ensures the Breadsall becomes a suburb of Derby. The proposed development completely contradicts the National Planning Policy Framework 13 (NPPF 13) which states: 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. The proposal also totally ignores the Breadsall Parish Council Village Neighbourhood plan 2019 - 2029, link - <a href="https://www.breadsallparishcouncil.org.uk/wp-content/uploads/2021/12/Breadsall-Neighbourhood-Plan_v21-final-draft-low-res-1.pdf">https://www.breadsallparishcouncil.org.uk/wp-content/uploads/2021/12/Breadsall-Neighbourhood-Plan_v21-final-draft-low-res-1.pdf</a> ). The key points of which I would like to highlight below from Chapter 7, page 8 are points 1, 2, 3, 7, 9, 11 & 12: 1 Protect and enhance the rural character of the parish and prevent urbanisation. 2 Enforce the requirements of the Green Belt to prevent inappropriate development and avoid coalescence with the Derby conurbation. 3 Encourage small-scale residential development in appropriate locations within the village envelope. 4 Ensure that a significant proportion of new housing development in the parish will comprise small dwellings to help cater for the lack of such accommodation. 5 Protect and enhance existing employment uses within the parish, including home working where this does not adversely affect adjoining properties and their amenities. 6 Encourage new small-scale employment opportunities in the limited locations where this is appropriate while preventing industrial or commercial uses that would be incompatible with the Green Belt or with the parish generally. 7 Ensure that all new developments, replacement buildings and extensions are constructed with high-quality materials, using designs that are compatible with the adjoining development and the parish in general. 8 Encourage energy conservation through sustainable construction methods and domestic-scale energy generation, but resist large-scale energy generation that would harm the visual character of the parish. 9 Improve measures to control existing flood risks within the parish and resist any new development that may increase existing flood risks. 10 Identify and preserve specific buildings, structures, natural features, views and vistas that enhance the character of the parish. 11 Identify key wildlife and biological features within the parish and take appropriate steps to preserve them. 12 Mitigate the effect of the large volume of through traffic in the village and aim to prevent any growth in through traffic. 13 Control parking on pavements where possible, including enforcement of strict requirements for the provision of sufficient on-sit
Ben Martin	North of Breadsall Hill Top	response-00787	Other	e parking. 14 Preserve and enhance local facilities within the parish, including especially the village shop, the Memorial Hall, the village school, the church, sports pitches, footpaths and greenways. 15 Maintain access to facilities provided outside the parish, particularly through provision of a regular bus service.
ben riley	West of Sandiacre	Response-00607	Traffic Congestion	Traffic congestion is already causing enough pollution and a danger to the surrounding school as it is. Adding 180 homes will only increase this.
ben riley	West of Sandiacre	Response-00607	Air Quality	We are near the M1, we don't want more pollution.
ben riley	West of Sandiacre	Response-00607	Wildlife / Biodiversity	We cherish the area. It's why we moved here so we could take walks with out children on the green belt. Please don't remove any of it. Once you begin to remove it, you'll carry on building on the green belt
ben riley	West of Sandiacre	Response-00607	School Capacity	Adding housing comes with the need of providing extra infrastructure to the community. I doubt there are plans to support this.
ben riley	West of Sandiacre	Response-00607	Type of Housing	It's been described as dense housing. Not only would you be removing beautiful scenic landscape, you'll be replacing it with awful looking brick and tarmac.
ben riley	West of Sandiacre	Response-00607	Green Belt	It's protected Green Belt for a reason. In what way is it protected if you can just build on it?

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Ben Rodney	North of West Hallam	Response-00121	Traffic Congestion	All ready a busy road and junction adding more houses will contest area
Ben Rodney	North of West Hallam	Response-00121	Road Safety	As referenced in traffic
Ben Rodney	North of West Hallam	Response-00121	School Capacity	Already a busy subscribed area for school places
Ben Rodney	North of West Hallam	Response-00121	Healthcare Facilities	Can?t get appointments as it is now let alone with more people adding to it
Ben Rodney	South of West Hallam	Response-00122	Traffic Congestion	On school days, the road is congested as it is, let alone adding in at least another 90 cars
Ben Rodney	South of West Hallam	Response-00122	Road Safety	Right opposite a primary school with more congestion,
Ben Rodney	South of West Hallam	Response-00122	Healthcare Facilities	Already cannot get appointments let alone adding another 90 homes
Ben Snowdon	West of Sandiacre	Response-00428	Traffic Congestion	Traffic along Stanton Road and the surrounding streets is currently untenable. The busses struggle to get past especially on Stanton Road and I have nearly been run over by cars driving on the pavement to get past. Added traffic congestion will compound this situation.
Ben Snowdon	West of Sandiacre	Response-00428	Road Safety	The roads are not wide enough for cars to pass and cars often drive on the pavements to get past nearly running me and my children over
Ben Snowdon	West of Sandiacre	Response-00428	Air Quality	180 additional houses will deliver 250 to 360 more cars. This will have a significant affect on air quality, compounded by the fact that green space and trees will be removed.
Ben Snowdon	West of Sandiacre	Response-00428	Wildlife / Biodiversity	This is an area of natural beauty and has many different types of plants, animals and birds that would all be affected.
Ben Snowdon	West of Sandiacre	Response-00428	Bus Services	The busses get stuck at my house on Stanton Road with the current traffic levels. Increased traffic will make the bus route even more congested. I have photographic evidence
Ben Snowdon	West of Sandiacre	Response-00428	Healthcare Facilities	I moved to the area 2 years ago and struggled to get in with a GP. So much so I have had to go to Nottinghamshire to get in (stapleford)
Bernadette Rothwell	South West of Draycott	Response-00998	Traffic Congestion	The broader area is already congested. Traffic particularly towards Nottingham is poor from Long Eaton.
Bernadette Rothwell	South West of Draycott	Response-00998	Road Safety	There was a death of a motorcyclist in this area from a car existing a property onto Derby Road. How will this be managed and mitigated?
Bernadette Rothwell	South West of Draycott	Response-00998	Wildlife / Biodiversity	I can?t imagine the destruction to wildlife from these plans. There is much wildlife and bird life in the area which will be disrupted from these plans.
Bernadette Rothwell	South West of Draycott	Response-00998	School Capacity	The local primary has plenty of capacity I imagine as it?s terrible. The local secondary schools are getting filer and fuller, with first choice options becoming increasingly hard to get, taking away the choice to send our kids to a school of good standard.
Bernadette Rothwell	South West of Draycott	Response-00998	Healthcare Facilities	I see no information on this brief for the extension of local medical services all of which are stretched to beyond breaking for both appointments and parking.
Bernadette Rothwell	South West of Draycott	Response-00998	Number of Houses	It?s a huge amount of houses for a village.
Bernadette Rothwell	South West of Draycott	Response-00998	Green Belt	Green belt is conservation of our beautiful countryside. What brown belt sites have been looked at, these should have been first I understand?
Bernadette Rothwell	South West of Draycott	Response-00998	Flooding / Drainage	Draycott has experienced significant, damaging, flooding to both residential and commercial properties. These house are very close to the flood plain. This is not going to ease the problem - quite the opposite. There are no details to indicate how this will be managed, for both the new houses as well as those already prone to flooding.
Bethan Eddy	North of Breadsall Hill Top	Response-00976	Traffic Congestion	People use it Breadsall as a cut through to get to the A38. This will increase this further
Bethan Eddy	North of Breadsall Hill Top	Response-00976	Road Safety	The roads are already busy, especially the junction of Brookside Road and Lime Lane already. There have been a number of accidents
Bethan Eddy	North of Breadsall Hill Top	Response-00976	Air Quality	Standing traffic will increase with the amount of traffic
Bethan Eddy	North of Breadsall Hill Top	Response-00976	Green Belt	This is the only bit of land separating Derby City and Breadsall Village, it removes the village boundaries
Bethan Eddy	North of Breadsall Hill Top	Response-00976	Flooding / Drainage	There are huge issues already with flooding in Breadsall Village, this will also increase the flow of water to the bottom of the hill in to the village
Bethan Eddy	North of Breadsall Hill Top	Response-00976	Other	I am following up on issues I raised at the full council meeting regarding the accuracies of the maps and information on Breadsall Hilltop land allocation. The map in the consultation document is not up to date and does not include the Durose development that is already built, if you look at the area on google maps you can see the further development. I am also concerned that the information is not accurate regarding Hungerhill Crescent as it is not a crescent, it is a close. These were raised at full council by myself prior to the consultation going out and I am concerned that the inaccuracies alter the way in which the information is viewed, as it looks like there is more ?green space? than there is. It also, makes me question the validity of the responses if people are unaware of the other developments in the area and that there will be little green space left.
Bethany Oakes	West of Sandiacre	Response-00960	Traffic Congestion	On a work day between 7.30 and 9am, it is already impossible to access the motorway in under 30 minutes. Rushy Lane cannot cope with any more traffic.
Bethany Oakes	West of Sandiacre	Response-00960	Road Safety	During pick up time, Stanton Rd and Rushy Lane are already hazardous, they cannot support any more vehicles without compromising safety.
Bethany Oakes	West of Sandiacre	Response-00960	Air Quality	240 more cars is an unsustainable amount of air pollution for a small village already next to the M1.
Bethany Oakes	West of Sandiacre	Response-00960	Wildlife / Biodiversity	The area being built on is currently a haven for wildlife, including foxes, badgers and squirrels.
Bethany Oakes	West of Sandiacre	Response-00960	Healthcare Facilities	Our local pharmacy was closed, and it's incredibly hard to get Doctor's appointments as well as dentist appointments in the village. How are we meant to support over 200 more people?!
Bethany Seivewright	North of Breadsall Hill Top	Response-01563	Traffic Congestion	The road layout is not set up for an additional 160 houses, the traffic is already bad enough and people speed coming up to the roundabout causing concerns for safety
Bethany Seivewright	North of Breadsall Hill Top	Response-01563	Wildlife / Biodiversity	Concerned over the wildlife with it being so close to the great northern Greenaway
Bethany Seivewright	North of Breadsall Hill Top	Response-01563	Healthcare Facilities	No additional health services being built, doctors are already overcrowded and is almost impossible to get an appointment. The Oakwood surgery also doesn?t accept half of Durose estate as out of catchment - never mind additional houses
Beverley Ann Ratcliffe	East of Breaston	Response-01098	Traffic Congestion	Using Heath Garden as an accessible road. The road into Heath Gardens is barely accessible for one vehicle at a time. Should there be two cars wanting to pass, then one vehicle has to reverse backwards to their own drives or to the side of the garage and mount the pavement to enable people to pass. Should a vehicle like a bin lorry, or any other sizeable vehicle come down the gardens, then you have to wait for it to leave before you can exist the Gardens, causing congestion. If drivers of larger vehicles are unaware of the narrowness of the road, they will have difficulty in managing to exist the cul-de-sac as there is limited space to turn around. There is no pavement apart from the top of Heath Gardens by the petrol station. There is also a double dog leg at the entrance to the cul-de-sac which a vehicle similar to a bin lorry which cannot navigate unless it mounts the kirb. The above would all be a Health & Safety risk for all residents due to limited access and no pavements in the cul de sac.
Beverley Ann Ratcliffe	East of Breaston	Response-01098	Road Safety	As mentioned in previous entry on Road Congestion.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Beverley Ann Ratcliffe	East of Breaston	response-01098	Air Quality	There will be a risk to Health and Safety through air pollution, air quality (including emissions), dust and noise levels due to the increase in traffic and building work which will take place through the amount of time to complete this project. As close to the M1, air quality is already not of the best.
Beverley Ann Ratcliffe	East of Breaston	response-01098	Wildlife / Biodiversity	There will be implications, felling of trees, loss of habitat for wildlife including foxes, rabbits, birds and all the smaller species due to this being a natural area for their habitat. This has always been a green belt, with no pollution, which has allowed the animals, trees and flora to develop and grow naturally. Also there is a high risk of flooding on this land which is proposed to build on.
Beverley Ann Ratcliffe	East of Breaston	response-01098	School Capacity	There is already an over-subscribed list of pupils for Breaston School and the infra-structure for Breaston will not accommodate any more capacity to increase pupils. In addition, whilst not just Breaston, you are planning new homes in Draycott, (a higher number of homes) and again, there is only one small school, how can both schools accommodate the further increase in capacity? Where do you suggest these young children go to school?
Beverley Ann Ratcliffe	East of Breaston	response-01098	Healthcare Facilities	Again, you are planning homes in both Breaston and Draycott. In Breaston, there is only one small Dental practice, which only takes on Private Patients, one Doctor's surgery which also covers Draycott and also has a surgery in Borrowash, which serves all three parishes. Getting an appointment into my doctors in Breaston is very difficult, how they are going to manage with an influx of around 200 new homes, equalling approx 400 people not including children? Quality of care would be highly impacted.
Beverley Ann Ratcliffe	East of Breaston	response-01098	Green Belt	Absolutely disgusting that you can change the Green Belt to Grey Belt. There is very limited Green belt in this area and in addition you are trying to put new houses in a small plot which already floods so increasing the risk of flooding to the neighboring cemetery and grounds also residents on nearby streets.
Beverley Ann Ratcliffe	East of Breaston	Response-01098	Landscape	There will be implications, felling of trees, loss of habitat for wildlife including foxes, rabbits, birds and all the smaller species due to this being a natural area for their habitat. This has always been a green belt, with no pollution, which has allowed the animals, trees and flora to develop and grow naturally. Also there is a high risk of flooding on this land which is proposed to build on.
Beverley Ann Ratcliffe	East of Breaston	response-01098	Flooding / Drainage	There is very limited Green belt in this area and in addition you are trying to put new houses in a small plot which already floods so increasing the risk of flooding to the neighboring cemetery and grounds also residents on nearby streets.
Beverley Ann Ratcliffe	East of Breaston	Response-01098	Other	This site if build on would cause a high increase in foot flow, traffic and noise through Heath Gardens causing a risk to Health & Safety to residents and other members of the public, as there are no pavements and limited access due to comments already submitted earlier. Also, please bear in mind the ages of residents currently residing in Heath Gardens, who your proposals would have impact on.
Beverley Dawn Kilby	North of West Hallam	Response-00235	Traffic Congestion	access will need to be carefully managed, it is the brow of a hill and the road speed limit currently is 40mph. could be an accident black spot. increased housing will lead to more cars
Beverley Dawn Kilby	North of West Hallam	response-00235	Road Safety	brow of a hill, 40 mph speed limit on this section of road
Beverley Dawn Kilby	North of West Hallam	response-00235	Other	these area is not part of West Hallam, would have a main road separating it from West Hallam
Beverley Gardner	West of Sandiacre	Response-01692	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Beverley Gardner	West of Sandiacre	response-01692	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Beverley Gardner	West of Sandiacre	response-01692	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Beverley Gardner	West of Sandiacre	response-01692	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Beverley Gardner	West of Sandiacre	Response-01692	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Beverley Gardner	West of Sandiacre	response-01692	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Beverley Gardner	West of Sandiacre	response-01692	Type of Housing	High density housing is preposterous not in keeping with current housing.
Beverley Gardner	West of Sandiacre	response-01692	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Beverley Gardner	West of Sandiacre	response-01692	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Beverley Gardner	West of Sandiacre	response-01692	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Beverley Green	West of Sandiacre	Response-01686	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Beverley Green	West of Sandiacre	response-01686	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.

Beverly Jordan	North of Breadsall Hill Top	Response-01330	Traffic Congestion	More pressure on present surrounding roads and roads through Breadsall village
Beverly Jordan	North of Breadsall Hill Top	Response-01330	Road Safety	Increased levels of traffic results in potential for traffic accidents , and pedestrian safety
Beverly Jordan	North of Breadsall Hill Top	Response-01330	Air Quality	Increase in traffic and congestion will lead to increased air pollution
Beverly Jordan	North of Breadsall Hill Top	Response-01330	Wildlife / Biodiversity	Increase in air pollution will directly affect wildlife in a previously marked Greenbelt area where wildlife has the opportunity to thrive
Beverly Jordan	North of Breadsall Hill Top	Response-01330	Bus Services	Additional bus services needed will increase traffic congestion pollution
Beverly Jordan	North of Breadsall Hill Top	Response-01330	School Capacity	Two estates have been established without a school so further infrastructure needs in this area will result in increase pressure in this area
Beverly Jordan	North of Breadsall Hill Top	Response-01330	Healthcare Facilities	Two estates have already been built putting pressure in this areas for medical facilities
Beverly Jordan	North of Breadsall Hill Top	Response-01330	Type of Housing	The present estates have already urbanised the countryside landscape of the Breadsall hilltops area a further extension and estate this would further impinge on the remaining small countryside
Beverly Jordan	North of Breadsall Hill Top	Response-01330	Number of Houses	There have already been two new estates over the last 5 years further development would remove or impinge on the 6 barn dwellings and residents at Breadsall Hilltop
Beverly Jordan	North of Breadsall Hill Top	Response-01330	Green Belt	The removal of the green belt would kill off the established wildlife and woodland and destroy the countryside openness feeling of the hilltop area already decreased with the two new estates
Beverly Jordan	North of Breadsall Hill Top	Response-01330	Landscape	The landscape has already been altered to remove fields impacting on woodland wildlife farm animals air openness and this will be all but eradicated with further builds
Beverly Jordan	North of Breadsall Hill Top	Response-01330	Flooding / Drainage	As a result of further removal of the landscape I feel this will result in the potential for flooding and drainage problems
Beverly Jordan	North of Breadsall Hill Top	Response-01330	Other	As a Manor Farm resident the proposals are causing a lot of anxiety. We have been informed that the plans have not taken us into consideration. We have invested a lot in our home and wonder where or if we are considered in the proposals
Bev Marvell	South West of Draycott	Response-01892	Wildlife / Biodiversity	This Green Belt is valuable for its ecological contributions. The wooded area included on the map of this proposal has a Council Tree Preservation order: 'EV14, PROTECTION OF TREES AND HEDGEROWS,DC5 - 88, Land near Bankfields Farm, Draycott, 19830429,19840203,W1 - Hawthorn copper beech sycamore limes willows & oaks' This is to protect groups of trees/woodlands considered important for their contribution to the local environment and the public's enjoyment. Half of this wooded area is in the proposal for development. The other half of the wood is within the area of 'safeguarded land'. Aerial maps show this wooded area is an 'oasis' for natural habitat within a sea of open countryside. It can not be lost or replaced. It is known that there are bats, owls, hedgehogs in this area, as well as other creatures. The Wildlife & Countryside Act 1981 provides protection for Barn Owls and Hedgehogs. Bats are protected under the Conservation of Habitats and Species Regulations 2017. There have been Barn Owl boxes very nearby for many years which are used by owls every year to raise their young
Bev Marvell	South West of Draycott	Response-01892	Type of Housing	This development will not significantly increase affordable housing in Draycott. Draycott has already a good record regarding creation of new social housing. 137 social houses were built in 2008 on a Brown Field site (Cowslip Meadow) and 2005-2015 the large listed Victoria Mill was converted to approximately 140 apartments.
Bev Marvell	South West of Draycott	Response-01892	Green Belt	I object to this policy. This Green Belt, off Derby Road, Draycott, should not be redefined as Grey Belt in order to develop it for housing. This Green Belt is particularly valuable because it is on the immediate fringe of a significant urban area, and has helped to retain this land as open and hence a valuable resource. It offers open countryside down to the river Derwent and is publicly accessible allowing outdoor recreation for large numbers of people in urban Draycott. The Local Government Association - Planning Advisory Service says that purposes of Green Belt are: ? to check the unrestricted sprawl of large built up areas - Yes this does. ? to prevent neighbouring towns from merging into one another - Yes this does. ? to assist in safeguarding the countryside from encroachment - Yes this does. This Green Belt land does play a strong role in fulfilling its core purposes, and so is not Grey Belt.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Bev Marvel	South West of Draycott	Response-01692	Flooding / Drainage	The newly revised Environment Agency flood plan map for planning, 2025, flood assessment looks less severe than its 2012 map (The Draycott and Church Wilne History Group keeps copies of such maps). 1 cannot see why it should have changed. Draycott is very close to the river Derwent and is low lying on gravel. It is renowned for flooding, flood waters regularly rising quickly (up to 3 times a year) to close proximity of residential homes on the south side of Draycott. We have very old flood banks in place to try to alleviate flooding. Bank Field House, at the centre of this development proposal, sits on the top of bank fields (fields along here have the old name 'Bank Fields' - for a reason). Immediately to the south of the house fields flood, they are particularly prone because the course of the river used to be even closer than it is today, this is evidenced on maps by the line of the parish boundary following the old river line. The house and other fields are on the bank, they do not flood as deeply, but do become sodden, an attempt to drain them uses water courses running around the west side of the wooded area. 'Safeguarded land' is also shown on the proposal. I believe this is land earmarked by the Council which may be required to serve development needs in the longer term? I also believe it is required that it 'should be genuinely capable of development when needed' - but as it is within the flood plain it would never be suitable for development. This safeguarded land is not viable.
Bev Marvel	South West of Draycott	Response-01692	Other	The public footpath across this proposed development is old, it is marked on the oldest maps I can find (Bennetts 1841) and was a route to the nearby important 'Ambaston Ford' over the Derwent. This footpath is now part of the 'Nomad Way - Circling Derby'. This footpath should not be re-routed or downgraded. I am unhappy with this consultation process. I attended the Council meeting at Long Eaton Town Hall 27th March, when an extension from 6 to 12 weeks consultation was denied. 6 weeks maybe appropriate for a new garage application, but not for a large development on Green Belt for 190 houses (also considering the Easter break). Some online sources of information do not appear to work. Such as the 'Mapping Portal' and other pages like: <a href="http://erewash.gov.uk/images/green_belt_review.pdf">erewash.gov.uk/images/green_belt_review.pdf</a> January 2025 'Page not found'. Also, I cannot find the Council's biodiversity report. I would have liked to consult these.
Bill Hartley	West of Sandiacre	Response-01696	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Bill Hartley	West of Sandiacre	Response-01696	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Bill Hartley	West of Sandiacre	Response-01696	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Bill Hartley	West of Sandiacre	Response-01696	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Bill Hartley	West of Sandiacre	Response-01696	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Bill Hartley	West of Sandiacre	Response-01696	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Bill Hartley	West of Sandiacre	Response-01696	Type of Housing	High density housing is preposterous not in keeping with current housing.
Bill Hartley	West of Sandiacre	Response-01696	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Bill Hartley	West of Sandiacre	Response-01696	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Bill Hartley	West of Sandiacre	Response-01696	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Bill Meadwell	West of Sandiacre	Response-00864	Healthcare Facilities	There is only one doctor and one dentist in Sandiacre. We have to ring at 8am to get an appointment and very often by the time we get through all the appointments are gone. It is virtually impossible to see a GP, only the nurse will see us. The nearest alternative surgery is in Stapleford, and they no longer take patients from Sandiacre. There is no chemist in Sandiacre any more, with Stapleford being the nearest.
Bill Meadwell	West of Sandiacre	Response-00864	Other	I understand that housing is required in the borough, but it cannot be on a 'find a piece of land and build on it' basis. Without suitable access, medical facilities, schools and public transport, a site cannot be deemed to be in any way appropriate
Bill Meadwell	West of Sandiacre	Response-00864	Bus Services	There is a limited service from Sandiacre estates. The Nottingham Trent Barton i4 service only runs until 7pm and after that time you have to walk from Stanton Road. Many people, especially the elderly and disabled, would find that an impossible walk as it is uphill all the way. There is a bus to Ilkeston, but this only goes along Stanton Road. It is inevitable that people will use cars and taxis, especially for medical appointments.
Bill Meadwell	West of Sandiacre	Response-00864	School Capacity	The local junior school, Cloudside, is full. If children have to attend other schools, they will not be willing or able to walk that distance and would have to rely on parents? cars to get there and back.
Bill Meadwell	West of Sandiacre	Response-00864	Traffic Congestion	The area from Cloudside Road down to Town Street, Rushy Lane and beyond are congested at all times of the day. With the increasing amount of HGV traffic from the old Stanton site, it can take several minutes to get to Derby Road whichever route is taken. This is often due to the combination of parked vehicles and heavy traffic. Already the buses and dustbin lorries struggle to get through, and emergency services must have the same problem. The official figure is that each household will own an average of 1.2 cars, giving an extra approximately 220 vehicles from the development. These houses will need to be serviced by food deliveries, courier services etc, with only one route in and out of the site. The access from Larch Drive is narrow - without any parked cars it is difficult for two vehicles to pass side by side. With parked cars as well, it will be impossible.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Brit Meadowell	West of Sandiacre	response-00864	Road Safety	The roads leading from the proposed development are used as walking routes by children going to and from school. It is also a very popular dog walking route. Adding to the number of vehicles using them on a daily basis will inevitably lead to more danger from road traffic accidents. The junctions on these roads are narrow with visibility often hampered by parked vehicles. The construction vehicles would be cause extra danger when turning into these roads and will need to mount the pavement in order to manoeuvre round the junctions. They will also further destroy the surface of the roads creating even more potholes making a trip hazard for pedestrians and possible damage to cars.
Brit Meadowell	West of Sandiacre	response-00864	Air Quality	Adding extra vehicles to the area will inevitably lead to increased emissions which will have a detrimental effect on air quality. The M1 motorway runs very close to the proposed site with 8 lanes of traffic constantly being used. It is by no means a rare event for traffic hold-ups to occur, which leads to vehicles standing still or stopping and starting, leaving behind pollution of the air. During the construction phase, there will be a number of large lorries driving very slowly along the narrow access roads which will add greatly to this pollution
Bradley Peace	South West of Draycott	Response-01348	Traffic Congestion	The Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic. 5 2 A transport assessment needs to be undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This passes through Draycott and Borrowwash. Passing busy junctions, Doctor's surgeries, public car parks, Primary schools, local cricket club as well as numerous residents' homes. 6 3 Noise from the construction (including vehicle movements) and operational phases of the proposed development need to be adequately addressed. 7 4 The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 cars per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead. 8 5 The A6005 (Derby Road) is an already busy road at peak times during the week and weekend which currently experiences over 3,861 cars a day. Adding 190 additional houses will cause significant congestion issues throughout the village and increase accidents within this overburdened area. 9 6 The current road network between Borrowwash and Draycott, which includes Derby Road, Hopewell Road and Gypsy Lane, already struggles to handle current traffic demand let alone the potential for at least 190 more cars. 10 7 The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. 11 8 NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic. 12 9 NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locatio
Bradley Peace	South West of Draycott	Response-01348	Traffic Congestion	ns that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Bradley Peace	south west of Draycott	response-01348	Road Safety	<p>The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents. 5 2 A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents. 6 3 NPPF 109. States that transport issues should be considered from the earliest stages of plan-making and development proposals, using a vision-led approach to identify transport solutions that deliver well-designed, sustainable and popular places. This should involve identifying, assessing and taking into account the environmental impacts of traffic and transport infrastructure ? including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains. Yet no traffic survey has been undertaken. If it had it would have highlighted that along A6005 (Derby Road) and exactly adjacent the proposed development. The peak traffic hours on Fridays are between 4 PM and 6 PM, with the highest average vehicle count observed from 4 PM to 5 PM. The average number of cars per day in the traffic data is approximately 3,861 vehicles. The highest recorded traffic day in the data is June 11, 2023, with a total of 4,779 vehicles. The maximum speed recorded in the traffic data is 106 mph and the number of times 70 mph is exceeded in the traffic data is 174. 7 4 The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment. 8 5 NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic. 9 6 NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identifi</p>
Bradley Peace	south West of Draycott	response-01348	Road Safety	<p>ed development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic.</p>
Bradley Peace	south west of Draycott	response-01348	Air Quality	<p>Noise from the construction (including vehicle movements) and operational phases of the proposed development have not been adequately addressed. 5 2 An environment noise assessment needs to be carried out, particularly for the residents directly opposite the site entrance; but also the whole route that the construction traffic will take. This passes through Draycott, Borrow ash and Beaston villages. Passing busy junctions, Doctor?s surgeries, public car parks, Primary schools, local cricket clubs as well as numerous resident?s homes. 6 3 Require the submission of an environmental noise assessment, prior to development works commencing, to rate and assess operational sound from all fixed installations comprising mechanical and electrical plant and equipment, with a scheme of mitigation measures where necessary; that all site preparation and construction to comply with specified working hours and limits to noise and dust emissions, waste disposal and lighting; and the submission of proposals, including the design and operating times, of any permanent external lighting on site. 7 4 Access and egress to the proposed housing development on Derby Road raises several issues relating to highway and pedestrian safety, ease of access and disruption from increased traffic. 8 5 The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. This will include Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 and Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963. 9 6 Noise and Vibration consultation to be undertaken to consider impacts during construction on nearby noise sensitive properties and ongoing management of a solar farm and the impact of noise and disturbance.</p>

Bradley Peace	South West of Draycott	response-01348	Wildlife / Biodiversity	Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. 5 2 Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. 6 3 This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. 7 4 The taking away of grazing/arable land and the disruption for the wildlife. 8 5 These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. 9 6 Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. There is an opinion that the deer fencing would devalue the area of open farmland and public right of way. 10 7 This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. 7 4 The taking away of grazing/arable land and the disruption for the wildlife. 8 5 These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. 9 6 Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. There is an opinion that the deer fencing would devalue the area of open farmland and public right of way. 10 7 This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. 11 8 The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. 12 9 These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. 13 10 Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. 14 11 Historical badger sett on part of the site to the Victorian tip at the bridge of Nooning Lane. 15 12 The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the v
Bradley Peace	South West of Draycott	response-01348	Wildlife / Biodiversity	illages to living in the midst of a housing estate. 16 13 To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. This area forms a green corridor and houses a number of RED LIST species 17 14 The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance. 18 15 NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. 19 16 NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt. 20 17 NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.
Bradley Peace	South West of Draycott	response-01348	Bus Services	public transport, which are already overstretched. No adequate plans have been provided to mitigate these concerns.
Bradley Peace	South West of Draycott	response-01348	School Capacity	secondary schools are at or near capacity. An influx of families will put immense pressure on school places, potentially forcing local children to travel further afield for education.
Bradley Peace	South West of Draycott	response-01348	Healthcare Facilities	Local GP surgeries and dental practices are already struggling to meet the needs of existing residents. Increasing the population significantly will make it even harder for people to access timely medical and dental care.
Bradley Peace	South West of Draycott	response-01348	Type of Housing	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. 5 2 Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing, 6 3 The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village's strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. 7 4 The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.

Bradley Peace	South West of Draycott	response-01348	Number of Houses	<p>NPPF 223. States that planning policies should set out criteria or requirements to ensure that permitted and proposed operations do not have unacceptable adverse impacts on the natural and historic environment or human health, taking into account the cumulative effects of multiple impacts from individual sites and/or a number of sites in a locality. The EBC are proposing a combined number of nearly 700 houses in the locality of Draycott, Borrowash and Breaston which is significantly overbearing and unrealistic when considering infrastructure, road networks and amenity. 5 2 The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. 6 3 The potential harm caused by the application far outweighs the potential public benefit. 7 4 The scale of the development is completely NOT in keeping with the character of the village. The proposed development should follow existing settlement patterns. New buildings and the volume of housing should harmonise with the neighbourhood. Retain local character and the retention of open spaces as is the character of the village. Views into and out of the village should be preserved. Clear lines of hills and spatial openness must be preserved. 8 5 This out of scale development rides roughshod over the NPPF and other relating policies and guidelines with the barest of lip service paid, with the minimum consultation being undertaken with residents which is compounded by the lack of information available and transparency. 9 6 The scale and massing of the development, which will begin with 190 houses but will significantly increase when the identified safeguarded land is developed in the future, is completely out of character with its surroundings and would be incredibly overbearing on the village and neighbourhood I strongly believe that there are better suited brownfield sites and genuine Grey Belt sites with land that is of poor quality. The land south west of Draycott is Grade 2 land (very good) and should be protected. 10 7 NPPF 61. States that to support the Government's objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay. The overall aim should be to meet an area's identified housing need, including with an appropriate mix of housing types for the local community. The land identified south west of Draycott is Green Belt and Grade 2 quality land. This development neither looks to protect the BMV nor does it look to bring forward the 109 existing Brownfield sites within the EBC that has full planning consent. 11 8 NPPF 73. States that the authority should identify, through the development plan and brownfield r</p>
Bradley Peace	South West of Draycott	response-01348	Number of Houses	<p>registers, land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC there are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. 12 9 The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.</p>
Bradley Peace	South West of Draycott	response-01348	Green Belt	<p>Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. 5 2 Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. 6 3 This is a colossal development which is not appropriate for the location chosen. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.
Bradley Peace	south West of Draycott	response-01346	Landscape	Under S106 of the Town and Country Planning Act 1990, as amended, contributions can be sought from developers towards the costs of providing community and social infrastructure, the need for which has arisen as a result of new development taking place. 5 2 No additional open space opportunities, protection of the public right of way or indeed to better facilities. If S106 funding is available for an application of this type this must be considered. 6 3 This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the villages surrounding it of Borrowwash and Breaston. 7 4 The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. 8 5 The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would feel imprisoned by a housing estate. 9 6 Loss of open land frequently used 10 7 These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. 11 8 Our local surroundings will become dominated by housing estates and will blight the local walks along the Public Right of Way which connect our Village. 12 9 The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. 13 10 Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. 14 11 Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. 15 12 Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. 16 13 These plans plus the plans for National Grid to

Bradley Peace	south west of Draycott	response-01348	Landscape	<p>install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. 17 14 The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. 18 15 The development of 190 homes will have a significantly negative impact on the spatial openness of the area, impacting both the physical and geographical characteristics of the open land, which prevents urban sprawl and maintains the separation between settlements. It will overwhelmingly impact the natural and undeveloped nature of the Green Belt area. 19 16 Protecting public rights of way and access, footpaths would be affected by this development. 20 17 Increased harm to the character of Public Rights of Way. 21 18 Boundaries are changed by fencing and walls. 22 19 The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. 23 20 Strongly object to this application the amenity and enjoyment of the use of the paths which cross the site will be severely compromised by the development. These paths provide an important means by which residents from the local area can get access to the countryside with substantial benefits for their physical and mental health. 24 21 The suggested 190 houses to the land south west of Draycott would enclose the paths, which would have a devastating effect on the enjoyment of walks, as would the replacement of green fields with 190 houses. 25 22 We acknowledge it is a balance between the adverse effects on the footpaths against the desirability of the development taking place, but question if the proposed measures would be sufficient to prevent a severe adverse effect on the use of the paths. 26 23 The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. 27 24 An extensive network of public footpaths is within the application site, and there are many in the near vicinity. The footpaths are well used and highly valued as an amenity. 28 25 Public footpaths this development would surely take away the enjoyment of what countryside walks we have left around. 29 27 The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. 30 28 The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. 31 29 It is the</p>
Bradley Peace	South West of Draycott	response-01348	Landscape	<p>wrong model in the wrong place to meet the EBCs housing needs when existing Brownfield sites exist within EBC being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. 32 30 Our local surroundings will become dominated by this housing development and will blight the local walks along the Public Right of Way which connect our Village. 33 32 The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. There are 109 existing Brownfield sites within the EBC that should be prioritised before the Green Belt land south west of Draycott is used. 34 33 Historic structures act as a focal point in countryside views and make a huge contribution to environmental quality. Their setting is often a major part of their significance. The proposed housing development to the land South West of Draycott deprives them of their context. 35 34 The proposed development is considered to have an adverse impact on the setting of local heritage assets. 36 35 This would have a detrimental and cumulative impact which would be harmful to local heritage assets. 37 36 The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. 38 37 Historic England show 14 listed building in Draycott: - Victoria Mill Grade 2 listed building, list entry number 1281333 / Church of St Chads, Church Wilne, Grade 1 listed building, list entry number 1281336 / Cart Shed and Stable at Draycott Mills, Grade 2 listed building, list entry number 1140155 / Cedars Farm House, Grade 2 listed building, list entry number 1087964 / The Cotton Processing and Storage Building at Draycott Mills, Grade 2 listed building, list entry number 1329376 / Doubling Mill at Draycott Mills, Grade 2 listed building, list entry number 1140154 / Draycott Hall and Outbuildings, Grade 2 listed building, list entry number 1334834 / Front Range Draycott Mills, Grade 2 listed building, list entry number 1334835 / Levers Machine Shed, Draycott Mills, Grade 2 listed building, list entry number 1250092 / Cotton warehouse, chimney and outbuilding, Draycott Mills, Grade 2 listed building, list entry number 1250121 / Cotton spinning mill and office block, Draycott Mills, Grade 2 listed building, list entry number 1250046 / Potter Lane Bridge, Grade 2 listed building, list entry number 1087966 / Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 / Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963 39 38 NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. 40 41 The amenity value of the footpaths through the application site would be entirely lost, and that of the surrounding footpaths greatly diminished due to the change from a beautiful rural landscape to a vast housing estate, with high fences/walls and a significant amount of houses adding to this negative impact. 41 45 It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landsca</p>

Bradley Peace	south west of Draycott	response-01349	Landscape	<p>pe and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. 42 46 Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape when existing Brownfield sites within EBC should be prioritised before the Greenbelt land south west of Draycott. 43 47 NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant amount of footpaths that will be affected by the development of 190 houses. 44 48 NPPF states that sustainable development should be achieved. There is an obvious lack of definition of why this site is a ?sustainable location?. The introduction of 190 houses will increase waste, carbon footprint and impact the areas future biodiversity needs. 45 49 NPPF 150. States that if it is necessary to restrict development in a village primarily because of the important contribution which the open character of the village makes to the openness of the Green Belt, the village should be included in the Green Belt. If, however, the character of the village needs to be protected for other reasons, other means should be used, such as conservation area or normal development management policies, and the village should be excluded from the Green Belt. The land south west of Draycott significantly contributes to the village and its character. This village is a part of this land and the Green Belt status allows villagers to access green spaces and enhances the village feel of the area which is rural. 46 50 NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. 47 51 NPPF 207. States in determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets? importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation. Yet development on the land south west of Draycott will significantly impact and later the heritage of the Village including the destruction of unspoilt Green Belt land, the adjacent conservation site of the canal and other listed heritage sites that surround the identified area. 48 52 NPPF 208. States the local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affect</p>
Bradley Peace	south West of Draycott	response-01349	Landscape	<p>ing the setting of a heritage asset) taking account of the available evidence and any necessary expertise. They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between the heritage asset?s conservation and any aspect of the proposal. This development will impact Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622. 49 53 NPPF 102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected 50 54 There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development of this size. 51 55 To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing. 52 56 To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools. 53 57 To conserve and enhance the Borough landscape character. This proposal does not promote the conservation or enhancement of the local landscape and is an inappropriate development.</p>
Bradley Peace	south west of Draycott	response-01349	Flooding / Drainage	<p>From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic was questions was asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. 5 2 Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. 6 3 There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. 7 4 In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. 8 5 NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes. 9 6 Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. 10 7 Building on a flood plain that has trees, grass &amp; plants that naturally help absorb water via roots systems when removed will have a huge impact. 11 8 When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. 12 9 NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issues. 13 10 NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where 50 development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Bradley Peace	South West of Draycott	Response-01348	Flooding / Drainage	the year with many residents on Lime Grove not able to obtain flood risk damage cover as a consequence. 14 11 NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. 15 12 NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.
Bradley Peace	South West of Draycott	Response-01348	Other	Loss of open space and green spaces ? this is vital for our community?s wellbeing 5 2 Primary School affected with noise and traffic 6 3 The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would not benefit from the current sprawling Greenbelt views as it will be gone forever. 7 4 It will have a detrimental effect on the wellbeing of people who enjoy the countryside, not to mention wildlife habitats, which are already under extreme pressure. 8 6 The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. 9 7 This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the small villages surrounding it of Borrowwash and Breaston. 10 8 It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. 11 9 Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. 12 10 The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of development on this green belt. 13 11 Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. 14 12 NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant lengths of footpaths that will be affected by the development of 190 houses on land south west of Draycott. 15 13 Promoting healthy and safe communities the effect on our healthy lifestyles, especially our local health and well-being needs ? taking away our green space and facility would be detrimental to our community and our day to day needs would fall short by the loss of our valued facilities 16 14 Open space and recreation. NPPF102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected 17 15 There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing
Bradley Peace	South West of Draycott	Response-01348	Other	development 18 16 Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter. This action by the EBC was irresponsible and not acting in the interests of the local communities this plan impacts. 19 17 To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing. 20 18 To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools.
Breanne Rodda	West of Borrowwash	Response-00708	Traffic Congestion	Too much traffic already through Borrowwash, even with a new road built people visiting the amenities will drive up rush hour traffic
Breanne Rodda	West of Borrowwash	Response-00708	Road Safety	The car safety coming off of the a52 already feels quite dangerous this will create more drivings coming off a busy slip road
Breanne Rodda	West of Borrowwash	Response-00708	School Capacity	With the number of houses planned, if no further educational facilities are built I struggle to see how the current capacity would keep up
Breanne Rodda	West of Borrowwash	Response-00708	Healthcare Facilities	I can never get an appointment at Park Medical Practice Borrowwash as it stands. I routinely can?t get an appointment or get sent to Chaddesden . This would just make the problem worse
Breanne Rodda	West of Borrowwash	Response-00708	Type of Housing	40% affordable housing is huge and would cause issues in the wider area
Breanne Rodda	West of Borrowwash	Response-00708	Landscape	The area of land is one of the last bits of nice greenery that a lot of houses can look out on to. It will massively impact our enjoyment and house prices if built over - especially as it will likely be a building site for a long time
Breanne Rodda	West of Borrowwash	Response-00708	Flooding / Drainage	The green area is always flooded when it is heavy rain, I suspect likely protecting a lot of houses in the area from more severe flooding
Brendan Hargreaves	North of Breadsall Hill Top	Response-00629	Traffic Congestion	There is far to much traffic on the roads around this area with all the other new developments and we dont want anymore
Brendan Hargreaves	North of Breadsall Hill Top	Response-00629	Air Quality	the air quality will be reduced, we are looking into air conditioning units for the roof of our property to reduce the pollution the same as the premises in the heathrow area due to the expansion there
Brendan Hargreaves	North of Breadsall Hill Top	Response-00629	Wildlife / Biodiversity	all the wildlife that will be killed and future wildlife in the area
Brendan Hargreaves	North of Breadsall Hill Top	Response-00629	Bus Services	there wont be available spaces on the buses with a new housing estate, its bad enough already at certian times
Brendan Hargreaves	North of Breadsall Hill Top	Response-00629	School Capacity	not enough schools in the area
Brendan Hargreaves	North of Breadsall Hill Top	Response-00629	Healthcare Facilities	the healthcare facilities are already struggling without extra pressure with more people
Brendan Hargreaves	North of Breadsall Hill Top	Response-00629	Flooding / Drainage	the systems in place will not be able to cope unless they are seriously renewed or upgrdated

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Brendan Horgan	Acorn Way, Derby	Response-00610	Traffic Congestion	Morley Road is already a designated traffic sensitive route, with heavy congestion at certain times of the day. There are five schools in the immediate vicinity, which cause excessive traffic build up due to parents traveling to Lees Brook School, or on route to the other schools in the area. Morley Road, is simply not up to accepting increased traffic. The road construction along Morley road is substandard for its present use, as it was previously a simple country lane, and it was never envisaged that traffic volumes would be what they are today.
Brendan Horgan	Acorn Way, Derby	Response-00610	Road Safety	Five schools in the vicinity
Brendan Horgan	Acorn Way, Derby	Response-00610	Air Quality	Standing traffic due to congestion at school times
Brendan Horgan	Acorn Way, Derby	Response-00610	Healthcare Facilities	Medical centres already over subscribed
Brendan Horgan	Acorn Way, Derby	Response-00610	Flooding / Drainage	The area (especially outside the school) floods regularly. The houses to the right of the main entrance to the school have flooded due to inadequate highway drainage. There is a serious drainage issue at Deborah Drive, with floods of up to 300mm across the carriageway. The highway drainage system on Morley Road is inadequate and not fit for purpose.
Brett James	North of Breadsall Hill Top	Response-00871	Road Safety	The impact on an area already swamped by traffic will be detrimental to the area
Bridgette Cussens	North of Breadsall Hill Top	Response-00390	Traffic Congestion	Oakwood is already busy with the new estate at the bottom, adding more near Acton way would make traffic horrendous and put extra pressure on the roads, this will see an increase in accidents which is already high on that stretch of road
Bridgette Cussens	North of Breadsall Hill Top	Response-00390	Wildlife / Biodiversity	Oakwood housing is getting bigger and bigger, much larger than the place can deal with. Putting this strain on the wildlife would be extremely detrimental, leaving minimal space for wildlife to prosper
Bridgette Cussens	North of Breadsall Hill Top	Response-00390	Healthcare Facilities	The healthcare services are already at full capacity, I struggle to get appointments when needed and adding to that will make it much worse for myself and the current residents of oakwood
Britta Solloway	West of Sandiacre	Response-00959	Traffic Congestion	Traffic going towards J25 Island a nightmare already
Britta Solloway	West of Sandiacre	Response-00959	School Capacity	Not enough capacity at schools now
Britta Solloway	West of Sandiacre	Response-00959	Healthcare Facilities	Infrastructure is bad now and you can't get appointments, no chance if additional 180 household need to use service
Britta Solloway	West of Sandiacre	Response-00959	Green Belt	Soon there won't be any nature left
Britton	West of Borrowwash	Response-00877	Traffic Congestion	We struggle daily to get on and off driveway due to increasing traffic- the proposed amount of housing will only increase the traffic
Britton	West of Borrowwash	Response-00877	Road Safety	We live on Derby Road - cars speed daily and do not stick to 30mph - the proposed housing will only add to the traffic and amount if cars in derby Rd- there are no speed cameras or speed sensors to slow speeding cars
Britton	West of Borrowwash	Response-00877	Air Quality	We have lived on Derby Road near the proposed site for 17 years, the traffic has increased drastically since we moved here and the proposed site will only increase the traffic and impact air quality
Britton	West of Borrowwash	Response-00877	Wildlife / Biodiversity	We live on Derby Rd close to proposed site - we have numerous bird species currently visit the garden along with amphibians/bats - the huge habitat loss will greatly impact the wildlife
Britton	West of Borrowwash	Response-00877	Healthcare Facilities	Trying to get a doctors appointment is already extremely difficult, the surgery phone lines are frequently full to capacity and people queue daily to wait for opening- the proposed site will only add to the pressures and lack of appointments
Britton	West of Borrowwash	Response-00877	Number of Houses	Borrowwash is a village, the number of houses proposed in and around Borrowwash will impact traffic, schools, doctors and other facilities
Britton	West of Borrowwash	Response-00877	Green Belt	Green belt should be protected due to habitat loss - there are surely other sites in and around the area that could be developed without impacting precious green belt
Bruce Broughton	North of West Hallam	Response-01533	Road Safety	The crossroads at High Lane West/Station Road/Belper Road/Park Hall Lane are busy throughout the day. The high traffic volume and speed of vehicles on High Lane West and Belper Road (A609), along with restricted visibility to the west, make it a difficult junction to navigate safely. Although official accident records may not show significant issues, minor collisions and near misses occur regularly at this junction, as I have observed living nearby for over forty years. The creation of a new junction serving around thirty-five houses less than 250m east of the existing junction will inevitably aggravate the current situation.
Bruce Broughton	North of West Hallam	Response-01533	Wildlife / Biodiversity	There is notable badger and other wildlife activity in this area. The proposals do not appear to address this, so a thorough investigation should be conducted before any development potential is considered to avoid harm or disruption to protected species.
Bruce Broughton	North of West Hallam	Response-01533	Number of Houses	The proposal to build around thirty-five houses on this site minimally addresses overall stated housing needs and, in my view, represents a significant, unnecessary intrusion into the Green Belt. A more appropriate option (if new housing is needed here) would be to extend the existing ribbon development on High Lane West, between 13 and 49 High Lane West (albeit currently Green Belt), accommodating about fifteen new houses without the need for wider encroachment into the Green Belt. This would be more in line with the suggestion of 'rounding off' in the Council's Core Strategy Amendment Report (March 2025 update).
Bruce Broughton	North of West Hallam	Response-01533	Green Belt	In many ways Park Hall Lane represents the 'gateway' to the countryside from the built-up parts of West Hallam. It is widely used as a recreational route by walkers, runners, horse riders and cyclists, seven days a week. The proposals suggest only 'emergency' access from Park Hall Lane from the site, with houses presumably backing onto the lane. However, developing area D would create about 120m of new 'urbanised' frontage to Park Hall Lane, affecting the area's recreational and rural character. The development of this area would not respect or preserve identified landscape character nor have any positive impact on visual amenity.
Bruce Broughton	North of West Hallam	Response-01533	Landscape	I would reiterate what I said under the 'Green Belt' heading namely that in many ways Park Hall Lane represents the 'gateway' to the countryside from the built-up parts of West Hallam. It is widely used as a recreational route by walkers, runners and cyclists, seven days a week. The proposals suggest only 'emergency' access from Park Hall Lane from the site, with houses presumably backing onto it. However, developing area D would create about 120m of new 'urbanised' frontage to the lane, affecting the area's recreational and rural character. The development of this area would not respect or preserve identified landscape character nor have any positive impact on visual amenity.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Bruce Broughton	North of West Hallam	Response-01533	Flooding / Drainage	The land is known locally to be liable to flooding with water overflowing onto public footpath no 2 at the eastern end of the site and the adjacent gardens, and even crosses High Lane West (A609) into gardens on the opposite side of the road. It is understood (from the Parish Council) that Severn Trent Water have visited the affected properties but have declined to do anything to remedy the situation. I can see nothing in the proposals to suggest that this has been considered.
Bruce Broughton	South of West Hallam	Response-01534	Traffic Congestion	Beech Lane is limited in width and often congested ? both weekdays and weekends ? as a result of parking by football teams and others using Beech Lane Recreation Ground and by parents delivering or collecting children from Scargill School. The junctions at Beech Lane/Station Road, at Cat & Fiddle Lane and at the Millhouse and Mapperley crossroads already have regular traffic tailbacks due to the volume of traffic. It is understood that Derbyshire County Council's Highways Department acknowledged problems at these junctions when approached by the Parish Council about them a year or two ago. There are however no signs of any improvements in the pipeline to achieve improvements and this proposed further development will only make matters worse.
Bruce Broughton	South of West Hallam	Response-01534	Road Safety	The site is directly opposite Scargill Primary School, where there are over 300 pupils, and as stated above Beech Lane is already regularly congested as a result of parking on the road. The provision of a new section of pavement along the southern side of Beech Lane where it adjoins the proposed development site will do nothing to address congestion and road safety concerns on Beech Lane as a whole, where it is not unusual to see vehicles mounting the pavement to avoid congestion.
Bruce Broughton	South of West Hallam	Response-01534	Number of Houses	The proposal to build around ninety homes on this site with a further area to the west being safeguarded for future development suggests even greater impact on this area is almost inevitable in the longer term.
Bruce Broughton	South of West Hallam	Response-01534	Green Belt	The proposed site has been rebuffed by Planning at Erewash many times over the years and one application that was submitted for an agricultural building was refused, so what is different now?
Bruce Broughton	South of West Hallam	Response-01534	Landscape	The development of this area would not respect or preserve identified landscape character nor have any positive impact on visual amenity.
B T Duke	West of Sandiacre	Response-01900	Traffic Congestion	Roads not suitable for extra traffic. Dangerous for children.
B T Duke	West of Sandiacre	Response-01900	Road Safety	Roads not suitable for HGV's.
B T Duke	West of Sandiacre	Response-01900	Air Quality	Bad enough with the motorway.
B T Duke	West of Sandiacre	Response-01900	Wildlife / Biodiversity	Very concerned.
B T Duke	West of Sandiacre	Response-01900	Bus Services	No Bus.
B T Duke	West of Sandiacre	Response-01900	Healthcare Facilities	No doctors.
B T Duke	West of Sandiacre	Response-01900	Number of Houses	Don't want them. Build on grey/brown belt.
B T Duke	West of Sandiacre	Response-01900	Green Belt	Criminal to build there.
B T Duke	West of Sandiacre	Response-01900	Flooding / Drainage	Very concerned.
B T Keen	West of Sandiacre	Response-01735	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
B T Keen	West of Sandiacre	Response-01735	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
B T Keen	West of Sandiacre	Response-01735	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
B T Keen	West of Sandiacre	Response-01735	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
B T Keen	West of Sandiacre	Response-01735	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
B T Keen	West of Sandiacre	Response-01735	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
B T Keen	West of Sandiacre	Response-01735	Type of Housing	High density housing is preposterous not in keeping with current housing.
B T Keen	West of Sandiacre	Response-01735	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
B T Keen	West of Sandiacre	Response-01735	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
B T Keen	West of Sandiacre	Response-01735	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
c/o The Equalised Club	West of Sandiacre	Response-01603	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
c/o The Equalised Club	West of Sandiacre	Response-01603	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. Callum binnall	West of Sandiacre	Response-00460	Traffic Congestion	The traffic will be ridiculous around cloudbside. Sandiacre is a small nit place and adding all these additional houses will surely congest the area. Most likely have more accident/hit and runs
Callum binnall	West of Sandiacre	response-00460	Road Safety	If this was to go ahead where would the new roads be built? What would happen to stoney clouds..
Callum binnall	West of Sandiacre	response-00460	Air Quality	All the heavy duty construction vehicles Will mess up the air quality of sandiacre
Callum binnall	West of Sandiacre	response-00460	Wildlife / Biodiversity	Sandiacre has countless beautiful areas and you'll be destroying a massive part of the animals habitat, plus moving all the horses from there home!
Callum binnall	West of Sandiacre	response-00460	Bus Services	The bus is already struggling, you wouldn't be able to add any bus stops as the bus wouldn't get up near the new builds
Callum binnall	West of Sandiacre	response-00460	School Capacity	Another perfect reason to not want any more houses built as how would my son get a placement in ladycross or cloudbside.
Callum binnall	West of Sandiacre	response-00460	Healthcare Facilities	Adams house is a joke at the moment so is any dental practice. How do expect it to carry on with more residents?
Callum binnall	West of Sandiacre	Response-00460	Type of Housing	A thousand reasons why we don't want anymore housing.
Callum binnall	West of Sandiacre	Response-00460	Number of Houses	We don't want anymore houses being built!
Callum binnall	West of Sandiacre	response-00460	Green Belt	Protect the green belt
Callum binnall	West of Sandiacre	response-00460	Landscape	The place your going to destroy is a beautiful bit of land that we don't want destroyed
Callum binnall	West of Sandiacre	response-00460	Flooding / Drainage	All these houses will have a knock on effect for stoney clouds. The house are to be built on top.of a hill. So naturally all that water will drop down onto stoney clouds and down to the old gold course
Callum binnall	West of Sandiacre	response-00460	Other	Stop this ridiculous project You clearly aren't a sandiacre resident. You clearly don't have our best interests at heart. Stop
Callum Gurney	North of Breadsall Hill Top	Response-01402	Other	Objection to Proposed Development ? Conflict with Policy CP18 (Green Wedges) I note that this application has been amended to exclude the development adjacent to the A61. However I still wish to raise strong objections to the proposed development (both in its amended form and original form) on the grounds that it conflicts with Policy CP18 concerning Green Wedges. Although the site lies just outside the designated green belt surrounding Breadsall, it directly abuts existing woodland and open countryside, forming an important part of the green corridor along the Great Northern Greenway. The application site provides valuable habitat for wildlife and functions as an essential green buffer. Its loss would significantly reduce ecological connectivity and visual amenity, impacting local biodiversity and the quality of life for residents, walkers, and cyclists who currently use and enjoy this open space. The site is actively appreciated by the community as a visual break in built development and as a wildlife corridor connecting to other open areas. While the outline proposal includes the retention of woodland, there are serious concerns that development will increase pressure on these areas, potentially leading to degradation over time. I am concerned that the proposed development does not provide an adequate buffer to the woodland corridor and built development will sit too close and will detrimentally impact the existing woodland. There is no BNG Assessment listed in the application documents on the portal so it appears that it hasn't yet been done. How can there be any confidence that the proposal would be able to satisfy the statutory requirement to deliver 10% net gain. Any BNG delivery off site or through the purchase of biodiversity units elsewhere, dilutes the benefit of 10% net gain as the biodiversity is lost here in this locality and the significant environmental impact is here. Crucially, the proposed development sits adjacent to land at Breadsall recently released from the green belt, which Erewash Borough Council is considering for housing allocation. If both sites are developed, the cumulative impact will be substantial?leading to the loss of meaningful green space, erosion of the rural character of the Great Northern Greenway, and the elimination of the settlement gap between Breadsall and the wider Derby conurbation. For these reasons, I urge the Council to reject the proposal in order to uphold the principles of Policy CP18 and protect the integrity of this important green wedge.
Callum Rhodes	Acorn Way, Derby	Response-00371	School Capacity	The oakwood area is already at capacity for school places
Callum Rhodes	Acorn Way, Derby	response-00371	Healthcare Facilities	Oakwood already struggles to provide GP appointments and has no NHS dentists in the area anymore. Further houses in Erewash not even providing these services unfairly penalise oakwood without providing them the associated council taxes.
Callum Rhodes	Acorn Way, Derby	response-00371	Flooding / Drainage	Acorn way has flooded under every moderate of heavy rainfall over the last two years and has to be repeatedly closed for safety. In addition Breadsall village has flooded repeatedly over the years. This will only exasperate issues.
Cameron Coope	North of Breadsall Hill Top	Response-00369	School Capacity	Primary school and secondary schools in the area are already nearly full in most year groups.
Cameron Coope	North of Breadsall Hill Top	response-00369	Healthcare Facilities	GP and dentist places are already few and far between
Cameron Coope	North of Breadsall Hill Top	response-00369	Flooding / Drainage	Flooding in Breadsall is already a major problem following building works.
Cameron Coope	Acorn Way, Derby	Response-00367	Road Safety	A junction off of Acorn Way will lead to risk taking driving.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Amerson Group	Acorn Way, Derby	Response-01902	School Capacity	West Park & Lees Brook the 2 closest secondary schools are already nearly full in every year group. More families will make this worse.
Amerson Group	Acorn Way, Derby	Response-01902	Healthcare Facilities	GP and Dentist places around the area are already few and far between
Amerson Group	Acorn Way, Derby	Response-01902	Number of Houses	Not enough amenities already in the area
C A Partridge	West of Sandiacre	Response-01903	Traffic Congestion	There are 2 roads up to the proposed area location and Beech Ave leading to Cloudside, these roads have very tight, sometimes blind areas. These roads are just not suitable for extra traffic. Sometimes the busses get stuck in snowy weather, traffic can not get up the hills. Bus services could not be extended. I have even slid in my car down the hill.
C A Partridge	West of Sandiacre	Response-01903	Air Quality	Extra pollution.
C A Partridge	West of Sandiacre	Response-01903	Wildlife / Biodiversity	There is a lot of wildlife on the site including bats, horses, birds of prey.
C A Partridge	West of Sandiacre	Response-01903	Bus Services	Buses would not be able to extend route 4. They are already looking at shortening the route because of parked cars.
C A Partridge	West of Sandiacre	Response-01903	Flooding / Drainage	The fields flood & when draining off the drainage system can't cope.
Carl	Acorn Way, Derby	Response-00386	Traffic Congestion	This road is always busy at peak times and will cause further problems with surround roads
			Road Safety	Only one place to cross
			Air Quality	Yet more pollution when vehicles are sat waiting at either end of acorn way
			Wildlife / Biodiversity	Already lots of wildlife being run over
Carl	Acorn Way, Derby	Response-00386	Bus Services	More buses required more pollution
			School Capacity	Already at bursting point
Carl	Acorn Way, Derby	Response-00386	Healthcare Facilities	Unable to get a appointment now so that will get worse which will have a major impact on people's well-being
Carl	Acorn Way, Derby	Response-00386	Type of Housing	Housing market is already broke due to labour increase in stamp duty
Carl	Acorn Way, Derby	Response-00386	Number of Houses	1 is to many in a area that is already stretched
			Green Belt	Leave it allown
Carl	Acorn Way, Derby	Response-00386	Landscape	New housing estates always look a mess compared with open fields
			Flooding / Drainage	Acorn way is already a road that floods in 2 areas that causes major disruption
Carl	Acorn Way, Derby	Response-00386	Other	If this goes ahead which it probably will as that is Labour for you why Erawadh and not Derby Council our area our Council tax revenue
Carl fox	South of West Hallam	Response-00067	Traffic Congestion	Increased traffic especially during building.
Carl fox	South of West Hallam	Response-00067	Road Safety	Additional traffic on what is a very quiet village
Carl fox	South of West Hallam	Response-00067	Wildlife / Biodiversity	Will spoil the village feel. Village is too small to build more housing
Carl fox	South of West Hallam	Response-00067	School Capacity	Only one small school in West Hallam additional housing will over crowd schools
			Green Belt	Spoils the landscape over crowds the area
Carl fox	South of West Hallam	Response-00067	Landscape	Will ruin the village feel
Carl Hill	North of Breadsall Hill Top	Response-00670	Traffic Congestion	Already hard to get out of Elmwood Drive? also recent deaths at Lime Lane junction down to Breadsall Village - the impact of the existing new housing has not been taken in to consideration
Carl Hill	North of Breadsall Hill Top	Response-00670	Road Safety	See previous point about lack of points to cross due to too many junctions and now traffic.. recent accidents at alone Lime Lane junction
Carl Hill	North of Breadsall Hill Top	Response-00670	Wildlife / Biodiversity	Buzzards, Deer and other wildlife will not have enough habitat now
Carl Hill	North of Breadsall Hill Top	Response-00670	School Capacity	No schools in the area no greater intake for Breadsall Village school.. no spaces at the only school in Oakwood and senior schools all a travel away
Carl Hill	North of Breadsall Hill Top	Response-00670	Healthcare Facilities	I cannot get a dentist appointment my GP is in the city centre as I cannot get a spot at the Oakwood surgery who is paying for additional GP's for the potential 800 residents before factoring in the existing development next door and the one at Lime Lane..
Carl Hill	North of Breadsall Hill Top	Response-00670	Green Belt	No separation from a retail park and Breadsall village all area merging in to one
			Flooding / Drainage	Already existing flooding risks to Breadsall village and this will continue to creat further risks to the village and beyond
Carly Denham	South of West Hallam	Response-00292	Wildlife / Biodiversity	These are our green spaces. There is a huge amount of wildlife in this area
Carly Denham	South of West Hallam	Response-00292	Landscape	Ruin the look of the village
Carly Denham	North of West Hallam	Response-00291	Traffic Congestion	The road from park hall is single track , already congested. Many horse riders and dog walkers
Carly Denham	North of West Hallam	Response-00291	Road Safety	Junction is dangerous
Carly Denham	North of West Hallam	Response-00291	Wildlife / Biodiversity	This is one of our green spaces. I have noticed a huge amount of wildlife. Badger set, barn owl, foxes, birds of prey
Carly Denham	North of West Hallam	Response-00291	Green Belt	These are our green spaces
Carmen Buckley	West of Borrowwash	Response-00737	Traffic Congestion	Traffic is already bad in the area due to the A52 and M1 being close by. The East Midlands is becoming known as one of the most polluted counties.
			Air Quality	With the airports and busy A52 and M1 being so close the air quality is poor. This area acts as a barrier between Borrowwash and Spondon.
Carmen Buckley	West of Borrowwash	Response-00737	Wildlife / Biodiversity	The fields are home to various ground nesting birds including skylarks and lapwings. Hedgehogs are endangered and the area is home to this now red listed species. Now is not the time to be cresting habitat loss. This would disrupt wildlife corridors and impact on protected species.
Carmen Buckley	West of Borrowwash	Response-00737	School Capacity	As a parent and also someone who works in the local education system the development will negatively affect our local school's ability to provide efficient education to all students. The schools are already struggling.
Carmen Buckley	West of Borrowwash	Response-00737	Green Belt	I object to the proposed planning at the bottom of my garden. There are many solutions to the housing crisis that don't involve building on the Green Belt land.
Carmen Buckley	West of Borrowwash	Response-00737	Landscape	This area acts as a much needed barrier between Spondon and Borrowwash. I bought my house because of the Green Belt land to the back meant I could be closer to nature and enjoy the west setting sun. Hedgerows are in decline and these fields serve as the perfect habitat for migrating birds and winter visitors inc redwings and field fares.
Carol Hart	North of West Hallam	Response-01828	Traffic Congestion	Again the site is quoted as 30 and this is only what you will be responding on but everyone in West Hallam knows that developers want to extend along the rear of High Lane West and again the pressure on the A609 is already a nightmare and again would put major pressure on the two junctions, Millhouse and Mapperley, again we also go back to the local transport which as already stated is practically non-existent and therefore your own transport is needed.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Carol Hart	North of Breadsall Hill Top	Response-01830	Other	The map showing the proposed site is also incorrect, the Durose development is not shown and a resident has said that his house is marked down in the proposed safeguarded site, he asks if the intention is to compulsory purchase his property, how can this site be judged correctly when the map is completely wrong, not just a development being left off but even incorrect naming of cul-de-sac and close.
Carol Hart	North of West Hallam	Response-01828	Road Safety	Although for fewer houses from when this site was first considered there is still the major problem of access, the access would be close to the major Millhouse crossroads, the cross roads that had already been highlighted as a problem by Highways, there is also for some reason an emergency access on to Park Hall Lane, why is this needed and also Park Hall Lane is so narrow it is mainly used by walkers and dog users, to even access the A609 from Park Hall Lane is an accident waiting to happen as it is a blind bend to the right from Stanley Common.
Carol Hart	South of West Hallam	Response-01829	Traffic Congestion	The report even mentions facilities in the Dales shopping area, this again is not capable of taking more cars, already cars cannot park in the car park and they then park in the village centre causing congestion yet again. We are talking of 90 houses in the plan but with a safeguarded section adjacent, you might only be judging on the 90 but it is obvious once access was obtained then a further application would follow. It could mean up to 150 or more houses, even with one car per household that would be catastrophic but as we all know most houses now seem to have more than one car. The bus service is non-existent, 6 buses in each direction in a day and nothing before 9 a.m. or after 6.30 p.m. It means residents have to rely on their own transport. This Core Strategy was commenced when I was Leader at EBC and officers were tasked to list all possible sites in the Borough that might be used for development. Myself along with my Deputy and other Executive Members along with the Planning Team and Green Spaces visited every site and we consulted with Derbyshire County Council about any highway problems. I still have the feedback from DCC on the West Hallam Site, they acknowledge that access/egress to and from West Hallam is difficult, they mention the awkward Beech Lane/Station road junction, awkward to make safer, they then mention the T junction with Cat & Fiddle Lane, they commented that signalization but also admit the topography is not suitable. They then go on to mention the other two junctions, Millhouse crossroads and Mapperley cross roads and say work would need to be done on those junctions. Yes the number of houses being suggested are slightly different but the concerns still are relevant.
Carol Hart	North of Breadsall Hill Top	Response-01830	Green Belt	The small but lovely village of Breadsall has taken more than its fair share of developments, albeit no directly in the village but the surrounding developments are so close to the boundary that you can almost touch them, the urban sprawl is changing the whole landscape of the area and it not acceptable in any way.
Carol Hart	North of West Hallam	Response-01828	Flooding / Drainage	There are two major problems with this site, one is that it is constantly under water, this water floods the footpath adjacent the site and the garden of the house adjacent the site, the water crosses the road at times and floods the gardens of a couple of properties on the opposite side of the road. Seven Trent water know of the problem but have taken no actions to remedy this.
Carol Hart	South of West Hallam	Response-01829	Road Safety	The proposed site is directly opposite the Scargill Primary School, which has over 300 pupils, the access to the development would be straight on to Beech Lane, as the name suggests it is not a major road and not even the width of a normal road, the access would also be very close to the major junction for leaving the estate, namely Hallam Way. The very major concerns are health and safety, Beech Lane is gridlocked several times a day, I am not sure whether the very short video can be included but it just proves a point, yes it is usually at school times but as there is a thriving junior football club that uses the Beech Lane recreation ground this also happens over the weekends. We are talking of 90 houses in the plan but with a safeguarded section adjacent, you might only be judging on the 90 but it is obvious once access was obtained then a further application would follow. It could mean up to 150 or more houses, even with one car per household that would be catastrophic but as we all know most houses now seem to have more than one car.
Carol Hart	South of West Hallam	Response-01829	Green Belt	This owner of this land has, I believe, contacted the Planning Department over the years in an effort to develop the area, he has always to my knowledge been rebuffed. He did actually put in an application to erect a barn in 2022, this was refused, the refusal mentioned due to its design and siting within the Green Belt and adjacent to the conservation area, it would have an adverse impact upon the visual appearance and character of the conservation area and would harm the openness of the Green Belt, so what has changed, if a single building is going to have that impact what are 90 or more likely 150+ going to have. I have not even mentioned the Green Belt invasion and the major impact on the wildlife in the site which is upsetting many of the residents.
Carol Hart	South of West Hallam	Response-01829	Bus Services	The bus service is non-existent, 6 buses in each direction in a day and nothing before 9 a.m. or after 6.30 p.m.
Carol Hart	North of Breadsall Hill Top	Response-01830	Traffic Congestion	I have represented Breadsall as the Derbyshire County Councillor since late 2004. This in 2004 was still a reasonably quiet village but starting to have problems being used as a ?rat run? for drivers wanting to access the A38 one way and the M1 the opposite way. Over the years there have been major developments on the boundary of Breadsall, namely on the Oakwood area, the Persimmon development and more recently the Durose Development. There is still a proposal for another 90 homes on Lime Lane, again on the boundary of Breadsall. The village is slowly disappearing and being overwhelmed by big housing developments. It is not only the massively increased traffic through the village but major flooding problems have been occurring. Despite repeated efforts to try to control this there are problems every time it rains and matters have got considerably worse since the new developments have taken place. Adding this extra development would only increase the problems of traffic and possibly flooding.
Caroline and John Thirwell	South West of Draycott	Response-01001	Traffic Congestion	increased volume of traffic entering/exiting our village
Caroline and John Thirwell	South West of Draycott	Response-01001	Wildlife / Biodiversity	This would also result in the destruction of local wildlife including protected species.
Caroline and John Thirwell	South West of Draycott	Response-01001	Healthcare Facilities	There has been little time to consider the impact on our community of this increase in the village population. The infrastructure of a doctor or dentist is not present in our village (the doctor was withdrawn many years ago even though the village has grown in numbers since we first settled here) and we are still not fully aware of the plans for the land South West of the village.
Caroline and John Thirwell	South West of Draycott	Response-01001	Number of Houses	The character of the village would also be changed irrevocably giving it a more urban feel
Caroline and John Thirwell	South West of Draycott	Response-01001	Green Belt	The green belt should be protected at all costs. It is our buffer between urban life and the countryside. Everyone can see that too much development between Borrowwash, Draycott, Breaston and Long Eaton will lead to an uninterrupted urban sprawl. We understand the need for housing for the young people in our community but we have been informed that there are plenty of brown field sites in the EBC's jurisdiction and that a high proportion of them already have planning permission for housing. It is surely much more in keeping with the NPPF guidelines to use these sites for housing development than destroy green belt land forever.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Caroline and John Thirwell	South West of Draycott	response-01001	Flooding / Drainage	The land around Draycott is very susceptible to flooding. In times of high rainfall we can watch the water filtering across the fields adjacent to us and, although it has never breached the road, it is of great concern that the impact of extra housing in this particular area will cause more influx of water (after all water has to go somewhere) when diverted from the surrounding fields. A more detailed assessment is needed before we are subjected to the annual stress of flooding impact, as happens in many other parts of the country. We are very very concerned about this.
Caroline and John Thirwell	South West of Draycott	response-01001	Other	We are always being told to walk for our health. There are many pleasant walks in the proposed development area which would be taken away by the huge influx of 190 houses (and maybe more). These plans do not seem to follow the NPPF 2024 and Erewash Borough Council's Local Plan 2022 and seem rushed with little thought to the residents of our village and the changes it will bring.
Caroline Blackmore	West of Sandiacre	Response-00451	Traffic Congestion	Sandiacre already has traffic congestion from Derby Road and Stanton with huge HGVs all day.
Caroline Blackmore	West of Sandiacre	Response-00451	Air Quality	Increase traffic Increase air pollution obviously
Caroline Blackmore	West of Sandiacre	Response-00451	Wildlife / Biodiversity	Obvious one you're trying to build on green belt it'll have a knock effect to Stony Clouds. Why do you want to take away green belt land. That parcel of land also buffers the motorway
Caroline Blackmore	West of Sandiacre	Response-00451	School Capacity	Schools are already seeing an increase due to the new homes built off Longmoor Lane which is mainly social housing
Caroline Blackmore	West of Sandiacre	Response-00451	Healthcare Facilities	Can you get a Dr's appointment ?? Again how are they meant to cope with the increase I refer back to the new home off Longmoor Lane and also ones being built on the old gas works
Caroline Blackmore	West of Sandiacre	Response-00451	Type of Housing	We don't want more social housing thank you.
Caroline Blackmore	West of Sandiacre	Response-00451	Number of Houses	Refer back to all the above area's how are they meant to cope with the increase. Councils are already at breaking point with the services they provide
Caroline Blackmore	West of Sandiacre	Response-00451	Green Belt	Save the Green Belt quite simply it's been there for years with good reason we need our green spaces
Caroline Blackmore	West of Sandiacre	Response-00451	Flooding / Drainage	We need this land to absorb the rain water , too much concrete where does the water go .... it doesn't hence the increase in flooding. You see the drainage infrastructure struggle why add to it
Caroline Blackmore	West of Sandiacre	Response-00451	Other	We don't want or need these house's, 2 development's is enough in Sandiacre. People can find else where to live don't ruin Sandiacre. Bad enough all the migrants we have to tolerate in the hotels as well. Consider the wildlife as well what are we teaching our children???
Caroline Driver	West of Sandiacre	Response-00618	Traffic Congestion	The roads are too narrow for current traffic, never mind an additional 700 vehicles per day. During school start and finish there is dangerous parking, roads reduced to single file. It is already dangerous for motorists and pedestrians often having to edge out blindly before any extra vehicles. The bus gets stuck regularly with the driver honking their horn and knocking on doors. The additional congestion that Stanton park will already cause on the main roads to the motorway will already leave us gridlocked in the estate and the queues back up into the estate causing hazards to pedestrians.
Caroline Driver	West of Sandiacre	Response-00618	Road Safety	During school start and finish there is dangerous parking, roads reduced to single file. It is already dangerous for motorists and pedestrians often having to edge out blindly before any extra vehicles. The bus gets stuck regularly with the driver honking their horn and knocking on doors. The additional congestion that Stanton park will already cause on the main roads to the motorway will already leave us gridlocked in the estate and the queues back up into the estate causing hazards to pedestrians crossing between cars. My cat got run over and killed last year. Volume of traffic important as roads are twisted, VERY narrow and blind corners (exacerbated by park cars from school and football club) creating little visibility, especially hazardous to the many children living on the estate.
Caroline Driver	West of Sandiacre	Response-00618	Air Quality	Pollution is already high as we have to live so close to the M1 and A52. Volume of traffic creates many standing vehicles queuing to get on these main roads which already exacerbate the problem. Building on the ?buffer zone? that acts as lung absorbing much pollution will poison our area further with fumes.
Caroline Driver	West of Sandiacre	Response-00618	Wildlife / Biodiversity	Stoney Clouds nature reserve is not big enough already. We walk there regularly and see the diverse habitat that the proposed area of building protects from immediate impact. In the last month I have seen 3 dead hedgehogs on the road. I have seen owls (one owl decapitated my pet rabbit). My next door neighbour has fox den in their garden with cubs every spring (have them all on camera). Likely in gardens due to loss of habitat already. This loss should not be exacerbated further.
Caroline Driver	West of Sandiacre	Response-00618	Bus Services	There is a bus service but there shouldn't be as the roads are too narrow. The bus is regularly stuck on beech Avenue, honking their horn and the driver knocking on doors, often very angrily. When I'm driving on my own street, it is necessary to mount the curb in order for the bus and a car to pass at the same time. This is a danger to all especially pedestrians.
Caroline Driver	West of Sandiacre	Response-00618	School Capacity	I live on Beech Avenue and when we moved here over 5 years ago, I couldn't get places for my 4 children at cloudside school at the bottom of the street, they had to go to school in stapleford.
Caroline Driver	West of Sandiacre	Response-00618	Healthcare Facilities	Again when I moved to beech Avenue 5 years ago, had to go to doctors in stapleford and dentist in long Eaton. The current 1 GP practice and 1 dentist is insufficient for the number of people already living here, never mind potentially another 180 families. Total madness.
Caroline Driver	West of Sandiacre	Response-00618	Type of Housing	There is no transparency about what the proposed housing is for. I saw Angela Rayner admitting on TV that most of her 1.5 million homes will go to immigrants. In a professional capacity I have met many unvetted illegal migrants from the hotels in long eaton and the vast majority that I met were rude, entitled, misogynistic and aggressive. I am already horrified that they are walking the streets with my children in the local area, never mind housing them at the top of my street. Please publish an exact breakdown of what you intend the housing to be used for. I have written to councillor Curtis Howard more than once asking this question which he is refusing to answer.
Caroline Driver	West of Sandiacre	Response-00618	Number of Houses	It is the highest density of all the proposals and not in keeping with current housing
Caroline Driver	West of Sandiacre	Response-00618	Green Belt	You should be protecting the green belt, as instructed by all constituents and voted for over and over again. As elected officials you should be doing what the electorate and tax payers want and sticking up for the local people, not blindly acting on instruction of the government who know nothing of our area. I'd be interested to know how many of the people proposing this live in any of the areas. The green belt provides recreation and wellbeing to everyone as well as animals, insects, amphibians (often have lots of frogs in my garden) and birds, so many different birds.
Caroline Driver	West of Sandiacre	Response-00618	Landscape	This proposal would change the existing beautiful landscape forever turning into a huge housing estate. The views across the parishes and it's beautiful walk will be destroyed and the skyline blotted out.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Caroline Driver	West of Sandiacre	Response-00618	Flooding / Drainage	October 2023 saw horrific flooding, even Lidl was under water. As we are towards the top of steep incline, replacing green belt with concrete jungle is very likely to impact this and run off into the canal. You need to liaise with Broxtowe council for impact on stapleford as they have been battling to solve the flooding where houses and businesses were destroyed. You will both need to undertake a risk assessment involving Broxtowe council. The roads at every entrance to our estate were blocked due to flooding, trapping people in including the vulnerable. I have videos as we were supposed to be going to the airport but couldn't get out. Imagine if it was the hospital we needed! More houses would impact massively the severity of this, putting people's lives, homes and livelihoods at risk.
Caroline Driver	West of Sandiacre	response-00618	Other	Totally inappropriate proposal. I have listed objection under every heading and all hugely relevant. What's worse is we, the tax payers, are expected to foot the bill yet again for things we don't want. I suggest saving any further waste of our money and scrap the plan altogether. Concentrate instead in relieving the further congestion that is going to be coming from Stanton park before trying to inflict further travesties on the local people.
Caroline Okeowo	East of Breaston	Response-01814	Traffic Congestion	The village road network is not equipped to handle additional traffic volumes. Increased congestion, parking problems, and road safety risks would result in a marked decline in quality of life for both residents and commuters.
Caroline Okeowo	East of Breaston	response-01814	Wildlife / Biodiversity	The land in question is designated Green Belt, protected to limit urban sprawl, safeguard the countryside, and preserve biodiversity. Development here would lead to the permanent loss of vital green space and the destruction of natural habitats supporting a variety of wildlife, including birds, bats, and small mammals. Once developed, this ecological value cannot be restored.
Caroline Okeowo	East of Breaston	Response-01814	School Capacity	The village primary school already faces constraints in space and facilities, while nearby secondary schools operate near or at full capacity. An influx of families would worsen the situation and could force children to seek school places outside the area.
Caroline Okeowo	East of Breaston	response-01814	Healthcare Facilities	Local GP surgeries and dental practices are under significant strain, and any increase in population would make access to timely care even more difficult.
Caroline Okeowo	East of Breaston	Response-01814	Number of Houses	Breaston is a historic rural village with a strong sense of identity and community. Introducing a large-scale development of 50 houses would significantly alter the village's scale and character, pushing it toward becoming a suburban extension rather than a distinct settlement. This would undermine the very qualities that make Breaston a desirable place to live.
Caroline Okeowo	East of Breaston	response-01814	Green Belt	Contradiction with Planning Policy and Legislation Under the National Planning Policy Framework (NPPF 2023): ? Paragraph 140 states that changes to Green Belt boundaries should only be made in exceptional circumstances. ? Paragraphs 149?150 highlight that inappropriate development in the Green Belt should only be permitted under very special circumstances. No compelling justification has been presented to meet these thresholds. Additionally: ? The Council is required to demonstrate a five-year housing land supply before Green Belt release is considered. There is no clear evidence that all brownfield and non-Green Belt options have been fully explored.
Caroline Okeowo	East of Breaston	Response-01814	Flooding / Drainage	Recent flooding events in late 2023 and early 2024 demonstrated the village's vulnerability to extreme weather. The proposed site, which currently functions as a natural soakaway and is often waterlogged, plays a key role in managing surface water. Development would replace permeable land with hard surfaces, significantly raising flood risk for both existing and future properties at a time when climate unpredictability is on the rise.
Caroline Roy	West of Sandiacre	Response-00945	Traffic Congestion	Surrounding roads won't be able to support the construction traffic, plus these roads are already congested and blocked enough with parked cars, let alone adding in all the cars for these new homes that will need to get through
Caroline Roy	West of Sandiacre	response-00945	Air Quality	Being so close to the M1 already, we really don't need additional traffic in the area to reduce air quality
Caroline Roy	West of Sandiacre	response-00945	Wildlife / Biodiversity	This area is a fantastic space for wildlife, from birds of prey to bees. We should be encouraging more spaces like these - not destroying them
Caroline Roy	West of Sandiacre	response-00945	Healthcare Facilities	Local Doctors are already a pain to get appointments at, adding this many extra residents to the area without additional GP facilities is just madness
Caroline Tew	North of West Hallam	Response-01021	Traffic Congestion	Traffic already backs up onto Station Road at busy times., this development will add to the problems. Turning right out of Station Road is already hazardous as the bend is not good towards Stanley Common. Turning out of the junction from Park Hall Lane is also dangerous, especially at busy times. It is very difficult to cross the road here. Additional traffic at the junction, even if it was further along would add to the problems
Caroline Tew	North of West Hallam	Response-01021	Road Safety	It is near a very busy crossroads and it is already difficult to cross the road at busy times without additional traffic. I walk my dog every day down Park Hall Lane and it is already busy and at times dangerous to cross High Lane
Caroline Tew	North of West Hallam	response-01021	Wildlife / Biodiversity	This area is a natural wildlife habitat for butterflies and wild flowers. I walk my dog here and walking in this peaceful environment is good for my mental health. The natural habitat with foxes, badgers and rabbits, plus the rich variety of birds should be conserved and protected for future generations. The area changes with the seasons, it is beautiful in summer with the wildlife meadow. Too much natural habitat is being lost to development when many previous industrial landscapes like Stanton Ironworks could be utilized for housing.
Caroline Tew	North of West Hallam	response-01021	Green Belt	It is important to protect the greenbelt for future generations. Everyone needs green spaces to enjoy and being in the natural environment within a village environment is the reason many people live in West Hallam. It is a well known fact that access to the countryside and open space helps with mental health difficulties
			Flooding / Drainage	This area regularly floods in times of high rainfall and water is pumped out the garden of one house
Carol Marshall	West of Sandiacre	Response-00736	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic. Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents for many years. The roads in Sandiacre are already congested with traffic coming from Stapleford which is in Nottinghamshire plus Stanton traffic also. A survey of traffic in Sandiacre is well over due.
Carol Marshall	West of Sandiacre	response-00736	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Carol Marshall	West of Sandiacre	Response-00736	Air Quality	Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Carol Marshall	West of Sandiacre	response-00736	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat. Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to wildlife for many years
Carol Marshall	West of Sandiacre	Response-00736	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Carol Marshall	West of Sandiacre	response-00736	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Carol Marshall	West of Sandiacre	response-00736	Type of Housing	High density housing is preposterous not in keeping with current housing.
Carol Marshall	West of Sandiacre	response-00736	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Carol Marshall	West of Sandiacre	response-00736	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Carol Marshall	West of Sandiacre	response-00736	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Carol morrice	West of Sandiacre	Response-00795	Traffic Congestion	Cloudside road is a very small road and the extra volume of traffic going through there will be a nightmare
Carol Shaw	West of Borrowwash	Response-00797	Traffic Congestion	The development of around 280 homes west of Borrowwash will create significant traffic congestion on the A6005 Derby Road. The creation of a new vehicular access and pedestrian crossing point will increase traffic flow and potentially lead to congestion at peak times. This could also impact road safety, especially with the increased number of vehicles entering and exiting the development. Bottleneck Without Direct A52 Access: Without direct access to the A52, the development will force additional traffic onto local roads, creating a bottleneck. Stationary traffic is already a common issue on Victoria Avenue and Station Road, and the increased volume from the new development will exacerbate this problem. This will lead to longer travel times, increased frustration for drivers, and higher risks of accidents. Impact of Events at Elvaston Castle: Events at Elvaston Castle, which attract large numbers of visitors, will have huge implications for traffic in the area. The additional traffic from the development will compound the congestion during these events, making it difficult for residents and visitors to navigate the area. National Policy Context: The National Planning Policy Framework (NPPF) emphasizes that transport issues should be considered from the earliest stages of plan-making and development proposals. It encourages developments that limit the need to travel and promote sustainable transport modes to reduce congestion and improve road safety. The NPPF also highlights the importance of designing schemes that contribute to making high-quality places and ensuring patterns of movement, streets, parking, and other transport considerations are integral to the design.
Carol Shaw	West of Borrowwash	response-00797	Road Safety	The development of around 280 homes west of Borrowwash will create significant traffic congestion on the A6005 Derby Road. The creation of a new vehicular access and pedestrian crossing point will increase traffic flow and potentially lead to congestion at peak times. This could also impact road safety, especially with the increased number of vehicles entering and exiting the development. Bottleneck Without Direct A52 Access: Without direct access to the A52, the development will force additional traffic onto local roads, creating a bottleneck. Stationary traffic is already a common issue on Victoria Avenue and Station Road, and the increased volume from the new development will exacerbate this problem. This will lead to longer travel times, increased frustration for drivers, and higher risks of accidents. Impact of Events at Elvaston Castle: Events at Elvaston Castle, which attract large numbers of visitors, will have huge implications for traffic in the area. The additional traffic from the development will compound the congestion during these events, making it difficult for residents and visitors to navigate the area. National Policy Context: The National Planning Policy Framework (NPPF) emphasizes that transport issues should be considered from the earliest stages of plan-making and development proposals. It encourages developments that limit the need to travel and promote sustainable transport modes to reduce congestion and improve road safety. The NPPF also highlights the importance of designing schemes that contribute to making high-quality places and ensuring patterns of movement, streets, parking, and other transport considerations are integral to the design. Narrow Derby Road and Pavements: Derby Road is already narrow with very narrow pavements, increasing the chances of fatalities, especially for children who may be forced to use this as an alternative to motor transport. The increased traffic from the development will exacerbate these safety concerns, making it more dangerous for pedestrians, particularly school children.
Carol Shaw	West of Borrowwash	response-00797	Air Quality	Increased traffic from the new development will likely lead to higher emissions, negatively impacting air quality in the area. The additional vehicles on the A6005 Derby Road will contribute to air pollution, which is contrary to the goals of the NPPF to promote sustainable development and reduce air pollution. Impact on Ashbrook School: The extra road traffic forced past Ashbrook school on Victoria Avenue will exacerbate air pollution levels, posing a significant health risk to school children. Children are particularly vulnerable to air pollution as their lungs are still developing, and they are more likely to be exposed to higher levels of pollutants due to their proximity to traffic. Increased traffic can lead to higher concentrations of particulate matter (PM2.5 and PM10) and nitrogen dioxide (NO2), which are known to cause respiratory issues and other health problems.
Carol Shaw	West of Borrowwash	Response-00797	Wildlife / Biodiversity	The development will require safeguarding the route of Ockbrook Footpath 41 and creating new parkland and woodland. However, the construction and increased human activity could disrupt local wildlife habitats and biodiversity. The area west of Borrowwash may contain important habitats that could be adversely affected by the development. Current Wildlife: The area is home to various species, including bats, birds of prey, water voles, newts, frogs, and birds. These species rely on the existing habitat for shelter, food, and breeding grounds. Simply moving them to a new park is not a viable solution as it disrupts their established ecosystems and can lead to a decline in their populations. Protected Species: Bats: All bat species in the UK are protected under the Wildlife and Countryside Act 1981 and the Conservation of Habitats and Species Regulations 2017. Disturbing or destroying their roosts is illegal. Water Voles: Protected under the Wildlife and Countryside Act 1981, it is an offense to intentionally kill, injure, or take water voles, or to damage, destroy or obstruct access to any structure or place used by them for shelter or protection. Great Crested Newts: Protected under the Wildlife and Countryside Act 1981 and the Conservation of Habitats and Species Regulations 2017. It is illegal to capture, kill, disturb or trade great crested newts, or to damage or destroy their habitat.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Carol Shaw	West of Borrowwash	response-00797	Bus Services	While the development includes provisions for pedestrian links to surrounding facilities and bus services, the increased population may strain existing public transport services. The current infrastructure may not be sufficient to accommodate the additional demand, leading to overcrowded buses and reduced service quality.
Carol Shaw	West of Borrowwash	Response-00797	Healthcare Facilities	The strategy does not specify enhancements to local healthcare facilities to accommodate the increased population. The influx of new residents will put pressure on existing struggling healthcare services, leading to longer wait times and reduced access to care
Carol Shaw	West of Borrowwash	response-00797	Type of Housing	The development proposes 280 homes, with 40% designated as affordable housing. While this addresses housing needs, the scale of the development is not in line with the character of Borrowwash and will lead to overdevelopment. Only 10% social housing will cure none of the homeless issues we have nationally. The number of proposed houses represents a huge additional percentage of the size of the current village. This significant increase will change village life negatively and permanently. The influx of new residents will alter the close-knit community feel, increase demand on local services, and potentially lead to overdevelopment
Carol Shaw	West of Borrowwash	response-00797	Number of Houses	The number of proposed houses represents a huge additional percentage of the size of the current village. Borrowwash is a small village, and adding 280 homes will significantly increase its size, potentially by a substantial percentage. This significant increase will change village life negatively and permanently. The influx of new residents will alter the close-knit community feel, increase demand on local services, and potentially lead to overdevelopment.
Carol Shaw	West of Borrowwash	response-00797	Green Belt	The development west of Borrowwash involves the destruction of green belt land, which is protected under the NPPF. The green belt serves to prevent urban sprawl and maintain the openness of the countryside. Developing this land contradicts the NPPF's aim to protect green belt areas except in exceptional circumstances. Renaming Green Belt to Grey Belt: The renaming of green belt to grey belt is an attack on the protections the green belt is supposed to provide. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. The NPPF states that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified. Renaming and reclassifying these areas undermines the purpose of the Green Belt and threatens the long-term sustainability and environmental health of the region.
Carol Shaw	West of Borrowwash	response-00797	Landscape	The development will alter the landscape character of the area, transforming open green spaces into residential areas. This change will negatively impact the visual appeal and natural beauty of the countryside surrounding Borrowwash.
Carol Shaw	West of Borrowwash	response-00797	Flooding / Drainage	The proximity of the development to the Ock Brook watercourse raises concerns about flooding and drainage. While the site is in Flood Zone 1, appropriate landscaping and drainage measures must be implemented to prevent adverse impacts on natural drainage patterns as Derby road floods from these fields currently, and often.
Carol Westcott	North of Breadsall Hill Top	Response-00973	Traffic Congestion	The road A608 will be vastly affected it is a very busy link road for villages through to Heanor
			Road Safety	There is a nursery school people walking and the road is 40mph which is far too fast
Carol Westcott	North of Breadsall Hill Top	Response-00973	Air Quality	Moor traffic and standing traffic this site will cause will add to pollution, the trees and bushes that will be destroyed will add to the carbon dioxide levels
Carol Westcott	North of Breadsall Hill Top	response-00973	Wildlife / Biodiversity	The site has lots of trees and bushes for birds and wildlife with the new housing estate that has been built at Dale acre road we have already lost lots of nature, with hardly any lawns and bushes. Where are the wildlife going to go.
Carol Westcott	North of Breadsall Hill Top	response-00973	Bus Services	Bus services will be interrupted by traffic queues which will impact on people getting to their destination on time
Carol Westcott	North of Breadsall Hill Top	response-00973	School Capacity	Schools are at full capacity and new builds means children do not get places in their satellite position impacting on distance people have to travel to take their children to school meaning more cars on the road
Carol Westcott	North of Breadsall Hill Top	response-00973	Healthcare Facilities	We cannot get an appointment at our already full GP practices how are we going to in the future with at least another 320 people needing a Doctor's surgery
Carol Westcott	North of Breadsall Hill Top	response-00973	Number of Houses	We already have 2 new housing estates and this impacts on sales of the older houses as it's easier to buy a new house therefore devaluation of properties and properties taking much longer to sell
Carol Westcott	North of Breadsall Hill Top	response-00973	Green Belt	We have a beautiful walk the Greenway and it's the only land around this area that can be enjoyed. The wildlife is wonderful around the Greenway with birds and wildlife.
Carol Westcott	North of Breadsall Hill Top	response-00973	Landscape	New houses are built with minimal gardening requirements drives hardly any lawns and hedges wildlife is just being driven out. Trees are destroyed by new buildings and we are supposed to be supporting climate change and helping to reduce the emissions how will this help.
Carol Westcott	North of Breadsall Hill Top	Response-00973	Flooding / Drainage	As I understand the land being used does not have great drainage with field land being destroyed where will all the water go.
Carol Westcott	North of Breadsall Hill Top	response-00973	Other	I understand we need more housing but just reported 2 months ago there are 1800 empty houses in the Erewash area and 1200 in Derby why are these not being regenerated so that more housing estates are not built. The houses are already there so would not impact on the environment.
Carolyn Hallam	West of Sandiacre	Response-00489	Traffic Congestion	There is already far too much traffic in Sandiacre. The lorry parking in Stanton has already caused more huge lorries to travel through the local streets. This development will add misery and gridlock to the narrow streets of Sandiacre
Carolyn Hallam	West of Sandiacre	Response-00489	Road Safety	Large HGVs will not be able to get up to the site. People will be forced to park on pavements causing danger to our many elderly and children.
Carolyn Hallam	West of Sandiacre	Response-00489	Air Quality	We already have too much air pollution. We are stuck between the M1 and the A52. Our boiler is being damaged by air pollution blocking the filters. Asthma is on the rise as are other breathing problems
Carolyn Hallam	West of Sandiacre	response-00489	Wildlife / Biodiversity	Building on greenbelt will definitely affect wildlife and biodiversity. Once it has been destroyed, it can't be put back. Animals live there because it's good habitat. Once they are displaced they will probably die. Putting up bird and bat boxes several years later, if at all, is useless
Carolyn Hallam	West of Sandiacre	response-00489	Healthcare Facilities	It is already extremely difficult to get a GP appointment in Sandiacre. There is no pharmacy and no plans to have one
Carolyn Hallam	West of Sandiacre	response-00489	Type of Housing	Why are there so few affordable homes being built. The comment of spending money outside the build area is dependent upon other factors? Just a loophole to get out of doing so
Carolyn Hallam	West of Sandiacre	response-00489	Number of Houses	Far too many houses on a narrow strip of greenbelt, right next to the motorway. It really isn't a good place to build
Carolyn Hallam	West of Sandiacre	response-00489	Green Belt	The houses are being built on green belt land. Downgrading it to grey belt to enable building is despicable.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Carolyn Hallam	West of Sandiacre	Response-00489	Flooding / Drainage	Sandiacre flooded last year. We were very close to being flooded ourselves. I am concerned that run off from the new housing development will cause our street to flood in the future. Green spaces are needed to offset this. Building is going ahead next to the canal and river now. On what was an open space. More housing higher up is almost certainly going to cause exacerbation of the floods in Sandiacre
Carolyn Wojtas	South of West Hallam	Response-01052	Traffic Congestion	I live in Beech Lane and the parking and traffic is horrendous a lot of the time ~ school drop off and activities on the recreation ground which is nearly every evening and every Saturday and Sunday.
Carolyn Wojtas	South of West Hallam	Response-01052	Road Safety	If is difficult to drive down Beech Lane with parked cars constantly anyway. Lots of traffic for school drop off and pick up and cars for activities on the recreation ground. Dangerous near school and where children play.
Carolyn Wojtas	South of West Hallam	Response-01052	Type of Housing	Is this genuinely housing for the West Hallam community. Is it going to bring issues in the village that we don't suffer from now?
Carolyn Wojtas	South of West Hallam	Response-01052	Number of Houses	The village has a lot of housing developments/estate already so I believe the area cannot cope with more housing re schools, roads, health centre etc.
Carys Whomsley	North of Breadsall Hill Top	Response-01438	Traffic Congestion	I am writing to register my strong objection to the above-mentioned planning application, both in its original and revised form. Despite the removal of the area adjacent to the A61 in the amended proposal, I believe that the proposed development remains deeply inappropriate and harmful for the following reasons: 1. Contravention of Policy CP18 and Loss of Green Wedge The proposed site lies just outside the designated Green Belt, but crucially directly abuts existing woodland and open countryside, forming part of the vital green corridor along the Great Northern Greenway. This area functions as a green buffer, enhancing ecological connectivity, supporting biodiversity, and providing visual and recreational amenity to local residents, walkers, and cyclists. Despite claims of woodland retention, the development threatens the integrity of this space. Proximity to new housing would increase human pressure on the natural environment, likely leading to degradation of woodland, fragmentation of habitats, and a reduction in wildlife corridors. No Biodiversity Net Gain (BNG) assessment appears in the application documents, raising concerns about whether the legally mandated 10% net gain can or will be achieved. Biodiversity enhancements delivered off-site would do nothing to mitigate local ecological loss, thereby undermining environmental sustainability in the area. Moreover, the site lies adjacent to land recently released from the Green Belt and under consideration for housing allocation by Erewash Borough Council. The cumulative impact of developing both sites would be devastating: a continuous sprawl from Derby through to Breadsall, resulting in the elimination of the settlement gap and permanent damage to the character of the Great Northern Greenway. 2. Environmental, Infrastructural, and Policy Concerns The proposal directly contradicts the National Planning Policy Framework (NPPF) Paragraph 143, particularly the goals of preventing urban sprawl and protecting the openness of Green Belt land. It also ignores the findings of the Strategic Housing Land Availability Assessment (SHLAA 359), which previously deemed the site unsuitable for residential development due to accessibility and environmental limitations. The development is completely incompatible with the objectives of the Breadsall Parish Neighbourhood Plan 2019?2029, particularly the aims to: Preserve the rural character and prevent urbanisation; Avoid coalescence with the Derby conurbation; Safeguard wildlife and ecological features; Control flood risk and infrastructure strain; Protect valued green spaces and visual vistas.
Carys Whomsley	North of Breadsall Hill Top	Response-01438	Traffic Congestion	Breadsall has already experienced increased flooding, attributed to upstream developments like Persimmon Estate and Breadsall Hilltop, which lie within the same water catchment area. Any additional development would worsen this issue, placing homes and infrastructure at risk. Furthermore, the proposal relies on access through two existing public footpaths within the Redrow estate and offers no concrete infrastructure improvements. The A608 is already over-congested, and no plans are presented to handle increased traffic or to safeguard children commuting to local schools. 3. Loss of Community and Ecological Value This land offers more than just open space?it is a much-loved and well-used amenity for the local community. It serves as a peaceful escape for informal recreation and nature engagement, and its visual and environmental contributions to the neighbourhood are significant. Its destruction would represent a major loss in local character and quality of life. The proposal underestimates the pressure on existing services, lacks detailed mitigation plans, and fails to explain how proposed footpaths will link meaningfully into existing routes. Nearby Local Wildlife Sites will be impacted
Carys Whomsley	North of Breadsall Hill Top	Response-01438	Road Safety	I am writing to register my strong objection to the above-mentioned planning application, both in its original and revised form. Despite the removal of the area adjacent to the A61 in the amended proposal, I believe that the proposed development remains deeply inappropriate and harmful for the following reasons: 1. Nearby Local Wildlife Sites will be impacted
Carys Whomsley	North of Breadsall Hill Top	response-01438	Bus Services	I am writing to register my strong objection to the above-mentioned planning application, both in its original and revised form. Despite the removal of the area adjacent to the A61 in the amended proposal, I believe that the proposed development remains deeply inappropriate and harmful for the following reasons: 1. Contravention of Policy CP18 and Loss of Green Wedge The proposed site lies just outside the designated Green Belt, but crucially directly abuts existing woodland and open countryside, forming part of the vital green corridor along the Great Northern Greenway. This area functions as a green buffer, enhancing ecological connectivity, supporting biodiversity, and providing visual and recreational amenity to local residents, walkers, and cyclists. Despite claims of woodland retention, the development threatens the integrity of this space. Proximity to new housing would increase human pressure on the natural environment, likely leading to degradation of woodland, fragmentation of habitats, and a reduction in wildlife corridors. No Biodiversity Net Gain (BNG) assessment appears in the application documents, raising concerns about whether the legally mandated 10% net gain can or will be achieved. Biodiversity enhancements delivered off-site would do nothing to mitigate local ecological loss, thereby undermining environmental sustainability in the area. Moreover, the site lies adjacent to land recently released from the Green Belt and under consideration for housing allocation by Erewash Borough Council. The cumulative impact of developing both sites would be devastating: a continuous sprawl from Derby through to Breadsall, resulting in the elimination of the settlement gap and permanent damage to the character of the Great Northern Greenway. 2. Environmental, Infrastructural, and Policy Concerns The proposal directly contradicts the National Planning Policy Framework (NPPF) Paragraph 143, particularly the goals of preventing urban sprawl and protecting the openness of Green Belt land. It also ignores the findings of the Strategic Housing Land Availability Assessment (SHLAA 359), which previously deemed the site unsuitable for residential development due to accessibility and environmental limitations. The development is completely incompatible with the objectives of the Breadsall Parish Neighbourhood Plan 2019?2029, particularly the aims to: Preserve the rural character and prevent urbanisation; Avoid coalescence with the Derby conurbation; Safeguard wildlife and ecological features; Control flood risk and infrastructure strain; Protect valued green spaces and visual vistas.
Carys Whomsley	North of Breadsall Hill Top	response-01438	Bus Services	Breadsall has already experienced increased flooding, attributed to upstream developments like Persimmon Estate and Breadsall Hilltop, which lie within the same water catchment area. Any additional development would worsen this issue, placing homes and infrastructure at risk. Furthermore, the proposal relies on access through two existing public footpaths within the Redrow estate and offers no concrete infrastructure improvements. The A608 is already over-congested, and no plans are presented to handle increased traffic or to safeguard children commuting to local schools. 3. Loss of Community and Ecological Value This land offers more than just open space?it is a much-loved and well-used amenity for the local community. It serves as a peaceful escape for informal recreation and nature engagement, and its visual and environmental contributions to the neighbourhood are significant. Its destruction would represent a major loss in local character and quality of life. The proposal underestimates the pressure on existing services, lacks detailed mitigation plans, and fails to explain how proposed footpaths will link meaningfully into existing routes. Nearby Local Wildlife Sites will be impacted

It serves as a peaceful escape for informal recreation and nature engagement, and its visual and environmental contributions to the neighbourhood are significant. Its destruction would represent a major loss in local character and quality of life. The proposal underestimates the pressure on existing services, lacks detailed mitigation plans, and fails to explain how proposed footpaths will link meaningfully into existing routes. Nearby Local Wildlife Sites will be impacted
Catherine Casartelli	West of Borrowwash	Response-01428	Traffic Congestion	The plans could add 280-560 additional cars moving through the village. At peak times traffic is already high. With only one road access road to the development has congestion on that development been considered at peak times?
Catherine Casartelli	West of Borrowwash	Response-01428	Road Safety	The proposed access point is in a 40mph speed limit. At peak times traffic through Borrowwash is already high. This plan could add 280- 560 additional cars moving through the village. When there are issues with A52, A50 or M1 then village traffic is very high causing road safety issues. The village has already suffered from fatal accidents.
Catherine Casartelli	West of Borrowwash	Response-01428	Healthcare Facilities	The doctors are already overstretched with the current village population. There is only 1 NHS dentist and they are full to capacity.
Catherine Casartelli	West of Borrowwash	Response-01428	Type of Housing	I am not sure that 40% affordable housing is what I would want. Homes sized and priced for first time buyers to enable first time buyers to stay in the village.
Catherine Casartelli	West of Borrowwash	Response-01428	Flooding / Drainage	Derby Road near the proposed access already suffers from flood water running through onto Derby Road during excessively heavy rainfall. Covering fields with roads and houses can only add to this rain run off.
Catherine Fox Charlton	North of Borrowwash	Response-00658	School Capacity	I am concerned about the spaces available within schools and nursery places.
Catherine Fox Charlton	West of Borrowwash	Response-00659	Healthcare Facilities	Borrowwash has difficulty servicing medical appointments for current residents and the one pharmacy has very little stock available.
Catherine Fox Charlton	West of Borrowwash	Response-00659	Traffic Congestion	This will no doubt cause traffic congestion on Derby Road
Catherine Fox Charlton	West of Borrowwash	Response-00659	Healthcare Facilities	Difficult to get medical appointments for current population and the chemist has difficulty servicing pharmaceuticals
Catherine Greenaway	West of Sandiacre	Response-00429	Traffic Congestion	The roads around the area, especially Beech Avenue and Coronation avenue cannot take the extra traffic, more so the construction vehicles. These avenues are not wide and buses already struggle to get through.
Catherine Greenaway	West of Sandiacre	Response-00429	Road Safety	Beech Avenue is already treated like a race track, the extra traffic will make this worse and dangerous for the residents.
Catherine Greenaway	West of Sandiacre	Response-00429	School Capacity	The local schools are already at capacity and with the extra children from the new houses could make it that not all children in the catchment area will get a place.
Catherine Greenaway	West of Sandiacre	Response-00429	Healthcare Facilities	We struggle already to get appointments at the doctors. There are only two in the area. How will these surgeries cope?
Catherine Greenaway	West of Sandiacre	Response-00429	Type of Housing	What type of houses are being built, will they be council houses or private? Or will they be used for the immigrants currently in hotels?
Catherine Greenaway	West of Sandiacre	Response-00429	Number of Houses	Will there be 180 in sandiacre or is this number split over several areas? If so how many are planned for sandiacre?

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Catherine Richardson	West of Sandiacre	Response-00531	Traffic Congestion	The site proposed would be difficult to access. Too many parked cars on and off the pavement. A lot of people working from home now. Also heavy traffic and parking around the school on Stanton road is already a problem. The terrain is too steep and narrow for safe access especially HGV. Soon be a bad accident if this goes ahead
Catherine Richardson	West of Sandiacre	Response-00531	Road Safety	The area is adjacent to a nature reserve frequently used by many dog walkers and pedestrian walkers. The access near Larch Avenue would become dangerous for these people. Also Cloudside road is already tricky to access and would become so much more dangerous. Chestnut Grove would become a rat run for traffic trying to avoid this so would also become dangerous for pedestrians
Catherine Richardson	West of Sandiacre	Response-00531	Air Quality	All this extra traffic would cause more air pollution. It's already bad enough being near the M1
Catherine Richardson	West of Sandiacre	Response-00531	Wildlife / Biodiversity	I have personally seen kestrels, buzzards, owls, badgers, hedgehog, foxes and many butterflies and other insects. Also many small birds would be affected by this site going ahead
Catherine Richardson	West of Sandiacre	Response-00531	Bus Services	The bus service already struggles with access and frequently gets held up on Beech Avenue
Catherine Richardson	West of Sandiacre	Response-00531	School Capacity	The local school would not be able to accommodate so many new pupils
Catherine Richardson	West of Sandiacre	Response-00531	Healthcare Facilities	Doctors and dentist are already creaking at the seams. It is hard enough already to get an appointment. So many new patients could not be accepted so would have to travel further afield
Catherine Richardson	West of Sandiacre	Response-00531	Type of Housing	180 houses being built in the proposed area would be like sardines in a tin. All crammed together right next to the M1
Catherine Richardson	West of Sandiacre	Response-00531	Number of Houses	Far too many houses being proposed for this site
Catherine Richardson	West of Sandiacre	Response-00531	Green Belt	Green belt land should remain greenbelt and not be downgraded to just to slap up houses to meet the targets. More thinking needs to go into this. There are other sites available. Behind Lidl for a start
Catherine Richardson	West of Sandiacre	Response-00531	Landscape	This landscape is the last bit of greenery between Sandiacre and the M1. It must be preserved
Catherine Richardson	West of Sandiacre	Response-00531	Flooding / Drainage	There will be problems with flooding. The houses on the estate are all lower down from the proposed site
Catherine Richardson	West of Sandiacre	Response-00531	Other	I feel that not enough thought has gone into this. Someone from government needs to visit and witness all the problems this site would cause
Cat Hope	South of West Hallam	Response-00127	Traffic Congestion	West hallam is a village, now soon will be an estate like oakwood! Traffic is horrendous, more so parking. Empty houses already on where the former white hart is. This once attractive village, will soon by awful. Ilkeston as the nearest town can't handle more traffic. Our villages are losing our green belt areas! Years ago Erewash would never budge, eg dale road stanley. We need to protect our green space! Soon will be none. Huge overcrowding happening. Criminal activity needs protection also! Our police can't cope as it is now.
Cat Hope	South of West Hallam	Response-00127	Road Safety	West hallam is a village, now soon will be an estate like oakwood! Traffic is horrendous, more so parking. Empty houses already on where the former white hart is. This once attractive village, will soon by awful. Ilkeston as the nearest town can't handle more traffic. Our villages are losing our green belt areas! Years ago Erewash would never budge, eg dale road stanley. We need to protect our green space! Soon will be none. Huge overcrowding happening. Criminal activity needs protection also! Our police can't cope as it is now.
Cat Hope	South of West Hallam	Response-00127	Wildlife / Biodiversity	West hallam is a village, now soon will be an estate like oakwood! Traffic is horrendous, more so parking. Cathy Bostock	South of West Hallam	Response-00181	Traffic Congestion	Already problems with on street parking during school drop off/pick up and football matches
Cathy Bostock	South of West Hallam	Response-00181	Number of Houses	Too many houses, new houses locally standing empty for past 2 years!
Cathy Bostock	South of West Hallam	Response-00181	Green Belt	Need to preserve green space for future generations
Chantelle croft	East of Breaston	Response-01483	Traffic Congestion	To much traffic already ☹️
Chantelle croft	East of Breaston	Response-01483	Wildlife / Biodiversity	We do not want any more houses build we are losing fields and trees the wild life will be come extinct
Charles Brooks	South of West Hallam	Response-00535	Traffic Congestion	The chosen site directly opposite Scargill School and adjacent to Beech Lane will significantly increase an already conected area particularly during school hours and most noticeably at the beginning and end of the school day. Beech Lane is not a normal width road and there are always instances of carts mounting the pavement near the school to get my. There will inevitably be more traffic congestion on Beech Lane as a result of the proposed development and the entrance on Beech Lane itself. Its clear to me that Councillors have not visited the site and I encourage them to do so. The development represents a serious health and safely issue so close to the primary school. Furthermore the centre of West Hallam which is approx. 100 yards away is contin ually busy with parked cars and through traffic. Even the occasional bus that comes into the centre often struggles to get through.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Charles Brooks	South of West Hallam	response-00935	Road Safety	This is already a serious issue on Beech Lane and especially at school opening and closing times. Its very difficult for through traffic to navigate the road safely. I have witnessed instances of vehicles mounting the pavements to get past. In the past I have been a school governor and Chair for about 10 years. The safety of the children near Beech Lane has always been an issue and has not improved over the years. In fact, the safety is even more acute since there is no longer a road crossing person or any measures to slow traffic. I always lived in dread of an accident involving a child and I still do. The village is already bulging with vehicles. Every household has more than one car. There are often near misses on the roads in West Hallam particularly people coming out from behind parked cars. Every exit out of West Hallam is difficult to navigate. There are no traffic lights, no mini roundabouts and no traffic calming apart from speed indicator devises on the High Lane Extra vehicles will only exacerbate the problems. I belong to Community Speed Watch and am very aware of the volume of traffic coming into and out of the village.,
Charles Brooks	South of West Hallam	response-00935	Air Quality	Without doubt, hoses instead of open fields will naturally reduce the airt quality as will the increased volume of vehicles. Its not just cars but delivery vehicles etc.
Charles Brooks	South of West Hallam	response-00935	Wildlife / Biodiversity	In todays world people are more and more concerned about wildlife and biodiversity. The proposed development land is rich in wildlife which should not be disturbed. There is currently a wonderful vista looking across the land. West Hallam is a rural village where I believe a large development like the one proposed can only significantly reduce the feeling of living in a rural environment. I moved to West Hallam to enjoy being surrounded by green fields and the sound of wildlife.
Charles Brooks	South of West Hallam	response-00935	Bus Services	What bus service!! You refer to West Hallam being well served by buses. This is simply not true. I suggest you do your research and check bus timetables. For a village the size and population of West Hallam, it is poorly serviced by public transport.
Charles Brooks	South of West Hallam	response-00935	School Capacity	I fully appreciate that Scargill School numbers are in decline from the days of new families coming to West Hallam and into the large new estate that was build in the late 70's and early 80's. In time the school may become unsustainable due to the maintenance of the additional buildings built during the peak of pupil number. I also understand that the school would benefit from more pupils and each child generates income for the school. In life we always have to make choices and in my opinion increasing pupil numbers should not trump the health and safety risks of increasing traffic around the school.
Charles Brooks	South of West Hallam	response-00935	Healthcare Facilities	I'm sure Councillors are very aware of the declining lack of healthcare facilities in West Hallam. Its extremely difficult to get an appointment with a GP (no full time GP practicing in West Hallam) and you even have to go to Ilkeston for a simple blood test. The current practice cannot cope with the existing demand. Where are the occupants of the proposed new development meant to go to receive their medical care.
Charles Brooks	South of West Hallam	response-00935	Type of Housing	None please. There are generally enough houses in West Hallam. The existing infrastructure struggles to cope. Personally I am not a NIMBY and not against new houses but very against the proposed site opposite the primary school and the associated issues this will create.
Charles Brooks	South of West Hallam	response-00935	Number of Houses	I understand the proposal is for 90 new homes with provision for more in the future. I am 100% against such a large number with the threat of even more. Councillors need to come and look at West Hallam. How can they vote in favour without inspecting the area and spending time in the location.
Charles Brooks	South of West Hallam	response-00935	Green Belt	People live in a rural location to enjoy the countryside and the benefits of being surrounded by open space. I pay extra for the pleasure of living in West Hallam. If green belt was not important to me then I would choose to live in a town or city. Green belt is very precious to me and should be to Erewash. Once you start building on it then where does it end??
Charles Brooks	South of West Hallam	response-00935	Landscape	West Hallam is a rural location and its identity must be preserved. We are a very close knit community who enjoy living in the countryside and enjoy the wonderful walks and green areas on our doorstep. Is it so necessary to disturb this.
Charles Brooks	South of West Hallam	response-00935	Flooding / Drainage	I do understand that the proposed land is often extremely wet and is quite undulating. It is also above an old mine. This area needs to be properly surveyed.
Charles Brooks	South of West Hallam	response-00935	Other	Overall, I wish to object to this development on the grounds of its close proximity to the local primary school. I do consider it a health and safety issue caused by increased traffic movement on Beech Lane which is effectively a country road and not a full width highway. I am sure Highways would have concerns about an entrance onto the proposed development on Beech Lane which would have to be opposite the school.
Charles Brooks	North of West Hallam	Response-00933	Traffic Congestion	The High Lane in West Hallam is already an extremely busy road and the slightest issue can cause congestion and delays. I know this road is busy because I am a member of the village Community Speedwatch Group and it is surprising how many vehicles travel along the High Lane in both directions. Residents living on the High Lane often have difficulty exiting their drives onto the road whether turning left or right. A new entrance and exit on the High Lane will only increase the issues. Whilst the speed limit is 40mph many vehicles exceed this speed as the road is relatively straight.
Charles Brooks	North of West Hallam	response-00933	Road Safety	There are regularly instances of near misses with pedestrians trying to cross the High lane due to the sheer volume and speed of traffic. A new exit and entrance in the High Lane will only make the situation worse. Credit to the Parish Council who have installed two Speed Indicator Devises (SID's) to try to make motorists aware of the speed limit but it appears to have had little effect. There are not continual pavements on both sides of the High Lane. There is no pavement by the proposed new entrance/exit. I understand there is an exit/entrance proposed for the new development for emergency vehicles only on Park Hall Lane. What is the purpose of this? Current exit from park Hall Lane onto the A609 id very difficult and particularly if you want to turn right which is a blind bend. Park Hall Lane is used primarily for walkers and horses. leave our green spaces alone please.
Charles Brooks	North of West Hallam	response-00933	Air Quality	Additional housing can only make air quality worse. The proposed land is lovely and green and used by animals and wildlife. Residents who live on the High Lane by the proposed development have wonderful views over the countryside.
Charles Brooks	North of West Hallam	response-00933	Wildlife / Biodiversity	As the proposed lane id effectively green belt any building will destroy the current wildlife and the varied biodiversity. When you go for a walk along Park Hall Lane towards Shipley Park the sights and sounds are glorious. I moved to West Hallam to be in the country and the countryside experience starts as soon as you walk onto Park Hall Lane. More often than not you can walk along Park Hall lane, through Mapperley Village and back to West Hallam without seeing or hearing a moving vehicle. In todays pressurised world, this has to be good for human wellbeing.
Charles Brooks	North of West Hallam	Response-00933	Bus Services	There are occasional buses along the High Lane but not always regular. West Hallam does lack a really good regular bus service between Derby and Ilkeston especially in the evenings.
Charles Brooks	North of West Hallam	response-00933	School Capacity	Not an issue here. The school has spare capacity as it was extended a few years ago to cater for the huge demand created by the new estate in the village. When I was Chair of Governors the population of young children exploded. Now the estate is more mature the school population has declined.
Charles Brooks	North of West Hallam	response-00933	Healthcare Facilities	The current healthcare facilities in West Hallam are extremely poor and insufficient to cater for the current population. Its extremely difficult to get an appointment to see a GP. Many people go straight to A and E at Derby Royal to be assessed. Even a simple blood test has to be done at Ilkeston.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Charles Brooks	North of West Hallam	Response-00933	Type of Housing	West Hallam is a reasonably affluent community. All properties are privately owned. I would not be against some new housing in West Hallam to appeal to our young people who want to stay in the village and buy a first property but not the location proposed. Totally inappropriate. West Hallam does not need any more large properties in the £300k plus range.
Charles Brooks	North of West Hallam	Response-00933	Number of Houses	No more needed in West Hallam. The current infrastructure cannot cope and is inadequate. Infrastructure improvements must be actioned before new housing is considered (eg GP's, buses, shops, pub, parking)
Charles Brooks	North of West Hallam	Response-00933	Green Belt	Please do not build on the green belt. As said previously, I moved to West Hallam to be in the country and I want to be surrounded by open spaces and to hear the sound of nature and wildlife.
Charles Brooks	North of West Hallam	Response-00933	Landscape	The landscape currently from the proposed development land is spectacular across fields and open spaces. Please leave it like this. There are surely better site in and around West Hallam. why not ask residents for their views instead of Councillors making decisions when i doubt they have even been to West Hallam to see for themselves. The decisions on housing are far to important to be made in Council Chambers. It should also not be a decision based on politics.
Charles Brooks	North of West Hallam	Response-00933	Flooding / Drainage	It is common knowledge that the proposed area is prone to flooding and the new build will increase the risk of surface water run-off. Please consult the residents that back onto the site. They will give you first hand information
Charles Brooks	North of West Hallam	Response-01252	Other	It is clear that little thought has gone into choosing this as a suitable site for additional housing. Please come and visit and see for yourselves.
Charles Hopkinson	West of Sandiacre	Response-01831	Traffic Congestion	Traffic is already a problem in the area drivers park on the pavement to allow buses and large vehicles to pass on stanton road.the whole of sandiacre is gridlocked at times more homes mean more cars .how long would this development take if approved the wildlife would also suffer.
Charlie Marvin	West of Sandiacre	Response-00256	Wildlife / Biodiversity	Our wildlife and nature should be protected as it has for many years without obstruction
Charlotte	North of Breadsall Hill Top	Response-00458	Traffic Congestion	Traffic across the Hilltop, Oakwood junction already busy and congested at peak times. Additional roads will add to this problem.
Charlotte	North of Breadsall Hill Top	Response-00458	Wildlife / Biodiversity	Greenway belt and surrounding areas should be protected.
Charlotte	North of Breadsall Hill Top	Response-00458	Healthcare Facilities	No local doctors in the area. Currently not taking on patients for local dentists, over capacity issues. Oakwood shops at capacity with car park always full, no other amenities to support more housing.
Charlotte	North of Breadsall Hill Top	Response-00458	Landscape	Current views across Breadsall Hilltop over to Darley are outstanding and very rare. These should be protected and cherished. They are so unique to Derbyshires naturally beauty of small villages across the terrain and unlike nowhere else in the country.
Charlotte Brennan	South West of Draycott	Response-00931	Road Safety	A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents.
Charlotte Brennan	South West of Draycott	Response-00931	Green Belt	Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside?s open character and the enhancement of recreational opportunities for local residents.
Charlotte Brennan	South West of Draycott	Response-00931	Flooding / Drainage	Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding.
Charlotte Brennan	South West of Draycott	Response-00931	Other	Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate.
Charlotte broughton	South of West Hallam	Response-01475	Traffic Congestion	Too much traffic in area without the new houses
Charlotte broughton	North of West Hallam	Response-01474	Traffic Congestion	Too much traffic already in the village
Charlotte broughton	North of West Hallam	Response-01472	School Capacity	School will be over run
Charlotte broughton	North of West Hallam	Response-01472	Healthcare Facilities	Can?t get a doctors appointment as it is, never mind with loads of new houses appearing
Charlotte Fennemore	East of Breaston	Response-01536	Wildlife / Biodiversity	It is important to keep greenbelt land to allow wildlife to thrive
Charlotte Fennemore	East of Breaston	Response-01536	School Capacity	Firfield School is already oversubscribed.
Charlotte Fennemore	East of Breaston	Response-01536	Green Belt	Greenbelt land is that for a reason and should be protected
Charlotte Fennemore	East of Breaston	Response-01536	Flooding / Drainage	That area is already subject to flooding and drainage issues. More houses will only make that worse
Charlotte Fry	West of Sandiacre	Response-00583	Traffic Congestion	The roads are already tight enough when people park either side and we already have buses coming past. It will become gridlocked and nobody will be able to get in and out their houses
Charlotte Fry	West of Sandiacre	Response-00583	Road Safety	As said before, roads are already narrow from parked and there is bound to be more accidents of people getting hit from cars and buses trying to drive by.
Charlotte Fry	West of Sandiacre	Response-00583	Air Quality	Air quality is already bad enough.
Charlotte Fry	West of Sandiacre	Response-00583	Wildlife / Biodiversity	We should be protecting our wildlife and not building homes on their homes that were there to begin with.
Charlotte Fry	West of Sandiacre	Response-00930	Bus Services	We already have plenty of buses coming up and down the roads. We don?t need anymore
Charlotte Fry	West of Sandiacre	Response-01232	Number of Houses	Too many houses are being built in that area and to get access to them you have to go up such a narrow little road that can?t handle that much traffic
Charlotte Fry	West of Sandiacre	Response-01232	Landscape	Building more ugly new builds will ruin the beautiful countryside and be non left. All the wildlife will be gone too
Charlotte Hunter	West of Sandiacre	Response-01376	Traffic Congestion	This is a tiny road which is at the bottom of a bus route, cars will be struggling to pass as cars park on the road, therefore causing congestion.
Charlotte Hunter	West of Sandiacre	Response-01376	Road Safety	This is also a route for young families that children use to get to school as well as access to nature reserve with higher risk of accidents happening due to the amount of people coming in and out of the road at the start and end of school day.
Charlotte Hunter	West of Sandiacre	Response-01376	Air Quality	This is a green belt and close proximity to a nature reserve and the building works will inevitably have a negative impact the quality of air for the surrounding people and ho live in the houses as well as the surrounding wildlife.
Charlotte Hunter	West of Sandiacre	Response-01376	Wildlife / Biodiversity	Hedgehogs, an endangered species will be impacted by this in a GREEN BELT area.
Charlotte Hunter	West of Sandiacre	Response-01376	Bus Services	There is a major bus route which falls at the bottom of the road, this is going to cause mayhem as the roads are very narrow. Being prone to accidents happening.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Charlotte Hunter	West of Sandiacre	Response-01376	School Capacity	Not enough space for further families to live here - schools have reached max capacity.
Charlotte Hunter	West of Sandiacre	Response-01376	Healthcare Facilities	It's already hard enough trying to get a doctors appointment- having more houses means more of a LOTERY getting one!
Charlotte Hunter	West of Sandiacre	Response-01376	Type of Housing	This type of housing isn't environmentally friendly and will impact the local nature. Including the endangered hedgehog.
Charlotte Hunter	West of Sandiacre	Response-01376	Number of Houses	This is going to cause noise pollution to the surrounding houses.
Charlotte Hunter	West of Sandiacre	Response-01376	Green Belt	Green belts are protected areas, this should NOT be built on.
Charlotte Hunter	West of Sandiacre	Response-01376	Landscape	There is a lot of wildlife including the endangered hedgehog which will be impacted by the building works.
Charlotte Hunter	West of Sandiacre	Response-01376	Flooding / Drainage	This is flood prone field - natural disaster zone!!
Charlotte Lun	South of West Hallam	Response-00150	Traffic Congestion	Traffic on Beech Lane especially and surrounding areas is dreadful particularly around school drop off and pick up times. Adding additional housing will only contribute to the chaos. The safety of the school children needs to be taken into consideration as the area is already an accident waiting to happen.
Charlotte Lun	South of West Hallam	Response-00150	Road Safety	The planned site is directly opposite a large primary school. The safety of the school children needs to be addressed if additional housing is to go ahead. The area is already an accident waiting to happen.
Charlotte Lun	South of West Hallam	Response-00150	Air Quality	90 additional houses could easily mean 180+ additional cars in the area. This will have a detrimental effect on air quality in the area. As well as destroying a green space in order to build on.
Charlotte Lun	South of West Hallam	Response-00150	Wildlife / Biodiversity	The planned building site is a lovely area of green land full of wildlife. Turning the area into housing will destroy the wildlife.
Charlotte Lun	South of West Hallam	Response-00150	Bus Services	West Hallam has next to no bus service. This will lead to people that rely on buses not wanting to move to the area. It will however attract people that can drive thus creating more traffic and more air pollution in the area.
Charlotte Lun	South of West Hallam	Response-00150	Healthcare Facilities	The doctor's surgery in West Hallam is at full capacity. Surrounding surgeries are at full capacity. Where will families moving into 90 additional homes go for GP treatment? It will put additional pressure on an already struggling area.
Charlotte Lun	South of West Hallam	Response-00150	Type of Housing	The majority of new build housing will not last more than 50 years. They are badly built by mostly under skilled workers that do not care about their workmanship.
Charlotte Lun	South of West Hallam	Response-00150	Number of Houses	90 houses on that plot of land is a lot to fit in. There will be barely any space between the houses.
Cheryl Wilde	Acorn Way, Derby	Response-00328	Traffic Congestion	Acorn Way is a very busy road already and cannot support another 550 homes.
Cheryl Wilde	Acorn Way, Derby	Response-00328	Road Safety	Acorn Way is a 60mph road reducing to 40mph approaching the traffic lights towards Raynesway. Having 550 homes worth of traffic pulling out will increase the risk of accidents.
Cheryl Wilde	Acorn Way, Derby	Response-00328	Wildlife / Biodiversity	Where is all the wildlife living in those fields where the houses are planned going to go? It will upset the ecosystem.
Cheryl Wilde	Acorn Way, Derby	Response-00328	School Capacity	There aren't enough primary school places in Oakwood for the number of houses we already have and there is no secondary school in Oakwood so where are all the children going to go to school and how will they get there.
Cheryl Wilde	Acorn Way, Derby	Response-00328	Healthcare Facilities	It is hard enough to get a doctors appointment as it is in Oakwood/ Chaddesden surgeries. The facilities available cannot possibly support another 550 homes.
Cheryl Wilde	Acorn Way, Derby	Response-00328	Number of Houses	550 new houses is far too many. We just don't have the infrastructure and the facilities to support this.
Cheryl Wilde	Acorn Way, Derby	Response-00328	Landscape	Oakwood is losing so much green space with the new developments at the bottom of Bishops Drive and the Persimmon estate by the side of Mansfield Road/Lime Lane plus the proposal for 150 new houses by Chaddesden Wood. Another 550 homes off Acorn Way is ridiculous.
Cheryl Wilde	Acorn Way, Derby	Response-00328	Flooding / Drainage	Acorn Way is notorious for flooding and has often been closed due to flooding. Surely another 550 homes will make this situation worse.
Cheryl Wilde	Acorn Way, Derby	Response-00328	Other	So the council tax from these new 550 houses will not go to Derby City but will go to Erewash and yet it is Derby City who will be supplying the services, road maintenance, street lighting, rubbish and waste collection, education services, cleaning etc. How is that possibly considered acceptable?
Chloe	Acorn Way, Derby	Response-00508	Traffic Congestion	One way out of spondon down willowcroft how you planning to control traffic and not make everyone late
Chloe	Acorn Way, Derby	Response-00508	School Capacity	You gonna build more schools or keep increasing g numbers in class? I don't think you look at the bigger picture
Chloe	Acorn Way, Derby	Response-00508	Healthcare Facilities	Health care is already struggling are you gonna build more hospitals? You guys aren't the one running round in it what about us nurse who are struggling are you gonna hire more people and increase our wages for the stuff we put ourselves through??
Chloe	Acorn Way, Derby	Response-00508	Landscape	Beautiful land gone you gonna find anymore to make up for it
Chloe Parkin	South of West Hallam	Response-00154	Road Safety	Not a good idea building more houses especially directly opposite a school. Will increase risks of accidents involving minors from the school.
Chloe Parkin	South of West Hallam	Response-00154	Green Belt	Spoils the beautiful countryside views in our village that lift the spirits of many. Seeing these views is a wonderful part of the village we live in and will building on this site will spoil our lovely village.
Chloe Parkin	South of West Hallam	Response-00154	Landscape	Building here will ruin the landscape of the lovely village.
Chloe Parkin	North of West Hallam	Response-00153	Wildlife / Biodiversity	Similar to the green spaces comment, destruction of green spaces is not good for local wildlife.
Chloe Parkin	North of West Hallam	Response-00153	Green Belt	Our green spaces are so valuable and cannot be recreated. Keep our green spaces for our beautiful countryside! Great for people's mental and physical health.
C Holmes	West of Sandiacre	Response-01620	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
C Holmes	West of Sandiacre	Response-01620	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
C Holmes	West of Sandiacre	Response-01620	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
C Holmes	West of Sandiacre	Response-01620	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
C Holmes	West of Sandiacre	Response-01620	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
C Holmes	West of Sandiacre	Response-01620	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
C Holmes	West of Sandiacre	Response-01620	Type of Housing	High density housing is preposterous not in keeping with current housing.
C Holmes	West of Sandiacre	Response-01620	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
C Holmes	West of Sandiacre	Response-01620	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
C Holmes	West of Sandiacre	Response-01620	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Chris Archer	North of Borrowwash	Response-01141	Flooding / Drainage	This area of Borrowwash has historically had issues with flooding and water drain off, by removing this green land it will only contribute to worsen the issue
Chris Archer	West of Borrowwash	Response-01142	Traffic Congestion	The traffic on Victoria is already a problem for the village due to the lack of off street parking for residents there. By adding a large number of houses in this area is will create and even greater issue
Chris Archer	West of Borrowwash	Response-01142	School Capacity	With only one infant and junior school an increase of such a large scale will create further issues for over sized classes
Chris Archer	West of Borrowwash	Response-01142	Healthcare Facilities	The two doctor surgeries and dentist surgery are already over subscribed and appointments are impossible to get at the minute with the population as it is without increasing this issue with a larger population
Chris Archer	West of Borrowwash	Response-01142	Flooding / Drainage	Borrowwash has a historical issue with rain water and flooding due to the run off from the A52 and fields to Spondon. By removing such natural drainage locations such as fields this will exacerbate this issue
Chris Beaumont	North of Breadsall Hill Top	Response-00841	Traffic Congestion	Breadsall village already suffers from the ?rat run? as a though road with many cars speeding through the village despite calming measures put in which almost seem to add to the need to speed up to get round them opposed to stopping and being held up for a few seconds. .
Chris Beaumont	North of Breadsall Hill Top	Response-00841	Flooding / Drainage	Breadsall will suffer yet again as a result of this development which will further increase the pressure on drainage within the village. I understand the village is served by 9 inch pipes which are 100 years old and this will add to the flooding overload. Discussions with all parties i.e the relevant councils and STW has expressed the concerns of villagers and parish councillors on this long running problem.
Chris C		Response-01106	Traffic Congestion	The roads through the estate are generally narrow which increases the safety risk with an increased volume of traffic
Chris C	North of Breadsall Hill Top	Response-01106	Wildlife / Biodiversity	The open spaces and access to wildlife areas is an important part of the area. Removal of this plus the likely damage caused through the building work negatively impacts the environment and quality of life for residents. Even now after construction of Durose estate building materials and rubble can still be found, this will only get worse with the proposed construction.
Chris Collins	South of West Hallam	Response-00037	Traffic Congestion	Beech Lane and surrounding streets (The Village, Hallam Way, Scargill Road etc) are extremely congested at school drop off and pickup time, often leading to buses being unable to pass along their routes. It is already dangerous for young children to cross the roads with the current level of traffic, this was obviously exacerbated a few years ago when DCC withdrew funding for the school crossing patrol. There couldn't be a worse place from a safety standpoint to build further housing than opposite Scargill School with the extra traffic that this would bring to the immediate area.
Chris Collins	South of West Hallam	Response-00037	Road Safety	Similar to my comments regarding traffic congestion, further traffic in the immediate area of Scargill School is a huge safety concern. During school pick-up and drop off there are huge numbers of cars arriving into the village / around the school for children. To introduce many more households trying to exit a new mini-estate opposite the main school entrance at ?rush hour? would bring chaos to Beech Lance and further roads around the village and introduce risk and safety concerns.
Chris Collins	South of West Hallam	Response-00037	Air Quality	With further traffic, households, waste etc comes further pollution. The air quality during construction of a number of houses would be incredibly polluting in the short to medium term on the health of residents, especially on the children in the school across the road. In the medium to longer term the new households would bring increased pollution with the added footprints.
Chris Collins	South of West Hallam	Response-00037	Wildlife / Biodiversity	The area in question is currently a haven for lots of wildlife, in the heart of the village. There are daily sightings of birds of prey hunting in the field, the field provides a habitat for a wide range of small mammals and other animals, grasses, plants and trees. Losing a habitat such as this will drive out / destroy the environment for countless animals.
Chris Collins	South of West Hallam	Response-00037	Bus Services	The bus service is already appalling for the number of er of residents in west Hallam. With such significant developments planned there is no way a bus service will ever meet the needs. However, as only 40% of the houses are ?affordable? (the cynic in me says that these will also be out of reach of most young people anyway) then the rest will have cars and not worry about public transport?.
Chris Collins	South of West Hallam	Response-00037	School Capacity	The local school goes through cycles in terms of numbers on roll. I used to be a governor but haven't seen the numbers for a few years now. The Erewash birth rate suggests that school numbers shouldn't be a problem but the school does attract from a wide area so this is one that needs to be seen through the lens of someone who has the actual numbers to hand.
Chris Collins	South of West Hallam	Response-00037	Healthcare Facilities	Thankfully I use a doctor outside of the village who is fabulous. I hear nothing good about the capacity challenges faced with people attending the village doctor surgeries. To add further people to this without adding capacity / capability would be negligent.
Chris Collins	South of West Hallam	Response-00037	Type of Housing	The wider area is in dire need of affordable nice housing. There are countless brown field sites that should be developed prior to green belt being prioritised. I u crests d that brownfield is more expensive but that's a legacy we all have to clean up these sites and redevelop them for the next generation.
Chris Collins	South of West Hallam	Response-00037	Number of Houses	The site shouldn't be developed at all, no houses. It is a dangerous location.
Chris Collins	South of West Hallam	Response-00037	Green Belt	Stop developing on green belt when there is brown belt land available.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Chris Collins	South of West Hallam	Response-00037	Landscape	As a village it would be preferable to not have more housing. To try and not come across as a NIMBY however, the current location means that the countryside starts across the road from the school, at the top of Hallam Way, at the end of The Village - changing this would be a significant impact to the landscape of the village and hundreds of people
Chris Collins	South of West Hallam	Response-00037	Flooding / Drainage	There's probably not a flooding issue with the site as it's elevated and slopes away from the rest of the village. Drainage however maybe a concern. Severn Trent have no end of issues in West Hallam. I would be concerned with the ability of the service providers to ramp up and not impact others negatively.
Chris Collins	South of West Hallam	Response-00037	Other	Water supply issues are an issue in the village with Severn Trent regularly suffering leaks, pressure issues etc. adding another significant number of houses onto their old creaking network doesn't seem like a good idea.
Chris copley	Acorn Way, Derby	Response-01246	Traffic Congestion	There is already a serious problem congestion in the area, especially at school opening and closing times. Morley road has speed bumps and cars often parked up blocking part of the road so there is poor natural flow of traffic
Chris copley	Acorn Way, Derby	Response-01246	Road Safety	There is a school at the location that gets very busy especially at opening and closing times, cars already park up on the road and the children have to walk between them, increasing the traffic would exacerbate this issue and would pose a danger to the children. Furthermore there is a care home and nursery near by more traffic will slow down the emergency services getting to these places quickly
Chris copley	Acorn Way, Derby	Response-01246	Air Quality	The air quality will undoubtedly be affected, we have a school, a nursing home and a large school in the exact area. The drop in air quality will have a negative impact on these people's, health as they are also the most vulnerable to these effects
Chris copley	Acorn Way, Derby	Response-01246	Wildlife / Biodiversity	The local area has a wide range of animals I've seen many, including rabbits, lots of bats living in the trees, voles, foxes and a number of unusual butterfly species. The area has variety of grass and trees types that support biodiversity, especially in the nearby stream that also hosts a lot of wildlife that I've seen
Chris copley	Acorn Way, Derby	Response-01246	Healthcare Facilities	The local doctors are already full, I have to drive to a nearby village to get an appointment. There are also a lot of elderly residents in that area that need extra care
Chris copley	Acorn Way, Derby	Response-01246	Type of Housing	The scale of build is too large, it will have a negative impact on the character of the area
Chris copley	Acorn Way, Derby	Response-01246	Number of Houses	The quantity is too much, the local roads can't handle such an increase
Chris copley	Acorn Way, Derby	Response-01246	Green Belt	I feel the green belt should be protected, this area is valuable for local children and residents and for many people in the areas is the only area of green belt they can access
Chris copley	Acorn Way, Derby	Response-01246	Landscape	The landscape will undoubtedly be badly affected, the area is currently outstandingly beautiful and is accessible by people who cannot afford cars or transport. To remove this option for people would be terrible
Chris copley	Acorn Way, Derby	Response-01246	Flooding / Drainage	Often after heavy rain Morley Road sees a lot of run off, the drains can currently only just handle this, more properties would cause a problem here
Chris copley	Acorn Way, Derby	Response-01246	Other	There is no easy access to the proposed site, Morley road cannot handle and increase in traffic, and is already a noisy road, it will have a negative impact on the health, well-being and safety of local residents
Chris Harris	North of Breadsall Hill Top	Response-01521	Traffic Congestion	The A608 is already too busy
Chris Harris	North of Breadsall Hill Top	Response-01521	Wildlife / Biodiversity	This will be adversely impacted by these additional properties
Chris Harris	North of Breadsall Hill Top	Response-01521	School Capacity	Not enough capacity already
Chris Harris	North of Breadsall Hill Top	Response-01521	Healthcare Facilities	Already inadequate doctors surgeries
Chris Hopkinson	North of Breadsall Hill Top	Response-01396	Traffic Congestion	Hugerhill close will not cope with the extra traffic
Chris Hopkinson	North of Breadsall Hill Top	Response-01396	School Capacity	Building Erewash housing joined onto an existing derby city estate will add more pressure to derby city
Chris Hopkinson	North of Breadsall Hill Top	Response-01396	Healthcare Facilities	Same as school. Added strain to derby city area
Chris Hull	South of West Hallam	Response-00272	Other	All looks fine to me
Chris Hume	West of Sandiacre	Response-01373	Traffic Congestion	Cars and vans are always parked on the paths on Coronation Ave, Cloudside Rd and Chestnut Grove making access difficult without additional housing. This problem extends to the whole area, Stanton road is often congested and the quality lorries on Town street is currently is a danger.
Chris Hume	West of Sandiacre	Response-01373	Road Safety	Volume of traffic on the estate at busy times makes it difficult and dangerous with all the parked cars to pass.
Chris Hume	West of Sandiacre	Response-01373	Air Quality	The air quality is poor with the M1 and all the Stanton lorry traffic.
Chris Hume	West of Sandiacre	Response-01373	Wildlife / Biodiversity	I live on Chestnut Grove, we have Bats, hedgehogs, Robbits, Bluetits, Sparrow Halks, Peregrine Falcon visiting as the food source is wood pidgin. We would lose all of the visiting wildlife in our garden if the building went ahead
Chris Hume	West of Sandiacre	Response-01373	Bus Services	I use the buses to Nottingham, there are often issues for the drivers with parked cars and vans for the busses to pass. Honestly I don't know how the drives put up with this as it's dangerous now, this development would make it worse
Chris Hume	West of Sandiacre	Response-01373	School Capacity	The congestion at School start and finish times is horrendous now, I avoid going out at these times, the cars park everywhere, this development will make it worse
Chris Hume	West of Sandiacre	Response-01373	Healthcare Facilities	Getting a doctor for routine appointment takes a month, NHS dentists spaces don't exist, this development will make it worse for everyone
Chris Hume	West of Sandiacre	Response-01373	Type of Housing	The antisocial behaviour in the area is bad now, this development will add to the problem centering the problem in an area that has an elderly population, police are never seen in this area there will be no more officers to police the social housing
Chris Hume	West of Sandiacre	Response-01373	Number of Houses	The number of proposed houses is frankly ridiculous, for all the reasons mentioned, make use of all the empty properties before building more. There are viable sites within Erewash, this site is not viable for access alone
Chris Hume	West of Sandiacre	Response-01373	Green Belt	Iv lived in this area for 20 years, if you go ahead with this ridiculous development you will ruin what is a beautiful area. Do not reclassify this green belt, look at the brown field sites of which there are many, you don't need to do this
Chris Hume	West of Sandiacre	Response-01373	Landscape	This is the worst place to build, it holds water, it's next to the M1, who would buy a house there, it's green belt and used for grazing land, it's best propose
Chris Hume	West of Sandiacre	Response-01373	Flooding / Drainage	My garden floods during heavy rain, I back onto the field and the water gathers in the field and then runs off into the gardens on Chestnut Grove. It's sometimes like a river running down the garden path and sometimes floods my garage. There is 12" of top soil, then clay which prevents draining
Chris Hume	West of Sandiacre	Response-01373	Other	There are reasons why planning has never been granted on this land, nothing has changed, go back and look why it's never been granted. This is green belt, once it's gone it's gone, use the empty property in Erewash, then brown field land first.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Chris Jones	West of Sandiacre	Response-01718	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Chris Jones	West of Sandiacre	Response-01718	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Chris Jones	West of Sandiacre	Response-01718	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Chris Jones	West of Sandiacre	Response-01718	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Chris Jones	West of Sandiacre	Response-01718	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Chris Jones	West of Sandiacre	Response-01718	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Chris Jones	West of Sandiacre	Response-01718	Type of Housing	High density housing is preposterous not in keeping with current housing.
Chris Jones	West of Sandiacre	Response-01718	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Chris Jones	West of Sandiacre	Response-01718	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Chris Jones	West of Sandiacre	Response-01718	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Chris Lunn	North of Breadsall Hill Top	Response-01410	Traffic Congestion	Road safety is another area of vital importance. As above, 160-320 additional vehicles flowing through the development and out into the Redrow estate, especially at peak times, will cause a build-up of traffic as it tries to enter Mansfield Road/Hilltop at the Dale Acre roundabout. It is already extremely dangerous getting out of Windmill Place due to traffic travelling too quickly and its proximity to the roundabout. Another 100-150 cars would undoubtedly cause accidents as people will take risks to compete with an already congested road system. Pedestrians will be vulnerable as they try to cross heavy traffic. These extra vehicles will cause additional pollution, noise and potentially increase the incidence of respiratory problems ? thus returning to the issue of inadequate healthcare facilities. Hungerhill Close, the road proposed to take the traffic flow on and off the proposed development already becomes congested as parked cars are an issue. With so many additional vehicles all having to use this route, the situation for pedestrians, many with young children, will become even more dangerous. Large vans, emergency vehicles and bin lorries will all have to use this road. Bin lorries, stopping every few metres to empty household waste will cause congestion and utter chaos at peak times. Cars will be discharging harmful emissions whilst waiting to get around large vehicles at the same time as small children are walking past. More health problems will undoubtedly arise.
Chris Lunn	North of Breadsall Hill Top	response-01410	Road Safety	Road safety is another area of vital importance. As above, 160-320 additional vehicles flowing through the development and out into the Redrow estate, especially at peak times, will cause a build-up of traffic as it tries to enter Mansfield Road/Hilltop at the Dale Acre roundabout. Chris Lunn	North of Breadsall Hill Top	response-01410	Air Quality	Derby is an industrial city which cause high levels of local air pollution. Having hundreds of more cars will just exacerbate the problems. My two children both have asthma and I strongly believe the local pollution is a strong link as to why.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Chris Lunn	North of Breadsall Hill Top	response-01410	Wildlife / Biodiversity	This land is a greenbelt/green wedge area and, as such, it is immensely important that it should remain so. These appear to be terms with which the council is either unfamiliar or for which they have total disregard. The proposed area is designated as a 'birds and bees' field which aims to increase the wildlife population, promote biodiversity and help to combat the effects of climate change and is integral to the Great Northern Greenway which was designed to enhance the quality of life for local residents. The field and track are heavily used by many people. Dog walkers, picnic-ers and people who just want to escape the stresses of life and reconnect with nature. The area provides essential habitat for many different species whose populations are already declining at an alarming rate. Hedgehogs and rabbits, once prolific in the area, are now a rarity. By proceeding with this development, the Council is eroding the very greenery that the Greenway was designed to protect. The Redrow housing estate cannot be without blame for this and no further habitat loss should be incurred. This proposed development completely undermines Erewash council's approach to the importance of preserving greenbelt and green wedge land for current and future generations to enjoy. To replace the natural beauty of the area by developing this land for housing will permanently end the visual contrast between the urban and rural areas and set a precedence for all future developments. It would cause irreparable damage to the landscape, disrupt wildlife corridors and erode a space that absorbs carbon and helps to improve air quality. I would like to draw your attention to your campaign 'Wild About Erewash'. In it you encourage people to get involved as it: Improves health and wellbeing, improves biodiversity and reduces our carbon footprint. It certainly makes for interesting reading, especially as you appear to have reneged on every point. You have clearly lost interest in everything you maintained was at the heart of your approach to the welfare of the local area and its residents. Possibly this was just an agenda to win the local election on behalf of Labour? It certainly begs the question of just how many other points you intend to retract? Your rewilding sites may not have included the land to the north of Breadsall Hilltop but that would be because it didn't need rewilding in the first place.
Chris Lunn	North of Breadsall Hill Top	response-01410	Bus Services	We have the H1 bus route which is so pointless, making it an unviable alternative to private car use, making it impractical for essential daily activities such as commuting to work or school, accessing healthcare and vital services, or traveling to other parts of Derby. Consequently, the proposed development would intensify reliance on cars, directly opposing Derby City Council's objectives for sustainable travel, improved air quality, and carbon reduction.
Chris Lunn	North of Breadsall Hill Top	response-01410	School Capacity	Schools are already doubling their intakes for the next academic year and I am speaking from personal experience. No extra teachers are being employed and no additional accommodation or resources are being provided. Schools will become oversubscribed and children required to travel further, out of area, to obtain a school place. This will result in additional vehicles and journeys being made, an increase in pollution and longer, more stressful days for the children. This goes very much against Derby Council's goals for sustainable travel to improve air quality and reduce carbon. Ultimately it is the children and their education who will suffer. This pattern is only set to repeat itself across the area as the numbers of children rises exponentially. The 160 new houses proposed are likely to total in the region of 500-650 adults and children. Most of these will require at some point, healthcare, leisure facilities, education and also the means to travel, either by car or public transport. Public transport, although technically available in the vicinity, is not accessible for everyone and does not necessarily run at convenient times. Buses in the area are well known to be infrequent and unreliable, hence I have to take my son to school by car, along with most parents who do not live close enough to walk. These numbers of houses are likely to produce 160-320 vehicles.
Chris Lunn	North of Breadsall Hill Top	Response-01410	Healthcare Facilities	Local doctors and health services are already stretched far beyond capacity. Clearly this is not a problem confined to Derby but why is it necessary to inflict even more suffering and hardship on an already over populated, over developed area? Getting a doctor's appointment in a timely manner is virtually impossible which leads to the 'clogging up' of A & E Departments and causing additional strain on hospitals or walk-in clinics. Waiting times for appointments will cause even more delays in getting treatment delivering a poorer quality service. When the Redrow estate was built, again no consideration was given to the additional number of people all requiring doctors and healthcare, hence we now have an overloaded system in the area which cannot cope as it is, without the additional 160 houses being proposed. Mental health issues are likely to rise as stress builds up due to frustration caused by too many people, in too small an area, all trying to access the same places at the same time. This proposed development cannot be allowed to go ahead; this land is vital to the wellbeing of the area, the community and the wildlife.
Chris Lunn	North of Breadsall Hill Top	response-01410	Green Belt	This land is a greenbelt/green wedge area and, as such, it is immensely important that it should remain so. These appear to be terms with which the council is either unfamiliar or for which they have total disregard. The proposed area is designated as a 'birds and bees' field which aims to increase the wildlife population, promote biodiversity and help to combat the effects of climate change and is integral to the Great Northern Greenway which was designed to enhance the quality of life for local residents. The field and track are heavily used by many people. Dog walkers, picnic-ers and people who just want to escape the stresses of life and reconnect with nature. The area provides essential habitat for many different species whose populations are already declining at an alarming rate. Hedgehogs and rabbits, once prolific in the area, are now a rarity. By proceeding with this development, the Council is eroding the very greenery that the Greenway was designed to protect. Your rewilding sites may not have included the land to the north of Breadsall Hilltop but that would be because it didn't need rewilding in the first place.
Chris Lunn	North of Breadsall Hill Top	Response-01410	Landscape	The proposed site is made up of clay soil which makes development even less suitable. The swelling and shrinking of the clay causes subsidence, ground heave and has a lower, load-bearing capacity requiring good drainage? which this site DOES NOT HAVE. Open green spaces, within the development, would likely be curtailed due to the difficulties in growing any plants and greenery in the clay. Landscaping would be the first item to the 'shelved' as money will undoubtedly run out. The new housing will be subjected to cracking and other associated problems which will put further strain on funding and causing misery for homeowners.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Chris Lunn	North of Breadsall Hill Top	response-01410	Flooding / Drainage	The topography of the proposed site has already been identified as unsuitable for development given the steep slope of the land. The drainage around the Windmill Place housing development is already prone to flooding and blockages and has had significant problems with inadequate or poor sewage systems installed. 160 additional houses, all requiring adequate water and sewage systems, will put an immense strain on an already struggling drainage system. The area is already prone to flooding and building on already waterlogged land and taking away the natural soakaway, is absolutely foolhardy. The increase in surface water is likely to flood not only the nearby areas of Oakwood and Breadsall but cause additional strain on all local drainage systems. Given the more and more frequent extreme weather events, flooding is only set to increase. Flooding increases the risk of additional health issues and damage caused to property.
Chris Lunn	North of Breadsall Hill Top	response-01410	Other	There are already plans for two developments to the west of the current Durose Country park. The lack of infrastructure is of major concern as the amount of housing being proposed could potentially bring with it 3500-4000 additional adults and children. It would appear that little or no thought has been given to a matter of such importance.
Chris O Connor	West of Sandiacre	Response-01641	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Chris O Connor	West of Sandiacre	Response-01641	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Chris O Connor	West of Sandiacre	response-01641	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Chris O Connor	West of Sandiacre	Response-01641	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Chris O Connor	West of Sandiacre	response-01641	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Chris O Connor	West of Sandiacre	response-01641	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Chris Reid	North of West Hallam	Response-00137	Traffic Congestion	Access road near high lane will cause issues with traffic
Chris Reid	North of West Hallam	response-00137	Wildlife / Biodiversity	This is near fields that have wildlife
Chris Reid	North of West Hallam	response-00137	Green Belt	We should not be building on green belt land
Chris Reid	South of West Hallam	Response-00136	Traffic Congestion	Beech lane area is already difficult to get through in mornings due to school
Chris Reid	South of West Hallam	response-00136	Road Safety	Already too many cars in area and as this is close to the school
Chris Reid	South of West Hallam	response-00136	School Capacity	Can the school cope?
Chris Reid	South of West Hallam	response-00136	Green Belt	This should not be happening in such a small area
Christian Reardon	West of Sandiacre	Response-01763	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Christian Reardon	West of Sandiacre	Response-01763	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Christian Reardon	West of Sandiacre	Response-01763	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Christian Reardon	West of Sandiacre	Response-01763	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Christian Reardon	West of Sandiacre	Response-01763	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Christian Reardon	West of Sandiacre	response-01763	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Christian Reardon	West of Sandiacre	response-01763	Type of Housing	High density housing is preposterous not in keeping with current housing.

Christian Rearson	West of Sandiacre	Response-01763	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Christian Rearson	West of Sandiacre	Response-01763	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Christian Rearson	West of Sandiacre	Response-01763	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Christine	South of West Hallam	Response-01019	Traffic Congestion	Already huge parking problems in and around this area, especially during term times, making it impossible to see at junction
Christine	South of West Hallam	Response-01019	Road Safety	Due to the amount of traffic at school opening and closing times road safety will be a massive problem
Christine	South of West Hallam	Response-01019	Bus Services	Already a very limited bus service to Ilkeston and Derby, meaning more cars on the tight roads especially St Wilfrids
Christine	South of West Hallam	Response-01019	School Capacity	Does the school have capacity for the extra children this development will hold?
Christine	South of West Hallam	Response-01019	Healthcare Facilities	Increased pressure on the Doctors surgery, when it already is too busy for a blood test and appointments are 3 weeks in advance
Christine Anderson	West of Sandiacre	Response-00484	Green Belt	The beauty of WH is the surrounding green fields, totally opposed to building on new land when there are disused sites that could be used
Christine Anderson	West of Sandiacre	Response-00484	Traffic Congestion	Extra traffic congestion which would happen with the proposed 180 new properties would be catastrophic to this area. We already struggle with small roads and vehicles such as i4 buses, ambulances cannot get through. Cars are parked on pavements and access is very limited.
Christine Anderson	West of Sandiacre	Response-00484	Road Safety	This is already a problem area as we have the Cloudside school, Sandiacre town football club all vying for parking on a very small busy road. Extra children from the 180 new houses will make this even more dangerous and difficult.
Christine Anderson	West of Sandiacre	Response-00484	Air Quality	Air quality is already affected as it is next to the 8 lane motorway. More cars from these houses will increase this.
Christine Anderson	West of Sandiacre	Response-00484	Wildlife / Biodiversity	A lot of endangered species live on this site - the community gains a lot of pleasure from this - using green space like this is, therefore, wrong.
Christine Anderson	West of Sandiacre	Response-00484	Bus Services	Extra traffic will impinge on our already stretched local bus service. Buses are required, especially for the elderly, to reach the Drs, Chemist, Shops etc. Buses are unable to get through the estate and more cars on our small roads will make it quite impossible and feel that the Bus companies will have to change their routes !
Christine Anderson	West of Sandiacre	Response-00484	School Capacity	Our schools are already full to capacity and lack of teachers is an ongoing problem.
Christine Anderson	West of Sandiacre	Response-00484	Healthcare Facilities	Our Doctors service is already fully stretched. We are unable to attain appointments without queuing at 8:00 on the day for a possible appointment. 180 new families will bring this service into a dangerous situation - they will not be able to offer a safe amount of medical care.
Christine Anderson	West of Sandiacre	Response-00484	Green Belt	A beautiful area enjoyed by so many people - Green belt. Surely there are other areas that can be used.
Christine Anderson	West of Sandiacre	Response-00484	Landscape	This area is used by so many members of the public to get out and relax - a very precious commodity in today's hectic rushing life. This is Green belt and should be conserved for future generations - we need to keep this.
Christine Anderson	West of Sandiacre	Response-00484	Other	The roads that would give access to this proposed new site were built nearly 100 years ago and are too narrow to accommodate any extra traffic. We have an ageing population now in this area and walking and crossing the roads is quite difficult. I use a stick and it is sometimes treacherous to get across the roads - I can't imagine how dangerous and stressful this would be with the proposed 180 new homes (400+ cars) and associated transport using these small old roads. Please think about the current residents.
Christine Barnes	North of West Hallam	Response-00639	Road Safety	This site would involve more vehicles using the crossroads at High Lane West and Station Road where visibility is poor. There would also be increased pedestrian useage at this junction from residents accessing the local school, and other village amenities; Tescos, is the only local shop in the area Doctors Pharmacy Village Hall Church
Christine Barnes	North of West Hallam	Response-00639	Wildlife / Biodiversity	Home to badgers as can be seen by the entrances to badger setts on Park Hall Lane.
Christine Barnes	North of West Hallam	Response-00639	Healthcare Facilities	Doctors already unable to cope with local demand.
Christine Barnes	North of West Hallam	Response-00639	Flooding / Drainage	Houses at the bottom end of High Lane West are already affected by flooding. At times flood water crosses HLW affecting properties on the other side. With increased housing this problem would be exacerbated. Who will sort out this problem for the affected householders.
Christine Barnes	South of West Hallam	Response-00640	Traffic Congestion	Beech Lane is already a heavily congested lane with inconsiderate parking. So many working parents find it necessary to use cars to drop children off and pick up children after school and parking is already a massive problem. Anyone who has carried out a risk assessment must acknowledge the increased use of the lane, dodging between cars is a huge hazard for children and indeed parents with pushchairs. Ninety plus houses will inevitably mean quite a number of children will have to cross the lane to the new houses.
Christine Barnes	South of West Hallam	Response-00640	Road Safety	The lane is narrow and there are many cars parked on the road/ pavement. Ninety plus houses will inevitably mean more children will have to cross the lane without a clear view of oncoming traffic. This will be an accident waiting to happen. I trust sufficient people have viewed the current difficulties and have sufficient foresight to do an appropriate risk assessment.
Christine Barnes	South of West Hallam	Response-00640	Bus Services	There is a poor bus service, particularly for people trying to get to and from work. An hourly service, when frequent late or no show buses, and no evening service is nor conducive to people getting to and from work. Potentially there could be another 2 cars per household , as the bus service will not meet the need for most people in employment.
Christine Barnes	South of West Hallam	Response-00640	Healthcare Facilities	Healthcare is already overstretched and cannot meet the current demand .
Christine Barnes	South of West Hallam	Response-00640	Green Belt	This site has previously been refused planning for further agricultural use. I cannot understand how circumstances have changed for it now to be considered for housing.
Christine Barnes	South of West Hallam	Response-01827	Traffic Congestion	Beech Lane is a narrow lane which is already heavily used by traffic entering and leaving the village. Additional traffic from the development will also impact on junctions at Station Road, Millhouse Garage, St Wilfrid's Road and High Lane West, which already are very busy junctions.
Christine Barnes	South of West Hallam	Response-01827	Road Safety	This site is directly opposite Scargill Primary School. Beech Lane is a narrow lane which is already heavily used by traffic entering and leaving the village. In addition parked vehicles present further hazards, particularly at the start and finish of the school day and during football matches at the weekends. These factors present a real problem for children crossing the lane, unseen, between parked vehicles, to access school and their home.
Christine Barnes	South of West Hallam	Response-01827	Bus Services	Ninety households will need at least one vehicle each to commute to work as the number 32 bus is hourly and service finishes early evening. The 53 bus is every two hours and finishes late afternoon. It also has to be said buses can run very late or at times, not at all, not conducive for a person trying to reach a workplace. I would hope that you will come to the village at the start and end of the school day to witness the problems I have outlined.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Christine Cole	West of Borrowwash	Response-01254	Traffic Congestion	I see it says the necessary road adjustment will be made but does not specify how that A6005 will cope with the additional potential traffic (+500 vehicles) that an estate this size will generate? The entrance is on an incline and currently 40mph. It is also the route many children take walking and on bikes to West Park school in Spondon. There is only 1 small path. During construction this will be a major problem. Infrastructure needs to be adjusted before site is constructed.
Christine Cole	West of Borrowwash	Response-01254	Road Safety	Infrastructure before site construction is started needs to be addressed. Possible widening of the road at site entrance with speed being reduced from 40mph? The entrance is after an incline in the road.
Christine Cole	West of Borrowwash	Response-01254	Healthcare Facilities	There are already reports of the local health care system creaking under the capacity to cope? What additional costs does this put on that system?
Christine Goodwin	North of Breadsall Hill Top	Response-00642	Traffic Congestion	I am most concerned about the potential increase in traffic through Breadsall village on roads which are already used as a rat run by the latest two developments on Breadsall Hill Top. It appears that very little thought is given to the impact these ill thought out developments have on Breadsall village where there are only unclassified roads not intended for the amount of traffic which now passes through the village.
Christine Goodwin	North of Breadsall Hill Top	Response-00642	Road Safety	Speeding traffic is already a problem through Breadsall Village and is a particular concern on Brookside Road where the junior school is situated
Christine Goodwin	North of Breadsall Hill Top	Response-00642	Green Belt	This is Green Belt land and was previously in the Land Availability Assessment 359 stated to be unsuitable for residential development The government attaches great importance to the Green Belt and one of its main functions is to prevent urban sprawl and to prevent neighbouring towns merging into one another. This development ensures that Breadsall becomes a suburb of Derby. This development is contrary to all planning requirements as it appears there has been little thought given to upgrading inadequate infrastructure particularly to roads and drainage both of which have the potential to be harmful to Breadsall Village which is already experiencing flooding due to previous developments on Breadsall Hill Top
Christine Gough	West of Sandiacre	Response-00578	Traffic Congestion	The bottom of Beech Ave is congested with traffic every day with school drop offs, buses struggle down Beech Avenue as it is and gets blocked . You cannot see the road when trying to pull out onto Stanton Road from Beech Avenue as there are so many cars parked . Some serious injury is going to happen soon and worrying it could be a child . Mobility scooters cannot get on the pavement with cars parked on them . The pollution is horrendous, the air is bad with cars and traffic and it's worrying for people with Asthma and lung problems . Stanton Road is very busy . All these roads cannot cope now with the traffic so another 180 houses and even more cars is absolutely beyond madness .!0
Christine Gough	West of Sandiacre	Response-00578	Road Safety	Road safety is a huge issue , people can't see the road with all cars parked on Stanton Road, there is a school on there and the amount of cars used each day is a problem and will only get worse with more houses built . There will be a serious accident one day . Beech Ave is a nightmare to get out off , when you drive down you cannot see when pulling out due to the amount of cars parked on Stanton Road , I have already had a car bump into me whilst pulling out . A child or infant anyone can get injured with the amount of traffic . There's no road crossing and you would not see them anyway if there was! There's cars parked all up Beech Avenue, blocking buses . Nightmare for emergency vehicles to get up , they would have a job and of course that would endanger lives more !
Christine Gough	West of Sandiacre	Response-00578	Air Quality	The air quality is bad due to the amount of traffic now and will only get a lot worse with more houses built . There is a school and there is a shop with the only post office in Sandiacre all on Stanton Road , so the traffic is ongoing , people leaving their engines running whilst waiting for the children or dropping them off at school , all Sandiacre residents have to drive to the local shop on Stanton Road to use the Post office and also to use the cash point and banking there . So huge amount of pollution from the vehicles . This will get even worse with more houses built and all the construction vehicles adding to more pollution and poor air quality
Christine Gough	West of Sandiacre	Response-00578	Wildlife / Biodiversity	Stoney Clouds is a well known for its abundance of wildlife . I've seen bats, goldfinches , foxes , hedgehogs and insects that have thrived there . Why at this time when we all know that bees , birds and other wildlife are in serious decline does anyone want to tear away their habitat , never to be replaced ? Replaced with a sprawl of houses built with no hedges, trees and hardly any gardens is beyond belief! Not good for biodiversity .Not even considering the wellbeing of people cramped together with no green space .
Christine Gough	West of Sandiacre	Response-00578	Bus Services	One bus service runs up and down Beech Avenue and Coronation rd, and Stanton Road . This is a necessity for people who need to get to work., shopping and for the elderly that rely on this . Not many people I have seen use the bus from this end at work peak times but of course the bus would pick up through Sandiacre . It is needed . The only complaint I have is that the buses struggle to get down Beech Avenue most of the time , due to the cars being parked in this road . And it's a complete nightmare school times with even more cars parked outside the school on Stanton Road, and cars parked to use the shop with the only post office in Sandiacre at the shop . The shop and school are on the same side . Elm Ave gets cars parked all along there too so difficult for them pulling out when a bus is trying to turn into Spencer Ave .
Christine Gough	West of Sandiacre	Response-00578	School Capacity	We have 3 schools in Sandiacre . All full and after speaking to some people who say that they cannot get their children into these and have to travel to other ones in neighbouring areas . How can these cope with more children !? There is no more room ! If they have to be ferried to other schools that would be more problems for traffic already critical here .
Christine Gough	West of Sandiacre	Response-00578	Healthcare Facilities	Only one doctors surgery in Sandiacre, where you can't get an appointment , no chemist , how do people look after their health when there are not enough facilities . One dentist who can't take on anymore . Sandiacre is bursting at the seams . Where are the facilities for new mothers and babies ? Where can they take their babies to be weighed and get their immunisations? Where can a child go for a health check up ? Have their teeth looked at ? Where can the people with diabetes go , to be checked and get their insulin ? With no chemist ! And there are potentially another 180 homes being built with people needing these non existent services . Absolutely crazy !!!!
Christine Gough	West of Sandiacre	Response-00578	Type of Housing	The proposed building on Stoney will I imagine be type of housing will be all cramped together ? No gardens , no where for the children to play, no where for birds and wildlife . No space for community for the people , nothing good for well being . This can cause social problems , more noise and more traffic parking problems . It doesn't matter if it's social housing , private homes , affordable homes , 180 homes will cause more problems because we don't have the right infrastructure to warrant the building of these homes
Christine Gough	West of Sandiacre	Response-00578	Number of Houses	180 homes too many for this space . We don't have the infrastructure to cope with them and the people who are going to potentially live there .

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Christine Gough	West of Sandiacre	response-00576	Green Belt	It is Green belt area and that should be protected at all costs . England is a small nation and the UK has over 68 million people living here . 1. Stop immigration- too many people here 2. There are 1800 homes empty in this area Use these homes for people , not build more . Green belt is for wildlife , heritage and of course our health and wellbeing , you cannot put a price on that , once gone we can never get that back . Stop the greed , because it's about money , that they are taking the Green belt , it's not for need when there are far too many homes empty!
Christine Gough	West of Sandiacre	response-00576	Landscape	We know that the area around and on Stoney Cloud is beautiful, the landscape is well known. It's an area where people can walk without having to think about the roads and danger . The building of these houses will loose the beauty of this area . Wildlife will be gone forever and all we will see is a concrete jungle on the landscape.
Christine Gough	West of Sandiacre	response-00576	Flooding / Drainage	The drainage will be a problem , houses built with no gardens , and the greenbelt areas all taken away , there will be flooding . These houses that are proposed to be built will be high up , and water will run down onto adjacent homes from Larch drive down to Laburnum , Cloudside , Maple , and Beech Ave . Blocking drains and causing more flooding and damage . We have concerns that we can smell sewage sometimes and worried that our drains on Beech Ave and maybe other roads maybe not emptying as quick , I would like the environmental team to check that the drainage is looked at , also concerns that the drainage may be affected more if more houses are built at the top 180 houses and then joined to ours Major concern of the build I have heard that the sewage could be a problem, does the sewage back up from the top ? Is it released in stages at night or day ? From Cloudside , Larch area down to Beech Ave , if so this would be a concern if more houses are joined into our drainage . I can smell sewage sometimes . I'm not sure how old the drainage is 1920? 1930 ?s . It would all needs replacing if more houses are built especially that many .
Christine Gough	West of Sandiacre	response-00576	Other	Even the people moving into the proposed new homes will suffer from pollution from the Motorway , as well as the residents suffering with more pollution from their cars . Trees and hedges will be torn down so no protection from carbon . There will be health problems as I mentioned before , and more strain on the NHS. Depression and mental health will Increase due to anxiety with the constant juggling of parking , the noise of added vehicles and heavy construction. It will also make children ill with the pollution , and no green space to play and enjoy the outdoors . There is a park at St Giles but again to get there , there is busy roads with no crossings .
Christine M Taylor	North of Breadsall Hill Top	Response-01389	Other	I object this strategy, due to three main reason, schooling, healthcare provision and environmental damage. Building 160 new homes is likely to put pressure on the local school, should the 1 school in Breadsall village, be at capacity, children will have to commute elsewhere such as Chaddesden. This will, increase pollution and cars on the road especially at rush hour. As well as this, the influx of people will put pressure on the Doctors at Oakwood medical centre, potentially demanding new doctors. Finally, the environment is likely to suffer and the urbanisation of the hill top is likely to create flood risk as the concrete is impermeable, Breadsall is already susceptible to flooding and I believe this to be a large concern. Traffic is also horrendous in Breadsall village.
Christine Ridgway	West of Sandiacre	Response-00465	Traffic Congestion	I have lived on Norbury Way for 27 years and worry that the proposed housing development will create more traffic from this part of Sandiacre, which will affect me already struggling to cross the road to go to work and walk the dogs, due to more cars being on the road.
Christine Ridgway	West of Sandiacre	response-00465	Road Safety	I worry in the road safety aspect, due to it already being a busy area and struggling to cross the roads. If proposed housing development goes ahead it will make it worse.
Christine Ridgway	West of Sandiacre	response-00465	Air Quality	This is worry, as I already live close to the M1 and this will create more pollution with more vehicles accessing the proposed housing development.
Christine Ridgway	West of Sandiacre	response-00465	Bus Services	I rely on using the buses to get about and they are very limited, so this issue would be made worse with new housing developments.
Christine Ridgway	West of Sandiacre	response-00465	Healthcare Facilities	I have had to register at Stapleford for my doctors even though it would be easier to be in Sandiacre however they have no availability and it is still a struggle to get a appointment when needed.
Christine Ridgway	West of Sandiacre	response-00465	Flooding / Drainage	I walk my dogs in the nature reserve daily and have seen alot of standing water in the proposed housing development, this would be a significant worry when building houses there.
Christopher Baddiley	East of Breaston	Response-01132	Traffic Congestion	Breaston's roads are not designed to accommodate additional traffic. 50 new homes will bring approximately 100 extra vehicles into the village, as most households have at least two cars nowadays. Increased congestion, parking issues, and safety concerns would negatively affect residents nearby.
Christopher Baddiley	East of Breaston	response-01132	Wildlife / Biodiversity	LOSS OF TREES / HEDGEROWS AND NATURE CONSERVATION This green belt is home to a diverse array of wildlife including: foxes, rabbits, birds, butterflies, bees and bats, all of which enrich the environment and enhance the quality of life for residents of Holly Avenue. The presence of such wildlife is indicative of a healthy ecosystem which must be preserved, not built upon. Developing on this land would result in the destruction of vital wildlife habitats. This land also serves as a necessary buffer zone from the noise and pollution generated by the (recently widened) M1 motorway.
Christopher Baddiley	East of Breaston	response-01132	School Capacity	The existing infrastructure in Breaston is already under considerable pressure. Firfield primary school and surrounding secondary schools are at (or near) capacity. The primary school in particular struggles with limited space and a lack of outdoor facilities already. An increase in population will add unsustainable pressure, likely forcing families to seek school places further afield.
Christopher Baddiley	East of Breaston	response-01132	Healthcare Facilities	The existing infrastructure in Breaston is already under considerable pressure. The local GP surgery is in high demand. The local dentist is now private, not NHS. Both practices are overstretched, and this proposed development would make it harder to access timely medical and dental care.
Christopher Baddiley	East of Breaston	Response-01132	Green Belt	There are more appropriate, sustainable locations for housing development which do not involve sacrificing protected green belt and countryside. Once lost, these green spaces and their ecological value cannot be replaced.
Christopher Baddiley	East of Breaston	response-01132	Flooding / Drainage	LANDSCAPING / FLOODING Storms in late 2023 and early 2024 have highlighted Breaston's vulnerability to flooding. Many properties in Holly Avenue suffered external and internal flood damage as a result of that weather. The proposed development site is a natural soakaway and is frequently waterlogged. The fields provide essential drainage and relief against further flooding. Replacing this green belt with hard surfaces would increase surface water run-off, raising the flood risk even further for homes on Holly Avenue and Heath Gardens. It would be irresponsible to compromise this natural buffer with 50 new homes.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Christopher Baddiley	East of Breaston	Response-01132	Other	NOISE AND DISTURBANCE RESULTING FROM PROPOSED USE At the north edge of the proposed new development is the cemetery / burial ground. This should be a quiet place to pay respect to our loved ones. While the cemetery is already close to the (recently widened) M1 motorway, building 50 new homes on the adjacent green belt will introduce even more noise and disturbance not just to the cemetery, but also to the residents of Holly Avenue who back directly onto the proposed new development. OVERLOOKING / LOSS OF PRIVACY Residents of Holly Avenue backing directly onto the proposed new development (and homes such as mine which overlook the green belt) would suffer overlooking from the new development and experience a massive loss of privacy. Many residents on Holly Avenue (myself included) chose to live here because of the open aspect across the fields. The proposed development of 50 homes would fundamentally change the look and feel of the east side of the village, undermining the very reason why I (and many of my neighbours) choose to live here in the first place.
Christopher Baddiley	East of Breaston	Response-01132	Number of Houses	The proposed development of 50 homes would fundamentally change the look and feel of the east side of the village, undermining the very reason why I (and many of my neighbours) choose to live here in the first place. At the north edge of the proposed new development is the cemetery / burial ground. This should be a quiet place to pay respect to our loved ones. While the cemetery is already close to the (recently widened) M1 motorway, building 50 new homes on the adjacent green belt will introduce even more noise and disturbance not just to the cemetery, but also to the residents of Holly Avenue who back directly onto the proposed new development.
Christopher Baddiley	East of Breaston	Response-01132	Air Quality	This land also serves as a necessary buffer zone from the noise and pollution generated by the (recently widened) M1 motorway.
Christopher Baddiley	East of Breaston	Response-01816	Air Quality	This land also serves as a necessary buffer zone from the noise and pollution generated by the (recently widened) M1 motorway.
Christopher Baddiley	East of Breaston	Response-01816	Wildlife / Biodiversity	This green belt is home to a diverse array of wildlife including: foxes, rabbits, birds, butterflies, bees and bats, all of which enrich the environment and enhance the quality of life for residents of Holly Avenue. The presence of such wildlife is indicative of a healthy ecosystem which must be preserved, not built upon. Developing on this land would result in the destruction of vital wildlife habitats.
Christopher Baddiley	East of Breaston	Response-01816	Green Belt	I feel there are more appropriate, sustainable locations for housing development which do not involve sacrificing protected green belt and countryside. Once lost, these green spaces and their ecological value cannot be replaced.
Christopher Baddiley	East of Breaston	Response-01816	Flooding / Drainage	Storms in late 2023 and early 2024 have highlighted Breaston's vulnerability to flooding. Many properties in Holly Avenue suffered external and internal flood damage as a result of that weather. The proposed development site is a natural soakaway and is frequently waterlogged. The fields provide essential drainage and relief against further flooding. Replacing this green belt with hard surfaces would increase surface water run-off, raising the flood risk even further for homes on Holly Avenue and Heath Gardens. It would be irresponsible to compromise this natural buffer with 50 new homes.
Christopher Baddiley	East of Breaston	Response-01816	Other	At the north edge of the proposed new development is the cemetery / burial ground. This should be a quiet place to pay respect to our loved ones. While the cemetery is already close to the (recently widened) M1 motorway, building 50 new homes on the adjacent green belt will introduce even more noise and disturbance not just to the cemetery, but also to the residents of Holly Avenue who back directly onto the proposed new development. The proposed development of 50 homes would fundamentally change the look and feel of the east side of the village, undermining the very reason why I (and many of my neighbours) choose to live here in the first place.
Christopher Chambers	North of West Hallam	Response-00169	Traffic Congestion	This development will increase traffic congestion at both 4-way cross roads at Stanley Common end and West Hallam (Bottle Kiln) end. Traffic through Mapperley village will increase. The route is heavily used by horse riding schools and any traffic along its entirety will therefore be subject to negotiation of these hazards.
Christopher Chambers	North of West Hallam	Response-00169	Road Safety	The proposed development of 35 homes is likely to generate a demand of around 50 vehicles (using the 3 cars per 2 dwelling allowance). I conservatively estimate a 100% increase in traffic in addition to existing usage, and this is likely to be heavily concentrated in the busiest 'rush hour' periods. The junction with High Lane West / Belper Road / Park Hall Lane is very busy and is blind to approach from Stanley Common direction. At night, it is difficult to retain sight of the road due to the positioning of right-turning vehicles into Station Road when arriving at this junction from High Lane West. The junction is not capable of carrying more traffic at busy periods and the lack of suitable pavement at the entry from Stanley Common side, combined with the tendency for the traffic from this direction to 'dip into' Park Hall Lane to 'undertake' vehicles turning right into Station Road can only be perilous for pedestrians and drivers wishing to exit Park Hall Lane. As the development is likely to contain a significant number of children that are likely to fall into the Scargill catchment area, the foot traffic in this area will therefore obviously increase and place a very heavy burden on a junction that is at capacity during peak periods. Park Hall Lane itself is used extensively by walkers, runners, cyclists, and families, and this is especially noticeable at weekends / evenings. There are multiple adjoining fields and livery stables containing horses and the lane is used for group riding, in a relatively safe area due to current limited vehicular use. The advent of up to 50 vehicles entering and exiting the lane is likely to be catastrophic for the wellbeing of those people who will no longer feel safe using this largely traffic free route. The local authority must not ignore that due to the capacity issues with the junction noted above, residents of the proposed development are very much likely to drive through Mapperley village to use the alternative entry to High Lane West at the junction with St Wilfrid's Rd. This is likely to cause significant disruption to the hamlet as well as place additional burden on said junction, which is a known accident black spot. The addition of dozens of vehicles every day along Park Hall Lane is likely to be economically threatening for the owners and operators of the Park Hall Pods and livery stables and cause irreversible hardship for existing residents and users of the area.
Christopher Chambers	North of West Hallam	Response-00169	Green Belt	The local authority should not be actively seeking to meet Government housing quotes by targeting green belt land over brownfield or existing development areas. This particular site is not subject to former industrial development, such as the area behind Newdigate Arms further towards Ilkeston, and there is no obvious need, other than the desires of private developers, in seeking to irrevocably altering the landscape with this proposal.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Christopher Chambers	North of West Hallam	Response-00170	Flooding / Drainage	This site is perpetually flooded, especially at the end opposite to Park Hall Lane. In heavy rains, the last 50m of the field is boggy or often underwater. There is a very well used footpath at this end as well as the access drive for the properties on High Lane West. Any development is to exacerbate the drainage issues and without extensive and potentially damaging (aesthetically, ecologically) drains and run off areas, the water that pools here will be moved to the footpath/drives access road. This development cannot take place without a detailed and proper groundwater survey, with mandatory compliances baked-in to any permissions granted. Examples of where the local authority has failed in this regard include former White Hart Public House Station Rd West Hallam which regularly floods as the building contractor has infilled the drainage ditches that were not adequately surveyed and the play park area off the Nutbrook trail to the rear of Elka's Rise Ilkeston, which is so poorly constructed that the meagre and rather desolate design of drainage is wholly inadequate for the needs of the site, which is largely unusable. The local authority needs to ensure that any planning consent includes strict mandates on drainage and that these are enforced.
Christopher Chambers	South of West Hallam	Response-00172	Traffic Congestion	The local authority should carry out traffic frequency surveys on Beech Lane at the following times: Mon-Fri 0830 - 0930am Mon-Fri 1500 - 1600pm Sat-Sun 0930-1130am Sat-Sun 1300-1700pm This should illustrate the existing traffic conditions that cover school entry/exit and use of the recreation ground over the course of a typical week. The survey needs to be when both cricket and football seasons are in progress and during term times. This illustration will highlight the folly of granting consent to a development of houses that is likely to add 100+vehicles at some or all of the proposed times.
Christopher Chambers	South of West Hallam	Response-00172	Road Safety	90 dwellings is likely to bring 130+ vehicles. Beech Lane is not suitable for the current levels of traffic in peak times, and the proposal for more than 100 extra vehicles into the same area, without substantial and damaging consequences is unacceptable. The recreation ground is very popular and its use brings additional vehicles to the area that saturates existing capacity and encourages residents of the adjacent West Hallam estate to use alternative routes to High Lane West, adding all of these extra vehicles is only likely to harm the road safety in the village. The proposed development is scheduled to have an entry/exit road on Beech Lane and this can only be within 250m of the entrance to Scargill school, which is potentially catastrophic for the safety of children using the school.
Christopher Chambers	South of West Hallam	Response-00172	School Capacity	Scargill School has a capacity of around 420 pupils, with a current term roster of 310. Whilst this appears to offer headroom for intake, this is unlikely to align with the expected requirements of up to 90 households, assuming no other intake is considered.
Christopher Chambers	South of West Hallam	Response-00172	Green Belt	The local authority should not be considering applications on green belt land.
Christopher Chambers	South of West Hallam	Response-00172	Landscape	The proposed development will decimate the existing landscape.
Christopher Chambers	South West of Kirk Hallam	Response-00173	Traffic Congestion	A development of 1000 houses is likely to bring around 1500 vehicles. How is the local authority anticipating the integration into the existing road networks without substantial consequence to road users? Ladywood Road to Spondon is nose-tail at peak times, the village of Ockbrook and the cut-through to A52/M1 is already in a terrible state due to existing traffic flow at one end and Stanton Road/ Hallam Fields is virtually impassable at the other end. This development can only be considered with serious and substantial investment in the surrounding road network. The inclusion of a school, whilst admirable, will need to provide capacity for at least 1000 pupils and is likely to be under-subscribed due to the popularity of other existing schools (which will have negative impacts on traffic flow in the area).
Christopher Chambers	North of Breadsall Hill Top	Response-00175	Traffic Congestion	Has the local authority carried out traffic surveys following the consent for the developments built on the site opposite and further toward Breadsall Hilltop (from the proposed area)? Traffic is nose-to-tail at many times throughout the day and virtually gridlocked at peak periods. The village of Breadsall is used extensively to avoid the main road route through the development area and is soon likely to be in need of a bypass road to alleviate the traffic congestion caused by the repeated granting of planning consent in the same area! This development will do nothing to improve the situation or the lives of those residents living in the once idyllic village.
			Landscape	The proposed development will decimate the landscape in this area. Where once were rolling green fields will soon be a carpet of brick and tarmac.
Christopher Chambers	North of Breadsall Hill Top	Response-00175	Flooding / Drainage	The Great Northern Greenway has seen water spill damage following the most recent developments in the adjacent areas, and the proposal is likely to exacerbate the drainage issues without substantial and potentially damaging (environmentally, aesthetically) works to the infrastructure necessary to support the application. Serious consideration and data collection / analysis needs to take place on the potential impacts of the removal of fauna and flora from the proposed development area (on the low-lying properties towards Breadsall village).
Claire binnall	West of Sandiacre	Response-00459	Traffic Congestion	The roads are already too busy on long Moor lane and town street I live on Lawrence street and the lorry traffic is already dangerous and excessive
Claire binnall	West of Sandiacre	Response-00459	Road Safety	The road is already too busy and narrow this is near to a local primary school which already served by a road that should be one way as its dangerous
Claire binnall	West of Sandiacre	Response-00459	Air Quality	This will massively reduce air quality for its already struggling residents due to increased traffic on long Moor road and the increase of pollution from the M1
Claire binnall	West of Sandiacre	Response-00459	Wildlife / Biodiversity	Stoney clouds had a diverse and beautiful range of wildlife and biodiversity the bats are very prevalent I would suggest a full study to see what wildlife you have up there as frogs and newts have been spotted in the area
			Bus Services	Useless services always late
Claire binnall	West of Sandiacre	Response-00459	School Capacity	There are no spaces for these extra children you are having brothers and sisters split up from the same families and sent to other school because we cannot accommodate the children in the area
Claire binnall	West of Sandiacre	Response-00459	Healthcare Facilities	Absolute joke you cannot get a doctor appointment at a GP house and there are no NHS provisions locally if you want an appointment you have to wait until November and go to a different county you are an absolute shambles hang your heads in shame so called councillors lining your pockets you are all a disgrace
Claire binnall	West of Sandiacre	Response-00459	Type of Housing	Unaffordable housing not for the masses just to try and keep up on one of your many election promises that you usually break
Claire binnall	West of Sandiacre	Response-00459	Number of Houses	0 we need 0 new houses
Claire binnall	West of Sandiacre	Response-00459	Green Belt	There are plenty of brown spaces that could be used this is a ridiculous proposal
			Landscape	This will ruin the local environment
Claire binnall	West of Sandiacre	Response-00459	Flooding / Drainage	There is a serious risk of flooding here
			Other	Stop this development immediately

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Claire Cherry	East of Breaston	Response-01817	Traffic Congestion	Breaston's roads are not designed to accommodate additional traffic. Increased congestion, parking issues, and safety concerns would negatively affect both residents and commuters. Breaston Village roads are already damaged to such an extent they are at points impassable. Adding in building and delivery transport and then subsequent further residential traffic would substantially worsen the current situation.
Claire Cherry	East of Breaston	Response-01817	Wildlife / Biodiversity	The proposed site lies within designated Green Belt land, which is protected to prevent urban sprawl, safeguard the countryside, and preserve natural habitats. Developing this land would result in the irreversible destruction of vital wildlife habitats, negatively affecting local species such as birds, bats, and small mammals. Once lost, these green spaces and their ecological value cannot be replaced. The proposal also conflicts with the UK's Climate Change Act 2008 and Environment Act 2021, undermining efforts to reduce carbon emissions and achieve the legally required 10% Biodiversity Net Gain.
Claire Cherry	East of Breaston	Response-01817	School Capacity	The village primary school and surrounding secondary schools are at or near capacity. The primary school in particular struggles with limited space and a lack of outdoor facilities already. An increase in population will add unsustainable pressure, likely forcing families to seek school places further afield.
Claire Cherry	East of Breaston	Response-01817	Healthcare Facilities	Local GP surgeries and dental practices are overstretched, and this development would exacerbate difficulties in accessing timely medical and dental care. Accessing GP services for primary health care provision for both children and adults is a significant challenge, within an already overstretched catchment. Adding further housing to the locality will further exacerbate this situation, reducing access to primary care, putting lives at risk and putting further stresses on already stretched A&E departments. Dental care is unavailable for those not already under the care of the Breaston Dental Surgery, and waiting lists exceed the lifespan of many residents within the village.
Claire Cherry	East of Breaston	Response-01817	Number of Houses	Breaston is a historic, rural village with a distinct character and strong sense of community. The proposed development of 50 houses would fundamentally alter the scale and character of the village, threatening to turn it into a town and undermining the reasons many residents choose to live here.
Claire Cherry	East of Breaston	Response-01817	Green Belt	Conflict with National and Local Planning Policy According to the National Planning Policy Framework (NPPF 2023): ? Paragraph 140 states that Green Belt boundaries should only be altered in exceptional circumstances. ? Paragraphs 149-150 confirm that inappropriate development in the Green Belt should not be approved except in very special circumstances. No compelling justification has been provided to demonstrate that these criteria have been met. Furthermore: ? The Council must first demonstrate a five-year housing land supply before considering Green Belt release. No clear evidence has been presented to confirm that all suitable brownfield and non-Green Belt options have been exhausted.
Claire Cherry	East of Breaston	Response-01817	Flooding / Drainage	Recent events, including severe storms in late 2023 and early 2024, have highlighted Breaston's vulnerability to flooding, with many properties suffering internal damage. The proposed development site acts as a natural soakaway and is frequently waterlogged, as evidenced by photos and videos taken by local residents. Replacing this land with hard surfaces would increase surface water runoff, raising the flood risk for both existing homes and new properties, especially given the increasingly unpredictable climate.
Claire cordery	North of Breadsall Hill Top	Response-01494	Traffic Congestion	Will create more cars in the area on the road.
Claire cordery	North of Breadsall Hill Top	Response-01494	Wildlife / Biodiversity	Will effect wildlife and remove the green area. There are already new houses in the area.
Claire dean	South of West Hallam	Response-00069	Traffic Congestion	Beech lane is a very well used narrow road, the site opposite is home to west hallam football club and host many games, the traffic congestion is already a concern so adding to this is ludicrous.
Claire dean	South of West Hallam	Response-00069	Road Safety	The parking on beech lane poses a huge risk, to increase occupancy in the area and expect them to use beech lane as their main route in and out of the proposed estate would be utter chaos. Not to mention the primary school opposite.
Claire dean	South of West Hallam	Response-00069	Air Quality	Adding homes means adding pollution.
Claire dean	South of West Hallam	Response-00069	Wildlife / Biodiversity	There's is a significant amount of wildlife in this land, I have known times people have been unable to access this due to this and to respect the wildlife.
Claire dean	South of West Hallam	Response-00069	Bus Services	Very poor in the area
Claire dean	South of West Hallam	Response-00069	School Capacity	Not enough spaces in local schools as it is.
Claire dean	South of West Hallam	Response-00069	Healthcare Facilities	There is a demand for the local services, most of us have to already travel out to access health care
Claire dean	South of West Hallam	Response-00069	Green Belt	There is several areas of brown belt so why take our green.
Claire dean	South of West Hallam	Response-00069	Flooding / Drainage	Extra homes address pressure to our systems.
Claire Dean	North of West Hallam	Response-00068	Traffic Congestion	High lane is already a busy road in which poses a great risk. The site in which your proposing to develop will not only add to the congestion but would also mean those living in the new proposed area would be pulling out onto a road of 40mph in which many do not adhere to the speed limit. Its an accident waiting to happen. Crossing this road on foot is also a huge danger and again adding to this and increasing habitats close by which increases vehicle usage is a threat to life. Not to mention the increased pollution and noise/disturbance from the traffic.
Claire dean	North of West Hallam	Response-00068	Road Safety	As previously mentioned the proposed site would significantly increase the traffic congestion. The proposed land is near to the blind bend before park hall lane which changes from 30 to 40mph in which many do speed up so it is an accident waiting to happen, I have first hand witnessed many near misses. More house means more people and vehicles, there isn't any means of crossings, traffic lights or support for those wishing to cross High lane in order to access the local amenities such as shops, schools, doctors etc Road safety should be a priority of the council and not adding danger to what is already a very busy road.
Claire Dean	North of West Hallam	Response-00068	Air Quality	Noise and air pollution would have an effect on the local area without a doubt. The quality of the air from the use of vehicles is already poor so again adding to this with not only transportation but household activities such as burning solid fuels such as cooking, heating and everyday living activities which would occur should you increase the number of households and occupants in the area.
Claire dean	North of West Hallam	Response-00068	Wildlife / Biodiversity	The area in question has a substantial amount of wildlife, we have often witnessed badgers, foxes, bats not to mention the horses that occupy the field at present. I hope you can appreciate that wildlife is a vital component of this diversity, playing essential roles in maintaining ecological balance. Building on this area would cause a significant biodiversity loss, threatening wildlife populations and ecosystems.
Claire Dean	North of West Hallam	Response-00068	Bus Services	The bus services are poor in west hallam.
Claire Dean	North of West Hallam	Response-00068	School Capacity	The schools in the local areas would feel a great strain from increased occupancy in the area. We already have very large numbers in the main primary school located in west hallam which may mean those living in the area may have to travel to other nearby schools.
Claire Dean	North of West Hallam	Response-00068	Healthcare Facilities	There is already a huge demand for health services in the area and not enough resources to meet those demands, this will only get worse.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Claire Dean	North of West Hallam	Response-00068	Type of Housing	The character and appearance of the houses on high lane pose great quality and it is a well known road for its up market value homes. People have worked hard to live on a road like this and to build new homes, several to affordable housing would not only reduce the value of these homes people have worked hard to create but the new housing would also have a detrimental effect on the positive reputation high lane holds!
Claire Dean	North of West Hallam	Response-00068	Number of Houses	35 homes is a significant amount, it means potentially 35 families which if it means families of 4 that's 140 people, 70 of those potentially using vehicles, footfall increases, noise, it just does not reflect the quiet calm area west hallam is now.
Claire Dean	North of West Hallam	Response-00068	Green Belt	We have several areas of brown belt so why try and take our green belt.
Claire Dean	North of West Hallam	Response-00068	Landscape	It would ruin the landscape end of.
Claire Dean	North of West Hallam	Response-00068	Flooding / Drainage	More hosiungs means strain on our water systems, pollution, which increases the risk of flooding an area that in the past has been known to flood.
Claire Dean	North of West Hallam	Response-00068	Other	I really hope you consider the upset this is causing, it does not seem fair you can come and ruin what is now a lovely area to live in. We have worked tirelessly for year to buy the house in which we currently reside in, to have houses built directly behind us would cause a significant amount of stress and loss in value to our own home. Please carefully consider all of the reasons.
Claire Hunter	North of West Hallam	Response-00709	Traffic Congestion	The traffic on this road is often congested and cars at times go well above the speed limit. This is a dangerous road without having the added risk of slowing traffic to access the housing. There have been many near misses with people turning right out of station road.
Claire Hunter	North of West Hallam	response-00709	Road Safety	My children have to cross this already busy road to get the school bus. It is already very risk without the added traffic of new housing. There is no pedestrian crossing and often people park untangle on Highlane west blocking the view of people trying to cross.
Claire Hunter	North of West Hallam	response-00709	Air Quality	More traffic will Mean added pollution in the area effecting the residents and wildlife in the area
Claire Hunter	North of West Hallam	response-00709	Wildlife / Biodiversity	Being a resident on high lane west next to this field we see the amount of wildlife there is. Owls, many species of birds, bats, rabbits etc. it's beautifulsurroundings by a which will be spoilt by the building of these houses and many animal habitats being destroyed.
Claire Hunter	North of West Hallam	Response-00709	Bus Services	The bus service doesn't ring regular enough or late enough for the amount of audience we have in the village never mind with more people joining the area.
Claire Hunter	North of West Hallam	Response-00709	School Capacity	The schools will not be able to accomodate the amount of children possibly moving to the area. Senior schools are oversubscribed and places will be hard to find.
Claire Hunter	North of West Hallam	Response-00709	Healthcare Facilities	There is a strain on nearby doctors surgeries and not being able to make appointments as they are overstretched without more people moving to the area
Claire Hunter	North of West Hallam	Response-00709	Type of Housing	We moved to this affluent area for the peace and beautiful surroundings. We didn't move to the area to be surrounded by affordable housing that potentially could bring residents that could have a negative impact in the area
Claire Hunter	North of West Hallam	response-00709	Number of Houses	Feel concerned about how the houses will positioned in the field that is next to us. How will This look how will this effect us as the house next door. The fields which we once looked over which attracted us to this area could potentially be destroyed and actually would make us want to move like many other residents in the area
Claire Hunter	North of West Hallam	response-00709	Green Belt	This green belt land is what attracted us to the area. We moved here because we weren't surrounded by houses and now there will be affordable housing next to us. Animal habitats destroyed and the beautiful surroundings will disappear
Claire Hunter	North of West Hallam	response-00709	Flooding / Drainage	We live next to the field and there is a major drainage problem that has been reported. We had to purchase our own pump to pump the water during times of rain or heavy snow. The water runs off the field onto the public footpath and onto our drive. Carol Hart has delivered sandbags before to us and this has been reported. This would be a major problem for the houses on this land
Clair Ellis	West of Sandiacre	Response-00475	Traffic Congestion	I live on Spencer Avenue and traffic is bad enough as it is. Extra traffic coming up this bus route to gain access to a new estate further up the hill will be unbearable.
Clair Ellis	West of Sandiacre	Response-00475	Wildlife / Biodiversity	The wildlife affected will be huge!
Clair Ellis	West of Sandiacre	Response-00475	School Capacity	Another 180 house with the possibility of 180 children, which school are they going to go to? Our local infants and junior schools will not have the capacity.
Clair Ellis	West of Sandiacre	response-00475	Healthcare Facilities	Our local doctors struggle to fit you in for an appointment as it is. Will there be another surgery to accommodate the rest of the new residents?
Clair Ellis	West of Sandiacre	response-00475	Green Belt	I do not want to lose this green belt! I regularly walk my dog here. I can't bear the thought of this space being destroyed. Not to mention the horses that currently live here.
Clair Ellis	West of Sandiacre	response-00475	Flooding / Drainage	How will this effect the drainage for those of us at the bottom of the hill?
Claire Matthews	East of Breaston	Response-01203	Green Belt	Green belt means green belt, no development. Erewash is not following the rules and wrecking the green belt, very gradually. If this development goes ahead, the adjoining land is certainly in danger of being developed.
Clare franks	West of Sandiacre	Response-00498	Traffic Congestion	Traffic in and around the sandiacre area is already poor. Parking on and around the schools is terrible as well as parking around the football club. Adding homes will only add to this. The motorway junction also suffers with congestion. Road surfaces are poorly maintained and this will only make it worse
Clare franks	West of Sandiacre	Response-00498	Air Quality	We already live next to one of the busiest motorways with poor air quality. Adding homes will not only worsen the air quality while contractions takes place, but the homes are also being build right next to the motorway meaning the noise pollution for the houses and the extra pollution in the area will be worse.
Clare franks	West of Sandiacre	response-00498	Wildlife / Biodiversity	This area has been part of stoney clouds for the last 15 years as long as we have lived here. There are many brownfield sites in the local area, I'm not sure why using green space where there are many species of wildlife is necessary.
Clare franks	West of Sandiacre	response-00498	School Capacity	Cluidside academy has had to increase the number of classes this year to cope with the increased number of children, how much more can they accommodate. Ladycross has had previous years of full capacity. What provision is being made for new children going to school in the area?
Clare Green	West of Sandiacre	Response-01751	Green Belt	There are many brownfield sites int eh area, why is greenfield being used?
Clare Green	West of Sandiacre	Response-01751	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Clare Green	West of Sandiacre	Response-01751	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Clare Green	West of Sandiacre	Response-01751	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Clare Green	West of Sandiacre	Response-01751	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Clare Green	West of Sandiacre	Response-01751	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Clare Green	West of Sandiacre	Response-01751	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Clare Green	West of Sandiacre	Response-01751	Type of Housing	High density housing is preposterous not in keeping with current housing.
Clare Green	West of Sandiacre	Response-01751	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Clare Green	West of Sandiacre	Response-01751	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Clare Green	West of Sandiacre	Response-01751	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Clare Roters	North of Breadsall Hill Top	Response-01553	Traffic Congestion	Congestion is already a problem at times and really impacts the surrounding area. The estate durose estate has small roads where we already struggle with cars from the existing estate
Clare Roters	North of Breadsall Hill Top	Response-01553	Road Safety	We have nr on and genuine collisions already and only a few days ago a gentleman was knocked off his motorcycle on the roundabout at the entrance to Dale acre way. Cars speed down Mansfield road all the time and only a couple of years ago a motorcyclist was killed nr the durose estate
Clare Roters	North of Breadsall Hill Top	Response-01553	Air Quality	More houses, more emmissions and less trees
Clare Roters	North of Breadsall Hill Top	Response-01553	Wildlife / Biodiversity	We have sighted kestrels, foxes, pheasants, bats, field mice and other animals on the durose estate itself. More damage to the greenway and woodland areas would remove their homes, food source and safety. There are also farm animal close by like cows who need to breve protected from fumes and noise.
Clare Roters	North of Breadsall Hill Top	Response-01553	Bus Services	Services that go through Oakwood and chaddesden are already overcrowded and these pass through breadsall.
Clare Roters	North of Breadsall Hill Top	Response-01553	School Capacity	School placements are few and far between in the area and no new schools are being built
Clare Roters	North of Breadsall Hill Top	Response-01553	Healthcare Facilities	Go appointments in the area are massively hard to get and those of us with existing conditions are already suffering with the services already provided in the area
Clare Roters	North of Breadsall Hill Top	Response-01553	Type of Housing	Flats and larger houses would block the beautiful views and countryside we have
Clare Roters	North of Breadsall Hill Top	Response-01553	Number of Houses	More houses would mean services in the area would struggle, wildlife would die and traffic would be insufferable. We pay a lot to live here and chose the area for the beautiful countryside and, amenities and access to areas in Derbyshire. It would push people out of their much loved homes
Clare Roters	North of Breadsall Hill Top	Response-01553	Green Belt	A loss of this beautiful countryside would be a massive loss to Derby if I'm honest and a loss to the wildlife that live in it and thrive
Clare Roters	North of Breadsall Hill Top	Response-01553	Landscape	This landscape is week kept, full of wildlife and still have farms who use it for live stock. It's calming, peaceful and relaxing. It's loved, respected and a great asset to derby
Clare Roters	North of Breadsall Hill Top	Response-01553	Flooding / Drainage	Drainage is already a problem, in homes on the durose estate and gardens. Many houses have struggled with blocked drains
Clare Roters	North of Breadsall Hill Top	Response-01553	Other	Crime in the area and lack of safety had already increased. More housing would bring more issues and spates of crime. Landscape and country so close to a city centre is almost unheard of these days and this landscape is decked in history, rare and endangered wild life ( birds of prey and bats) more housing would destroy this.
Clare Tomlinson	Acorn Way, Derby	Response-00423	Traffic Congestion	Acorn Way and Morley Road are over capacity at Peak Times - the traffic noise from Acorn Way in particular is very bad. There are often delays exiting Oakwood at peak times - particularly towards Asda and Kings Corner
Clare Tomlinson	Acorn Way, Derby	Response-00423	Road Safety	Acorn Way is a national speed limit road - 60 mph single carriageway - there have been multiple accidents including fatality. The visibility is poor - the road undulates significantly and there are many blind bends. This is made worse by overgrown foliage - this road is under the responsibility of Derby and Derbyshire council - why should those residents in those councils pay to benefit multiple occupants of Erewash
Clare Tomlinson	Acorn Way, Derby	Response-00423	Air Quality	Currently, air quality appears to be good - this would be significantly reduced by increased vehicular activity and removal of green space.
Clare Tomlinson	Acorn Way, Derby	Response-00423	Wildlife / Biodiversity	I have personally seen Foxes and Badgers. There are multiple birds of prey. The insect life is abundant - including butterflies etc There are some large trees and older hedgerows which support a range of wildlife.
Clare Tomlinson	Acorn Way, Derby	Response-00423	Bus Services	Are not adequate There is a bus with limited operating times on Morley Road - this does not run on a Sunday.
Clare Tomlinson	Acorn Way, Derby	Response-00423	School Capacity	The local schools are oversubscribed - these schools are in the Derby City Council area and will not benefit from Erewash council tax. Although there are other schools - they are not within walking distance and this would add to traffic flow.
Clare Tomlinson	Acorn Way, Derby	Response-00423	Healthcare Facilities	It is well both impossible to obtain a gp appointment and the health centre is oversubscribed capacity. There are no NHS dentists in the local area. The journey to the local hospital is lengthy
Clare Tomlinson	Acorn Way, Derby	Response-00423	Type of Housing	Very little new build housing is affordable and the number of affordable houses is usually inadequate
Clare Tomlinson	Acorn Way, Derby	Response-00423	Number of Houses	This number represents over development of a site which should remain as a green wedge between the local suburban areas.
Clare Tomlinson	Acorn Way, Derby	Response-00423	Green Belt	There are no justifications for building on green fields when sufficient brown field sites exist. Green belt is important both to distinguish between different areas but also to provide a resource for local residents and to protect and encourage wildlife,
Clare Tomlinson	Acorn Way, Derby	Response-00423	Landscape	This may not be a typical beauty spot - but the green hills are a visual stimulant to local residents

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Clare Tomlinson	Acorn Way, Derby	Response-00423	Flooding / Drainage	Acorn Way floods regularly - and the road has been closed on many occasions. It is planning policy not to allow householders to pave over garden space due to the reduction in drainage of surface water - building on a large area will increase exponentially the amount of run off. A case in point is Breadsall Village which has flooded more often since the building of the Persimmon Lime Tree Court Estate - another blot on the landscape.
			Other	This area represents a valuable green space for both wildlife and local residents. This is an unacceptable proposal
Cllr Simon Mabbott	South West of Kirk Hallam	Response-01480	Traffic Congestion	1. The Bypass Will Not Reduce Congestion - It Will Shift It Rather than easing congestion, the proposed bypass will simply divert traffic to the already overwhelmed Bulls Head/Quarry Hill roundabout. This key junction is used by vehicles accessing Ilkeston and is already a known congestion point. Adding more traffic will only exacerbate existing delays without providing any meaningful relief for local residents who already face daily gridlock. 2. Kirk Hallam Residents Have Limited and Worsening Access to Ilkeston Kirk Hallam residents primarily rely on Quarry Hill Road to reach Ilkeston a journey of just 1.3 miles that should take about 8 minutes. However, due to heavy congestion and inefficient junctions, this trip now often takes 20?25 minutes or more during peak times. The only alternative is a 4.7-mile detour through West Hallam, increasing time, fuel costs, pollution and inconvenience. As Ilkeston is the nearest hub for shopping, healthcare, public transport, and schools, this restricted access directly affects the daily lives and well-being of the Kirk Hallam community. 3. A6096 Roundabout Will Create New Delays and Hazards Introducing a roundabout on the fast-moving A6096 (Ladywood Road), which carries significant traffic from Derby, will: Force Kirk Hallam drivers to yield to high-speed vehicles, Create longer wait times when exiting the area, Increase the risk of accidents in a location ill-suited for frequent stopping and merging. 4. St Norbert Drive / Godfrey Drive ? A Known Accident Hotspot The junction near the Cat & Fiddle pub is already an accident-prone area. Increased queuing and traffic from the new A6096 roundabout will worsen safety risks and further raise the likelihood of collisions at this location. 5. Bulls Head / Quarry Hill Roundabout ? Already Gridlocked This roundabout currently suffers from regular gridlock due to high volumes of car traffic, school runs, and HGVs. It causes: Significant delays for residents, Disruption to public transport, Dangerous delays for emergency services. Feeding additional traffic from a new bypass and development into this congested hub will only compound the problem. Also planning has recently been granted for 5 residential flats and a shop which is only going to make the situation worse. 6. Sow Brook Lane Roundabout ? Yet Another Obstacle The proposed roundabout at Sow Brook Lane presents another barrier for Kirk Hallam residents. It will require them to yield to faster-moving bypass traffic, with no lights or priority system to ensure fair access. This adds to the difficulty of entering and exiting the area. 7. The Cumulative Impact ? Kirk Hallam Boxed in by Congestion With multiple new roundabouts and bottlenecks planned at every major exit, Kirk Hallam faces the risk of being completely surrounded by traffic congestion. Road access is already strained, and these developments would isolate the community further making even routine journeys increasingly difficult and stressful.
Cllr Simon Mabbott	South West of Kirk Hallam	response-01480	Road Safety	1/. The Bypass and Development Pose a Serious Threat to Road Safety in Kirk Hallam The proposed development and bypass stand to significantly worsen road safety in and around Kirk Hallam. The area is already burdened by multiple high-risk traffic points, and this plan offers no meaningful measures to reduce those dangers. Instead, it intensifies existing hazards while introducing new ones. 2/. A6096 Roundabout ? High-Speed Danger Zone The proposed roundabout on the A6096 (Ladywood Road) would channel fast-moving traffic from Derby straight into Kirk Hallam. Drivers exiting from the community would be forced to yield to this flow, greatly increasing the risk of collisions?especially during peak times or poor weather. The speed differential and lack of controlled entry make this an inherently unsafe design. 3/. St Norbert Drive / Godfrey Drive ? A Known Hazard Worsened Located near the Cat & Fiddle pub, this junction is already recognized as an accident black spot, plagued by limited visibility and frequent near-misses. Increased traffic from the A6096 roundabout would lead to longer queues and further impair safety at this vulnerable intersection?for both drivers and pedestrians. 4/. Bulls Head / Quarry Hill Roundabout ? A Gridlock Turning Dangerous This key roundabout is already overwhelmed by school traffic, heavy goods vehicles, and commuter congestion. With the bypass funnelling even more vehicles into this point, the risks multiply: driver frustration, unsafe merging, and poor lane discipline all contribute to a higher likelihood of accidents. 5/. Sow Brook Lane Roundabout ? An Ill-Equipped Conflict Point The second proposed roundabout, at Sow Brook Lane, adds yet another junction where residents must yield to bypass traffic. This road is not built for high volumes and lacks any form of signal control or pedestrian protection. As a result, the risk of collisions will rise significantly, especially at busy times.
Cllr Simon Mabbott	South West of Kirk Hallam	response-01480	Air Quality	1/. Harmful Impact on Air Quality from Cumulative Traffic Changes The combination of 1,000 new homes, a proposed 40mph bypass, and multiple new roundabouts will significantly degrade air quality in and around Kirk Hallam. Far from alleviating pressure, these changes will increase vehicle numbers, congestion, and harmful emissions in an already strained environment. 2/. More Traffic = More Emissions The bypass and additional housing will funnel thousands of extra vehicles onto the local road network. As seen daily at the Bulls Head roundabout, traffic already stalls in long queues. With two more roundabouts feeding even more cars, vans, buses, and HGVs into the same limited routes, idling engines will emit higher concentrations of nitrogen dioxide (NO?), carbon monoxide (CO), and fine particulate matter (PM10 and PM2.5). 3/. Pollution on Residents? Doorsteps Many of Kirk Hallam?s homes, schools, and walking routes are located close to these busy roads. This puts vulnerable residents, particularly children, the elderly, and those with pre-existing conditions?at greater risk from increased air pollution. Long-term exposure to traffic emissions is well documented as a cause of asthma, respiratory illness, heart disease, and other chronic health conditions. 4/. Longer Journeys, Dirtier Air A trip to Ilkeston, just 1.3 miles away, already takes 20?25 minutes during peak times due to traffic congestion. With more development, new roundabouts, and added delays, journey times will only increase. That means more vehicles idling for longer, producing more exhaust and worsening local air quality across the board.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Cllr Simon Mabbott	South West of Kirk Hallam	Response-01480	Wildlife / Biodiversity	<p>1/. Irreversible Harm to Local Biodiversity and Natural Ecosystems The land to the south-west of Kirk Hallam is a vital part of the local ecosystem, providing essential habitat and green space that supports a wide range of wildlife. The proposed development poses a significant threat to biodiversity, disrupting the delicate ecological balance and permanently fragmenting the natural landscape. 2/. Habitat Destruction on a Large Scale The fields, hedgerows, mature trees, and open green spaces targeted for development are home to a variety of species including birds, bats, small mammals, and pollinators. These habitats would be destroyed or severely disturbed during construction, with no meaningful replacement. Once lost, these ecosystems cannot simply be re-established elsewhere. 3/. Loss of Critical Wildlife Corridors This area currently functions as a wildlife corridor, enabling animals to move safely between woodlands, fields, and hedgerows. The introduction of a housing estate and bypass would sever this natural link, creating a hard barrier that isolates animal populations and disrupts their ability to travel, feed, and breed effectively. 4/. Threat to Legally Protected Species Although a full ecological assessment has yet to be disclosed, it is highly likely that protected species including bats, hedgehogs, badgers, and nesting birds are present in the area. Disturbing or displacing these animals without appropriate mitigation would risk violating legal protections and could lead to long-term ecological harm. 5/. Loss of Essential Pollinator Habitats Bees, butterflies, and other pollinators rely on the wildflowers and hedgerows found throughout this green space. Their decline would not only impact local biodiversity but also disrupt the plant life and food chains they support. The wider health of the ecosystem depends on the survival of these species. 6/. Compounding Pressure on an Already Stressed Environment The surrounding area is already under strain from existing development, traffic, and recreational use. Removing even more green space and introducing additional air, noise, and light pollution will only increase the stress on remaining wildlife populations and diminish the area's natural resilience. 7/. Greenbelt Land ? More Than Just Open Space This land is designated Greenbelt for a reason. It serves not only to preserve open countryside but to support environmental health and biodiversity. Once built over, these habitats and ecological functions are gone for good?they cannot be replicated in landscaped gardens or managed green strips. 8/. A Long-Term Environmental Cost If allowed to proceed, this development would inflict lasting damage on the natural environment, reduce local biodiversity, and sever Kirk Hallam's ecological link to the surrounding countryside. These impacts must be recognised as fundamental reasons to reject, at the very least, drastically reconsider this proposal.</p>
Cllr Simon Mabbott	South West of Kirk Hallam	Response-01480	Bus Services	<p>1/. Lack of Public Transport Planning Undermines the Development The proposed development is moving forward without a clear, credible plan to improve public transport for Kirk Hallam's current and future residents. Far from being expanded, vital services are actually being reduced leaving the community more isolated and dependent on cars. 2/. Withdrawal of the 21 Bus Service ? A Major Loss The cancellation of the 21 bus route, which provided direct links to Nottingham and the Queen's Medical Centre (QMC), has removed a critical public transport lifeline. This service was well used and vital for accessing employment, healthcare, and education. Its loss has left Kirk Hallam residents with fewer, less frequent travel options, particularly impacting those without access to a car. 3/. Existing Bus Services Are Unreliable and Infrequent The remaining services are already limited in frequency and increasingly unreliable, especially during rush hour. Delays caused by congestion at key points like the Bulls Head and Quarry Hill roundabouts make these services even less practical. With the added pressure from 1,000 new homes, reliability will decline further, pushing more people away from public transport altogether. 4/. No Defined Public Transport Strategy The development plans contain no clear or funded proposals for public transport. There are no confirmed agreements with bus operators, no integrated service strategy, and no indication of how increased demand will be managed. This lack of foresight and consultation risks leaving a growing population without viable travel options. 5/. More Cars, More Congestion, Less Sustainability In the absence of reliable and accessible bus routes, new residents will have little choice but to rely on private vehicles. This will inevitably lead to higher traffic volumes, greater emissions, and increased pressure on roads already operating at capacity. Rather than promoting sustainable transport, the development will deepen car dependency. 6/. Disproportionate Impact on the Most Vulnerable Those hardest hit by poor public transport include older adults, disabled residents, students, and those on lower incomes. The removal of direct access to critical destinations like Nottingham and QMC Hospital is particularly damaging for individuals who depend on public transport for medical care and essential travel. 7/. Conclusion: A Missed Opportunity for Sustainable Growth This development risks overwhelming an already fragile transport system. Without serious investment in reliable, frequent, and connected public transport, Kirk Hallam faces growing isolation, increased road traffic, and a decline in quality of life. Any responsible planning decision must factor in the urgent need for public transport reform?not simply add to the problem.</p>
Cllr Simon Mabbott	South West of Kirk Hallam	Response-01480	School Capacity	<p>1/. Inadequate Education Provision for a Major Housing Development The proposed construction of 1,000 new homes will place unsustainable pressure on school capacity in Kirk Hallam and the surrounding area. Without a full and forward thinking education plan, the development risks overwhelming local schools and disrupting families. 2/. Junior School Alone Is Not Enough While the developer has pledged to build a new junior school, this addresses only a fraction of the educational need. No provision has been confirmed for secondary education a serious oversight given the number of families and school age children expected to move into the area. 3/. Local Secondary Schools Are Already Full Secondary schools in and around Kirk Hallam are already operating at or near capacity. Many are among the largest and most sought-after in the borough. A significant number of students already travel in from out of area most arriving by car, placing further strain on school resources, infrastructure, and nearby roads during peak hours. 4/. Increased Travel, Increased Congestion Without local secondary school options, families will be forced to send children to out-of-area schools, relying heavily on cars or school buses. This will compound congestion along already overstretched routes, including Ladywood Road, Quarry Hill, and Sow Brook Lane adding more traffic to roads already under daily strain. 5/. Disruption to Family Life and Community Ties A lack of nearby secondary provision could lead to children being placed in schools away from their friends or siblings. Parents may be left to juggle multiple school drop-offs, long commutes, and logistical headaches. These disruptions not only increase daily stress but weaken community cohesion and support networks. 6/. A Serious Gap in Long-Term Planning The proposal to build a junior school may seem like a positive step, but it falls short of what is needed. A development of this scale requires a full education strategy, one that includes secondary and post 16 (sixth form or college) education. Without this, the plan is incomplete and puts long term educational access at risk. 7/. Conclusion: School Infrastructure Cannot Support the Strain While the junior school proposal is acknowledged, the development remains critically under-supported in terms of educational infrastructure. Kirk Hallam already accommodates a large and growing student population. Without new secondary school capacity, the area simply cannot absorb additional demand without significant consequences for education quality, traffic flow, and family wellbeing.</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Cllr Simon Mabbott	South West of Kirk Hallam	response-01480	Healthcare Facilities	<p>1/. Unsustainable Pressure on Healthcare Services The proposed development of 1,000 new homes will bring a significant population increase to Kirk Hallam, placing unsustainable pressure on already overburdened local healthcare services. 2/. Existing Services Already Struggling Local GP practices and healthcare facilities are currently under strain. Many residents report long waiting times, difficulty booking appointments, and reduced access to face to face care. The system is already stretched to its limit and this development would push it beyond breaking point. 3/. No Provision for Additional Medical Infrastructure Despite the scale of the proposed development, there is no confirmed plan to expand or create new healthcare services. There is no mention of new GP surgeries, dental practices, pharmacies, or community health centres to support the influx of new residents. Without this, both new and existing patients will face even greater difficulty accessing basic care. 4/. Increased Burden on Hospitals With GP services unable to meet demand, more people will turn to A&amp;E departments for routine care further straining already overstretched hospitals such as Queen’s Medical Centre and Royal Derby Hospital. This creates a ripple effect, impacting emergency care for everyone in the region. 5/. Accessibility Challenges The recent withdrawal of the 21 bus service, which previously connected Kirk Hallam to QMC Hospital, has severely reduced access to essential healthcare particularly for those without a car. Elderly and disabled residents are especially affected. Meanwhile, increased traffic from the development will make it harder for ambulances and emergency services to reach those in need quickly. 6/. Growing Health Inequality A development of this size, without matching investment in health infrastructure, risks deepening health inequalities. Vulnerable groups including the elderly, families with young children, people with chronic illnesses, and those on lower incomes will be hit hardest. The result will be a community where timely, affordable care is no longer accessible to all. 7/. Conclusion: Health Provision Must Match Growth Without parallel investment in local healthcare infrastructure, this development will significantly worsen access to medical care and negatively impact the health and wellbeing of both new and existing residents. Planning decisions must prioritise the delivery of essential services alongside housing, anything less is short sighted and irresponsible.</p>
Cllr Simon Mabbott	South West of Kirk Hallam	response-01480	Type of Housing	<p>1/. Failing to Meet Local Housing Needs The proposed development of 1,000 homes does not align with the genuine housing requirements of the Kirk Hallam community?falling short in affordability, accessibility, and demographic relevance. 2/. No Provision for Accessible or Senior Friendly Homes The plan fails to include bungalows or single-storey homes, which are vital for older residents and those with mobility challenges. Kirk Hallam has a growing elderly population in need of safe, accessible housing within their existing community. Instead of offering suitable downsizing options, the proposal prioritises larger, less accessible family homes that are often unaffordable or impractical for those most in need. 3/. Inadequate Commitment to Affordable Housing The suggested provision of just 10% affordable housing, contingent on financial viability which offers no real guarantees. This minimal and uncertain commitment does little to support young people, key workers, and lower income families who are already struggling to find secure, affordable accommodation in the area. 4/. Focused on Developer Profit, Not Community Need The emphasis on high cost, market rate housing serves developers far more than the local population. Rather than addressing the regional housing crisis, this approach risks pricing out existing residents and undermines efforts to build a diverse, inclusive community. 5/. Missed Opportunity for a Balanced Housing Mix A development of this scale should include a broad range of housing types and tenures?such as affordable family homes, social rent properties, accessible units, and shared ownership options. This is a chance to create a community that supports people at all stages of life. Failing to plan for a varied housing mix raises serious concerns about social exclusivity and long-term sustainability. Conclusion: A Community Left Behind The current proposal overlooks the real housing priorities of Kirk Hallam. Without a clear, inclusive strategy to deliver genuinely affordable and accessible homes, the development risks serving investors, not residents. To meet the true needs of the community, a more thoughtful and balanced approach is essential.</p>
Cllr Simon Mabbott	South West of Kirk Hallam	response-01480	Number of Houses	<p>1/. Overdevelopment Without Justification The proposed scale of development is excessive, disproportionate, and unsuited to a community like Kirk Hallam. The plan to build 1,000 new homes, alongside an additional allocation of ?safeguarded? land for a further 350 raises major concerns about overdevelopment, infrastructure capacity, and the long-term sustainability of the area. 2/. Hidden Expansion Through ?Safeguarded? Land Labelling land as ?safeguarded? is, in practice, a step toward eventual development. This means the true scope of the proposal could reach 1,350 homes, a figure that would dramatically increase the local population and place overwhelming pressure on already-stretched roads, schools, healthcare facilities, drainage systems, and public transport. 3/. No Phased Growth or Infrastructure Strategy There is no evidence of a structured, phased approach to managing this level of expansion. Without a clearly coordinated plan to deliver essential services and infrastructure in parallel with new housing, the community will likely face significant disruption and shortfalls in public provision from the outset. 4/. A Development Out of Proportion Kirk Hallam is a modest, relatively self-contained settlement with limited connectivity. An influx of up to 1,350 new homes could nearly double its size, fundamentally altering the character of the area without offering proportional benefits to current residents or demonstrating a genuine need based on local housing demand. 5/. Ignoring the Cumulative Impact This proposal cannot be viewed in isolation. Taken alongside other recent or planned developments across the borough, the combined effect on public services, infrastructure, and the environment is severe. The wider implications of such unchecked growth have not been properly assessed or addressed. Conclusion: Unsustainable and Unbalanced Growth This level of development is not only excessive it is poorly timed, insufficiently supported, and strategically unsound. Kirk Hallam lacks the infrastructure to absorb such rapid expansion, and the proposal represents a clear case of unsustainable planning that prioritises housing numbers over community wellbeing. Driven by financial gain rather than community.</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Cllr Simon Mabbott	South West of Kirk Hallam	response-01480	Green Belt	<p>1/. Destruction of Greenbelt Land: A Threat to Kirk Hallam's Character and Environment The land identified for development lies within or directly borders, designated Greenbelt, which plays a vital role in protecting the countryside from unchecked urban sprawl and in maintaining the rural identity of communities like Kirk Hallam. 2/. Loss of a Valued Natural Landscape The south-west of Kirk Hallam currently offers expansive views, mature trees, thriving hedgerows, and vital wildlife corridors. It forms a distinct green boundary between our community and surrounding urban areas. The introduction of a bypass and a large housing estate would permanently destroy this landscape, replacing it with concrete, tarmac, and large-scale infrastructure. 3/. Undermining the Purpose of the Greenbelt A core function of Greenbelt land is to prevent the coalescence of neighbouring towns and to maintain clear visual and physical separations. This development would erode that buffer, risking a creeping urban merger between Kirk Hallam, Dale Abbey, and potentially West Hallam, especially if future plans for an additional 850 homes northwest of Kirk Hallam proceed. Such expansion sets a dangerous precedent for further encroachment into protected rural space. 4/. Irreplaceable Environmental Value This land is far more than empty space. It supports biodiversity, provides vital habitats for local wildlife and pollinators, and contributes to climate resilience by acting as a natural carbon sink. These environmental functions cannot simply be replaced or relocated once lost to development. 5/. Impact on Public Access and Wellbeing Residents regularly use this area for walking, recreation, and personal wellbeing. It provides a quiet, natural retreat from the increasingly built-up and congested surroundings. The area also holds historical significance, with a monastic footpath once used by monks traveling between Ilkeston and Dale Abbey?linking the community to its cultural heritage. Paving over this landscape strips the community of one of its last accessible green spaces. 6/. In Conflict with Planning Policy The proposal directly contradicts national and local planning principles that aim to protect Greenbelt land unless truly exceptional circumstances exist. No such justification has been provided here nor has any serious consideration been given to alternatives, such as building on brownfield or previously urbanised sites. Conclusion: Greenbelt Must Be Protected This development would irreversibly damage a vital section of Greenbelt, undermining the environmental integrity, visual character, and identity of Kirk Hallam. It fails to meet the threshold for exceptional circumstances and should therefore be rejected outright to preserve the area's natural and historical legacy.</p>
Cllr Simon Mabbott	South West of Kirk Hallam	Response-01480	Landscape	<p>1/. Irreversible Damage to the Landscape and Identity of Kirk Hallam The proposed construction of 1,000 homes, a 40mph bypass, and multiple roundabouts would have a profound and permanent impact on the landscape surrounding Kirk Hallam. 2/. From Rural Countryside to Urban Sprawl The south-west edge of Kirk Hallam is currently defined by open fields, hedgerows, mature trees, and uninterrupted rural views. This distinctive landscape not only separates the community from neighbouring areas but also gives Kirk Hallam its unique semi-rural identity. The proposed development would transform this peaceful setting into a sprawling extension of the urban area?dominated by dense housing, road networks, traffic infrastructure, and artificial lighting. 3/. Destruction of Visual Amenity Residents and visitors who currently enjoy the natural beauty and visual openness of the area will instead face a landscape filled with rooftops, vehicles, and concrete. The scenic countryside that offers relief from the built environment will be lost, replaced by an urbanised horizon that undermines the character of the area. 4/. Noise and Light Pollution A bypass and large-scale housing scheme will bring with it increased noise from construction and traffic, as well as light pollution from streetlights, vehicles, and homes. These changes will significantly alter the area's quiet character, especially for those living on the southern edge of Kirk Hallam who currently benefit from its rural setting. 5/. Permanent Loss of Landscape Character Once this development goes ahead, the existing character of the land cannot be restored. The natural boundaries that mark the edge of Kirk Hallam will be erased, and the community's connection to its surrounding countryside will be permanently severed. 6/. Erosion of Local Identity Kirk Hallam's identity is closely tied to its position at the fringe of open countryside. It is not designed to be part of a high-density conurbation. By removing this rural boundary, the proposal threatens to absorb the community into an indistinct urban sprawl, diminishing what makes the area special. Conclusion: A Lasting Loss This proposal would do more than build houses?it would erase the very landscape character that defines Kirk Hallam. Once lost, this setting cannot be recovered. The development should be rejected in order to preserve the area's distinct identity and valued countryside surroundings.</p>
Cllr Simon Mabbott	South West of Kirk Hallam	response-01480	Flooding / Drainage	<p>1/. Flood Risk and Drainage Concerns The proposed development presents serious risks to local drainage systems and flood resilience in Kirk Hallam. Converting greenfield land into hard, impermeable surfaces such as roads, rooftops, and pavements will significantly disrupt natural water absorption and increase surface water runoff. 2/. Loss of Natural Drainage Capacity The open fields currently act as a natural drainage system, absorbing rainfall and slowing the flow of stormwater. Paving over this land removes that natural buffer, forcing excess water into an already overburdened drainage network. 3/. Increased Local Flood Risk The additional runoff generated by 1,000 new homes and a bypass could overwhelm existing drainage infrastructure, especially during periods of heavy rainfall. This not only heightens flood risk within the new development itself but also threatens existing homes, roads, and gardens in lower lying parts of Kirk Hallam. 4/. Impact Beyond Kirk Hallam Runoff from the site will inevitably flow downstream, potentially affecting other communities within the Erewash catchment area. The development could contribute to a wider regional flooding problem, with consequences for flood management efforts beyond the immediate site. 5/. Lack of Detailed Drainage Plans So far, no comprehensive or publicly accessible flood risk assessment or drainage strategy has been provided. There is no clear evidence that sustainable drainage systems, attenuation features, or effective runoff controls will be implemented or that they will be sufficient to protect both new and existing properties. 6/. A History of Drainage Issues Parts of Kirk Hallam have already experienced surface water flooding in the past. Residents remain concerned about the area's limited drainage capacity. This development could worsen those issues, especially around key roads and junctions that lie at natural drainage points. Conclusion: An Unacceptable Risk This proposal risks replacing natural flood defences with concrete and tarmac without any clear plan to manage the consequences. Unless a robust, fully funded, and enforceable flood mitigation strategy is presented, this development could put both existing and future homes at serious risk of flooding.</p>
Cllr Simon Mabbott	South West of Kirk Hallam	response-01480	Other	<p>As the newly elected County Councillor for Ilkeston South and Kirk Hallam, I've had to come up to speed quickly on the issues affecting our area. What has stood out most is the strength of feeling and deep rooted pride within the local community, a community that now faces the real risk of losing its identity if this development goes ahead in its current form. Residents are not opposed to all development. They understand the need for growth and are willing to engage constructively. But development must be proportionate, sustainable, and respectful of the character and capacity of the area. It cannot come at any cost. I urge you to ensure that a meaningful and thorough consultation takes place with the people I represent. I would welcome the opportunity to meet, listen, and work together to find a solution that meets future needs without sacrificing the integrity of this community.</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Cole Hawkins	West of Sandiacre	Response-01714	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Cole Hawkins	West of Sandiacre	response-01714	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Cole Hawkins	West of Sandiacre	response-01714	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Cole Hawkins	West of Sandiacre	response-01714	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Cole Hawkins	West of Sandiacre	response-01714	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Cole Hawkins	West of Sandiacre	response-01714	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Cole Hawkins	West of Sandiacre	response-01714	Type of Housing	High density housing is preposterous not in keeping with current housing.
Cole Hawkins	West of Sandiacre	response-01714	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Cole Hawkins	West of Sandiacre	response-01714	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Cole Hawkins	West of Sandiacre	response-01714	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Colin & Cynthia Green	South West of Draycott	Response-00922	Traffic Congestion	Road prone to speeding traffic at anytime even though 30 mph several incidents/traffic accidents recorded plus at least one fatality. Assuming 2 vehicles per new build which is down currently @ 190 homes plus safeguarding area in future, vehicles will be turning out each direction to either Derby or Nottingham so trying to cross this road safely will be dangerous plus children cross this busy road to catch school bus to Friesland etc. Speed watch checks on this stretch should be contacted for their statistics.
Colin & Cynthia Green	South West of Draycott	response-00922	Road Safety	Again, crossing this busy road problematic already so additional 190 homes will increase traffic say 2 vehicles per new build will pose problems to Derby or Nottingham. Not safe to cross now at peak times as no crossing available & speeds in excess of 30 mph now.
Colin & Cynthia Green	South West of Draycott	response-00922	Air Quality	Additional vehicles on road for 190 + new builds affect air quality.
Colin & Cynthia Green	South West of Draycott	response-00922	Wildlife / Biodiversity	Bats apparently in vicinity, different species recorded. Also, badger setts nearby recorded, not to mention hares etc.
Colin & Cynthia Green	South West of Draycott	response-00922	Bus Services	Trent Barton run bus service to Nottingham & Derby, plus school buses to local nearby schools eg Friesland, etc. crossing this busy road with additional vehicles will mean it unsafe for pedestrians to get to use buses for which I am a concessionary bus pass holder & my husband too. Turning in & out onto this stretch of road where bus stops are pose hazards & unsafe.
Colin & Cynthia Green	South West of Draycott	response-00922	School Capacity	Local Draycott infants/primary school not able to extend boundaries so where are extra schoolchildren going to go? Believe school capacity currently about right but extra places will definitely be needed so will be overcrowded.
Colin & Cynthia Green	South West of Draycott	response-00922	Healthcare Facilities	No Dentist either NHS or private in Draycott, no GP surgery in Draycott, nearest Breaston or Borrowwash so Pharmacy will not cover extra patients. Currently, very difficult to get to speak to a GP representative so will only get much worse.
Colin & Cynthia Green	South West of Draycott	response-00922	Type of Housing	Understand the 190+ new builds are some private, proportion social housing but interested to know exactly what is in the pipeline to be built? I have objected about this to EBC & asked who will be allocated these new builds but did not receive exact details, eg will the illegals in this area jump queues or what prices will be asked, are they 2, 3, or 4 beds, are garage spaces for vehicles allocated, so much unknown or we are not told!
Colin & Cynthia Green	South West of Draycott	response-00922	Number of Houses	190 I believe on this green belt land initially with ability to increase number of houses on safeguarded land marked out. This figure is not set in stone & just wonder how many many will be added in future. Madness.
Colin & Cynthia Green	South West of Draycott	response-00922	Green Belt	Green belt for us council tax payers if we were to ask to extend on say, would be denied I'm sure but how come EBC/Government can do just this? Plenty of brownfield areas in Erewash area could be used but no, Greenbelt, which you now call Greybelt which has been overturned by council officials. Once greenbelt has gone, it's gone forever. Also the proposed Pylons due to come through will be affected on this planning, madness again.
Colin & Cynthia Green	South West of Draycott	response-00922	Landscape	Greenbelt, river views which does flood believe it or not, beautiful old trees & hedgerows, will be gone & lost forever if this goes ahead. Wildlife will be affected also of course. Walkers use these footpaths & this will be affected no doubt.
Colin & Cynthia Green	South West of Draycott	response-00922	Flooding / Drainage	Standing water/flooding over years at certain times of course, drainage & sewerage affected by this scheme of new builds. I believe Severn Trent will or should confirm this.
Colin & Cynthia Green	South West of Draycott	response-00922	Other	We strongly disagree with this planning application, using Green Belt when other areas down as Brownfield areas could & should be considered. Concerns over proposed Pylons coming through this area, flooding/drainage unable to cope. Wildlife & trees/hedgerows removed probably or severely affected, species of bats recorded may be wiped out. Infrastructure unsuitable & unable to cope, school places not available, health facilities eg GP appointments or Surgery not able to cope now never mind extra influx of adults & children say 400+ for 190 new homes. Worries over extra vehicles on unsuitable road 30mph should be but speeding due to nature of road set up, railway bridge & incline goes from 30-40 mph where a motorcyclist was killed a couple of years ago towards Derby. We suggest if new homes to be build, EBC consider brownfield areas never Greenbelt .
Colin Billington	West of Sandiacre	Response-00227	Traffic Congestion	Roads too narrow for access
Colin Billington	West of Sandiacre	Response-00227	School Capacity	Schools not big enough

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Colin Ellington	West of Sandiacre	response-01727	Number of Houses	Far too many houses on green belt
Colin Ellington	West of Sandiacre	response-01727	Green Belt	Why not build more near the old golf course
Colin Ellington	West of Sandiacre	response-01727	Other	There are surely other areas of land to build houses on and not on green belt causing congestion
Colin Brewster	North of Breadsall Hill Top	Response-00576	Traffic Congestion	As a resident of Breadsall Village I am well aware of the increased traffic this development will have on the parish. There is no alternative route being put in place to mitigate this situation and once again, as with the Persimmon and Durose developments, all traffic needing to access the A61 and A38 has little choice but to pass through the village. The situation has become dangerous and this development will only serve to make things worse. A solution needs to be found before any further development is allowed to go ahead.
Colin Brewster	North of Breadsall Hill Top	response-00576	Road Safety	The traffic situation in Breadsall Village has become ridiculous. The roads are just not capable of taking the increased flow and road safety has become an increased worry with the relocation of the village school to the main thoroughfare. A solution is needed before any additional development is granted.
Colin Brewster	North of Breadsall Hill Top	response-00576	Air Quality	I have no supporting data, but the air quality must have significantly increased with the vast increase of traffic through Breadsall Village.
Colin Brewster	North of Breadsall Hill Top	response-00576	Wildlife / Biodiversity	The proposed site is currently designated as Green Belt, which was put in place for a reason. It is home to an abundance of ground-based wildlife and visiting birds, it provides coalescence between the city and Breadsall Village. This final piece of countryside, right on the boundary, should not be lost to development. It has remained as Green Belt for many years now and should stay as such
Colin Brewster	North of Breadsall Hill Top	response-00576	Green Belt	It is understood by the community that this location is Green Belt and in recent years has been deemed unsuitable for residential development. If this development was to go ahead Breadsall would automatically become a directly connected suburb of Derby, this should not be allowed.
Colin Brewster	North of Breadsall Hill Top	response-00576	Landscape	If approved this development would obviously bring about a further deterioration of the current landscape. Although my main concern is that Breadsall should not be allowed to be a suburb of Derby.
Colin Brewster	North of Breadsall Hill Top	response-00576	Flooding / Drainage	Breadsall Village is already suffering from the water which is being discharged from both the Persimmon and Durose attenuation systems. Both the attenuation ponds may discharge at an acceptable rate but neither points of discharge are connected directly or indirectly to a water course. This causes significant flooding and damage at several points in the village. This development simply cannot be allowed to do the same as Persimmon has done, and simply let the discharged water flow down to the village. During wet weather we suffer terrible flooding episodes and both EBC and DCC appear to completely ignore our awful predicament. I am really concerned that this development will simply make the situation worse
Colin Brewster	North of Breadsall Hill Top	Response-00576	Other	Mental and Physical Wellbeing This Green Belt land currently provides a green route from Breadsall Village, via the Great Northern Greenway, Oakwood, a route that is well walked by both communities. This open green route undoubtedly provides substantial physical and mental wellbeing to many local people. This again should not be lost to development.
Colin Cox	West of Sandiacre	Response-01716	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Colin Cox	West of Sandiacre	response-01716	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Colin Cox	West of Sandiacre	response-01716	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Colin Cox	West of Sandiacre	response-01716	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Colin Cox	West of Sandiacre	response-01716	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Colin Cox	West of Sandiacre	response-01716	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Colin Cox	West of Sandiacre	response-01716	Type of Housing	High density housing is preposterous not in keeping with current housing.
Colin Cox	West of Sandiacre	response-01716	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Colin Cox	West of Sandiacre	response-01716	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Colin Cox	West of Sandiacre	response-01716	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Colin Marriott	West of Sandiacre	Response-00686	Traffic Congestion	Access to the site would be up Stanton Road, an already congested road. Then onto Coronation avenue, Cloudside Road and Larch Drive which is only just over 5 metres wide and totally unsuitable for heavy traffic
Colin Marriott	West of Sandiacre	response-00686	Road Safety	As in the previous comment an increase in traffic movement increases the risk of accidents especially past either Cloudside Academy or Friesland school
Colin Marriott	West of Sandiacre	response-00686	Air Quality	According to official figures Sandiacre is only just below high levels of pollution due to emissions from the motorway. In addition there is increased incidence of pollution from brake dust and tyres
Colin Marriott	West of Sandiacre	response-00686	Wildlife / Biodiversity	This proposed site is an area of wide biodiversity, a green space full of wildlife, including over 30 species of birds,foxes,rabbits and bats. The adjoining nature reserve of Stoney Clouds would suffer greatly if this was to go ahead. Developers do not care about wild life only profit.
Colin Marriott	West of Sandiacre	response-00686	Bus Services	The i 4 bus service in this area is a godsend especially for elderly people. If this development was to go ahead and with increased traffic movement, congestion on Stanton Road . Could this mean a cancellation of the bus which would lead to some people being unable to get to shops, the Post Office or face a 15 to 20 minute walk to another bus stop.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Colin Marriott	West of Sandiacre	Response-00686	School Capacity	All the local schools are full. Some Sandiacre residents are having to send their children to schools in Stapleford and beyond.
Colin Marriott	West of Sandiacre	Response-00686	Healthcare Facilities	One surgery, full in, one dentist that doesn't accept NHS patients, no pharmacy, A lot of residents use the facilities in Stapleford due to the lack of facilities in Sandiacre. Another reason for keeping the bus services
Colin Marriott	West of Sandiacre	Response-00686	Type of Housing	The site is not suitable for this amount of properties. No details of what the properties would be like.
Colin Marriott	West of Sandiacre	Response-00686	Number of Houses	The density far outnumber those in adjacent areas. The current population of Sandiacre is approximately 8000 but you are trying to increase it by over 5%. Where are these people coming from.
Colin Marriott	West of Sandiacre	Response-00686	Green Belt	This has been a greenbelt since 1951 when the land was sold to Westerman. We don't have enough green space now and once built on they don't come back
Colin Marriott	West of Sandiacre	Response-00686	Landscape	Builders do not care about the landscape only how many houses they can cram on a piece of land, how much profit they will make and planting a few shrubs and trees would not replace what we have.
Colin Marriott	West of Sandiacre	Response-00686	Flooding / Drainage	The infrastructure is over 60 years old and has been subject to burst pipes in recent times. More pressure on an already overstretched system could have a devastating effect. The land at the rear of Sycamore Crescent gets very boggy after heavy rain. Any reduction in land able to soak up rainfall could lead to more run off and potential flooding
Colin Marriott	West of Sandiacre	Response-00686	Other	Official figures state that over 1800 properties lie empty in Erewash, why aren't they being utilised. 5000 on the housing list but only 10% social housing. There are alternative brownfield sites in the area that would be more suitable and cause less disruption. And as a Labour supporter all my life I am disgusted that you are taking the easy option.
Collette Kenny	West of Sandiacre	Response-00579	Traffic Congestion	The Traffic on Stanton Road Especially weekdays during School hours is absolutely ridiculous.. Even the Buses struggle due to the Parking !!! We Don't need Massive Lorries and Plant Machinery Hurting By The Roads are Not Designed For it
Connor Gratton	South of West Hallam	Response-00232	Traffic Congestion	Traffic is already very congested. Further traffic will be untenable
Connor Gratton	South of West Hallam	Response-00232	Wildlife / Biodiversity	This is a very large greenbelt area. I have more concerns over the negative impact on the local wildlife.
Connor Gratton	South of West Hallam	Response-00232	Green Belt	Refer to comments on wildlife.
Connor Gratton	South of West Hallam	Response-00232	Landscape	The area is a commonly-used and very pleasant walking area. Destroying this will have a negative impact on the village.
Connor Gratton	South of West Hallam	Response-00232	Flooding / Drainage	The area already suffers from poor drainage and West Hallam is frequently cutoff following heavy rain. This will further aggravate the situation.
Connor Gratton	South of West Hallam	Response-00232	Other	West Hallam is a greenbelt area which is surrounded by fields. In addition to the immediate negative impact of the development, there is a significant risk that this will set a harmful precedent for future damaging developments.
Connor Murfin	West of Sandiacre	Response-00926	Traffic Congestion	It is already congested as it is round that area, this allocation will make it even worse.
Connor Murfin	West of Sandiacre	Response-00926	Wildlife / Biodiversity	We need to protect the rest of the nature we have left, it is very important to preserve this area.
Connor Murfin	West of Sandiacre	Response-00926	Green Belt	The green belt needs to be protected at all costs. If this allocation gets approved then what's to stop more allocations being permitted and then they'll be nothing of the green belt left.
Connor Murfin	West of Sandiacre	Response-00926	Other	These houses will most be most probably being built for migrants who are illegally in this country, so your housing people that are not even contributing to society, never will and draining the countries money.
Coral Bradley	North of Breadsall Hill Top	Response-00862	Wildlife / Biodiversity	Please do not build on this land. It's next to a beautiful wood that lots of people use and visit to look at the wildlife. We have already had two housing estates built close to us in the last few years. We can't cope with more impact on the environment and other factors like doctors etc. we would urge you to look elsewhere for housing
Corrina loosemore	West of Sandiacre	Response-00589	Traffic Congestion	180 cars extra Existing roads already struggling with extra traffic Busses have to drive on pavements
Corrina loosemore	West of Sandiacre	Response-00589	Road Safety	As before
Corrina loosemore	West of Sandiacre	Response-00589	Air Quality	At least 180 cars and more will pollute the atmosphere Trees will be remove which means carbon will not be removed naturally
Corrina loosemore	West of Sandiacre	Response-00589	Wildlife / Biodiversity	Badgers ,voles ,shrew,slow worms Birds Trees Native bluebells
Cory page	North of West Hallam	Response-01425	Traffic Congestion	The road is busy, I often walk my dog and to cross this road can take 10 to 15 minutes at times.
Cory page	North of West Hallam	Response-01425	Road Safety	Cars travel at speed on this road, we've witnessed near misses and accidents and have only lived here for 7 months.
Cory page	North of West Hallam	Response-01425	Air Quality	More people more pollution and ruining the wildlife and increasing this pollution is selfish.
Cory page	North of West Hallam	Response-01425	Wildlife / Biodiversity	I enjoy watching the badgers at night, foxes can be found here. Birds nesting in the trees.
Cory page	North of West Hallam	Response-01425	Bus Services	There are barely any buses, I rely on my bike.
Cory page	North of West Hallam	Response-01425	Flooding / Drainage	The land proposed does flood and has done in the past.
Courtney Bennett	West of Sandiacre	Response-00593	Traffic Congestion	There is already enough heavy traffic through the area of Sandiacre causing enough noise and air pollution that devalues the houses already in the area, causes damage to roads (such as potholes that are not repaired) and causes dust on the roads and in the air.
Courtney Bennett	West of Sandiacre	Response-00593	Road Safety	The roads in the area are already dangerous with no or very little safe pavement / paths. There is already a danger to the public because of this and this is going to increase the footflow as well as increase the chance of potential accidents and deaths. Increased traffic volumes, improper footpaths, crossing spaces, overgrown & damaged footpaths meaning increased chance of accident.
Courtney Bennett	West of Sandiacre	Response-00593	Air Quality	There are already several large construction vehicles that pass through Sandiacre causing dust in the air and on the roads. Having the area dug up and general constructions works is going to cause further air pollution and poor quality of air for the current residents, wildlife and children.
Courtney Bennett	West of Sandiacre	Response-00593	Wildlife / Biodiversity	Sandiacre is one of the very last few towns in the area that has so much beautiful green spaces for natural wildlife, exploration, walks, children so why destroy that? Wildlife population such as birds, badgers, foxes, insects (including bees) are already depleting. We should be doing everything we can to protect them and the world around us by planting more trees, plants and encouraging wildlife to populate as well as providing a green open space environment for children to explore, play in and learn about.
Courtney Bennett	West of Sandiacre	Response-00593	Bus Services	The bus services in the area is already inconsistent. This will cause more people to use cars and motorbikes increasing the road congestion even more, polluting the air even more, increasing the risk of antisocial behaviour towards pedestrians and transport services when there aren't enough services to provide for the residents as is.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Courtney Bennett	West of Sandiacre	Response-00593	School Capacity	schools are already underfunded, overran, uncontrollable students, under resourced so presumably a least a minimum of 2 nurseries, 2 primary schools and 2 secondary schools are going to be built and included in this plan to accommodate for the increase education needs as well as help with the already struggling education sectors in the area? Education is so important. Why don't we spend the time educating the current residents and children on the green spaces we have left. Provide education on how to look after our planet environment and wildlife. Provide a public greenhouse or allotments for the residents to have and use to assist with mental & physical health, to provide education to the younger generations to provide education to growing fruit and vegetables while keeping a safe space for wildlife to thrive.
Courtney Bennett	West of Sandiacre	Response-00593	Healthcare Facilities	As like the schools, the healthcare sector is also already overran, underfunded, understaffed, unsupported. Are you building an additional 2 doctors practices and pharmacies to aid the increased proposed population? You are just adding and causing more physical and mental problems to the current residents by increasing the amount of people in the area when the education and health care sectors in this area are already struggling.
Courtney Bennett	West of Sandiacre	Response-00593	Type of Housing	The majority of the new build houses don't have gardens or adequate green spaces. These houses need to be detached or semi detached and all have mandatory gardens with trees that are legally not allowed to be removed as well as plants, grass verges so that the wildlife in the area can still attempt to have a home and some quality of life. There are already so many empty houses in the area that can be repurposed, reused and recycled because of the unaffordable housing crisis. Why don't we reuse and recycle what we already have instead of killing a green space.
Courtney Bennett	West of Sandiacre	Response-00593	Number of Houses	The number of house needs to be reduced by a minimum of half if not more! It would be even better if no houses were built at all.
Courtney Bennett	West of Sandiacre	Response-00593	Landscape	Stop destroying beautiful landscapes and green areas! Sandiacre is so very lucky to have so many pockets of green open spaces with a variety of wildlife, trees and plants that people of all ages can enjoy. Where is the wildlife going to go when we destroy there home? Where are dog walkers going to go when we destroy the fields? Where are children going to play, learn and enjoy the outdoor natural spaces when it's all gone and there is nothing left.
Courtney Bennett	West of Sandiacre	Response-00593	Flooding / Drainage	The area already floods and there is no proper drainage plan. It's common knowledge that new build houses are so poorly built that they flood and have so many issues with flooding and removal of the increased heavy rainfall each year. Building on land where water escapes is only going to cause the flooding to increase in the area. The water has to go somewhere and has to drain somewhere.
Courtney Bennett	West of Sandiacre	Response-00593	Other	Stop killing wildlife, stop killing trees, stop killing plants. Please be mindful, sustainable and responsible for keeping our environment clean, environmentally friendly and pleasurable to the eye, soul and mind.
Courtney Hodges	Acorn Way, Derby	Response-00403	Traffic Congestion	Too much traffic on an already busy road which is one of the only ways in or out of Oakwood. This will have a huge effect on peak rush hour traffic also
Courtney Hodges	Acorn Way, Derby	Response-00403	Road Safety	Acorn Way is a fast paced road, with no pavement which is incredibly busy throughout the day. Adding more traffic onto the road will make this unsafe for pedestrians and other road users
Courtney Hodges	Acorn Way, Derby	Response-00403	Bus Services	As our buses have recently been changed, having more houses added will mean the bus services are more busy and will take longer to get into town. This will result in people driving to work, instead of getting the bus
Courtney Hodges	Acorn Way, Derby	Response-00403	School Capacity	Living in Oakwood now, we will struggle when our child is old enough to get into the one school that Oakwood has, meaning our child will have to go to a school in Chaddesden, taking a space from another child who lives in Chaddesden
Courtney Hodges	Acorn Way, Derby	Response-00403	Healthcare Facilities	Same as the schools, having 2 doctors surgeries which we cannot get an on the day appointment, adding more people will make this even worse than it already is
Courtney Hodges	Acorn Way, Derby	Response-00403	Flooding / Drainage	The fields flood when it rains in huge amounts, including spilling onto the road which results in the road closing. Adding houses onto the fields will only increase this flood risk
C Owen	West of Sandiacre	Response-01917	Traffic Congestion	The roads are not built for all the traffic it has at the moment, let alone the construction traffic and all the new homes with their vehicles.
C Owen	West of Sandiacre	Response-01917	Air Quality	The air quality is bad enough now with the M1 motorway which is not being monitored, so it's only going to get worse.
C Owen	West of Sandiacre	Response-01917	Wildlife / Biodiversity	The area is full of our local wildlife that will be lost & it will never return.
C Owen	West of Sandiacre	Response-01917	Healthcare Facilities	The area does not have the infrastructure for all the proposed construction & the people going to live there.
C Owen	West of Sandiacre	Response-01917	Green Belt	This green belt has been part of my life since childhood. It's a nature reserve & needs to be protected.
Craig Freeman	West of Sandiacre	Response-01561	Traffic Congestion	It is already very congested to drive anywhere towards Larch Drive for the handful of cars that have to go this far back from Stanton Road. Increasing the volume of traffic these access roads would be dangerous and cause bottlenecks for all users. Often cars are already frequently driving onto pavements to avoid blockages and this will only increase causing significant danger to pedestrians and frustrations to drivers.
Craig Freeman	West of Sandiacre	Response-01561	Road Safety	It is already very congested to drive anywhere towards Larch Drive for the handful of cars that have to go this far back from Stanton Road. Increasing the volume of traffic these access roads would be dangerous and cause bottlenecks for all users. Often cars are already frequently driving onto pavements to avoid blockages and this will only increase causing significant danger to pedestrians and frustrations to drivers.
Craig Freeman	West of Sandiacre	Response-01561	Air Quality	Although we have the conservation area as a cleaner space to walk and exercise our dogs, the quality will probably be decreased due to additional traffic so close, in addition to the Motorway noise and air pollution.
Craig Freeman	West of Sandiacre	Response-01561	Wildlife / Biodiversity	There is evidence of badgers and my wife has often seen deer in the conservation area, often in the woods backing on to the horse fields. Filling this space with housing will likely drive this wildlife away or destroy the habitat they rely on.
Craig Freeman	West of Sandiacre	Response-01561	Bus Services	Buses can only loop around Coronation Avenue and Maple Drive. These buses often have to use the pavements to navigate around the narrow turns. This will require many people having to walk down from the new estate to a very limited number of ref bus stops, potentially requiring more frequent buses along congested and narrow roads.
Craig Freeman	West of Sandiacre	Response-01561	School Capacity	Cloudside Academy is a great school and already seems to be bursting at the seams to accommodate the number of children that wish to attend. I don't see how this could accommodate more children from the new development without having to extend and reduce the green space the children enjoy on the existing school premises.
Craig Freeman	West of Sandiacre	Response-01561	Healthcare Facilities	Adam House is the only health service in Sandiacre and it is already almost impossible to get an appointment, especially if you work full time. Increasing the demand on this poor facility will only cause more frustration, more delays to primary care and increased cost for remedial action and treatments.
Craig Freeman	West of Sandiacre	Response-01561	Number of Houses	180 dwellings in such a narrow space so close to the motorway is not very desirable for the residents, and will potentially create a future problem if not attracting a healthy diversity of income families.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
			Green Belt	It's clearly taking green belt away, and in such a way that it is immediately adjacent to a conservation area.
Craig Hydes	West of Borrowwash	Response-00782	Traffic Congestion	This site will heavily impact accessibility to the nearby coop and local amenities.
			Road Safety	Road safety on Derby Road and Victoria Avenue will be severely increased.
Craig Hydes	West of Borrowwash	Response-00782	Wildlife / Biodiversity	Nesting barn owls, bats, lapwing, will all be affected.
Craig Hydes	West of Borrowwash	Response-00782	School Capacity	The two primary schools located in Borrowwash and Ockbrook are at full capacity and there is an annual difficulty on getting a child place in catchment. I had this issue with both my children.
Craig Hydes	West of Borrowwash	Response-00782	Healthcare Facilities	The local NHS dentist is full to capacity, and I have been on the waiting list for several years.
Craig Hydes	West of Borrowwash	Response-00782	Type of Housing	A new housing estate and quality will not be with in keeping of the local heritage of the area. The new houses of recent are built of poor quality and will look an eyesore.
Craig Hydes	West of Borrowwash	Response-00782	Landscape	The change of landscape will significantly impact Borrowwash, west. The new house builds will no doubt promote social housing or provide accommodation for legal immigrants. This will lower the quality of people in the area as Derby City has quickly deteriorated over a few short years. The house prices will be heavily impacted driving long time residents away which would leave a bad taste in people's mouth.
Craig Hydes	West of Borrowwash	Response-00782	Flooding / Drainage	The bulk earthworks in the surrounding areas are built up of significant quantities of clay. Drainage is poor for existing property owners on Field Close and Victoria Avenue. Flooding is a problem and we personally suffer every year.
Craig Hydes	West of Borrowwash	Response-00782	Other	Accessibility on and off the A52 will be massively impacted. Historic dog walking routes will be ruined.
Craig Johnston	South of West Hallam	Response-00234	Traffic Congestion	Roads not adequate
Craig Johnston	South of West Hallam	Response-00234	Road Safety	Beech lane is already congested and unsafe
Craig Johnston	South of West Hallam	Response-00234	School Capacity	School is at capacity already
Craig Johnston	South of West Hallam	Response-00234	Number of Houses	Estate is already big enough for the infrastructure
Craig Richards	West of Sandiacre	Response-01638	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Craig Richards	West of Sandiacre	Response-01638	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Craig Richards	West of Sandiacre	Response-01638	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Craig Richards	West of Sandiacre	Response-01638	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Craig Richards	West of Sandiacre	Response-01638	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Craig Richards	West of Sandiacre	Response-01638	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Craig Richards	West of Sandiacre	Response-01638	Type of Housing	High density housing is preposterous not in keeping with current housing.
Craig Richards	West of Sandiacre	Response-01638	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Craig Richards	West of Sandiacre	Response-01638	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Craig Richards	West of Sandiacre	Response-01638	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Craig Thims	West of Sandiacre	Response-01765	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Craig Thims	West of Sandiacre	Response-01765	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Craig Thims	West of Sandiacre	Response-01765	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Craig Thims	West of Sandiacre	Response-01765	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Craig Thims	West of Sandiacre	Response-01765	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.

Dale bush	South of West Hallam	Response-01542	Other	Roads are already hazardous around beech Lane and the playing field and school, damaging to deerland increased risk of flooding in the area. The doctors is already busy the village does not have the infrastructure for this site to go ahead.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Dale Hartow	West of Borrowwash	Response-00887	Traffic Congestion	Traffic onto the A52, Victoria avenue leading to ockbrook, at borrowwash cross roads and leading into spondon will be more hectic, especially in peek travel times causing major disruptions to travel and infrastructure along with the school traffic already causing delays and issues. More housing will cause major delay.
Dale Hartow	West of Borrowwash	Response-00887	Road Safety	There is only one pedestrian crossing at the coop crossroad. There is not enough infrastructure for people?s safety when crossing busy areas and the small shopping area of coop and birds will be heavily populated with cars which already has limited child spots and very few disabled bays
Dale Hartow	West of Borrowwash	Response-00887	Air Quality	Less farm land and fields, more cars and traffic causing much more air pollution
Dale Hartow	West of Borrowwash	Response-00887	Wildlife / Biodiversity	Losing fields will risk wildlife to reduce massively
Dale Hartow	West of Borrowwash	Response-00887	Healthcare Facilities	The doctors has applied for an extension but is under staffed regardless
Dale Hartow	West of Borrowwash	Response-00887	Type of Housing	New Housing will not be fitting for the area
Dale Hartow	West of Borrowwash	Response-00887	Green Belt	Losing natural green belt
			Flooding / Drainage	Losing fields which are used as natural flood banks and soak aways will cause more surface water, larger puddles and cause long term flooding issues
Dale Longmuir	South West of Draycott	Response-01543	Air Quality	Reduce greenery and wildlife will change the quality of the air, more traffic and pollution from cars will also reduce air quality, this area is a nice peaceful village with a lot of greenery around you cant change that. People wont have as many areas to go for walks to enjoy their local area and to clear their minds
Dale Longmuir	South West of Draycott	Response-01543	Wildlife / Biodiversity	The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt.
Dale Longmuir	South West of Draycott	Response-01543	Green Belt	The land is a key feature of draycott introducing wildlife and a clean space you will destroy so much and there is much more suitable land to build on do not ruin such a nice area! "NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels of land as identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. "
Dale Longmuir	South West of Draycott	Response-01543	Flooding / Drainage	This land is apart of our flood fields, the newly built houses will suffer devastating floods as well as the concrete and housing will make it so that the ground cant prevent the water from getting to other houses which shouldn't flood, roads will be closed, this will have a massive affect on so many homes and roads influengin traffic and quality of life.
DAllen	West of Sandiacre	Response-00525	Traffic Congestion	Definitely more cars on the road which will affect traffic which is already congested due to fourway traffic lights in Sandiacre bridge
DAllen	West of Sandiacre	Response-00525	Air Quality	More cars ie pollution to the environment plus upheaval and congestion whilst building
DAllen	West of Sandiacre	Response-00525	Wildlife / Biodiversity	Spoiling the green belt land as we walk in this area
DAllen	West of Sandiacre	Response-00525	School Capacity	School placement always an issue and class sizing will also be affected and not conducive to learning
DAllen	West of Sandiacre	Response-00525	Healthcare Facilities	Doctors surgeries locally will be affected by this as at present there is an overload of dr to patient ratios
DAllen	West of Sandiacre	Response-00525	Green Belt	The land should be kept as green belt to preserve the habitats that exist there
Dana	West of Sandiacre	Response-01173	Traffic Congestion	Will add to congestion at M1 roundabout
Dana	West of Sandiacre	Response-01173	Wildlife / Biodiversity	Need to preserve gree spaces not destroy them
Dana	West of Sandiacre	Response-01173	Healthcare Facilities	Not even a chemist in Sandiacre now
Dana	West of Sandiacre	Response-01173	Green Belt	We shouldn't be destroying wildlife habitats and local beauty spots
Dana Demidoff	North of Breadsall Hill Top	Response-00634	Traffic Congestion	inadequate road infrastructure
Dana Demidoff	North of Breadsall Hill Top	Response-00634	Wildlife / Biodiversity	This is surely an important health not just for wildlife but for people's mental health
Dana Demidoff	North of Breadsall Hill Top	Response-00634	Healthcare Facilities	Again no infrastructure
Dana Demidoff	North of Breadsall Hill Top	Response-00634	Green Belt	This flies in the face of previous Strategic Housing Land Availability Assessment 359 on the site, as unsuitable for residentia development, plus, as already mentioned, a total lack of intent to upgrade inadequate infracture. This also ensures Breadsall becomes a suburb of Derby. NO protection of Green Belt land and completely ignoring the main clauses in the National Planning Policy Framwork.
Dana Demidoff	North of Breadsall Hill Top	Response-00634	Flooding / Drainage	Where is the drainage infrastructure
			Other	Why must you do this instead of encouraging recycling of derelict and other urban land
Daniel	West of Sandiacre	Response-00545	Traffic Congestion	The local roads at the top of the estate and surrounding avenues, are already narrow with kerbside parking on both sides. This significantly reduces the effective road width, leaving very little space for two-way traffic and emergency vehicle access. There is a particularly hazardous blind corner on cloud side road, creating an unsafe environment for both pedestrians and drivers. Introducing a large volume of new traffic will dramatically increase the risk of road traffic collisions. An additional 180 homes could conservatively result in over 300 additional vehicles (assuming an average of 1.7 cars per household), further congesting roads that were not designed for such capacity.
			Road Safety	Further to my comments on traffic, the blind corner and kerb parked cars are a really problem when considering the volume of traffic you are insisting upon

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Daniel	West of Sandiacre	Response-00545	Air Quality	More vehicles mean more exhaust emissions, contributing to poorer air quality in a primarily residential area where children walk to school and residents engage in outdoor activities. The development's proximity to the M1 already subjects residents to elevated noise levels. Increasing local road traffic will only worsen this issue, impacting overall wellbeing. The proposed site is adjacent to a nature reserve area, as shown on the map. The increase in noise, litter, and human intrusion will have a detrimental effect on local wildlife and biodiversity.
Daniel	West of Sandiacre	Response-00545	Wildlife / Biodiversity	The proposed development borders a nature reserve and mature green space, which currently supports a range of local wildlife including birds, bats, foxes, and potentially protected species. Increased human presence, noise, lighting, and domestic pets will disrupt these ecosystems irreparably. Once natural habitats are lost, they are almost impossible to recover. This development directly threatens local biodiversity and undermines efforts to preserve green corridors for wildlife.
Daniel	West of Sandiacre	Response-00545	Bus Services	The local council in my opinion runs a good public transport system however adding. Adding 180 new households will put pressure on this and lead to a inferior service. Without significant investment in bus infrastructure, the majority of new residents will rely on private vehicles, which will worsen congestion and pollution.
Daniel	West of Sandiacre	Response-00545	School Capacity	Local primary and secondary schools are already at or near capacity. The influx of families from 180 new homes will put unsustainable pressure on these facilities. There is no evidence in the planning documents that new educational infrastructure will be created or that schools have room to expand.
Daniel	West of Sandiacre	Response-00545	Healthcare Facilities	GP surgeries and local NHS services are already overstretched, with long wait times and limited availability. An increase of potentially hundreds of new residents will put further pressure on these essential services without any guarantee of expansion or additional funding. Are you going to build a new GP office or hire more doctors?
Daniel	West of Sandiacre	Response-00545	Type of Housing	Who exactly is this housing for? To my understanding this is part of the government scheme to build a million new homes, but the houses here are mostly privately owned, is this new social homing? who is living there exactly? While affordable housing is important, clustering large numbers of social homes in one area with a class disparity without proper infrastructure or amenities risks creating social imbalance and strain on local services.
Daniel	West of Sandiacre	Response-00545	Number of Houses	180 is an obscene amount for the type of land were talking about for such a small amount of land which such massive disadvantages.
Daniel	West of Sandiacre	Response-00545	Landscape	The development will significantly alter the semi-rural character of the area. What is currently a quiet, low-density neighbourhood will become crowded and urbanised. Views across green space and the sense of openness will be permanently lost, diminishing the aesthetic and recreational value of the area.
Daniel	West of Sandiacre	Response-00545	Flooding / Drainage	The area is on a slope and currently benefits from natural drainage through the green space. Removing trees and topsoil will increase surface runoff, heightening the risk of flooding for existing homes, especially those at lower elevations. Local drainage systems are already dated and often strained during periods of heavy rain.
Daniel	West of Sandiacre	Response-00545	Other	Let me be absolutely clear: this proposed development is not just inappropriate, it is an insult to the local community. Every single point raised in this objection, traffic chaos, lack of infrastructure, strained schools and GP services, environmental destruction, flooding risk, and irreversible harm to our local landscape, has been echoed by countless residents who live here and care about this area. If this application is approved despite the overwhelming and reasoned objections from those who actually live, work, and raise families here, it will serve as undeniable proof that public consultation is nothing more than a checkbox exercise. If community voice holds no weight in the planning process, then what we have is not democracy, it is dictatorship under the guise of due process. Let's talk plainly. This land was sold approximately four years ago. It is glaringly obvious that the current owner, likely a developer or an entity working with one, purchased this land with the intent of pushing through a housing scheme, regardless of the suitability or local needs. This isn't a community-driven initiative. This isn't local regeneration. This is opportunism, pure and simple, and trying to pass it off as beneficial or necessary is not only disingenuous, it is outright dishonest. You do not need a degree in planning to see what is going on here: a green buffer next to a motorway is being targeted for high-density housing, with zero meaningful investment in infrastructure to support it. And you expect residents to accept this under the illusion of progress? We are watching. And should this be approved, it will be remembered as a blatant example of a council putting profit and policy ahead of people. If you push forward with this plan, despite the logic, the reasoning, and the overwhelming public outcry, then let history show that you didn't just ignore us, you damaged the democratic system.
Daniel Clark	North of West Hallam	Response-01091	Traffic Congestion	The Village is already busy with poor access at school and busy times. The parking in and around the village is dangerous and congested
Daniel Clark	North of West Hallam	Response-01091	Road Safety	Busy with cars parked everywhere now. Adding potential traffic to a area that has high parking and traffic issues now. Is ridiculous and this will have more people coming in to the village to use the shops and schools.
Daniel Clark	North of West Hallam	Response-01091	Wildlife / Biodiversity	We live in a village for the wevis and wildlife and more houses should not be approved to this beautiful area
Daniel Clark	North of West Hallam	Response-01091	Bus Services	They struggle to manoeuvre now with the high traffic and small roads and more houses in the area will make it worse
Daniel Clark	North of West Hallam	Response-01091	School Capacity	There is no parking now at the school making it dangerous for drivers and children with cars parked on the narrow roads and your perposal will add to this. There is no way of expanding the school to accommodate more children
Daniel Clark	North of West Hallam	Response-01091	Landscape	This will ruin the landscape and the nature around the area
Daniel Clark	South of West Hallam	Response-01094	Traffic Congestion	Traffic Congestion The Village is already busy with poor access at school and busy times. The parking in and around the village is dangerous and congested
Daniel Clark	South of West Hallam	Response-01094	Road Safety	Busy with cars parked everywhere now. Adding potential traffic to a area that has high parking and traffic issues now. Is ridiculous and this will have more people coming in to the village to use the shops and schools.
Daniel Clark	South of West Hallam	Response-01094	Wildlife / Biodiversity	We live in a village for the wevis and wildlife and more houses should not be approved to this beautiful area
Daniel Clark	South of West Hallam	Response-01094	Bus Services	They struggle to manoeuvre now with the high traffic and small roads and more houses in the area will make it worse
Daniel Clark	South of West Hallam	Response-01094	School Capacity	There is no parking now at the school making it dangerous for drivers and children with cars parked on the narrow roads and your perposal will add to this. There is no way of expanding the school to accommodate more children
Daniel Downes	West of Sandiacre	Response-01630	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Daniel Downes	West of Sandiacre	response-01630	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. Daniel Downes	West of Sandiacre	response-01630	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Daniel Downes	West of Sandiacre	response-01630	Type of Housing	High density housing is preposterous not in keeping with current housing.
Daniel Downes	West of Sandiacre	response-01630	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Daniel Downes	West of Sandiacre	response-01630	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Daniel Downes	West of Sandiacre	response-01630	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Daniel Hands	West of Sandiacre	Response-00057	Traffic Congestion	To access the site would mean increased traffic on an already busy enclosed estate. The roads, layout and current number of cars per residency are already creating issues in and around the area, especially around peak school hours when there is often gridlock caused by the number vehicles trying to access or exit the estate. At weekends when residents use on street parking, this creates further issues as lorries and large vehicles struggle to navigate through. To increase the number of vehicles trying to access this site will only negatively impact residents and will create increased frustration and risk. The current bus route is often blocked as the streets are simply not wide enough to accommodate parked vehicles and larger vehicles such as buses. I dread to think what would happen if a fire engine were to try to gain access at these times.
Daniel Hands	West of Sandiacre	response-00057	Road Safety	At the bottom of the estate is Cloudside junior school, at the is Friesland comprehensive. These area and the surrounding roads are an accident waiting to happen, with cars parked on pavements, blind bends, turning spaces, double parked and/or blocking residents access and egress to their properties. The number of vehicles trying to access the area often creates gridlock and creates increased risks for both pedestrians and drivers alike as both are put under more pressure due the standoffs created. It is not unusual for drivers to mount and drive on the footpath simply to relieve the stalemate in traffic. To further increase the number of vehicles on and off this estate is not only dangerous, but also a further frustration for residents who battle these streets on a daily basis
Daniel Hands	West of Sandiacre	response-00057	Wildlife / Biodiversity	With dwindling areas left to wilderness, to further decrease any green space in any shape and form can only negatively impact wildlife, flora and fauna. Not to mention the impact decreased open spaces and increased development will have on people's mental and social wellbeing.
Daniel Hands	West of Sandiacre	response-00057	School Capacity	Where will the extra children go? The schools we have, are already very nearly at full capacity. To increase this capacity would mean exceeding their already over stretched resources. Classes are already overwhelmed, teachers do not have enough time to dedicate quality 1-2-1 support for students as it is. The resources schools have available and the budgets allowed do not lend themselves to delivering quality curriculum and development of our youngsters as they are now. To simply add to these dynamics will only serve to further dilute and weaken an already overstretched system.
Daniel Hands	West of Sandiacre	response-00057	Healthcare Facilities	All local doctors, dentists and other health care facilities such as mental health services and pediatricians are already overloaded. We already have to wait weeks or months to see professionals and receive the help and care needed to protect our families. QMC hospital often sees waiting time of several hours, with many residents reporting A&E waiting times exceeding 8 hours.
Daniel Hands	West of Sandiacre	response-00057	Type of Housing	The current desirability of the area is largely due to type and scope of houses that make up the surrounding area. Maple avenue for example is made up largely of self build and small development properties which offer a wide range and variation on sizes and layouts. Where as the ex council houses that make up the majority of housing in the area offer larger gardens good sized rooms and potential future development for occupiers. These ideals are not seen in modern developments where space is at a premium and housing is built for profit and to maximise budgets. I think the type of housing would need to accommodate families and meet the same desirabilities offered by the current housing stock in the area.
Daniel Hands	West of Sandiacre	response-00057	Number of Houses	To add another 180 residencies to this area seems unrealistic and not in keeping with the wants, needs or opinions of the current residents. 30 - 50 would be more realistic and could be built to be more inkeeping with the area
Daniel Hands	West of Sandiacre	Response-00057	Green Belt	The idea of greenbelt land is to prevent urban sprawl. By removing, reducing or reclassifying green belt goes against the core principles of establishing protected areas and boundaries in the first place, especially as there are already derelict and undeveloped brownfield sites in and around the local area. These remain undeveloped and unused, which not only creates an eyesore on the community but also attracts various anti social behaviours and incidents. To ignore these blights on our community landscape while we are expected to engage and agree to further loss of natural and green spaces for residents to enjoy, seems a little far suited to cost over common sense OR the views and opinions of local residents.
Daniel Hands	West of Sandiacre	response-00057	Flooding / Drainage	While drainage in the immediate area may not be an issue, the increased pressure on the systems downhill of the site cannot be overlooked. Areas at the base of the hill have seen increased flooding over recent years, with the river erwash regularly bursting it's banks and the erwash canal bursting in 2023.

Daniel Hands	West of Sandiacre	Response-00057	Other	This entire process has seemed underhand by Erewash borough Council and it seems they have done their utmost to minimise the consultations and engagement from residences. It is clear that those supporting these developments either have alteria motives and incentives , or are completely out of touch with their constituents and deny that their views are worth considering. I have yet to meet another local resident that supports this development. I feel betrayed by this council and the government that supports it. It is not the first time this Council has faced scrutiny over its planning decisions and the effects its incompetence has had on the local communities. I for one would welcome a full public enquiry into Erewash Council and it's operations, as they seem more interested in profitability than community.
Daniel hickson	South of West Hallam	Response-00177	Traffic Congestion	Very busy road especially when school starts and ends
Daniel hickson	South of West Hallam	Response-00177	Road Safety	Children getting dropped off and collected at school
Daniel hickson	South of West Hallam	Response-00177	Air Quality	Children playing out at park and school which will suffer
Daniel hickson	South of West Hallam	Response-00177	Wildlife / Biodiversity	Ecosystem will be damaged
Daniel hickson	South of West Hallam	Response-00177	School Capacity	School is only small and classes are at a maximum at Scargill
Daniel hickson	South of West Hallam	Response-00177	Green Belt	Will ruin the cricket club with houses backing onto the ground
Daniel hickson	South of West Hallam	Response-00177	Landscape	Will be ruined
Daniel Lang	West of Borrowwash	Response-00322	Traffic Congestion	At peak times there are already queues around borrowwash junction. The additional traffic will only make this worse. Additionally there will need to be yellow lines on Derby road as parked cars often exacerbate the problem.
Daniel Lang	West of Borrowwash	Response-00322	School Capacity	There will need to be additional places available to go with the increase in population.
Daniel Lang	West of Borrowwash	Response-00322	Healthcare Facilities	The local GP practices are already massively oversubscribed. It is virtually impossible to get an appointment. There will be a desperate need to bring in another surgery or expand the current one
Daniel Lang	West of Borrowwash	Response-00322	Type of Housing	Borrowwash is a peaceful and quiet village. Assurances will need to be made that the 40% of affordable houses are in keeping with the area. Nobody wants anti social behaviour.
Danielle Andrews	Acorn Way, Derby	Response-01244	Traffic Congestion	Morley Road already struggles to accommodate traffic flow to and from the school, there is no safe way to funnel traffic for upwards of 1000 extra people onto acorn way and the congestion on Morley Road will be significant. This road is full of speed bumps and cars parked on the roadside limit traffic flow further
Danielle Andrews	Acorn Way, Derby	Response-01244	Road Safety	Hundreds of children use this road daily and the traffic levels are already high. Concerns with how the extra traffic flow would exit onto Morley Road
Danielle Andrews	Acorn Way, Derby	Response-01244	Air Quality	The level of proposed housing feels extremely large for the area. With an extra 1000 plus people, there is likely to be a similar quantity of cars which the road isn't designed for.
Danielle Andrews	Acorn Way, Derby	Response-01244	Wildlife / Biodiversity	I disagree wholeheartedly with the scale of housing proposed for the green belt land, alongside increasing traffic and reducing safety on a school route, removing all green land is detrimental to both the environment and the general populace. Preserving areas for green space should be considered in any planning on this area to encourage biodiversity
Danielle Andrews	Acorn Way, Derby	Response-01244	Bus Services	The bus service already is adequate on this route, this service isn't excessively used and extra funding should go towards retaining biodiversity and green space around housing
Danielle Andrews	Acorn Way, Derby	Response-01244	Healthcare Facilities	Chaddesden park medical is an incredibly busy practice. It can take hundreds of attempts to get through in a morning and appointments are incredibly limited. I will often drive to borrowwash for appointments as chaddesden practice has overflowed. I don't believe the service can handle so many extra people
Danielle Andrews	Acorn Way, Derby	Response-01244	Number of Houses	This is my greatest concern. Removing all of the green space on the Morley Road side of acorn way and filling it to maximum capacity will put a strain on roads, schooling, doctors and reduce biodiversity and the ability to enjoy green space. Some of this land should be preserved. 550 homes is huge surge in populace in an area that is already very busy and will remove the last of the large green space
Danielle Andrews	Acorn Way, Derby	Response-01244	Green Belt	We purchased a home knowing we would have access to public footpaths through fields and that this was green belt land. How easily green belt is removed calls into question whether this is truly protected land. To not preserve any of the land on this side of acorn way is a travesty. Even a reserved section like chaddesden wood would benefit the new housing estates and preserve green land
Danielle Andrews	Acorn Way, Derby	Response-01244	Flooding / Drainage	Derby is already an area that struggles with flooding. Removing all green land will increase risk in the area
Danielle Harrison	West of Sandiacre	Response-00568	Traffic Congestion	This is already a densely populated estate. I have witnessed the bus and ambulance crews, struggle to navigate the routes through the estate due to the volume of parked cars and lack of off-road parking. An additional 180 homes, each with multiple vehicles, is sure to add greater congestion and pollution.
Danielle Harrison	West of Sandiacre	Response-00568	Road Safety	Cloud side school congestion at drop-off and pick-up times makes Stanton Road impassible. If you extend the estate, with more families accessing this education provision, the local roads will become more hazardous.
Danielle Harrison	West of Sandiacre	Response-00568	Air Quality	No brainer. If you build on green belt the air quality will decrease. The motorway has already increased the carbon monoxide levels in my body. As a non-smoker my midwife could not believe my readings and she asked directly if I lived close to a motorway. A housing estate of this size will increase poor air quality readings.
Danielle Harrison	West of Sandiacre	Response-00568	Wildlife / Biodiversity	This is a green belt corridor for foxes, badgers and hedgehogs. I have seen families of foxes at twilight traversing this field the reach the woodland connected to stoney cloud. The foxes use the woodland corridor right along the motorway edge. This land would make a beautiful rewilding project for the local community. The amount of butterflies and moths viewed in the hedgerow grasses is testament to its biodiversity potential. A study must be done.
Danielle Harrison	West of Sandiacre	Response-00568	Bus Services	The bus route through the estate already struggles to navigate the roads, this will be increased with a further highly populated estate is built with poor access routes to it.
Danielle Harrison	West of Sandiacre	Response-00568	School Capacity	Cloudside primary school and Friesland Secondary School are already popular and over subscribed schools. The local amenities do not support an additional 180 family unit in the area.
Danielle Harrison	West of Sandiacre	Response-00568	Healthcare Facilities	Adam House Surgery struggles to meet the needs of locals as it is. On average we have waited up two weeks to get a doctors appointment in our household and rely on the 111 helpline because the service is so poor. The dentists are also at total capacity and we are unable to have NHS appointments at all so have to travel outside Sandiacre, to Derby!

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Danielle Harrison	West of Sandiacre	Response-00568	Type of Housing	We live across from Norbury Way in Sandiacre which is testament to the issues caused by social housing allocations. Alcohol and drug addiction is rife. Yesterday I called the police to remove a knife stashed in undergrowth. This is already a blight on the local crime rates with anti social behaviour, as police records support. If you add any more social housing be prepared for the local community to suffer the consequences
Danielle Harrison	West of Sandiacre	Response-00568	Number of Houses	180 houses are disproportionate the the houses already built along the surrounding roads. The scale of this planning application far exceeds the housing surrounding it.
Danielle Harrison	West of Sandiacre	Response-00568	Green Belt	Green belt should be protected at all costs and never built on while brown field sites in the local community exist. Why isn't the area at the side of the Lidl site being developed instead. We are destroying this planet.
Danielle Harrison	West of Sandiacre	Response-00568	Landscape	This landscape is boggy in the winter and the water table being free from buildings allows the natural habitat to act as a permeable surface. If you build on this area, the landscape will have increased surface runoff which the local drainage system cannot sustain. Green belt should be a protected landscape.
Danielle Harrison	West of Sandiacre	Response-00568	Flooding / Drainage	180 houses increases surface runoff which off and puts more pressure on ailing sewer systems, flood defences drains. The flooding seen in Sandiacre with the bursting of the Erewash was unprecedented. This will only get worse, at a cost to the council
Danielle Harrison	West of Sandiacre	Response-00568	Other	Councillors should fight for green belt and its protection at all costs. It is deplorable to think we would sacrifice such a huge site of green belt in this way, when there is absolutely no demand for it
Danielle Tyler	North of West Hallam	Response-01121	Traffic Congestion	Traffic is already very dangerous, we do not need increased amount of cars. Would be lethal trying to pull out at the crossroads.
Danielle Tyler	North of West Hallam	Response-01121	Road Safety	So dangerous already when trying to cross the road as a pedestrian, increased cars would make this worse.
Danielle Tyler	North of West Hallam	Response-01121	Wildlife / Biodiversity	Loss of habitat for lots of wildlife in the area
Danielle Tyler	North of West Hallam	Response-01121	Bus Services	Virtually none existent as it is.
Danielle Tyler	North of West Hallam	Response-01121	School Capacity	Very difficult to get secondary children in at chosen schools as it is without increased number of children.
Danielle Tyler	North of West Hallam	Response-01121	Healthcare Facilities	Already unable to get it at local GP practices, they would not be able to support increase of patients.
Danielle Tyler	North of West Hallam	Response-01121	Green Belt	Land is green belt, should not be built on.
Danielle Tyler	North of West Hallam	Response-01121	Landscape	New houses would ruin countryside feel. Ruin landscape for local houses. Reduced current property prices.
Danielle Tyler	North of West Hallam	Response-01121	Flooding / Drainage	The friled has poor drainage already
Danielle Tyler	North of West Hallam	Response-01121	Other	New houses not wanted.
Daniel Naylor	West of Sandiacre	Response-00680	Traffic Congestion	With 2300 homes approved for development in the 2022 Erewash core strategy in neighbouring kirk hallam and Stanton, and the currently developing industrial units in Stanton using Sandiacre and Stanton by dale as direct access to the m1, it would be absolute lunacy to building 180 new homes in Sandiacre to add to this, as sandiacre is absolute gridlock already at peak times without all these developments adding to it. Sandiacre and nearby villages in the current day suffers huge traffic gridlock during peak times and with the development of the industrials units in nearby Stanton currently in its infancy, it's a 100% certainty that the weight of industrial traffic will increase, much to the detriment to the people of sandiacres way of life in the coming years. With the Erewash core strategy (that includes the development of 1300 homes to be built on greenbelt land in neighbouring kirk hallam and a further 1000 houses to be built in Stanton) of March 2022 approved by the previous conservative led council, Sandiacre is already at further risk to bear the majority on the traffic from those developments as sandiacre and Stanton by dale are the direct routes for gaining access to the M1. If both these examples aren't bad enough for the residents of sandiacres impending doom regarding traffic gridlock, imagine my absolute shock and bewilderment when I heard of an extra 180 homes proposed to be built on the edge of a sandiacre housing estate, namely west sandiacre? For the reasons given above, I object to this development profusely, for many reasons which will follow but mainly for the sheer weight of traffic that sandiacre will already struggle to cope with, without an extra 180 extra homes to add to the problem. Sandiacre just doesn't have the road infrastructure to handle the extra traffic capacity as it already struggles today, as it serves as a direct route to the M1 from nearby towns and villages. I understand that local councils are under pressure to build more homes which in turn generates more council tax income, but to add to an already ongoing problem is unfair to the local residents and I plead with anybody in authority to put their concerns as high priority above all other issues. I have 20+ years' experience working alongside the construction industry, project managing the delivery of utilities to new developments, so I can say with all confidence that the access proposed for this new development is nothing short of logistical lunacy. This development if approved would struggle to commence as the vehicles required to deliver materials and machinery required to complete these developments would find it impossible to navigate the narrow local roads, with tight bends that would make it mathematically impossible for some long base vehicles to maneuverer. I would also question the load bearing of the local roads as these were never built to take such heavy traffic, and the heavy vehicles required on a daily basis over several years during development would destroy the roads over and over. This area of sandiacre is a quiet area and as such, this has been a huge factor when families and elderly people choose to live here. The risk of harm from extra traffic would multiply, with this area taking heavy traffic not common in this area during development, then afterwards with 180 homes adding to the area permanently.
Daniel Naylor	West of Sandiacre	Response-00680	Road Safety	The planned access to this proposed site is an absolute non starter. working in the construction industry, I have vast experience what transport is required to complete this development. The tight corners and small roads would make delivering materials and plant to this site near impossible making everyday life for residents along this route a living nightmare. I have no confidence the integrity of the roads could be maintained due to the weight of daily industrial traffic whilst the long drawn out development would take place. The roadworks that would take place offsite to install required utilities ( electricity, water, gas, fibre) all the way to the proposed site to add to the traffic needs to be also addressed. Residents who live in this area did so as its a quiet area and the volume of traffic that would be required to build these houses would make roads unsafe, especially for families and the elderly. This area of sandiacre is a quiet area and as such, this has been a huge factor when families and elderly people choose to live here. The risk of harm from extra traffic would multiply, with this area taking heavy traffic not common in this area during development, then afterwards with 180 homes adding to the area permanently. The unnecessary nuisance and risks the residents would have to endure during the vast roadworks required to install required utilities (electricity,gas, water and fibre) to the new development needs to be taken into consideration as these works would be major works, that will go on for weeks, if not months. Emergency vehicles already struggle to access some parts of the proposed route in sandiacre, especially in the winter months when the roads are at high risk of icy conditions. Anybody living in the proposed new development would do so with the risk of emergency assistance reaching them in adequate timescales due to the steep incline to the proposed development.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Daniel Naylor	West of Sandiacre	Response-00680	Air Quality	With 2300 homes approved for development in the 2022 Erewash core strategy in neighbouring kirk hallam and Stanton, and the currently developing industrial units in Stanton using Sandiacre and Stanton by dale as direct access to the m1, air pollution will already be at unnecessary high levels without adding 180 new homes in sandiacre to add to this. With the 4 lane M1 running alongside sandiacre, the air quality in this area is already in poor condition, without adding to it with 180 new homes, all with vehicles and some with more than 1 on their driveway.
Daniel Naylor	West of Sandiacre	Response-00680	School Capacity	Current school allocations are already in short supply without an extra 180 new homes to add to that. Youngsters from nearby towns are students at sandiacre freisland school due to this problem and with 2300 homes approved for development in the 2022 Erewash core strategy in neighbouring kirk hallam and Stanton, parents getting their children into their first choice school would be an impossibility. As I've stated above, I live in nearby Ilkeston where first choice secondary school places are not a guarantee, as I found out when my children didn't get their first-choice school, but they were lucky enough to get their second-choice school in the same town. Some children in my area had to go as far as their third choice which means daily commutes over to the secondary school in sandiacre (sandiacre friesland school). As you could imagine, this has a knock-on effect to the children of sandiacre as they're forced to travel further afield to schools in neighbouring towns due to schools' capacity unable to meet the local population demands. 180 new homes in the area would exacerbate this issue further which would mean more children having to commute to other towns at peak times, adding to the traffic problem I stated at the start of this objection.
Daniel Naylor	West of Sandiacre	Response-00680	Healthcare Facilities	Doctors, dentists and chemists (there already is no chemist in sandiacre) are already in short supply, without 180 new homes adding to this problem. Will guarantees be made create more doctors surgeries etc to handle the added residents to the area id this development got pushed through? In addition to schools, there's the issue with available doctors, dentist and chemists. There is already only 1 doctor and 1 dentist practice in sandiacre so the local residents already struggle to get a doctor's appointment in reasonable time, then have to travel to nearby Stapleford to collect their vital medication as there is no chemist in sandiacre. An extra 180 homes to add the this already existing problem would do the existing and the proposed new residents no favours whatsoever when requiring medical assistance.
Daniel Naylor	West of Sandiacre	Response-00680	Green Belt	Simply shouldn't be building on greenbelt anyway. What's the point in greenbelt if the local council refuse to protect it?
Daniel Naylor	West of Sandiacre	Response-00680	Landscape	The geography of this area makes accessing this area of sandiacre really difficult in the winter months. Residents will inform you that driving up the proposed access route can be impossible when roads are icy.
Daniel Naylor	West of Sandiacre	Response-00680	Flooding / Drainage	The proposed area currently holds flood water. Once this development is completed, the flood water will not have anywhere to soak away like it already does, so the risk of passing flood water running through nearby houses causes millions in damage and putting existing residents lives in potential danger, rises significantly.
Daniel Naylor	West of Sandiacre	Response-00680	Other	Existing traffic needs to be monitored at an appropriate time (ie, peak times) to understand how awful the traffic already is, without the added traffic from 180 new homes and the 2300 homes approved for development in the 2022 Erewash core strategy in neighbouring kirk hallam and Stanton, and the currently developing industrial units in Stanton .
Daniel naylor	South West of Kirk Hallam	Response-01510	Traffic Congestion	A by pass for kirk hallam doesn't go far enough. All this does is divert traffic from upper ladywood road to where 12 houses are. A by pass would need derby road including in it and going much further than 12 houses towards Sandiacre. Sandiacre and stanton by Dale are already busy traffic routes, this development would gridlock those 2 areas at peak times.
Daniel naylor	South West of Kirk Hallam	Response-01510	Road Safety	Traffic going into Ilkeston up quarry hill road is very heavy at peak times already, without an extra 1000+ new homes, all with vehicles adding to it. Bulls head area is an accident waiting to happen already with school pupils walking this route at peak times alongside heavy traffic. This needs to be addressed now, without the new development, let alone with it added. The relief road would need to incorporate derby road to alleviate this already ongoing issue
Daniel naylor	South West of Kirk Hallam	Response-01510	Air Quality	Obviously, more traffic, more air pollution. Dust from building sites in dry months would aggregate people locally with respiratory issues
Daniel naylor	South West of Kirk Hallam	Response-01510	School Capacity	Secondary school places in the area are already at a small scale. An extra 1000+ houses would make some children have to travel miles to get to school due to limited places. Some children already have to travel miles out of town to attend the nearest available school with places available.
Daniel Naylor	West of Sandiacre	Response-00680	Healthcare Facilities	Doctors, dentists and chemists are already a rare service gibmven, without a further 1000+ homes to cater for
Daniel Naylor	West of Sandiacre	Response-00680	Number of Houses	Sandiacre and neighbouring towns and villages seem to be taking the brunt in Erewash's allocation o required new developments where other areas of the borough seems largely untouched.
Daniel Naylor	West of Sandiacre	Response-00680	Wildlife / Biodiversity	180 new homes would also have a direct effect on the rare and beautiful wildlife that exists in the proposed area. People local and afar use this area for walks that they claim helps with their mental health when wanting to escape the hustle and bustle of everyday life, as they walk amongst all the flora and fauna.
Daniel Stanbridge	South of West Hallam	Response-00099	Traffic Congestion	The village is already busy
Daniel Stanbridge	South of West Hallam	Response-00099	School Capacity	Schools in the area are already at capacity
Daniel Stanbridge	South of West Hallam	Response-00099	Green Belt	We must strive to protect our green belt
Dan Pilgrim	West of Borrowwash	Response-00932	Traffic Congestion	Traffic in Borrowwash is already busy on a day to day basis. The village comes to a standstill when m1 or a52 is shut, this project will only increase the demand on the roads
Dan Pilgrim	West of Borrowwash	Response-00932	Road Safety	Limited access road to area,
Dan Pilgrim	West of Borrowwash	Response-00932	Air Quality	Protect natural areas, avoiding pollution
Dan Pilgrim	West of Borrowwash	Response-00932	Wildlife / Biodiversity	Protect nature, currently areas being used for farm land, full of animals
Dan Pilgrim	West of Borrowwash	Response-00932	Green Belt	Protect green belt areas
Dan Pilgrim	West of Borrowwash	Response-00932	Landscape	Protect green belt areas, avoiding so call eye sores such as affordable housing
Dan Pilgrim	West of Borrowwash	Response-00932	Other	1000's of houses are being built just down the road at Boulton Moor site, why destroy another green belt area for MORE houses. Better to develop existing project plots.
Darran and Emma Rea	West of Sandiacre	Response-00597	Traffic Congestion	The area is already congested, it is an active bus route where the bus does struggle at times to get around, even worse when it is winter. Parking is a nightmare already even with houses that have off road parking.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Darren and Emma Rea	West of Sandiacre	response-00597	Road Safety	Current traffic is already dangerous, cars are parked on junctions which is restricting clear views, cars go way above the speed limit already (check Stanton Road and also Sycamore Crescent) there are a lot of elderly and disabled people in the area alongside those who have dogs, it is difficult enough already with the current traffic in the area, not to mention cars parked obstructing views
Darren and Emma Rea	West of Sandiacre	response-00597	Air Quality	Increase of traffic pollution in the area is a concern
Darren and Emma Rea	West of Sandiacre	response-00597	Wildlife / Biodiversity	There are a lot of protected species of wildlife in the area, the development will drive wildlife away which will have a detrimental effect to the area especially when Stoney Clouds is a nature reserve, it will have a huge impact on the wildlife
Darren and Emma Rea	West of Sandiacre	Response-00597	Bus Services	The bus service is a concern, it is going to isolate and cut off a lot of elderly and disabled people who do not have access to cars if the bus that currently services this area has to cease because of the increase in traffic and parked cars
Darren and Emma Rea	West of Sandiacre	response-00597	School Capacity	The local schools in the area are already at full capacity, even local residents struggle to get their child into these schools, the development will house families so where will their children go
Darren and Emma Rea	West of Sandiacre	response-00597	Healthcare Facilities	Local residents already struggle to get into the doctors, the impact of this development will put further pressure on the healthcare facilities, even local dentists aren't able to take on NHS patients, the services are already stretched
Darren and Emma Rea	West of Sandiacre	response-00597	Type of Housing	The housing won't be in keeping with the area, currently we have semi detached, terraced and detached housing with good back gardens and spaced out, the new development will be crammed in, limited parking to maximise how many houses they can build
Darren and Emma Rea	West of Sandiacre	Response-00597	Number of Houses	It is double the density of what is currently in the area which will not be in keeping, even if it was half the housing they want to build, it would still not be in keeping with the area
Darren and Emma Rea	West of Sandiacre	response-00597	Green Belt	The fact that they want to build on the green belt is abhorrent, it is green belt for a reason, the impact on the services and wildlife to the area is going to be detrimental, there has to be other sites other than green belt that must be considered
Darren and Emma Rea	West of Sandiacre	response-00597	Landscape	Stoney Clouds is a nature reserve, the landscape is going to change, it is going to ruin the views especially those right next to this proposed development
Darren and Emma Rea	West of Sandiacre	response-00597	Flooding / Drainage	The area is already at capacity, when we get rain, the water runs down the middle of the road, the drainage has only been built for what housing we have in the area
Darren and Emma Rea	West of Sandiacre	response-00597	Other	This new development will increase traffic, congestion, strain on the local services and schools which are already at full capacity, as pet owners we use the nature reserve daily, this will have a huge impact on the area especially the work that has to be carried out for the development, the quiet streets will have an increase of traffic, pollution and noise, this development could also have an impact on the house prices of the area not to mention the detrimental effect on the wildlife and the environment, Sandiacre is a close knit community, we object to the development as we love the area as it is, we do not need more houses in the area
Darren adams	North of Breadsall Hill Top	Response-00874	Traffic Congestion	The traffic throughout the village has dramatically increased in volume since the New housing development in Oakwood, if this development goes through no doubt it will cause even more traffic and pollution
Darren adams	North of Breadsall Hill Top	Response-00874	Road Safety	During non-rush-hour traffic the speed that vehicles go through the village is in excess of the current speed limit
Darren adams	North of Breadsall Hill Top	response-00874	Air Quality	With the increase of traffic already going through the village during rush-hour, the air quality in my opinion has changed dramatically. Has there been an air monitoring station setup to see what the effects are.
Darren adams	North of Breadsall Hill Top	response-00874	Wildlife / Biodiversity	Since the old railway line has been converted into a public footpath with a deformation of trees, I believe this has had a major effect on the wildlife has made a noticeable difference
Darren adams	North of Breadsall Hill Top	response-00874	Landscape	Unfortunately the village will be overtaken by all new modern houses and effectively become a housing estate. Changing the English countryside from what was once villages to now modern housing Estates.
Dave Stone	South of West Hallam	Response-00140	Traffic Congestion	The area in question is already a bottle neck at key school times and is often dangerous due to parked cars.
Dave Stone	South of West Hallam	response-00140	Wildlife / Biodiversity	Using green areas for development should not be allowed.
Dave Stone	South of West Hallam	response-00140	Number of Houses	How is the local infrastructure going to be improved to match extra demand of added houses and population. If it isn't then it should not be permitted.
Dave Stone	South of West Hallam	response-00140	Other	How is the sale and development going to benefit West Hallam. If there are no benefits (as judged by residents) then alternative brown field sites should be used for development.
David and Mary Murden	South West of Draycott	Response-01898	Road Safety	Other concerns that we have are Road Safety and the Amenities in the village. The stretch of Derby Road from Shacklecross to the village of Draycott is a notorious danger spot. It is still called by many 'The Draycott Straight', as it used to have a 60 mph speed limit. Now, of course, that is down to 40 mph, then 30 mph, but we all know that there are very many motorists and motorcyclists who ignore these limits and still use it as a fast run, and this has been the cause of many accidents. Having a new road opening onto this area, which we believe would be near to the railway bridge, would add to this peril and put many more lives in danger.
David and Mary Murden	South West of Draycott	response-01898	Wildlife / Biodiversity	As well as its primary use as agricultural land, this area is also a much valued haven for local wildlife, much of which is considered endangered in our country. At present we are visited by badgers, foxes, hedgehogs, bats and many, many birds. At the last RSPB birdcount we recorded 20 different species in our garden. Also in the fields and woods which are under consideration we know that Sparrow hawks regularly make their nests, they are a home for the Little Owl and the Barn Owl, both Green and Greater spotted woodpeckers and buzzards. It goes without saying that once building work commences in this area much of this wildlife will disappear and this would be a very sorry state of affairs.
David and Mary Murden	South West of Draycott	response-01898	Number of Houses	In recent years Draycott has added to its housing stock in very inventive ways. Wisely, using brownfield sites, we have added many homes at the large Mill, known as Parris, and also at the smaller Mill in Market Street. Cowslip Meadow is also a large estate of mixed social and private housing which has been added to the village. In all, I believe we now have around 1,500 homes. Adding another 190 (or is the rumour right that it will be more than that?), is a large addition, about 8% that will alter the nature of our rural village. This land is one of the few remaining fields that separate us from Borrowwash, we feel that before long the three communities of Borrowwash, Draycott and Breaston will be strung together into one unit. This is not what we want. It is difficult to know how our medical services will manage with this increase. Having no actual doctor's surgery or dentist in Draycott, we already struggle to find appointments in Breaston or Borrowwash, and this will clearly be a problem.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David and Mary Murden	South West of Draycott	Response-01898	Green Belt	We are confused and concerned about the decision to build on existing Green Belt land. We know that the government have suggested that existing Green belt which is not in agricultural use, such as car parking areas, small business sites etc should be considered re-assigning as Grey belt, but the fields that are under consideration in Draycott have continually been in agricultural use, the field behind our house having been sown with Spring Barley only this April. Food security for our country is very important and we know that it is increasingly under threat as other countries change their priorities and their marketing strategies. We understand that elsewhere, in Erewash, there are Brownfields sites and other more obvious 'Grey belt' sites which we think should be considered before encroaching on agricultural land.
David and Mary Murden	South West of Draycott	Response-01898	Flooding / Drainage	Another cause of confusion is our understanding that the flood risk boundaries have been amended in recent months. No reason has been given to us for this change of boundary. There certainly has been no flood prevention measures in the area, the River Derwent has not changed its course, the weather has been wetter than ever (apart from this past winter) so I would be grateful if someone could explain the reasoning behind this decision. In the past we have had notification that our house, in Lime Grove, backing onto the 'Safeguarded' area of the development, was in the flood zone. We were given information about where to obtain sand bags if needed, and several times have received automated telephone calls giving us advance warning of flooding in this area. The last such call we received was during the night in October 2023. As far as we can see the circumstances in this area have not changed since then. We see first hand how wet this field behind our house gets. Indeed, when we first lived here (we came in 1973) the most regular crop was winter wheat, sown in the autumn and grown on for a summer harvest. This has not been possible for a good few years now as the field is inaccessible for the farmer during the autumn and winter. Nowadays the stubble of last seasons crop is left in the ground until it dries out in April, or sometimes even May, and then a crop such as Spring Barley is sown. This does not seem a very suitable basis for building homes. In fact, Tim Barker (farmer now deceased) once said to us that he would like to have houses on the land but he knew that it would not be possible 'at our end' because of the water on the land.
David and Mary Murden	South West of Draycott	Response-01898	Other	Lastly we feel we must comment on the unreasonably short amount of time that has been allowed for consultation. None of the local councillors have shown their face for public discussion or to answer questions. We always thought that the local Council was there to protect the rights of the local people and its land, so we hope you will reconsider this decision.
David and Nicala O'Leary	South West of Draycott	Response-00822	Traffic Congestion	Draycott's infrastructure is not equipped to accommodate a development of this scale. Local roads are already struggling with speeding and congestion. Adding 190 homes could introduce over 380 additional vehicles to local roads, significantly increasing congestion
David and Nicala O'Leary	South West of Draycott	Response-00822	Road Safety	Speed Indicator Devices in the village routinely show vehicles exceeding safe limits, often surpassing speeds seen on major highways. Adding 190 homes could introduce over 380 additional vehicles to local roads, significantly increasing the risk of accidents
David and Nicala O'Leary	South West of Draycott	Response-00822	Air Quality	Adding 190 homes could introduce over 380 additional vehicles to local roads, significantly increasing air pollution
David and Nicala O'Leary	South West of Draycott	Response-00822	Wildlife / Biodiversity	The proposed site is rich in biodiversity, supporting a variety of bird species, bats, and small mammals. Development would destroy these habitats permanently. It would also eliminate a key green corridor that serves as a natural buffer between settlements. The proposed development also contradicts commitments under the Climate Change Act 2008 and Environment Act 2021, including the legal requirement to achieve a 10% Biodiversity Net Gain.
David and Nicala O'Leary	South West of Draycott	Response-00822	School Capacity	Local schools are already oversubscribed and would not be able to accommodate the additional demand without significant, unfunded investment in staff and facilities.
David and Nicala O'Leary	South West of Draycott	Response-00822	Healthcare Facilities	There are no medical facilities within Draycott; residents must travel to Breaston or Borrowwash for GP and dental services.
David and Nicala O'Leary	South West of Draycott	Response-00822	Number of Houses	Draycott is a historic rural village with a strong sense of community and a unique character. The scale and nature of this proposed development would fundamentally alter that character, turning our village into a suburban extension of nearby towns. This loss of identity and community cohesion is unacceptable.
David and Nicala O'Leary	South West of Draycott	Response-00822	Green Belt	This proposal represents a serious and irreversible threat to our countryside, environment, infrastructure, and the identity of the village of Draycott. Once lost, Green Belt land cannot be recovered. It is vital that we protect it, not only for its environmental and recreational value, but also to prevent the unchecked urban sprawl that this development would undoubtedly accelerate. Draycott, Breaston, and Borrowwash are currently distinct communities; this development risks merging them and eroding their unique character. In planning policy terms, this proposal fails to meet the criteria set out in the National Planning Policy Framework (NPPF 2023). Paragraph 140 makes clear that Green Belt boundaries should only be altered in exceptional circumstances. Paragraphs 149-150 reinforce that inappropriate development in the Green Belt should not be approved except in very special circumstances. No such circumstances have been demonstrated here. Furthermore, the Council has not shown that it has exhausted all available brownfield and non-Green Belt options, nor that it meets the required five-year housing land supply threshold necessary before Green Belt release can even be considered.
David and Nicala O'Leary	South West of Draycott	Response-00822	Flooding / Drainage	The site in question also plays a critical role in flood resilience. It lies close to the River Derwent and is prone to frequent flooding, as witnessed during the storms of late 2023 and early 2024. Local residents have documented flooding on the proposed site, which acts as a natural soakaway. Paving over this land would only increase surface water runoff and elevate the flood risk to existing homes. As residents with long-standing knowledge of the river, the O'Leary family have resided at 20 Cleveland Avenue since 1958 and can confirm that flooding encroaches far closer to homes than recent flood maps suggest. These lived experiences should not be dismissed in favour of overly optimistic modelling.
David Atchison	South West of Draycott	Response-01247	Traffic Congestion	The Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic. The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David Atchison	South West of Draycott	Response-01247	Road Safety	A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment.
David Atchison	South West of Draycott	Response-01247	Wildlife / Biodiversity	The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt.
David Atchison	South West of Draycott	Response-01247	Healthcare Facilities	Local health care facilities are already completely overwhelmed and this proposal will only put further strain on them, reducing availability and quality of care for existing residents.
David Atchison	South West of Draycott	Response-01247	Type of Housing	The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village's strong historic character? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.
David Atchison	South West of Draycott	Response-01247	Number of Houses	NPPF 61. States that to support the Government's objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay. The overall aim should be to meet an area's identified housing need, including with an appropriate mix of housing types for the local community. The land identified south west of Draycott is Green Belt and Grade 2 quality land. This development neither looks to protect the BMV nor does it look to bring forward the 109 existing Brownfield sites within the EBC that has full planning consent. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.
David Atchison	South West of Draycott	Response-01247	Green Belt	Protecting Green Belt land, this land should be kept open and unharmed. NPPF 153. 'Very Special Circumstances' have to be proven i.e. all other options exhausted to classify this application as a 'very special circumstance?'. We cannot see any evidence that this has taken place. Therefore, it is an inappropriate application and proposal and does not demonstrate exceptional circumstances. NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. It is the wrong model in the wrong place to deliver housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. This when there are 109 existing Brownfield sites within the EBC that should be prioritised first over Green Belt land.
David Atchison	South West of Draycott	Response-01247	Landscape	This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the villages surrounding it of Borrowwash and Breaston. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape.
David Atchison	South West of Draycott	Response-01247	Flooding / Drainage	From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic was questions was asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. Building on a flood plain that has trees, grass & plants that naturally help absorb water via roots systems when removed will have a huge impact. NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David Atchison	South West of Draycott	Response-01247	Other	I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. There are around 2000 vacant social housing in Derbyshire County. Why are these houses not being prioritised ahead of this land being used for development.
David Boyle	South West of Draycott	Response-01426	Traffic Congestion	The Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic. Noise from the construction (including vehicle movements) and operational phases of the proposed development need to be adequately addressed. NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic. "NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic."
David Boyle	South West of Draycott	Response-01426	Road Safety	An environment noise assessment needs to be carried out, particularly for the residents directly opposite the site entrance; but also the whole route that the construction traffic will take. This passes through Draycott, Borrow ash and Beaston villages. Passing busy junctions, Doctor's surgeries, public car parks, Primary schools, local cricket clubs as well as numerous resident's homes.
David Boyle	South West of Draycott	response-01426	Wildlife / Biodiversity	The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance. Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt. Historical badger sett on part of the site to the Victorian tip at the bridge of Nooning Lane. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area.
David Boyle	South West of Draycott	response-01426	School Capacity	The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents.
David Boyle	South West of Draycott	Response-01426	Type of Housing	The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village's strong historic character? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing. The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David Boyle	South West of Draycott	response-01426	Number of Houses	NPPF 73. States that the authority should identify, through the development plan and brownfield registers, land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC there are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. The scale of the development is completely NOT in keeping with the character of the village. The proposed development should follow existing settlement patterns. New buildings and the volume of housing should harmonise with the neighbourhood. Retain local character and the retention of open spaces as is the character of the village. Views into and out of the village should be preserved. Clear lines of hills and spatial openness must be preserved.
David Boyle	South West of Draycott	response-01426	Green Belt	Protecting Green Belt land, this land should be kept open and unharmed Protecting public rights of way and access, a large number of footpaths would be affected NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. Great weight should be given to the findings and recommendations of independent Landscape Quality Assessment NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents.
David Boyle	South West of Draycott	response-01426	Landscape	The suggested 190 houses to the land south west of Draycott would enclose the paths, which would have a devastating effect on the enjoyment of walks, as would the replacement of green fields with 190 houses. We acknowledge it is a balance between the adverse effects on the footpaths against the desirability of the development taking place, but question if the proposed measures would be sufficient to prevent a severe adverse effect on the use of the paths. An extensive network of public footpaths is within the application site, and there are many in the near vicinity. The footpaths are well used and highly valued as an amenity. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate.
David Boyle	South West of Draycott	response-01426	Flooding / Drainage	NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone. Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes.
David Boyle	South West of Draycott	Response-01426	Other	Require the submission of an environmental noise assessment, prior to development works commencing, to rate and assess operational sound from all fixed installations comprising mechanical and electrical plant and equipment, with a scheme of mitigation measures where necessary; that all site preparation and construction to comply with specified working hours and limits to noise and dust emissions, waste disposal and lighting; and the submission of proposals, including the design and operating times, of any permanent external lighting on site. The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. This will include Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 and Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963. An environment noise assessment needs to be carried out, particularly for the residents directly opposite the site entrance; but also the whole route that the construction traffic will take. This passes through Draycott, Borrow ash and Beaston villages. Passing busy junctions, Doctor's surgeries, public car parks, Primary schools, local cricket clubs as well as numerous resident's homes.
David Byrne	North of Breadsall Hill Top	Response-01433	Traffic Congestion	Traffic across dale acre way is already congested and the roads in and around bishops drive in the mornings and evenings can cause significant delays and often result in lateness dropping my boy to school.
David Byrne	North of Breadsall Hill Top	Response-01433	Road Safety	There have been a number of near miss incidents on our estate already due to a large range of 4 way intersections, adding more traffic will likely result in an accident
David Byrne	North of Breadsall Hill Top	Response-01433	Wildlife / Biodiversity	Greenbelt land is already becoming less and less, this development will further erode it
David Byrne	North of Breadsall Hill Top	Response-01433	School Capacity	It has been a real struggle finding suitable allocation for schooling and as such have been pushed to a school in darley abbey. Adding more residents will compound this problem
David Byrne	North of Breadsall Hill Top	response-01433	Healthcare Facilities	Health care facilities particularly at oakwood precinct is already constrained, often being impossible to get face to face appointments, more residents will worsen this
David Casey	West of Sandiacre	Response-01608	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
David Casey	West of Sandiacre	response-01608	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David Casey	West of Sandiacre	Response-01608	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
David Casey	West of Sandiacre	Response-01608	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
David Casey	West of Sandiacre	Response-01608	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
David Casey	West of Sandiacre	Response-01608	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
David Casey	West of Sandiacre	Response-01608	Type of Housing	High density housing is preposterous not in keeping with current housing.
David Casey	West of Sandiacre	Response-01608	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
David Casey	West of Sandiacre	Response-01608	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
David Casey	West of Sandiacre	Response-01608	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
David Cater	West of Sandiacre	Response-01756	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
David Cater	West of Sandiacre	Response-01756	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
David Cater	West of Sandiacre	Response-01756	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
David Cater	West of Sandiacre	Response-01756	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
David Cater	West of Sandiacre	Response-01756	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
David Cater	West of Sandiacre	Response-01756	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
David Cater	West of Sandiacre	Response-01756	Type of Housing	High density housing is preposterous not in keeping with current housing.
David Cater	West of Sandiacre	Response-01756	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
David Cater	West of Sandiacre	Response-01756	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
David Cater	West of Sandiacre	Response-01756	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
David Cousins	South West of Kirk Hallam	Response-01303	Green Belt	Many have protested long and hard, individually and via Green Squeeze, at the whole development west and south of Kirk Hallam. Those protests have evidently fallen on deaf ears and the cause is seemingly lost so I will not reiterate the argument, other than to say that the objections still stand. What is especially alarming in this Amendment is that, even before the scheme begins, the previous declaration and assurance that the "Relief Road" would represent a delineation or barrier to new development has already been discarded by the appearance of the triangular shaped area to the west of the "Relief Road" and adjoining Ladywood Road. Not only has this area been designated for development but it is referred to as a "Centre" to serve the whole of the development, and presumably passing traffic on the A6096 as well. The notion that a "Centre" is located at the extreme edge of the development, and that any residents using it would need to cross the (undoubtedly very busy) "Relief Road" seems ridiculous - so much for supposedly encouraging walking and cycling - and one can only assume that it is actually envisaged to serve, ultimately, an even larger area. It is painfully obvious to most of us that, once a road exists, the pressure to utilise the Green Belt land on the opposite side of it becomes ever stronger. I wholeheartedly object to ANY encroachment of development to the West or South of the "Relief Road", now or at any time in the future.
David Cousins	South West of Kirk Hallam	Response-01303	Flooding / Drainage	The proposed new development and the relief road, plus the newly allocated and "safeguarded" areas, all appear to drain to the point on Sowbrook Lane which is already subject to flooding. Thereafter it all drains to the Erewash and then to the point in the middle of Sandiacre/Stapleford which flooded so catastrophically last year.
David Duxbury	North of Breadsall Hill Top	Response-00305	Traffic Congestion	The original plan for Oakwood included a direct connection to the a61, which has never been built. Congestion and speeding on Brookside Road continues to be a significant problem which will be made worse by the development. Additional proposed developments on land adjacent to lime lane, and recent extensions to Oakwood, have already made the issue worse.
David Duxbury	North of Breadsall Hill Top	Response-00305	Wildlife / Biodiversity	The development will impact the biodiversity in the surrounding areas and access to green corridors. Developments adjacent to the proposed land and adjacent to lime lane have already impact the area significantly.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David Duxbury	North of Breadsall Hill Top	Response-00305	Healthcare Facilities	This development is on the edge of Erewash and healthcare services will almost certainly be provided by the park medical practise. This practice is already vastly over subscribed. Services have not been expanded and developments adjacent to the proposed development and adjacent to lime lane have already added significantly to demand.
David Duxbury	North of Breadsall Hill Top	Response-00305	Green Belt	The proposed development continues to erode the green wedge between Oakwood and breadsall village. Development adjacent to the proposed site and the development adjacent to lime lane and a608 have already significantly eroded the green belt surrounding breadsall village.
David Duxbury	North of Breadsall Hill Top	Response-00305	Flooding / Drainage	The land in question already contributes to yearly flooding and uncontrolled run off onto church lane. Attenuation ponds will not solve this problem as observed in breadsall village and continuing problems with runoff water, which has been made worse by developments adjacent to the a608 in recent years
David Fretwell	South of West Hallam	Response-00133	Traffic Congestion	Already lots of complaints due to heavy congestion at school times plus recreational use at weekends. Adding further volume could potentially grid lock beech lane
David Fretwell	South of West Hallam	Response-00133	Road Safety	Additional traffic at beech lane junction and station road is far from ideal. What is already an unsafe junction will not be helped by further traffic
David Fretwell	South of West Hallam	Response-00133	Bus Services	Currently Hallam is not really served by a bus service, which without further increases the use of cars and increases the volume of traffic
David Fretwell	South of West Hallam	Response-00133	Healthcare Facilities	It's currently taking around 3 weeks to get my son into a the doctors for a return appointment. Increasing the population of West Hallam is only going to make this worse
David Fretwell	South of West Hallam	Response-00133	Landscape	Part of the attraction of living in the village is it is surrounded by beautiful landscapes and walks. Adding houses both reduces the attraction, impacts the local wildlife and can have a negative impact on villagers mental state
David Fry	West of Sandiacre	Response-00596	Traffic Congestion	The traffic through sandiacre is already too busy and causing problems
David Fry	West of Sandiacre	Response-00596	Road Safety	The school operates additional facilities every evening and all weekend and the traffic for residents is overwhelming as it's difficult to get off the drive some days The football club also means lots of traffic. Additional housing will only compound the traffic problems
David Fry	West of Sandiacre	Response-00596	Air Quality	Obviously we don't want even more pollution from more vehicles
David Fry	West of Sandiacre	Response-00596	Wildlife / Biodiversity	The stoney cloud nature reserve is used daily by the local residents and visitors alike. To destroy and reduce the local wildlife is totally unacceptable There are Peregrine Falcons on the proposed site. Are these not protected species ?
David Fry	West of Sandiacre	Response-00596	School Capacity	The local schools are already at full capacity and in use evenings and weekends too. The Cloudside Academy on Stanton Road is open until the early evening for after school and swimming clubs.
David Fry	West of Sandiacre	Response-00596	Green Belt	Why is it even a consideration to build on greenbelt land when there are other options available
David G York	South West of Draycott	Response-01843	Traffic Congestion	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will exacerbate traffic volume, impacting road safety and increasing the risk of accidents. Increased traffic can lead to congestion, longer travel times, and heightened frustration among drivers, which may result in more aggressive driving behaviours. The road infrastructure may not be equipped to handle the additional load, leading to potential bottlenecks and increased wear and tear on the road surface.
David G York	South West of Draycott	Response-01843	Road Safety	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will increase traffic volume, impacting road safety and increasing the risk of accidents. A transport assessment needs to be undertaken, particularly for the residents opposite and adjoining the proposed site entrance. Moreover, the increased traffic will pose a significant risk to pedestrians and cyclists. The A6005 is a key route for local residents, including children walking to school and elderly residents. Higher traffic volumes increase the likelihood of accidents involving these vulnerable road users. Implementing traffic calming measures such as speed bumps, pedestrian crossings, and improved signage could mitigate some risks, but these measures need to be carefully planned and executed. A comprehensive transport assessment is essential to understand the full impact of the proposed development on road safety. This assessment should consider current traffic levels, projected increases, and the capacity of existing road infrastructure. It should also evaluate the potential need for new traffic control measures and improvements to pedestrian and cyclist safety.
David G York	South West of Draycott	Response-01843	Flooding / Drainage	Minimal liaison has been undertaken by EBC with Severn Trent regarding drainage and water management arrangements for the Draycott site. Draycott residents experience multiyear flooding events, and this development will further compound flooding issues. More investigation is needed to determine why this known flood location site is suitable for development. A Flood Risk Assessment should be requested for developments within a Flood Zone.
David G York	South West of Draycott	Response-01843	Wildlife / Biodiversity	The area has an abundance of wildlife, including protected species such as bats and many migrating birds. These animals and birds will lose their habitats and nesting sites, which is not protecting our fragile environment or providing for biodiversity in our green spaces. The development will damage the biodiversity of the site and adjoining Green Belt. The area has an abundance of wildlife, including protected species. This development will remove grazing land, a valuable asset for horses, and scatter local wildlife, leading to the loss of habitats.
David G York	South West of Draycott	Response-01843	Other	We strongly object to the consultation process, which has been limited and not fully transparent. Erewash Borough Council (EBC) has only given local residents the minimum six-week period to submit objections to this significant change to the Local Plan and Core Strategy. This timeframe is insufficient for residents to review and understand the magnitude of the change and formulate objections, especially given the missing details such as the master plan for the land south west of Draycott. These plans do not align with the National Planning Policy Framework (NPPF) 2024 and EBC Local Plan 2022. Furthermore, adequate consultation has not been undertaken with the Draycott Local Parish Council or residents regarding the impact of these plans on the local community, village, and amenity. Noise from construction and operational phases of the development has not been adequately addressed. An environmental noise assessment needs to be carried out, particularly for residents living adjacent and opposite the site entrance.
David G York	South West of Draycott	Response-01843	Type of Housing	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing, particularly the houses along Derby Road. Careful consideration must be given to ensure similar housing is developed to maintain the neighborhood and village character.
David G York	South West of Draycott	Response-01843	Number of Houses	EBC is proposing nearly 700 houses in Draycott, Borrowwash, and Breaston, which is significantly overbearing and unrealistic considering infrastructure, road networks, and amenities. The proposal for 190 houses will change the villages look and feel, impacting its rural identity and risking morphing into a combined town with Breaston and Borrowwash.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David G York	South West of Draycott	response-01843	Green Belt	EBC should be protecting Green Belt land. The Green Belt and green fields should remain open and safe, preserving public rights of way and access to local green spaces. The Draycott footpaths are in constant use, providing villagers easy access to a countryside environment. This land is rural in character, offering a tranquil and transitional landscape between Daycott Parish, Borrowwash, and Breaston. All these villages are impacted by the proposal to reclassify Green Belt to Grey Belt for housing development. While there is a need for housing, the NPPF states that existing Brownfield and Grey Belt sites should be prioritized over Green Belt sites. There are 109 existing Brownfield sites within EBC, equating to 81 hectares, with 103 of these having full planning permission. These sites should be prioritized for development before Green Belt land is considered. The NPPF states that Green Belt is to be protected and requires exceptional circumstances for development. There is nothing exceptional about the council plans to build on unspoilt Green Belt land to meet their housing target when existing Brownfield sites are available. The land south west of Draycott meets all the criteria for Green Belt purposes, preventing urban sprawl, preserving the countryside's open character, and enhancing recreational opportunities for local residents. Changing this land to Grey Belt and developing 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density.
David G York	South West of Draycott	response-01843	Landscape	The existing footpaths and access to the small wood bring great enjoyment to all who walk these trails, providing substantial benefits for physical and mental health. The development will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The proposal is far too big and overpowering for the village, impacting its heritage and cherished greenbelt landscape.
David Harasym	North of West Hallam	Response-01054	Traffic Congestion	The traffic in a morning is already too heavy for the junction.
David Harasym	South of West Hallam	Response-01055	Road Safety	The location next to the school is a traffic concern
David Harrison	South West of Kirk Hallam	Response-01429	Number of Houses	The site is not large enough for the number of proposed houses
David Harrison	South West of Kirk Hallam	Response-01429	Other	I wish to put forward my objection to the Core Strategy and its review amendment. It is the worse possible thing which could happen on every point above to an already struggling yet amazing and beautiful place . It will destroy the greenbelt and both the homes of the wildlife and biodiversity, the heritage of the people and the monastic history which made Kirk Hallam the amazing place and community it is whilst also shattering the physical and mental health giving characteristics of the greenbelt. The plan will further over intensify the population and massively increase the already heaving regular congestion and pollution whilst creating social division and further crippling an already overstretched infrastructure beyond all limitations. The current population haven't been given due consideration and will once again - as has happened on so many occasions to this community - not properly been given proper thought which is disgraceful. The allocations should be democratically shared fairly and equally across the whole of Erewash without disdain or disrespect towards just a small of percentage of Erewash residents.
David Henfrey	South of West Hallam	Response-00118	Traffic Congestion	Beech land already very unsafe at school times
David Henfrey	South of West Hallam	Response-00118	School Capacity	Schools not big enough
David House	West of Borrowwash	Response-01489	Traffic Congestion	The development will exacerbate congestion in Borrowwash, especially at the busy junction by the Coop.
David House	West of Borrowwash	Response-01489	Wildlife / Biodiversity	The development will consume what has become a wildlife haven in recent years.
David House	West of Borrowwash	Response-01489	Healthcare Facilities	The local GP practices are unlikely to cope with the increase in numbers of people.
David House	West of Borrowwash	Response-01489	Green Belt	The proposed development consumes green belt when we think there are more suitable sites in the borough. The development represents a further step towards a continuous built up area, encroaching into Derby.
David House	West of Borrowwash	Response-01489	Flooding / Drainage	The area to the south of the proposed site is susceptible to flooding. We live at 60 Derby rd, Borrowwash. Our garden and garage have been flooded in recent years. We are concerned that the development will exacerbate this.
David Massey	Acorn Way, Derby	Response-00575	Traffic Congestion	Morley Road is barely big enough to service the houses on it particularly at school times. It wasn't deemed important enough to be resurfaced properly and if it was decided it needed speed bumps due to the school why can it now be ok to add the volume of traffic from 550 houses.
David Massey	Acorn Way, Derby	Response-00575	Road Safety	Morely road has speed bumps to protect school children. Vastly increasing the number of vehicles is at odds with that
David Massey	Acorn Way, Derby	Response-00575	Air Quality	No mention is made of reduction in air quality which will clearly be reduced by added traffic, added bonfires, added wood burner users eyc
David Massey	Acorn Way, Derby	Response-00575	Wildlife / Biodiversity	Talk is made of cycle lanes but not enough to make up for the additional traffic. The area has a major green corridor along the brook and building this number of homes will affect this.
David Massey	Acorn Way, Derby	Response-00575	Bus Services	Whilst improved bus service would be welcome the reality is that these homes will all have two cars and won't use the buses, particularly when the bus service will just be wound down
David Massey	Acorn Way, Derby	Response-00575	School Capacity	There isn't sufficient capacity in local schools for the current level of children given the class sizes are known to be too large. School times are already chaos with no clear strategy for controlling vehicles at those times. Again this seems to be at odds with protecting the children using speed bumps by increasing traffic
David Massey	Acorn Way, Derby	Response-00575	Healthcare Facilities	There is absolutely not enough healthcare locally to support 550 homes. Getting into the doctor's is difficult. Dentist impossible. Ours are both in Borrowwash
David Massey	Acorn Way, Derby	Response-00575	Type of Housing	If they must be built then social housing should be a larger percentage with no possibility of them being sold off
David Massey	Acorn Way, Derby	Response-00575	Number of Houses	When the application was put in for the brook farm it was for far fewer houses with access to Acorn way. Now it seems more houses with access to a smaller road is the plan
David Massey	Acorn Way, Derby	Response-00575	Flooding / Drainage	We live next to the brook. More houses will reduce run off and cause flooding. The brook barely survives heavy rainfall and the environment agency lists the possibility of flooding. Once the houses are built no-one will be able to be held responsible. Flood prevention will be inadequate and the existing home owners downstream will pay the penalty
David Modrovic	West of Borrowwash	Response-00803	Traffic Congestion	Borrowwash and Victoria Ave particularly already congested
David Modrovic	West of Borrowwash	Response-00803	Road Safety	Increase in traffic brings more pollution and increased risk of road traffic accidents
David Modrovic	West of Borrowwash	Response-00803	Air Quality	More traffic means more pollution
David Modrovic	West of Borrowwash	Response-00803	Wildlife / Biodiversity	The impact of the wildlife would be detrimental, has anyone actually done a proper survey?
David Modrovic	West of Borrowwash	Response-00803	Bus Services	Bus service already poor, more people adding to this wouldn't help
David Modrovic	West of Borrowwash	Response-00803	School Capacity	Schools already at capacity and in need of repair, where you putting those extra children?

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David Modrovic	West of Borrowash	Response-00603	Healthcare Facilities	Doctors facilities are already pushed to the brink!
David Modrovic	West of Borrowash	Response-00603	Type of Housing	If you were to build it would need to be affordable and in keeping with the area! But it never is!
David Modrovic	West of Borrowash	Response-00603	Number of Houses	No houses wanted here! One is one too many
David Modrovic	West of Borrowash	Response-00603	Green Belt	Green belt needs to be retained for farming! No farmers no food!
David Modrovic	West of Borrowash	Response-00603	Landscape	I like the view from my house! I don't want to look at more houses!
David Modrovic	West of Borrowash	Response-00603	Flooding / Drainage	Where would any rain water go? Currently the land absorbs it, building would increase flooding!
David Modrovic	West of Borrowash	Response-00603	Other	It seems an utterly stupid idea and probably just for the land owner to cash in rather than sell for agricultural, all empty houses or my old barracks should be repurposed rather than build more houses
David Morrell	South of West Hallam	Response-00477	Traffic Congestion	Traffic is an issue around the village centre and this development will further impact on this and impact on the West Hallam Conservation area
David Morrell	South of West Hallam	Response-00477	Air Quality	Additional traffic will impact on the west Hallam conservation area
			Green Belt	This development would impact on the aesthetic of the west Hallam conservation area
David Morrell	South of West Hallam	Response-00477	Landscape	This would irreversibly impact the open countryside views from west Hallam and take away from The conversation area
David Mosley	South of West Hallam	Response-01062	Traffic Congestion	Beech lane is already really bad for parking around school drop off and pick up and even on weekends when there is football on the field as the parents have nowhere to park other than Beech Lane
David Mosley	South of West Hallam	Response-01062	Road Safety	Again, the road is already quite unsafe with parents parking for school drop off and pick up and also at the weekends with people parking all along Beech Lane for football on the field as they have nowhere else to park.
David Mosley	South of West Hallam	Response-01062	Bus Services	The bus service is quite poor for West Hallam. Will the bus provider be offering an improved service for the area? This then adds to the road safety on Beech lane in busy periods.
David Mosley	South of West Hallam	Response-01062	School Capacity	Have Scargill been consulted about an influx of children and their capacity? My daughter is in a class that already has 33 children in the class which I believe is around the maximum there can be.
David Rees	Acorn Way, Derby	Response-00566	Traffic Congestion	The proposal to construct 'at least 2 vehicular accesses onto Morley Road?' and, by implication, none on Acorn Way, is not viable, for the following reasons: 1. Morley Road south of the Acorn Way roundabout is already a very busy road, particularly during peak periods and can become virtually impassable in the Lees Brook Academy area during school opening/closing periods. 2. Morley Road south of the Acorn Way roundabout is a relatively narrow road with several bends and it only takes a very few vehicles parked on the road to result in traffic congestion; several vehicles are always parked on the road and, in the Lees Brook Academy area during school opening/closing periods, Morley Road becomes effectively blocked 200-300m either side of the school entrance. The road is so narrow that even cars partially parked on the path [soon to become forbidden] cannot be passed by a vehicle without that vehicle crossing to the 'oncoming' side of the road. 3. Construction of any new vehicular access on Morley Road south of the Acorn Way roundabout would have to comprise either a T junction or a roundabout: the former at least would require traffic lights to allow the large number of vehicles from the development access onto Morley Road; both would have to be built to the east of Morley Road, as the west side is fully populated by housing. Either option would be feasible at the northern end of the section of Morley Road where the land on the east side is the same level as that of the road, but not south of the White House Nursery because of the increasing elevation difference between Morley Road and the land to the east of it: either a T junction or a roundabout would require lower the approach road to that of Morley Road and this, together with the bend in the road in this part of Morley Road, would result in a blind junction. Any new vehicular accesses onto Morley Road would adversely impact traffic flow on Morley Road, particularly if traffic lights are necessary. 5. Widening Morley Road would not solve the congestion problems outlined above: widening would only be possible on the east side of the road, and only as far south as Morley Gardens, from which point existing dwellings occupy both sides of the road. 4. In summary, 550 dwellings in the proposed development would result in circa 800 more vehicles regularly using Morley Road; given the congestion problems highlighted above, Morley Road in its current state or potentially widened state would not cope with this additional number of vehicles. 5. A further point on traffic congestion: if the plan is for HGVs to access the site during the building phase via the 'at least 2 vehicular accesses onto Morley Road?', this would be totally untenable: currently no large HGVs use Morley Road, because it is too narrow; I understand that there is a weight restriction on Morley Road; the impact on Morley Road residents would be immense. 6. The plans should be further amended to remove 'at least 2 vehicular accesses onto Morley Road?', and replaced with 'at least 2 vehicular accesses onto Acorn Way?': Acorn Way is a wider road and would lend itself to widening and ingress/egress points far better than Morley Road, which is totally unfit for what the current proposal requires.
David Rees	Acorn Way, Derby	Response-00566	Road Safety	Morley Road south of the Acorn Way roundabout is already a very busy road; it is relatively narrow, has several bends, always has a number of cars parked on the road and has established housing on both sides of the road for most of its length down to the Wilmot Arms pub. The road has a 30mph limit, but many vehicles travel at much higher speeds despite the presence of anti-speed bumps. Road safety is therefore already a significant issue for vehicles, pedestrians and cyclists [there are no cycle paths on this road]. Road safety is most acute in the area of Lees Brook Academy; it is already at a dangerous level during peak periods and particularly during school opening/closing periods, when the road becomes virtually blocked with 'drop-off/collection' cars and school children randomly and unpredictably meander across the road. There can be no doubt whatsoever that an additional circa 800 more vehicles from the proposed 550-house development that would ingress/egress Morley Road from 'at least 2 vehicular accesses?' would further reduce road safety.
David Rees	Acorn Way, Derby	Response-00566	Air Quality	It is obvious that both during the building phase and steady-state, the significant increase in vehicular traffic on Morley Road must reduce the air quality for its residents.
David Rees	Acorn Way, Derby	Response-00566	Bus Services	The amended wording 'Financial contributions to increase the frequency of improve bus services and bus halts along Morley Road?' is suspicious. The problem with current bus services along Morley Road [Route 32] is that the buses run only hourly. The quality of buses is not an issue, but the frequency is. 'Improve bus services?' could just mean new seats on the existing buses! No, this wording is too loose and will not do; one could drive a double-decker bus though these words [excuse the pun]. The original wording 'increase the frequency of bus services?' should be retained, together with 'and improve bus halts?'. Furthermore, 'Financial contributions?' is too loose: how much and for how long needs to be scoped.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David Rees	Acorn Way, Derby	response-00566	School Capacity	The deletion of ?Financial contributions towards the provision of additional pupil capacity at appropriate schools in Oakwood and Chaddesden where necessary;? is unacceptable and exposes the dishonourable approach being taken by Erewash Borough Council [EBC] on this proposed development, which would be built on EBC land, but the EBC expects Derby City Council tax payers to pay for the impact on local infrastructure and facilities such as schools, whilst EBC enjoys the income from the 550 families in terms of council tax. Assuming the current birth rate in the UK [1.57/woman], 550 dwellings could be expected to contain 550 x 1.57 = 863 children; not all dwellings will contain children, therefore a number of, say, 550 children would be a reasonable assumption. Clearly, this number of children would not be able to be accommodated in the existing schools in Oakwood and Chaddesden, so for EBC to expect Derby City council [and its council tax payers] to pick up the tab for the costs of 500 additional school places is at best naïve and, at worst, disgracefully dishonourable. EBC must provide all necessary school facilities for its own residents.
David Rees	Acorn Way, Derby	response-00566	Healthcare Facilities	550 dwellings in the proposed development would contain circa 1200 people. Clearly, this number of people would not be able to be provided with the required healthcare facilities from the current healthcare resources in Oakwood and Chaddesden, so for Erewash Borough Council [EBC] to expect Derby City Council [and its council tax payers] to pick up the costs for healthcare facilities of an additional circa 1200 people, whilst EBC enjoys the council tax of these people, is at best naïve and, at worst, disgracefully dishonourable. I was unable to find any coverage of this in the previous issue of EBC's documentation and so I assume that EBC is not offering anything. ECB must provide all necessary school facilities for its own residents.
David Rees	Acorn Way, Derby	response-00566	Number of Houses	My vote would be for zero houses.
David Rees	Acorn Way, Derby	Response-00566	Green Belt	The proposed development is on Green Belt land; the diagram shown in the initial pages of the on-line objection submission document conveniently ? and incorrectly ? indicates that this area is NOT Green Belt?. dishonourable again. The Erewash Borough Council [EBC] document ?Green Belt Technical Paper, Erewash Borough Council, September 2023, states as rationale for using Green Belt land at SGA1 ?Site extends the conurbation of Derby. Release of this area of Green Belt forms a logical extension to Oakwood and would not compromise the historic setting of any rural villages?. Paragraph 140 of the NPPF states that Green Belt boundaries should only be altered where EXCEPTIONAL CIRCUMSTANCES ARE FULLY EVIDENCED AND JUSTIFIED?? . It would appear from the evidence that the only rationale offered by EBC for using this Green Belt land for housing is to tick off 550 of its new-housing target: hardly ?exceptional circumstances?! If Green Belt is to be encroached, far better to use this area for a solar panel array, which would at least retain the spirit of ?Green?, given the climate crisis.
David Rees	Acorn Way, Derby	response-00566	Flooding / Drainage	My concern here is with Morley Road, south of the Acorn Way roundabout. The recent heavy rains once again highlighted the problem of existing rain run-off, from the field proposed for development, onto Morley Road. The field elevation is up to 2-3m above that of Morley Road and the run-off from the field results in a shallow, fast-running river down the gradient [north to south] of Morley Road that pools further down the road where the gradient becomes level for approx 200m before the gradient continues. One must assume that the run-off from a housing development would be significantly higher than that from a field. The existing drainage is inadequate and, therefore, without a significant upgrade to the current drainage system and specific run-off mitigation constructions on the proposed development, the flood risk WILL increase. The cost of the necessary upgrade to the current drainage system must fall to Erewash Borough Council and/or the developer.
David Rees	Acorn Way, Derby	response-00566	Other	The current proposal, which would construct ?at least 2 vehicular accesses onto Morley Road access points? would create a living hell for residents on Morley Road during the construction phase of the development: numerous noisy, very large HGVs and site construction vehicles; reduced air quality; and a lot of mud on the road. Given the size of the proposed development, this disturbance in Morley Road residents' lives would be for a very long period. Mental Health would without doubt become a major issue for those residents. This problem would be solved by moving the access points to Acorn Way, which has no domestic dwellings on it and would therefore have no impact on residents. My earlier comments highlighting the non-viability of the access points being located on Morley Road would also then be solved.
David Richards	South of West Hallam	Response-01465	Traffic Congestion	Traffic is a key concern. School drop-off / pick-up times are chaotic and all of Beech Lane is effectively reduced to a single track lane. This will be worsened by the proposal. It will also affect surrounding villages and access for service and emergency vehicles.
David Richards	South of West Hallam	response-01465	Road Safety	Children use this part of Beech Lane extensively due to the location of the school and using the park, cricket club and surrounding woodland. Introducing more traffic is not suitable.
David Richards	South of West Hallam	response-01465	Wildlife / Biodiversity	The field has much wildlife including pheasants, kestrels, owls, badgers etc. It should not be acceptable for the loss of this to be mitigated via another site miles away. The Oak tree on the frontage of the site along with the established hedgerow should not be allowed to be change - this is an important visual characteristic of the village.
David Richards	South of West Hallam	response-01465	Landscape	The openness of this site is an important characteristic of the village and provides relief from the otherwise densely populated pattern of development. The loss of this will be harmful in this regard. The impact on the adjacent conservation area will be significant and this should be avoided. A densely populated housing development adjacent to a historic farmstead is inappropriate.
David Ruddock	West of Sandiacre	Response-01776	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
David Ruddock	West of Sandiacre	Response-01776	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
David Ruddock	West of Sandiacre	response-01776	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
David Ruddock	West of Sandiacre	Response-01776	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David Ruddock	West of Sandiacre	Response-01776	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
David Ruddock	West of Sandiacre	Response-01776	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
David Ruddock	West of Sandiacre	Response-01776	Type of Housing	High density housing is preposterous not in keeping with current housing.
David Ruddock	West of Sandiacre	Response-01776	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
David Ruddock	West of Sandiacre	Response-01776	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
David Ruddock	West of Sandiacre	Response-01776	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
David Smith	West of Borrowwash	Response-01115	Traffic Congestion	I am particularly concerned about the quantity of increased traffic , pollution and danger especially around school opening and closing times. As things stand the crossing of children across Victoria avenue is an accident waiting to happen. Increase of traffic heading to Derby and the M1 via the A52 is already a problematic area.
David Smith	West of Borrowwash	Response-01115	Wildlife / Biodiversity	The size of the green belt is already quite limited .With the most recent developments in Spondon leading to the City boundary it has left a very narrow portion of land for wildlife which is already being seriously affected by climate change and loss of habitat. There is a considerable variety of bird, mammals and insect life that need to be allowed this channel of green belt.
David Smith	West of Borrowwash	Response-01115	Type of Housing	it is always a concern about quality of housing and different types of housing. Sadly I believe that developments of this kind rarely if ever stick to the original plans for mixed housing.
David Smith	West of Borrowwash	Response-01115	Green Belt	It should always be protected particularly when it is already a narrow strip of land. A footpath is not a defensible barrier and so would not be an obstacle to further developments.
David Smith	West of Borrowwash	Response-01115	Flooding / Drainage	Living close to the area in recent years our garden has remained flooded almost throughout the winter months. I am not sure but there may be some parts of this land which is likely to flood. Many of the houses in Field close have required new flooring which is an indicator that the area is low lying.
David Steare	West of Borrowwash	Response-01300	Traffic Congestion	1 The A6005 road from Spondon to Borrowwash is already very busy at commuter times. When there are lane closures due to repairs or cabling the delays can already cause a queue backing up into the village. The proposed house building will exacerbate this (especially during the construction phase) and as I live on Princess Drive this will cause further delay to my car journeys. 2 Currently there are no parking restrictions on the A6005 near to the proposed site. Visitors to this development may use the A6005 for parking leading to delays when traffic has to give way. 3 The proposed site is near a brow of a hill on the A6005. There are no traffic cameras in the vicinity and speeding motorists risk collision to traffic queuing to enter or leave the site. 4 Currently any diversion because of an A52 closure already causes gridlock in Borrowwash village and along the A6005. The proposed house building will exacerbate this.
David Steare	West of Borrowwash	Response-01300	Road Safety	1 If there is only one road entrance and exit, and if there are two entrances and exits this increases the risk of collision when speeding vehicles meet other vehicles manoeuvring to enter or leave the development. 2 The development being located near to a brow of a hill on the A6005 reduces visibility and reaction time for speeding vehicles to avoid crashing into queues into and out of the development. 3 West Park School pupils walking home to Borrowwash will have to cross an additional road junction. This increased risk also applies to parents with pushchairs and the elderly walking to/from Borrowwash and Spondon. 4 There is no pavement after Borrowwash House on the A6005 going from Borrowwash to Spondon. Crossing the road at the top of the hill already seems difficult without additional traffic from the development. 5 If a Pelican Crossing is installed this will decrease traffic flow, increase traffic density and if placed to the Spondon side of the development entrance/exit may lead to difficulties associated with the brow of the hill and speeding vehicles.
David Steare	West of Borrowwash	Response-01300	Air Quality	1 I suspect that around 280 commuters will have a detrimental effect on the air quality of the surrounding area including neighbouring houses and the farm during commuting periods. 2 I suspect that this detrimental air quality will be exacerbated by the development near to the A52 dual carriageway and its heavy traffic at commuter times.
David Steare	West of Borrowwash	Response-01300	Wildlife / Biodiversity	1 The proposed development will destroy a wildlife habitat corridor between Spondon and Borrowwash and between the A52 dual carriageway and the A 6005. The land is home to many species of insects, reptiles, birds, and small mammals let alone the wild flowers and the grasses. 2 The land is currently only used when occasional dog walkers and the occasional hiker use the footpath. The current occasional footpath use maintains the habitat.
David Steare	West of Borrowwash	Response-01300	Green Belt	The biodiversity of the land and the wilderness appearance should be considered as outstanding natural beauty situated so close to Derby.
David Thompson	West of Sandiacre	Response-01324	Traffic Congestion	Insufficient infrastructure for 180 homes
David Thompson	West of Sandiacre	Response-01324	Air Quality	Detrimental to air quality
David Thompson	West of Sandiacre	Response-01324	Wildlife / Biodiversity	Wildlife forced into gardens
David Thompson	West of Sandiacre	Response-01324	Number of Houses	Too many
David Thompson	West of Sandiacre	Response-01324	Green Belt	We need green belt
David Thompson	West of Sandiacre	Response-01324	Landscape	Will look ugly
David Thompson	South West of Draycott	Response-00654	Road Safety	The development of further housing will bring added flow of traffic to Derby Road. This will only add to the existing issues with vehicles speeding through the village at all times of the day and night and will further add to the current situation of "an accident waiting to happen".
David Thompson	South West of Draycott	Response-00654	Wildlife / Biodiversity	Use of the proposed area for housing will have a detrimental impact wildlife and biodiversity. If the proposal was to be approved a substantial Biodiversity Net Gain plan would be required.
David Thompson	South West of Draycott	Response-00654	Healthcare Facilities	Local doctors are already at breaking point and those of us who are residents in the village already to struggle to get into our own doctors that we've been registered with for years. Adding further housing will mean further applications to register with the local doctors / dentists etc and create even more problems for getting appointments.
David Thompson	South West of Draycott	Response-00654	Type of Housing	Allowed development of this land will bring the requirement for potential developers to include further development of social housing. Previous required development of social housing in Draycott brought waves of increased crime rates, which are not welcomed in the village.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David Thompson	South West of Draycott	response-00654	Green Belt	Our greenbelt should be protected as much as possible. Draycott is already under the threat of the Chesterfield to Willington National Grid Pylon scheme and this proposal adds to that.
David Thompson	South West of Draycott	response-00654	Landscape	Development of the housing will affect the landscape of the village and spoil the views of residents that have backed onto those affected fields for years.
David Thompson	South West of Draycott	response-00654	Flooding / Drainage	Flooding has been an issue to the south of Draycott for years. Adding the development of housing will add impermeable hard surfacing that will create additional surface water runoff and increased flows into surface water drainage, all with the potential to add to the flooding.
David Thompson	South West of Draycott	response-00654	Other	Crime Rates - Draycott has seen increased crime in the form of break ins, theft of motorcycles / vehicles, van break-ins, anti-social behavior etc. Additional housing is going to attract more thieves into the area and if social housing is required as part of any development, this could also create unwanted crime. I experienced this personally whilst being a resident of Cowslip Meadow when it was developed!
David Thompson	West of Sandiacre	Response-00826	Number of Houses	I would like to object to the proposed house building on green belt land at Stoney clouds, Sandiacre, why build here when 1800 houses are empty in the Borough
David Thurgood	South West of Draycott	Response-01195	Traffic Congestion	The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with the increased number of vehicles (>250) if this development goes ahead. It is likely that further new access routes will have to be incorporated for this and any associated future development into areas not designed for increased traffic causing real safety risks.
David Thurgood	South West of Draycott	response-01195	Wildlife / Biodiversity	These plans, plus the plans for National Grid to install super pylons only circa 600 metres away, means that the south west area of Draycott will be hugely impacted from both a conservation and natural environment perspective. This development will negatively impact the ecology, wildlife and beauty of the area.
David Thurgood	South West of Draycott	response-01195	Green Belt	Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is approximately 8H. These 8 sites alone will allow 514 net dwellings to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever.
David Thurgood	South West of Draycott	response-01195	Flooding / Drainage	Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone.
David Thurgood	South West of Draycott	response-01195	Other	Loss of caravan and motorhome storage facilities - It is likely that future associated developments could see the closure of the existing local secure storage compound which will mean that alternative facilities further afield (outside Draycott) will have to be found. The additional travelling will have an impact with additional fuel costs, journey times and less convenience than the current situation. Similarly closure or relocation of the current caravan and motorhome service / repair business will reduce the business diversity and capability within Draycott as well as negatively impacting current business users. The loss of safe and convenient horse stabling and pasturing will negatively effect local users.
David Tindley	West of Sandiacre	Response-00515	Traffic Congestion	I wish to object to the currently proposed vehicular access for this development. Based on the plans, the access appears to be significantly constrained. Even with the removal of trees/hedges and the construction of the highway over existing root zones which should be protected, the widest achievable opening is only 5.7 metres with the current gate being only 2.7m. This also assume they own the current land to achieve the 5.7m. A two-way road typically requires a width of 5.5 to 7.3 metres, plus space for a pedestrian footpath. Having measured the current road at the point near the gate, the actual road is only 5.4864m wide, which falls below the minimum required for a two-way road. If the existing footpaths are added to this measurement, the total width required to continue the existing footpath lines and the road itself is 9.04 m Therefore, even with the absolute minimum road width just after a bend, this proposal fails to allow for safe pedestrian access alongside vehicle movement. As a result, the development of 180 homes would leave residents without a safe pedestrian route in or out of the site. This conflicts with NPPF Paragraph 110, which requires developments to give priority to pedestrian and cycle movements and create places that are safe, secure and attractive for all users. Additionally, the route leading to the site from the main road consists of narrow residential streets, which are frequently lined with parked cars, both on the roads and on the pavements. The latter could cause significant accessibility and safety issues for people of limited or restricted mobility and parents with young children and pushchairs. The Sandiacre Neighbourhood Plan 2022-37, recently agreed following a referendum, clearly identifies many of these access roads as already being congested. There is existing evidence of buses getting stuck, particularly on Beech Avenue, indicating that large vehicles, especially construction traffic, would be unable to safely navigate these roads. I am also concerned that a fire engine, ambulance or any emergency vehicles, plus delivery vehicles, post office vans and supermarket/courier deliveries would struggle to access the site in a timely manner due to these same constraints, particularly where parked cars restrict manoeuvrability. This raises serious concerns regarding access for emergency services and the safe management of construction traffic, in conflict with NPPF Paragraph 111, which advises that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety or the residual cumulative impacts on the road network would be severe. The proposed development will also increase the number of vehicles using these currently quiet roads. At present, drivers patiently wait for one another to pass parked vehicles. However, with significantly more traffic generated by 180 homes, the parked cars that currently cause little disruption are likely to create congestion and hazards for pedestrians. Current ONS statistics suggest that there are an average 1.29 cars for each household in the country. This would suggest an additional 232 for a development of 180 properties. However, given that only 10% of the development would be earmarked for 'affordable' housing, with the remainder (based on the developer's other sites locally) likely to be 3, 4 and 5-bedroom houses, the expectation is the number of cars will be significantly higher. This runs counter to NPPF
David Tindley	West of Sandiacre	response-00515	Traffic Congestion	Paragraph 112, which stresses the need for developments to enable safe and suitable access for all users and to minimise conflicts between vehicles and pedestrians. Cloudside Road, the ONLY access to Larch Drive, is on a steep gradient. In snowy or icy conditions, it actually becomes impassable. It is never gritted (presumably one of the reasons being that the gritter lorries cannot access the road), and it relies on local residents to grit the road manually accessing a grit-box halfway up the road. For all of these reasons, I strongly object to the proposed vehicular access arrangement and urge the planning authority to reconsider a solution that ensures both safe pedestrian connectivity and appropriate vehicle access, without compromising the surrounding residential streets.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David Hindley	West of Sandiacre	response-00519	Road Safety	<p>Stanton Road is the main access road to the proposed site, with Beech Avenue and Coronation Avenue feeding off it. There are only two wider approaches to Stanton Road from the west from Rushey Lane, and from the east from Town Street/Ilkeston Road. Given that Rushey Lane has a weight restriction on it of 7.5 tonnes (unless for access) to prevent HGVs travelling on to Stanton via Stanton by Dale, so it would seem inevitable that any construction traffic will have to enter from Town Street/Ilkeston Road. This is already difficult, with tight, blind bends immediately you access Stanton Road, another when to turn right close to the Blue Bell pub, and particularly so when you turn left by Sandiacre Football Club/St Giles Park. Within 100m of the football club, on the opposite side of the road, is Cloudside Academy Primary School. Both are key facilities/amenities for the village, and extremely important. However, on practice nights, match days and on evenings when football matches are being screened on TV, Stanton Road is extremely congested. It must not be forgotten that the football club provides facilities for children as well, and this causes serious safety concerns for them, particularly as they are less aware of the safety hazards caused by the congestion. School drop-offs and pickups are even worse. Whilst there is a temporary restricted speed of 20mph during these times, the congestion is awful, with congestion on street corners creating further blind bends for people trying to turn left out of Beech Avenue, and with parking extending well up Beech Avenue as well. Whilst most drivers are considerate and careful, I have seen several instances where drivers have had to mount the school-side kerb to avoid vehicles coming in the opposite direction. With very young children in the vicinity, I think is already a major safety issue which can only be exacerbated by an increase in traffic numbers from the proposed development. This is particularly the case when large construction traffic is added to the situation. I consider the road safety issues involved with this proposal to be extremely serious, and I therefore strongly object to the proposal.</p>
David Hindley	West of Sandiacre	response-00519	Air Quality	<p>I wish to object to the proposed development on the grounds of its likely negative impact on local air quality. Only a few years ago, parts of Sandiacre were identified as exceeding national air quality standards leading to a need to regularly monitor air pollution levels. It took considerable effort by both the local authority and the community to reduce harmful emissions and bring pollution levels under control. The land identified for development currently acts as a vital green buffer between the M1 motorway and existing residential properties. This open space plays an important role in absorbing pollutants and providing a physical barrier that shields homes from the worst effects of motorway emissions. The loss of this green space would remove that buffer entirely, exposing current residents to higher levels of air pollution. Whilst I understand that the council either ceased or significantly reduced monitoring of air quality in 2022 because of reduced levels at that time, since then the M1 close to Sandiacre has become a smart motorway. Speed control/monitoring tends to result in more cars being slower/stationery in the area increasing air pollutants. Furthermore, HGV through the village has undoubtedly increased since then, and will increase further as the commercial property element of the re-development at Stanton expands. The proposed addition of 180 dwellings would lead to a significant increase in vehicle movements in the area both during construction and once the homes are occupied. This additional traffic, in combination with the factors previously highlighted risks tipping the local area back into non-compliance with national air quality standards, undoing years of progress. This proposal is therefore in conflict with Paragraph 186 of the National Planning Policy Framework (NPPF), which states that "Planning policies and decisions should sustain and contribute towards compliance with relevant limit values or national objectives for pollutants." It also goes against Paragraph 183, which requires planning decisions to ensure that new development is appropriate for its location, taking into account the likely effects (including cumulative effects) of pollution on health and the natural environment. Allowing development in this location risks not only increasing air pollution for future residents, who would be living right next to a major motorway, but also worsens the quality of life and health outcomes for the existing community by removing a green-belt space that currently acts as a protective buffer. For these reasons, I strongly object to the proposed development and urge the planning authority to carefully consider the long-term environmental and health impacts on the community.</p>
David Hindley	West of Sandiacre	response-00519	Wildlife / Biodiversity	<p>The proposed site is adjoining Stoney Clouds Nature Reserve. The latest available report on the reserve (Stoney Clouds LNR Management Plan 2013-2022) appears to have been commissioned by the Council in 2012?, and the report, produced by the Derbyshire Wildlife Trust was updated 29/4/20. This provides a substantial and detailed description of the site's flora and fauna. There is much anecdotal evidence of foxes, badgers, rabbits and moles, and I know from personal experience that there are field mice and brown rats. Bats are regularly seen in the summer months in the Larch Drive area, where they roost in the woods. In terms of reptiles, common frog and common toad are believed to be resident, together with grass snakes and, we are advised, adders. Resident bird species are many and varied. Our garden backs on to the wood at Stoney Clouds (Compartment 6 Cloud House Plantation). I have personally seen or heard 29 different bird species over the last 12 months, either as visitors to our garden or on walks in the woods themselves. These include over-wintering migrants such as chiffchaff and blackcap, sparrowhawk, greater spotted and green woodpeckers. Also included in this list are birds identified in the report as being priority species in the UK and Lowland Derbyshire Local Biodiversity Action Plan - bullfinch, song thrush, house sparrow and dunnoek. All the species are associated with the hedgerow and woodland habitats. The report highlights that here is a legal obligation not to damage or disturb protected species or breeding birds during the breeding season. In my view, despite a requirement to provide a suitable green buffer?, any construction and development work on the site will inevitably have a significant and detrimental effect on the flora and fauna of the site. For these reasons, I strongly object to the proposed development and urge the planning authority to carefully consider the detrimental impact the development will have on the area's wildlife.</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David Tindsley	West of Sandiacre	response-00515	Bus Services	I wish to raise an objection to the proposed development on the grounds of poor accessibility and inadequate public transport provision. There is already existing evidence that buses regularly struggle to navigate the narrow residential roads leading to the proposed site. In some cases, buses have become stuck due to parked cars and tight corners. Given the constraints, I am uncertain how a large service bus would be able to safely access the proposed site entrance, especially when accounting for construction traffic and future vehicle use. If a bus is unable to enter the site itself, residents particularly those who are older or have limited mobility would be expected to walk back uphill from the existing bus stop on Cloudside Road/Maple Avenue to return home. This presents a serious accessibility concern, as the existing roads include a significant gradient, which would make walking difficult or even unmanageable for many, especially in poor weather. This directly conflicts with Paragraph 112 of the National Planning Policy Framework (NPPF), which requires that developments give priority to pedestrian and cycle movements and promote access to high-quality public transport. It also contradicts Paragraph 130, which emphasises that developments should be inclusive and accessible, ensuring that they meet the needs of people with disabilities and reduced mobility. If the development cannot provide a site layout that enables safe and practical access for buses, it will result in a scheme that is not only poorly connected but excludes a significant portion of the population from being able to live there comfortably. For these reasons, I object to the current proposal and urge the planning authority to ensure that any approved development provides proper, accessible public transport links that serve all residents.
David Tindsley	West of Sandiacre	response-00515	School Capacity	I wish to object to the proposed development on the grounds of insufficient local school capacity to accommodate the likely increase in pupil numbers. I believe that Cloudside School is currently operating at capacity, and I understand that other nearby schools are in a similar position. While there is some indication that pupil numbers may fall in the future, we have yet to see any significant evidence of this locally, and any such changes would take time to materialise. An additional 180 dwellings would undoubtedly bring more families to the area, many with school-aged children. Without proper forward planning and investment in additional classroom space, local schools will be unable to provide the places required. This could result in children being allocated places far from their homes, creating further strain on transport infrastructure and undermining the principle of community-based education. This situation is contrary to Paragraph 95 of the National Planning Policy Framework (NPPF), which states that it is important that a sufficient choice of school places is available to meet the needs of existing and new communities? and that local authorities should take a proactive approach to ensuring this. I therefore urge the planning authority to ensure that any future development is matched by appropriate investment in education infrastructure, including the expansion of existing schools such as Cloudside, so that we are in a position to accommodate new pupils without impacting the quality of education provided. Until such assurances and plans are in place, I must object to this development on the basis that the local education system is not currently equipped to support it.
David Tindsley	West of Sandiacre	Response-00515	Healthcare Facilities	I wish to object to the proposed development due to the lack of sufficient healthcare provision in the local area. I currently use Adam House Medical Centre, and I am very aware of the challenges already facing our local GP services. Although there are no patient quotas at GPs, it is extremely difficult to get an appointment, and patients are often required to call at exactly 8am, or personally attend the surgery, to stand any chance of being seen. If you call even 30 minutes later, all available appointments for the day are typically gone. This has become the norm, not the exception, and it reflects the level of pressure the practice is already under. Adding another 180 homes to the area will place further strain on a system that is already at breaking point. Without additional investment in local healthcare infrastructure, this development risks worsening access for both existing and new residents. There is a similar situation relating to dentists, where it is almost impossible to register for an NHS dentist at any local dentist with the Erewash BC this concern aligns with Paragraph 95 of the National Planning Policy Framework (NPPF), which states that planning policies and decisions should ensure that developments are supported by the necessary infrastructure, including health facilities. It is also supported by Paragraph 8, which highlights the importance of promoting healthy and safe communities as part of sustainable development. Until there is a clear and funded plan to expand healthcare capacity locally whether through additional GP provision, clinic space, or staffing this development is premature and would place an unacceptable burden on already overstretched services. For these reasons, I strongly object to the application and urge the planning authority to ensure that adequate health infrastructure is in place before any further large-scale housing developments are approved.
David Tindsley	West of Sandiacre	response-00515	Type of Housing	I wish to object to the proposed development on the grounds that it does not appear to be in accordance with the local Neighbourhood Plan, particularly in terms of housing scale, type, and density. The Sandiacre Neighbourhood Plan 2022 -2037, developed in consultation with the local community to guide appropriate and sustainable development. This plan sets clear expectations that new development should reflect the character of the area, including the type and density of housing, and should be proportionate to the existing built environment. A proposal for 180 dwellings on this site would represent a significant increase in density compared to the surrounding area. It would result in a development that appears out of scale and out of keeping with the established residential character. Such a large number of homes in a single location also risks undermining the carefully considered planning policies agreed through the Neighbourhood Plan process. This conflicts with Paragraph 15 of the National Planning Policy Framework (NPPF), which recognises the legal status of Neighbourhood Plans and supports giving local communities the power to shape development in their area. It also contradicts Paragraph 127, which states that developments should be sympathetic to local character and align with the expectations set out in local design guides or codes. Restricting the number of affordable? houses to just 10% appears to conflict with the Sandiacre Neighbourhood Plan, which recommends (para. 145) that the Parish diversify its housing mix, increasing the number of 1-2 bedroom dwellings to balance out the high proportion of 3+bedroom dwellings on offer and ensure that both younger households and downsizing older people have a broader range of options than they do at present?. I suspect that to include a higher percentage of affordable housing would make this a much less viable and lucrative development for the developer.
David Tindsley	West of Sandiacre	response-00515	Number of Houses	It is my strongly held view, and mirrored by neighbours and residents in the affected areas, that NO houses should be built on this land whatsoever. It is completely inappropriate given the significant access and traffic issues, and I therefore strongly object to the suggested development.
David Tindsley	West of Sandiacre	response-00515	Green Belt	The land in question is currently classified as green belt, and it also adjoins the Stoney Clouds Nature Reserve. Whilst the Revised Strategy document requires that a suitable green buffer between development and the adjoining Stony (sic) Clouds Local Nature Reserve?, I am highly sceptical that this would be adhered to by the developer, or properly monitored and enforced by the Council. Using green belt land when there are suitable brownfield sites in Sandiacre (and particularly Stanton) available is completely unacceptable.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David Hindley	West of Sandiacre	Response-00515	Landscape	The proposed development of 180 houses must be considered high-density (and very much in line with other sites developed by Peveril Homes in the area. This is totally out of character compared to the surrounding area.
David Hindley	West of Sandiacre	Response-00515	Flooding / Drainage	Whilst the proposed site is not in the designated flood zones identifies by the council, nevertheless, I believe that any proposed development on the land could create major issues for residents in the area. Gardens backing on to the site on Larch Drive and Chestnut Grove (backing on to what are currently now stables) get flooded during heavy rain. I have been told by some residents on Maple Avenue and Elm Avenue that their gardens can flood with water and it can come up to the bottom of their front doors during heavy rain as the water finds its natural course down the hill. Nature reserves often act as natural drainage areas. With more tarmac/concrete making drainage less easy, developing this land could increase the risk of flooding to the existing houses, especially during extreme weather, which are becoming more frequent due to climate change. Severn Trent have not been at all helpful in providing any information about sewers in the area. However, a development of 180 houses will inevitably place significant stress on what is probably an already aged and stressed sewer system.
David Hindley	West of Sandiacre	Response-00515	Other	1. I understand that in the appendix to the local Neighbourhood Plan, an alternative housing site has already been proposed. This site, on derelict land behind Lidl, has undergone public consultation, been reviewed by a planning inspector, and was approved through a referendum, with broad community support. This alternative site would deliver a similar number of homes to the Sandiacre area but is far better suited to the community's needs and local infrastructure. Given the extensive process already undertaken, which included public input and scrutiny, I believe this site represents a much more appropriate and sustainable option for development than the currently proposed site. In light of this, I strongly urge the planning authority to prioritise this alternative site and reject the current proposal, which does not align with the outcomes of the Neighbourhood Plan process. 2. I find it difficult to accept that any councillor that has voted to support the scheme has actually visited the site, and taken time to assess properly the significant problems and issues it would cause. Common sense would show that the proposed single site access is both too narrow, and only approached from a series of narrow, congested residential streets that have many blind right-angle bends which are totally unsuitable for HGV construction traffic. 3. As this portal does not seem to support the attachment of files, I will be submitting a series of photographs by email to supplement this objection, to demonstrate some of the key areas that I have outlined. 4. Overall, I regard it as absolutely disgraceful that the council is even considering this site for possible development, when perfectly acceptable brownfield sites are available. It has no redeeming features, and I object to the proposal in the strongest terms.
David Tyler	West of Borrowwash	Response-00835	Traffic Congestion	Access will be poor without considerable road realignment on Derby road
David Tyler	West of Borrowwash	Response-00835	Road Safety	Accessing the proposed site from Derby road will have safety concerns
David Tyler	West of Borrowwash	Response-00835	Wildlife / Biodiversity	This is farmed land, cropped annually not a brown field site, as well as wildlife and biodiversity being present
David Tyler	West of Borrowwash	Response-00835	Green Belt	This working agricultural land not baron land
David Tyler	West of Borrowwash	Response-00835	Flooding / Drainage	This land is close to a brook that occasionally floods derby road, if the land is built on, there will be less natural soakaway and the possibility of regular flooding of derby road
David Tyler	West of Borrowwash	Response-00835	Other	More should be done to reduce the number of empty properties across the whole of erewash before building on farm land
David Tyler	North of Borrowwash	Response-00836	Traffic Congestion	How is going to be safe to access the site so close to the A52 junction
David Tyler	North of Borrowwash	Response-00836	Road Safety	Is the access off Cole lane ? If so it will be very close to the A52 Junction
David Tyler	North of Borrowwash	Response-00836	Air Quality	The proposed site is very close to the A52. Air and noise pollution must be an issue
David Tyler	North of Borrowwash	Response-00836	Flooding / Drainage	This land provides drainage for the A52, as does the adjoining lands
David Tyler	North of Borrowwash	Response-00836	Other	The council should be looking at all the empty properties across Erewash borough and bring them back into occupancy. Possibly look at council/housing association properties with 2 or more bedrooms with a single person living there and offer an alternative 1 bedroom property to free up a larger property. Offer some kind of incentive, lower rent or something.
David Webster	South West of Draycott	Response-01113	Traffic Congestion	"NPPF 109. States that transport issues should be considered from the earliest stages of plan-making and development proposals, using a vision-led approach to identify transport solutions that deliver well-designed, sustainable and popular places. This should involve identifying, assessing and taking into account the environmental impacts of traffic and transport infrastructure ? including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains. Yet no traffic survey has been undertaken. If it had it would have highlighted that along A6005 (Derby Road) and exactly adjacent the proposed development. The peak traffic hours on Fridays are between 4 PM and 6 PM, with the highest average vehicle count observed from 4 PM to 5 PM. The average number of cars per day in the traffic data is approximately 3,861 vehicles. The highest recorded traffic day in the data is June 11, 2023, with a total of 4,779 vehicles. The maximum speed recorded in the traffic data is 106 mph and the number of times 70 mph is exceeded in the traffic data is 174."
David Webster	South West of Draycott	Response-01113	Road Safety	The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents.
David Webster	South West of Draycott	Response-01113	Air Quality	The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment.
David Webster	South West of Draycott	Response-01113	Wildlife / Biodiversity	The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds, bats etc who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC.
David Webster	South West of Draycott	Response-01113	Bus Services	The use of the bus services is provided by Trent Barton which runs every 20 minutes which at peak times i.e morning and between school leaving at 15 00 hours are normally restricted to standing only for me and my wife both over 70 at the moment any additional traffic in people and children could lead to use waiting for the next bus.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David Webster	South West of Draycott	Response-01113	School Capacity	Has there been a study if our local school can cope with the extra children that will require education
David Webster	South West of Draycott	Response-01113	Healthcare Facilities	Has there been a study of the extra 17% of population will have on our healthcare can it cope ?
David Webster	South West of Draycott	Response-01113	Type of Housing	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing, The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village?s strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.
David Webster	South West of Draycott	Response-01113	Number of Houses	This out of scale development rides roughshod over the NPPF and other relating policies and guidelines with the barest of lip service paid, with the minimum consultation being undertaken with residents which is compounded by the lack of information available and transparency. The scale and massing of the development, which will begin with 190 houses but will significantly increase when the identified safeguarded land is developed in the future, is completely out of character with its surroundings and would be incredibly overbearing on the village and neighbourhood I strongly believe that there are better suited brownfield sites and genuine Grey Belt sites with land that is of poor quality. The land south west of Draycott is Grade 2 land (very good) and should be protected. NPPF 61. States that to support the Government?s objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay. The overall aim should be to meet an area?s identified housing need, including with an appropriate mix of housing types for the local community. The land identified south west of Draycott is Green Belt and Grade 2 quality land. This development neither looks to protect the BMV not does it look to bring forward the 109 existing Brownfield sites within the EBC that has full planning consent. NPPF 73. States that the authority should identify, through the development plan and brownfield registers, land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC their are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.
David Webster	South West of Draycott	Response-01113	Green Belt	NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. Great weight should be given to the findings and recommendations of independent Landscape Quality Assessment NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside?s open character and the enhancement of recreational opportunities for local residents. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David Webster	South West of Draycott	response-01113	Landscape	<p>Our local surroundings will become dominated by housing estates and will blight the local walks along the Public Right of Way which connect our Village. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. The development of 190 homes will have a significantly negative impact on the spatial openness of the area, impacting both the physical and geographical characteristics of the open land, which prevents urban sprawl and maintains the separation between settlements. It will overwhelmingly impact the natural and undeveloped nature of the Green Belt area.</p>
David Webster	South West of Draycott	response-01113	Flooding / Drainage	<p>From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic was questions was asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes. Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. Building on a flood plain that has trees, grass &amp; plants that naturally help absorb water via roots systems when removed will have a huge impact. When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issues. "NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where 50 development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout the year with many residents on Lime Gr</p>
David Webster	South West of Draycott	response-01113	Flooding / Drainage	<p>ove not able to obtain flood risk damage cover as a consequence. " NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
David Webster	South West of Draycott	Response-01143	Other	There are around 2000 vacant social housing in Derbyshire County. Why are these houses not being prioritised ahead of this land being used for development. I strongly object to the Sustainability Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local residents resulted in a score of -6 placing this land ran 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 & 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should received a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed. I would like the EBC to confirm that if this does go ahead that they would pay for any damages that accrue due any flooding to my house and pay any house insurance increase that is if i can get home insurance as residents on Lime Grove are not able to obtain flood damage cover due to flooding Who ever gave the go ahead with this proposal should be remove from there job
David Whitehead	North of West Hallam	Response-01051	Traffic Congestion	The development will increase traffic to an already difficult/hazardous crossroads
David Whitehead	North of West Hallam	Response-01051	Road Safety	Park hall lane is not suitable for an increase of traffic that this development would result in.
David Whitehead	North of West Hallam	Response-01051	Air Quality	The development will cause a degradation in air quality from construction machinery fumes and dust.
David Whitehead	North of West Hallam	Response-01051	Wildlife / Biodiversity	The site is home to a badger sett, and mature hedgerows with a wide range of species supported. Bats also roost in the trees on the site of the proposed development.
David Whitehead	North of West Hallam	Response-01051	School Capacity	West Hallam only has a small capacity for school intake.
David Whitehead	North of West Hallam	Response-01051	Healthcare Facilities	It is difficult enough to get an appointment at any of the West Hallam surgeries as it is.
David Whitehead	North of West Hallam	Response-01051	Type of Housing	This is not social housing and only for making money for the private developers.
David Whitehead	North of West Hallam	Response-01051	Number of Houses	25 houses on that small field will cause so much upset on a green field site and all over the value of most first time buyers.
David Whitehead	North of West Hallam	Response-01051	Green Belt	The green belt should be left while there are plenty of more suitable brown fields sites available for development.
David Whitehead	North of West Hallam	Response-01051	Landscape	The site provides a natural break between west Hallam and Mapperley to the north.
David Whitehead	North of West Hallam	Response-01051	Flooding / Drainage	The field floods every winter and Autumn after moderate and heavy rain.
David Yeo	West of Sandiacre	Response-01705	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
David Yeo	West of Sandiacre	Response-01705	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
David Yeo	West of Sandiacre	Response-01705	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
David Yeo	West of Sandiacre	Response-01705	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
David Yeo	West of Sandiacre	Response-01705	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
David Yeo	West of Sandiacre	Response-01705	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
David Yeo	West of Sandiacre	Response-01705	Type of Housing	High density housing is preposterous not in keeping with current housing.
David Yeo	West of Sandiacre	Response-01705	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
David Yeo	West of Sandiacre	Response-01705	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
David Yeo	West of Sandiacre	Response-01705	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Dawn Fish	East of Breaston	Response-01165	School Capacity	Local schools are at capacity!
Dawn Fish	East of Breaston	Response-01165	Healthcare Facilities	Local doctors and nhs dentists are at capacity
Dawn Fish	East of Breaston	Response-01165	Number of Houses	Breaston and Draycott are lovely villages with a good community feel. More and more houses being added will take that away and make it more of a town and ruin the community feel.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Dawn Glennis Smith	East of Breaston	Response-01885	Green Belt	The houses are being built on greenbelt land. Once it's gone, it's gone forever. Why are brownfield sites not being used
Dawn Glennis Smith	West of Sandiacre	Response-00510	Traffic Congestion	Traffic congestion is already a problem in the existing area and would only get worse with the building of these houses.
Dawn Glennis Smith	West of Sandiacre	Response-00510	Road Safety	Road safety would increase as the infrastructure to this area will not be improved.
Dawn Glennis Smith	West of Sandiacre	Response-00510	Wildlife / Biodiversity	This area has already been damaged by house building. What remains should be protected for the animals, birds, insects and plant life.
Dawn Glennis Smith	West of Sandiacre	Response-00510	Bus Services	Bus services are already impacted by parked vehicles, narrow roads, etc. An already difficult route would prove impossible if extended.
Dawn Glennis Smith	West of Sandiacre	Response-00510	Green Belt	This area is GREEN BELT land. Part of it has already disappeared to house building, the rest should protected so that it can be enjoyed by everyone. It is a wonderful area of natural beauty which SHOULD NOT BE BUILT ON! I strongly object to destruction of green belt land!
Dawn Glennis Smith	West of Sandiacre	Response-00510	Landscape	This is STONEY CLOUDS an historic part of the local landscape - PLEASE DO NOT DESTROY this precious part of Sandiacre by building on it. Build the houses on a Brown Field site.
DA Wood	East of Breaston	Response-01885	Traffic Congestion	Access even now at times to the roadway is that it is a narrow and distorted, creating a major problem in bypassing other vehicles, especially commercial transports. At morning rush hours, school times, and shopping routes, considering 50 new houses with a possible 100 plus travellers would be in chaos especially when the population increases over time.
Dean Bosworth	West of Sandiacre	Response-01665	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Dean Bosworth	West of Sandiacre	Response-01665	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud Side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Dean Bosworth	West of Sandiacre	Response-01665	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Dean Bosworth	West of Sandiacre	Response-01665	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Dean Bosworth	West of Sandiacre	Response-01665	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Dean Bosworth	West of Sandiacre	Response-01665	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Dean Bosworth	West of Sandiacre	Response-01665	Type of Housing	High density housing is preposterous not in keeping with current housing.
Dean Bosworth	West of Sandiacre	Response-01665	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Dean Bosworth	West of Sandiacre	Response-01665	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Dean Bosworth	West of Sandiacre	Response-01665	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Dean Corcoran	East of Breaston	Response-00798	Traffic Congestion	The A6005 is already an extremely busy road especially at peak times , it's already difficult to exit Heath Gardens- adding to the use of this road will only increase the potential for further traffic issues especially for individuals wanting to turn right from Heath Gardens - not helped by the close proximity of the Jet petrol station
Dean Corcoran	East of Breaston	Response-00798	Road Safety	The A6005 is already an extremely busy road with access from Heath Gardens already difficult for existing Heath Garden residents - an increase of users would just add to this issue and in my opinion increase the likelihood of accidents particularly for anyone wanting to turn right from Heath Gardens across both cycle lane and against quick moving traffic and school children at peak times
Dean Corcoran	East of Breaston	Response-00798	Air Quality	The proximity of the M1 already impacts this area any increase in users will obviously impact this
Dean Corcoran	East of Breaston	Response-00798	Wildlife / Biodiversity	The land in question has for many years supported a wide variety of wildlife with foxes seen almost everyday (den in the overgrowth at side of field) with fox cubs often seen playing in the sun around the field, bats use the fields to hunt for prey ( again seen regularly at dusk) as well as numerous birds including birds of prey and European green woodpecker, rabbits live in numerous burrows at various points at the sides of the field as well as trees ( including oak trees ) that support a number of squirrels all of which would be lost if this proposal were to go ahead
Dean Corcoran	East of Breaston	Response-00798	School Capacity	Schools in the area are already struggling with capacity so further housing development will just exacerbate this issue
Dean Corcoran	East of Breaston	Response-00798	Healthcare Facilities	Availability of health care is a known issue countrywide Breaston is no different - any increase in residential development will of course impact this
Dean Corcoran	East of Breaston	Response-00798	Type of Housing	Houses on Holly Avenue which border the fields proposed for development are 1.5 feet above the level of the field ( to ensure we do not flood) it also means that we will be looking down into peoples homes causing a lack of privacy for both existing residents and the proposed houses.
Dean Corcoran	East of Breaston	Response-00798	Number of Houses	This land floods so it is foolish to even be considering building any number of houses here
Dean Corcoran	East of Breaston	Response-00798	Green Belt	This area was designated as Green belt for a reason it acts as both a place for wildlife , presents a break between homes and the M1 and a flood plain ( flooding increased when pipework was removed from central reservation in the next field over ( between The proposed development and M1 the farmer that uses this land can confirm that the flooding that now occurs each year is exacerbated as a result of this with the flooding impacting both his fields and the fields where work is being proposed
Dean Corcoran	East of Breaston	Response-00798	Landscape	The view from entering the village from Longmore Lane will be impacted destroying the wildlife that currently live and feed there

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Dean Corcoran	East of Breaston	Response-00798	Flooding / Drainage	As mentioned numerous times in previous answers this area is known to flood regularly and often remaining underwater for many weeks with birds such as Egrets seen on many occasions the previously mentioned change of water runoff from the M1 and water table means that you are considering providing housing for people in the knowledge that any development will be prone to these issues
Dean Corcoran	East of Breaston	Response-00798	Other	I strongly object to this proposal
Dean Lavelle	West of Sandiacre	Response-01774	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Dean Lavelle	West of Sandiacre	Response-01774	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Dean Lavelle	West of Sandiacre	Response-01774	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Dean Lavelle	West of Sandiacre	Response-01774	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Dean Lavelle	West of Sandiacre	Response-01774	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Dean Lavelle	West of Sandiacre	Response-01774	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Dean Lavelle	West of Sandiacre	Response-01774	Type of Housing	High density housing is preposterous not in keeping with current housing.
Dean Lavelle	West of Sandiacre	Response-01774	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Dean Lavelle	West of Sandiacre	Response-01774	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Dean Lavelle	West of Sandiacre	Response-01774	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Dean Michell	West of Sandiacre	Response-01343	Traffic Congestion	At school times the bottom of Beech Avenue is unsuitable already. Living on the corner of Beech Avenue I often see cars cutting the corner leaving on coming traffic to swerve. When a lot of people are parked on the road buses have problems getting down the Avenue.
Dean Michell	West of Sandiacre	Response-01343	Road Safety	When the bus has stop ,car use the pavement to get round. I have nearly been hit coming out my gate.
Dean Michell	West of Sandiacre	Response-01343	Air Quality	The extra traffic will bring extra noise and fumes to a already busy area.
Dean Michell	West of Sandiacre	Response-01343	Wildlife / Biodiversity	There is a good variety of wildlife and this should get better in time. Building new home will put wildlife in danger.
Dean Michell	West of Sandiacre	Response-01343	Healthcare Facilities	You cannot get appointments at the doctors now ,so how will building more homes help.
Dean Michell	West of Sandiacre	Response-01343	Type of Housing	To many house already in sandiacre.
Dean Michell	West of Sandiacre	Response-01343	Number of Houses	To many house of any type.
Dean Michell	West of Sandiacre	Response-01343	Green Belt	Stoney Clouds is a well used area by the locals community. This is something that is needed for people wellbeing.
Dean Michell	West of Sandiacre	Response-01343	Flooding / Drainage	Building on this space I am concerned about flooding .
Dean Peake-Whitehurst	West of Sandiacre	Response-00488	Traffic Congestion	The road system in the local village will not handle the increased volume of traffic and would be unfair on existing residents
Dean Peake-Whitehurst	West of Sandiacre	Response-00488	Road Safety	See comments on Traffic Congestion. The thought is the same, more vehicles will result in increased danger for a small, quiet village
Dean Peake-Whitehurst	West of Sandiacre	Response-00488	School Capacity	Having just started a family, this is a major concern for us. School places are already low and adding close to 200 new homes will inevitable worsen this situation
Dean Peake-Whitehurst	West of Sandiacre	Response-00488	Healthcare Facilities	Getting an appointment at the local GP surgery is already hard enough. We do not need more competition for healthcare
Dean Peake-Whitehurst	West of Sandiacre	Response-00488	Green Belt	Just stop trying to ruin the countryside. Just have a bit of a grow up and stop it...
Dean Wright	South of West Hallam	Response-00094	Traffic Congestion	Increased traffic in an already busy area, particularly at the start and end of the school day
Dean Wright	South of West Hallam	Response-00094	Road Safety	Increased road traffic at an already busy junction
Dean Wright	South of West Hallam	Response-00094	Air Quality	Increased vehicle numbers and homes will lower air quality, particularly worrying as it is next to a school
Dean Wright	South of West Hallam	Response-00094	Wildlife / Biodiversity	Considerable loss of greenery and wildlife habitat. That this development is even being considered is utterly unacceptable.
Dean Wright	South of West Hallam	Response-00094	Healthcare Facilities	Healthcare provisions are already stretched without more homes in the area
Dean Wright	South of West Hallam	Response-00094	Green Belt	This area should be protected, loss of greenery belt will not only result in the loss of habitat and lower air quality, villages and towns will simply blur into one.
Dean Wright	South of West Hallam	Response-00094	Landscape	The view across the dales will be irrevocably lost, with extensive habitat lost
Dean Wright	South of West Hallam	Response-00094	Other	How is this development even being considered? West Hallam has no suitable areas for development.
Debbie Hunt	East of Breaston	Response-01803	Healthcare Facilities	Healthcare: Local GP surgeries and dental practices are under significant strain, and any increase in population would make access to timely care even more difficult.
Debbie Hunt	East of Breaston	Response-01803	Number of Houses	Breaston is a historic rural village with a strong sense of identity and community. Introducing a large-scale development of 50 houses would significantly alter the village's scale and character, pushing it toward becoming a suburban extension rather than a distinct settlement. This would undermine the very qualities that make Breaston a desirable place to live, undermine our house prices and essentially connect Breaston to Long Eaton.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Debbie Hunt	East of Breaston	Response-01803	School Capacity	:The village primary school already faces constraints in space and facilities, while nearby secondary schools operate near or at full capacity. An influx of families would worsen the situation and could force children to seek school places outside the area.
Debbie Hunt	East of Breaston	Response-01803	Flooding / Drainage	Recent flooding events in late 2023 and early 2024 demonstrated the village's vulnerability to extreme weather. The proposed site, which currently functions as a natural soakaway and is often waterlogged, plays a key role in managing surface water. Development would replace permeable land with hard surfaces, significantly raising flood risk for both existing and future properties at a time when climate unpredictability is on the rise. Our house will be directly affected by this and I am very concerned about our garden and house flooding.
Debbie Hunt	East of Breaston	Response-01803	Traffic Congestion	Traffic and transport: The village road network is not equipped to handle additional traffic volumes. Increased congestion, parking problems, and road safety risks would result in a marked decline in quality of life for both residents and commuters.
Debbie Hunt	East of Breaston	Response-01803	Wildlife / Biodiversity	The land in question is designated Green Belt, protected to limit urban sprawl, safeguard the countryside, and preserve biodiversity. Development here would lead to the permanent loss of vital green space and the destruction of natural habitats supporting a variety of wildlife, including birds, bats, and small mammals. Once developed, this ecological value cannot be restored. As our house backs onto the field in question, we know there is a fox family and rabbits that live in that field. The development also runs counter to the Climate Change Act 2008 and the Environment Act 2021, undermining national commitments to reduce carbon emissions and meet the 10% Biodiversity Net Gain requirement.
Debbie Hunt	East of Breaston	Response-01803	Green Belt	Contradiction with Planning Policy and Legislation Under the National Planning Policy Framework (NPPF 2023): ? Paragraph 140 states that changes to Green Belt boundaries should only be made in exceptional circumstances. Why is this proposal exceptional circumstances when there are other locations available? ? Paragraphs 149?150 highlight that inappropriate development in the Green Belt should only be permitted under very special circumstances. No compelling justification has been presented to meet these thresholds. Additionally: ? The Council is required to demonstrate a five-year housing land supply before Green Belt release is considered. There is no clear evidence that all brownfield and non-Green Belt options have been fully explored.
Debbie Launders	South West of Kirk Hallam	Response-01293	Traffic Congestion	Traffic is already congested through Kirk Hallam so any additional housing will increase congestion.
Debbie Launders	South West of Kirk Hallam	Response-01293	Air Quality	Already way to many cars / lorries etc in this area
Debbie Launders	South West of Kirk Hallam	Response-01293	Wildlife / Biodiversity	The development is in an area of natural beauty and conservation which is under threat from many areas. We need to keep the boundaries between urban areas to allow wildlife and biodiversity to stand a chance of surviving.
Debbie Launders	South West of Kirk Hallam	Response-01293	Green Belt	The green belt is there for a reason to help sustain the natural beauty of this area.
Debbie Launders	South West of Kirk Hallam	Response-01293	Landscape	It will soon be back to back housing from Ilkeston to Spondon - who wants that
Deborah young	West of Borrowash	Response-01306	Traffic Congestion	At least 200 to 300 more cars coming out on to Nottingham road . Traffic bad enough as it is
Deborah young	West of Borrowash	Response-01306	Road Safety	If cars are allowed to come out of road opposite ashbrook school it will be an accident waiting to happen .
Deborah young	West of Borrowash	Response-01306	Wildlife / Biodiversity	The site has bats, foxes hedgehogs, large bird population including pheasants buzzards,wrens , plus insects bees , butterflies .
Deborah young	West of Borrowash	Response-01306	Healthcare Facilities	We can't get in the doctors now . What would it be like with another 500+ people . Dentist is full .
Deborah young	West of Borrowash	Response-01306	Green Belt	Why has green belt been changed . Once this beautiful green piece of land is built on it can never be green again . I find that so sad .
Deborah young	West of Borrowash	Response-01306	Flooding / Drainage	Since they built the house next to field it has flooded more . If they build on the land were will the water go . ?
Deborah young	West of Borrowash	Response-01306	Other	WHEN THE GREEN LAND HAS GONE THERE'S NO BRINGING IT BACK . I know people need houses but there must be more none green areas to build on .
Debra Martin	East of Breaston	Response-01469	Healthcare Facilities	You can't get a GP or hospital appointment very easy in this area as it is. The schools are also full to capacity. I could have ticked every option for my objection
Debra Martin	South West of Draycott	Response-01470	Wildlife / Biodiversity	Could object to this by all of the options, destroying wildlife habitat, not enough schools in the area, can't get GP appointments, I also don't believe the village can cope with all the extra traffic
Debra Michell	West of Sandiacre	Response-01346	Traffic Congestion	Living on the corner of Beech Avenue for over 30 years I have seen many accidents . From cars cutting corners, buses hitting cars and knocking down their own bus stops. This is our road is narrow so when car park on the road everyone as problems using our Avenue. Police have been to my home on a number of time and ask us to park on the pavement. A lot of the time it?s not our cars.
Debra Michell	West of Sandiacre	Response-01346	Road Safety	When the bus is at the bus stop car mount the pavement to get round. Children use this Avenue to get to and from school. parent that bring there children in car park everywhere on pavement and corner and don?t consider anyone, it?s a nightmare driving at these times.
Debra Michell	West of Sandiacre	Response-01346	Air Quality	To many cars use Beech Avenue to get to their homes now. More traffic more fumes. From braking,tyres and exhaust.
Debra Michell	West of Sandiacre	Response-01346	Wildlife / Biodiversity	There are great number of birds and wildlife around Stoney Clouds. Building more house harm there habitats.
Debra Michell	West of Sandiacre	Response-01346	Bus Services	We need this bus service for everyone. I do believe you should double yellow lines on the corners of Beech Avenue so the bus can get round more easily.
Debra Michell	West of Sandiacre	Response-01346	School Capacity	Only having 3 schools which are over subscribed, how do you make more spaces for more children.
Debra Michell	West of Sandiacre	Response-01346	Healthcare Facilities	Adam House doctors , it almost impossible to get an appointment if you are not on the phone at 8 am. We don?t have no chemist no more which is very much needed. The dentist is good , but I don?t know if they are taking on new patients.
Debra Michell	West of Sandiacre	Response-01346	Number of Houses	There are a lot of empty houses in sandiacre, 180 new homes on that lands is far to many houses, for the area.
Debra Michell	West of Sandiacre	Response-01346	Green Belt	We need more open spaces for our mental health and our wellbeing . Open space are so important. Once we lose this land we never get it back The Princess of Wales even said how nature help her with her illness. Having gone through cancer myself walking and being with nature was the best medicine. We don?t have many foot paths in sandiacre so we don?t want to be walking through a housing estate to get to our destination. Green belt land should NEVER be built on.
Debra Michell	West of Sandiacre	Response-01346	Flooding / Drainage	Building 180 I am concerned about flooding. The rain water will run down and the land what you want to build on his hightup.
Debra Michell	West of Sandiacre	Response-01346	Other	I am very concerned about more traffic coming through sandiacre especially with all the work happening at Stanton. There are far too many lorries using our roads. We need a new junctions on the motor way to take this traffic out of Sandicre. How about sorting out this problem first,
Debra Scutly	West of Sandiacre	Response-00288	Traffic Congestion	The road leading up is not suitable for the volume of traffic that the site will bring to the area. The roads leading up to the site have large amounts of in road parking already meaning the roads are essentially single carriageway. The access way to the site cannot be widened due to existing properties. The practicalities of the build itself is hugely problematic due to the narrow access on approach roads. Huge Lorries will not be able to access the site.
Debra Scutly	West of Sandiacre	Response-00288	Road Safety	Due to the amount of road parking there are severe concerns as to road safety .

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Debra Scully	West of Sandiacre	response-00286	Air Quality	Dust and particles will impact residence who currently live in a peaceful area
Debra Scully	West of Sandiacre	response-00286	Wildlife / Biodiversity	The area is adjacent to a nature reserve and the urbanisation will have a dramatic affect on the areas bio diversity as a direct result of the build
Debra Scully	West of Sandiacre	response-00286	Bus Services	Insufficient bus services in the area and none adjacent to the site means more cars in the road
Debra Scully	West of Sandiacre	response-00286	School Capacity	Very limited spaces at Cloudside academy and Ladycross school. However Friesland school is always over subscribed
Debra Scully	West of Sandiacre	response-00286	Healthcare Facilities	Already no healthcare provisions for local residents with the local gp due to close. Already unable to get GP appointments without adding further residents
Debra Scully	West of Sandiacre	response-00286	Type of Housing	Unable to comment as no plans seen as yet
Debra Scully	West of Sandiacre	response-00286	Number of Houses	Too many for the site suggested
Debra Scully	West of Sandiacre	response-00286	Green Belt	Green belt land already adjoins Nature reserve and the urbanisation will remove the break from the M1
Debra Scully	West of Sandiacre	response-00286	Landscape	New build will destroy haven for local wildlife and areas of enjoyment from families who currently use the well trodden right of way
Debra Scully	West of Sandiacre	response-00286	Flooding / Drainage	With removal of trees and soaking away areas there will be an increase of flooding in the local adjacent properties. A further 80 homes of clean and foul water. Does the local systems already have capacity to take that extra waste?
Debs Washer	West of Sandiacre	Response-00487	Traffic Congestion	Increase to traffic, parking around this area is already hard
Debs Washer	West of Sandiacre	Response-00487	Road Safety	More cars equals more risks to children getting knocked down
Debs Washer	West of Sandiacre	Response-00487	Air Quality	Greater pollution through increased vehicles near a beauty spot
Debs Washer	West of Sandiacre	Response-00487	Wildlife / Biodiversity	It's a nature reserve , the heavy plant used to build the houses will cause untold damage to the wildlife and nature
Debs Washer	West of Sandiacre	Response-00487	School Capacity	Cloudside school is already over subscribed, additional housing will cause more pressure on an already at capacity school
Debs Washer	West of Sandiacre	Response-00487	Healthcare Facilities	Adam House is a joke and virtually impossible to get an appointment, adding more houses won't help.
Debs Washer	West of Sandiacre	Response-00487	Type of Housing	There is no need for any more social housing and green belt to be used for this purpose, use some of the empty buildings and bring them back to life.
Debs Washer	West of Sandiacre	Response-00487	Number of Houses	None is the correct answer.
Debs Washer	West of Sandiacre	Response-00487	Green Belt	I'm amazed that this is even being considered as a viable option. Get a grip!
Debs Washer	West of Sandiacre	Response-00487	Landscape	Noone needs to see yet another blot on the landscape.
Debs Washer	West of Sandiacre	Response-00487	Other	A ridiculous idea which has not been thought through correctly at all. Just don't. For once, consider the landscape, wildlife and don't go grabbing the money. You cannot create more green space so don't lose the ones you have
Denise Ball	West of Borrowwash	Response-01291	Traffic Congestion	The large size of the development will require a complete review of the capacity of the surrounding road system. There are already delays at peak times and any extra traffic caused by the development would increase traffic congestion
Denise Ball	West of Borrowwash	response-01291	Healthcare Facilities	Borrowwash is well served with services including doctor's surgeries, chemists, a dentist, library, junior and infant schools and a shopping area supplying most daily needs. The size of the proposed development would put pressure on these services. The Practitioners Surgery on Derby Road is already reported to be at full capacity and is being extended to cope with existing demand for health care. There would need to be further expansion of services to cope with a population increase from the houses in this development.
Denise Ball	West of Borrowwash	response-01291	Type of Housing	It has been suggested that the housing is needed for the high number of children living in sub-standard accommodation. The building of £300,000 houses does not address the needs of these people in need. Part of the problem is the low level of support for families with children. These families are more likely to be helped by low cost housing in Ilkeston and Long Eaton where flexible employment is more likely to be found rather than Borrowwash as there is now little local employment opportunities. The employment was available in the past at work places such GIC, narrow fabrics, Bains Drive bedding/ lace works, and the nearby Celanese works at Spondon. The local sites are now housing for commuters to other locations. The type of commuter housing proposed is satisfying the need of the Derby planning area which already has plans to expand housing to the west of Derby. These commuter type houses are not improving the needs of Erewash residents.
Denise Ball	West of Borrowwash	response-01291	Green Belt	The site is in a very sensitive part of the Green Belt, being part of a small area separating Erewash villages from the developed areas of Derby City. The few fields between Borrowwash and Spondon protect and retain the individual character of Borrowwash. This piece of the Green Belt is long established and people living in Borrowwash greatly appreciate the openness of the agricultural fields to the west of their village. I ask that Erewash Borough Council protect the Green Belt with respect to this site. The Green Belt around Borrowwash is clearly defined and none of this application site should be developed for housing, small industry and other built structures. A public right of way exists alongside the site. This means that the site will be very visible from public points as well as from the large number of houses neighbouring the site. The development will be a very visible intrusion into the openness of the Green Belt. There are undeveloped sites in Borrowwash that have planning permission. This goes against any idea that there is a shortage of housing in Borrowwash. I am aware that Erewash Borough has been allocating brownfield sites for development and hope that it will continue this policy. I reject strongly, the argument that short-term issues of land supply, if they exist, could be solved by breaking the long-term policy of the Green Belt. Erewash Borough should not allocate housing development to land between Spondon and Borrowwash.
Denise bennett	West of Sandiacre	Response-00030	Traffic Congestion	Sandiacre already has substantial traffic through the centre - the valley is known for its high pollution already
Denise bennett	West of Sandiacre	response-00030	Air Quality	We already have the highest pollution in Erewash
Denise bennett	West of Sandiacre	response-00030	School Capacity	There are only 2 primaries and high school they will struggle to maintain standards
Denise bennett	West of Sandiacre	response-00030	Healthcare Facilities	There is one doctor at full capacity, no NHS dentist, no pharmacy
Denise bennett	West of Sandiacre	response-00030	Green Belt	How can you guarantee that the loss of green belt will not result in ever worsening flood threats
Denise Creasey	West of Sandiacre	Response-00786	Traffic Congestion	It is very unsuitable for the access to be from Cloudside as the very considerable increase in traffic would make this very dangerous on roads which are already busy with parking on both sides of the roads. The increase in volume of traffic would further increase the existing problems. Furthermore, the use of Cloudside for heavy construction traffic with the noise, vibration and dirt would be environmentally detrimental to both residents and wildlife for many years. These problems would be made worse in bad winter weather.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Denise Creasey	West of Sandiacre	response-00786	Road Safety	The roads on and around Cloudside are steep, twisting and with blind narrow corners already difficult to navigate with poor visibility with parked cars. This area could not contend safely with additional traffic or indeed construction traffic. At peak times there is congestion of traffic making road safe for pedestrians very difficult. Access via the narrow cart track at the top of Larch Drive and Cloudside Road is unsuitable for this volume of traffic. The increase in the volume of traffic and construction vehicles would also be detrimental to the road safety of the children and parents at the peak times when children are arriving and leaving schools in the area.
Denise Creasey	West of Sandiacre	response-00786	Air Quality	Pollution is already high in the area due to the proximity to the A52 and M1 and the M1 junction 25. Widening of the M1 has already increased this pollution along with bringing the heavy goods vehicles closer to the housing. This proposed site currently acts to absorb much of this pollution.
Denise Creasey	West of Sandiacre	response-00786	Wildlife / Biodiversity	This site has a diverse habitat for all of our native species, flora and fauna. It is in close proximity to the Stoney Clouds Nature Reserve and would impact badly on all wildlife in the area. Wildlife is already struggling against loss of habitat. Animals and wildlife would be greatly adversely affected by noise, light and air pollution affecting their natural behaviours.
Denise Creasey	West of Sandiacre	response-00786	Bus Services	As the current bus service is unable to access the roads above Coronation Avenue due to the steepness and parked cars it would not be possible to provide a bus service for a residents on an even higher site.
Denise Creasey	West of Sandiacre	response-00786	School Capacity	Consideration needs to be made for increased capacity at the local schools for years ahead.
Denise Creasey	West of Sandiacre	response-00786	Healthcare Facilities	Consideration needs to be made for health care facilities such as GP surgeries and dental practices. Currently there is only one of each which are both currently over subscribed.
Denise Creasey	West of Sandiacre	response-00786	Type of Housing	The high density housing is not in keeping with the current housing.
Denise Creasey	West of Sandiacre	response-00786	Number of Houses	It is the highest density of all the proposals and if this is allowed, will give rise to concerns for further phases in the future.
Denise Creasey	West of Sandiacre	response-00786	Green Belt	Green belt should be protected from construction in order to provide recreation and wellbeing to everyone. Also to protect the habitat for all our animals, insects, birds and plants and trees.
Denise Creasey	West of Sandiacre	response-00786	Landscape	This proposal would permanently change this landscape, spoiling the wonderful views and destroying the lovely walks.
Denise Creasey	West of Sandiacre	response-00786	Flooding / Drainage	Increasing the density of housing with loss of green belt will increase the risk of flooding in the housing below this site.
Denise Creasey	West of Sandiacre	response-00786	Other	Access for emergency vehicles needs to be addressed especially when construction traffic is blocking already difficult to navigate roads.
Denise Illsley	West of Borrowwash	Response-00056	Traffic Congestion	The traffic in the village has increased substantially over the past few years and this development will only increase the problem further.
Denise Illsley	West of Borrowwash	response-00056	Wildlife / Biodiversity	I am really concerned about the loss of more green spaces and the threat to our wildlife that this will bring.
Denise Illsley	West of Borrowwash	response-00056	Healthcare Facilities	We have two medical practices in Borrowwash and it is becoming increasingly difficult to get appointments to see a GP or nurse. It's near impossible to get a blood test. Not everyone has transport to enable them to travel to get a test. The situation has just got worse and this will make it even more difficult.
Denise Illsley	West of Borrowwash	response-00056	Green Belt	It is vital that we maintain our green belt. Once lost it will never return. Borrowwash will become a concrete jungle with no where for nature to flourish.
Denise Lingard	West of Sandiacre	Response-01759	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Denise Lingard	West of Sandiacre	response-01759	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Denise Lingard	West of Sandiacre	response-01759	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Denise Lingard	West of Sandiacre	response-01759	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Denise Lingard	West of Sandiacre	response-01759	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Denise Lingard	West of Sandiacre	response-01759	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Denise Lingard	West of Sandiacre	response-01759	Type of Housing	High density housing is preposterous not in keeping with current housing.
Denise Lingard	West of Sandiacre	response-01759	Number of Houses	It is the highest density of all the proposals and will give rise to concern for further phases in the future.
Denise Lingard	West of Sandiacre	response-01759	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Denise Lingard	West of Sandiacre	response-01759	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Denis Woodcock	North of Borrowwash	Response-00930	Traffic Congestion	Infilling will only compound the issues of parking. People are parking on pavements more and more. Extra traffic at peak times around Victoria road, Nottingham road and Station road will make life unbearable for residence.
Denis Woodcock	North of Borrowwash	Response-00930	Healthcare Facilities	Our healthcare facilities are poor now additional capacity is the last thing we need.
Denis Woodcock	North of Borrowwash	Response-00930	Number of Houses	Borrowwash has a good amount of green spaces, when these are gone they're gone forever. Our open spaces should be protected for everyone to benefit. Borrowwash will lose one of its main assets and become another urban sprawl.
Denis Woodcock	North of Borrowwash	Response-00930	Flooding / Drainage	Flooding will increase, Borrowwash has problems now it will not cope with the extra capacity.
Denis Woodcock	North of Borrowwash	Response-00930	Other	Over the years there has been too much infilling and it seems to be a policy to keep on doing this. People need space, cramming houses in any space will always be counterproductive. Have you not learned from previous mistakes. The character of our village destroyed.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Dennis Watts	West of Sandiacre	Response-01726	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Dennis Watts	West of Sandiacre	Response-01726	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Dennis Watts	West of Sandiacre	Response-01726	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Dennis Watts	West of Sandiacre	Response-01726	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Dennis Watts	West of Sandiacre	Response-01726	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Dennis Watts	West of Sandiacre	Response-01726	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Dennis Watts	West of Sandiacre	Response-01726	Type of Housing	High density housing is preposterous not in keeping with current housing.
Dennis Watts	West of Sandiacre	Response-01726	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Dennis Watts	West of Sandiacre	Response-01726	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Dennis Watts	West of Sandiacre	Response-01726	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Derek Morton	West of Sandiacre	Response-01607	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Derek Morton	West of Sandiacre	Response-01607	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Derek Morton	West of Sandiacre	Response-01607	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Derek Morton	West of Sandiacre	Response-01607	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Derek Morton	West of Sandiacre	Response-01607	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.

Derek Morton	West of Sandiacre	Response-01607	Type of Housing	High density housing is preposterous not in keeping with current housing.
Derek Morton	West of Sandiacre	Response-01607	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Derek Morton	West of Sandiacre	Response-01607	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Derek Morton	West of Sandiacre	Response-01607	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Derrick Hunt	West of Sandiacre	Response-00437	Type of Housing	There are no specifics as far as I am aware as to what is actually being proposed in terms of bungalows 2beds 3 beds 4 beds etc
Derrick Hunt	West of Sandiacre	Response-00437	Landscape	These are open fields looking out across the motorway towards Ilkeston These fields hold water well to certain point but when flooded you get a good run off down the footpath onto cloudside road
Derrick Hunt	West of Sandiacre	Response-00437	School Capacity	I don't think we have capacity in the schools if these are homes built for family's with average 2 children per household
Derrick Hunt	West of Sandiacre	Response-00437	Number of Houses	The site doesn't seem to be large enough for 180 houses unless they are going to be shoe horned in. There has to be room for roads and infrastructure and each house will need 2 car parking spaces minimum
Derrick Hunt	West of Sandiacre	Response-00437	Bus Services	There is only one bus route one way up Stanton road up coronation ave down beech AVE up Stanton road and put through travers road. If it can get round due to parked cars delivery drivers and courier vans blocking the roads
Derrick Hunt	West of Sandiacre	Response-00437	Healthcare Facilities	The healthcare service is terrible you are very lucky if you can get an appointment at the doctor's if they'll register you. And good luck trying to even get registered with a NHS dentist So maybe add in some incentive for people to take out private medical insurance.
Derrick Hunt	West of Sandiacre	Response-00437	Green Belt	The lang is green belt as a buffer from the motorway there is a well used footpath that gives access to and from Stanton

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Derrick Hunt	West of Sandiacre	response-00437	Other	I would like to say this just seems a very poorly thought out scheme of housing. Which just seems to be purely about political box ticking rather than being in any body's interest apart from maybe a developer Access and traffic to this part of sandiacre is already very heavy and restricted.
Derrick Hunt	West of Sandiacre	response-00437	Flooding / Drainage	All the drainage from this goes down onto Stanton road 180 houses were is all that sewage and surface water capacity going to come from
Derrick Hunt	West of Sandiacre	response-00437	Traffic Congestion	Access to Stanton road from either end is very restricted to hgv's for this development. Cloudside Infants school already causes ridiculous congestion on Stanton road The only one way bus route through the estate is regularly held up or diverted due to the narrowness of the roads and would not be able to get anywhere this new estate. Coronation ave cloudside road and beech AVE are all narrow roads with vehicles parked all over now. Most house now have 2 vehicles and a lot on this estate don't have off road parking
Derrick Hunt	West of Sandiacre	response-00437	Road Safety	The roads around the existing estate are pretty dangerous already for children With Cloudside infants on Stanton road And children for senior school having to walk to Friesland at Ripley or a drop off journey for parents causing more danger to the ones walking.
Derrick Hunt	West of Sandiacre	response-00437	Air Quality	When the motorway was widened to four lanes the highway's agency sent out forms for people to claim compensation in the houses that are already here How can it be right to build these new houses next to the motorway ?
Derrick Hunt	West of Sandiacre	response-00437	Wildlife / Biodiversity	We need natural open spaces you can't just keep concreting over the green belt just because you have 5000 people on a housing waiting list who already have somewhere to live.
Destiny Jade-Blake	West of Sandiacre	Response-01636	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Destiny Jade-Blake	West of Sandiacre	response-01636	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Destiny Jade-Blake	West of Sandiacre	response-01636	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Destiny Jade-Blake	West of Sandiacre	response-01636	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Destiny Jade-Blake	West of Sandiacre	Response-01636	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Destiny Jade-Blake	West of Sandiacre	response-01636	Type of Housing	High density housing is preposterous not in keeping with current housing.
Destiny Jade-Blake	West of Sandiacre	response-01636	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Destiny Jade-Blake	West of Sandiacre	response-01636	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Destiny Jade-Blake	West of Sandiacre	response-01636	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Devan Meehan	South West of Kirk Hallam	Response-01406	Traffic Congestion	The a6096 is already full of traffic, adding a junction will make it a lot worse
Devan Meehan	South West of Kirk Hallam	response-01406	Wildlife / Biodiversity	Losing a lot green space
Devan Meehan	South West of Kirk Hallam	response-01406	School Capacity	It's not just primary school spaces that are needed, nursery and secondary school space too
Devan Meehan	South West of Kirk Hallam	Response-01406	Type of Housing	New builds nowadays are too small with tiny gardens, not good enough housing attracting undesirable people
Dexter Codrington	South West of Draycott	Response-00986	Traffic Congestion	The A6005 (Derby Road) is already significantly busy, and the addition of 190 houses will increase traffic volume, impacting road safety and increasing the risk of accidents. A transport assessment needs to be undertaken, particularly for the residents opposite and adjoining the proposed site entrance. The increased traffic and congestion will increase the pollution in the village. The traffic situation will be a cumulative impact of an additional 700 plus homes using the same main road from Borrowwash to Draycott to Breaston and onwards.
Dexter Codrington	South West of Draycott	Response-00986	Road Safety	The road is regularly backed up due to accidents on the A50, M1 and adjoining A52. It is a short cut to avoid many of the busy junctions at peak times. The volume of traffic and the subsequent number of accidents is already far too many for such a small village. It is no longer safe to ride a horse or bike at busy times along this road., or indeed attempt to cross the road to walk a dog We have had a fatality outside of our house and a serious collision into a parked car due to speed and parked cars.
Dexter Codrington	South West of Draycott	response-00986	Air Quality	the additional pollution due to almost 1000 homes by the time the safeguarded land is used up will be terrible. The carbon that would have been absorbed by the trees, grassland and hedgerows will no longer happen as the houses will have been built over and across this valuable greenbelt resource. Testing of the car volumes, the cumulative impact and estimates of the increase in pollution must take place
Dexter Codrington	South West of Draycott	response-00986	Wildlife / Biodiversity	we have Badgers, Bats, rabbits, foxes and hares on our property. We have also has muntjac deer in out garden. The birdlife is amazing with many migrating birds including endangered swallows. We have many nesting birds including Woodpeckers and birds of prey including Buzzards and owls. The greenbelt provides a safe haven for these animals. The grasslands attract a varied array of butterflies during the summer with rare species year after year. This development will devastate this wildlife and biodiversity. Once it is gone it will never come back.
Dexter Codrington	South West of Draycott	response-00986	Bus Services	More buses on the road will lead to more pollution and more traffic chaos. There is a good bus service now it does not need changing
Dexter Codrington	South West of Draycott	response-00986	School Capacity	A lot of local children across the Borough have to travel to an available secondary school. There are limited places at the local schools as it is

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Dexter Codrington	South West of Draycott	Response-00986	Healthcare Facilities	Draycott does not have a doctors or dentist surgery. The current doctors practise is shared between Borrowwash, Breaston and Draycott. Yet again this is about the cumulative effect for the 3 planned developments. It is very difficult to get an appointment today, the surgery will not cope. There is no NHS Dentist locally. There are no NHS dentists taking on new patients as at today. I have spent 2 hrs trying to find one
Dexter Codrington	South West of Draycott	Response-00986	Type of Housing	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing, particularly the houses along Derby Road. Any planned development should take place on Brownfield sites.
Dexter Codrington	South West of Draycott	Response-00986	Number of Houses	190 + 60 houses is a 17% increase in homes in Draycott. This is too many and it is a development in the wrong place
Dexter Codrington	South West of Draycott	Response-00986	Green Belt	I am strongly against this development. It is the wrong location . EBC should be protecting Green Belt land. The Green Belt and green fields should remain open and safe, preserving public rights of way and access to local green spaces. The Draycott footpaths are in constant use, providing villagers easy access to a countryside environment. This land is rural in character, offering a tranquil and transitional landscape between Draycott Parish, Borrowwash, and Breaston. All these villages are impacted by the proposal to reclassify Green Belt to Grey Belt for housing development. While there is a need for housing, the NPPF states that existing Brownfield and Grey Belt sites should be prioritized over Green Belt sites. There are 109 existing Brownfield sites within EBC, equating to 81 hectares, with 103 of these having full planning permission. These sites should be prioritized for development before Green Belt land is considered. The NPPF states that Green Belt is to be protected and requires exceptional circumstances for development. There is nothing exceptional about the council's plans to build on unspoilt Green Belt land to meet their housing target when existing Brownfield sites are available. The land south west of Draycott meets all the criteria for Green Belt purposes, preventing urban sprawl, preserving the countryside's open character, and enhancing recreational opportunities for local residents. Changing this land to Grey Belt and developing 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density.
Dexter Codrington	South West of Draycott	Response-00986	Landscape	The landscape of the proposed development welcomes you as you enter Draycott from Borrowwash. It is fitting with a Village that does sit outside of suburbia. The existing footpaths and access to the small wood bring great enjoyment to all who walk these trails, providing substantial benefits for physical and mental health. The development will have a devastating effect on the enjoyment of walks, replacing green space with 190+ houses. The proposal is far too big and overpowering for the village, impacting its heritage and cherished greenbelt landscape. The area has an abundance of wildlife, including protected species such as bats and many migrating birds. These animals and birds will lose their habitats and nesting sites, which is not protecting our fragile environment or providing for biodiversity in our green spaces.
Dexter Codrington	South West of Draycott	Response-00986	Flooding / Drainage	The services for this development all come from the Main Derby Road. This is regularly being pumped out by the environment agency as the Victorian sewage system can not cope today. How ill it cope with the additional 600 toilets and 6-700 showers and sinks etc. Flooding The proposed site is within a flood Zone, I understand this has now been downgraded but unsure on what basis noting the floods we experienced in 2023/4. If we fill this location with concrete the water will have to go somewhere which will exacerbate the current flooding in residents gardens. Minimal liaison has been undertaken by EBC with Severn Trent regarding drainage and water management arrangements for the Draycott site. Draycott residents experience multiyear flooding events, and this development will further compound flooding issues. More investigation is needed to determine why this known flood location site is suitable for development. A Flood Risk Assessment should be requested for developments within a Flood Zone
Dexter Codrington	South West of Draycott	Response-00986	Other	I strongly object to the whole application for the proposed development on Green Belt land south west of Draycott. This location is inappropriate for development due to its impact on the village, its residents, the environment, and local wildlife. Consultation Process I strongly object to the consultation process, which has been limited and not fully transparent. Erewash Borough Council (EBC) has only given local residents the minimum six-week period to submit objections to this significant change to the Local Plan and Core Strategy. This timeframe is insufficient for residents to review and understand the magnitude of the change and formulate objections, especially given the missing details such as the master plan for the land south west of Draycott. These plans do not align with the National Planning Policy Framework (NPPF) 2024 and EBC's Local Plan 2022. Furthermore, adequate consultation has not been undertaken with the Draycott Local Parish Council or residents regarding the impact of these plans on the local community, village, and amenity
Diane Bakhda	North of Breadsall Hill Top	Response-01411	Traffic Congestion	I am a resident of Breadsall village. We are already blighted by the huge volume of traffic that passes through our village. Where we have footpath, they are often very narrow. I have often experienced frightening occasions when traffic driving far too fast, desperate to avoid stopping at the chicanes, passes within inches of my body. Many of our residents are elderly and not too steady on their feet and so are extremely nervous about walking anywhere nearby. It can take a very long time to cross Brookside Road. I am fearful that, if this development goes ahead, the volume of traffic through the village will increase even more and our decreased air quality will become even worse.
Diane Bakhda	North of Breadsall Hill Top	Response-01411	Air Quality	Please see my above comment
Diane Bakhda	North of Breadsall Hill Top	Response-01411	Green Belt	At one time, the term "Green Belt" gave you some confidence that the land would be preserved either to benefit the environment or to help the country produce its own food. PLEASE can we go back to this definition!
Diane Bakhda	North of Breadsall Hill Top	Response-01411	Flooding / Drainage	We have had the driest spring for at least 100 years and yet water is still flowing onto Croft Lane in Breadsall. We are assuming this is due to all the new building that has taken place without adequate provision for the loss of water being able to soak naturely into the ground. Is this development only going to add to the problem?
Diane Corsham	East of Breaston	Response-00225	Traffic Congestion	This will cause a lot more traffic congestion on a road that is not used to traffic congestion and is likely to cause congestion further round the roads leading out of the village which in turn is going to have a knock on effect which is unfair to the people who live there!
Diane Corsham	East of Breaston	Response-00225	Road Safety	Road safety is another burning issue as the roads are chocker blocked with traffic and the pedestrians are going to suffer as more and more cars are going to be on the road and the roads are going to be busier if you build more houses. The roads don?t need anymore traffic on them!
Diane Corsham	East of Breaston	Response-00225	Air Quality	Air quality is going to be going downhill if you build anymore houses because of the traffic congestion it will cause! Air quality is not good really if you think about the proximity of the motorway to where you are proposing to build these houses, it?s not going to be a good idea to place more people in that area because the quality of life will suffer!
Diane Corsham	East of Breaston	Response-00225	Wildlife / Biodiversity	In an area where wildlife is in abundance as I see plenty of foxes, bats flying up and down Holly Avenue! I think it would have a detrimental effect on the wildlife environment on those fields and I don?t think that it is at all fair of the council to expect wildlife to just up sticks and move on to pastures new as where will they go as all potential habitats are being destroyed and developed for mankind!

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Diane Corsham	East of Breaston	Response-00225	Bus Services	The bus service provided is not even enough to deal with the traffic congestion that is experienced already and they took off a really useful bus service which connected the village to all surrounding areas! The old and the vulnerable needs aren't being met either!
Diane Corsham	East of Breaston	Response-00225	School Capacity	Schools are going to be fuller as well so are you thinking of offering more classes for the extra students that the schools are going to have to take on!
Diane Corsham	East of Breaston	Response-00225	Healthcare Facilities	There isn't enough healthcare facilities in the area for people who reside in this area never mind draining the resources even further to accommodate more people in an area that cannot offer proper healthcare facilities for the people living in the village already!
Diane Corsham	East of Breaston	Response-00225	Type of Housing	You say that it is going to be affordable housing but I can't see that it is affordable housing in Breaston an area where affordable housing would not fit in as you have the likes of Poplar Road and Holly Avenue which would not fit the criteria!
Diane Corsham	East of Breaston	Response-00225	Number of Houses	Also the number of homes that you are proposing to build, if this is passed then what usually happens is that more houses are built than previously planned and I think that would be unfair to the residents who already live near that area!
Diane Corsham	East of Breaston	Response-00225	Green Belt	Green belt areas should just be that green belt and be left alone!
Diane Corsham	East of Breaston	Response-00225	Landscape	The houses would be a blot on the landscape as once they go up the fields would be changed forever!
Diane Corsham	East of Breaston	Response-00225	Flooding / Drainage	This area is known as flood plain and why would you want to build on this area as it already floods massively without any more drainage problems being brought into this area it's not fair to the residents who already live there and complete lack of thought to anyone else that lives in the area as I'm sure that the residents of Holly Avenue have already sent in their videos of the area under water when they have had recent flooding occur!
Diane Gillborn	West of Sandiacre	Response-00983	Green Belt	It is a disgrace that building on green belt land is even an option. It will stop the area being used for recreational walks, damage the wildlife and create even more pollution.
Diane Jones	West of Sandiacre	Response-00852	Traffic Congestion	Sandiacre is already suffering from excess traffic accessing the A52 and M1. This will increase with the development of the Stanton site. Roads local to this proposal are totally inadequate for construction traffic.
Diane Jones	West of Sandiacre	Response-00852	Road Safety	The proposed development is very near to local schools and therefore construction traffic on Stanton Road, which is already very busy, is an added danger.
Diane Jones	West of Sandiacre	Response-00852	Air Quality	Any additional traffic is detrimental to an already polluted area.
Diane Jones	West of Sandiacre	Response-00852	Wildlife / Biodiversity	There is a diversity of wildlife in the stoney clouds area and the proposed development will encroach on the whole area. We are privileged to see Buzzards, Kestrels and Red Kites regularly.
Diane Jones	West of Sandiacre	Response-00852	Bus Services	Sandiacre has no Chemist, Bank or Post Office and one Doctor's surgery. This means that people have to travel into Stapleford or Long Eaton to access these services. The village cannot sustain increases in population in our local schools etc.
Diane Jones	West of Sandiacre	Response-00852	Healthcare Facilities	We only have one Doctor's surgery in Sandiacre. There used to be two chemists, one on Station Road and one on Derby Road, now there are none. If more houses are to be built we need increased services.
Diane Jones	West of Sandiacre	Response-00852	Type of Housing	No houses on this site.
Diane Jones	West of Sandiacre	Response-00852	Number of Houses	No houses should be built on this land.
Diane Jones	West of Sandiacre	Response-00852	Green Belt	Green Belt is precious. Local people have enjoyed this area for hundreds of years ie the walks to Stanton Village, the Monks Path to Dale Abbey and the ancient field systems.
Diane Jones	West of Sandiacre	Response-00852	Landscape	The view from Stoney Clouds is amazing and the rocks are reputedly the end of the Pennines. This is a precious area and must be retained for future generations.
Diane Mcmorrow	West of Sandiacre	Response-00433	Traffic Congestion	Traffic congestion is already a problem especially around school times 8.30 till 9am and 2.30 to 3pm Monday to Friday on Stanton Road Beech Avenue Elm Avenue and Spencer Road. It's also on a bus route and some drivers use it as a short cut from the M1 junction 25
Diane Mcmorrow	West of Sandiacre	Response-00433	Road Safety	The traffic at the moment is very busy cars parking on the pavement buses struggling to pass additional traffic would be dangerous to school children walking to school along with all other pedestrians I've struggled walking my dog trying to pass parked cars
Diane Mcmorrow	West of Sandiacre	Response-00433	Air Quality	Being asthmatic I'm real concerned about the air quality/pollution living on Sycamore Crescent I struggled when the motorway was extended to 4 lanes either side we need to be aware and responsible for what we are doing especially for our young venerable children
Diane Mcmorrow	West of Sandiacre	Response-00433	Wildlife / Biodiversity	Having walked up Stoney Clouds Nature Reserve for many years with my 2 border collies I've seen all walks of life from foxes rabbits squirrels numerous birds nesting owls and woodpecker alike not to mention the beautiful plants the bluebells wild garlic and mushrooms to name a few. It would be such a shame to lose this wild habitat progress isn't always a good thing
Diane Mcmorrow	West of Sandiacre	Response-00433	Bus Services	There is a bus service it sometimes struggles to pass with park cars I can't imagine what the extra volume of traffic would do to the bus service our roads are not built to cope with this.
Diane Mcmorrow	West of Sandiacre	Response-00433	School Capacity	Schools are already overwhelmed local children having to go alternative schools surely they should be prioritise
Diane Mcmorrow	West of Sandiacre	Response-00433	Healthcare Facilities	Gp surgeries and Dentists are vastly overwhelmed Gp in Sandiacre really struggle to allocate you an appointment lines open at 8am by 8.05am all appointments have gone. Many of my friends have resorted to going to a surgery's in nearby Stapleford. I've not been able to get into a Dentist since lock down Health Care Facilities are not good at all
Diane Mcmorrow	West of Sandiacre	Response-00433	Type of Housing	Don't want the house were a village bursting at the seems we don't have the infrastructure to support additional homes
Diane Mcmorrow	West of Sandiacre	Response-00433	Number of Houses	I've lived in Sandiacre all my life and 42 of them at my present address I personally don't want to see any houses built
Diane Mcmorrow	West of Sandiacre	Response-00433	Green Belt	Feel strongly about green belt and conservation area they are there for a reason having their own ecosystems and habits to support the local wildlife. Having green areas in towns and cities give tranquil escapes to the local residents therefore green belt areas should be left alone
Diane Mcmorrow	West of Sandiacre	Response-00433	Landscape	Having nature on the doorstep is a wonderful thing we are so lucky in Sandiacre having this beautiful Nature Reserve within walking distance for many. The walks can educating relaxing and picturesque to unique to be destroyed
Diane Mcmorrow	West of Sandiacre	Response-00433	Flooding / Drainage	We have had problems with drainage before especially with spells of heavy rain. Recently we've also had burst pipes as the old drainage system is crumbling/cracking in parts. My concern would be about the added use of construction vehicles on the roads
Diane Mcmorrow	West of Sandiacre	Response-00433	Other	The infrastructure of Sandiacre isn't there to sustain the building of the houses roads schools health care and the emergency service would not cope

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Diane Meadwell	West of Sandiacre	Response-00807	Traffic Congestion	Access would be via Larch Avenue and along Cloudside Road, both of which are narrow and unsuitable for large numbers of vehicles. There is no other means of access. From Cloudside Road, traffic would only have the choice of turning left on to Maple Avenue and down Beech Avenue, or turning right and travelling along Coronation Avenue. Both of these roads are narrow and unsuitable for the additional traffic that this development would undoubtedly bring about. From there, traffic would either turn left towards Lenton Street/Town Street, or right along Stanton Road towards Rushy Lane. Both of these routes are already very congested, with queues forming for much of the day. Add to this the rapidly increasing number of lorries now being generated by the development of the Stanton land, and the roads that are already over used and in very poor condition will deteriorate further. Local residents are regularly reporting that they can take up to five minutes to get out of Church Lane and on to Lenton Street or Town Street. The junction at the bridge in Sandiacre is having to cope with more traffic than previously, with delays most of the day.
Diane Meadwell	West of Sandiacre	Response-00807	Road Safety	The roads around the proposed development are narrow and there are always vehicles parked on them. They are used regularly by children on their way to and from school and access to Stoney Clouds. They are also used frequently by dog walkers at all times of day. The additional traffic would not only be increased by the residents of the houses, but also by the numerous courier services which often use larger vehicles. These delivery companies are already very frequent users of our local roads, and that number will only increase as people use internet shopping more and more. Add to this an additional 180 addresses requiring access through these narrow roads, and the risk of road accidents of all kinds would undoubtedly increase. We should be encouraging people, children in particular, to walk and cycle, but this added danger will result in too many misgivings.
Diane Meadwell	West of Sandiacre	Response-00807	Air Quality	There is proven evidence that emissions from vehicles cause health problems. This is not only from fuel, but also from tyre and brake dust which is given off by all vehicles. Many larger vehicles are not electric and are not expected to be any time soon. In the short term, the huge amount of construction traffic will result in excessive emissions of all kinds. They will need to drive slowly owing to the narrowness of the roads and the tight turns needed to approach them, thus ensuring the maximum amount of engine emissions. In the longer term, any additional traffic will obviously increase emissions. This has a negative impact not only for humans but also for the flora and fauna of the area.
Diane Meadwell	West of Sandiacre	Response-00807	Wildlife / Biodiversity	The vast amount of flora and fauna that inhabit the Stoney Clouds nature reserve is clearly noted in the management plan compiled by Derbyshire Wildlife Trust and commissioned by Erewash Borough Council. The proposed site immediately adjoins this area. In the short term, the construction and all associated traffic will undoubtedly affect the area in a significant way. This damage could very well be irreversible. We are already witnessing a decline in the number of birds, mammals and invertebrates in our area, and this development can only add to this decline, whether this be short or long term. The RSPB reports a serious decline in wildlife due to habitat loss resulting in the UK being one of the most nature depleted countries on Earth. The destruction of Green Belt land will add significantly to this catastrophic situation. We should be protecting these spaces for the future generations
Diane Meadwell	West of Sandiacre	Response-00807	Bus Services	There is a limited bus service in this area. The residents of the proposed development will not be close to any of these services and will no doubt drive to their destinations. The walk from the area to the nearest bus stop is quite substantial, with the return trip being uphill. This excludes those people who are unable to carry out this walk, and could thus create isolation
Diane Meadwell	West of Sandiacre	Response-00807	School Capacity	The local junior school is fully subscribed and other schools in the area are a long way from the proposed development. This would lead to more car journeys and greater congestion in an already over used road system in the surrounding area.
Diane Meadwell	West of Sandiacre	Response-00807	Healthcare Facilities	Sandiacre has only one doctor's surgery and one dental surgery. There is no pharmacy. Our local health provision is over subscribed and there are no walk in centres or minor injury and illness centres in the near vicinity.
Diane Meadwell	West of Sandiacre	Response-00807	Green Belt	I quote from the Council's website: To adapt meaningfully to the changing climate and its impacts we need to restore the natural habitat and biodiversity to our borough This includes linking up green spaces to enable plant and animal species to flourish and find refuge Erewash Borough Council will be assessing all our parks and wild places to see where restoration can be made to the benefit of nature and the community We will be liaising closely with the County Council as part of the Derbyshire Local Nature Recovery Strategy. By destroying Green Belt land you will jeopardise this vision. Mitigation of climate change is being sought urgently. Leaving this area of Green Belt to nature, as it has been for many years, will surely contribute to this. Why plant trees and create green spaces when at the same time destroying what we already have?
Diane Meadwell	West of Sandiacre	Response-00807	Flooding / Drainage	Whilst the area in question is not part of a flood zone, it acts as part of a soak away area to prevent rainfall running down the hills into the lower lying land. We are being told regularly of the threat to nature and flooding as a result of more and more people concreting over gardens, and yet the Council is willing to build over an area of Green Belt land.
Diane Reynolds	South of West Hallam	Response-00216	Traffic Congestion	It's already a very busy road to have more cars would not help. The traffic is already bad trying to get out of the villages. With queues are already bad on st Wilfred, station road and cat and fiddle cross roads. With most family's having at least 1 car this is a concern that this will only get worse. Even with currently families in the village as their kids get older this will already increase as there will then be more people with cars so adding to this with more houses is a real concern. The congestion at the shops is getting even worse already with the car park being full and spilling over onto the road
Diane Reynolds	South of West Hallam	Response-00216	Wildlife / Biodiversity	There are a family of pheasant that frequent over the field. Birds of prey and many other wildlife that would be effected by the build. We see many animals such as pheasants family, see and hear owls, woodpeckers and many other birds that will be effected
Diane Reynolds	South of West Hallam	Response-00216	Green Belt	It is important to protect the green belt so we still have green spaces. Why protect it for green belt if it is then able to be built on. How can a building in 2021 be objected due to it being green belt but now some money can be made it is being considered. This gives you no faith in the council when considering to vote that goal post can be moved to make money instead of considering wildlife and the area
Diane Reynolds	South of West Hallam	Response-00216	Other	This will effect my mental health. My garden and view are my sanctuary and for these to be taken away is so sad. It will also have an effect on our house value, not having clear views will mean lower value
Diane Reynolds	South of West Hallam	Response-00216	Bus Services	There are no buses in the evening which means if you wanted to go anywhere in the evening you can't
Diane Reynolds	South of West Hallam	Response-00216	Road Safety	The traffic is already bad getting out of the village. We live on beech lane and on school times and when football is on it is particularly bad. With cars mounting the pavement at speed to get past each other. I genuinely fear for the safety of my family when walking or reversing of our drive. With at least most people having 1 car per household the roads will not be able to cope with more houses. There has already been a near miss with kids up the road with a car nearly hitting them coming out of their house on the pavement
Diane Reynolds	South of West Hallam	Response-00216	Number of Houses	The area will not be able to cope with the amount of houses the road structure is not suitable.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Diane Reynolds	South of West Hallam	Response-00216	Healthcare Facilities	Doctors are already at capacity and having to wait months for an appointment with more houses this will only make the situation worse and potentially dangerous for people who need to see a doctor
Diane Turner	West of Sandiacre	Response-01744	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Diane Turner	West of Sandiacre	Response-01744	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Diane Turner	West of Sandiacre	Response-01744	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Diane Turner	West of Sandiacre	Response-01744	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Diane Turner	West of Sandiacre	Response-01744	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Diane Turner	West of Sandiacre	Response-01744	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Diane Turner	West of Sandiacre	Response-01744	Type of Housing	High density housing is preposterous not in keeping with current housing.
Diane Turner	West of Sandiacre	Response-01744	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Diane Turner	West of Sandiacre	Response-01744	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Diane Turner	West of Sandiacre	Response-01744	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Diane Webster	South West of Draycott	Response-01177	Traffic Congestion	A transport assessment needs to be undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This passes through Draycott and Borrowwash. Passing busy junctions, Doctor's surgeries, public car parks, Primary schools, local cricket club as well as numerous resident's homes. Noise from the construction (including vehicle movements) and operational phases of the proposed development need to be adequately addressed. The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead. The A6005 (Derby Road) is an already busy road at peak times during the week and weekend which currently experiences over 3,861 cars a day. Adding 190 additional houses will cause significant congestion issues throughout the village and increase accidents within this overburdened area. The current road network between Borrowwash and Draycott, which includes Derby Road, Hopewell Road and Gypsy Lane, already struggles to handle current traffic demand let alone the potential for at least 190 more cars. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. "NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic."
Diane Webster	South West of Draycott	Response-01177	Road Safety	The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents. A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents. "NPPF 109. States that transport issues should be considered from the earliest stages of plan-making and development proposals, using a vision-led approach to identify transport solutions that deliver well-designed, sustainable and popular places. This should involve identifying, assessing and taking into account the environmental impacts of traffic and transport infrastructure ? including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains. Yet no traffic survey has been undertaken. If it had it would have highlighted that along A6005 (Derby Road) and exactly adjacent the proposed development. The peak traffic hours on Fridays are between 4 PM and 6 PM, with the highest average vehicle count observed from 4 PM to 5 PM. The average number of cars per day in the traffic data is approximately 3,861 vehicles. The highest recorded traffic day in the data is June 11, 2023, with a total of 4,779 vehicles. The maximum speed recorded in the traffic data is 106 mph and the number of times 70 mph is exceeded in the traffic data is 174."

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Diane Webster	South West of Draycott	Response-01177	Air Quality	The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. "NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowash. This is totally unrealistic and the current roads would not cope with the volume of traffic."
Diane Webster	South West of Draycott	Response-01177	Wildlife / Biodiversity	Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The taking away of grazing/arable land and the disruption for the wildlife. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. There is an opinion that the deer fencing would devalue the area of open farmland and public right of way. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. Historical badger sett on part of the site to the Victorian tip at the bridge of Nooning Lane. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. This area forms a green corridor and houses a number of RED LIST species The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance. NPPF 151. States that once Green Belts have been defined, local planning authorities should
Diane Webster	South West of Draycott	Response-01177	Wildlife / Biodiversity	plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt. "NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite. "
Diane Webster	South West of Draycott	Response-01177	Bus Services	Has a survey been carried out to any addition requirement that will be required during the peak times 8.00 - 9.30 and 15.00 - 17.30
Diane Webster	South West of Draycott	Response-01177	School Capacity	Will the Draycott school have the capacity to cater for the addition children I assume a survey has taken
Diane Webster	South West of Draycott	Response-01177	Healthcare Facilities	Has a survey taken place so that the Local Doctors practice can cope with the additional 17% plus patients
Diane Webster	South West of Draycott	Response-01177	Type of Housing	Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing, The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village's strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Diane Webster	South West of Draycott	response-01177	Number of Houses	<p>The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The potential harm caused by the application far outweighs the potential public benefit. The scale of the development is completely NOT in keeping with the character of the village. The proposed development should follow existing settlement patterns. New buildings and the volume of housing should harmonise with the neighbourhood. Retain local character and the retention of open spaces as is the character of the village. Views into and out of the village should be preserved. Clear lines of hills and spatial openness must be preserved. This out of scale development rides roughshod over the NPPF and other relating policies and guidelines with the barest of lip service paid, with the minimum consultation being undertaken with residents which is compounded by the lack of information available and transparency. The scale and massing of the development, which will begin with 190 houses but will significantly increase when the identified safeguarded land is developed in the future, is completely out of character with its surroundings and would be incredibly overbearing on the village and neighbourhood I strongly believe that there are better suited brownfield sites and genuine Grey Belt sites with land that is of poor quality. The land south west of Draycott is Grade 2 land (very good) and should be protected. NPPF 73. States that the authority should identify, through the development plan and brownfield registers, land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC there are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.</p>
Diane Webster	South West of Draycott	response-01177	Green Belt	<p>Great weight should be given to the findings and recommendations of independent Landscape Quality Assessment NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl. NPPF states that in exceptional circumstances authorities should review Green Belt boundaries in accordance with the policies in this Framework and propose alterations to meet these needs in full, unless the review provides clear evidence that doing so would fundamentally undermine the purposes (taken together) of the remaining Green Belt. Changing the land south west of Draycott to Grey Belt and the development of 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density. Working on the current population of Draycott, 190 new homes will be an at least 17% increase in population. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish and Borrowwash and other villages surrounding it of Breaston and Borrowwash. "NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels of land as identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. " NPPF states the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate where the development would utilise Grey Belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Bel</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Diane Webster	South West of Draycott	response-01177	Green Belt	t across the area of the plan. It is clear the authority is now altering existing and acceptable Green Belt land to suit this paragraph/approach of the NPPF by converting it to Grey Belt. This is both hasty and reckless. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. The development on the land south west of Draycott for the people of Draycott and other areas, will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. It is the wrong model in the wrong place to deliver housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. This when there are 109 existing Brownfield sites within the EBC that should be prioritised first over Green Belt land. Understand there is need for new housing but there are an abundance of brownfield, previously developed sites that the developers and council should explore before this location. There are 109 existing Brownfield sites in EBC giving 81H with 103 of these having full planning permission. These sites should be prioritised first for development before Greenbelt land is considered. Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is c.8H. These 8 sites alone will allow 514 net dwelling to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever.
Diane Webster	South West of Draycott	response-01177	Landscape	The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would feel imprisoned by a housing estate. Loss of open land frequently used These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. Our local surroundings will become dominated by housing estates and will blight the local walks along the Public Right of Way which connect our Village. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. The development of 190 homes will have a significantly negative impact on the

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Diane Webster	South West of Draycott	Response-01177	Landscape	<p>spatial openness of the area, impacting both the physical and geographical characteristics of the open land, which prevents urban sprawl and maintains the separation between settlements. It will overwhelmingly impact the natural and undeveloped nature of the Green Belt area. Protecting public rights of way and access, footpaths would be affected by this development. Increased harm to the character of Public Rights of Way. Boundaries are changed by fencing and walls. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Strongly object to this application the amenity and enjoyment of the use of the paths which cross the site will be severely compromised by the development. These paths provide an important means by which residents from the local area can get access to the countryside with substantial benefits for their physical and mental health. The suggested 190 houses to the land south west of Draycott would enclose the paths, which would have a devastating effect on the enjoyment of walks, as would the replacement of green fields with 190 houses. We acknowledge it is a balance between the adverse effects on the footpaths against the desirability of the development taking place, but question if the proposed measures would be sufficient to prevent a severe adverse effect on the use of the paths. The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. An extensive network of public footpaths is within the application site, and there are many in the near vicinity. The footpaths are well used and highly valued as an amenity. Public footpaths this development would surely take away the enjoyment of what countryside walks we have left around. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. It is the wrong model in the wrong place to meet the EBCs housing needs when existing Brownfield sites exist within EBC being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. Our local surroundings will become dominated by this housing development and will blight the local walks along the Public Right of Way which connect our Village. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. There are 109 existing Brownfield sites within the EBC that should be prioritised before the Green Belt land south west of Draycott is used. Historic structures act as a focal point in countryside views an</p>
Diane Webster	South West of Draycott	Response-01177	Landscape	<p>d make a huge contribution to environmental quality. Their setting is often a major part of their significance. The proposed housing development to the land South West of Draycott deprives them of their context. The proposed development is considered to have an adverse impact on the setting of local heritage assets. This would have a detrimental and cumulative impact which would be harmful to local heritage assets. The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. Historic England show 14 listed building in Draycott:- Victoria Mill Grade 2 listed building, list entry number 1281333 / Church of St Chads, Church Wilne, Grade 1 listed building, list entry number 1281336 / Cart Shed and Stable at Draycott Mills, Grade 2 listed building, list entry number 1140155 / Cedars Farm House, Grade 2 listed building, list entry number 1087964 / The Cotton Processing and Storage Building at Draycott Mills, Grade 2 listed building, list entry number 1329376 / Doubling Mill at Draycott Mills, Grade 2 listed building, list entry number 1140154 / Draycott Hall and Outbuildings, Grade 2 listed building, list entry number 1334834 / Front Range Draycott Mills, Grade 2 listed building, list entry number 1334835 / Levers Machine Shed, Draycott Mills, Grade 2 listed building, list entry number 1250092 / Cotton warehouse, chimney and outbuilding, Draycott Mills, Grade 2 listed building, list entry number 1250121 / Cotton spinning mill and office block, Draycott Mills, Grade 2 listed building, list entry number 1250046 / Potter Lane Bridge, Grade 2 listed building, list entry number 1087966 / Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 / Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963 NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The amenity value of the footpaths through the application site would be entirely lost, and that of the surrounding footpaths greatly diminished due to the change from a beautiful rural landscape to a vast housing estate, with high fences/walls and a significant amount of houses adding to this negative impact. It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape when existing Brownfield sites within EBC should be prioritised before the Greenbelt land south west of Draycott.</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Diane Webster	South West of Draycott	response-01177	Flooding / Drainage	<p>Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes. Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. Building on a flood plain that has trees, grass &amp; plants that naturally help absorb water via roots systems when removed will have a huge impact. When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issues. "NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where 50 development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout the year with many residents on Lime Grove not able to obtain flood risk damage cover as a consequence. " NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. NPPF 174. States that within this context</p>
Diane Webster	South West of Draycott	response-01177	Flooding / Drainage	<p>the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.</p>
Diane Webster	South West of Draycott	response-01177	Other	<p>Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter half term and the consultation window included 4 Bank Holidays. This when much of the information required was not available and FOI requests were submitted and took 20 working days for a response to be received, when the government agencies contacted themselves did not work the said Bank Holidays. This has meant important information has not been received by residents when developing objections. This action by the EBC was irresponsible, some may say planned, and not acting in the interests of the local communities this plan impacts. I strongly object to the consultation process which as best can be described as limited and not fully transparent when engaging with the local community. EBC has only given local residents mere 6 weeks to submit objections to what is an incredibly important change to the original Local Plan and Core Strategy. This is simply not enough time for residents to review and analysis the share magnitude of information and formulate objections, this when significant information is also missing which includes the master plan for the land south west of Draycott. The manner in which EBC has undertaken the 6 week consultation is not inclusive and does not allow non internet users to be aware of the consultation and changes to the Core Strategy. The average age within Draycott and Church Wile Parish is 58 and there is a large proportion of the community that was not aware of this important change. We fully object to the whole process and in particular the 6 week consultation period. I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. I strongly object to the Sustainability Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local residents resulted in a score of -6 placing th</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Diane Webster	South West of Draycott	Response-01177	Other	is land ran 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 & 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should received a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless. There are around 2000 vacant social housing in Derbyshire County. Why are these houses not being prioritised ahead of this land being used for development. I assume that if this goes ahead and additional flooding occurs EBC will be liable and pay for any repair cost to the house holder
Dianne Simmons	West of Borrowwash	Response-00401	Traffic Congestion	When there is an issue on the A52 which is regular, the village of Borrowwash is gridlocked, with an additional 200 plus houses this will be a disaster
Dianne Simmons	West of Borrowwash	Response-00401	Healthcare Facilities	The Dr's Surgery on Victoria Avenue and Derby Road already struggle to provide appointments, with over 200 new homes it will be impossible to get an appointment and with an aging population in Borrowwash and Ockbrook this is very concerning
Dianne Simmons	West of Borrowwash	Response-00401	Flooding / Drainage	I live on Field Close and our garden floods even with the lightest of rain, another 200 plus houses will surely make this worse.
Dominic Tye	South of West Hallam	Response-01016	Traffic Congestion	The development will dramatically increase the volume of traffic in our village which will have a detrimental impact on all those who live in our gorgeous village.
Dominic Tye	South of West Hallam	Response-01016	Green Belt	We are losing yet more of our precious green belt land which is so important for everyone. We should be able to continue to enjoy the land as it is with the spectacular countryside which surrounds our village.
Donna Butcher	South West of Draycott	Response-01155	Traffic Congestion	he Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic. A transport assessment needs to be undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This passes through Draycott and Borrowwash. Passing busy junctions, Doctor's surgeries, public car parks, Primary schools, local cricket club as well as numerous resident's homes. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Donna Butcher	South West of Draycott	Response-01155	Road Safety	The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents. A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents. NPPF 109. States that transport issues should be considered from the earliest stages of plan-making and development proposals, using a vision-led approach to identify transport solutions that deliver well-designed, sustainable and popular places. This should involve identifying, assessing and taking into account the environmental impacts of traffic and transport infrastructure ? including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains. Yet no traffic survey has been undertaken. If it had it would have highlighted that along A6005 (Derby Road) and exactly adjacent the proposed development. NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic. NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic.
Donna Butcher	South West of Draycott	response-01155	Wildlife / Biodiversity	Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The taking away of grazing/arable land and the disruption for the wildlife. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield si
Donna Butcher	South West of Draycott	Response-01155	Wildlife / Biodiversity	tes existing in EBC which should be used first before Green Belt. NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Donna Butcher	south west of Draycott	response-01155	Type of Housing	<p>Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. Donna Butcher	south west of Draycott	response-01155	Number of Houses	<p>NPPF 223. States that planning policies should set out criteria or requirements to ensure that permitted and proposed operations do not have unacceptable adverse impacts on the natural and historic environment or human health, taking into account the cumulative effects of multiple impacts from individual sites and/or a number of sites in a locality. The EBC are proposing a combined number of nearly 700 houses in the locality of Draycott, Borrowwash and Breaston which is significantly overbearing and unrealistic when considering infrastructure, road networks and amenity. The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The potential harm caused by the application far outweighs the potential public benefit. The scale of the development is completely NOT in keeping with the character of the village. The proposed development should follow existing settlement patterns. New buildings and the volume of housing should harmonise with the neighbourhood. Retain local character and the retention of open spaces as is the character of the village. Views into and out of the village should be preserved. Clear lines of hills and spatial openness must be preserved. The scale and massing of the development, which will begin with 190 houses but will significantly increase when the identified safeguarded land is developed in the future, is completely out of character with its surroundings and would be incredibly overbearing on the village and neighbourhood I strongly believe that there are better suited brownfield sites and genuine Grey Belt sites with land that is of poor quality. The land south west of Draycott is Grade 2 land (very good) and should be protected. NPPF 61. States that to support the Government's objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay. The overall aim should be to meet an area's identified housing need, including with an appropriate mix of housing types for the local community. The land identified south west of Draycott is Green Belt and Grade 2 quality land. This development neither looks to protect the BMV nor does it look to bring forward the 109 existing Brownfield sites within the EBC that has full planning consent. NPPF 73. States that the authority should identify, through the development plan and brownfield registers, land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC there are 109 Brownfield sites as deta</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Donna Butcher	South West of Draycott	response-01155	Number of Houses	filed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.
Donna Butcher	South West of Draycott	response-01155	Green Belt	Protecting Green Belt land, this land should be kept open and unharmed Protecting public rights of way and access, a large number of footpaths would be affected NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. Great weight should be given to the findings and recommendations of independent Landscape Quality Assessment The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl. NPPF states that in exceptional circumstances authorities should review Green Belt boundaries in accordance with the policies in this Framework and propose alterations to meet these needs in full, unless the review provides clear evidence that doing so would fundamentally undermine the purposes (taken together) of the remaining Green Belt. Changing the land south west of Draycott to Grey Belt and the development of 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density. Working on the current population of Draycott, 190 new homes will be an at least 17% increase in population. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish and Borrowwash and other villages surrounding it of Breaston and Borrowwash. NPPF states the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate where the development would utilise Grey Belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Belt across the area of the plan. It is clear the authority is now altering existing and acceptable Green Belt land to suit this paragraph/approach of the NPPF by converting it to Grey Belt. This is both hasty and reckless. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. The development on the land south west of Draycott for the people of Draycott and other areas, will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has
Donna Butcher	South West of Draycott	response-01155	Green Belt	an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. It is the wrong model in the wrong place to deliver housing needs being of a scale that is ultimately detrimental to the local landscape, wildlife and impact irreversibly upon the area. This when there are 109 existing Brownfield sites within the EBC that should be prioritised first over Green Belt land. Understand there is need for new housing but there are an abundance of brownfield, previously developed sites that the developers and council should explore before this location. There are 109 existing Brownfield sites in EBC giving 81H with 103 of these having full planning permission. These sites should be prioritised first for development before Greenbelt land is considered. Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is c.8H. These 8 sites alone will allow 514 net dwelling to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever. It was previously thought that the land of the former Stanton Ironworks was taken out of the EBCs core strategy due to contamination that rendered the site unusable. Yet a recent Freedom of Information (FOI) request which was answered by EBC has advised the site is indeed to be utilised and has been allocated 1000 houses. Can EBC please advise if the status of the Stanton Ironworks sites and if this is included within the Core Strategy and how the planned 1000 houses impacts the Greenbelt review and use of Greenbelt land. NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF 4. States that local planning authorities should approach decisions on proposed development in a positive and creative way. They should use the full range of planning tools available, including brownfield registers and permission in principle, and work proactively with applicants to secure developments that will improve the economic, social and environmental conditions of the area. EBC needs to demonstrate what appraisals have been undertaken on the 109 Brownfield sites as detailed within their own Brownfield Register, and why these sites have not been prioritised for development over the identified Green Belt land. NPPF 13. Protecting Green Belt Land:- The government attaches great importance to Green Belts. The fundamental aim of Green Belt is to keep land permanently open; the essential characteristics of Green Belts are their openness and their permanence. This is an inappropriate development in the Green Belt and there is NO evidence of the appraisals that have been undertaken on existing Brownfield sites within EBC which there are 109 with 8 of these giving over 51H and the opportunity to develop over 500 dwellings. NPPF 146. The applicant and authority MUST make as much use as possible of Brownfield Sites and underutilised land; AND PROVE that there is nothing left before encroaching on the Green Belt.
Donna Butcher	South West of Draycott	response-01155	Green Belt	? There is no PROOF of the authority discussing with neighbouring authorities about whether they could accommodate some of the identified need for this development, in order not to use the Green Belt. NPPF 152. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances. This application does not demonstrate any exceptional circumstances.

Donna Butcher	South West of Draycott	Response-01155	Landscape	<p>The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would feel imprisoned by a housing estate. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. An extensive network of public footpaths is within the application site, and there are many in the near vicinity. The footpaths are well used and highly valued as an amenity. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The amenity value of the footpaths through the</p>
Donna Butcher	South West of Draycott	Response-01155	Landscape	<p>application site would be entirely lost, and that of the surrounding footpaths greatly diminished due to the change from a beautiful rural landscape to a vast housing estate, with high fences/walls and a significant amount of houses adding to this negative impact. It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. NPPF 150. States that if it is necessary to restrict development in a village primarily because of the important contribution which the open character of the village makes to the openness of the Green Belt, the village should be included in the Green Belt. If, however, the character of the village needs to be protected for other reasons, other means should be used, such as conservation area or normal development management policies, and the village should be excluded from the Green Belt. The land south west of Draycott significantly contributes to the village and its character. This village is a part of this land and the Green Belt status allows villagers to access green spaces and enhances the village feel of the area which is rural. NPPF 207. States in determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets? importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation. Yet development on the land south west of Draycott will significantly impact and later the heritage of the Village including the destruction of unspoilt Green Belt land, the adjacent conservation site of the canal and other listed heritage sites that surround the identified area.</p>
Donna Butcher	South West of Draycott	Response-01155	Flooding / Drainage	<p>From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic was questions was asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Donna Butcher	South West of Draycott	response-01155	Other	Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter half term and the consultation window included 4 Bank Holidays. This when much of the information required was not available and FOI requests were submitted and took 20 working days for a response to be received, when the government agencies contacted themselves did not work the said Bank Holidays. This has meant important information has not been received by residents when developing objections. This action by the EBC was irresponsible, some may say planned, and not acting in the interests of the local communities this plan impacts. I strongly object to the consultation process which as best can be described as limited and not fully transparent when engaging with the local community. EBC has only given local residents mere 6 weeks to submit objections to what is an incredibly important change to the original Local Plan and Core Strategy. This is simply not enough time for residents to review and analysis the share magnitude of information and formulate objections, this when significant information is also missing which includes the master plan for the land south west of Draycott. I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. As residents living next to the site of the proposed change in Green Belt status and future housing development, we are of the view that these proposals will have a serious negative impact on the village, visual openness, spatial openness, the local community and our standard of living. I strongly object to the Sustainability Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local residents resulted in a score of -6 placing this land ran 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions
Donna Butcher	South West of Draycott	response-01155	Other	incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 & 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should received a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed.
Donna Peace	South West of Draycott	Response-01344	Traffic Congestion	The road n and around Draycott are not designed to accommodate the extra vehicles this development will bring. Increased congestior and parking issues wil legatively impact both resident: and commuters

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Donna Peace	South West of Draycott	Response-01344	Road Safety	<p>oad SafetyTraffic CongestionWildlife - BiodiversityOther - Noise &amp; DisturbanceOther - Health &amp; Wellbeing A B C 1 2 Road Safety 3 Objection Data 4 1 The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents. 5 2 A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents. 6 3 NPPF 109. States that transport issues should be considered from the earliest stages of plan-making and development proposals, using a vision-led approach to identify transport solutions that deliver well-designed, sustainable and popular places. This should involve identifying, assessing and taking into account the environmental impacts of traffic and transport infrastructure ? including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains. Yet no traffic survey has been undertaken. If it had it would have highlighted that along A6005 (Derby Road) and exactly adjacent the proposed development. The peak traffic hours on Fridays are between 4 PM and 6 PM, with the highest average vehicle count observed from 4 PM to 5 PM. The average number of cars per day in the traffic data is approximately 3,861 vehicles. The highest recorded traffic day in the data is June 11, 2023, with a total of 4,779 vehicles. The maximum speed recorded in the traffic data is 106 mph and the number of times 70 mph is exceeded in the traffic data is 174. 7 4 The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment. 8 5 NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic. 9 6 NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure</p>
Donna Peace	South West of Draycott	Response-01344	Road Safety	<p>that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic.</p>
Donna Peace	South West of Draycott	Response-01344	Air Quality	<p>1 Noise from the construction (including vehicle movements) and operational phases of the proposed development have not been adequately addressed. 5 2 An environment noise assessment needs to be carried out, particularly for the residents directly opposite the site entrance; but also the whole route that the construction traffic will take. This passes through Draycott, Borrow ash and Beaston villages. Passing busy junctions, Doctor?s surgeries, public car parks, Primary schools, local cricket clubs as well as numerous resident?s homes. 6 3 Require the submission of an environmental noise assessment, prior to development works commencing, to rate and assess operational sound from all fixed installations comprising mechanical and electrical plant and equipment, with a scheme of mitigation measures where necessary; that all site preparation and construction to comply with specified working hours and limits to noise and dust emissions, waste disposal and lighting; and the submission of proposals, including the design and operating times, of any permanent external lighting on site. 7 4 Access and egress to the proposed housing development on Derby Road raises several issues relating to highway and pedestrian safety, ease of access and disruption from increased traffic. 8 5 The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. This will include Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 and Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963. 9 6 Noise and Vibration consultation to be undertaken to consider impacts during construction on nearby noise sensitive properties and ongoing management of a solar farm and the impact of noise and disturbance.</p>

Donna Peace	South West of Draycott	response-01344	Wildlife / Biodiversity	<p>1 Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. 2 Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. 3 This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. 4 The taking away of grazing/arable land and the disruption for the wildlife. 5 These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. 6 Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. There is an opinion that the deer fencing would devalue the area of open farmland and public right of way. 7 This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. 7 4 The taking away of grazing/arable land and the disruption for the wildlife. 8 5 These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. 9 6 Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. There is an opinion that the deer fencing would devalue the area of open farmland and public right of way. 10 7 This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. 11 8 The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. 12 9 These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. 13 10 Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. 14 11 Historical badger sett on part of the site to the Victorian tip at the bridge of Nooning Lane. 15 12 The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the</p>
Donna Peace	South West of Draycott	response-01344	Wildlife / Biodiversity	<p>villages to living in the midst of a housing estate. 16 13 To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. This area forms a green corridor and houses a number of RED LIST species 17 14 The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance. 18 15 NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. 19 16 NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt. 20 17 NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.</p>
Donna Peace	South West of Draycott	response-01344	Bus Services	<p>public transport, which are already overstretched. No adequate plans have been provided to mitigate these concerns.</p>
Donna Peace	South West of Draycott	Response-01344	School Capacity	<p>The village primary school and surrounding secondary schools are at or near capacity. An influx of families will put immense pressure on school places, potentially forcing local children to travel further afield for education.</p>
Donna Peace	South West of Draycott	response-01344	Healthcare Facilities	<p>Healthcare: Local GP surgeries and dental practices are already struggling to meet the needs of existing residents. Increasing the population significantly will make it even harder for people to access timely medical and dental care.</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Donna Peace	South West of Draycott	Response-01344	Type of Housing	<p>1 The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. 5 2 Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing, 6 3 The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village?s strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. 7 4 The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.</p>
Donna Peace	South West of Draycott	Response-01344	Number of Houses	<p>1 NPPF 223. States that planning policies should set out criteria or requirements to ensure that permitted and proposed operations do not have unacceptable adverse impacts on the natural and historic environment or human health, taking into account the cumulative effects of multiple impacts from individual sites and/or a number of sites in a locality. The EBC are proposing a combined number of nearly 700 houses in the locality of Draycott, Borrowwash and Breaston which is significantly overbearing and unrealistic when considering infrastructure, road networks and amenity. 5 2 The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. 6 3 The potential harm caused by the application far outweighs the potential public benefit. 7 4 The scale of the development is completely NOT in keeping with the character of the village. The proposed development should follow existing settlement patterns. New buildings and the volume of housing should harmonise with the neighbourhood. Retain local character and the retention of open spaces as is the character of the village. Views into and out of the village should be preserved. Clear lines of hills and spatial openness must be preserved. 8 5 This out of scale development rides roughshod over the NPPF and other relating policies and guidelines with the barest of lip service paid, with the minimum consultation being undertaken with residents which is compounded by the lack of information available and transparency. 9 6 The scale and massing of the development, which will begin with 190 houses but will significantly increase when the identified safeguarded land is developed in the future, is completely out of character with its surroundings and would be incredibly overbearing on the village and neighbourhood I strongly believe that there are better suited brownfield sites and genuine Grey Belt sites with land that is of poor quality. The land south west of Draycott is Grade 2 land (very good) and should be protected. 10 7 NPPF 61. States that to support the Government?s objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay. The overall aim should be to meet an area?s identified housing need, including with an appropriate mix of housing types for the local community. The land identified south west of Draycott is Green Belt and Grade 2 quality land. This development neither looks to protect the BMV not does it look to bring forward the 109 existing Brownfield sites within the EBC that has full planning consent. 11 8 NPPF 73. States that the authority should identify, through the development plan and brownfield</p>
Donna Peace	South West of Draycott	Response-01344	Number of Houses	<p>registers, land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC their are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to</p>

Donna Peace	south west of Draycott	response-01344	Green Belt	<p>1 Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. 5 2 Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. 6 3 This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. 7 4 The taking away of grazing/arable land and the disruption for the wildlife. 8 5 These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. 9 6 Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. There is an opinion that the deer fencing would devalue the area of open farmland and public right of way. 10 7 This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. 11 8 The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. 12 9 These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. 13 10 Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. 14 11 Historical badger sett on part of the site to the Victorian tip at the bridge of Nooning Lane. 15 12 The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. 16 13 To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. This area forms a green corridor and houses a number of RED LIST species 17 14 The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would det</p>
Donna Peace	south West of Draycott	response-01344	Green Belt	<p>rimentally impact upon Lime Grove and Derby Road character and appearance. 18 15 NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. 19 16 NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt. 20 17 NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Donna Peace	south west of Draycott	response-01344	Landscape	<p>1 Under S106 of the Town and Country Planning Act 1990, as amended, contributions can be sought from developers towards the costs of providing community and social infrastructure, the need for which has arisen as a result of new development taking place. 5 2 No additional open space opportunities, protection of the public right of way or indeed to better facilities. If S106 funding is available for an application of this type this must be considered. 6 3 This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the villages surrounding it of Borrowwash and Breaston. 7 4 The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. 8 5 The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would feel imprisoned by a housing estate. 9 6 Loss of open land frequently used 10 7 These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. 11 8 Our local surroundings will become dominated by housing estates and will blight the local walks along the Public Right of Way which connect our Village. 12 9 The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. 13 10 Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. 14 11 Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. 15 12 Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. 16 13 These plans plus the plans for National Grid t</p>
Donna Peace	south West of Draycott	response-01344	Landscape	<p>o install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. 17 14 The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. 18 15 The development of 190 homes will have a significantly negative impact on the spatial openness of the area, impacting both the physical and geographical characteristics of the open land, which prevents urban sprawl and maintains the separation between settlements. It will overwhelmingly impact the natural and undeveloped nature of the Green Belt area. 19 16 Protecting public rights of way and access, footpaths would be affected by this development. 20 17 Increased harm to the character of Public Rights of Way. 21 18 Boundaries are changed by fencing and walls. 22 19 The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. 23 20 Strongly object to this application the amenity and enjoyment of the use of the paths which cross the site will be severely compromised by the development. These paths provide an important means by which residents from the local area can get access to the countryside with substantial benefits for their physical and mental health. 24 21 The suggested 190 houses to the land south west of Draycott would enclose the paths, which would have a devastating effect on the enjoyment of walks, as would the replacement of green fields with 190 houses. 25 22 We acknowledge it is a balance between the adverse effects on the footpaths against the desirability of the development taking place, but question if the proposed measures would be sufficient to prevent a severe adverse effect on the use of the paths. 26 23 The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. 27 24 An extensive network of public footpaths is within the application site, and there are many in the near vicinity. The footpaths are well used and highly valued as an amenity. 28 25 Public footpaths this development would surely take away the enjoyment of what countryside walks we have left around. 29 27 The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. 30 28 The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. 31 29 It is th</p>

Donna Peace	south west of Draycott	response-01344	Landscape	<p>e wrong model in the wrong place to meet the EBCs housing needs when existing Brownfield sites exist within EBC being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. 32 30 Our local surroundings will become dominated by this housing development and will blight the local walks along the Public Right of Way which connect our Village. 33 32 The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. There are 109 existing Brownfield sites within the EBC that should be prioritised before the Green Belt land south west of Draycott is used. 34 33 Historic structures act as a focal point in countryside views and make a huge contribution to environmental quality. Their setting is often a major part of their significance. The proposed housing development to the land South West of Draycott deprives them of their context. 35 34 The proposed development is considered to have an adverse impact on the setting of local heritage assets. 36 35 This would have a detrimental and cumulative impact which would be harmful to local heritage assets. 37 36 The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. 38 37 Historic England show 14 listed building in Draycott: - Victoria Mill Grade 2 listed building, list entry number 1281333 / Church of St Chads, Church Wilne, Grade 1 listed building, list entry number 1281336 / Cart Shed and Stable at Draycott Mills, Grade 2 listed building, list entry number 1140155 / Cedars Farm House, Grade 2 listed building, list entry number 1087964 / The Cotton Processing and Storage Building at Draycott Mills, Grade 2 listed building, list entry number 1329376 / Doubling Mill at Draycott Mills, Grade 2 listed building, list entry number 1140154 / Draycott Hall and Outbuildings, Grade 2 listed building, list entry number 1334834 / Front Range Draycott Mills, Grade 2 listed building, list entry number 1334835 / Levers Machine Shed, Draycott Mills, Grade 2 listed building, list entry number 1250092 / Cotton warehouse, chimney and outbuilding, Draycott Mills, Grade 2 listed building, list entry number 1250121 / Cotton spinning mill and office block, Draycott Mills, Grade 2 listed building, list entry number 1250046 / Potter Lane Bridge, Grade 2 listed building, list entry number 1087966 / Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 / Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963 39 38 NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. 40 41 The amenity value of the footpaths through the application site would be entirely lost, and that of the surrounding footpaths greatly diminished due to the change from a beautiful rural landscape to a vast housing estate, with high fences/walls and a significant amount of houses adding to this negative impact. 41 45 It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local lands</p>
Donna Peace	south West of Draycott	response-01344	Landscape	<p>cape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. 42 46 Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape when existing Brownfield sites within EBC should be prioritised before the Greenbelt land south west of Draycott. 43 47 NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant amount of footpaths that will be affected by the development of 190 houses. 44 48 NPPF states that sustainable development should be achieved. There is an obvious lack of definition of why this site is a ?sustainable location?. The introduction of 190 houses will increase waste, carbon footprint and impact the areas future biodiversity needs. 45 49 NPPF 150. States that if it is necessary to restrict development in a village primarily because of the important contribution which the open character of the village makes to the openness of the Green Belt, the village should be included in the Green Belt. If, however, the character of the village needs to be protected for other reasons, other means should be used, such as conservation area or normal development management policies, and the village should be excluded from the Green Belt. The land south west of Draycott significantly contributes to the village and its character. This village is a part of this land and the Green Belt status allows villagers to access green spaces and enhances the village feel of the area which is rural. 46 50 NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. 47 51 NPPF 207. States in determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets? importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation. Yet development on the land south west of Draycott will significantly impact and later the heritage of the Village including the destruction of unspoilt Green Belt land, the adjacent conservation site of the canal and other listed heritage sites that surround the identified area. 48 52 NPPF 208. States the local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affe</p>
Donna Peace	south West of Draycott	response-01344	Landscape	<p>cting the setting of a heritage asset) taking account of the available evidence and any necessary expertise. They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between the heritage asset?s conservation and any aspect of the proposal. This development will impact Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622. 49 53 NPPF 102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected 50 54 There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development of this size. 51 55 To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing. 52 56 To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools. 53 57 To conserve and enhance the Borough landscape character. This proposal does not promote the conservation or enhancement of the local landscape and is an inappropriate development.</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Donna Peace	South West of Draycott	Response-01344	Flooding / Drainage	<p>1 From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. 5 2 Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. 6 3 There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. 7 4 In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. 8 5 NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes. 9 6 Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. 10 7 Building on a flood plain that has trees, grass &amp; plants that naturally help absorb water via roots systems when removed will have a huge impact. 11 8 When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. 12 9 NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issues. 13 10 NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where 50 development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding througho</p>
Donna Peace	South West of Draycott	Response-01344	Flooding / Drainage	<p>ut the year with many residents on Lime Grove not able to obtain flood risk damage cover as a consequence. 14 11 NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. 15 12 NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.</p>
Donna Peace	South West of Draycott	Response-01344	Other	<p>1 Loss of open space and green spaces ? this is vital for our community?s wellbeing 5 2 Primary School affected with noise and traffic 6 3 The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would not benefit from the current sprawling Greenbelt views as it will be gone forever. 7 4 It will have a detrimental effect on the wellbeing of people who enjoy the countryside, not to mention wildlife habitats, which are already under extreme pressure. 8 6 The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. 9 7 This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the small villages surrounding it of Borrowwash and Breaston. 10 8 It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. 11 9 Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. 12 10 The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of development on this green belt. 13 11 Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. 14 12 NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant lengths of footpaths that will be affected by the development of 190 houses on land south west of Draycott. 15 13 Promoting healthy and safe communities the effect on our healthy lifestyles, especially our local health and well-being needs ? taking away our green space and facility would be detrimental to our community and our day to day needs would fall short by the loss of our valued facilities 16 14 Open space and recreation. NPPF102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected 17 15 There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housin</p>

Donna Pearson	South West of Draycott	Response-00441	Other	g development 18 16 Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter. This action by the EBC was irresponsible and not acting in the interests of the local communities this plan impacts. 19 17 To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing. 20 18 To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools.
Donna Pearson	Acorn Way, Derby	Response-00441	Traffic Congestion	The traffic on Morley road and acorn way is already at breaking point.For every house you build there will be another 2 cars.Our roads can't cope as it is.
Donna Pearson	Acorn Way, Derby	Response-00441	Road Safety	Morley road and acorn away are used as race tracks adding more cars to this is crazy
Donna Pearson	Acorn Way, Derby	Response-00441	Air Quality	Adding more congestion to the area at rush hours is !?ll be detrimental to peoples health..
Donna Pearson	Acorn Way, Derby	Response-00441	Wildlife / Biodiversity	Living in a fairly rural area with .My children love to watch the rabbits and birds.You are going to take this away from the younger generation.
Donna Pearson	Acorn Way, Derby	Response-00441	School Capacity	As a mother of 2 children living in Oakwood I am disappointed that I could not get my children in to Oakwood school.So in order to cater for the new families you plan on brining to Oakwood i suggest you will need to build a new school!
Donna Pearson	Acorn Way, Derby	Response-00441	Healthcare Facilities	The people of Oakwood and Chaddesden already struggle to be seen by there Dr.Over populating the area is going to cause even more distress to the situation.
Donna Pearson	Acorn Way, Derby	Response-00441	Type of Housing	As a home owner living in a lovely quiet area I would definitely object to any kind of social housing as this would de value my property.
Donna Pearson	Acorn Way, Derby	Response-00441	Number of Houses	Any number is to high.
Donna Pearson	Acorn Way, Derby	Response-00441	Green Belt	One of the main reasons we bought a house looking on to green belt was for the feeling of being in the countryside and being able to enjoy the wild life. Green belt is impotent for the environment ams should definitely not be built on.
Donna Pearson	Acorn Way, Derby	Response-00441	Landscape	The view at the moment is stunning and the walk are good for people?s mental health
Donna Pearson	Acorn Way, Derby	Response-00441	Flooding / Drainage	Acorn way Morley road are subjugated to flooding every time it rains.To build on that would be a mistake as the houses already on Morley road could be subj cr to flooding
Donna Steele	West of Sandiacre	Response-00781	Traffic Congestion	I live on Larch Drive and the roads leading up to the proposed site are already full of cars parking, both Cloudside Ave and Larch Drive are very narrow roads and are not suitable for heavy Lorry?s to access the site. Also once the houses are built this will put more pressure on the roads. Traffic is already a nightmare especially at school run times on Beech Ave and Stanton Road. The area is a beautiful quite place which was one of the reasons moved here, this will all change if the these houses are built.
Donna Steele	West of Sandiacre	Response-00781	Road Safety	Traffic congestion is already a nightmare around the proposed area, this will only add to this.
Donna Steele	West of Sandiacre	Response-00781	Wildlife / Biodiversity	Stoney clouds is a beautiful place. There?s lots of wildlife in the area which will disappear if this build goes a head. There will not be anywhere for the wildlife to go and this will slowly disappear, it?s a very sad situation.
Donna Steele	West of Sandiacre	Response-00781	School Capacity	Building 180 houses will put so much pressure on our local schools which are already over stretched. There just isn?t the places in our local schools for more children who could possibly move into the area.
Donna Steele	West of Sandiacre	Response-00781	Healthcare Facilities	Our doctors surgeries and local dentist do not have the capacity to take more patients. I am still trying to find a dentist to take me as a patient.
Donna Steele	West of Sandiacre	Response-00781	Green Belt	I just don?t understand how Green belt land isn?t protected from building houses on. I always believe it was but suddenly councils can change this to build houses on. Stop and think, if this carries on we will be left without any beautiful green belt land and what happens to our wildlife?
Donna Steele	West of Sandiacre	Response-00781	Flooding / Drainage	If these houses are built on the green belt land where will the rain go? It could cause flooding to area including my own house, it?s very stressful thinking this could happen to me. We need green belt land for natural drainage.
Donna Wheatley	South West of Draycott	Response-00863	Wildlife / Biodiversity	There is an abundance of wildlife in the area which will be totally wiped out if the development is allowed to proceed, the proposed land is greenbelt for a reason, the wildlife will lose its current habitat and have nowhere else to go which is a travesty
Donna Wheatley	South West of Draycott	Response-00863	Healthcare Facilities	It is hard enough to get a GP appointment as it is, how is adding an additional 700 homes going to help, it won't....
Dorothy Deeprose	West of Sandiacre	Response-00817	Traffic Congestion	Traffic is bad now this will make it worse
Dorothy Deeprose	West of Sandiacre	Response-00817	Road Safety	The road will become a traffic jam and therefore make safety an issue for the people here.
Dorothy Deeprose	West of Sandiacre	Response-00817	Air Quality	The added traffic will make polution. Also, traffic will use the other roads nearby making them congested
Dorothy Deeprose	West of Sandiacre	Response-00817	Wildlife / Biodiversity	You will wipe out the wildlife
Dorothy Deeprose	West of Sandiacre	Response-00817	School Capacity	You would need to build a new school to take the extra people
Dorothy Deeprose	West of Sandiacre	Response-00817	Healthcare Facilities	I hope you will build more GP practices for these people. It already takes weeks to see a GP. Also, GP's are only open during the week meaning you cant be ill at weekends but yet you can by a TV! This is crazy
Dorothy Deeprose	West of Sandiacre	Response-00817	Number of Houses	Please dont build new houses. I would ask you to fix the buildings we already have or knock them down and build on them. We should future proof what we have. Insulate, add solar panneling, EV chargers and heat pumps if we are going to future proof Britain.
Dorothy Deeprose	West of Sandiacre	Response-00817	Green Belt	If you destroy the green belt its gone for good.
Dorothy Deeprose	West of Sandiacre	Response-00817	Flooding / Drainage	This area is prone to floods now. More buildings will make it worse
Douglas Chambers	Acorn Way, Derby	Response-01235	Traffic Congestion	The potential for additional vehicular traffic causing further major congestion on Morley is unacceptable. Under present conditions through traffic can be delayed for very long periods
Douglas Chambers	Acorn Way, Derby	Response-01235	Road Safety	The potential for for approximately 1200 further children added to the present school children exiting/crossing the roads is unacceptable
Douglas Chambers	Acorn Way, Derby	Response-01235	Bus Services	Further delays caused by and to buses and passengers will severely handicap particularly the elderly who rely upon the service.
Douglas Hunt	Acorn Way, Derby	Response-00353	Traffic Congestion	Traffic congestion is already a major problem on Morley Road without extra traffic from new homes
Douglas Hunt	Acorn Way, Derby	Response-00353	Road Safety	Traffic congestion already makes emergency vehicle access difficult at peak times without the increase in traffic from new homes
Douglas Hunt	Acorn Way, Derby	Response-00353	Wildlife / Biodiversity	The development will undoubtedly destroy the existing wildlife habitat

Name of Responder	Consultation Site	Response ID	Response Category	Detail
			School Capacity	Local schools are currently close to maximum capacity with no scope or funding to increase in size
Douglas Hunt	Acorn Way, Derby	Response-00353	Healthcare Facilities	Health care facilities in the locality are close to maximum capacity and the additional population will degrade local health care if additional infrastructure is not provided
			Green Belt	EBC have not provided sufficient reasoning to justify building on green belt when there is more than adequate brown belt available to meet their targets
Douglas Hunt	Acorn Way, Derby	Response-00353	Flooding / Drainage	There is already a major flooding issue at the lower end of Morley Road and the disruption to natural drainage and additional run of from the development will exacerbate that issue without the provision of additional drainage infrastructure
Douglas Walker	South West of Draycott	Response-00994	Traffic Congestion	NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic. The Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic. The A6005 (Derby Road) is an already busy road at peak times during the week and weekend which currently experiences over 3,861 cars a day. Adding 190 additional houses will cause significant congestion issues throughout the village and increase accidents within this overburdened area. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic.
Douglas Walker	South West of Draycott	Response-00994	Road Safety	A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents. NPPF 109. States that transport issues should be considered from the earliest stages of plan-making and development proposals, using a vision-led approach to identify transport solutions that deliver well-designed, sustainable and popular places. This should involve identifying, assessing and taking into account the environmental impacts of traffic and transport infrastructure ? including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains. Yet no traffic survey has been undertaken. If it had it would have highlighted that along A6005 (Derby Road) and exactly adjacent the proposed development. The peak traffic hours on Fridays are between 4 PM and 6 PM, with the highest average vehicle count observed from 4 PM to 5 PM. The average number of cars per day in the traffic data is approximately 3,861 vehicles. The highest recorded traffic day in the data is June 11, 2023, with a total of 4,779 vehicles. The maximum speed recorded in the traffic data is 106 mph and the number of times 70 mph is exceeded in the traffic data is 174. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment. NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic.

Douglas Walker	south west of Draycott	response-00994	Wildlife / Biodiversity	<p>This development will lead to the unnecessary damage to Greenfield and Green Belt sites, resulting in an irreversible stain on the landscape. NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite. NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance. To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. This area forms a green corridor and houses a number of RED LIST species. there is a historical badger sett on part of the site to the Victorian tip at the bridge of Nooning Lane. there is also deer and other wildlife including bats in Banksfield Farm and. There is recent video and photographic evidence of this in the area. This development will destroy this local wildlife and natural habitats. How will the development mitigate these risk? Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area.</p>
Douglas Walker	south West of Draycott	response-00994	Healthcare Facilities	<p>The General Practice Doctors and Dental Surgeries are already over subscribed with many of them no not taking on any new patients with many Draycott residents having to use other surgeries in other villages/towns. This development will further compound these issues. How does the EBC plan to mitigate these very real issues and pressure on local infrastructure?</p>
Douglas Walker	south west of Draycott	response-00994	Type of Housing	<p>The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing, The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village?s strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village?s strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Douglas Walker	South West of Draycott	Response-00994	Number of Houses	<p>The scale and massing of the development, which will begin with 190 houses but will significantly increase when the identified safeguarded land is developed in the future, is completely out of character with its surroundings and would be incredibly overbearing on the village and neighbourhood I strongly believe that there are better suited brownfield sites and genuine Grey Belt sites with land that is of poor quality. The land south west of Draycott is Grade 2 land (very good) and should be protected. The scale of the development is completely NOT in keeping with the character of the village. The proposed development should follow existing settlement patterns. New buildings and the volume of housing should harmonise with the neighbourhood. Retain local character and the retention of open spaces as is the character of the village. Views into and out of the village should be preserved. Clear lines of hills and spatial openness must be preserved. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless. NPPF 73. States that the authority should identify, through the development plan and brownfield registers, land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC there are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. NPPF 61. States that to support the Government's objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay. The overall aim should be to meet an area's identified housing need, including with an appropriate mix of housing types for the local community. The land identified south west of Draycott is Green Belt and Grade 2 quality land. This development neither looks to protect the BMV nor does it look to bring forward the 109 existing Brownfield sites within the EBC that has full planning consent.</p>
Douglas Walker	South West of Draycott	Response-00994	Green Belt	<p>It is clear from the EBC own policies and the NPPF that protecting Green Belt and Greenfield land that is of good quality is a key priority, yet these plans go totally against these policies. This land should be kept open, unharmed and REMAIN protected for future generations. Furthermore, NPPF 156. The proposed development of 190 houses to the land south west of Draycott when located in the Green Belt, must demonstrate exceptional circumstances and are inappropriate unless very special circumstances can be demonstrated. Can the EBC please advise what 'exceptional circumstances' have led to the land south west of Draycott being identified for development and losing its Green Belt / Green Field classification? The NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. The NPPF also states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. Can the EBC please demonstrate what appraisals and outcomes have been undertaken on the existing Brownfield sites within EBC? The NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. Can the EBC please advise how the land south west of Draycott does not meet this criteria? The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. Can the EBC please demonstrate how it has met this policy requirement? NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes. The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl. NPPF states that in exceptional circumstances authorities should review Green Belt boundaries in accordance with the policies in this Framework and propose alterations to meet these needs in full, unless the review provides clear evidence that doing so would fundamentally undermine the purposes (taken together) of the remaining Green Belt. Changing the land south west of Draycott to Grey Belt and the development of 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density. Working on the current population of Draycott, 190 new homes will be an at least 17% increase in population. NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Douglas Walker	South West of Draycott	response-00994	Green Belt	<p>w, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels of land as identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. The NPPF further states the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate where the development would utilise Grey Belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Belt across the area of the plan. It is clear the authority is now altering existing and acceptable Green Belt land to suit this paragraph/approach of the NPPF by converting it to Grey Belt. This is both hasty and reckless. NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greybelt land does not meet this objective and will actually achieve the total opposite. NPPF 4. States that local planning authorities should approach decisions on proposed development in a positive and creative way. They should use the full range of planning tools available, including brownfield registers and permission in principle, and work proactively with applicants to secure developments that will improve the economic, social and environmental conditions of the area. EBC needs to demonstrate what appraisals have been undertaken on the 109 Brownfield sites as detailed within their own Brownfield Register, and why these sites have not been prioritised for development over the identified Green Belt land. NPPF 13. Protecting Green Belt Land:- The government attaches great importance to Green Belts. The fundamental aim of Green Belt is to keep land permanently open; the essential characteristics of Green Belts are their openness and their permanence. This is an inappropriate development in the Green Belt and there is NO evidence of the appraisals that have been undertaken on existing Brownfield sites within EBC which there are 109 with 8 of these giving over 51H and the opportunity to develop over 500 dwellings. NPPF 20. States that the target level of housing development within the plans should be capped in line with the capacity of Brownfield sites to accommodate it, to protect Green Belt yet these plans significantly exceed it. NPPF 143. The Green Belt serves 5 purposes: 1) To stop urban sprawl 2) To stop towns merging 3)</p>
Douglas Walker	South West of Draycott	response-00994	Green Belt	<p>To safeguard from encroachment onto the countryside 4) To preserve special settings, character and history 5) To ensure the recycling of derelict or Brownfield land. The proposals being made by EBC to reclassify existing Green Belt land to the south west of Draycott does not meet any of these 5 purposes and actually looks to achieve the total opposite. Furthermore, no apparent attempt has been made by EBC to demonstrate why the 109 existing Brownfield sites within EBC have not been prioritised over this Green Belt land. NPPF 146. The applicant and authority MUST make as much use as possible of Brownfield Sites and underutilised land; AND PROVE that there is nothing left before encroaching on the Green Belt. ? There is no PROOF of the authority discussing with neighbouring authorities about whether they could accommodate some of the identified need for this development, in order not to use the Green Belt.</p>
Douglas Walker	South West of Draycott	response-00994	Landscape	<p>This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the villages surrounding it of Borrowwash and Breaston. This development will mean the loss of this green space forever. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over GreenBelt. Furthermore, this development will lead to the unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. The NPPF 150. States that if it is necessary to restrict development in a village primarily because of the important contribution which the open character of the village makes to the openness of the Green Belt, the village should be included in the Green Belt. If, however, the character of the village needs to be protected for other reasons, other means should be used, such as conservation area or normal development management policies, and the village should be excluded from the Green Belt. The land south west of Draycott significantly contributes to the village and its character. This village is a part of this land and the Green Belt status allows villagers to access green spaces and enhances the village feel of the area which is rural. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Douglas Walker	south west of Draycott	response-00994	Landscape	<p>t and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. The development of 190 homes will have a significantly negative impact on the spatial openness of the area, impacting both the physical and geographical characteristics of the open land, which prevents urban sprawl and maintains the separation between settlements. It will overwhelmingly impact the natural and undeveloped nature of the Green Belt area. The suggested 190 houses to the land south west of Draycott would enclose the paths, which would have a devastating effect on the enjoyment of walks, as would the replacement of green fields with 190 houses. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. It is the wrong model in the wrong place to meet the EBCs housing needs when existing Brownfield sites exist within EBC being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. Our local surroundings will become dominated by this housing development and will blight the local walks along the Public Right of Way which connect our Village. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. There are 109 existing Brownfield sites within the EBC that should be prioritised before the Green Belt land south west of Draycott is used. It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. NPPF 207. States in determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets? importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to</p>
Douglas Walker	south West of Draycott	response-00994	Landscape	<p>include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation. Yet development on the land south west of Draycott will significantly impact and later the heritage of the Village including the destruction of unspoilt Green Belt land, the adjacent conservation site of the canal and other listed heritage sites that surround the identified area. NPPF 208. States the local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affecting the setting of a heritage asset) taking account of the available evidence and any necessary expertise. They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between the heritage asset?s conservation and any aspect of the proposal. This development will impact Noonng Lane Bridge, Grade 2 listed building, list entry number 1417622.</p>
Douglas Walker	South West of Draycott	response-00994	Flooding / Drainage	<p>From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic was questions was asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. The NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes. NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issues. NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where 50 development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout the year with many residents on Lime Grove not able to obtain flood risk damage cover as a consequence. NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. NPPF 174. States that within this context the aim of the sequential test is to steer ne</p>
Douglas Walker	South West of Draycott	response-00994	Flooding / Drainage	<p>w development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.</p>

Douglas Walker	South West of Draycott	response-00994	Other	I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter half term and the consultation window included 4 Bank Holidays. This when much of the information required was not available and FOI requests were submitted and took 20 working days for a response to be received, when the government agencies contacted themselves did not work the said Bank Holidays. This has meant important information has not been received by residents when developing objections. This action by the EBC was irresponsible, some may say planned, and not acting in the interests of the local communities this plan impacts. The manner in which EBC has undertaken the 6 week consultation is not inclusive and does not allow non internet users to be aware of the consultation and changes to the Core Strategy. The average age within Draycott and Church Wile Parish is 58 and there is a large proportion of the community that was not aware of this important change. We fully object to the whole process and in particular the 6 week consultation period. I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. I strongly object to the Sustainability Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local reside
Douglas Walker	South West of Draycott	response-00994	Other	nts resulted in a score of -6 placing this land ran 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 & 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should received a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless. There are around 2000 vacant social housing in Derbyshire County. Why are these houses not being prioritised ahead of this land being used for development. An environment noise assessment needs to be carried out, particularly for the residents directly opposite the site entrance; but also the whole route that the construction traffic will take. This passes through Draycott, Borrow ash and Beaston villages. Passing busy junctions, Doctor?s surgeries, public car parks, Primary schools, local cricket clubs as well as numerous resident?s homes. The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. This will include Nooning Lane Bridge, Grade 2 listed building,
Douglas Walker	South West of Draycott	response-00994	Other	list entry number 1417622 and Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963. NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant lengths of footpaths that will be affected by the development of 190 houses on land south west of Draycott. Open space and recreation. NPPF102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected
D Pallett	West of Sandiacre	Response-01627	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
D Pallett	West of Sandiacre	response-01627	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
D Pallett	West of Sandiacre	Response-01627	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
D Pallett	West of Sandiacre	Response-01627	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
D Pallett	West of Sandiacre	Response-01627	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
D Pallett	West of Sandiacre	Response-01627	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
D Pallett	West of Sandiacre	Response-01627	Type of Housing	High density housing is preposterous not in keeping with current housing.
D Pallett	West of Sandiacre	Response-01627	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
D Pallett	West of Sandiacre	Response-01627	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
D Pallett	West of Sandiacre	Response-01627	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Dr CJ Marvell	South West of Draycott	Response-01901	Traffic Congestion	Traffic and safety concerns. Exacerbated by the dormitory nature of the proposed development, traffic through the village will be much increased especially by commuting at busy times. At these times Derby Road is extremely busy and the extra junction and traffic will put great pressure on this infrastructure. There may also be safety concerns due to the increased traffic and the new road junction.
Dr CJ Marvell	South West of Draycott	Response-01901	Number of Houses	Character of the proposed development. The development is misconceived as it will change the character of the village. Draycott has a very strong community spirit but the new proposed development will not only not contribute to this but will detract from it, as it appears that the development will be constructed as a separate enclave with only one entry/exit onto Derby Road. It will in effect be a "dormitory" settlement, with very few of the new inhabitants taking part in village life because of the isolated nature of the proposed development. This sort of development is very much out of keeping with the existing mixed housing in Draycott.
Dr CJ Marvell	South West of Draycott	Response-01901	Green Belt	The sprawl between Nottingham and Derby is broken significantly only by the countryside to the west of Draycott, between Draycott and Borrowwash. There is another smaller gap, between Borrowwash and Spondon which is already being encroached upon.
Dr CJ Marvell	South West of Draycott	Response-01901	Green Belt	Draycott and Breaston are already linked without a gap and Breaston and Long Eaton are separated only by a narrow corridor along the motorway. The proposed development reduces the only significant gap between Derby and Nottingham. Loss of Green space. The land to be developed is mostly high grade farmland and small copses of trees. It is highly objectionable that this beautiful green belt should be designated as
Dr CJ Marvell	South West of Draycott	Response-01901	Green Belt	"grey belt" merely to suit the purposes of politicians and developers. There is no other justification for this shameful loss of irreplaceable green space.
Dr CJ Marvell	South West of Draycott	Response-01901	Flooding / Drainage	Flooding in general. Draycott is highly prone to flooding. The previous Environment Agency flood map designated parts of the proposed development site as flood zone 2 or 3.
Dr CJ Marvell	South West of Draycott	Response-01901	Flooding / Drainage	This has rather conveniently been re-designated in the latest EA flood map (2025) as being free of flooding. Any resident of Draycott will tell you that the area behind Lime Grove does suffer flooding, but mainly by surface water. Once again it appears politically expedient to re-designate this land. The effect of Surface Water. The gardens and occasionally some of the houses on Lime Grove adjacent to the proposed development suffer regular flooding. The Derwent burst its banks seven times in 2024 with the water covering varying amounts of land to the south of Lime Grove, Cleveland Avenue, Derwent Street and South Street. This was not the direct cause of flooding to housing in Draycott as the river floods here are well understood. Much less well understood is the effect of heavy local rainfall on the water table as the river rises and the excess water can no longer be carried away by the river. The water table may rise several metres under these conditions and combined with surface water runoff, this does regularly cause flooding in some gardens and properties in Draycott. The building of the proposed development will exacerbate this problem by increasing surface runoff due to the increase in hard paved areas; the effect on the immediate water table is difficult to determine. Special measures taken to protect the new houses may well save them from flooding but the effect on existing houses, mainly on Lime Grove will be increased.
Dr Sarah Mee	West of Borrowwash	Response-01320	Traffic Congestion	Whilst I note the proposals for off-site highway investment; the scale of this must be determined in the context of existing volume of traffic on the A6005 Derby Road which is frequently at capacity and traffic is completely grid-locked when the A52 is closed. The A6005 was designed to support traffic into and out of the village and access to the village homes. The road is not designed for high volume urban or construction traffic. Additional public transport upgrades will add to the congestion and traffic increases related to school access must be balanced with the need to provide adequate pavement for children to also walk to and from the proposed housing allocation site and the local schools. Pavements are already narrow and often difficult to access due to hedges overhanging and this must be factored in when proposals for easing existing and future traffic congestion worsening are developed. .
Dr Sarah Mee	West of Borrowwash	Response-01320	Road Safety	The proposed housing allocation site sits on the crest of a hill with the prevailing traffic speed often exceeding the designated 30mph limit on the entry to the village by cars and motorbikes with poor visibility of existing turnings into driveways of houses on on Derby Road. The increased traffic volumes could lead to an increased potential for collisions. The entry to the housing allocation site must incorporate a bell mouth design to allow for adequate visual splays and this is a challenge without significantly impinging on the property to the East of the allocation at number 72 or the parkland on the West boundary of the proposed housing allocation site. I am very concerned about the lack of robust proposals for secondary emergency access to the proposed housing allocation site. It is currently unclear how this is to be accommodated and a major objection on both road and public health and safety grounds. I note the proposal for new pedestrian access but this alone will not be adequate and must be supported by revisions to the prevailing traffic speeds and adequate visibility splays at the proposed housing allocation site.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Dr Sarah Mee	West of Borrowwash	response-01320	Air Quality	The main concerns on air quality relate to the construction period. During piling and with haulage vehicles entering and leaving the proposed housing allocation site daily there will be an unacceptable volume of air particle debris and traffic fumes for the existing residents of Derby Road which must be contained and monitored so this does not cause damage to the health of existing residents or impact the quality of their living standards such as being able to use their gardens safely. Clean air is a fundamental human right. The Clean Air Act debated on 19 March 2024 aims to establish a legal right for citizens to breathe clean air and abide by WHO clean air guidelines. Air pollution is a national health emergency in the UK and targets within the Environment Act for fine particulate matter should be complied with during the construction of any housing or industrial development at this site West of Borrowwash. It is without doubt that the current air quality around the current Greenbelt designated land will be negatively impacted during the construction phase at this proposed housing allocation site for the existing village residents and potentially following construction, even when taking into account the currently enhanced building regulations and energy efficiency technologies for the houses, the traffic flow and related fumes will be hugely increased.
Dr Sarah Mee	West of Borrowwash	Response-01320	Wildlife / Biodiversity	The current Greenbelt designated land at this location supports a rich variety of wildlife which will inevitably be destroyed and not re-accommodated in the small strip of parkland proposed as substitute area of demarcation of the village of Borrowwash from the Derby City boundary. This wildlife and area of biodiversity will be forever lost and replaced with some form of manufactured Biodiversity Net Gains to meet guidelines but the original habitat for many existing species will be destroyed forever. In line with my comments on the Greenbelt review in the relevant section of this submission, what constitutes countryside is perception based and highly subjective to individuals. Taking away another natural green space will always negatively impact the original wildlife and biodiversity.
Dr Sarah Mee	West of Borrowwash	response-01320	Bus Services	Public transport provision for the new residents of a development at this site would impact the volume of traffic on an already busy road and additional buses would need to be provided for the route to and from Derby and Nottingham and allocations to from schools. At peak times the service is already at capacity and the impact of additional traffic on congestion, pollution and road safety must be factored in to decision making
Dr Sarah Mee	West of Borrowwash	response-01320	School Capacity	The housing development at this site will bring families and children who will need adequate educational provision. There are two small state funded primary schools near the housing allocation site and adequate resourcing of these schools and the secondary schools some distance away must be considered.
Dr Sarah Mee	West of Borrowwash	response-01320	Healthcare Facilities	Emergency secondary access to the proposed allocation site must be robustly designed otherwise access to emergency services will remain a major concern for the people living in the proposed development of 280 houses. Access to healthcare facilities is already extremely restricted for existing residents due to staffing issues and size of the GP practices serving Borrowwash and the nearest A and E and other secondary care facilities. Increasing the housing allocation safely must be accompanied by increasing the access to healthcare facilities and be proven to not just add further strain on existing resources.
Dr Sarah Mee	West of Borrowwash	response-01320	Type of Housing	I am concerned that the proposed 280 houses will be overlooking one another with small garden areas and won't be in keeping with the design of the majority of the properties in the village which are older style with larger gardens and privacy and influence the village character so well. I am concerned that housing allocation of Greenbelt at this site might include industrial development and that the parkland designation area will be further developed and the character of the current village lost completely for existing residents and future generations.
Dr Sarah Mee	West of Borrowwash	response-01320	Number of Houses	Although it is the trajectory of travel in modern property development to maximise land use and minimise privacy, 280 houses is a large allocation for the space and surrounding village infrastructure to accommodate safely in terms of emergency access, road safety, and healthcare service provision. Please also see my comments on the flood risk. I am very concerned about the flooding from the site which has been severe enough to close the A6005 after rainfall when the road and particularly that road area at the allocation site access which can become a stream.
Dr Sarah Mee	West of Borrowwash	response-01320	Green Belt	Release of Greenbelt land for housing allocation at this site is a complete reversal of the original decision making process which recognised the designated land as fulfilling the purposes of Greenbelt and is without new evidence to underpin revisiting the original decision. There is no new evidence or data submitted within the consultation documents entitled Greenbelt Review Jan 2025 - only a subjective opinion that vistas from the site are semi-urban. The same vistas were present at time of Greenbelt designation so this has not changed and floodlights at the sportsground are used rarely at night and when partially lit, the footpath within the Greenbelt has enhanced safety. It is my counter view from the Greenbelt review report that walking on the footpath at this site provides a real sense of space and countryside with the fields on either side allowing for existing residents and visitors to enjoy a countryside view and feel and exercise themselves and their dogs in fresh air and an open space. There are adequate non-Greenbelt spaces for housing allocation in Erewash. Eroding Greenbelt at this site will fundamentally destroy the village feel to Borrowwash and this open space which prevents the village merging with the Derby City boundary and thus current not feeling like part of the town. We note that the footpath is to be retained however walking on a footpath bordered by a housing estate on one side and a busy parkland area on the other is far from the current experience of space and countryside so my view is that loss of Greenbelt here fundamentally impinges the countryside. Having a new major road in and out of the housing allocation site will also destroy any remaining benefit of the footpath for residents.
Dr Sarah Mee	West of Borrowwash	response-01320	Landscape	Comments related to landscape value of the site relate to the original Greenbelt designation and lack of new evidence to reverse the decision on preserving this site for countryside use of current residents and future generations and concerns about forever altering the village status of Borrowwash.
Dr Sarah Mee	West of Borrowwash	response-01320	Flooding / Drainage	There is a field drainage ditch and an underground spring behind the existing properties on Derby Road. The ditch fills rapidly after rain and existing flood defences are frequently overwhelmed causing Derby Road to become a running stream which has closed Derby Road in the last few years at times. The Flood Prevention Officer at Matlock has been involved in site assessment and Erewash Council have been made aware of this flood water and potential risk of flooding on several occasions by several residents of Derby Road. At times the flood water prevents exit from driveways on Derby Road which has been a major safety concern for access to emergency vehicles to properties and exit of residents in an emergency or even just to take the bins down to the road. Recent enquiry by a resident found drains and sewers to be at capacity already along Derby Road for existing houses so additional housing is a major concern on the flooding risk.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Dr Sarah Price	West of Borrowwash	Response-01120	Other	Many existing residents of Derby Road and Victoria Avenue are older people who have expressed significant concern about the construction phase of any housing allocation development at the Greenbelt site on pollution, traffic congestion, road safety and noise and disruption to village life. My Mum is 80 and has lived in the village, raising a family and contributing in her paid working life to the village of Borrowwash for most of her adult existence. Mum has enjoyed the Greenbelt and countryside vistas with friends and family and visitors and dogs over the years and greatly appreciated the space and peaceful village feel this area of countryside affords. Due to physical ill health and mobility issues my Mum is virtually house bound now but enjoys the sanctuary of her well kept garden which would be directly adjacent to the road in and out of any planned development. The impact of a major construction project on the doorstep is a huge concern for my Mum and I am very concerned about the impact on her mental health and well being and ask that this is not overlooked by any human involved in decision making. The development will bring relentless noise and poor air quality at a time in my Mum's life where peace and clean air should be prioritised. I am very concerned that the current housing allocation review is already having an impact on her sleep and is causing her a great amount of worry about the future of the quality of her life in her own home and garden. There is a lot of fear that when construction gets underway existing residents of Derby Road will have no access to peaceful greenspaces in their gardens which could have devastating mental health consequences especially for those who are elderly and house bound by physical illness.
Dr Shelagh Brown	South West of Draycott	Response-01158	Traffic Congestion	Traffic in and out of the proposed construction site will cause noise pollution in what was previously a quiet area between two villages.
Dr Shelagh Brown	South West of Draycott	Response-01158	Road Safety	The A6005 between Draycott and Borrowwash is increasingly busy, with many drivers exceeding the speed limit. Additional housing with the associated additional cars is likely to increase the accident rate. Fatalities have resulted from accidents on this road.
Dr Shelagh Brown	South West of Draycott	Response-01158	Wildlife / Biodiversity	It will be detrimental to wildlife.
Dr Shelagh Brown	South West of Draycott	Response-01158	Healthcare Facilities	Draycott, Borrowwash and Breaston already have an inadequate number of GPs and dentists.
Dr Shelagh Brown	South West of Draycott	Response-01158	Number of Houses	The proposal for 190 new houses will diminish the feel of being a small village with a strong sense of community cohesion and support.
Dr Shelagh Brown	South West of Draycott	Response-01158	Green Belt	Loss of Green Belt will have a significant impact for the worse, on the mental health of local residents who currently enjoy walking for relaxation in this area. Brownfield sites should be prioritised for new housing.
Dr Shelagh Brown	South West of Draycott	Response-01158	Flooding / Drainage	The area is a flood plain. I have lived in Draycott for 35 years and flooding has become more frequent and severe during this time. Any building on flood plain at the edge of the village must inevitably put the centre of the village at increased flood risk.
Dr Shelagh Brown	South West of Draycott	Response-01158	Other	The plan is being rushed through with only the minimum time allowed for public consultation.
D Simpson	West of Sandiacre	Response-01712	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
D Simpson	West of Sandiacre	Response-01712	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
D Simpson	West of Sandiacre	Response-01712	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
D Simpson	West of Sandiacre	Response-01712	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
D Simpson	West of Sandiacre	Response-01712	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
D Simpson	West of Sandiacre	Response-01712	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.

D Simpson	West of Sandiacre	Response-01712	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
D Simpson	West of Sandiacre	Response-01712	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
D Simpson	West of Sandiacre	Response-01712	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Dudley Medhurst	South West of Draycott	Response-01180	Traffic Congestion	Our roads already struggle at peak times. If there are incidents on the motorways or A52 and traffic is often diverted our village comes to a standstill.
Dudley Medhurst	South West of Draycott	Response-01180	Road Safety	It is a very dangerous part of our village road and there have indeed been many accidents in the area. Further traffic will only make it worse when coming over the bridge into the village.
Dudley Medhurst	South West of Draycott	Response-01180	Wildlife / Biodiversity	This is a rural area and wildlife is in abundance. Building will decimate nesting places and roosts (bats have been recorded here and under UK law are protected) . There are also badger setts on the proposed site.
Dudley Medhurst	South West of Draycott	Response-01180	Healthcare Facilities	There are no available NHS dentists in the area. The doctors (2 practises covering Breaston, Draycott & Borrowwash) are already struggling with current population and another 700 houses and approx another 2000 people will not help anybody .
Dudley Medhurst	South West of Draycott	Response-01180	Type of Housing	I do not think for one minute this will be 40% affordable housing as many first time buyers will struggle to buy these new house anyway.
Dudley Medhurst	South West of Draycott	Response-01180	Number of Houses	The village community will not be able to cope with another 400 people.
Dudley Medhurst	South West of Draycott	Response-01180	Green Belt	I strongly believe that Greenbelt should stay Greenbelt.....where will it stop?
Dudley Medhurst	South West of Draycott	Response-01180	Flooding / Drainage	The drains cannot cope now so what will another 200 plus houses do to our system along with approx another 400 people adding to the drainage/sewage systems that are struggling now! Many houses are unable to get home insurance.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Dudley Meadhurst	South West of Draycott	Response-01180	Other	There are much better sites that can be used especially current brownfield sites. There are also houses for sale in Draycott at the moment which you could class as affordable housing but they are not selling. It's not houses we need its cheaper taxes and energy.
E bayley	North of West Hallam	Response-00080	Traffic Congestion	Busy crossroads already with bus stops so increasing danger for school children
E bayley	North of West Hallam	Response-00080	Wildlife / Biodiversity	Area of natural growth and animals
E bayley	North of West Hallam	Response-00080	Healthcare Facilities	Already cannot get appointments at local doctors and dentists
E bayley	North of West Hallam	Response-00080	Flooding / Drainage	This area floods easily so increasing run off will cause flooding at other houses already present
Ebony Eaves	South of West Hallam	Response-01497	Traffic Congestion	Beech Lane can't cope with any more traffic, there's limited bus links, it is already really congested at peak times and when recreation ground in use and it also has a huge affect on the wildlife and the village amenities
Ebony Eaves	South of West Hallam	Response-01497	Road Safety	.
E Cooper	West of Sandiacre	Response-01923	Traffic Congestion	Already too many parked cars for buses. Increase in traffic would cause more issues & worsen the already problematic issue.
E Cooper	West of Sandiacre	Response-01923	Road Safety	Difficulty already accessing homes. Parked cars already make road crossing difficult.
E Cooper	West of Sandiacre	Response-01923	Air Quality	Ruining the air quality near nature reserve. Light pollution & noise would increase.
E Cooper	West of Sandiacre	Response-01923	Wildlife / Biodiversity	No doubt over spill from nature reserve living here. This needs investigating.
E Cooper	West of Sandiacre	Response-01923	Healthcare Facilities	Cannot access these already (family live in area). No dentist/doctor appointments already.
E Cooper	West of Sandiacre	Response-01923	Number of Houses	Too many for current infrastructure of area without additional services also being added.
E Cooper	West of Sandiacre	Response-01923	Landscape	Nature reserve next door, additional noise/light/traffic etc. All with proximity will ruin this reserve! Why build here? More suitable spaces in built up areas with less impact & an eyesore that could be used instead.
E Cooper	West of Sandiacre	Response-01923	Flooding / Drainage	Currently soaks up water, changing to pavements/houses will cause additional run off.
Ed Huntley	East of Breaston	Response-01120	Traffic Congestion	50 households and their cars will increase congestion around the Wilsthorpe roundabout and J25 of the M1.
Ed Huntley	East of Breaston	Response-01120	Wildlife / Biodiversity	Old hedges and trees are threatened by this proposed development.
Ed Huntley	East of Breaston	Response-01120	School Capacity	The nearest schools, Firfield and Wilsthorpe are currently full.
Ed Huntley	East of Breaston	Response-01120	Healthcare Facilities	There are no available NHS Dentists and Doctors as it is.
Ed Huntley	East of Breaston	Response-01120	Number of Houses	50 houses seems greedy. 5 or 10 houses would raise no objections. The noise and disruption will be awful for years.
Ed Huntley	East of Breaston	Response-01120	Green Belt	This is an area which regularly floods. We would have reduced flood protection and the people living in the new houses might be subject to flooding.
Ed Huntley	East of Breaston	Response-01120	Flooding / Drainage	This is an area which regularly floods. We would have reduced flood protection and the people living in the new houses might be subject to flooding.
Edward James Gregory	Acorn Way, Derby	Response-00727	Traffic Congestion	Acorn way is very busy, with bad visibility and drainage, and the site of many accidents. Further development will increase congestion, usage, danger and surface water run off
Edward James Gregory	Acorn Way, Derby	Response-00727	Road Safety	Acorn way is very busy, with bad visibility and drainage, and the site of many accidents. Further development will increase congestion, usage, danger and surface water run off
Edward James Gregory	Acorn Way, Derby	Response-00727	Air Quality	Acorn way is very busy, with bad visibility and drainage, and the site of many accidents. Further development will increase congestion, usage and reduce air quality. There are no busses, road is too dangerous for cycling so everyone will use cars increasing pollution
Edward James Gregory	Acorn Way, Derby	Response-00727	Wildlife / Biodiversity	This area should be left as open agricultural land, and not be developed / hard surfaced. It provides a natural green break from Chaddesden towards Oakwood and Spondon
Edward James Gregory	Acorn Way, Derby	Response-00727	Bus Services	There are no buses here so they cannot be used! This will require all residents to use their own cars and cycling is too dangerous
Edward James Gregory	Acorn Way, Derby	Response-00727	School Capacity	Schools are already oversubscribed. Erewash does not provide schools in this area, so the development should not be considered
Edward James Gregory	Acorn Way, Derby	Response-00727	Healthcare Facilities	Doctors and dentists are already oversubscribed. Erewash does not provide these in this area, so the development should not be considered
Edward James Gregory	Acorn Way, Derby	Response-00727	Number of Houses	too many on the edge of Erewash, consider proposals in the centre of Erewash
Edward James Gregory	Acorn Way, Derby	Response-00727	Green Belt	Should be protected and development should be in the centre of Erewash, not on the edge of other areas
Edward James Gregory	Acorn Way, Derby	Response-00727	Landscape	it is a natural green separation between different housing areas, and should not be degraded by poor quality housing on unsuitable sites
Edward James Gregory	Acorn Way, Derby	Response-00727	Flooding / Drainage	Area is prone to flooding and surface water run off onto the badly designed Acorn Way
Edward James Gregory	North of Breadsall Hill Top	Response-00728	Traffic Congestion	The area already suffers from traffic congestion, and safety issues due to speed and number of vehicles
Edward James Gregory	North of Breadsall Hill Top	Response-00728	Road Safety	The area already suffers from traffic congestion, and safety issues due to speed and number of vehicles. Area suffers from flooding and run-off onto the highways. There for further development will increase this and reduce safety
Edward James Gregory	North of Breadsall Hill Top	Response-00728	Air Quality	The area already suffers from traffic congestion, and safety issues due to speed and number of vehicles, so any increase will impact air quality
Edward James Gregory	North of Breadsall Hill Top	Response-00728	Wildlife / Biodiversity	The area already suffers from traffic congestion, and safety issues due to speed and number of vehicles, so any increase will impact air quality, and reduce the amount of green space and hedgerows for animals
Edward James Gregory	North of Breadsall Hill Top	Response-00728	Bus Services	Limited buses and danger for cycling on fast roads, will only encourage individual car journeys
Edward James Gregory	North of Breadsall Hill Top	Response-00728	School Capacity	Schools are already at capacity, and Erewash does not provide schools in this area. Erewash should provide developments where it will service the residents, not assume other areas will provide this.
Edward James Gregory	North of Breadsall Hill Top	Response-00728	Healthcare Facilities	Doctors / Dentists are already at capacity, and Erewash does not provide these services in this area. Erewash should provide developments where it will service the residents, not assume other areas will provide this.
Edward James Gregory	North of Breadsall Hill Top	Response-00728	Type of Housing	Unsuitable for green belt / green separation
Edward James Gregory	North of Breadsall Hill Top	Response-00728	Number of Houses	Unsuitable for green belt / green separation
Edward James Gregory	North of Breadsall Hill Top	Response-00728	Green Belt	Unsuitable for green belt / green separation
Edward James Gregory	North of Breadsall Hill Top	Response-00728	Landscape	Unsuitable for green belt / green separation
Edward James Gregory	North of Breadsall Hill Top	Response-00728	Flooding / Drainage	Area suffers from flooding and run-off onto the highways. There for further development will increase this and reduce safety
Eileen Bailey	South of West Hallam	Response-00213	Bus Services	Terrible bus service
Eileen Bailey	South of West Hallam	Response-00213	Healthcare Facilities	Can't get an appointment now

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Eileen Bailey	South of West Hallam	Response-01053	Traffic Congestion	Traffic is terrible overcrowding
Eileen Bailey	South of West Hallam	Response-01053	Road Safety	Parking is terrible
Eileen Bailey	South of West Hallam	Response-01053	Bus Services	Bus service is terrible doctors are terrible can't get appointments now
Eileen Bailey	South of West Hallam	Response-01053	Healthcare Facilities	Doctors are missing in West Hallam
Elaine hodgkinson	North of Breadsall Hill Top	Response-00854	Traffic Congestion	There is already bad congestion all the way from the junction with Mansfield Rd with particularly dangerous sections at the right hand junction next to Slice of India and the Lime lane and Breadsall junctions where there have been fatalities. It will badly increase the number of cars travelling through the residential area of Oakwood.
Elaine hodgkinson	North of Breadsall Hill Top	Response-00854	Road Safety	There is already bad congestion all the way from the junction with Mansfield Rd with particularly dangerous sections at the right hand junction next to Slice of India and the Lime lane and Breadsall junctions where there have been fatalities. It will badly increase the number of cars travelling through the residential area of Oakwood with the risk to residents that poses.
Elaine hodgkinson	North of Breadsall Hill Top	Response-00854	Air Quality	The increased traffic will undoubtedly reduce the air quality for the adjacent housing and walkers and cyclists using the greenway. t will badly increase the number of cars travelling through the residential area of Oakwood. t will badly increase the number of cars travelling through the residential area of Oakwood which will reduce the air quality significantly.
Elaine hodgkinson	North of Breadsall Hill Top	Response-00854	Wildlife / Biodiversity	There is already lot of biodiversity along the Greenway which be impacted by this new development.
Elaine hodgkinson	North of Breadsall Hill Top	Response-00854	School Capacity	Local schools are already over subscribed with only one small primary school in Oakwood.
Elaine hodgkinson	North of Breadsall Hill Top	Response-00854	Healthcare Facilities	Oakwood doctors are already heavily over subscribe with it being impossible to get an appointment for the majority of people. This development will not have any positive affect on funding from developers.
Elaine hodgkinson	North of Breadsall Hill Top	Response-00854	Type of Housing	Any housing must be as environmental as possible with solar panels, swift bricks and hedgehog highways.
Elaine hodgkinson	North of Breadsall Hill Top	Response-00854	Green Belt	This is currently green belt which provides an important wildlife corridor for areas such as chaddesden wood. It must not increase flooding for Breadsall or drain much needed water from further up the hill.
Elaine hodgkinson	North of Breadsall Hill Top	Response-00854	Landscape	It will obviously have a detrimental effect on the landscape next to a site of a bronze age settlement.
Elaine hodgkinson	North of Breadsall Hill Top	Response-00854	Flooding / Drainage	It must not increase flooding for Breadsall or drain much needed water from further up the hill.
Elaine Pickering	West of Sandiacre	Response-00811	Traffic Congestion	Sandiacre hasn't the infrastructure to cope the extra traffic
Elaine Pickering	West of Sandiacre	Response-00811	Air Quality	Extra traffic fumes
Elaine Pickering	West of Sandiacre	Response-00811	Wildlife / Biodiversity	Taking more land away from green space
Elaine Pickering	West of Sandiacre	Response-00811	Healthcare Facilities	Have they provided extra health care services to cope the extra residents
Elaine Pickering	West of Sandiacre	Response-00811	Green Belt	Green belt land should be protected
Elaine Pickering	West of Sandiacre	Response-00811	Flooding / Drainage	Is there capacity for this
Elaine Wright	South West of Draycott	Response-01002	Green Belt	strongly object to the Sustainability Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local residents resulted in a score of -6 placing this land ran 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 & 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should receive a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed. 11.7 The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless
Eleanor Moseley	West of Sandiacre	Response-00799	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Eleanor Moseley	West of Sandiacre	Response-00799	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Eleanor Moseley	West of Sandiacre	Response-00799	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Eleanor Moseley	West of Sandiacre	Response-00799	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Eleanor Moseley	West of Sandiacre	Response-00799	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Eleanor Moseley	West of Sandiacre	Response-00799	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Eleanor Moseley	West of Sandiacre	Response-00799	Type of Housing	High density housing is preposterous not in keeping with current housing.
Eleanor Moseley	West of Sandiacre	Response-00799	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Eleanor Moseley	West of Sandiacre	Response-00799	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Eleanor Moseley	West of Sandiacre	Response-00799	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Eleanor Newman	West of Sandiacre	Response-00718	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Eleanor Newman	West of Sandiacre	Response-00718	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Eleanor Newman	West of Sandiacre	Response-00718	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Elena Maxim	North of Breadsall Hill Top	Response-01573	Traffic Congestion	Concerns around traffic building up. Roads too small and difficult to pass through
Elena Maxim	North of Breadsall Hill Top	Response-01573	Wildlife / Biodiversity	There wouldn't be any
Elena Maxim	North of Breadsall Hill Top	Response-01573	School Capacity	There is already high demand for schools and nurseries around the area
Elisha Gunn	West of Sandiacre	Response-00585	Traffic Congestion	We already live close to busy roads adding additional cars will increase congestion and make the roads less safe for school children
Elisha Gunn	West of Sandiacre	Response-00585	Road Safety	As the proposed plans are close to a school the road safety will be reduced as more cars cause further congestion getting out of the small town which can lead to dangerous driving and accidents to our young and venerable residents
Elisha Gunn	West of Sandiacre	Response-00585	Bus Services	Due to the increased number of cars already parking on the roads causing minor obstructions to bus services and difficulty navigating from the Bluebell end of Sandiacre right up to beech avenue and round by adding more houses which will increase the number of cars will make this extremely important bus service nearly impossible to continue
Elizabeth	West of Borrowwash	Response-01215	Traffic Congestion	There will be a huge increase in traffic along Nottingham Road causing queues between Borrowwash and Spondon
Elizabeth	West of Borrowwash	Response-01215	School Capacity	Schools especially West park will struggle to provide
Elizabeth	West of Borrowwash	Response-01215	Healthcare Facilities	Drs are already over prescribed
Elizabeth	West of Borrowwash	Response-01215	Green Belt	Joins Borrowwash to the City
Ellen Haddon	North of West Hallam	Response-00065	Traffic Congestion	This is obviously a main road and extremely busy making pulling out of the junctions from Mapperley very difficult. With increased volume of traffic from the development and the poor vision due to the bend in the road this would be an absolute disaster and death trap.
Ellen Haddon	North of West Hallam	Response-00065	Road Safety	Many children cross at this area of high lane for the school buses. They can be standing for ages as it is and you often see them making foolish runs as they have been there for so long. The extra traffic and pressure on this area would have unthinkable consequences.
Ellen Haddon	North of West Hallam	Response-00065	Bus Services	There is a very poor bus service running from West Hallam. Putting social housing here, who may not have cars would be very restrictive for people and unworkable for them.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Ellen Haddon	North of West Hallam	Response-00065	Healthcare Facilities	I am a pharmacist and know the pressures the NHS are currently under. I know this area first hand and doctors appointments are extremely difficult to get resulting in the pharmacy seeing a lot more patients and trying to help as best they can. With the lack of government funding to pharmacies over the past few years there is no money for extra staff and having this increased volume of patients would be unthinkable and unmanageable. People do not realise how on the edge pharmacies are and this would be the final push. The doctors surgeries in the area are extremely small and are not built for the increased demand. We also do not have the money or qualified doctors to increase appointments. This along with the poor bus services to get to other surgeries in Ilkeston makes the situation impossible.
Ellen Haddon	North of West Hallam	Response-00065	Flooding / Drainage	The field on mention floods continuously often overflowing into the road and building up there. Surely putting houses on here will cause high lane to flood more frequently and more severe.
Ellen Haddon	North of West Hallam	Response-00065	Other	Families have worked and saved hard, many for the NHS and government, to get houses looking over this field. It has been their dream home for their children with the perfect view. These houses will be destroyed and devalued massively. Is this the thanks they get for working and saving hard ?
Ellen Young	West of Borrowwash	Response-01357	Traffic Congestion	280 houses could see 560 more cars in the village. This would make congestion in the village worse particularly during rush hour and school times. Borrowwash is one of the main diversions when there has been an incident on the A52. An increase in cars within the village will add to the traffic jams caused by the diversion. Likewise, the village will also see an increase in queues caused by local events, such as the County Show, due to an increase in cars in general around the neighbourhood and cars going to the event.
Ellen Young	West of Borrowwash	Response-01357	Road Safety	Covent Garden Close would turn into one of the main roads out of the development. This road is opposite the school and the increased traffic increases the danger to children and parents. School times are already dangerous as parents park anywhere without care, limiting the view of the road when trying to cross. Extra traffic coming from a side street would make it more hazardous. Speeding is also a big issue on Derby Road and Victoria Avenue. There have been many collisions on the Kimberly Road junctions due to the people turning out of the junction not being able to judge the speed of oncoming vehicles as they're either speeding or doing the speed limit. If we had more traffic coming out of another side street then it adds to the risk of collisions. Something needs to be done about the speeding issue in the village. Trying to cross the road safely is difficult; one car could be doing 60mph but the car in the opposite direction could be doing 20mph. Judging the speed of the cars can be difficult when everyone is doing whatever speed they want. The extra cars will only add to the dangers.
Ellen Young	West of Borrowwash	Response-01357	Wildlife / Biodiversity	The fields have a wealth of biodiversity. The well established hedgerow allow a place for insects and animals to hide, nest and eat. The brambles within the hedges supply food for insects and birds. When the fields haven't been planted, the flowers in the fields provide food for insects, particularly bees. The equally established trees within the border provide places for birds to nest and perch. Bats have been observed flying in the field proposed to be built on. Whilst they could be nesting anywhere within a 10Km radius, they would lose a food source and potentially a place to roost. Bats have sensitive eyes and prefer darkness, they may not relocate to the park due to light pollution from the houses and street lights. Pheasants, foxes and hedgehogs have a home in these fields. There's a wide variety of insects and songbirds. Birds of prey hunt in these fields. Some of the wildlife found in the fields prefer fields and not woodland. According to the 2023 State of Nature report, the UK is one of the most nature depleted countries on Earth. According to the report, there has been a 19% decline in 753 species studied since 1970 and the distributions of 54% of flowering plant species and 59% of mosses and liverworts have decreased across Britain. Removing the proposed land from the wild is contributing to the depletion of biodiversity.
Ellen Young	West of Borrowwash	Response-01357	Healthcare Facilities	We have 2 GP surgeries. These struggle to process the current population of Borrowwash without an extra influx of people. As a patient at Overdale Medical Practice, I recently struggled to get an appointment as they were fully booked. Likewise, people often voice their frustration with not being able to book appointments at both Medical Practices on the community Facebook group. The dentist often stops accepting NHS patients as they're full. If residents of the affordable housing require dental appointments then they'll likely need NHS appointments due to the high cost of appointments.
Ellen Young	West of Borrowwash	Response-01357	Number of Houses	280 houses is a lot of to add to a small village. It's going to feel cramped having so many houses so close to our gardens.
Ellen Young	West of Borrowwash	Response-01357	Green Belt	Once Green belt is gone, it's gone. We can never get it back.
Ellen Young	West of Borrowwash	Response-01357	Flooding / Drainage	Since the creation of Covent Garden Close and a house/building on some land off Derby Road, the field to the south of Covent Garden Close now floods in places it didn't in the past. The field to the north east of this has always been waterlogged on rainy days. There was a little stream that ran along the border of some of the fields. This has since become clogged and no longer flows like it used to. 20+ years ago, the farmer dug a ditch around the perimeter of at least one of the fields on the plan. This prevented the field from becoming water logged and from run off entering gardens. This ditch hasn't been maintained for many years but it could prevent crops from being waterlogged, which is a current problem with growing crops. Building on fields that becomes waterlogged is going to increase the chances of existing gardens and the new houses of flooding as the water has nowhere to go. Drainage can only take so much water away before it's overwhelmed. Maybe it's time we should start looking at the correlation of the increase in flooding with the amount fields being built on and stop blaming the situation solely on global warming. We're lucky in Borrowwash, we rarely flood but when we do it tends to be in places near a source of water, e.g. brooks, or at the bottom of hills. I fear that building on land that becomes waterlogged in heavy rain is going to cause flooding in places we don't normally see it.
Ellen Young	West of Borrowwash	Response-01357	Other	The planted fields haven't been maintained well. There doesn't seem to have been a rotation of crops. There hasn't been any signs of the fields being fertilised. Drainage hasn't been maintained. It feels as if the fields have been neglected on purpose so the owner has an argument for selling it for development. They'll probably get more money selling the land for development than agriculture. Residents understand the need for more housing but there are better places in Derbyshire to build than green belt in a small village. An adjustment to the proposal that may see less objections is putting the park/woodland on the land by the Victoria Avenue houses with access via Covent Garden Close and put the houses on the land off Derby Road, where the park is allocated. Regardless of whether they put an objection in, residents don't want 280 houses on their backdoor but they may not feel so strongly about it if there is a barrier between the new and existing houses. There is a bigger benefit to the community with this change as more locals can access the park as it's closer to the centre of the village but people on the development and residents on the south of the village can still access it.
Emily	West of Sandiacre	Response-01880	Traffic Congestion	Already too much traffic with the schools and HGV etc.
Emily	West of Sandiacre	Response-01880	Road Safety	Small road for access for the amount of traffic.
Emily	West of Sandiacre	Response-01880	Air Quality	With the traffic at a standstill the cars will be polluting. Plus too close to M1.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
	West of Sandiacre	Response-01880	Wildlife / Biodiversity	More loss of wildlife, trees etc.
Emily	West of Sandiacre	Response-01880	School Capacity	Not enough room in schools or doctors now!!
	West of Sandiacre	Response-01880	Number of Houses	Too many houses for that area.
Emily	West of Sandiacre	Response-01880	Green Belt	More & more green belt gone for housing which is wrong.
Emily Milnes	West of Sandiacre	Response-00470	Traffic Congestion	Traffic through Sandiacre already incredibly busy, further traffic will overload the roads
Emily Milnes	West of Sandiacre	Response-00470	Air Quality	New houses will be along the M1 corridor, if houses are built they will have poor air quality, ignoring the increased traffic
Emily Milnes	West of Sandiacre	Response-00470	Healthcare Facilities	GP surgery already struggling and no pharmacy in Sandiacre
Emily Milnes	West of Sandiacre	Response-00470	Green Belt	Erosion of greenbelt
Emily Milnes	West of Sandiacre	Response-00470	Other	Currently no access to the site and would likely result in changing road layout and infrastructure that is already struggling.
Emily Reeve	South of West Hallam	Response-01495	Traffic Congestion	The area is already very busy at times. Often with people parking the entire length of the road making it into a road where only one car can drive. There is limited visibility from one end of the parked cars to the other causing vehicles to come from both directions which causes back ups of traffic.
Emily Reeve	South of West Hallam	Response-01495	Road Safety	Often during the times that vehicles are parked along the road and traffic comes from both directions which, it causes people to mount the curbs and drive along the footpath for a way. I have experienced this on many occasions when walking my children to school. People also speed down the road to be past the parked vehicles quickly making crossing very hard. An increase in housing in the area will only add to this issue. If the access to the site is put opposite the school this can only cause more danger to the children and adults of the school.
Emily Reeve	South of West Hallam	Response-01495	Air Quality	The increase in traffic can only lower the air quality around a school and play area.
Emily Reeve	South of West Hallam	Response-01495	Wildlife / Biodiversity	The area set out has a population of birds and animals. It is hunting grounds for birds of prey including buzzards, kestrels and owls. All seen on a regular basis. Obviously if the birds of prey are there, there must be a population of small animals to sustain them. The housing would impact on the natural habitat.
Emily Reeve	South of West Hallam	Response-01495	Bus Services	Our bus service is limited with no service in the evenings.
Emily Reeve	South of West Hallam	Response-01495	Healthcare Facilities	It is difficult to get a doctor's appointment as it is in the village.
Emily Reeve	South of West Hallam	Response-01495	Type of Housing	I would be concerned about the type and quality of housing. We currently have new buildings on Station Road that are unoccupied and need work to make them more habitable. The houses have been crammed in there with no regard to vision around a corner. Can you guarantee that the housing would be of suitable quality for the village where we pay a premium to live?
Emily Reeve	South of West Hallam	Response-01495	Number of Houses	The number of houses concerns me. I seems like it is going to be a case of squeezing in as many as possible to give maximum gain.
Emily Reeve	South of West Hallam	Response-01495	Green Belt	The green belt land should not be built on. There are other areas that would be a more suitable site
Emily Reynolds	South of West Hallam	Response-00149	Landscape	The current landscape is used by lots of people. From dog walkers to children heading to the fields and woods to play.
Emily Reynolds	South of West Hallam	Response-00149	Traffic Congestion	Traffic is bad enough around the village already especially at school pick up time. West Hallam does not have the road infrastructure to support more homes. Building houses will without a doubt cause crashes and will make it much much harder to get around the village. The road/connection on beech lane you have planned will not be enough to offset this.
Emily Reynolds	South of West Hallam	Response-00149	Road Safety	Again, linking to traffic congestion. More congestion = higher chance of accidents. The proposed area of development is right outside a primary school. You will absolutely end up with kids at the very least injured if the proposed homes are built. Most households have 2 cars now so you would be adding at the least 180 cars to that one small area which links to increased congestion as well.
Emily Reynolds	South of West Hallam	Response-00149	Air Quality	Again, average 180 cars will be added to the village if the proposed development goes ahead. That will have a massive negative impact on the air quality around the village which I have always considered to be good.
Emily Reynolds	South of West Hallam	Response-00149	Wildlife / Biodiversity	Building houses will have a big impact on the species living in and around the field. The field itself you'd be destroying habitats. No amount of putting in hedges and grass edges "for biodiversity" will replace that. It won't be the same. For species around it in terms of feeding/hunting ground. You will reduce the amount of biodiversity around west hallam which make it such a nice place to live.
Emily Reynolds	South of West Hallam	Response-00149	Bus Services	The bus services are rubbish anyway in west hallam. People will be forced to rely on cars because it's difficult to get anywhere by bus therefore increasing congestion and the likelihood of accidents if the road is busier. More people would be likely to use the bus if it was more reliable and more frequent but if you added that many homes I think the buses would be rammed anyway and you'd struggle to get on them.
Emily Reynolds	South of West Hallam	Response-00149	School Capacity	Scargill is already at max capacity and so are the surrounding primary and secondary schools. Most people moving to the new homes will likely be families or people who intend to start families. Lets say 1 child per home. 90 children. Where are those children going to go to school? Unless you plan on building another school I don't see how this development could possibly be successful. We do not have the infrastructure to support the proposed development.
Emily Reynolds	South of West Hallam	Response-00149	Healthcare Facilities	Same as schools really. It's difficult enough to get a doctors appointment as it is and the pharmacy always seems to be very busy. You cannot add 90 new homes to the village and expect everything to be okay and that it won't have a huge impact on the people already living here and the surrounding areas like Ilkeston, and to the health care facilities.
Emily Reynolds	South of West Hallam	Response-00149	Type of Housing	I think if you did build some homes it would be good to incorporate some environmentally friendly features into them such as bat boxes, swift boxes, and hedgehog corridors between the gardens. Solar panels would also be a good feature but I understand that would be a big ask.
Emily Reynolds	South of West Hallam	Response-00149	Number of Houses	I don't think any houses should be built but if you build any the number should be massively reduced to limit the impact on the current residents of West hallam. The infrastructure simply won't cope with that number of houses. Our areas of greenspaces for us and our wildlife are in massive decline and they should not be taken away. For our own benefit in terms of mental wellbeing but also for species which are already in decline.
Emily Reynolds	South of West Hallam	Response-00149	Green Belt	The green belt should be left alone. The houses once built and while in development will have a negative impact on the surrounding environment.
Emily Reynolds	South of West Hallam	Response-00149	Landscape	The houses would be a scar on the landscape.
Emily Reynolds	South of West Hallam	Response-00149	Flooding / Drainage	I honestly can't see how essentially concreting over that area won't have an effect on flooding in the village. You'd be covering that whole area in impermeable services and will likely increase the risk and likelihood of flooding events occurring and those events having a considerable impact on the surrounding homes and businesses.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Emma	West of Sandiacre	Response-00492	Traffic Congestion	Roads are hard to get up and down in that area as it is with added residence let alone the building work and vehicles they'll be using. This will cause a lot of traffic and difficulty to get up and down as the roads are narrow.
Emma	West of Sandiacre	Response-00492	Road Safety	The roads are extremely difficult to get up and down in winter and icy snowy conditions. Several times I've had to have days off work due to icy conditions where other colleagues who live locally aren't on top of the hill don't have any issues.
Emma	West of Sandiacre	Response-00492	Wildlife / Biodiversity	New houses can't be built in our area because birds of prey have been spotted, and their presence indicates the land is an important habitat. Protecting these species means development is restricted to preserve the local ecosystem.
Emma	West of Sandiacre	Response-00492	Healthcare Facilities	The doctor appointments are very hard to get into at the moment taking several days. This will add extra stress to the Doctors facilities making it even harder to get appointment.
Emma	South West of Kirk Hallam	Response-01265	Traffic Congestion	The area is comprised of narrow small lanes that see around 3 overturned vehicles per year. Adding 1000 houses to this area without the correct road infrastructure would be catastrophic and a danger to life. The roads are not gritted in winter and they are not cared for with numerous huge potholes. The lanes are single car and you often need to pull into passing spaces. The pollution from the cars will damage the green belt.
Emma	South West of Kirk Hallam	Response-01265	Wildlife / Biodiversity	
Emma	South West of Kirk Hallam	Response-01265	Number of Houses	The number of houses is monstrous, the footfall of human traffic will drive animals away and ruin their habitats. The human litter and pollution will deeply affect our beautiful green belt.
Emma Binns	North of Breadsall Hill Top	Response-00843	Traffic Congestion	More traffic through our already congested village. Long queues to get out at Pektron island in a morning already.
Emma Binns	North of Breadsall Hill Top	Response-00843	Road Safety	More cars will use Breadsall as a rat run and speed through the village.
Emma Binns	North of Breadsall Hill Top	Response-00843	Air Quality	Air quality must be effected by the extra cars and homes.
Emma Binns	North of Breadsall Hill Top	Response-00843	Wildlife / Biodiversity	Isn't this allocated area a wetland area that already has flooding and bogging issues? There will also be animals and birds living in this area that will be affected.
Emma Binns	North of Breadsall Hill Top	Response-00843	School Capacity	There are not enough local schools to cope with new housing.
Emma Binns	North of Breadsall Hill Top	Response-00843	Green Belt	Why are all green belt areas now being built on?
Emma Binns	North of Breadsall Hill Top	Response-00843	Flooding / Drainage	The village already has flooding issues because of fields and rough tracks being built on, the water has to go somewhere and will end up devastating properties in the village at the bottom of the hill.
Emma Charlton	North of Breadsall Hill Top	Response-01545	Traffic Congestion	As a resident of Brookside Road where cars exceed 30mph, the increase in traffic is going to result in a fatal RTC soon. It's already treated as a racetrack with no measures to reduce this other than dangerous chicanes.
Emma Charlton	North of Breadsall Hill Top	Response-01545	School Capacity	Local schools are at full capacity so this development is not sustainable in terms of local school places
Emma Charlton	North of Breadsall Hill Top	Response-01545	Healthcare Facilities	The local GP surgery's are struggling under pressure of being over subscribed
Emma Charlton	North of Breadsall Hill Top	Response-01545	Type of Housing	We have a real fear of the amount of antisocial behaviour that allocated social housing brings with it as personal victims of crime from a well known local who falls within that category
Emma Charlton	North of Breadsall Hill Top	Response-01545	Other	A terrible waste of a beautiful green space enjoyed by nature, wildlife and dog walkers that keeps Breadsall and the surrounding area separated from large housing estates. All local primary schools are currently over subscribed, as well as the local doctors, so there is no infrastructure to support the increase in numbers to the area either. The newest nearby estate has lead to devastating floods in Breadsall Village and the allocation of social housing on the estate has lead to an increase in crime and antisocial behaviour in Breadsall. Of which we have sadly been victims of. And this development will only adversely contribute to more of this. Surrounding this land and closing the gap on all sides by mass residential housing will have a huge damaging effect on such precious, natural habitat for wildlife, as well as the local residents who chose, and worked hard to afford to live, in Breadsall village because of the distance from such estates and the peace and tranquility of the area.
Emma Daniels	North of Breadsall Hill Top	Response-00346	Traffic Congestion	Area is already congested enough in peak and even non peak hours now. It's almost impossible to cross the road safely with no traffic calming measures or lights to do so.
Emma Daniels	North of Breadsall Hill Top	Response-00346	Road Safety	No traffic calming measures or lights to cross safely with the congested traffic or speeding cars
Emma Daniels	North of Breadsall Hill Top	Response-00346	Air Quality	Air quality is very poor at the moment with the amount of traffic
Emma Daniels	North of Breadsall Hill Top	Response-00346	School Capacity	There is 1 small school in the area and already oversubscribed. Where are the children going to school?
Emma Daniels	North of Breadsall Hill Top	Response-00346	Healthcare Facilities	All the houses keep going up in Oakwood and no additional healthcare facilities to accommodate these people. Cannot get into a dentist or an appointment at the drs when needed as it is, why add extra strain on already overstretched non existent facilities in Oakwood
Emma Daniels	North of Breadsall Hill Top	Response-00346	Other	You see housing developments all over derby but with additional parks/schools/road infrastructure to accommodate the extra houses, not seeing any of this in Oakwood, the houses are going up and facilities and services are staying the same, this is not right nor fair on the people of Oakwood
Emma Daniels	Acorn Way, Derby	Response-00349	Traffic Congestion	Traffic is congested enough through Morley road and Acorn way
Emma Daniels	Acorn Way, Derby	Response-00349	Road Safety	No safe places to cross the road as it is on Morley road with all the congestion. Acorn way has one set of traffic lights but it is a dangerous road and speed limit with so many accidents already on this road without the extra load adding to it
Emma Daniels	Acorn Way, Derby	Response-00349	School Capacity	Why have the provisions for extra school capacity been marked out? This is a pivotal point, how can another 550 homes be built without any additional school? Where are all the children supposed to go?
Emma Daniels	Acorn Way, Derby	Response-00349	Healthcare Facilities	Another 550 homes and no mention of extra healthcare facilities. Drs/dentist already struggling and cannot meet demand. Groups of teenagers hanging around and vandalising our parks because of nowhere to go, what happened to youth clubs?
Emma Daniels	Acorn Way, Derby	Response-00349	Number of Houses	Too many houses again and no mention of extra facilities
Emma Daniels	Acorn Way, Derby	Response-00349	Flooding / Drainage	Acorn way never used to flood but ever since the new homes the last couple of years have been terrible, how are new homes going to help this?
Emma Daniels	Acorn Way, Derby	Response-00349	Other	Cannot keep putting up houses without proper infrastructure and facilities to support these, other areas in derby have additional schools/parks/surgeries so why is Oakwood not getting the same with all these developments that have already taken place and now wanting to build more homes is an outright disgrace

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Emma Fox	West of Sandiacre	Response-00230	Traffic Congestion	The traffic is a nightmare as it is especially by the school. It means it's going to be even worse. At the moment larch drive is tight at the best of times and now with hundreds of extra cars it's going to be unbearable. We have also paid for this lifestyle, beautiful surroundings and now you are planning on building hundreds of houses which is now going to be damaged. I will not vote for this.
Emma Gregory	West of Borrowwash	Response-01454	Traffic Congestion	I object because the development would substantially increase the volume of traffic with added noise and air pollution. All traffic leaving and entering the site travelling along the A6005 in an easterly direction to Nottingham would have to go through the village centre creating further congestion. Cars, lorries, buses, vans, cyclists and e-scooters would be increased hugely. All this is detrimental to village life.
Emma Gregory	West of Borrowwash	Response-01454	Road Safety	Too much traffic already going through Borrowwash.
Emma Gregory	West of Borrowwash	Response-01454	Air Quality	See traffic congestion
Emma Gregory	West of Borrowwash	Response-01454	Wildlife / Biodiversity	Loss of precious wildlife and protected wildlife on the Green Belt field. Badgers Water Voles Bats - all species are protected Rabbits Birds - many bird species are protected Doornice - protected species Foxes are commonly found Kingfishers and Herons Frogs and fish are also known to inhabit the area Hedgehogs are plentiful in Borrowwash Birds - Sparrow, Hawks and Birds of Prey come to the field each day
Emma Gregory	West of Borrowwash	Response-01454	Healthcare Facilities	Great difficulty in getting appointments now. With 268 new houses, to say 4 people to a new house, that is approximately 1064 people needing to be registered to a new GP practice. Even though Park Medical Practice in Borrowwash has an extended building, they will still have to get more staff when as we know it is not easy to recruit.
Emma Gregory	West of Borrowwash	Response-01454	Number of Houses	Borrowwash is only a small village - 268 houses (approximately) is a lot for a small village. With natural wastage of older people, within the next 10 years there will be a large number of houses becoming available.
Emma Gregory	West of Borrowwash	Response-01454	Green Belt	I object to the proposed development being built on Green Belt land within Erewash. There are plenty of brownfield sites in Erewash without building on our precious Green Belt in Borrowwash. I object to this development being built on the last open green space between Derby, Spondon and Borrowwash travelling along the A6005. I object because this is inappropriate development which by definition is harmful to the Green Belt. Last piece of Green Belt lost would lead to urban spread. The village wants to keep its village status and not be joined to Derby
Emma Gregory	West of Borrowwash	Response-01454	Flooding / Drainage	This land is a flood plain and regularly floods.
Emma Gregory	West of Borrowwash	Response-01454	Other	This development would severely and detrimentally impact on my privacy and quality of life, making use of my garden virtually impossible due to noise and air pollution. Air pollution is a real worry to me from the building work and also vehicle movement. Please build on brownfield sites in Erewash, not on Green Belt areas. Green belt areas serve a purpose.
Emma Hawkins	North of Breadsall Hill Top	Response-00813	Traffic Congestion	The consultation states that access will be from Hungerhill Crescent. This is incorrect as it is actually Hungerhill Close. This would mean opening a road which is currently a Close ?dead end? to a through road. This road is not suitable nor wide enough to carry further traffic of 300 plus cars and the safety of current users will be impacted . Such new road would pass over a public footpath used by the local community gaining access to the Great Northern Greenway and Breadsall village by foot. This route is also used by school children who attend the school in the village further volumes of traffic would make this unsafe. The consultation states that access will also be provided from Dale Acre Way, again this road is in fact a ?dead end?. Such access would mean crossing an existing pathway used as mentioned above and the design of the estate in providing recreational space will be changed dramatically and no longer would be able to be enjoyed in the way that the estate does now. The road is also narrow and could not deal with increased volumes of traffic safely. the estate connects to the A608 which is all ready congested with being the main route from Derby to Heanor with existing traffic delays around the island and difficulty trying to join the A609 from Stratford Road. Additional traffic will increase this greatly. Traffic will also increase along the already congested A61 and there will be a significant increase of through traffic via Breadsall Village which is against the Breadsall Parish Council Village Neighbourhood plan 2019-2029 point 12. There are currently planning applications for for the land south of Breadsall Hill Top and Lime Lane. Which will all have an affect on traffic in the area.
Emma Hawkins	North of Breadsall Hill Top	Response-00813	Road Safety	The consultation states that access will be from Hungerhill Crescent. This is incorrect as it is actually Hungerhill Close. This would mean opening a road which is currently a Close ?dead end? to a through road. This road is not suitable nor wide enough to carry further traffic safely. Such new road would pass over a public footpath used by the local community gaining access to the Great Northern Greenway and Breadsall village by foot. This route is also used by school children who attend the school in the village further volumes of traffic would make this unsafe. The consultation states that access will also be provided from Dale Acre Way, again this road is in fact a ?dead end?. Such access would mean crossing an existing pathway used as mentioned above and the design of the estate in providing recreational space will be changed dramatically and no longer would be able to be enjoyed in the way that the estate does now. The road is also narrow and could not deal with increased volumes of traffic safely. The island to the entrance of the estate is all ready congested and un safe due to unclear road markings.
Emma Hawkins	North of Breadsall Hill Top	Response-00813	Air Quality	Adding a further 160 dwellings could potentially create 300 plus cars using a small road to pass through an existing small estate reducing the air quality further. Building on green belt will reduce the amount of open space which natuarly provides better air quality.
Emma Hawkins	North of Breadsall Hill Top	Response-00813	Wildlife / Biodiversity	The proposed development will adversely affect the wildlife in the area forcing them into a much smaller corridor. Light pollution will negatively impact this much smaller corridor namely the Great Northern Greenway and also the farming animals next door. The land provides breeding grounds for all types of wildlife including foxes, rabbits, insects, birds including buzzards, owls and bats. this would be lost. There is also a natural pond at the bottom right corner of the land and this and the wildlife within will be adversely affected by a through road if not lost. The proposal ignores the Breadsall Parish Council Village Neighbourhood plan 2019-2029. Key points of are: ? 1 - Protect and enhance the rural character of the parish and prevent urbanisation. ? 2 - Enforce the requirements of the Green Belt to prevent inappropriate development and avoid coalescence with the Derby conurbation. ? 9 - Improve measures to control existing flood risks within the parish and resist any new development that may increase existing flood risks. ? 11 - Identify key wildlife and biological features within the parish and take appropriate steps to preserve them. ? 12 - Mitigate the effect of the large volume of through traffic in the village and aim to prevent any growth in through traffic.
Emma Hawkins	North of Breadsall Hill Top	Response-00813	Bus Services	Buses pass close by although not reliable.
Emma Hawkins	North of Breadsall Hill Top	Response-00813	School Capacity	The senior school which can be attend to by foot Da Vinic Academy is already at capacity serving a vast catchment area including Breadsall, Oakwood, Breadsall Hill Top and Chaddesden. The Breadsall village school is small with an intake of only 16 for reception

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Emma Hawkins	North of Breadsall Hill Top	Response-00813	Healthcare Facilities	There are only two doctors in Oakwood which covers a vast catchment area and are full to capacity with appointments very difficult to achieve. There is one dentist in Oakwood whom are not taking on NHS patients this dentist business is more cosmetic. There are not facilities within Breadsall Village under Erewash Borough Council which can services this new proposed development.
Emma Hawkins	North of Breadsall Hill Top	Response-00813	Type of Housing	Not enough affordable housing
Emma Hawkins	North of Breadsall Hill Top	Response-00813	Number of Houses	Too many
Emma Hawkins	North of Breadsall Hill Top	Response-00813	Green Belt	The preservation of this greenbelt land referred to above helps to achieve these key objectives. It also provides separation of neighbouring towns and rural settlements within Erewash Borough and separates Breadsall from the Derby conurbation. The map provided in the consultation document is incorrect and does not show the existing Durose County Estate as demonstrated in the image below highlighting the estate. Housing on this land will merge into the existing estate and Derby City contradicting: ? 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. ? 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.
Emma Hawkins	North of Breadsall Hill Top	Response-00813	Landscape	The landscape of the countryside for Breadsall/Breadsall Hill Top will disappear and become one big housing estate connecting Breadsall to Derby City
Emma Hawkins	North of Breadsall Hill Top	Response-00813	Flooding / Drainage	The land currently provides natural flood defences to the Village and Durose Estate as it has drainage ditch's running around the perimeter. If this land was built on the defences will be removed causing flooding to the Durose Estate and the Breadsall Village. The village suffers serious flooding and further building on this land will increase this further.
Emma Hawkins	North of Breadsall Hill Top	Response-00813	Other	The proposal ignores the Breadsall Parish Council Village Neighbourhood plan 2019-2029. Key points of are: ? 1 - Protect and enhance the rural character of the parish and prevent urbanisation. ? 2 - Enforce the requirements of the Green Belt to prevent inappropriate development and avoid coalescence with the Derby conurbation. ? 9 - Improve measures to control existing flood risks within the parish and resist any new development that may increase existing flood risks. ? 11 - Identify key wildlife and biological features within the parish and take appropriate steps to preserve them. ? 12 - Mitigate the effect of the large volume of through traffic in the village and aim to prevent any growth in through traffic. The preservation of this greenbelt land referred to above helps to achieve these key objectives. It also provides separation of neighbouring towns and rural settlements within Erewash Borough and separates Breadsall from the Derby conurbation. The map provided in the consultation document is incorrect and does not show the existing Durose County Estate as demonstrated in the image below highlighting the estate. Housing on this land will merge into the existing estate and Derby City contradicting: ? 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. ? 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. Not withstanding that there is a current planning application for the development of the land south of Breadsall Hill Top. The Durose Estate will be surrounded merging into one big estate of Derby City. The consultation states that access will be from Hungerhill Crescent. This is incorrect as it is actually Hungerhill Close. This would mean opening a road which is currently a Close ?dead end? to a through road. This road is not suitable nor wide enough to carry further traffic. Such new road would pass over a public footpath used by the local community gaining access to the Great Northern Greenway and Breadsall village by foot. This route is also used by school children who attend the school in the village further volumes of traffic would make this unsafe. Also, there is a natural pond located in the bottom right corner as highlighted by a purple dot within the above image, such development will have a negative impact on wildlife using this pond. The consultation states that access will also be provided from Dale Acre Way, again this road is in fact a ?dead end?. Such access would mean crossing an existing pathway used as mentioned above and the design of the estate in providing recreational space will be changed dramatically and no longer would be able to be enjoyed in the way that the estate does now. The road is also narrow and could not deal with increased volumes of traffic safety. The land also provides some natural drainage helping to prevent flooding to the local area particularly Breadsall Village which is badly affected by flooding. Such development will remove this and increase the risk of flo
Emma Hawkins	North of Breadsall Hill Top	Response-00813	Other	oding immensely. Flooding to the village has increased since the development of Durose and Persimmon Lime Lane already. The proposed development will adversely affect the wildlife in the area forcing them into a much smaller corridor. Light pollution will negatively impact this much smaller corridor namely the Great Northern Greenway and also the farming animals next door. All of the above cannot be rectified with points 1-5 in the consultation as such planned estate will adversely impact the current situation as mentioned above. There are no provisions to improve the A608 which is already congested pushing more traffic through Breadsall Village, no provisions to provide services to help deal with the increase in population in the area such as doctors, Dentist and schools which are all full to capacity. The area cannot cope with potentially 2 further developments already going through planning and this further proposed development based on all the above points and I object.
Emma Lound	South of West Hallam	Response-00187	Traffic Congestion	Beech Lane is already heavily congested during the day. On road parking, the school, the main turning into the estate and the already heavily congested routes into West hallam already struggle to cope. At school times there are hundreds of children and their parents in the area. More cars and another junction will mean higher risks. I already find it dangerous to turn on to my drive at the junction of Beech Lane and Station Road and even more traffic will increase the risk to myself and other users of Beech Lane.
Emma Lound	South of West Hallam	Response-00187	Road Safety	The road is narrow and heavily congested already. More vehicles will increase the risk of KSI collisions. 300 children attend the primary school, the road junction is one of only two routes into the large residential estate and it's a main road to the shopping centre. This development will put residents and children in danger. Should there be any KSI collisions on this route there will be a record for the coroner and the relevant authorities of the concerns raised.
Emma Lound	South of West Hallam	Response-00187	Air Quality	More vehicles will contribute to poorer air quality. As combustion engine vehicles accelerate from stationary (at a junction for example) they emit a higher level of pollutants. The number of vehicles using that road already reduce the air quality, increasing that number by up to 150 vehicles would only make the situation worse.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Emma Lound	South of West Hallam	Response-00187	Wildlife / Biodiversity	The fields behind Beech Lane and Station Road are a hive of activity for wildlife and birds such as Red Kites, pheasants and Bats. Building on this land will force them out of their habitat.
Emma Lound	South of West Hallam	Response-00187	School Capacity	The school already provides places for 300 children. This is already an extraordinary amount for a primary school. There is no mention of any provision for extra places or funding for the school to cope with extra students.
Emma Lound	South of West Hallam	Response-00187	Healthcare Facilities	The local surgery is already busy. The plan does not address the need for more doctors places or additional funding to cope with the increase in residents...which could be up to 300 more people to cater for.
Emma Lound	South of West Hallam	Response-00187	Green Belt	This is an area of green belt. A previous application for a farmer to build an agricultural building on this exact land was refused in 2021 due to it bordering conservation area and possible affecting the aesthetic of the green belt...but 90 houses is OK??! Also there has been a brown field site identified less than a mile away at the storage depot, why not extend that site where the road and infrastructure can be amended and built from scratch rather than shoehorn things into a spot that does not fit.
Emma Lound	South of West Hallam	Response-00187	Flooding / Drainage	The safeguarded area is a run off field. It is low lying and some of the plants growing in there are associated with boggy/wet land. Building or considering building on this would cause issues.
Emma Lound	South of West Hallam	Response-00187	Other	Other sites have already been identified. Brown field sites have been identified. This site has been turned down several times due to the logistical issues, the safety issues and the green belt/conservation area. Amongst other concerns.
Emma Newsham	South of West Hallam	Response-00117	Traffic Congestion	Beech lane is already externally congested at school pick up and drop offs and when the field is in use for football
Emma Newsham	South of West Hallam	Response-00117	Wildlife / Biodiversity	Using up more green space,
Emma Peterson	West of Sandiacre	Response-00491	Traffic Congestion	Traffic is bad now
Emma Peterson	West of Sandiacre	Response-00491	Road Safety	School nearby
Emma Peterson	West of Sandiacre	Response-00491	Air Quality	Trucks not ideal
Emma Peterson	West of Sandiacre	Response-00491	Wildlife / Biodiversity	Save our beauty spot
Emma Peterson	West of Sandiacre	Response-00491	Green Belt	This should remain green belt
Emma Ryan	West of Sandiacre	Response-00503	Traffic Congestion	There are already plenty of vehicles in and around Sandiacre. The amount of vehicles has gotten worse over the years, this will just further compound that.
Emma Ryan	West of Sandiacre	Response-00503	Road Safety	I don't think you can add somewhere between 180-360 cars to a small town and not expect the roads to be more congested and more dangerous, especially given the school located a short distance away. The area around the school struggles enough daily as it is, without putting extra people and their cars into the town.
Emma Ryan	West of Sandiacre	Response-00503	Air Quality	The building works will cause pollution. The 180 extra homes bringing in roughly 180-360 extra cars to the town will cause more pollution.
Emma Ryan	West of Sandiacre	Response-00503	Wildlife / Biodiversity	Taking green land and turning it into more (somewhat unnecessary) housing will be detrimental to the wildlife, there is no way to avoid that. You can't lay down 180 houses and expect there not to be a knock on effect to the local wildlife that was there before.
Emma Ryan	West of Sandiacre	Response-00503	Bus Services	Perhaps it will get a few more people using the bus service. But that is probably the only positive I can see in any of this. But I doubt that many as the bus service isn't that reliable at the best of times.
Emma Ryan	West of Sandiacre	Response-00503	School Capacity	Ladycross Infant School and Cloudside Academy are already full schools. Where would the children of these extras homes go for education? There is not the schooling capacity for them.
Emma Ryan	West of Sandiacre	Response-00503	Healthcare Facilities	There is one GP in Sandiacre, one dentist and no pharmacy. At that a lot of residents are already accessing services like this from Stapleford. Again, there is a lack of services as it is for the current residents, let alone bringing in potentially 180 more families. When these people can't get seen at the GP they end up in the local emergency department which is then a further strain on the healthcare system.
Emma Ryan	West of Sandiacre	Response-00503	Type of Housing	There just does not need to be another 180 homes added to Sandiacre. It's completely ludicrous.
Emma Ryan	West of Sandiacre	Response-00503	Number of Houses	Too many home for an already full area. I understand the 'need' for housing, but 10% being 'affordable'...18 out of 180 just feels shocking. It isn't supporting people needing homes. It's unnecessary greed.
Emma Ryan	West of Sandiacre	Response-00503	Landscape	For me personally, I moved to Sandiacre in 2012 and Stoney Clouds Nature Reserve was one of my biggest appeals and has been somewhere myself and my family have frequented many times. It would be a shame to place a housing estate right by it like that and would actually put me off living here.
Emma Ryan	West of Sandiacre	Response-00503	Flooding / Drainage	As seen with a lot of the new housing developments the heavily concreted areas that were once green have caused significant flooding and damage. Some of his damage has been to the new build houses, other areas it has caused flooding to homes that have never encountered this problem before now. That area being high up as it is will more likely cause issue for the homes already in situ below it.
Emma Ryan	West of Sandiacre	Response-00503	Other	I honestly don't know how the schools or the healthcare can survive another 180 families accessing them in the area. It's difficult to get a dentist appointment, you have to travel to Stapleford to access a pharmacy. There is one small doctors surgery. We have two small schools that already are full to capacity as are most other schools within the locals towns. I currently really love living in Sandiacre, have been living here since 2012. If more houses get built I really would be considering moving because I just don't feel my family will be able to get the services they need (education and healthcare) from the local area that we should be able to access.
Emma Stanley-Smith	North of West Hallam	Response-01565	Traffic Congestion	Very busy road. Accident waiting to happen!
Emma Stanley-Smith	North of West Hallam	Response-01565	Road Safety	Very busy road. Accident waiting to happen
Emma Stanley-Smith	South of West Hallam	Response-01564	Traffic Congestion	Serious concerns around traffic congestion and children's safety. Junction and surrounding roads already extremely busy during key times. This development could endanger a child's life.
Emma Stanley-Smith	South of West Hallam	Response-01564	Road Safety	Serious concerns around traffic congestion and children's safety. Junction and surrounding roads already extremely busy during key times. This development could endanger a child's life.
Emma Stanley-Smith	South of West Hallam	Response-01564	Wildlife / Biodiversity	Current area is used by a wide variety of wildlife.
Emma Stanley-Smith	South of West Hallam	Response-01564	Bus Services	Very poor bus service which would mean people have to drive who live here. Making congestion worse.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Emma Wall	West of Sandiacre	Response-00319	Traffic Congestion	The roads are not suitable for a large amount of traffic. They're already breaking apart on Coronation Avenue which is where you propose access through and up into this new spot of land that you're calling grey belt which is in fact greenbelt. The traffic is already bad around the school area in Stanton Road. There's parking on either side of the road everywhere in the smaller roads such as Sycamore, Chestnut, Cloudside etc
Emma Wall	West of Sandiacre	Response-00319	Road Safety	Cars already parked on either side of the roads around this area and prevents ambulances and buses is getting through it quite a number of places it's not suitable for an increase of traffic. It's dangerous for children people drive fairly fast through these roads already adding to that it will only cause more problems.
Emma Wall	West of Sandiacre	Response-00319	Air Quality	More traffic, more poor air quality. Stony Flowers is a nature reserve and as such should be protected from air quality as much as it is impression of building around it. You will damage the flora, specifically the lichen that is protected by the woodland trust that Stoney clouds
Emma Wall	West of Sandiacre	Response-00319	Wildlife / Biodiversity	I walk my dogs regularly around this area and there are huge amounts of wildlife just on my phone alone on the Merlin app counted more than 20 species of different birds. The raptors hunt on these fields. There's a lot of wildlife that will be lost damaged displaced or gone forever of that area. It's unacceptable to build on this piece of land.
Emma Wall	West of Sandiacre	Response-00319	Bus Services	Coronation Avenue is already difficult for buses to get through the increase of buses. I've no doubt we need to go up through cloud side in order to get to this new development and therefore the infrastructure will not cope with it.
Emma Wall	West of Sandiacre	Response-00319	School Capacity	There's no way the schools can cope with this
Emma Wall	West of Sandiacre	Response-00319	Healthcare Facilities	I work in general practice and I know uniquely that all services in this area are overstretched and over registered already. The general practice is around this area will not cope with an influx of extra people. I very much doubt that the ICB have been consulted about this. Knowing the planning issues where I am practice manager at, there is no understanding by development or by planning officers that a single plot of land will be enough for one surgery. General practice cannot do branch surgery anymore. It cost too much money and if they are intimating that they will cover it with a plot just for a surgery. You are incorrect and completely out of date with how the health service can run in primary care.
Emma Wall	West of Sandiacre	Response-00319	Type of Housing	The only type of housing I object to is having housing on that piece of land
Emma Wall	West of Sandiacre	Response-00319	Number of Houses	180 houses on that space of land is utterly ridiculous. It's not big enough for that and certainly the infrastructure will not cope with it in terms of drainage, water, electricity supply communication supply et cetera et cetera
Emma Wall	West of Sandiacre	Response-00319	Green Belt	This is greenbelt. This is an archaeological space that connects to stony clouds and I'm sure has archaeological connotations. I will be searching for an archaeological specialist to look at this land. It also has a public right of way across the motorway to the golf course.
Emma Wall	West of Sandiacre	Response-00319	Landscape	Building on this site will totally ruin the landscape
Emma Wall	West of Sandiacre	Response-00319	Flooding / Drainage	Currently drainage around this area is very very poor. I have friends on Chestnut and on Poplar/Larch back onto this field and they frequently get flooded through the houses. Also the drainage along Coronation Avenue is constantly needing to be fixed. It's always leaking on the road.
Emma Wall	West of Sandiacre	Response-00319	Other	I'm very much objecting to any kind of building on that piece of land for structural reasons around infrastructure healthcare transport, air quality protecting wildlife drainage water supply communications and everything else. It's a very bad place to build on from that perspective. And we will lose a lot of wildlife and it will spoil stony clouds.
Emma Wilson	West of Sandiacre	Response-01222	Traffic Congestion	Its horrific already at peak times at Sandiacre lights, putting in this many houses on top of all the additional lorries that will be there due to Stanton Park will make it 1000 times worse.
Emma Wilson	West of Sandiacre	Response-01222	Wildlife / Biodiversity	We should not be building on our green spaces. There will be none left soon
Emma Wilson	West of Sandiacre	Response-01222	School Capacity	If you are planning to build schools as part of it then it's mad. Class sizes are already huge and children are not getting into preferred schools
Emma Wilson	West of Sandiacre	Response-01222	Healthcare Facilities	Can't get a GP appointment now without adding a further 3000 plus people to the area
Emma Wilson	West of Sandiacre	Response-01222	Green Belt	Shouldn't be building on green belt EVER
Esme Moss	West of Sandiacre	Response-00592	Traffic Congestion	Will contribute to additional traffic congestion, especially near the local schools which adds additional safety concerns to children.
Esme Moss	West of Sandiacre	Response-00592	Road Safety	Will increase the number of cars, road users in the local area contributing to increased traffic congestion, pollution and poses a greater risk to children and elderly people in the area.
Esme Moss	West of Sandiacre	Response-00592	Wildlife / Biodiversity	Will destroy locally important habitat for a range of species, including a range of protected species (bats, reptiles, badger, shrews) and locally important species. This area of land contributes and increases habitat connectivity in the area, allowing for safe dispersal of a range of species (invertebrates, small mammals, badger) and therefore promotes the success of local species populations. With the changes being made, biodiversity will decrease in the local area which in turn will contribute to the national and international biodiversity crisis.
Esme Moss	West of Sandiacre	Response-00592	Number of Houses	Not a sustainable number of houses for the small area of land.
Esme Moss	West of Sandiacre	Response-00592	Landscape	Will be an eyesore. Decrease the aesthetic value of the area.
Esther Cook	West of Sandiacre	Response-01861	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Esther Cook	West of Sandiacre	Response-01861	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions. I would also point out access to the site would be difficult as steep hills and damage would be done to all roads leading to the site.
Esther Cook	West of Sandiacre	Response-01861	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Esther Cook	West of Sandiacre	Response-01861	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Esther Cook	West of Sandiacre	Response-01861	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Esther Cook	West of Sandiacre	Response-01861	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Esther Cook	West of Sandiacre	Response-01861	Type of Housing	High density housing is preposterous not in keeping with current housing.
Esther Cook	West of Sandiacre	Response-01861	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Esther Cook	West of Sandiacre	Response-01861	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Esther Cook	West of Sandiacre	Response-01861	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out. Although I do not live in the area, moving away a few years ago but still visit regularly to Sandiacre and enjoy the open landscape and wonderful greenbelt of Stoney Clouds.
Eve Barker	West of Borrowwash	Response-00443	Traffic Congestion	Traffic through Borrowwash and Ockbrook is awful. Pot holes, from the wear and weight of too many vehicles already.
Eve Barker	West of Borrowwash	Response-00443	Road Safety	Speeding is a problem in the village, the sheer amount of vehicles is already too much for Borrowwash to cope with
Eve Barker	West of Borrowwash	Response-00443	Air Quality	A main road already runs through the village, air pollution is a real concern
Eve Barker	West of Borrowwash	Response-00443	Wildlife / Biodiversity	This field is home to foxes, sparrow hawks, a wide range of wild birds, bats feed here also. Greenbelt is fast disappearing and we'll never get it back
Eve Barker	West of Borrowwash	Response-00443	Healthcare Facilities	I've rang 5 times this week to get a doctors appointment and each time, no appointments available. Too many people, too few spaces
Eve Barker	West of Borrowwash	Response-00443	Number of Houses	The sheer number of houses is insane and not needed or wanted. Already developed sites are available, Wilmot site, Burrows yard
Eve Barker	West of Borrowwash	Response-00443	Green Belt	This land has always been protected greenbelt. As a 40+ year resident, it's essential it stays protected. Borrowwash is a village, not a town. We need these fields for wildlife, protect us from merging into neighbouring villages
Ewan Snowdon	West of Sandiacre	Response-00766	Traffic Congestion	The traffic congestion is already heavy at certain times of day, as a young driver it's very stressful and by building these new homes it will add further traffic and cause higher stress and anxiety when I'm trying to travel down to visit my dad and struggling to find a safe place to keep my car without having to worry about large lorries and traffic causing damage to my car or forcing me to leave my car in a place that doesn't guarantee it's safe.
Ewan Snowdon	West of Sandiacre	Response-00766	Road Safety	Currently the traffic isn't light and on certain days it becomes very heavy with traffic and vehicles mounting pavement to get through the traffic. With the new flow of traffic that will come through means further drivers making unsafe decisions just for the sake of pushing through traffic rather than waiting, I shouldn't have to further add to my anxiety by worrying if vehicles are going to mount the curb and hit me, just to get around the additional parked cars.
Ewan Snowdon	West of Sandiacre	Response-00766	Air Quality	Further construction and traffic will negatively contribute towards lowering the air quality and as a passionate environmentalist, we have to limit what we're putting into the atmosphere and the impact on the wildlife that depends on the air quality to survive and thrive.
Ewan Snowdon	West of Sandiacre	Response-00766	Wildlife / Biodiversity	By building these homes it will disrupt the wildlife and as an avid wildlife photographer it will mean that I'm losing out on witnessing the wildlife in its natural habitat and capturing those moments.
Ewan Snowdon	West of Sandiacre	Response-00766	Type of Housing	The density of housing is a real concern. Having so many houses crammed in so close to each other will lead to overcrowding and a poor quality of life and poor living standards.
Ewan Snowdon	West of Sandiacre	Response-00766	Number of Houses	With so many houses, there's worry that there won't be enough parking provision. So the newly built roads will be clogged with cars parked on the roads, making access for emergency services even more difficult and endangering pedestrians.
Ewan Snowdon	West of Sandiacre	Response-00766	Flooding / Drainage	The flooding and surface water that I drive through on Stanton road will be even worse with more houses, concrete and pavements that green space. I already feel nervous about driving through the flooding and surface water at current levels.
Ewan Snowdon	West of Sandiacre	Response-00766	Other	Access to the site is really tight at the moment, buses get stuck and emergency services struggle at the moment to get up there. When you add even more traffic and even more streets off the network of existing streets, how will a fire engine get to the houses in the back of the estate in time to save lives, or an ambulance.
Fay Cresswell	West of Sandiacre	Response-00701	Traffic Congestion	Sandiacre West is already densely over run with traffic at peak times of the day. On Cloudside there are often people parked on the pavement causing it to be very difficult to get out of Chestnut Grove yesterday a van was parked on the corner and my husband had to inch forward to see then a car came driving round the corner from Maple making us have to reverse back into Chestnut Grove where vehicles were double parked. This was so dangerous and if it had been a van etc it would have struggled to reverse. There is a blind bend at the top of Cloudside turning right towards the proposed new development where vehicles park dangerously all ready. Further down the hill there is another blind corner in front of the Sandiacre Town Football Club and Scout hut which is particularly dangerous. When there's a match or event people park right up to the entrance both side of the CarPark down the road as far as Beech Avenue so if you come round the blind bend you instantly get obstruction and if a car decides to come the other way as it can't see you there's no option but to mount the curb which is outside the Primary school someone will get hurt.
Fay Cresswell	West of Sandiacre	Response-00701	Road Safety	As above there are so many dangerous roads double parking, parking on pavements parking on corners where visibility is already poor. In winter Chestnut Grove Larch Drive Cloudside Road become very difficult to drive as the hill of Cloudside is steep and cars skid frequently in ice and snow. I myself got stuck and it took 3 men from local houses to push my car up to my property on Chestnut Grove. Buses run through the estate and frequently get stuck because of badly parked vehicles. This estate was Council and when built rules were work vans were not allowed to park on streets at home addresses but now 3 of my nearest neighbours have personal cars and work vans 2 houses sold across from mine without drives one family have 2 Estates and a Transit Van and the other a MPV and a work van there is not space for 2 vehicles outside the property yet alone 3 and this is common place on the Estate. The proposed path and that's what it is to the development is too small to take 180 houses worth of vehicles let alone construction traffic. There is a 7.5 tonne weight limit
Fay Cresswell	West of Sandiacre	Response-00701	Air Quality	The pollution levels in this area are high as your own records show. Adding these extra vehicles will only add more pollution and the houses will be exceptionally close to not only chemicals pollution but light pollution and noise pollution too. We are obviously further away and can hear the M1 all day and night. Our house if covered in dust much more than anywhere else I know.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Fay Cresswell	West of Sandiacre	response-00701	Wildlife / Biodiversity	There is a wide range of wildlife on the fields presently we have Foxes, Badgers, hedgehogs, frogs return annually. There is an abundance of bird life we have buzzards, Sparrow Hawks, Kestrel s and various garden birds from tits robins wrens blackbirds Jays Doves Sparrows Magpies Goldfinches and more.
Fay Cresswell	West of Sandiacre	response-00701	Bus Services	Currently we have the I4 and 14 bus service this side of Sandiacre with only the I4 coming anywhere near to the new development. The nearest bus stop will be where Coronation/Mapleand Cloudside meets. This runs from 5:30 until 7pm then nothing until following day with no service up here Sunday. During the rest of the time buses run on Stanton Road a good 20 minutes away from the new development for the able bodied. The I4 runs to Nottingham and the 14 Ilkeston.
Fay Cresswell	West of Sandiacre	response-00701	School Capacity	Unknown if the school can cope
Fay Cresswell	West of Sandiacre	response-00701	Healthcare Facilities	We have no pharmacy in Sandiacre at all you have to travel to Stapleford the nearest to get your prescription. It's difficult to get appointments now at the GP you have to phone at 8 am and queue. Frequently you are offered appointments at a different practice in Sawley which is great if you drive but not if you can't as from this side of Sandiacre it's 2 buses there and 2 back and when your unwell that is not appropriate at all
Fay Cresswell	West of Sandiacre	response-00701	Type of Housing	There would be far too many houses in a small area at the moment the estate is Semi detached and detached properties with some bungalows so the new properties would have to be small close to each other and not in keeping with the area
Fay Cresswell	West of Sandiacre	response-00701	Number of Houses	There is not area for 180 houses to meet government standards.
Fay Cresswell	West of Sandiacre	response-00701	Green Belt	This development is next to the beautiful Stoney Clouds nature reserve and would severely affect the landscape and wildlife. This is a hugely popular location used by 100s of people walking dogs. Taking exercise birdwatching mushroom picking etc. This land has changed to grey belt from green in a very unhandled way where none of the rest who back onto the fields were never contacted
Fay Cresswell	West of Sandiacre	response-00701	Landscape	As above it's a landscape overlooking the Erewash golf course its tree lined and used for horses
Fay Cresswell	West of Sandiacre	response-00701	Flooding / Drainage	The drains already cannot cope with heavy rain fall they fill to the top and overflow causing huge puddles across the road. There is a rat issue in this area already this will only add to it
Faye Wilkinson	North of Breadsall Hill Top	Response-01129	Traffic Congestion	It is highly unlikely that junctions on Dale Acre can be made safer, they are small residential junctions that are already very close to homes. Roads are already busy with parked cars on the pavements and roads due to homes having more cars than driveway space. Congestion is already bad enough during rush hour on Mansfield Road out of the Durose Estate towards the city centre. More homes in the area would add to this and cause dangerous situations.
Faye Wilkinson	North of Breadsall Hill Top	response-01129	Road Safety	Cars are already parked roadside and on pavements due to limited parking for residents causing pedestrians to walk on the road which would become more dangerous with increased traffic.
Faye Wilkinson	North of Breadsall Hill Top	response-01129	Wildlife / Biodiversity	Wildlife have already had their habitats limited by the building of Durose Country Park, this would reduce their habitats further. The wildlife will be threatened further either driving them into the residential areas or worse, giving them no chance of survival.
Faye Wilkinson	North of Breadsall Hill Top	response-01129	School Capacity	Residents and members of the wider community are already struggling to find school places for their children. These plans include no suggestions to build schools or facilities for this already struggling community, There are also no plans to build schools anywhere within the local area. It is not environmentally friendly to expect parents to drive their children to schools in neighbouring towns and villages.
Faye Wilkinson	North of Breadsall Hill Top	response-01129	Healthcare Facilities	There are no plans to provide or build new healthcare services in this area. Residents of the community already report difficulties obtaining access to GP or dentist services. Again, it is not environmentally conscious to expect residents to have to drive to these services.
FAY SAXTON	South West of Kirk Hallam	Response-01409	Traffic Congestion	The people of the village of Kirk Hallam and surrounding areas experience severe traffic congestion every day, leading to a great deal of stress, time wasted and real safety issues, underlined by a recent accident on the A6096 towards Bulls Head roundabout. Many of the users are children going to and from school, giving rise to an urgent need for clear measures to protect their safety. There are plans for new homes and a retail outlet at Bulls Head roundabout, both opening onto this totally overwhelmed location. Further, the plans for c 2000 new new homes at Kirk Hallam and Stanton will massively and unreasonably add to an already impossible situation. The worst thing the Council can do is to simply add to the gridlock by allowing these new developments. It is unreasonable for the Council to expect local people to tolerate the situation as it is, let alone knowingly add such an unthinkable number of homes, many with several vehicles, to the problem. The Council consider that creating a Relief Road around Kirk Hallam will solve the problem. Local people know it will not. Joined by an increasing number of HGVs already existing and certain to increase exponentially as the previous Stanton Ironworks develops and with thousands of new occupants/workers from the new housing developments, the congestion problem will not only continue but worsen. Both new vehicles and existing vehicles will vie for places at the new roundabout at Sow Brook in order to access the Relief Road. The Council choose to play down how busy and potentially dangerous that road will be by labelling it a Relief Road, whilst instructed consultants SYSTRA call it for what it will be, a By-Pass, with all the dangers from HGVs, traffic and fumes that entails. The Council refer to multiple exits for new residents along the Relief Road, but getting their cars out to go to work in the morning will involve considerable difficulty, and who would relish squeezing in between HGVs, let alone risking their safety on a bike, or their children's safety? Crossing such a road to the inappropriately located so called "Local Centre" which is neither Local nor a Centre, is in fact only accessible by crossing the dangerous busy Relief Road itself. It can only safely be accessed by motorists, not residents. Then there is the proposed new roundabout junction at Sow Brook which reliably floods every winter, and with all the new developments, the only outcome will be complete standstill. The developers will claim to be able to stop the flooding, but we all remember when even Ilkeston Train Station was under water together with much of the locality resulting in a Climate Emergency being declared on 26.10.23. And when drivers reach the other end of the Relief Road, having met HGVs from other delivery businesses such as the depot at West Hallam coming in the opposite direction, where will those drivers actually go and what impact will they have? Previous MP Maggie Throup called the Relief Road "A road to nowhere." I believe it will be a "a road to chaos". The choices will be return to the A6096/Bulls Head queue, head through Stanley residential village with parked cars causing little road width and having suffered badly with potholes till recently resurfaced, head through Ockbrook, another residential village with parked cars, with an amazing proliferation of potholes, until recently resurfaced also, or through Spondon Village to reach the A52, unsuitable for HGVs with only the smallest of roundabo

FAY SAXTON	South West of Kirk Hallam	response-01409	Traffic Congestion	uts. Please do not forget our rural roads where our farming tradition continues - where people used to get lost until the advent of Google Maps. Dale Abbey residents are rightly worried about the impact of so much residential development giving rise to numerous cut throats at speed, already a problem but likely to be vastly increased, causing potential real dangers not only to farmers with their machinery but to residents and their children, walkers, horse riders, cyclists and the many visitors who come to enjoy this beautiful area. SYSTRA have looked only at wider road networks, but what impact assessment has the Council requested as to the impact on the people who actually live on these streets and lanes, the people and the farmers who live around the Green Belt? The outlook is bleak for those who live and work in this area and will be until people are listened to and their concerns acton upon. Will people really actually want to come and live in such an area that is quite literally stuck? What happened to growth, prosperity and quality of life?
FAY SAXTON	South West of Kirk Hallam	response-01409	Road Safety	The roads in Kirk Hallam and surrounding areas cannot be made safe until the Council stops loading them with unrealistic numbers of new residents most of whom are likely to own one or more cars. It does not make sense to add to a current traffic crisis in the area which is at risk of standstill. The Council needs to implement a common sense policy of fairly sharing out housing throughout Erewash and treating our Green Belt as rare and precious as it is, an overarching policy above and beyond their points systems. No-one has to drive very far in Erewash to get to work and many prefer to live in quieter areas. There is no need for a traffic crisis that is unnecessarily undermining road safety.
FAY SAXTON	South West of Kirk Hallam	response-01409	Air Quality	Poor air quality, as measured at A6096/Bulls Head, needs urgent attention for the benefit of all residents. Matters of fairness and equality are vital to attend to especially when it is clear that people's wellbeing is suffering both physically and mentally through poor air quality and avoidable stress.
FAY SAXTON	South West of Kirk Hallam	response-01409	Wildlife / Biodiversity	With the current area of Green Belt set to be destroyed at Kirk Hallam now standing at c 50 hectares, its biodiversity will be lost. The development that replaces it appears to be mainly closely aligned homes with small gardens with little or no ability to re-establish diversity. Local people remain deeply upset at this predicted loss and share poignant video footage of it whilst it still remains Green Belt, their over 3000 objections to the development having not been listened to. I am particularly concerned about the future of Pioneer Meadows. I appreciate the Council's recognition of its Green Flag multiple prize winning LNR importance but is this purely lip service? Many developments would not even be considered for fear of disturbing such a biodiverse local asset, especially in a Green Belt setting, strikingly at its beautiful best with its 111 plant Derbyshire County Biological Register record, at this time of year. At the last Inspector's hearing, which I attended, reference to an approach to Derbyshire Wildlife Trust was made to consider sufficiency of measures to protect wildlife and biodiversity. No letter of instruction or actual report formed part of the evidence. Now, the situation has deteriorated for the worse for wildlife/biodiversity as shown in the CORE STRATEGY REVIEW AMENDMENT MAP BOOK on FIGURE 2 SOUTH WEST OF KIRK HALLAM HOUSING ALLOCATION. At present of course, the animals have the benefit of the whole of the Green Belt in which to come and go, so a proposed extension of Pioneer Meadows does not form a benefit for them in itself. To their detriment, that extension continues to lead them to a high chance of death on the Relief Road, especially with no provision stated to help them cross safely into the wider Green Belt beyond. The position now with this latest map is that Pioneer Meadows is virtually enclosed. There is nothing in the Key to the map to indicate what hatching (Strategic Green Infrastructure Corridor) infilled with Orange (Housing Allocation) actually means - does it refer, for instance, to an area where there may or may not be housing so the animals may or may not have sole access, or an area where housing has priority over the animals? Much of the unclarified hatched orange area continues to the south-east as a narrow section, which does not appear wide enough to allow often shy animals to feel safe to use it, given the Orange (Housing Allocation) is so near with its human family noise to deter them. The newly added so called "Safeguarded Land" will ultimately mean more development and yet another route out of Pioneer Meadows will be blocked to wildlife, including deer, badgers, foxes, stoats, hares, rabbits, rodents and hedgehogs etc. The position with birds, including birds of prey, owls, bats, invertebrates and insects including moths needs to be considered, including the need for special low lighting and crossings. Likewise the restriction on biodiversity via plants and fungi needs consideration. I would request the Inspector to ask for a Report/Updated Report to be obtained from the Derbyshire Wildlife Trust on the impact on wildlife/diversity of the whole of the revised proposal shown on this map, plus clarification by the Council/Developers as to what the hatching infilled with orange actually means. These steps are important because Pioneer Meadows is a valuable wildlife/biodiversity asset to both Kirk Hallam and also Derbyshire with its listing on the Derbyshire County Biological Register.
FAY SAXTON	South West of Kirk Hallam	response-01409	Wildlife / Biodiversity	The Report may lead to important amendments to the extent of land available to animals to move safely and further provisions for their safety, and the chance of the proliferation of plant seeds within and beyond the reserve to increase biodiversity.
FAY SAXTON	South West of Kirk Hallam	response-01409	Bus Services	It is important for Kirk Hallam residents to have access to a regular and frequent bus service from various points around the hilly village of Kirk Hallam, along with and of equal importance to those available on the A6096, so that equality of transport is extended, particularly to the elderly, disabled and incapacitated.
FAY SAXTON	South West of Kirk Hallam	response-01409	School Capacity	It is important that children in the Kirk Hallam area should be able to take up school places in their home area and that sufficient funds are made available for this to happen.
FAY SAXTON	South West of Kirk Hallam	response-01409	Healthcare Facilities	Given the vast increase in population proposed for Kirk Hallam, it is vital that sufficient healthcare provision and funding are made available for all residents of Kirk Hallam.
FAY SAXTON	South West of Kirk Hallam	response-01409	Type of Housing	The majority of houses proposed are closely constructed with small gardens. There will be little scope to create biodiversity from destruction of Green Belt unless green areas with plants, trees and hedges are plentiful, and even then any biodiversity would be minimal in comparison with the natural Green Belt they would replace. There would need to be plenty of provision of green areas for children to play locally and safely. Careful regard needs to be paid to the houses being of sufficient quality to provide resilience to increasing climate change. Only 10% of the houses are proposed to be affordable housing and only if viable. If indeed there is a local housing need as the current administration claim as opposed to Angela Rayner's broadcast statement that Britain has "plenty of houses" and despite local estate agents having a variety of homes for sale, then it would be important for a 10% commitment to be upheld. There are concerns that any new houses would in reality be let out for landlord profit both in the UK and abroad which would lead to an unsettled and ever changing community and would inevitably be disruptive and unsettling for the residents of the current village of Kirk Hallam and for those occupying the new houses. In addition, such occupation would lead to a greater likelihood of crime, inherent with large settlements anyway, to be vastly increased. The lack of a settled community would also have health implications for residents stressed about their personal safety and security and that of their children.

RAY SAXTON	south west of Kirk Hallam	response-01409	Number of Houses	<p>NUMBER OF HOUSES/GREEN BELT (these categories overlap) The housing allocation of c1000 houses for the village of Kirk Hallam is totally unfair and unreasonable. Kirk Hallam is a village on the Erewash Green Belt, along with all the other Green Belt villages and should take an equal share of the development allocation, not be dumped with a massive proportion. The Inspector on examining the maps at the last Core Strategy Review could see that Kirk Hallam is a village. Yet all BUT Kirk Hallam are treated for planning purposes as villages, for no cogent reason. Kirk Hallam's church of All Saints is the nearest Grade 1 Listed Church to the Abbey of Dale Abbey and the close relationship between the two villages is well documented. We know that the Canons of Dale Abbey ministered as priests to the people of Kirk Hallam. To this day, visitors (and locals) take what is known locally as the "Monks Path" from the church and Abbey of Dale to Kirk Hallam and its Church. The Abbey at Dale owned and farmed the land that we now call our Green Belt, including Kirk Hallam. This history is a valued heritage asset to Erewash and likely to be so into the future. Expecting Kirk Hallam to take c 1000 new homes when the amounts to be taken by other villages vary from c 50 to c 280 is grossly unfair and needs to be halted. Kirk Hallam has been used over the years as a dumping ground for unwanted development. It should not be up to developers to choose what land they want to build on. At Kirk Hallam, the land proposed for development is within the Dale Abbey Parish. Many Kirk Hallam residents come under Dale Abbey for Council Tax. Kirk Hallam's ties to Dale Abbey are indisputable. Virtually all of the villages have some council houses, Kirk Hallam has many too but also many houses built for workers by Stanton Ironworks, people whose tireless work assisted in building the wealth of the Ilkeston area for many years. Many residents are descendants of those workers, some of whom are still alive, some of whom died of lung conditions due to tending the furnaces. In this way Kirk Hallam presents to Erewash a further historical heritage value, later in time, but one that should be respected. In reality, the village of Kirk Hallam has been denigrated as low value, and robbed at an unknown time of its value as a village without its consent, despite valiant ongoing efforts by a life-long Kirk Hallam villager to untangle its planning history. The village of Kirk Hallam should not be expected to take on any more than its fair share of the development in Erewash. The Council should re-visit their figures and indeed the way in which land is selected for development so that overarching fairness and common sense are the primary criteria, and the Green Belt treated as the treasured asset of Erewash that it is, long known to locals as "The Jewel of Erewash". Forcing development on the Kirk Hallam and surrounding areas is short sighted and unrealistic. It is apparent to anyone living in the area that this part of Erewash is already full to overflowing, experiencing traffic conditions which have no realistic way of being resolved by what is presented and certainly not by a so called Relief Road that creates further problems throughout the area, as discussed in "Transport" above. The housing allocations the Council have made when considering options across the Borough concern me greatly. Why overload and stifle Kirk Hallam and surrounding areas when there are clearly other options av</p>
RAY SAXTON	south West of Kirk Hallam	response-01409	Number of Houses	<p>ailable? SA2025 UPDATE SITES ASSESSED (REJECTED) BOROUGH SOUTH shows considerable areas of land in the region of Hopwell CP that have been offered but rejected, indeed a representative of the owner of this land was present at the last Core Strategy Hearing. All we are presented with is a map showing the area, with no explanation whatsoever as to why a portion of this land could not be used to restore fairness to the village of Kirk Hallam to reduce its c 1000 house allocation, why it could not play its part in eliminating the £10 million cost of the so called Relief Road and removing the need for this road altogether, why it could not play its part in ending the daily headache for school children and commuters in the deadlock that increases day by day at A6096/Bulls Head? The land is not far at all from the high employment areas of Erewash - it is within under an hours walking distance from Kirk Hallam, it could support a primary school cost £4 million, with money to spare after eliminating the cost of the Relief Road. Beyond the points system, it makes sense, its logical, its fair, and it can reduce the congestion. Please respect the people of Kirk Hallam and be willing to reconsider and widen your perspectives to find solutions where solutions are desperately needed - and available. A steady increase over the years to an allocation of c 1000 houses at the village of Kirk Hallam is vastly out of all proportion both to the current size of Kirk Hallam itself and massively so to the size of each of the surrounding Green Belt villages. The character of the villages should be maintained, balanced and not destroyed or encroached upon by unsuitable development. None of the villages want to become small towns or satellites of Ilkeston. They should be able to remain inviting and interesting for visitors who come to the Green Belt for health giving recreation as they do at present. In particular, the c 1000 house Kirk Hallam development represents a considerable encroachment towards the historic village of Dale Abbey to which it will be in sight and sound. Of important concern is the placement of what is termed a "Local Centre" (dealt with here as it is part of the proposed new development whilst not a "house"). The Local Centre is proposed to be built on what was and should remain Green Belt land beyond the Dale Abbey side of the Relief Road and adjacent to the A6096. Whilst the Council claim the so called Relief Road "will create a defensible Green Belt boundary as well as a landscape buffer between the Green Belt and housing allocation" (CORE STRATEGY REVIEW AMENDMENT DOCUMENT; P. 36, 3RD PARA FROM BOTTOM), the proposed setting of this Local Centre entirely breaks that boundary and provides a stepping stone for more new development towards Dale Abbey. This is totally unacceptable. Such a siting, being across the Relief Road in the direction of Dale Abbey, will sooner or later lead to developers digging deeper into the Green Belt to the detriment of both Kirk Hallam and Dale Abbey. Indeed, there seems to be no other reason for such a siting given its presence at the furthest point away from Kirk Hallam old and new, which would involve residents and their children crossing the busy and dangerous Relief Road with its cars, heavy vehicles and HGVs from both existing and forthcoming heavy traffic from other delivery depots such as West Hallam. Such a crossing cannot be made safe without a pedestrian bridge. The equality issues flowing from this</p>
RAY SAXTON	south West of Kirk Hallam	response-01409	Number of Houses	<p>Local Centre are rightly insurmountable, given that the Local Centre would be virtually inaccessible to the elderly and disabled and extremely dangerous for children - a dash for a ball into the road or a dare could prove fatal. This proposed development adjoining the A6096 would be more accessible to motorists from other parts than to the residents of Kirk Hallam new and old. Such a building would act like a motorway service station, an eyesore to the historic rural area, and as inappropriate and unwanted an intrusion as is possible to the character of the area. It risks becoming a hub for criminality/drugs aimed at the housing development via the many exits proposed on the unpoliced Relief Road. Kirk Hallam already has a Village Centre that could be refurbished/extended if required and there are also additional local shopping facilities at the supermarket in the garage at Kirk Hallam and at nearby Ilkeston and West Hallam. In addition, the proposal for a Local Centre supplanting the existing Village Centre represents a shocking and unnecessary exploitation of Green Belt Land that needs to be prevented, and a violation of the Councils own description of the Relief Road as a "defensible Green Belt boundary."</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
PAY SAXTON	South West of Kirk Hallam	Response-01409	Green Belt	An extension of Green Belt issues from "Number of Houses/Green Belt" above. There is great sadness at the proposed extensive destruction of so much of the historic Kirk Hallam/ Dale Abbey Green Belt that has been treasured over decades and centuries. This proposed development has shown a cavalier and unfair attitude to the importance and value of the Local Green Belt as evidenced by the out of all proportion Kirk Hallam housing allocation of c 1000 houses and inappropriate local centre unnecessarily destroying Green Belt even beyond the boundary with the dangerous Relief Road. This senseless destruction of Green Belt would be so far reaching that it is difficult to imagine and impossible to justify. I can only hope that the Council will restore fairness between the villages so that the Village of Kirk Hallam bears only its rightful share, so that our precious Green Belt can be saved for our families, our descendents and our visitors. I would request the Council to seriously review its allocations and carry out its role of custodian of the Green Belt in a just way so that we can continue to cherish and care for our beautiful "Jewel of Erewash".
PAY SAXTON	South West of Kirk Hallam	Response-01409	Landscape	Recent proposals for development across Erewash will, if implemented, change our landscape and Green Belt forever. I would request the Council to show a serious intention to develop policies which will preserve rather than destroy our landscape.
PAY SAXTON	South West of Kirk Hallam	Response-01409	Flooding / Drainage	Dealt with under "Transport" above.
Finlay Moss	West of Sandiacre	Response-00588	Traffic Congestion	There?s a school nearby and there isn?t enough infrastructure for the increased traffic this will create
Finlay Moss	West of Sandiacre	Response-00588	Air Quality	Considering we already live next to m1 corridor (which significantly increases both noise and air pollution) this planned increase will only further decrease the already low air quality in the area
Finlay Moss	West of Sandiacre	Response-00588	Wildlife / Biodiversity	Building on horse fields and grey belt that supports the local biodiversity in the area
Fiona Petrie	South of West Hallam	Response-00274	Traffic Congestion	At school start and closing times this road and those around it is already congested. Adding more traffic to this area is ludicrous.
Fiona Richards	West of Borrowwash	Response-00020	Wildlife / Biodiversity	A bee road is needed!
Fiona Richards	West of Borrowwash	Response-00020	Green Belt	Need a fire breaker between Borrowwash and Spondon
			Other	New houses next to the busy A52. Pedestrian safety, air pollution and aesthetics.
Fiona Turner	South West of Kirk Hallam	Response-01362	Traffic Congestion	The congestion of traffic is already under a lot of pressure. Monday- Friday the area is congested beyond belief. I work in the local community and getting from Kirk hallam into Ilkeston mon-fri, takes 25 minutes, weekends takes 8 minutes. This is purely due to the congestion created by work traffic, school traffic. Let alone the disruption the road works would create. The roads are dangerous as they are, they aren?t fit for purpose due to all the pot holes and the congestion and road works only will make this worse. Before adding to these pressures, this should be looked at first. Stopping this traffic coming through from sowbrook lane and into Kirk Hallam. Which they do to avoid the congestion up on quarry hill and bulls head. Which has temporary traffic lights all the time which cause even more congestion. Which was created when they stopped access to midland storage (or whatever it?s called now) from west hallam.
Fiona Turner	South West of Kirk Hallam	Response-01362	Road Safety	My daughter attends Dallimore primary school, which is already under great pressure from passing traffic. During school drop off and pick up times (peak times) the traffic flying past is dangerous. Children?s lives are at risk due to this. Crossing patrol is in place but their safety is too, at risk. Causing more disruption to build said access road, will increase the traffic flow along Dallimore road, and increase a danger to the children who go there. Parking is already bad enough from parents coming in from surrounding areas. Road visibility is already restricted without having additional lorries and work traffic coming past. Before adding to these pressures, this should be looked at first. Stopping this traffic coming through from sowbrook lane and into Kirk Hallam. Which they do to avoid the congestion up on quarry hill and bulls head. Which has temporary traffic lights all the time which cause even more congestion. Which was created when they stopped access to midland storage (or whatever it?s called now) from west hallam.
Fiona Turner	South West of Kirk Hallam	Response-01362	Air Quality	A large-scale housing development involving thousands of homes and the construction of an access road can have several negative impacts on air quality, both short-term (during construction) and long-term (post-construction). Here?s a breakdown of those impacts: ? Short-Term Impacts (During Construction) 1. Dust and Particulate Matter (PM): ? Earthmoving, excavation, and demolition activities release particulate matter (PM10 and PM2.5). ? Dust from uncovered soil, construction materials, and vehicle movement on unpaved roads can degrade local air quality. 2. Emissions from Construction Equipment: ? Heavy machinery (bulldozers, excavators, trucks) emit nitrogen oxides (NOx), carbon monoxide (CO), and diesel particulate matter. ? These emissions can cause localized air pollution ?hotspots,? especially if work continues over many months or years. 3. Vehicle Traffic and Idling: ? Increased movement of construction vehicles and trucks contributes to emissions, especially from diesel engines. ? Long-Term Impacts (Post-Construction) 1. Increased Traffic Volume: ? Thousands of new homes can lead to thousands of additional vehicles on local roads, significantly increasing NOx, CO, volatile organic compounds (VOCs), and PM2.5 emissions. ? If public transportation is lacking, car dependency will amplify the impact. 2. Worsened Urban Heat Island Effect: ? Replacing vegetation with buildings and roads reduces air filtering and increases heat retention, worsening ozone formation and reducing air quality. 3. Indoor and Residential Emissions: ? More homes mean more heating systems, fireplaces, cooking appliances, etc., which may add to local emissions?especially if gas or wood-burning systems are common. 4. Cumulative Impact: ? If nearby developments are also underway, or if the area already suffers from poor air quality, the cumulative effects can push pollution levels over health-based standards.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Fiona Turner	South West of Kirk Hallam	Response-01362	Wildlife / Biodiversity	A new housing development on the edge of a nature reserve can have significant and often detrimental impacts on the reserve and its wildlife. These impacts can be both direct and indirect, short-term (during construction) and long-term (after occupation). Here's a breakdown: ? Construction Phase Impacts 1. Noise Pollution: ? Heavy machinery and construction activity generate sustained noise, which can disturb sensitive wildlife, particularly breeding birds, mammals, and amphibians. ? Some species may abandon nesting sites or relocate permanently. 2. Light Pollution: ? Bright artificial lighting at night can disrupt nocturnal species, alter insect behavior, and interfere with bird migration and bat foraging. 3. Dust and Air Pollution: ? Dust from construction can settle on vegetation, affecting plant health. ? Emissions from machinery may degrade air quality for both flora and fauna. 4. Vibration and Ground Disturbance: ? Ground vibrations from heavy equipment can impact burrowing animals and disturb the soil ecology near the boundary. ? Post-Construction/Long-Term Impacts 1. Habitat Fragmentation and Edge Effects: ? Proximity to a development changes the microclimate and ecology at the boundary, increasing exposure to wind, light, and invasive species. ? Wildlife that depends on undisturbed habitat may be forced deeper into the reserve or may not survive at all. 2. Increased Human Activity: ? Recreational pressure from new residents?dog walking, biking, off-trail hiking?can lead to soil compaction, disturbance to nesting sites, and littering. ? Unleashed pets, especially cats and dogs, can prey on birds, small mammals, and reptiles. 3. Pollution and Runoff: ? Stormwater runoff from new roads, driveways, and lawns can carry pesticides, fertilizers, and oil residues into the nature reserve, degrading water quality in streams and wetlands. ? Potential for nutrient enrichment (eutrophication), leading to algal blooms and decline of sensitive aquatic species. 4. Invasive Species Introduction: ? Landscaping with non-native plants or accidental introductions (e.g., via soil, garden waste) can lead to invasive species colonizing the reserve. ? These often outcompete native plants, altering food webs and reducing biodiversity. 5. Disturbance to Wildlife Movement and Breeding: ? Artificial barriers like roads, fences, or high-traffic paths can impede wildlife movement, affecting access to foraging or breeding sites. ? Some species may experience population decline or local extinction due to isolation. ? Cumulative and Long-Term Ecological Risks ? Loss of ecological integrity: Even if the physical footprint is outside the reserve, the ecological impacts can degrade the value of the habitat over time. ? Biodiversity loss: Especially significant in reserves set up to protect rare, threatened, or sensitive species. ? Reduced ecosystem services: E.g., pollination, water filtration, carbon sequestration?all could be compromised.
Fiona Turner	South West of Kirk Hallam	Response-01362	Bus Services	There are many negative impacts to bus services: 1. Strain on Existing Services: ? Without investment or planning, a sudden population increase can overwhelm current routes, leading to overcrowding, delays, and declining service quality. ? Passengers in nearby areas may experience reduced reliability or longer wait times. 2. Poor Service Uptake Without Incentives: ? If new residents default to car use (due to infrequent or indirect bus routes), then increased demand may not materialize?and services may remain underutilized or be cut in the future. 3. Mismatch Between Need and Provision: ? Buses may not run at convenient times or to employment centers, schools, or healthcare facilities, limiting usefulness for residents. ? A poorly designed layout (e.g., houses far from main roads or without direct bus access) can discourage ridership. 4. Initial Gaps Before Services Are Upgraded: ? In many developments, bus improvements lag behind housing occupancy, leaving early residents without adequate transport options.
Fiona Turner	South West of Kirk Hallam	Response-01362	School Capacity	The plans state the provisions to build a new school, but will it? The local schools are already great pressure as they are full. Not only are local schools of Kirk hallam, taking capacity up with local residents children but also children out of the area. This is because schools out of the area, are not so sort after or already full themselves. Teaching staff is also another worry. It's ok promising to build new school, if it happens, but who will staff them?
Fiona Turner	South West of Kirk Hallam	Response-01362	Healthcare Facilities	There's been mention of a new school but I see no plans to build any new gp surgeries or dentists? These are two services that are already stretched to their limit. Dentists not taking NHS patients, gp surgeries full to capacity already- yes they will take on more patients but they don't have capacity to give you an appointment. Another factor of healthcare, take into consideration the elderly and vulnerable residents of Kirk hallam. Those who are lucky enough to stay at home to be cared for, will experience ongoing issues with their carers turning up late because of the congestion on the roads. This will have a negative impact on their healthcare. Waiting 8 hours or more for emergency services- congestion only adds to this and cause more disruption
Fiona Turner	South West of Kirk Hallam	Response-01362	Number of Houses	A development of this size is equivalent to building a small town, and its impacts on existing communities and infrastructure can be major: 1. Traffic Congestion and Road Safety ? A typical 1,000-home development could generate 1,500?2,000 extra vehicles. ? Local roads may become overburdened, leading to congestion, delays, and an increased risk of accidents, particularly near schools and junctions. 2. Pressure on Public Services ? Local GP surgeries, hospitals, schools, and emergency services may not have capacity for the population increase. ? This can lead to longer waiting times, overcrowded classrooms, and reduced service quality. 3. Impact on Community Identity ? Smaller villages or rural communities may feel overwhelmed by the scale of development. ? The development could dilute local character and disrupt the social cohesion of the area. 4. Environmental Degradation ? The loss of green space, trees, and natural features contributes to: ? Reduced air quality ? Urban heat island effects ? Declining mental well-being of local residents 5. Visual and Physical Landscape Change ? Fields, hedgerows, and open land will be replaced by rooftops, tarmac, and dense housing layouts. ? This can permanently alter sightlines, skyline profiles, and the general feel of the area. 6. Housing Market Pressures ? If houses are high-end, it may price out locals. ? If poorly integrated, it could lead to transient populations or increased social tension. ? Cumulative Effects ? Combined, the impacts of the access road, 1,000 houses, and associated infrastructure (schools, shops, car parks) will have a profound and permanent effect on both the natural and built environment. ? Particularly when built into a sensitive site like a nature reserve, the cumulative damage may be irreversible.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Fiona Turner	South West of Kirk Hallam	Response-01362	Green Belt	Erosion of Green Belt Purpose Green belts exist to: ? Restrict urban sprawl ? Maintain open countryside near cities ? Preserve the identity of separate towns/villages ? Support agriculture and biodiversity ? Provide recreational space for urban residents When housing is built in green belt land: ? These goals are weakened or undermined. ? It sets a precedent for future encroachment, known as ?salami-slicing? of the green belt. ? 2. Loss of Open Space and Natural Habitat ? Development replaces fields, woodlands, wetlands, and hedgerows with built structures. ? This leads to: ? Habitat destruction ? Loss of biodiversity ? Disruption of wildlife corridors ? Green belts often serve as buffers for nature reserves, so development on their edge can have indirect ecological impacts. ? 3. Agricultural Land Loss ? Many green belt areas contain productive farmland. ? Building over it can reduce local food production capacity and impact rural economies. ? 4. Urban Sprawl and Village Merging ? New developments can cause the merging of separate towns and villages, eroding their distinct identities. ? This risks turning rural or semi-rural settings into continuous suburban areas. ? 5. Increased Flood Risk ? Green belt land often includes natural floodplains and permeable surfaces that absorb rainwater. ? Housing developments introduce impermeable surfaces (roads, roofs), increasing surface runoff and potential for local flooding. ? 6. Infrastructure and Accessibility Challenges ? Green belt areas typically lack public transport, schools, and utilities scaled for large developments. ? New housing can place unsustainable pressure on infrastructure or result in car-dependent communities?counter to sustainability goals.
Fiona Turner	South West of Kirk Hallam	Response-01362	Landscape	Building an access road through a nature reserve is highly intrusive and typically considered ecologically destructive. Here?s how it could affect the landscape: 1. Habitat Destruction and Fragmentation ? Trees, vegetation, and wildlife habitats will be lost to make way for the road and housing. ? The access road will fragment the reserve, isolating wildlife populations and disrupting natural movement corridors. ? This can lead to species decline, especially for birds, amphibians, reptiles, and small mammals. 2. Visual Intrusion ? Natural, scenic landscapes will be replaced by roads, street lighting, buildings, and parked cars. ? The area will lose its rural or untouched visual character, particularly where the development meets or enters the nature reserve. 3. Noise and Light Pollution ? Traffic, construction, and residential activity will introduce constant noise and artificial lighting. ? This negatively affects nocturnal species (bats, owls, insects) and can permanently change animal behavior and breeding success. 4. Pollution and Runoff ? Increased air pollution from cars and water pollution from road runoff (oil, chemicals, litter) can contaminate nearby streams, wetlands, and soil. ? The loss of vegetation reduces the land?s ability to filter and absorb water, raising erosion and flood risks. 5. Soil Compaction and Erosion ? Construction and road use compact the soil, reducing permeability and damaging the delicate balance of the reserve?s ecology and hydrology.
Fiona Turner	South West of Kirk Hallam	Response-01362	Flooding / Drainage	Strain on Utilities and Drainage ? Existing systems for water, electricity, gas, and sewage may not be designed for a significantly larger population. ? Risk of: ? Sewer overflows or backups. ? Water pressure drops. ? Increased surface water runoff and local flooding, especially if green space is replaced by impermeable surfaces.
Fiona Turner	South West of Kirk Hallam	Response-01362	Other	1. Increased Traffic and Congestion ? More residents typically mean more cars on local roads, leading to: ? Longer travel times. ? Congestion during peak hours. ? Increased risk of accidents. ? Rural or small-town road networks can be ill-equipped to handle a sudden rise in vehicle numbers. ? 2. Pressure on Local Services and Infrastructure ? GP surgeries, hospitals, schools, and public transport can become overstretched. ? Local residents may face: ? Longer wait times for medical appointments. ? Difficulty getting school places. ? Reduced availability of social services. ? This is especially problematic when infrastructure is not upgraded in parallel with housing. ? 3. Noise, Dust, and Disruption During Construction ? Extended construction periods can bring: ? Persistent noise from heavy machinery. ? Air pollution from dust and diesel engines. ? Vibration that may affect nearby properties. ? Early morning and weekend work can disturb residents? quality of life. ? 4. Strain on Utilities and Drainage ? Existing systems for water, electricity, gas, and sewage may not be designed for a significantly larger population. ? Risk of: ? Sewer overflows or backups. ? Water pressure drops. ? Increased surface water runoff and local flooding, especially if green space is replaced by impermeable surfaces. ? 5. Loss of Green Space and Visual Amenity ? Natural or undeveloped land being built over can: ? Reduce access to nature for existing residents. ? Impact mental well-being, particularly in rural or semi-rural communities. ? Change the character of the area?loss of views, openness, and tranquility. ? 6. Overdevelopment and Urban Creep ? Residents may feel the development causes: ? Loss of village identity or community feel. ? Merging of formerly separate settlements (urban sprawl). ? Increased littering and antisocial behaviour, especially if the population grows rapidly without social integration plans. ? 7. Rising House Prices and Rents (or Sometimes Falling) ? Depending on the location: ? New, expensive homes may push up prices, making the area less affordable for locals. ? In some areas, a large influx of homes can saturate the market and reduce resale values of existing properties. ? 8. Impact on Privacy and Light ? New buildings, especially if taller or denser than surrounding properties, may: ? Overlook gardens or windows. ? Block sunlight, particularly in winter months. ? 9. Increased Pressure on Recreation Areas ? More people using parks, footpaths, and green belts can lead to: ? Overuse, erosion, litter, and disturbance to wildlife. ? Reduced enjoyment for existing users. ? 10. Social Friction ? Large developments can lead to a sudden demographic shift, which may: ? Disrupt local social dynamics. ? Create tension between new and long-standing residents if integration is poor or local concerns are ignored.
Fiorella Di Fina	North of Breadsall Hill Top	Response-01123	Traffic Congestion	Traffic will worsen and Will make the area noisier and more polluted
Francesca Dean	North of West Hallam	Response-00220		The junction prior to this field is already very dangerous and unsafe for everyone.
Francesca Dean	North of West Hallam	Response-00220	Road Safety	Speed limits are not kept, children cross here, the field already floods onto Highlane
Francesca Dean	North of West Hallam	Response-00220	Wildlife / Biodiversity	Badgers, bats, sparrowhawks, rabbits & horses
Francesca Dean	North of West Hallam	Response-00220	Healthcare Facilities	What healthcare facilities? We already had to move to ilkeston due to lack of health care in west hallam. This will make it even worse
Francesca Dean	North of West Hallam	Response-00220	Number of Houses	Far too many. The field always floods, there are mines, petrol station was previously on site.
Francesca Dean	North of West Hallam	Response-00220	Green Belt	Needs to be protected. There are lots of houses that can be fixed up, brown sites can be used. Once it starts on this field it will continue all across our green belt!
Francesca Dean	North of West Hallam	Response-00220	Flooding / Drainage	The entire field floods with any water. It also gets water from the houses and other fields on it due to it being lower. This also floods highland west making it lethal
Francesca Dean	South of West Hallam	Response-00221	Traffic Congestion	Beech lane is chaos at all times of the day. There is no parking for houses that already exist, for school, for football, for cricket, for anything. You can barely pass the parked cars. The pavement is too thin either side and dangerous.
			Road Safety	No safe crossings or traffic control
Francesca Dean	South of West Hallam	Response-00221	Bus Services	Already limited and a nightmare. Adding more people will cause an increase to this.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Francesca Dean	South of West Hallam	Response-00221	School Capacity	None with two more sites proposed. The school already has none catchment pupils
Francesca Dean	South of West Hallam	Response-00221	Healthcare Facilities	Again, no health care services to those who already live in west hallam. We already have to go to ilkeston for ours! It's a risk to everyone who already loves here
Francesca Dean	South of West Hallam	Response-00221	Number of Houses	Far too many
Francesca Dean	South of West Hallam	Response-00221	Green Belt	Use houses already available or brown sites. We must protect our greenbelt!
Francesca Dean	South of West Hallam	Response-00221	Landscape	What landscape? There won't be any with houses there!
Francesca Hope	West of Borrowwash	Response-00528	Traffic Congestion	Victoria Avenue is already busy without extra traffic coming into the village
Francesca Hope	West of Borrowwash	Response-00528	Wildlife / Biodiversity	I live at the back of the field and see a whole variation of wildlife who at present have no where else to go as land is borrowwash is continually being built on
Francesca Hope	West of Borrowwash	Response-00528	Healthcare Facilities	Our 2 GP surgeries are already full to capacity and obtaining an appointment is a struggle without additional residents to include also
Francesca Hope	West of Borrowwash	Response-00528	Landscape	We currently have the most beautiful view from our house which will be spoilt to be filled with a building site for years and eventually housing
Francesca Hope	West of Borrowwash	Response-00528	Other	Noise pollution. We currently live in a lovely quiet cul de sac and this will be spoilt if a housing estate is built with construction vehicles, building noise etc right next to our houses for years until completion
Francis Ian Scott	South West of Draycott	Response-01535	Traffic Congestion	The Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic. A transport assessment needs to be undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This passes through Draycott and Borrowwash, passing busy junctions, Doctor's surgeries, public car parks, Primary schools, local cricket club as well as numerous resident's homes. Noise from the construction (including vehicle movements) and operational phases of the proposed development need to be adequately addressed. The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead. The A6005 (Derby Road) is an already busy road at peak times during the week and weekend which currently experiences over 3,861 cars a day. Adding 190 additional houses will cause significant congestion issues throughout the village and increase accidents within this overburdened area. The current road network between Borrowwash and Draycott, which includes Derby Road, Hopewell Road and Gypsy Lane, already struggles to handle current traffic demand let alone the potential for at least 190 more cars. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. "NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic." NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic.
Francis Ian Scott	South West of Draycott	Response-01535	Traffic Congestion	ublic transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. Name of Responder	Consultation Site	Response ID	Response Category	Detail
Francis Ian Scott	South West of Draycott	response-01535	Road Safety	The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents. A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents. "NPPF 109. States that transport issues should be considered from the earliest stages of plan-making and development proposals, using a vision-led approach to identify transport solutions that deliver well-designed, sustainable and popular places. This should involve identifying, assessing and taking into account the environmental impacts of traffic and transport infrastructure ? including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains. Yet why has no traffic survey been undertaken? If it had it would have highlighted that along A6005 (Derby Road) and exactly adjacent the proposed development ... the peak traffic hours on Fridays are between 4 PM and 6 PM, with the highest average vehicle count observed from 4 PM to 5 PM. The average number of cars per day in the traffic data is approximately 3,861 vehicles. The highest recorded traffic day in the data is June 11, 2023, with a total of 4,779 vehicles. The maximum speed recorded in the traffic data is 106 mph and the number of times 70 mph is exceeded in the traffic data is 174." The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment. NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). Francis Ian Scott	South West of Draycott	response-01535	Wildlife / Biodiversity	Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The taking away of grazing/arable land and the disruption for the wildlife. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. There is an opinion that the deer fencing would devalue the area of open farmland and public right of way. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. Historical badger sett on part of the site to the Victorian tip at the bridge of Noonning Lane. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. This area forms a green corridor and houses a number of RED LIST species The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appe

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Francis Ian Scott	South West of Draycott	Response-01535	Wildlife / Biodiversity	arance. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt. NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.
Francis Ian Scott	South West of Draycott	Response-01535	Bus Services	The occupants of the 190 houses to be built (with a further 70 houses being built on the identified land adjacent), will undoubtedly put a strain on the current bus services through Draycott - which will not be able to cope with the additional customers.
Francis Ian Scott	South West of Draycott	Response-01535	Type of Housing	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing, The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village's strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.
Francis Ian Scott	South West of Draycott	Response-01535	Number of Houses	NPPF 223. States that planning policies should set out criteria or requirements to ensure that permitted and proposed operations do not have unacceptable adverse impacts on the natural and historic environment or human health, taking into account the cumulative effects of multiple impacts from individual sites and/or a number of sites in a locality. The EBC are proposing a combined number of nearly 700 houses in the locality of Draycott, Borrowwash and Breaston which is significantly overbearing and unrealistic when considering infrastructure, road networks and amenity. The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The potential harm caused by the application far outweighs the potential public benefit. The scale of the development is completely NOT in keeping with the character of the village. The proposed development should follow existing settlement patterns. New buildings and the volume of housing should harmonise with the neighbourhood. Retain local character and the retention of open spaces as is the character of the village. Views into and out of the village should be preserved. Clear lines of hills and spatial openness must be preserved. This out of scale development rides roughshod over the NPPF and other relating policies and guidelines with the barest of lip service paid, with the minimum consultation being undertaken with residents which is compounded by the lack of information available and transparency. The scale and massing of the development, which will begin with 190 houses but will significantly increase when the identified safeguarded land is developed in the future, is completely out of character with its surroundings and would be incredibly overbearing on the village and neighbourhood I strongly believe that there are better suited brownfield sites and genuine Grey Belt sites with land that is of poor quality. The land south west of Draycott is Grade 2 land (very good) and should be protected. NPPF 61. States that to support the Government's objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay. The overall aim should be to meet an area's identified housing need, including with an appropriate mix of housing types for the local community. The land identified south west of Draycott is Green Belt and Grade 2 quality land. This development neither looks to protect the BMV nor does it look to bring forward the 109 existing Brownfield sites within the EBC that has full planning consent. NPPF 73. States that the authority should identify, through the development plan and brownfield registers, land to accommodate

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Francis Ian Scott	South West of Draycott	response-01535	Number of Houses	at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC there are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.
Francis Ian Scott	South West of Draycott	response-01535	Green Belt	Protecting Green Belt land, this land should be kept open and unharmed Protecting public rights of way and access, a large number of footpaths would be affected Harm to the landscape is therefore intensified. NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. Great weight should be given to the findings and recommendations of independent Landscape Quality Assessment NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl. NPPF states that in exceptional circumstances authorities should review Green Belt boundaries in accordance with the policies in this Framework and propose alterations to meet these needs in full, unless the review provides clear evidence that doing so would fundamentally undermine the purposes (taken together) of the remaining Green Belt. Changing the land south west of Draycott to Grey Belt and the development of 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density. Working on the current population of Draycott, 190 new homes will be an at least 17% increase in population. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish and Borrowwash and other villages surrounding it of Breaston and Borrowwash. "NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels of land as
Francis Ian Scott	South West of Draycott	response-01535	Green Belt	identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority to with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. " NPPF states the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate where the development would utilise Grey Belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Belt across the area of the plan. It is clear the authority is now altering existing and acceptable Green Belt land to suit this paragraph/approach of the NPPF by converting it to Grey Belt. This is both hasty and reckless. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. The development on the land south west of Draycott for the people of Draycott and other areas, will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. It is the wrong model in the wrong place to deliver housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. This when there are 109 existing Brownfield sites within the EBC that should be prioritised first over Green Belt land. Will totally spoil a greenbelt area with lovely views. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. The considerable scale, extent and nature of the proposed development would be contrary to national policy in NPPF. Understand there is need for new housing but there are an abundance of brownfield, previously developed sites that the developers and council should explore before this location. There are 109 existing Brownfield sites in EBC giving 81H with 103 of these having full planning permission. These sites should be prioritised first for development before Greenbelt land is considered. Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is c.8H. These 8 sites alone will allow 514 net dwelling to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever. There are more appropriate areas that could hold such a large housing development and n

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Francis Ian Scott	south west of Draycott	response-01535	Green Belt	<p>ot look out of place and spoil the little green areas left within this community. Whilst we/I understand the need for more housing we/I ask that you reconsider the location proposed and look for an alternative site that would house one more suitably. Supporter of the building of new houses but strongly object to the scale and location of this proposed development on the land South West of Draycott. It was previously thought that the land of the former Stanton Ironworks was taken out of the EBCs core strategy due to contamination that rendered the site unusable. Yet a recent Freedom of Information (FOI) request which was answered by EBC has advised the site is indeed to be utilised and has been allocated 1000 houses. Can EBC please advise if the status of the Stanton Ironworks sites and if this is included within the Core Strategy and how the planned 1000 houses impacts the Greenbelt review and use of Greenbelt land. NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. "NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greybelt land does not meet this objective and will actually achieve the total opposite. " NPPF 4. States that local planning authorities should approach decisions on proposed development in a positive and creative way. They should use the full range of planning tools available, including brownfield registers and permission in principle, and work proactively with applicants to secure developments that will improve the economic, social and environmental conditions of the area. EBC needs to demonstrate what appraisals have been undertaken on the 109 Brownfield sites as detailed within their own Brownfield Register, and why these sites have not been prioritised for development over the identified Green Belt land. NPPF 13. Protecting Green Belt Land:- The government attaches great importance to Green Belts. The fundamental aim of Green Belt is to keep land permanently open; the essential characteristics of Green Belts are their openness and their permanence. This is an inappropriate development in the Green Belt and there is NO evidence of the appraisals that have been undertaken on existing Brownfield sites within EBC which there are 109 with 8 of these giving over 51H and the opportunity to develop over 500 dwellings. NPPF 20. States that the target level of housing development within the plans should be capped in line with the capacity of Brownfield sites to accommodate it, to protect Green Belt yet these plans significantly exceed it. NPPF 143. The Green Belt serves 5 purposes: 1) To stop urban sprawl 2) To stop towns merging 3) To safeguard from encroachment onto the countryside 4) To preserve special settings, character and history 5) To ensure the recycling of derelict or Brownfield land. The proposals being made by EBC to reclassify existing Green Belt land to the south west of Draycott does not meet any of</p>
Francis Ian Scott	south West of Draycott	response-01535	Green Belt	<p>these 5 purposes and actually looks to achieve the total opposite. Furthermore, no apparent attempt has been made by EBC to demonstrate why the 109 existing Brownfield sites within EBC have not been prioritised over this Green Belt land. NPPF 144. States before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. No attempt has been made by the authority to explore existing Brownfield sites or underutilised land within the EBC. NPPF 146. The applicant and authority MUST make as much use as possible of Brownfield Sites and underutilised land; AND PROVE that there is nothing left before encroaching on the Green Belt. ? There is no PROOF of the authority discussing with neighbouring authorities about whether they could accommodate some of the identified need for this development, in order not to use the Green Belt. NPPF 150. Once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, to retain and enhance landscapes, visual amenity and biodiversity. NPPF 152. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances. This application does not demonstrate any exceptional circumstances. NPPF 153. 'Very Special Circumstances' have to be proven i.e. all other options exhausted to classify this application as a 'very special circumstance?'. We cannot see any evidence that this has taken place. Therefore, it is an inappropriate application and proposal and does not demonstrate exceptional circumstances. NPPF 156. The proposed development of 190 houses to the land south west of Draycott when located in the Green Belt, must demonstrate exceptional circumstances and are inappropriate unless very special circumstances can be demonstrated.</p>

Francis Ian Scott	south west of Draycott	response-01535	Landscape	<p>Under S106 of the Town and Country Planning Act 1990, as amended, contributions can be sought from developers towards the costs of providing community and social infrastructure, the need for which has arisen as a result of new development taking place. No additional open space opportunities, protection of the public right of way or indeed to better facilities. If S106 funding is available for an application of this type this must be considered. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the villages surrounding it of Borrowwash and Breaston. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would feel imprisoned by a housing estate. Loss of open land frequently used These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. Our local surroundings will become dominated by housing estates and will blight the local walks along the Public Right of Way which connect our Village. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the s</p>
Francis Ian Scott	south West of Draycott	response-01535	Landscape	<p>outh west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. The development of 190 homes will have a significantly negative impact on the spatial openness of the area, impacting both the physical and geographical characteristics of the open land, which prevents urban sprawl and maintains the separation between settlements. It will overwhelmingly impact the natural and undeveloped nature of the Green Belt area. Protecting public rights of way and access, footpaths would be affected by this development. Increased harm to the character of Public Rights of Way. Boundaries are changed by fencing and walls. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Strongly object to this application the amenity and enjoyment of the use of the paths which cross the site will be severely compromised by the development. These paths provide an important means by which residents from the local area can get access to the countryside with substantial benefits for their physical and mental health. The suggested 190 houses to the land south west of Draycott would enclose the paths, which would have a devastating effect on the enjoyment of walks, as would the replacement of green fields with 190 houses. We acknowledge it is a balance between the adverse effects on the footpaths against the desirability of the development taking place, but question if the proposed measures would be sufficient to prevent a severe adverse effect on the use of the paths. The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. An extensive network of public footpaths is within the application site, and there are many in the near vicinity. The footpaths are well used and highly valued as an amenity. Public footpaths this development would surely take away the enjoyment of what countryside walks we have left around. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. It is the wrong model in the wrong place to meet the EBCs housing needs when existing Brownfield sites exist within EBC being of a scale that is ultimately det</p>

Francis Ian Scott	south west of Draycott	response-01535	Landscape	<p>rimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. Our local surroundings will become dominated by this housing development and will blight the local walks along the Public Right of Way which connect our Village. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. There are 109 existing Brownfield sites within the EBC that should be prioritised before the Green Belt land south west of Draycott is used. Historic structures act as a focal point in countryside views and make a huge contribution to environmental quality. Their setting is often a major part of their significance. The proposed housing development to the land South West of Draycott deprives them of their context. The proposed development is considered to have an adverse impact on the setting of local heritage assets. This would have a detrimental and cumulative impact which would be harmful to local heritage assets. The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. Historic England show 14 listed building in Draycott: - Victoria Mill Grade 2 listed building, list entry number 1281333 / Church of St Chads, Church Wilne, Grade 1 listed building, list entry number 1281336 / Cart Shed and Stable at Draycott Mills, Grade 2 listed building, list entry number 1140155 / Cedars Farm House, Grade 2 listed building, list entry number 1087964 / The Cotton Processing and Storage Building at Draycott Mills, Grade 2 listed building, list entry number 1329376 / Doubling Mill at Draycott Mills, Grade 2 listed building, list entry number 1140154 / Draycott Hall and Outbuildings, Grade 2 listed building, list entry number 1334834 / Front Range Draycott Mills, Grade 2 listed building, list entry number 1334835 / Levers Machine Shed, Draycott Mills, Grade 2 listed building, list entry number 1250092 / Cotton warehouse, chimney and outbuilding, Draycott Mills, Grade 2 listed building, list entry number 1250121 / Cotton spinning mill and office block, Draycott Mills, Grade 2 listed building, list entry number 1250046 / Potter Lane Bridge, Grade 2 listed building, list entry number 1087966 / Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 / Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963 NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The amenity value of the footpaths through the application site would be entirely lost, and that of the surrounding footpaths greatly diminished due to the change from a beautiful rural landscape to a vast housing estate, with high fences/walls and a significant amount of houses adding to this negative impact. It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape when existing Br</p>
Francis Ian Scott	south West of Draycott	response-01535	Landscape	<p>ownfield sites within EBC should be prioritised before the Greenbelt land south west of Draycott. NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant amount of footpaths that will be affected by the development of 190 houses. NPPF states that sustainable development should be achieved. There is an obvious lack of definition of why this site is a ?sustainable location?. The introduction of 190 houses will increase waste, carbon footprint and impact the areas future biodiversity needs. NPPF 150. States that if it is necessary to restrict development in a village primarily because of the important contribution which the open character of the village makes to the openness of the Green Belt, the village should be included in the Green Belt. If, however, the character of the village needs to be protected for other reasons, other means should be used, such as conservation area or normal development management policies, and the village should be excluded from the Green Belt. The land south west of Draycott significantly contributes to the village and its character. This village is a part of this land and the Green Belt status allows villagers to access green spaces and enhances the village feel of the area which is rural. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. "NPPF 207. States in determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets? importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation. Yet development on the land south west of Draycott will significantly impact and later the heritage of the Village including the destruction of unspoilt Green Belt land, the adjacent conservation site of the canal and other listed heritage sites that surround the identified area. " NPPF 208. States the local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affecting the setting of a heritage asset) taking account of the available evidence and any necessary expertise. They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between</p>
Francis Ian Scott	south West of Draycott	response-01535	Landscape	<p>the heritage asset?s conservation and any aspect of the proposal. This development will impact Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622. " NPPF 102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development of this size. To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing. To create safe and attractive places which contribute towards quality of life and community cohesion. This project will significantly detrimentally impact on the quality of life and fragment the community who use this area as a community facility. Including educational opportunities for local schools. To conserve and enhance the Borough landscape character. This proposal does not promote the conservation or enhancement of the local landscape and is an inappropriate development.</p>

Francis Ian Scott	South West of Draycott	Response-01535	Flooding / Drainage	<p>From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes. Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. Building on a flood plain that has trees, grass &amp; plants that naturally help absorb water via roots systems when removed will have a huge impact. When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issues. "NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where 50 development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout the year with many residents on Lime Gr</p>
Francis Ian Scott	South West of Draycott	Response-01535	Flooding / Drainage	<p>ove not able to obtain flood risk damage cover as a consequence. " NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.</p>
Francis Ian Scott	South West of Draycott	Response-01535	Other	<p>Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across Easter half term and the consultation window included 4 Bank Holidays. This when much of the information required was not available and FOI requests were submitted and took 20 working days for a response to be received, when the government agencies contacted themselves did not work the said Bank Holidays. This has meant important information has not been received by residents when developing objections. This action by the EBC was irresponsible, some may say planned, and not acting in the interests of the local communities this plan impacts. I strongly object to the consultation process which as best can be described as limited and not fully transparent when engaging with the local community. EBC has only given local residents mere 6 weeks to submit objections to what is an incredibly important change to the original Local Plan and Core Strategy. This is simply not enough time for residents to review and analysis the share magnitude of information and formulate objections, this when significant information is also missing which includes the master plan for the land south west of Draycott. The manner in which EBC has undertaken the 6 week consultation is not inclusive and does not allow non internet users to be aware of the consultation and changes to the Core Strategy. The average age within Draycott and Church Wile Parish is 58 and there is a large proportion of the community that was not aware of this important change. We fully object to the whole process and in particular the 6 week consultation period. I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. As residents living next to the site of the proposed change in Green Belt status and future housing development, we are of the view that these proposals will have a serious negative impact on the village, visual openness, spatial openness, the local community and our standard of living. I strongly object to the Sustaina</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Francis Ian Scott	south west of Draycott	response-01535	Other	<p>bility Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local residents resulted in a score of -6 placing this land ran 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 &amp; 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should received a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless. Noise from the construction (including vehicle movements) and operational phases of the proposed development have not been adequately addressed. An environment noise assessment needs to be carried out, particularly for the residents directly opposite the site entrance; but also the whole route that the construction traffic will take. This passes through Draycott, Borrow ash and Beaston villages. Passing busy junctions, Doctor?s surgeries, public car parks, Primary schools, local cricket clubs as well as numerous resident?s homes. Require the submission of</p>
Francis Ian Scott	south West of Draycott	response-01535	Other	<p>an environmental noise assessment, prior to development works commencing, to rate and assess operational sound from all fixed installations comprising mechanical and electrical plant and equipment, with a scheme of mitigation measures where necessary; that all site preparation and construction to comply with specified working hours and limits to noise and dust emissions, waste disposal and lighting; and the submission of proposals, including the design and operating times, of any permanent external lighting on site. Access and egress to the proposed housing development on Derby Road raises several issues relating to highway and pedestrian safety, ease of access and disruption from increased traffic. The use of long/heavy goods vehicles should be prohibited due to the significant amount of Grade I and II listed buildings in the vicinity of the proposed development on land south west of Draycott. This will include Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622 and Hopwell Road Bridge, Grade 2 listed building, list entry number 1087963. Noise and Vibration consultation to be undertaken to consider impacts during construction on nearby noise sensitive properties and ongoing management of a solar farm and the impact of noise and disturbance. Loss of open space and green spaces? this is vital for our community?s wellbeing Primary School affected with noise and traffic The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would not benefit from the current sprawling Greenbelt views as it will be gone forever. It will have a detrimental effect on the wellbeing of people who enjoy the countryside, not to mention wildlife habitats, which are already under extreme pressure. The recent pandemic has highlighted the valuable and regular use of these footpaths, promoting and fostering good mental health. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the small villages surrounding it of Borrowwash and Breaston. It is the wrong model in the wrong place to deliver the EBCs housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area and its residents. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of development on this g</p>

Including educational opportunities for local schools.
Gail and Tony Orme	West of Sandiacre	Response-00805	Traffic Congestion	We already have to suffer HGV lorries 'constantly' driving through Sandiacre. Heavy traffic is a problem now let alone having an extra 20,000 extra vehicles a year !
			Air Quality	Since myself and my husband have moved here we have had respiratory problems coughs etc more than we have ever had . Due to heavy pollution we feel.
Gail and Tony Orme	West of Sandiacre	Response-00805	Number of Houses	I feel it is unnecessary for Sandiacre we already have lots of new builds. Plus I'm told there are 1800 empty houses!!
Gail and Tony Orme	West of Sandiacre	Response-00805	Green Belt	There are not many places left as it is for people to walk and enjoy . Especially for the young . Please please leave the Green Belt land alone .
Gail Berry	West of Sandiacre	Response-01644	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Gail Berry	West of Sandiacre	Response-01644	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Gail Berry	West of Sandiacre	Response-01644	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Gail Berry	West of Sandiacre	Response-01644	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Gail Berry	West of Sandiacre	Response-01644	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Gail Berry	West of Sandiacre	Response-01644	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Gail Berry	West of Sandiacre	Response-01644	Type of Housing	High density housing is preposterous not in keeping with current housing.
Gail Berry	West of Sandiacre	Response-01644	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Gail Berry	West of Sandiacre	Response-01644	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Gail Berry	West of Sandiacre	Response-01644	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Gail Holdsworth	South West of Draycott	Response-00937	Traffic Congestion	I rely on the only bus from Nottingham. Always full. The main road through Draycott near the Olympic is virtually one way traffic . Often difficult to cross the road. There is a history of speeding through Draycott especially near the proposed site.
Gail Holdsworth	South West of Draycott	Response-00937	Road Safety	Further to previous comments. Speeding through Draycott , especially at night. It is a straight road from Borrowwash to Long Eaton.
Gail Holdsworth	South West of Draycott	Response-00937	Air Quality	Draycott is a small village.concern about traffic pollution especially as school in centre of village in the main road.
Gail Holdsworth	South West of Draycott	Response-00937	Wildlife / Biodiversity	The village is surrounded by wildlife and nature reserves. Chad Water for example. The proposed sites proximity to the river and other bodies of water make it a haven for wildlife. Why is green belt and protected areas like trees being used when there is plenty of brown field and grey belt available. There are paths and walks around Draycott that are well used by residents for dog walking and for the positive effect in mental health, for adults but especially for children.
Gail Holdsworth	South West of Draycott	Response-00937	Bus Services	I do not drive and rely on this bus service. One bus all the way from Nottingham . Unreliable and not a pleasant experience now . This will not be able to cope with such a large potential rise in population. A licat bus is desperately needed.
Gail Holdsworth	South West of Draycott	Response-00937	School Capacity	There is a small school right in the middle of Draycott. Such an increase in numbers will obviously result in more traffic congestion and pollution. Obviously not good for young children.
Gail Holdsworth	South West of Draycott	Response-00937	Healthcare Facilities	There us one very small GP surgery in Draycott. I do not see how it can cope with such a large influx. It is hard enough to get appointments as it is.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Gail Holdsworth	South West of Draycott	response-00937	Type of Housing	Proposed 40% affordable housing will be totally different to the houses at that end of Draycott. For all of these reasons Draycott will no longer be a village. The whole character of Draycott will be lost for ever.
Gail Holdsworth	South West of Draycott	response-00937	Number of Houses	The proposed number of houses Will massively increase the population with all the negative outcomes that will create. There is a strong community feel in the village with volunteers maintaining its look and character and cleanliness. As it gets bigger that will be impossible to maintain.
Gail Holdsworth	South West of Draycott	response-00937	Green Belt	The proposed site is protected and green belt. There are constantly used footpaths and rights of way. How can the laws just be changed without full consultation of the people who live in this area. I have received no information from Erewash council about these proposals . I only found out in seeing a notice at a bus stop
Gail Holdsworth	South West of Draycott	response-00937	Landscape	This is a village in a rural setting. This will create a total change to Draycott. Houses for sale in Draycott will no longer be able to say 'house for sale in the ever sought after village?.'
Gail Holdsworth	South West of Draycott	response-00937	Flooding / Drainage	Five minutes walk from my house I can be by the river. Any surveys done in houses in this area say 'flood risk?' . Residents near the proposed site often have flooded gardens. If there are any thoughts of trying to divert this risk from the proposed building site it will possibly just divert to the middle of Draycott in the future.
Gail Holdsworth	South West of Draycott	Response-00937	Other	. This building proposal will totally change the look and community feel of Draycott. It will no longer be a village in a rural setting. It will create major negative changes to the area and I cannot see anything positive about the proposals. It is too many houses to add to such a small village. Once Draycott is destroyed by overdevelopment on protected land it will be lost forever. Plus there is the whole, probably , years long building work of noise and disruption and the possibility that the one bus we have will have to be rerouted.
Gale Harvey	North of West Hallam	Response-01130	Traffic Congestion	Will make an awful junction there !
Gale Harvey	North of West Hallam	Response-01130	Road Safety	Will need lights coming onto high lane - awful junction
Gale Harvey	North of West Hallam	Response-01130	Healthcare Facilities	GPS already very busy with poor capacity to serve local area
Gale Harvey	North of West Hallam	Response-01130	Green Belt	More green space disappearing
Garry Hickton	South West of Draycott	Response-01473	Traffic Congestion	The site will bring in congestion to the village and the access and egress to the houses is in a dangerous place. With an additional 190 vehicles moving on and off the site there is the potential of major accidents
Garry Hickton	South West of Draycott	Response-01473	Road Safety	Potential pedestrian/ vehicle collision accidents at the bottom of the railway bridge
Garry Hickton	South West of Draycott	Response-01473	Air Quality	More vehicles will increase pollution to the air from exhaust fumes.
Garry Hickton	South West of Draycott	Response-01473	Wildlife / Biodiversity	Bats and other wildlife live in the area concerned
Garry Hickton	South West of Draycott	Response-01473	Green Belt	The site is Greenbelt and should not be built on
Garry Hickton	South West of Draycott	Response-01473	Flooding / Drainage	This area floods and water even backs up into gardens and toilets on Lime Grove
Gary Hamson	South of West Hallam	Response-00052	Traffic Congestion	The proposed entrance to the site is directly opposite the main entrance to the school on what is one of two roads out of the village, the other being St Wilfred's Road. The road is gridlocked from around 8-30am to 9-15am and from 2-50 pm to 4-00pm Has the site been visited by any of the planning dept who chose this site ??
Gary Hamson	South of West Hallam	Response-00052	Road Safety	I fear children's safety is at risk and the likelihood of serious injury or worse is a distinct possibility of happening
Gary Hamson	South of West Hallam	Response-00052	Wildlife / Biodiversity	Has a check been done for wildlife on the site - bats, newts or slo worms ?
Gary Hamson	South of West Hallam	Response-00052	Bus Services	A long standing bus stop opposite the school entrance is being relocated and taken away from the existing site opposite the school entrance
Gary Hamson	South of West Hallam	Response-00052	School Capacity	Has anyone from planning checked with the school on vacancies for new pupils?
Gary Hamson	South of West Hallam	Response-00052	Healthcare Facilities	Has anyone checked if the local GP Practice have availability?
Gary Hamson	South of West Hallam	Response-00052	Green Belt	Is there any other sites in the village that is in green belt but away from the school and within the scoring given on the criteria layed down?
Gary Hamson	South of West Hallam	Response-00052	Landscape	This site with the safeguard land will severely affect residents living on Beech Lane
Gary Hamson	North of West Hallam	Response-00055	Traffic Congestion	I have lived on High Lane West since 1988 and witness in a daily basis cars speeding in access of the 40mph limit for this road and to have an entrance on here is lunacy ? has anyone from your planning dept walked up and down this road at any time during the day ??
Gary Hamson	North of West Hallam	Response-00055	Road Safety	This is a fast road in terms of the cars speeding with no speed cameras although they have been promised in the past and this just is not a safe place for an entrance to a cul de sac
Gary Hamson	North of West Hallam	Response-00055	Wildlife / Biodiversity	The field is under water for three months of the year and very possibly a site for newts
Gary Hamson	North of West Hallam	Response-00055	Number of Houses	30 is not going to make any positive impact on the VILLAGE!
Gary Hamson	North of West Hallam	Response-00055	Flooding / Drainage	There is a ditch along the boundary on the roadside and the field is a terrible location in terms of flooding and no 49 High Lane West has dealt with this over the last few years
Gary Hamson	North of West Hallam	Response-00055	Other	Again has anyone been from planning or the highways dept ??
GARY MARK WOODHOUSE	South West of Kirk Hallam	Response-01451	Traffic Congestion	Traffic volume is increasing weekly if not also at a daily rate in the Kirk Hallam area, gridlock occurs every day as far as The Cat and Fiddle public house to the Little Hallam Hill junction with Quarry Hill Road and Stanton Road numerous times throughout the day causing substantial queuing and holdups, Heavy Goods Vehicles ( HGVs) are now a major part of the problem due to the areas development of New Stanton Park which is just around the corner, this will increase traffic congestion massively over the next 10 years, the proposal to build a new bypass to the south west of Kirk Hallam is just going to send more traffic to this area with the massive housing development of 1000 houses at the side of this road / bypass with 1000s more cars added to this area surely common sense would say no to the South West of Kirk Hallam Development and further gridlock
GARY MARK WOODHOUSE	South West of Kirk Hallam	Response-01451	Road Safety	Road safety in Kirk Hallam is terrible especially School hours for dropping off and picking up children, it is a notoriously difficult time, monstrous amounts of traffic on the junctions of St Norberts road / Spondon rd / Ladywood rd / Godfrey drive all fighting to access the main road, another junction, Godfrey Drive / St Norberts / Little Hallam Hill is also as bad, Kirk Hallam has two of the three secondary schools in the whole of the Ilkeston area. Children cross at the notorious Bulls Head Junction daily with no pedestrian crossings in that area its only time before a child gets killed crossing, thousands more cars will make things even worst

Name of Responder	Consultation Site	Response ID	Response Category	Detail
GARY MARK WOODHOUSE	South West of Kirk Hallam	Response-01451	Air Quality	Air Quality In the South West of Kirk Hallam at the Moment is very good due to it being green belt and large amounts of vegetation in this area, as soon as a development of 1000 houses and a heavily polluting 24/7 bypass with Lots of HGVs going along it is constructed the pollution level will increase dramatically, the new proposed development is also in danger by the bypass straight from the start of house building as it sits right next to the bypass, which from day one of opening will emit large quantities of carbon dioxide, carbon monoxide, hydrocarbons, nitrogen oxides, mobile source air toxins such as the really bad forever chemicals such as bpa.s benzene, formaldehyde , lead and may more toxins straight into their gardens and the older houses in Kirk hallam, surely a poisoned environment waiting to cause all the ailments of these toxins to the public,
GARY MARK WOODHOUSE	South West of Kirk Hallam	Response-01451	Wildlife / Biodiversity	well what can we say apart from destroying a local nature reserve by building around it like a brick wall but even worst a housing development with a thousand houses entrapping the wildlife and oh one more thing a 24/7 40mph bypass that no amphibian or mammal can cross safely this development is a catastrophe for the local wildlife, a small wildlife corridor just aims the wildlife to the bypass to its death, roads kill lots of wildlife its a reported fact this development will not help wildlife at all it will kill more than it will ever save, disturbance from construction, dirty water run off into the local brookes streams will reduce amphibians and cut off from surrounding mates for breeding purposes wildlife will be reduced to a minimum, footfall from the new development with dogs, cycles, childrens noise and mechanical noises ie cars lorries and garden implements will drive nature away not increase its numbers a great example of amphibian detruction is the famous under road pipes for toads at Awsworth bypass, now a housing development has now wiped out the toads in that area not one survives
GARY MARK WOODHOUSE	South West of Kirk Hallam	Response-01451	Bus Services	bus services are nearly none existant in Kirk Hallam basically its the ilkeston flyer which passes through Kirk Hallam every 30 minutes to derby and ilkeston town , cars are the only way to really get anywhere which negates the enviromental sustainability of any new development solely reliant on car useage which the 1000 houses is purpose built for
GARY MARK WOODHOUSE	South West of Kirk Hallam	Response-01451	School Capacity	kirk Hallam Community Academy children aged 11-18, pupil capacity 1202 , it has 814 enrolled atm Ladywood Primary School children aged 3 - 11, pupil capacity 270, it has 321 enrolled atm, it is OVERSUBSCRIBED Saint John Houghton children aged 11-16, pupil capacity 606, it has 685 enrolled atm, it is OVERSUBSCRIBED Dallimore Primary and Nursery School aged 2-11, pupil capacity 315, it has 353 pupils atm, Oversubscribed, as you can see from these figures all accept one are oversubscribed the 1000 houses development would mean a massve influx of students to the Kirk hallam area exasperating the availability of school places with also the developers under no obligation to build any new secondary schools making it unsustainable or viable to build all these 1000 houses
GARY MARK WOODHOUSE	South West of Kirk Hallam	Response-01451	Type of Housing	No Bungalows for the elderly no nursing homes or social centres not enough affordable housing for the local community all big 3, 4, and 5 bed houses out of the reach of locals bringing in outsiders and creating a new social divide with existing locals
GARY MARK WOODHOUSE	South West of Kirk Hallam	Response-01451	Number of Houses	the housing allocation will increase Kirk Hallams population from 5966 residents by 40% plus that is far too large an increase for Kirk hallam to Take
Gary Mortimer	North of Borrowwash	Response-01147	Wildlife / Biodiversity	The area is full of wildlife which would be negatively impacted by this development
Gary Mortimer	North of Borrowwash	Response-01147	Other	The quality of life for inhabitants of this development will be very poor as the houses are immediately adjacent to the A52 dual carriageway
Gary Mortimer	West of Borrowwash	Response-01148	Traffic Congestion	The road is already heavily congested and a development of this size will have a horrendous effect on the already congested A6005
Gary Mortimer	West of Borrowwash	Response-01148	Road Safety	The narrow pavements already put pedestrians at risk and any additional traffic will increase this risk unacceptably
Gary Mortimer	West of Borrowwash	Response-01148	School Capacity	There is already capacity issues at local schools which would be made much worse by this development
Gary Mortimer	West of Borrowwash	Response-01148	Type of Housing	ONLY 40% of the new homes would be affordable housing, this is very low
Gary Mortimer	West of Borrowwash	Response-01148	Number of Houses	280 houses is extremely high. This would add over 500 cars on the road in the area.
Gary Murfin	Acorn Way, Derby	Response-00373	Traffic Congestion	Traffic congestion is always bad getting in and out of Oakwood and this is bound to make it far worse and also increased pollution, especially as most houses tend to have 2 cars or more nowadays
Gary Murfin	Acorn Way, Derby	Response-00373	Road Safety	Increased traffic will lead to increased road safety concerns, especially in and around schools etc
Gary Murfin	Acorn Way, Derby	Response-00373	Air Quality	Based on each new home owner having at least one car, maybe more air quality will suffer
Gary Murfin	Acorn Way, Derby	Response-00373	Wildlife / Biodiversity	Obviously this will suffer here and in the area around Chaddesden wood
Gary Murfin	Acorn Way, Derby	Response-00373	Bus Services	I?m just reading the comments about bus services, there obviously will have to be more bus?s and routes, also I can?t understand why the bus routes through Danebridge crescent are affected, which is near where I live
Gary Murfin	Acorn Way, Derby	Response-00373	School Capacity	More new schools will be needed, the junior school in Oakwood is already too small for the area
Gary Murfin	Acorn Way, Derby	Response-00373	Healthcare Facilities	Park Medical and Lister house surgeries are already a full capacity and struggle, it?s already hard to get a appointment quickly, this is a pretty major issue already
Gary Murfin	Acorn Way, Derby	Response-00373	Type of Housing	More new housing if being built needs to be far more affordable, I thought that was the idea, the percentage of new builds be so called affordable is too low, and they aren?t really affordable enough
Gary Murfin	Acorn Way, Derby	Response-00373	Number of Houses	Again Oakwood is always a very big estate and it?s not a great idea to build more houses on the edge of it especially as the council tax will be going to the Erewash council, it obvious the housing is being built as close to the Derby border as possible
Gary Murfin	Acorn Way, Derby	Response-00373	Flooding / Drainage	There has always been flooding on Acorn way quite often over the years making it impassable, how will be stopped
Gary Murfin	North of Breadsall Hill Top	Response-00374	Traffic Congestion	The traffic in and out of Oakwood is already bad at times due to Oakwood being a big estate already, this new development and the one on Acorn way will obviously make it worse
Gary Murfin	North of Breadsall Hill Top	Response-00374	Road Safety	With increased traffic from the new developments planned in the area road safety will become a bigger issue
Gary Murfin	North of Breadsall Hill Top	Response-00374	Air Quality	Again with all the new houses having approx two vehicles which is common nowadays air quality is bound to suffer
Gary Murfin	North of Breadsall Hill Top	Response-00374	Wildlife / Biodiversity	A lot the green land in the area will be gone if the current building plans in the area go ahead
Gary Murfin	North of Breadsall Hill Top	Response-00374	Bus Services	There will have to be plans in place to have new bus routes in the area also increasing traffic in the area and pollution
Gary Murfin	North of Breadsall Hill Top	Response-00374	School Capacity	School capacity in the is already limited especially at the junior school in Oakwood there needs to be plans to ensure to local infrastructure can cope with new homes and people and children in the area , are new schools being built
Gary Murfin	North of Breadsall Hill Top	Response-00374	Healthcare Facilities	Park medical and Lister house surgeries already struggle and seem to be at full capacity, it?s very hard to get a appointment sometimes, also there aren?t enough dentists in the area and no nhs dentists

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Gary Siddall	South West of Draycott	Response-01237	Type of Housing	The percentage of houses being built and being called affordable is not enough, and even the ones being called affordable are not very affordable
Gary Murfin	North of Breadsall Hill Top	Response-00374	Number of Houses	There are far too many houses being planned to be built on the edge of Oakwood which is already a large estate, this site along with the houses planning to be built off Acorn way and near Chaddesden wood is going to create a lot of problems in the area
Gary Siddall	South West of Draycott	Response-01237	Traffic Congestion	The A6005 is a busy road already - but as a main "A" road between Nottingham and Derby (and excluding the A52 "bypass"), it's expected to be, that's what it's there for. (Figures for the amount of traffic using the road through Draycott are available, if you wish to ask). However, it doesn't take much to snarl it all up and bring the whole area to a virtual standstill ! The most recent example has been all the roadworks etc. happening in Draycott and out towards Borrowwash... The almost constant traffic lights for weeks have caused some considerable disruption in the village and surrounding roads. I live on the main A6005 and although I personally live towards the opposite end of the village to where the works and traffic lights were, it was a regular occurrence to see traffic queuing past my house and cause difficulty for me to get on and off my own driveway. But yes, this case was "temporary", I know.... But it gives a good indication of what life could be like with increased traffic and - God forbid - (potentially) additional traffic lights to allow cars to get in and out of a "new housing estate". The increased traffic will not only congest the local roads in Draycott though - I fully expect many of the additional cars will be wanting to use the A52 as well.... Access to that is already just barely adequate (IMO), but add another 190+ cars (plus all of the ones from Borrowwash's "new houses") going up and down Cole Lane...?? Really...?? Traffic flow in the area is almost on a knife-edge, so any significant increase in traffic is likely to cause huge congestion.... And with 190/240 new houses, an additional one car per household on the roads in Draycott is surely a greatly conservative estimate...? I don't know how access/egress to the "proposed new houses" is going to work, there is potentially a lot of traffic trying to get in and out there... There have been RTA/RTI's in that area in the past (including one fatal, that I can recall), But as I said above, the thought of installing traffic lights there will likely disrupt traffic in the whole area, IMO. Increased traffic will also inevitably mean increased wear and tear on the roads too: It is already obvious, that the County Council are incapable of maintaining the roads (potholes !) to an acceptable standard - has this been taken into account at all...? As far as I'm aware, road safety/traffic planning should be addressed at the very early/primary stages of planning and development proposals, but this does not appear to be the case in this instance. The road infrastructure needs to have a LOT more thought than just putting one or two "side streets" into the "proposed new estate" - in fact, the WHOLE road traffic assessment by EBC seems to have been woefully inadequate. And remember - when I keep saying "190+ cars", that is a VERY conservative "absolute best case scenario" that unrealistically assumes that every new household has just one car.... Which we all know will NOT be the case in reality.
Gary Siddall	South West of Draycott	Response-01237	Road Safety	There is potentially going to be a lot more traffic in the close area of the "proposed new houses" .... There have been RTA/RTI's in that area in the past (including one fatal, that I can recall) Has a full and comprehensive road safety/traffic planning assessment done (which I understand should be done very early on in any planning and development proposals)...?
Gary Siddall	South West of Draycott	Response-01237	Air Quality	No doubt the air quality is going to suffer during the construction stages of such a big development, But afterwards, the increased traffic will undoubtedly have a lasting effect on the air quality too.
Gary Siddall	South West of Draycott	Response-01237	Wildlife / Biodiversity	This site not only has a number of protected trees/woodland areas, but is also many species of wildlife too: It is known - and recorded - that the area is home to various species of hedgehogs, squirrels, foxes, and also deer, bats and badgers. As well as these there are many types of birds - importantly, including some on the "Red List" - which use or return to the area annually, for their nesting habitat. Obviously, their whole environment will be destroyed, with no chance of it ever coming back again. A few years ago, Water Voles were discovered at an adjacent site on Derby Road and immediately, steps were taken to protect them. Now, due to the close proximity of this proposed housing site, it is highly possible that it's development could affect/disrupt the Voles' colonies... As Water Voles are legally protected in the UK, has this been properly investigated/assessed ??
Gary Siddall	South West of Draycott	Response-01237	Bus Services	Draycott currently has an efficient bus service between Nottingham and Derby along the A6005.... this, I expect, *should* be ok - UNLESS you re going to want to start diverting busses down/around the "proposed new housing estate" (which doesn't really happen anywhere else along that route), so that will undoubtedly slow everything down. But even if the busses will stay on the main road, I expect there will have to be a new/additional Bus Stop for the "proposed new estate" with so many new houses to serve... In which case, it needs to be one that is a lay-by type, OFF the road and MUST be carefully assessed for road safety in that area !!!
Gary Siddall	South West of Draycott	Response-01237	School Capacity	Yes, Draycott does have a school - I admit I do not know whether it has capacity for new children at the moment, but even if it does, will it be able to cope in the near future with potentially 190+ additional families...?? This needs to be taken in account.
Gary Siddall	South West of Draycott	Response-01237	Healthcare Facilities	Draycott has NO doctors or dentists - so new residents (even IF they could actually afford to live in the new houses...) have no "basic amenities" in the village. Everybody knows that it's difficult enough as it is to get in to a doctors, but almost impossible to get an NHS dentist anywhere in the area. This is the case NOW - it will be massively worse with 190+ additional households ! There is not enough local infrastructure to support so many more people.
Gary Siddall	South West of Draycott	Response-01237	Type of Housing	Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the new 190 houses has been designated as "affordable housing" which breaks down to 29 x "2 Bed Terraces", and 95 x "3 Bed Semis". This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Gary Siddall	South West of Draycott	response-01237	Number of Houses	The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful countryside. And with reference to the use of the word "safeguarded", it has not gone unnoticed that an area of the proposed building site which has been marked as "safeguarded land" on the map seems to be intentionally misleading to imply that it will NOT be built on in the future, whereas the actual meaning was clearer in the original wording on the map before it was mysteriously altered recently, as it is really "safeguarded FOR future building" ! Naughty. The scale of the development is completely NOT in keeping with the character of the village. The proposed development should follow existing settlement patterns. New buildings and the volume of housing should harmonise with the neighbourhood. Retain local character and the retention of open spaces as is the character of the village. Views into and out of the village should be preserved. Clear lines of hills and spatial openness must be preserved.
Gary Siddall	South West of Draycott	response-01237	Green Belt	We all know why Green Belt is there and why it's important to preserve - once it's gone, it's gone forever. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. Green Belt land is there to check the unrestricted sprawl of built-up areas, to prevent neighbouring towns from merging into one another and safeguard the countryside. The land to south west of Draycott meets all of these and also sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. Brown Field and Grey belt areas exist - why have they been just passed over to build on Green Belt ??? Scandalous.
Gary Siddall	South West of Draycott	response-01237	Landscape	This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the villages surrounding it of Borrowash and Breaston - land which is frequently used ! The housing proposal is far too big overpowering, it will completely change the landscape of the whole area, denying the villagers of Draycott and surrounding areas some of its most beautiful countryside to walk in freely and experience the trees, flowers and diverse wildlife, as they have done for many, many years. Once it's gone, it's gone - please don't let it go !
Gary Siddall	South West of Draycott	response-01237	Flooding / Drainage	This is probably the main issue which YOU really should be the most concerned about from a legal standpoint - flooding ! Is this site really "fit for purpose", I ask?? Be under no illusions - the fields for the proposed housing in Draycott, they FLOOD - and flood regularly. I don't care what any of your so-called reports might say - if you live here, you know - the residents of Lime Grove are aware of this all too well ! Virtually every year there are photos documented on social media of the flooding in this area and other places all around Draycott, it's no secret ! Also the fact that Flood Risk Zone for these areas has suddenly and miraculously been downgraded as this building proposal is being pushed through, is highly suspicious. .... But it doesn't matter what risk number you call it, IT WILL FLOOD. Just a few days ago, it was reported that the Association of British Insurers (ABI) are warning that, as part of the Government's project to build 1.5 million new houses, houses built on/near flood plains may be deemed uninsurable ! Conveniently downgrading the Flood Risk "on paper" does not stop flooding. There seems to have been the bare minimum of liaison with Severn Trent on such matters, but even if strenuous efforts ARE undertaken to stop a new housing development in this area from flooding, where will all this water go ?? The mere fact that the removal of all the trees and grasses/plants, etc. will mean massively less root systems to help absorb water.... This could easily make *other* areas of the village newly susceptible to flooding, as the "excess" water is forced elsewhere. I do not believe that anywhere near enough investigative work has been done on this aspect, which quite rightly worries existing village residents in case their family homes potentially become newly at risk of flooding. Building here is almost reckless !
Gary Siddall	South West of Draycott	response-01237	Other	For reasons I do not profess to understand, there are clearly brown field and grey belt sites which have apparently been skipped straight over in order to somehow attempt to justify building on wholly unsuitable beautiful Green Belt land. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation (despite claims to the contrary).. This consultation process has been "pushed through" with only the bare minimum time afforded to the residents of Draycott to absorb, investigate and comment. EBC have not exactly been "understanding" when considering residents feelings and concerns in this matter, considering that many residents who maybe don't use Social Media, etc, were unaware of all this - yet EBC still refused to allow an extended 12 weeks consultation time. Also, some of the comments about residents could be taken as disrespectful. EBC have also not been "helpful", in what could be seen as "dragging their feet" with things like taking 20 days to return FOI requests, etc. It is clear where their interests lie and they are certainly not impartial.... I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. Just during the construction process (*if* it should go ahead - which by now should be obvious that it really shouldn't), the sheer amount of construction traffic that will be in and around the area will be HUGE ! And not just the proposed construction in Draycott, but in the surrounding villages as well: All of the construction vehicles, delivery trucks and other site vehicles will already be giving the roads more of a pounding than they have ever had, potentially spreading mud and dirt on them too (clogging drains...?), for some distance - not to mention all the potentially damaging vibration they will bring to all the roads in the area. Which leads me to construction pollution - the dust, fumes, smoke, etc., and especially the noise which the closer residents (and wildlife) will be forced to endure for years while all this goes on (if it ever gets finished...??!). Not acceptable. It is known that there are around 2,000 vacant Social Housing properties in Derbyshire county - why are these not being prioritised over new building ???
Gaynor Pawley	North of Breadsall Hill Top	Response-00627	Traffic Congestion	As a resident living on the A608 I can say since the recent 3 development along this already busy road, with another currently being built; the traffic load has significantly risen. Another significant development with more planned in the future would make this area total gridlock.
Gaynor Pawley	North of Breadsall Hill Top	Response-00627	Road Safety	The 40 mph limit on the A608, which has been reviewed previously has been kept as it is a main route into Derby. If more housing developments are built this is increasingly becoming part of an urban city scape and as such the road infrastructure should be dealt with to put in a bypass for this area for safety.
Gaynor Pawley	North of Breadsall Hill Top	Response-00627	Air Quality	It goes without saying air quality would suffer not only from the increase in traffic but because the roads are already gridlocked, standing traffic would exacerbate the situation.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Gaynor Pawley	North of Breadsall Hill Top	Response-00627	Wildlife / Biodiversity	Once this area has been built on there will be a permanent loss of wildlife. The development would encroach on land which has seen foxes, badgers, bats, owls and other important wildlife, which is gradually having it's habitat and feeding grounds reduced. also the proximity to the green way would further reduce the biodiversity.
Gaynor Pawley	North of Breadsall Hill Top	Response-00627	School Capacity	What are the plans to increase capacity of schools? With more children in the area especially with social housing, walking children along heavily congested routes to existing schools would pose a risk to serious accidents.
Gaynor Pawley	North of Breadsall Hill Top	Response-00627	Healthcare Facilities	After Multiple recent developments it is near on impossible to get an appointment at the doctors. The plans will build on Erewash land but due to the proximity to Oakwood, Derby City facilities would be more favourable without any contribution to improve the services. All the revenue from these houses would end up elsewhere.
Gaynor Pawley	North of Breadsall Hill Top	Response-00627	Number of Houses	60 houses on such a small piece of land would put stress on the area for flooding of Breadsall village, who are already suffering the consequences of recent developments. The more houses built the less pervious land is left, therefore moving the natural rain water down to Breadsall village and the inadequate brook which has flooded on numerous occasions in recent years.
Gaynor Pawley	North of Breadsall Hill Top	Response-00627	Green Belt	If this is Greenbelt land which is protected, why is it a target for ticking a box of the numer of houses built?
Gaynor Pawley	North of Breadsall Hill Top	Response-00627	Landscape	As a suburb of Derby there should be a semi rural feel to the area. If more houses are built on this land it ends up becoming part of the inner city. If this is the case Erewash would be contributing to an extension of urban living not protecting the semi rural feel
Gaynor Pawley	North of Breadsall Hill Top	Response-00627	Flooding / Drainage	60 houses on such a small piece of land would put stress on the area for flooding of Breadsall village, who are already suffering the consequences of recent developments. The more houses built the less pervious land is left, therefore moving the natural rain water down to Breadsall village and the inadequate brook which has flooded on numerous occasions in recent years. Drainage and sewers in this area are already under major stress and more houses would only feed into this . This would become an area of high surface run off and have a knock on effect to Breadsall and surrounding areas.
Gaynor Pawley	North of Breadsall Hill Top	Response-00627	Other	All of the revenue would go to Erewash feeding into other areas for improvement, however due to the proximity to Derby City/ Oakwood, all the resources in Derby/ Oakwood would be be effected.
Ged Doherty	North of Breadsall Hill Top	Response-01822	Other	Mental health is very important and in my case I run a small company so have considerable stress every day. The addition of the stress caused by this issue is deeply concerning and I know that that along with the hours I keep will make me most vulnerable to mental and physical degradation. On top of that the transformation of the Greenway into an urban strolling facility is removing a benefit to my health as I would wish to run in countryside and not alongside urban sprawl, and thus the situation would be even worse. Maybe you don't care about the effect that your development plans have on those involved, maybe you do, but believe me when I tell you that this is a terrible idea and the concept and the confusion and uncertainty, and the no doubt deliberately confusing misuse of the word 'safeguarded' is causing huge stress to all involved. You have a great deal of responsibility in your role, and even more so with the ridiculous targets imposed upon you by successive governments, none of whom seem to have the ability to run a bath, never mind a country. We look to you to try to at least deal with some of those targets in a way that doesn't obliterate any of the benefits of the areas concerned and show some empathy for the people who pay your wages.
Ged Doherty	North of Breadsall Hill Top	Response-01822	Traffic Congestion	Traffic in the area has increased considerably with 2 large developments within a mile of our spot in the middle, and road safety concerns are much heightened, especially at peak times, as there is simply too much traffic using that road, and to add to that with the proposed developments would exacerbate the situation intolerably. It would also cause even more traffic to divert through Breadsall again raising congestion, pollution and safety concerns.
Ged Doherty	North of Breadsall Hill Top	Response-01822	Green Belt	If I could I would make the first 10 points of objection the Green Belt. People much wiser than me proposed the idea of Green Belt land for several reasons including the prevention of urban sprawl, reduction of flood risk, providing greenspace for communities to explore, providing a home for wildlife and safeguarding resources that help clean our air and water. It is not an asset that can simply be redesignated or have the importance of its categorisation reduced by councils because they have housing targets to meet. In our situation the Green Belt is vitally important to prevent the sprawl of Derby swallowing up the village of Breadsall, and in spite of comments to the contrary in your amended study of the area, it is performing that role very well. If there is genuine concern that it is not performing well then surely erecting houses on that land would worsen the situation by ensuring that the role would not be performed at all. Development on Green Belt land should ONLY be allowed in 'exceptional circumstances?', and I would suggest that there are many brownfield sites that could be used to fulfil your targets without resorting to putting a blight on countryside areas such as in this proposal. I understand that developers love the idea of green field over brown field sites as there are many fewer construction hurdles to negotiate, but that is not an 'exceptional circumstance?', and as a Planning Officer showing consideration to the residents of your area you should be fighting even the remotest suggestion of proposals for major developments on green belt land with every fibre of your body. I live at Manor Farm Barns, and have done so since the barns were converted over 20 years ago. We have had restrictions imposed for all of those 20 years because the properties are in a protected zone, so planning has been denied for items such as conservatories, the windows have to be of wood (necessitating replacement a couple of years ago at considerable cost over PVC) and I wasn't even allowed a wood effect metal roller shutter garage door because it was 'harmful to the environment?', even though the wooden doors fitted were completely unfit for purpose and facilitated several break-ins. We have put up with these restrictions because of the privilege that we have of the beauty of the area we live in, and the loss of that once it is in the midst of the urban sprawl (the area indicated as 'safeguarded for future development?') is beyond devastating and is simply wrong. We have always been assured that development could not take place on the land north of our properties because of the Protected Zone, but it appears that at the stroke of a pen, areas can be redesignated with absolutely zero consideration for the community within which these areas lie and the same level of thought as to why these areas were designated such in the first place. The rural amenity of this area MUST be maintained at all costs. The consultation maps are out of date and in some cases do not appear to recognise the complete development of Manor Farm Barns. Previous reviews produced after visits by the planning department stated this land is unsuitable for residential building. Now an amendment is produced, again at the stroke of a pen without the same due diligence. The overall impression is that the Planning Department have a complete disregard for the work and reasoning of previous incumbents and the views of members of the impacted community; any consultations will be meanin

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Ged Doherty	North of Breadsall Hill Top	Response-01822	Green Belt	gless because the land has been reclassified and thus objections hold no water and Government targets have to be met regardless of any concerns. Thus little effort is needed with regard to consultations and what might be the best way forward as the proposals will be rammed through anyway. The 6 dwellings of Manor Farm Barns have a right of way to Mansfield Road using the track owned by the farm. We are unsure as to the intentions regarding the barns complex should this development be permitted, as our properties have not been marked as remaining (in white on the map) and are within the area ?safeguarded? for future development. (Please could the misleading term ?safeguarded? be changed, as this implies that it may be looking after the interests of parties involved, but actually only serves as our very own Sword of Damocles with the knowledge that development can take place at any time at the whim of the Planning Department.) The properties within the development were all purchased on the understanding that the area was a Protected Zone and thus commanded a considerable premium because of their location. If they end up being surrounded by this development there will be a huge reduction in the value of the properties and appropriate financial compensation would be required. If the map is correct (although I have been informed that it may well not be) then is the plan for the purchase of all buildings within the indicated ?safeguarded? zone under some sort of compulsory purchase? Again if this is the case there would need to be adequate market value compensation.
Ged Doherty	North of Breadsall Hill Top	Response-01822	Wildlife / Biodiversity	Between the village of Breadsall and the land in question is the Great Northern Greenway, which is a fabulous amenity used by many members of the community for walking, running and cycling, enabling the users to enjoy a countryside walk so close to the city of Derby. It is also a great place to observe a whole variety of species of wildlife. Allowing the land to be developed would not only devalue the Greenway from its outlook consideration (who wants to walk through a housing estate?) but would also ruin the habitat of many of the species of wildlife, forcing them to migrate elsewhere and possibly in some cases even perish.
Ged Doherty	North of Breadsall Hill Top	Response-01822	Flooding / Drainage	Although the high levels of rainfall that we have had over the past couple of years were exceptional, climate changes seems to indicate that this will be a more regular occurrence, and the area simply couldn't cope with the water running off the higher ground, primarily due to the 2 developments on the A608 mentioned earlier. The northern area of the currently ?safeguarded? area has been segregated (under government grants) from cattle grazing land to provide a nature reserve and also an area to soak away some of the water to prevent flooding in Breadsall. Even if this area itself is not built upon, the burden it would face from even more development would simply overwhelm it, leaving Breadsall even more vulnerable to flooding.
Ged Doherty	North of Breadsall Hill Top	Response-01822	School Capacity	The area is already stretched beyond the limit for schools and to force through yet more development into such a small area is nonsensical and will have a considerable impact on those already resident.
Ged Doherty	North of Breadsall Hill Top	Response-01822	Healthcare Facilities	The area is already stretched beyond the limit for medical facilities and to force through yet more development into such a small area is nonsensical and will have a considerable impact on those already resident.
Gemma	Acorn Way, Derby	Response-00380	School Capacity	You continue to want to build more and more houses. But there is no consideration of. Doctor capacity - cannot get an appointment due to the oakwood ward already bring under provided for School places - 550 house means more children and you won't contribute to extending / building a school to cater for the children who need places. Dentists / local shops, Are you building parks for children to play or just taking up all the land for profit? traffic and amenities- its already impossible to get out of oakwood after 7.45. So adding even more traffic is a huge mistake. I strongly object
Gemma	Acorn Way, Derby	Response-00380	Healthcare Facilities	Cannot get appointments now so adding more houses- are more doctors local amenities being added to?
Gemma	Acorn Way, Derby	Response-00380	Flooding / Drainage	Our garden floods now due to the changes to the road - removing green land and trees to absorb the excess water has a knock on everywhere
Gemma	Acorn Way, Derby	Response-00384	Traffic Congestion	Acorn way is already congested at peak times. Adding more homes around this area would just be absolute chaos
Gemma	Acorn Way, Derby	Response-00384	Wildlife / Biodiversity	Oakwood is known for its wildlife and green belt and you want to destroy that for homes which could be built elsewhere, Saving our wildlife and saving our green belt.
Gemma	Acorn Way, Derby	Response-00384	Type of Housing	Oakwood has a relatively low crime rate with a tight knit community, by adding these homes you risk losing this.
Gemma	Acorn Way, Derby	Response-00384	Flooding / Drainage	Acorn way is known for flooding, falling trees, and ice. Adding houses onto it would just increase flooding for a start
Gemma Cotter	North of Breadsall Hill Top	Response-01374	Traffic Congestion	The A608 is already subject to regular congestion at peak times and difficult to divert during incidents or road works. The absence of local school provision and services in easy walking distance would greatly increase traffic flows at peak times. The section of the A608 between The Paddock and Stratford Road is particularly steep and narrow. The pavement barely fits two pedestrians. The carriageway is frequently affected by the H1 bus stopping or cyclists struggling with the hill, and it is difficult for other road users to safely overtake to keep traffic flowing. The Greenway mixed use route goes a long way round the hill gradient, is not legally connected to the site (footpath rather than bridleway) and is unsuitable for efficient commuting to avoid the difficulties of cycling in the A608. It has also proved unsafe for lone women to use in recent weeks and on previous occasions where violent assaults have taken place.
Gemma Cotter	North of Breadsall Hill Top	Response-01374	Road Safety	Nearby the A608/ Lime Lane junction is the site of frequent RTCs including fatalities. The staggered junction is difficult to negotiate at peak times and increased traffic density encourages risky pulling out of the side roads. Lime Lane at Kings Corner also has a poor safety record with multiple factors. Only minor improvements have been made since the construction of Oakwood and it is a major connection between Oakwood/ Spondon to go north of Derby or traffic entering Derby from areas such as Heanor or Ilkeston. Further housing developments between Oakwood and Breadsall will place additional strain on traffic flows and accident risk.
Gemma Cotter	North of Breadsall Hill Top	Response-01374	Bus Services	The H1 offers a frequent service limited to accessing Derby at the Council House or northwards to Heanor. Services beyond Heanor are more limited. It does not connect at the bus station and is remote from the train station. Public travel connections around Derby are time-consuming and expensive pushing car use as the most practical option for most destinations, especially for multiple-person journeys. This poor provision will increase the number of car journeys.
Gemma Cotter	North of Breadsall Hill Top	Response-01374	School Capacity	School provision around the Oakwood/ Breadsall area is already inadequate. Many children from these areas already have to be driven across to other areas such as Chaddesden, Spondon, Morley, Stanley, Allestree and Heanor. The nearest primary school is a mile away by the shortest route which is not suitable all year round due to lighting and footpath conditions. The realistic practical strategy will be for parents to choose to drive adding congestion to the A608, Stratford Road junction and into Breadsall Hilltop. There is a lack of suitable SEN provision for children in this area with children not being given allocated places at appropriate special schools that can meet their needs. Secondary school applications are precarious with choices made across a broad range of schools and being subject to demand in other suburbs of Derby and surrounding areas of Derbyshire. This undermines the community of this area of Derby as children living in close proximity to each other are schooled across a large geographical area.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Gemma Cotter	North of Breadsall Hill Top	Response-01374	Healthcare Facilities	There is inadequate access to GP services and dentistry around this area of Derby. Lister House frequently has no capacity across its 4 clinics (car ownership essential to accept short notice appointments in Chellaston, Alvaston or Normanton). My family has experienced asthma escalating to 999 calls because timely access to a GP for additional steroids to relieve symptoms was not available. This is a greater overall cost to the NHS. There is no NHS dentistry in Oakwood. Breadsall does not have any medical services locally.
Gemma Cotter	North of Breadsall Hill Top	Response-01374	Green Belt	This land is an essential part of the separation of Derby's suburbs and maintaining Breadsall's character as a separate Derbyshire village. It maintains a wedge of open countryside going towards Derby as far as the Paddock pub. The green belt is already under threat by a planning application at Chaddesden Woods which could sever the woods from open countryside. Some of this land could be lost to development near the A61. The more substantial that these green belts and green wedges are, the more ecological value they have at being able to sustain wildlife populations.
Gemma Cotter	North of Breadsall Hill Top	Response-01374	Flooding / Drainage	The heavy clay soils at the site waterlog each winter and after periods of sustained heavy rain which are predicted to increase due to climate change. The frequency of significant flooding downhill in Breadsall has been increasing in recent years since new developments at Durose and Allport Heights. This causes damage to homes in the valley, closes access through Breadsall and causes damage to amenities such as the Greenway. The density of these recent additions to the housing stock have little natural drainage through small gardens not conducive to beneficial measures like tree planting and healthy lawns, and paved frontages dedicated to maximising car parking. There is also the risk of an additional 150 homes being built behind Chaddesden Woods putting additional drainage issues upstream and along Lime Lane aggravating these issues.
Gemma Cotter	North of Breadsall Hill Top	Response-01374	Other	Although this site is in Erewash, it is not connected to other settlements or services within Erewash. The nearest services available are provided by Derby City and development at this site will not fund them through council tax. These services are already strained and struggle to meet the needs of the current population around Oakwood and Breadsall Hilltop. The boundary nature of this site and nearby area causes maintenance issues with roads and footways as maintenance and repairs are more complex to organise. There are other planning applications within the nearby area under consideration by Derby City Council and the cumulative effect of each development site must be considered holistically to protect the environment, living conditions, access to services and road safety.
Gemma Woolnough	South West of Draycott	Response-01394	Traffic Congestion	The location of this housing development is directly off the main road through Draycott, a road which is already very busy at peak times and on which there is a high level of traffic speeding. There has also been multiple fatalities on this road involving cars entering the road from various streets & avenues going off it. It is very likely that the entrance to this housing development will require traffic to merge near the bridge which means less time for cars/motorbikes to react to new cars entering the road. The increase in traffic will also result in increased noise and air pollution, negatively impacting the lives of villagers.
Gemma Woolnough	South West of Draycott	Response-01394	Road Safety	As previously mentioned there has been multiple fatalities on the main road through Draycott, the latest on Tuesday 13th May, in which a motor cyclist was killed. Speeding is commonplace on the main road going through the village, which would likely only be made worse by an increase in houses and consequently more traffic. Many of the fatalities have involved traffics joining the main road from side streets which will only increase with the new housing development as more vehicles will be joining a busy & fast road.
Gemma Woolnough	South West of Draycott	Response-01394	Air Quality	The new housing development would negatively impact air quality in the village due to an increase in traffic due to an increase in vehicles passing through the village. The development work would require the use of heavy machinery which would likely lead to lots of dust & debris negatively impacting the air quality in the village.
Gemma Woolnough	South West of Draycott	Response-01394	Wildlife / Biodiversity	The land this development is planned for is precious green belt land, which provides homes for lots of nature & wildlife. By building on this land it would negatively impact the wildlife in the area due to a significant loss of habitat. Deer, badgers, foxes, pheasants, barn owls & bats and many bird species have been seen on this land, all of which would be displaced if this housing development were to go ahead. Also being very close to multiple water sources water vole have also been seen in the very near surrounding areas. As more and more green belt land is being built on this will only continue to get worse with less & less places for wildlife to live in leading to a loss of biodiversity in Draycott and surrounding villages but also negatively disrupting vital ecosystems.
Gemma Woolnough	South West of Draycott	Response-01394	Bus Services	Currently there is only one bus service in the village which is already busy at peak times. If the housing development were to go ahead additional buses would be needed to meet demand.
Gemma Woolnough	South West of Draycott	Response-01394	Healthcare Facilities	Currently in Draycott there is not a doctor or a dentist. The nearest doctors is in Breaston or Borrowwash which is already very busy with limited appointment capacity. There are currently no NHS dentist places for adults in Breaston or Borrowwash meaning that the new residents in the housing development would need to travel some way out to try and find a dentist. The village is not set up to cater for more residents due to the lack of any medical provision in the form of a doctor or dentist.
Gemma Woolnough	South West of Draycott	Response-01394	Number of Houses	The 190 houses proposed seems far too many for a village with no Doctors', Dentist or Secondary School. The residents would need to travel out to find any of these essential services. The primary school is only small with limited nursery spaces so parents with young families would need to travel out of the village to find a nursery with spaces if they require it. The proposed land is very close to a bridge which likely means there would be limited access roads going in and out of the development, which does not seem feasible or viable with so many houses. The road is already busy at peak times, with a high level of fatalities for a village this size, the vast increase in houses they would likely increase the traffic level significantly which may result in further fatalities.
Gemma Woolnough	South West of Draycott	Response-01394	Green Belt	This housing development is proposed on precious green belt land which is home to a diverse range of nature of wildlife including: deer, bats, barn owls, foxes, rabbits, badgers and many birds. Green belt land is precious and provides essential homes for wildlife. By building on this land it would result in a significant loss of biodiversity, permanently damaging ecosystems. I strongly object to houses being built on green belt land when other alternative areas are available not on previous land.
Gemma Woolnough	South West of Draycott	Response-01394	Landscape	The land proposed for the housing development is directly adjacent and opposite many residential homes and is kept as agricultural fields with horses grazed on the fields. By building on this land it would negatively impact the landscape of the whole village with the loss of beautiful open space, which many people find positively impacts their mental health. The housing development would cause a loss of this landscape, instead built on and concreted over, negatively impacting the area.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Gemma Woodbough	South West of Draycott	Response-01204	Flooding / Drainage	The proposed land for this development is directly on a flood plain which often floods during time of heavy rainfall. For many months the land is water logged which if built on would likely lead to an increased levels of surface water run off. This would increase the flood risk of the whole village including the residents of the proposed new homes. As the effects of global warming increase, we will likely experience wetter weather conditions which if this vital flood plain is built upon will increase the flood risk to the rest of the village. Many homes in the village already experience the effects of flood water and the risk to homes being flooded in the future will be significantly more if the land is built upon.
Geoff Potts	East of Breaston	Response-01205	Flooding / Drainage	The report on the site attributes the poor drainage to unauthorised ground works. However the water table has always been high, when we moved into our property in the mid 1980?s the field behind was uncultivated brush land yet the house next door was left with standing water in the rear garden after periods of heavy rain. For the reason above I am opposed to any development which could increase the flood risk.
Geoff Potts	East of Breaston	Response-01205	Other	Have any checks been undertaken to ensure that there is no hazardous waste on the site? There is a raised area of land just west of the row of trees and north of the perpendicular row of trees dividing the propose sight. This raised area is the result of something being emptied from tipper trucks several years ago ago.
Geoff Tindsley	West of Sandiacre	Response-00755	Traffic Congestion	I am a regular visitor to my father and step-mum?s house on Larch Drive and I wish to object to the currently proposed vehicular access for this development. 1. I am astonished that this even being considered by the council. The access itself appears to be significantly constrained. I would have thought that, even with the removal of trees/hedges by the access site, this would still be extremely narrow to allow for a 2-way road and footpaths. 2. My understanding is that a two-way road typically requires a width of 5.5 to 7.3 metres, plus space for a pedestrian footpath. My father has measured the current road at the point near the gate, and the actual road is only 5.487m wide, which falls below the minimum required for a two-way road. If the existing footpaths are added to this measurement, the total width required to continue the existing footpath lines and the road itself is 9.04, which appears to be significantly more than the available access width. 3. Therefore, even with the absolute minimum road width just after a bend, this proposal fails to allow for safe pedestrian access alongside vehicle movement. As a result, the development of 180 homes would leave residents without a safe pedestrian route in or out of the site. 4. I can confirm from personal experience that the route leading to the site from the main road consists of narrow residential streets, which are frequently lined with parked cars, both on the roads and on the pavements. The latter could cause significant accessibility and safety issues for people of limited or restricted mobility and parents with young children and pushchairs. I understand that the Sandiacre Neighbourhood Plan 2022-37, recently agreed following a referendum, clearly identifies many of these access roads as already being congested. 5. I believe there is existing evidence of buses getting stuck, particularly on Beech Avenue, indicating that large vehicles, especially construction traffic, would be unable to safely navigate these roads. 6. I am also concerned that a fire engine, ambulance, or any emergency vehicles, would struggle to access the site in a timely manner due to these same constraints, particularly where parked cars restrict manoeuvrability. This raises serious concerns regarding access for emergency services and the safe management of construction traffic. 7. The proposed development would inevitably increase the number of vehicles using these currently quiet roads. At present, drivers patiently wait for one another to pass parked vehicles. However, with significantly more traffic generated by 180 homes, the parked cars that currently cause little disruption are likely to create congestion and hazards for pedestrians. Current ONS statistics suggest that there are an average 1.29 cars for each household in the country. This would suggest an additional 232 for a development of 180 properties. However, given that only 10% of the development would be earmarked for ?affordable? housing, with the remainder (based on the developer?s other sites locally) likely to be 3, 4 and 5-bedroom houses, the expectation is the number of cars will be significantly higher. 8. Cloudside Road, is the ONLY access to Larch Drive, and is on a steep gradient. In snowy or icy conditions, it actually becomes impassable. It is never gritted (presumably one of the reasons being that the gritter lorries cannot access the road), and it relies on local residents to grit the road manually accessing a grit-box halfway up t
Geoff Tindsley	West of Sandiacre	Response-00755	Traffic Congestion	he road. For all of these reasons, I strongly object to the proposed vehicular access arrangement and urge the planning authority to reconsider a solution that ensures both safe pedestrian connectivity and appropriate vehicle access, without compromising the surrounding residential streets.
Geoff Tindsley	West of Sandiacre	Response-00755	Road Safety	1. Stanton Road is the ?main? access road to the proposed site, with Beech Avenue and Coronation Avenue feeding off it. There are only two wider approaches to Stanton Road ? from the west from Rushey Lane, and from the east from Town Street/Ilkeston Road. I believe that Rushey Lane has a weight restriction on it of 7.5 tonnes (unless for access) to prevent HGVs travelling on to Stanton via Stanton by Dale, so it would seem inevitable that any construction traffic will have to enter from Town Street/Ilkeston Road. 2. When coming from the other side of Nottingham, via Moorbridge Lane, there is a difficult right-hand turn into Stanton Road, particularly when there are large HGVs coming in the opposite direction. There are tight, blind bends immediately you access Stanton Road, another when to turn right close to the Blue Bell pub, and particularly so when you turn left by Sandiacre Football Club/St Giles Park. Within 100m of the football club, on the opposite side of the road, is Cloudside Academy Primary School. 3. I am sure that both are important facilities/amenities for the village. However, when there are practice nights, match days and on evenings when football matches are being screened on TV, I have experienced Stanton Road being extremely congested. It must not be forgotten that the football club provides facilities for children as well, and this causes serious safety concerns for them, particularly as they are less aware of the safety hazards caused by the congestion. 4. I am aware that school drop-offs and pickups are even worse. Whilst there is a temporary restricted speed of 20mph during these times, the congestion is awful, with congestion on street corners creating further blind bends for people trying to turn left out of Beech Avenue, and with parking extending well up Beech Avenue as well. 5. Whilst most drivers are considerate and careful, I have seen instances where drivers have had to mount the school-side kerb to avoid vehicles coming in the opposite direction. With very young children in the vicinity, I think there already is a major safety issue which can only be worsened by an increase in traffic numbers from the proposed development. This is particularly the case when large construction traffic is added to the situation. I consider the road safety issues involved with this proposal to be extremely serious, and I therefore strongly object to the proposal.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Geoff Tindsley	West of Sandiacre	response-00755	Air Quality	I wish to object to the proposed development on the grounds of its likely negative impact on local air quality. 1. The land identified for development currently must act as a vital green buffer between the M1 motorway and existing residential properties. This open space would play an important role in absorbing pollutants and providing a physical barrier that shields homes from the worst effects of motorway emissions. The loss of this green space would remove that buffer entirely, exposing current residents to higher levels of air pollution. 2. Speed control/monitoring on the M1 tends to result in more cars being slower/stationary in the area increasing air pollutants. There also seems to be far more HGVs going through the village. 3. The proposed addition of 180 dwellings would lead to a significant increase in vehicle movements in the area both during construction and once the homes are occupied. This additional traffic, in combination with the factors previously highlighted risks tipping the local area back into non-compliance with national air quality standards. 4. Following development in this location risks not only increasing air pollution for future residents, who would be living right next to a major motorway, but also worsens the quality of life and health outcomes for the existing community by removing a green-belt space that currently acts as a protective buffer. For these reasons, I strongly object to the proposed development and urge the planning authority to carefully consider the long-term environmental and health impacts on the community.
Geoff Tindsley	West of Sandiacre	Response-00755	Wildlife / Biodiversity	1. I'm aware that there is much anecdotal evidence of foxes, badgers, rabbits and moles, and I know from my parents' experience that there are field mice and brown rats. They do see bats regularly during the summer, where they roost in the woods. In terms of reptiles, common frog and common toad are believed to be resident, together with grass snakes and, I understand, adders. 2. Resident bird species are many and varied. My parents' house backs on to the wood at Stoney Clouds (Compartment 6 Cloud House Plantation). They tell me that they have personally seen or heard 29 different bird species over the last 12 months, either as visitors to their garden or on walks in the woods themselves. These include over-wintering migrants such as chiffchaff and blackcap, sparrowhawk, greater spotted and green woodpeckers. Also included in this list are birds identified in the report as being priority species in the UK and Lowland Derbyshire Local Biodiversity Action Plan - bullfinch, song thrush, house sparrow and dunnoek. All the species are associated with the hedgerow and woodland habitats.
Geoff Tindsley	West of Sandiacre	response-00755	Bus Services	1. Whilst I do not have any experience of using the bus service in the area, I can well understand the problems that the buses have in negotiating the local roads. I know that both my parents have had situations where the bus driver has been unable to get through a gap because of parked cars, and has had to stop and knock on doors to ask people to move their vehicles. I wish to raise an objection to the proposed development on the grounds of poor accessibility and inadequate public transport provision. 2. There is no way that a bus could access the development land. Access from the development site would be difficult for less mobile residents, or parents with pushchairs, and I believe this would discourage the use of public transport, and thereby encourage increased car usage, which is not ecologically friendly. For these reasons, I object to the current proposal and urge the planning authority to ensure that any approved development provides proper, accessible public transport links that serve all residents.
Geoff Tindsley	West of Sandiacre	response-00755	School Capacity	I wish to object to the proposed development on the grounds of insufficient local school capacity to accommodate the likely increase in pupil numbers. 1. I believe that Cloudside Academy is currently operating at capacity, and I understand that other nearby schools are in a similar position. While there is some indication that pupil numbers may fall in the future, we have yet to see any significant evidence of this locally, and any such changes would take time to materialise. 2. An additional 180 dwellings would undoubtedly bring more families to the area, many with school-aged children. Without proper forward planning and investment in additional classroom space, local schools will be unable to provide the places required. This could result in children being allocated places far from their homes, creating further strain on transport infrastructure and undermining the principle of community-based education. I must object to this development on the basis that the local education system is not currently equipped to support it.
Geoff Tindsley	West of Sandiacre	response-00755	Healthcare Facilities	I wish to object to the proposed development due to the lack of sufficient healthcare provision in the local area. 1. I understand that there is currently only one GP surgery and one dentist in the village. Although there are no patient quotas at GPs, I am told that it is extremely difficult to get an appointment, and patients are required to call at exactly 8am, or personally attend the surgery, to stand any chance of being seen. If you call even 30 minutes later, all available appointments for the day are typically gone. This has become the norm, not the exception, and it reflects the level of pressure the practice is already under. Adding another 180 homes to the area will place further strain on a system that is already at breaking point. Without additional investment in local healthcare infrastructure, this development risks worsening access for both existing and new residents. 2. There is a similar situation relating to dentists, where it is almost impossible to register for an NHS dentist at any local dentist with the Erewash BC. For these reasons, I strongly object to the application and urge the planning authority to ensure that adequate health infrastructure is in place before any further large-scale housing developments are approved.
Geoff Tindsley	West of Sandiacre	response-00755	Type of Housing	I wish to object to the proposed development on the grounds that it does not appear to be in accordance with the local Neighbourhood Plan, particularly in terms of housing scale, type, and density. 1. A proposal for 180 dwellings on this site would represent a significant increase in density compared to the surrounding area. It would result in a development that appears out of scale and out of keeping with the established residential character. Such a large number of homes in a single location also risks undermining the carefully considered planning policies agreed through the Neighbourhood Plan process. 2. Restricting the number of 'affordable' houses to just 10% appears to conflict with the Neighbourhood Plan, which recommends (para. 145) that 'the Parish diversify its housing mix, increasing the number of 1-2 bedroom dwellings to balance out the high proportion of 3+bedroom dwellings on offer and ensure that both younger households and downsizing older people have a broader range of options than they do at present?'. I suspect that to include a higher percentage of affordable housing would make this a much less viable and lucrative development for the developer.
Geoff Tindsley	West of Sandiacre	response-00755	Number of Houses	It is my strongly held view, and mirrored by neighbours and residents in the affected areas, that NO houses should be built on this land whatsoever. It is completely inappropriate given the significant access and traffic issues, and I therefore strongly object to the suggested development.
Geoff Tindsley	West of Sandiacre	Response-00755	Green Belt	The land in question is currently classified as green belt, and it also adjoins the Stoney Clouds Nature Reserve. Whilst the Revised Strategy document requires that 'a suitable green buffer between development and the adjoining Stony (sic) Clouds Local Nature Reserve?', I am highly sceptical that this would be adhered to by the developer, or properly monitored and enforced by the Council. Using green belt land when there are suitable brownfield sites in Sandiacre (and particularly Stanton) available is completely unacceptable.
Geoff Tindsley	West of Sandiacre	response-00755	Landscape	The proposed development of 180 houses must be considered high-density (and very much in line with other sites developed by Peveril Homes in the area. This is totally out of character compared to the surrounding area.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Geoff Hindley	West of Sandiacre	Response-00755	Flooding / Drainage	1. Whilst I believe the proposed site is not in the designated flood zones identifies by the council, I am of the opinion that any proposed development on the land could create major issues for residents in the area. My understanding is that gardens backing on to the site on Larch Drive and Chestnut Grove (backing on to what are currently now stables) get flooded during heavy rain. Some residents further down the hill, on Maple Avenue and Elm Avenue, also can be flooded as the water finds its natural course down the hill. 2. Nature reserves often act as natural drainage areas. With more tarmac/concrete making drainage less easy, developing this land could increase the risk of flooding to the existing houses, especially during extreme weather, which are becoming more frequent due to climate change. 3. A development of 180 houses will inevitably place significant stress on what is probably an already aged and stressed sewer system.
Geoff Hindley	West of Sandiacre	Response-00755	Other	1. I understand that in the appendix to the local Neighbourhood Plan, an alternative housing site has already been proposed. This site, on derelict land behind the Lidl superstore, has undergone public consultation, been reviewed by a planning inspector, and was approved through a referendum, with broad community support. This alternative site would deliver a similar number of homes to the Sandiacre area but is far better suited to the community's needs and local infrastructure. Given the extensive process already undertaken, which included public input and scrutiny, I believe this site represents a much more appropriate and sustainable option for development than the currently proposed site. In light of this, I strongly urge the planning authority to prioritise this alternative site and reject the current proposal, which does not align with the outcomes of the Neighbourhood Plan process. 2. I find it difficult to accept that any councillor that has voted to support the scheme has actually visited the site, and taken time to assess properly the significant problems and issues it would cause. Common sense would show that the proposed single site access is both too narrow, and only approached from a series of narrow, congested residential streets that have many blind right-angle bends which are totally unsuitable for HGV construction traffic. 3. Overall, given the serious traffic congestion and safety issues, together with significant access issues, (plus the fact that the land is currently green belt and borders a nature reserve I regard it as absolutely disgraceful that the council is even considering this site for possible development. It has no redeeming features, and I strongly object to the proposal.
Geoff Whittaker	West of Borrowwash	Response-01805	Road Safety	There is talk about the need for suitable and safe routes for pedestrians and cyclists, but no account is taken about the amount of work that will be needed to meet this requirement or the significant costs this will incur. This could involve work by Derby City Council on its network.
Geoff Whittaker	North of Borrowwash	Response-01806	Traffic Congestion	There is talk about the need for work to adjacent junctions but this is not detailed and what the costs will be. There is talk about a new junction on the A6005 but no costs are given. It would be reckless to not consider the overall costs within the proposals.
Geoff Whittaker	North of Borrowwash	Response-01806	Flooding / Drainage	There appears to be no mention of surface water attenuation for these sites. They will contribute to the flow going into the Derwent which already floods several times a year. They will add to the flow initially in the two brooks. The Ockbrook already is close to causing flooding to properties lower down its cause and has flooded housing on Kimberley Drive once the past years. The other brook also appears in a poor state of repair and lacks maintenance.
Geoff Whittaker	West of Borrowwash	Response-01805	Flooding / Drainage	There appears to be no mention of surface water attenuation for these sites. Geoff Whittaker	North of Borrowwash	Response-01806	Road Safety	There is talk about the need for suitable and safe routes for pedestrians and cyclists, but no account is taken about the amount of work that will be needed to meet this requirement or the significant costs this will incur. This could involve work by Derby City Council on its network.
George Foster	South West of Draycott	Response-01199	Traffic Congestion	The Road Traffic Assessment which was undertaken by Systra (13.03.25) did not include Draycott or assess the road network in or around the land south west of Draycott. This is a huge error and oversight by EBC, and further compounds the hasty and reckless approach taken by EBC when developing the housing plan with Draycott. A road traffic survey would have highlighted the significant volume of traffic experienced on the A6005 (Derby Road), which can see over 4,000 cars per day, and the already locally congested network of Gypsy Lane and Hopewell Road which cannot take the current volume of traffic. A transport assessment needs to be undertaken, particularly for the residents directly opposite the proposed site entrance; but also the whole route that the construction traffic will take. This passes through Draycott and Borrowwash. Passing busy junctions, Doctor's surgeries, public car parks, Primary schools, local cricket club as well as numerous resident's homes. Noise from the construction (including vehicle movements) and operational phases of the proposed development need to be adequately addressed. The roads in and around the proposed housing development South West of Draycott are not adequate for the volume of traffic that would use these routes if the development goes ahead. These include the A6005 (Derby Road) which itself experiences 3,861 car per day, Gypsy Lane and Hopewell Road which are small country lanes. These roads currently struggle to cope with the current traffic demand and would not cope with at least a further 190 cars if this development goes ahead. The A6005 (Derby Road) is an already busy road at peak times during the week and weekend which currently experiences over 3,861 cars a day. Adding 190 additional houses will cause significant congestion issues throughout the village and increase accidents within this overburdened area. The current road network between Borrowwash and Draycott, which includes Derby Road, Hopewell Road and Gypsy Lane, already struggles to handle current traffic demand let alone the potential for at least 190 more cars. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPF sustainable location assessment. NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic. NPPF 89. States that planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by publ

Name of Responder	Consultation Site	Response ID	Response Category	Detail
George Foster	South West of Draycott	response-01199	Traffic Congestion	ic transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic.
George Foster	South West of Draycott	response-01199	Road Safety	The A6005 (Derby Road) is an already significantly busy main road which experience an average number of 3,861 cars per day with a peak of 4,779 recorded in 2023. If 190 houses are built on the land south west of Draycott this will mean an at least additional c.380 cars in Draycott alone. This volume of traffic will significantly impact road safety and increase the risk of road traffic accidents. A recent road traffic survey which was undertaken on the A6005 (Derby Road) and close to the proposed entrance to the housing development, found that within the 40 mph speed limit in this area cars exceeded 70 mph an average of 174 times a day. The addition of over c.380 additional cars will further compound this danger and increase likely road traffic accidents. NPPF 109. States that transport issues should be considered from the earliest stages of plan-making and development proposals, using a vision-led approach to identify transport solutions that deliver well-designed, sustainable and popular places. This should involve identifying, assessing and taking into account the environmental impacts of traffic and transport infrastructure ? including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains. Yet no traffic survey has been undertaken. If it had it would have highlighted that along A6005 (Derby Road) and exactly adjacent the proposed development. The peak traffic hours on Fridays are between 4 PM and 6 PM, with the highest average vehicle count observed from 4 PM to 5 PM. The average number of cars per day in the traffic data is approximately 3,861 vehicles. The highest recorded traffic day in the data is June 11, 2023, with a total of 4,779 vehicles. The maximum speed recorded in the traffic data is 106 mph and the number of times 70 mph is exceeded in the traffic data is 174. The increased road and traffic to the area will have a detrimental impact to the local environment when considering the close proximity of Green Belt Land, the Erewash River and the Derby Road to Draycott canal and footpath. These areas contain a magnitude of nature and local habitat that will be negatively impacted by increased population density, carbon footprint and does not align to the NPPFs sustainable location assessment. NPPF 20. States that strategic policies should set out an overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat). The road network in and around the identified development would require significant investment and remodelling to handle the anticipated volume of cars. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads. The road network in and around the identified development would
George Foster	South West of Draycott	response-01199	Road Safety	require significant investment and remodelling to handle the anticipated volume of cars. This when considering EBC have proposed nearly 700 additional houses in Draycott, Breaston and Borrowwash. This is totally unrealistic and the current roads would not cope with the volume of traffic.
George Foster	South West of Draycott	response-01199	Wildlife / Biodiversity	This development will lead to the loss of the ecology in the area and the importance of the flora, fauna and wildlife and the unnecessary damage to green field sites, resulting in an irreversible stain on the landscape, and will take away grazing/arable land and the disruption for the wildlife. This is a colossal development which is not appropriate for the location chosen. The development will negatively impact the ecology, wildlife and beauty of the area. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. Following the excavation of the adjacent Derby Road to Draycott canal water voles were discovered and remedial action was taken during this work to prevent endangerment of this wildlife. When considering the adjacent development of 190 houses and the heavy and sustained construction traffic during the life cycle of the development, this will likely force this and other wildlife to relocate from the area. Historical badger sett on part of the site to the Victorian tip at the bridge of Noonning Lane. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the village of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. To safeguard and enhance biodiversity (including BAP Habitats and Species) and geodiversity and improve connectivity between, and access to, green spaces and functional habitats. This area forms a green corridor and houses a number of RED LIST species The proposed site south west of Draycott and the second phase of the development which would mean that in addition to the initial 190 houses, the development of an additional c70 dwellings would be undertaken on the identified safeguarded land on Banksfield Farm, would result in the removal of several TPO trees which contribute to the visual amenity of the area. The removal of these trees would detrimentally impact upon Lime Grove and Derby Road character and appearance. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve dam

Name of Responder	Consultation Site	Response ID	Response Category	Detail
George Foster	South West of Draycott	Response-01199	Wildlife / Biodiversity	aged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. NPPF 192. States that to protect and enhance biodiversity and geodiversity, plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. The land south west of Draycott is home to a significant amount of trees and wildlife including squirrels and badgers. The development on this land will kill wildlife and destroy historic trees and wildlife in the area. This is reckless when existing Brownfield sites existing in EBC which should be used first before Green Belt. NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greenbelt land does not meet this objective and will actually achieve the total opposite.
George Foster	South West of Draycott	Response-01199	Type of Housing	The proposed 40% affordable housing within the development is not in keeping with the surrounding housing and in particular the houses that will boarder the development. The houses along Derby Road which would back onto the new development are 4-5 bedroom detached houses with a valuation range of £600,000+. Careful consideration must be given to the existing housing and how the developers ensure similar housing is developed to maintain the neighbourhood and village character. Within the EBCs Core Strategy plan it details out a draft housing allocation which refers to the type of houses. It states that 40% of the x190 dwellings has been designated as affordable housing which breaks down to x29 '2 Bed Terraces' and x95 '3 Bed Semis'. This type of housing is not in keeping with the surrounding and existing housing which comprises of 4-5 bedroom detached houses. This allocation of affordable housing is overbearing and not in keeping with the surrounding neighbourhood and character of the village. Only x66 of the x190 houses are in keeping with the surrounding existing type of houses. Other similar developments in recent times have designated 10% of its allocation to affordable housing, The proposed siting of the development is particularly ill-considered. It is on a Green Belt site and is Grade 2 quality land, and building here would both diminish the striking views from Derby Road when entering and leaving the village, and be prominent from most angles within the village. The proposed housing mix is out of keeping with the village?s strong historic character ? no other dwellings in the village in this area are 2 bedroom terraces of which there are x29, for instance. While design issues might be solved by conditions or revised proposals, these could not remedy the siting problem. The need for affordable housing will not be fulfilled by developing on this site, as local property values for new build property currently start at circa £300,000.
George Foster	South West of Draycott	Response-01199	Number of Houses	NPPF 223. States that planning policies should set out criteria or requirements to ensure that permitted and proposed operations do not have unacceptable adverse impacts on the natural and historic environment or human health, taking into account the cumulative effects of multiple impacts from individual sites and/or a number of sites in a locality. The EBC are proposing a combined number of nearly 700 houses in the locality of Draycott, Borrowwash and Breaston which is significantly overbearing and unrealistic when considering infrastructure, road networks and amenity. The proposal for 190 houses to begin, which will increase to c.240 once the safeguarded land has been developed, is far too big and overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. The potential harm caused by the application far outweighs the potential public benefit. The scale of the development is completely NOT in keeping with the character of the village. The proposed development should follow existing settlement patterns. New buildings and the volume of housing should harmonise with the neighbourhood. Retain local character and the retention of open spaces as is the character of the village. Views into and out of the village should be preserved. Clear lines of hills and spatial openness must be preserved. This out of scale development rides roughshod over the NPPF and other relating policies and guidelines with the barest of lip service paid, with the minimum consultation being undertaken with residents which is compounded by the lack of information available and transparency. The scale and massing of the development, which will begin with 190 houses but will significantly increase when the identified safeguarded land is developed in the future, is completely out of character with its surroundings and would be incredibly overbearing on the village and neighbourhood I strongly believe that there are better suited brownfield sites and genuine Grey Belt sites with land that is of poor quality. The land south west of Draycott is Grade 2 land (very good) and should be protected. NPPF 61. States that to support the Government?s objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay. The overall aim should be to meet an area?s identified housing need, including with an appropriate mix of housing types for the local community. The land identified south west of Draycott is Green Belt and Grade 2 quality land. This development neither looks to protect the BMV not does it look to bring forward the 109 existing Brownfield sites within the EBC that has full planning consent. NPPF 73. States that the authority should identify, through the development plan and brownfield registers, land to accommodate
George Foster	South West of Draycott	Response-01199	Number of Houses	at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. Within the EBC their are 109 Brownfield sites as detailed on the last EBC Brownfield Register 2024, with 103 of these having full planning consent. Of these sites, 8 are over 1H each, giving the ability to develop over 500 houses. Why are these sites not being prioritised first over Green Belt land. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
George Foster	south west of Draycott	response-01199	Green Belt	<p>Protecting Green Belt land, this land should be kept open and unharmed. Protecting public rights of way and access, a large number of footpaths would be affected leading to harm to the landscape is therefore intensified. NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF states that Green Belt is to be protected and requires exceptional circumstances to be built on. There is nothing exceptional about the council's plans to build on un-spoilt, Green Belt land to meet their current housing target when existing Brownfield sites exist. Great weight should be given to the findings and recommendations of independent Landscape Quality Assessment NPPF states Green Belt serves five purposes which are to; check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; safeguard the countryside from encroachment; preserve the setting and special character of historic towns; and assist urban regeneration by encouraging the recycling of derelict and other urban land. The land to south west of Draycott meets all of this criteria and not only prevents urban sprawl but sets to preserve the countryside's open character and the enhancement of recreational opportunities for local residents. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. Therefore, existing Brownfield sites within the EBC should be prioritised first over using Green Belt land. NPPF refers to Grey Belt as areas of previously developed land or other land that do not strongly contribute to Green Belt purposes, The land south west of Draycott is neither of these and strongly contributes towards Green Belt purposes as it acts as a buffer, safeguards the countryside and acts as a barrier to urban sprawl. NPPF states that in exceptional circumstances authorities should review Green Belt boundaries in accordance with the policies in this Framework and propose alterations to meet these needs in full, unless the review provides clear evidence that doing so would fundamentally undermine the purposes (taken together) of the remaining Green Belt. Changing the land south west of Draycott to Grey Belt and the development of 190 homes will negatively impact the remaining Green Belt land with overcapacity and increased population density. Working on the current population of Draycott, 190 new homes will be an at least 17% increase in population. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish and Borrowwash and other villages surrounding it of Breaston and Borrowwash. NPPF states where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (?Golden Rules?) should be made: - necessary improvements to local or national infrastructure; and - the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. The proposal to remove the parcels</p>
George Foster	South West of Draycott	response-01199	Green Belt	<p>of land as identified from Green Belt status and the development of 190 homes will mean access to green spaces for existing residents will be less accessible, and no plans or provisions have been made to improve local infrastructure. We are not aware that any discussion has been undertaken by the authority with neighbouring authorities on whether they can accommodate the development need through existing Brown Field or Grey Belt land. NPPF states the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate where the development would utilise Grey Belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Belt across the area of the plan. It is clear the authority is now altering existing and acceptable Green Belt land to suit this paragraph/approach of the NPPF by converting it to Grey Belt. This is both hasty and reckless. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. The development on the land south west of Draycott for the people of Draycott and other areas, will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. It is the wrong model in the wrong place to deliver housing needs being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. This when there are 109 existing Brownfield sites within the EBC that should be prioritised first over Green Belt land. Will totally spoil a greenbelt area with lovely views. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. The considerable scale, extent and nature of the proposed development would be contrary to national policy in NPPF. We understand there is need for new housing but there are an abundance of brownfield, previously developed sites that the developers and council should explore before this location. Of the 109 existing Brownfield sites in the EBC 8 of these are over 1H each giving a combined total of 15.29H. The land South West of Draycott is c.8H. These 8 sites alone will allow 514 net dwelling to be built. These sites should be prioritised for development before the Greenbelt land to the south west of Draycott is considered and lost forever. There are more appropriate areas that could hold such a large housing development and not look out of place and spoil the little green areas left within this community. Whilst I understand the need for more housing we/I ask that you reconsider the location proposed and look fo</p>

George Foster	south west of Draycott	response-01199	Green Belt	<p>r an alternative site that would house one more suitably. I am a supporter of the building of new houses but strongly object to the scale and location of this proposed development on the land South West of Draycott. It was previously thought that the land of the former Stanton Ironworks was taken out of the EBCs core strategy due to contamination that rendered the site unusable. Yet a recent Freedom of Information (FOI) request which was answered by EBC has advised the site is indeed to be utilised and has been allocated 1000 houses. Can EBC please advise if the status of the Stanton Ironworks sites and if this is included within the Core Strategy and how the planned 1000 houses impacts the Greenbelt review and use of Greenbelt land. NPPF states that existing Brown Field and Grey Belt sites are to be prioritised over the development of Green Field and certainly Green Belt sites, but these plans offer up Green Belt in advance of Brown Field site development. NPPF 2. States it has three objectives to enable sustainable development. The third of these is an environmental objective ? to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. The EBCs proposal of reclassifying the land South West of Draycott from Greenbelt to Greybelt land does not meet this objective and will actually achieve the total opposite. NPPF 4. States that local planning authorities should approach decisions on proposed development in a positive and creative way. They should use the full range of planning tools available, including brownfield registers and permission in principle, and work proactively with applicants to secure developments that will improve the economic, social and environmental conditions of the area. EBC needs to demonstrate what appraisals have been undertaken on the 109 Brownfield sites as detailed within their own Brownfield Register, and why these sites have not been prioritised for development over the identified Green Belt land. NPPF 13. Protecting Green Belt Land:- The government attaches great importance to Green Belts. The fundamental aim of Green Belt is to keep land permanently open; the essential characteristics of Green Belts are their openness and their permanence. This is an inappropriate development in the Green Belt and there is NO evidence of the appraisals that have been undertaken on existing Brownfield sites within EBC which there are 109 with 8 of these giving over 51H and the opportunity to develop over 500 dwellings. NPPF 20. States that the target level of housing development within the plans should be capped in line with the capacity of Brownfield sites to accommodate it, to protect Green Belt yet these plans significantly exceed it. NPPF 143. The Green Belt serves 5 purposes: 1) To stop urban sprawl 2) To stop towns merging 3) To safeguard from encroachment onto the countryside 4) To preserve special settings, character and history 5) To ensure the recycling of derelict or Brownfield land. The proposals being made by EBC to reclassify existing Green Belt land to the south west of Draycott does not meet any of these 5 purposes and actually looks to achieve the total opposite. Furthermore, no apparent attempt has been made by EBC to demonstrate why the 109 existing Brownfield sites within EBC have</p>
George Foster	south West of Draycott	response-01199	Green Belt	<p>not been prioritised over this Green Belt land. NPPF 144. States before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. No attempt has been made by the authority to explore existing Brownfield sites or underutilised land within the EBC.</p>
George Foster	south west of Draycott	response-01199	Landscape	<p>Under S106 of the Town and Country Planning Act 1990, as amended, contributions can be sought from developers towards the costs of providing community and social infrastructure, the need for which has arisen as a result of new development taking place. No additional open space opportunities, protection of the public right of way or indeed to better facilities. If S106 funding is available for an application of this type this must be considered. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the villages surrounding it of Borrowwash and Breaston. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate when existing Brownfield sites are available within EBC. The footpaths that cross the land have amazing views and are used regularly by residents and visitors. The recent pandemic years have shown us that we need space to exercise and be at peace with ourselves and nature, for our own mental wellbeing. This development will have the effect, that anyone using the path would feel imprisoned by a housing estate. Loss of open land frequently used. These decisions are irreversible, and our children will have less open countryside to explore and play in. Losing safe connecting space between locations. This when existing and available Brownfield sites within EBC should be prioritised over Greenbelt. Our local surroundings will become dominated by housing estates and will blight the local walks along the Public Right of Way which connect our Village. The sheer scale of the proposed site will have such an irreversible effect on the landscape. The land/footpaths will be surrounded by housing which will render the land unusable by residents whom rely on it as an area to escape and relax. These footpaths are well-used by many people for physical and mental health. This may seem insignificant to others however, residents rely on this land to enable freedom and a work life balance, which will be lost as result of this development. Footpaths although still evident on the plan will no longer be enjoyed by families maintaining their ongoing mental health, health and well-being as they will not have the same enjoyment having to walk through a housing estate. Footpaths, the Amenity and enjoyment of the use of these pathways which cross through and around this site which provide an important means by which residents of the local villages can get access to the countryside with substantial benefits for their physical and mental health as well as providing means of sustainable transport. For the people of Draycott and other areas, this will have a devastating effect on the enjoyment of walks, replacing green space with 190 houses. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. These plans plus the plans for National Grid to install super pylons only circa 600 meters away means the</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
George Foster	South West of Draycott	Response-01199	Landscape	<p>south west area of Draycott, will be hugely impacted from both a conservation and natural environment perspective. This area of the village will be unrealistically overburdened with development on Green Belt and green spaces. The development of 190 homes will have a significantly negative impact of the visual openness of the area. This development will interrupt and spoil the landscape, negatively impacting the perceptual qualities of the area. The development will significantly obstruct and diminish the visual experience of the open countryside. The development of 190 homes will have a significantly negative impact on the spatial openness of the area, impacting both the physical and geographical characteristics of the open land, which prevents urban sprawl and maintains the separation between settlements. It will overwhelmingly impact the natural and undeveloped nature of the Green Belt area. The NPPF includes an overarching objective to protect and enhance our natural, built and historic environment, including making effective use of land. It is the wrong model in the wrong place to meet the EBCs housing needs when existing Brownfield sites exist within EBC being of a scale that is ultimately detrimental to the local landscape and will harm the countryside, wildlife and impact irreversibly upon the area. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. NPPF 8. Promoting healthy and safe communities:- 104. Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users, this area has significant amount of footpaths that will be affected by the development of 190 houses. NPPF states that sustainable development should be achieved. There is an obvious lack of definition of why this site is a ?sustainable location?. The introduction of 190 houses will increase waste, carbon footprint and impact the areas future biodiversity needs. NPPF 150. States that if it is necessary to restrict development in a village primarily because of the important contribution which the open character of the village makes to the openness of the Green Belt, the village should be included in the Green Belt. If, however, the character of the village needs to be protected for other reasons, other means should be used, such as conservation area or normal development management policies, and the village should be excluded from the Green Belt. The land south west of Draycott significantly contributes to the village and its character. This village is a part of this land and the Green Belt status allows villagers to access green spaces and enhances the village feel of the area which is rural. NPPF 151. States that once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunitie</p>
George Foster	South West of Draycott	Response-01199	Landscape	<p>s for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. This development will remove existing green spaces forever which residents currently have access to including footpath, walks and visual vistas and spatial openness. NPPF 207. States in determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets? importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation. Yet development on the land south west of Draycott will significantly impact and later the heritage of the Village including the destruction of unspoilt Green Belt land, the adjacent conservation site of the canal and other listed heritage sites that surround the identified area. NPPF 208. States the local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affecting the setting of a heritage asset) taking account of the available evidence and any necessary expertise. They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between the heritage asset?s conservation and any aspect of the proposal. This development will impact Nooning Lane Bridge, Grade 2 listed building, list entry number 1417622. NPPF 102. Access to a network of high quality open spaces would be reduced by this application and our opportunities for physical activity and health and wellbeing would be adversely affected. There would be a detrimental effect on the Carbon Sink opportunities by the loss of open land and the effects of a housing development of this size. It is important the EBC conserves and enhances the Borough landscape character and not destroy it. This proposal does not promote the conservation or enhancement of the local landscape and is an inappropriate development.</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
George Foster	South West of Draycott	Response-01199	Flooding / Drainage	<p>From the correspondence received from the EBC which was in answer to an FOI request. We can see that minimal liaison has been undertaken by the EBC planning team with Severn Trent when appraising the prospective Draycott site drainage and water management arrangements, and only four quite generic questions were asked by EBC in January 2025. It is clear from this evidence that EBC is not taking seriously the flood issues that Draycott residents experience annually with the houses on Lime Grove that back onto the land south west of Draycott experiencing significant flooding which impacts gardens and foul sewerage networks. More investigation needs to be undertaken by EBC as to why this site is not suitable for development. Increase flooding risk to the area. The houses that back onto the land South West of Draycott have experienced significant flooding and this development will further compound this flooding. There is already a risk of flooding in the area and the erosion of soil and plants will increase the risk of floods to other areas in the local community. In line with the National Planning Policy Framework, a Flood Risk Assessment may be required for development which falls within a Flood Zone. NPPF states that infrastructure must come first, yet the outline ideas to provide infrastructure are either not in place or are no timeline in advance of the proposed developments. There are currently no plans to develop new healthcare or improved infrastructure with these significant scale extensions of population. The area south of the proposed land suffers from flooding and this will only be compounded by the development of 190 new homes. Although the relevant now falls outside of a Flood Risk Zone the topology of the site indicates that the runoff from both of the sites will add to the already present flood risk areas within the Environment Agency flood risk zone. Building on a flood plain that has trees, grass &amp; plants that naturally help absorb water via roots systems when removed will have a huge impact. When considering the Environment Agency's flood risk survey for the area the development of the 190 houses will be built on neighbouring high to medium risk flood and risks compounding the flood risk in the area. NPPF 162. States that the planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure. The development of 190 houses on land south west of Draycott totally contradicts this statement as this land was previously within flood risk 1 zone, and experiences significant flooding throughout the year. This development will further compound this issues. NPPF 170. States that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where 50 development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere. Yet the land south west of Draycott experiences significant flooding throughout the year with many residents on Lime Gro</p>
George Foster	South West of Draycott	Response-01199	Flooding / Drainage	<p>ve not able to obtain flood risk damage cover as a consequence. NPPF 173. States that a sequential risk-based approach should also be taken to individual applications in areas known to be at risk now or in future from any form of flooding, by following the steps set out below. Can the EBC advise why on the eve of the original consultation meeting held on 27th March 2025 by EBC, it was advised that the flood risk zone for the land south west of Draycott had been reclassified and the information within the public domain, e.g. EA Flood Risk Plan, was out of date. Was this a coincidence and can the EBC advise why the risk zone for this land has now changed when the land still floods. NPPF 174. States that within this context the aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. Yet the land south west of Draycott was recently within a Flood Risk Zone.</p>
George Foster	South West of Draycott	Response-01199	Other	<p>I strongly object to the consultation process which as best can be described as limited and not fully transparent when engaging with the local community. EBC has only given local residents mere 6 weeks to submit objections to what is an incredibly important change to the original Local Plan and Core Strategy. This is simply not enough time for residents to review and analysis the share magnitude of information and formulate objections, this when significant information is also missing which includes the master plan for the land south west of Draycott. Only the bare minimum consultation has been undertaken by EBC with the local residence of Draycott. The six week consultation period is not sufficient when considering the share size of the development and impact on the village, and is not sufficient time for the local parish and residence to develop a set of objections. When two weeks of the consultation period was across easter half term and the consultation window included 4 Bank Holidays. This when much of the information required was not available and FOI requests were submitted and took 20 working days for a response to be received, when the government agencies contacted themselves did not work the said Bank Holidays. This has meant important information has not been received by residents when developing objections. This action by the EBC was irresponsible, some may say planned, and not acting in the interests of the local communities this plan impacts. There are around 2000 vacant social housing in Derbyshire County. Why are these houses not being prioritised ahead of this land being used for development. The manner in which EBC has undertaken the 6 week consultation is not inclusive and does not allow non internet users to be aware of the consultation and changes to the Core Strategy. The average age within Draycott and Church Wile Parish is 58 and there is a large proportion of the community that was not aware of this important change. We fully object to the whole process and in particular the 6 week consultation period. I strongly object to the significant changes EBC plan to make to its Core Strategy and the reclassification of the land south west of Draycott to Grey Belt. It is widely accepted that the Grey Belt policy has been implemented in a rushed and incoherent manner, which is reflected in the EBCs hastily revised Core Strategic Review and a clear lack of transparency and community consultation. The policy is likely to have little to no impact on achieving the government's target of 1.5 million new homes by the end of the current Parliament but threatens to destroy currently protected green spaces. I strongly do not believe these plans are in line with the National Planning Policy Framework (NPPF) 2024, and the Erewash Borough Councils (EBC) Local Plan 2022. I also do not believe that adequate consultation has been undertaken by EBC with the Draycott Local Parish Council or residents on these plans, and the impact they will have on the local community, wider village and amenity. Furthermore, the development plans plus the proposed National Grids pylon corridor which has been identified as only being circa 600 meters away from this development, will mean the south west of Draycott will be unrealistically overburdened with development impacting Green Belt land. As residents living next to the site of the proposed change in Green Belt status and future housing development, we are of the view that these proposals will have a</p>

Name of Responder	Consultation Site	Response ID	Response Category	Detail
George Foster	South West of Draycott	Response-01384	Other	serious negative impact on the village, visual openness, spatial openness, the local community and our standard of living. I strongly object to the Sustainability Assessment which was undertaken by the EBC when assessing the land south west of Draycott. The EBC assessment scored this land as +3 with a ranking of joint 3rd place, when our independent review using professionals and informed local residents resulted in a score of -6 placing this land ran 20th. When reviewed, clear and obvious errors have been made where the EBC has underplayed and positively scored key questions incorrectly to achieve a desired outcome. For example, 9.1: Will it make efficient use of brownfield land? the EBC states that it will not as the site is entirely Greenfield and we know there over 109 Brownfield sites in EBC. Yet the EBC only gives this question a -1 when it should surely receive an at least a Minor Negative -2 score. Question 16.5: Will it protect the best and most versatile (BMV) agricultural land? the EBC itself states the land south west of Draycott 'Agricultural Land Classification Grade 2 so is of reasonable quality' and this scheme will not therefore protect the BMV. Yet the EBC has scored it only -1. This in our view should be a Minor Negative -2 as there is limited Grade 2 land within the area with most being Grade 3 & 4. Furthermore, question 16.6: Will it prevent the loss of greenfield land to development? the EBC itself states that 'No, the site is Greenfield in its classification so development would not prevent the loss of greenfield land. The limited scale of site limits this negative impact', yet the site is over 8H of Greenfield Grade 2 quality land and only awards a -1. This is our view should received a -2 or even a -3 as this development will have a significant impact on the Greenfield land and its surrounding areas. Questions 2.2 and 2.1 relate to employment and EBC advises that this scheme will not boost employment in the local area due to its limited scale yet award neutral 0' to both questions. Surely these questions should receive -1 as they fail to deliver on the question. Furthermore, questions such as 14.4, 15.2, 15.3, 15.4, 16.1 and 16.2 are all speculative in their answer as they relate to the developer delivering on certain sustainable aspects which can not possibly be scored at this time. Overall, we strongly object to the EBC Sustainability Assessment and would call for this to be independently reviewed. The current housing target which drives the need to develop on the Green Belt is flawed and needs to be changed. It is based on over inflated housing targets that are not realistic, which puts pressure on local authorities to disregard the impact such developments have on local communities and villages to purely meet statistical objectives. This can be seen with the c.17% increase in the population of Draycott if the development of 190 houses goes ahead. This would also be further compounded when the safeguarded land is developed adding an additional c70 houses. This increase and expansion is unrealistic and reckless.
George Langton	North of Breadsall Hill Top	Response-01385	Traffic Congestion	My main concern is the likelihood of increased traffic flow through Breadsall Village from Brookside Road to Croft Lane, caused by drivers from Breadsall Hilltop seeking a short cut to the A38. There is already a high level of traffic through the village, particularly at peak times, causing potential danger to children at the new Breadsall C of E Primary School and congestion at the Pektron Island. In the mornings, residents of Breadsall Village wishing to turn left at the Pektron Island on to Frank Whittle Way towards the city centre and the Meteor shopping area face a long wait now, and the proposed new housing can only make this worse. A new road linking Breadsall Hilltop to Frank Whittle Way would go some way to reducing this, but obviously the steep terrain would make this a challenge.
George Langton	North of Breadsall Hill Top	Response-01386	Green Belt	The Great Northern Greenway currently provides a much-valued tranquil green space in a heavily built-up area, and both development areas come very close to this.
Georgia C	West of Sandiacre	Response-01296	Traffic Congestion	Traffic congestion is already atrocious in the local area, Sandiacre cross road lights being a key example.
Georgia C	West of Sandiacre	Response-01296	Road Safety	The roads are already unsafe as is, poor quality of driving can be observed every journey you go on. We don't need more cars on the road.
Georgia C	West of Sandiacre	Response-01296	Air Quality	Next to motorway which already contributes to poor air quality in the area.
Georgia C	West of Sandiacre	Response-01296	Wildlife / Biodiversity	Noise and disturbances to local nature reserve (which is already a small area) and the animals living there.
Georgia C	West of Sandiacre	Response-01296	Bus Services	Limited bus services in place as is.
Georgia C	West of Sandiacre	Response-01296	Healthcare Facilities	NHS is already on its knees and keeps getting worse under the Labour government. As a tax payer you cannot afford to be ill, as you will not receive the care you have contributed to all your working life.
Georgia C	West of Sandiacre	Response-01296	Type of Housing	New builds on developments such as these are renowned for not meeting standards and will not be standing in a hundred years. We have perfectly good buildings in existence as is, which if require work/investment will continue to stand the test of time as they have done for many years.
Georgia C	West of Sandiacre	Response-01296	Number of Houses	We have an aging population, so how is there a housing crisis now when for decades the number of houses has more than sufficed? The death rate is higher than the birth, so why do we require so many new builds?
Georgia C	West of Sandiacre	Response-01296	Green Belt	This is vital for both human and wildlife. If we keep encroaching and destroying our natural world I truly believe people's mental health will suffer. We are not built to sit behind screens 9-5, we need fresh air and green spaces to breathe. If we keep building in every area here and there every year to meet so called housing targets, we will be left with little to no areas of green space.
Georgia C	West of Sandiacre	Response-01296	Landscape	United Kingdom is supposed to be our green and pleasant land, not grey concrete and red brick. So much of our established woodland has already been destroyed and now it seems they want fields to go the same way.
Georgia C	West of Sandiacre	Response-01296	Flooding / Drainage	I have already witnessed local areas to myself experience heartbreaking flooding, areas which have never flooded previously. The residents who lost homes and priceless possessions all seemed to believe the reason for this was the new housing development on former farmland, which at the time had only been half completed. It seems likely they will flood again, with potentially more homes and areas flooded as the development continues.
Georgia Marvin	West of Sandiacre	Response-00261	Traffic Congestion	- I'm rather worried about how the traffic will be once the houses are built. There's already enough cars parked on cloudside road without more cars, vans and Lorry's been brought into the mix! I genuinely don't know how construction will take place as cloudside road is the only access point?
Georgia Marvin	West of Sandiacre	Response-00261	Road Safety	I do feel that there will 100% be more accidents if this goes ahead. Cloudside road has such a tight blind corner, and if two cars are met head to head I'm concerned for the safety of drivers, pedestrians and pets.
Georgia Marvin	West of Sandiacre	Response-00261	Air Quality	Construction will affect air pollution and quality. The dust, chemicals which will cover cloudside and coronation avenues will have a detrimental effect on all residents. The noise and hustle it will also bring will be outrageous and many residents will have their lives interrupted for many many years!
Georgia Marvin	West of Sandiacre	Response-00261	Wildlife / Biodiversity	I am so angry and passionate about this subject because building 180 homes will destruct so many more habitats, it will destroy breeding cycles. It will cause so many more deaths which will means all animals will flee towards the motorway. Stoney clouds is a nature reserve. Not really reserving nature when you want to destroy all their habitats.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Georgia Marvin	West of Sandiacre	response-00261	Bus Services	The I4 is the only bus route which many residents rely on. Many elderly residents rely on this service to carry out their retirement. The bus service struggles to get through as it is with the congestion of vehicles and parked cars. How are the services going to cope with over 200 more residents to take ? The buses will always be reaching full capacity !
Georgia Marvin	West of Sandiacre	Response-00261	School Capacity	There are three schools in the town of Sandiacre. An infant, primary and secondary. Which partners have to fight for a place for their children to attend. The schools are overran, overworked, overpopulated as it is. With 180 new homes being built, how many more children will we need to make room for? How are teachers supposed to stretch their very already limited time for? And what about the children the schools already host? Will they be neglected and overlooked to make way for new children? I will be interested how the government plan to solve this creeping issue?
Georgia Marvin	West of Sandiacre	response-00261	Healthcare Facilities	The residents of Sandiacre still don't all have a place within a GP or dentist. Dentists in the local area are not taking on any new patients. You have to wait 2+ months to even get a doctors appointment as it is. The current residents of Sandiacre are neglected so how is adding 180 new households going to solve this issue?
Georgia Marvin	West of Sandiacre	response-00261	Type of Housing	Sandiacre is a relatively quiet town. I'll be interested to know what kind of families this housing scheme will bring.
Georgia Marvin	West of Sandiacre	response-00261	Number of Houses	180 houses is ridiculous. Triple the residents, triple the cars, triple the strain it will put onto our town. Triple the wildlife threat. Triple the accidents this will cause.
Georgia Marvin	West of Sandiacre	response-00261	Green Belt	What once was a lovely, peaceful and charming area. A place where you could appreciate nature at its finest. During lockdown we got a real feel for what was on our doorstep, we appreciated everything nature had to offer and we've never taken it for granted again, to have that taken away from us is a disgrace and dishonour. A nature reserve no more, an absolute disgrace.
Georgia Marvin	West of Sandiacre	response-00261	Landscape	The deconstruction of such a beautiful area will be so heart wrenching and breaking. The quiet area will be no more - the traffic and disruption will ruin the area. What once had such scenic views will be overran with the horrid door to door ratio. Sandiacre will never be peaceful and beautiful again
Georgia Marvin	West of Sandiacre	response-00261	Other	I used to reside on cloudside road, I was born there. I spent 24 years there and was always rewarded by such beautiful views. I now reside on Taft Avenue, which is round the corner to cloudside school - the parking there is horrendous as it is during school pick up times/drop off. I don't see how adding 180 houses will make this any better.
Georgina	North of Breadsall Hill Top	Response-00343	Traffic Congestion	More traffic then thr roads can handle
Georgina	North of Breadsall Hill Top	response-00343	Number of Houses	Too many properties
Geri Hickton	South West of Draycott	Response-01472	Traffic Congestion	The village is busy at key times- this was shown by the recent roadworks which caused carnage! This is going to be worse with additional housing and associated cars. Add construction traffic into the mix and the roads will be horrific at key times
Geri Hickton	South West of Draycott	Response-01472	Road Safety	Traffic exiting the site will be turning into / against traffic coming over the bridge which makes them blind until last minute. This causes a significant risk to pedestrians, cyclists, horse riders, motorcyclists and other drivers Exacerbating this problem is speeding traffic which whilst it happens, cannot be prevented - it is already a danger, adding further traffic would be to increase this risk
Geri Hickton	South West of Draycott	response-01472	Air Quality	Additional traffic will obviously have a detrimental impact upon air quality increasing the risk of higher emissions and the associated health implications If there are 190 homes - many homes are a minimum of 2car families- the impact will be significant
Geri Hickton	South West of Draycott	response-01472	Wildlife / Biodiversity	The area is a haven for wildlife. I have personally seen bats, Mont jack deer and a barn owl.
Geri Hickton	South West of Draycott	response-01472	School Capacity	There is only one small primary school. Local secondary schools are further away which further increases the traffic congestion , air quality and accident risk
Geri Hickton	South West of Draycott	Response-01472	Healthcare Facilities	Local doctors and dentists are already struggling to provide a service to current residents
Geri Hickton	South West of Draycott	response-01472	Flooding / Drainage	The area is already a significant flood risk and the railway lines flood regularly. With the loss of land for water to soak into, this water will have no place to go, exacerbating the problem and causing significantly higher levels of flooding
Gillian Bosworth	North of West Hallam	Response-00920	Road Safety	High Lane is a very busy road now. Adding a new road exiting onto High Lane adds more danger to those leaving the driveways of existing housing.
Gillian Bosworth	North of West Hallam	Response-00920	Healthcare Facilities	Local health care facilities are already very stretched.
Gillian Bosworth	North of West Hallam	Response-00920	Flooding / Drainage	This field is often flooded, the flooding spreading to neighbouring properties and the road. New housing can only make matters worse.
Gillian Bosworth	South of West Hallam	Response-00921	Traffic Congestion	Already extremely busy / jams at school times.
Gillian Bosworth	South of West Hallam	response-00921	Road Safety	This proposed development is opposite the school off an already very busy road.
Gillian Bosworth	South of West Hallam	response-00921	Healthcare Facilities	Healthcare facilities are already very stretched in this area.
Gillian Fitzpatrick	West of Borrowwash	Response-00482	Traffic Congestion	For each house built there is potential for at least 2 x cars plus delivery vans, waste collectors etc etc. The access roads to the A52 (Victoria Avenue & Borrowwash Road) cannot cope with current traffic or parking outside houses with no off-street parking and I seriously worry about the impact of further traffic on the foundations and structure of the existing old houses. Pollution will be increased ? electric cars not withstanding! The surrounding roads notably the A52, Derby Road, Victoria Avenue and Borrowwash Road are already overloaded with far too much traffic, especially at peak times. Both Victoria Avenue and Borrowwash Road have schools which cause huge traffic problems already ? more homes will only increase this problem with potentially fatal results. The proposed exit onto Derby Road is a black spot with poor visibility as is access from Borrowwash Road onto the A52 ? more traffic cannot logistically and safely be accommodated.
Gillian Fitzpatrick	West of Borrowwash	response-00482	Road Safety	The surrounding roads notably the A52, Derby Road, Victoria Avenue and Borrowwash Road are already overloaded with far too much traffic, especially at peak times. Both Victoria Avenue and Borrowwash Road have schools which cause huge traffic problems already ? more homes will only increase this problem with potentially fatal results. The proposed exit onto Derby Road is a black spot with poor visibility as is access from Borrowwash Road onto the A52 ? more traffic cannot logistically and safely be accommodated.
Gillian Fitzpatrick	West of Borrowwash	response-00482	Air Quality	The pre-mentioned traffic congestion is ultimately going to cause a serious reduction of the already poor air quality. It will be like living in a city which, if this development proceeds is exactly what we shall be.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Gillian Fitzpatrick	West of Borrowwash	Response-00482	Wildlife / Biodiversity	The Green areas and farmland need to be protected. We need wildlife. We need pollinators. We need a clear demarcation between the city and the borough and ANY development on this land would mean Borrowwash feeling part of the sprawling Metropolis of Derby city! The council should only be using Brown sites for more housing in the borough! There must be plenty of vacant properties in the towns that could be converted to housing - especially affordable housing!
Gillian Fitzpatrick	West of Borrowwash	Response-00482	Bus Services	At peak times there will be a need for more buses and therefore more traffic which has previously been objected to.
Gillian Fitzpatrick	West of Borrowwash	Response-00482	School Capacity	The schools are already at capacity
Gillian Fitzpatrick	West of Borrowwash	Response-00482	Healthcare Facilities	Our doctor's practices are full and one of the practices already has a very poor reputation for answering the phone and providing appointments.
Gillian Fitzpatrick	West of Borrowwash	Response-00482	Type of Housing	There should be no housing! That field/ green space needs to be preserved. The proposed remaining green area is insufficient to separate Borrowwash from Spondon in other words the city from the borough!
Gillian Fitzpatrick	West of Borrowwash	Response-00482	Number of Houses	There should be no housing! That field/ green space needs to be preserved. The proposed remaining green area is insufficient to separate Borrowwash from Spondon in other words the city from the borough!
Gillian Fitzpatrick	West of Borrowwash	Response-00482	Green Belt	The Green areas and farmland need to be protected whatever designation they are given. We need wildlife. We need pollinators. We need a clear demarcation between the city and the borough and ANY development on this land would mean Borrowwash feeling part of the sprawling Metropolis of Derby city! The council should only be using Brown sites for more housing in the borough! There must be plenty of vacant properties in the towns that could be converted to housing - especially affordable housing!
Gillian Fitzpatrick	West of Borrowwash	Response-00482	Landscape	The question of landscape is irrelevant - there should be no housing and the landscape should remain as it is!
Gillian Fitzpatrick	West of Borrowwash	Response-00482	Flooding / Drainage	I am seriously concerned about drainage. We already experience flooding (Derby Road in particular) and more concrete means less drainage. What about sewage? Climate change has increased rainfall which has raised the water table. My garden flooded last year for the first time since I have lived here (42 years!).
Gillian Fitzpatrick	West of Borrowwash	Response-00482	Other	(Application Reference: ERE/0914/0013 Location Land West of 23 to 195 Victoria Avenue & Land North of 12 to 72 Derby Road Borrowwash DE72 3HB) The above 2014 proposal for this development went to full planning. My daughter and I attended the public meeting and the proposal was unanimously rejected ? not one member of the committee was in favour! This should stand indefinitely! I am sympathetic to the need for good housing however I have lived in this village all my life and I have witnessed the loss of many old houses, recreational sites and green areas ? I think Borrowwash has done enough.
Gillian Hitchcock	West of Borrowwash	Response-00446	Traffic Congestion	Victoria Avenue is already a nightmare for parking, why isn't there an access road so people who back onto this ?allocation? could use their gardens as off road parking option.
Gillian Hitchcock	West of Borrowwash	Response-00446	Road Safety	Again there are many boy racers using Derby Road and Victoria Avenue as a racing track! More traffic when the kids are going to school would be horrendous
Gillian Hitchcock	West of Borrowwash	Response-00446	Air Quality	Need we keep repeating that the increase in traffic will greatly affect the air quality
Gillian Hitchcock	West of Borrowwash	Response-00446	Wildlife / Biodiversity	Building on this land would be detrimental to the wildlife in the area. Surely there are enough empty houses in the area that could be do up rather than keep building on greenbelt!
Gillian Hitchcock	West of Borrowwash	Response-00446	Bus Services	Bus service is rubbish now, being more people to the area and make it worse, that's a great idea not!
Gillian Hitchcock	West of Borrowwash	Response-00446	School Capacity	The schools in the area are pretty full now, why bring yet more people traffic and chaos to them?
Gillian Hitchcock	West of Borrowwash	Response-00446	Healthcare Facilities	Wow health care is a massive problem locally, lack of appointments, so unless a new facility is being built it's going to be awful
Gillian Hitchcock	West of Borrowwash	Response-00446	Type of Housing	No housing of any variety is welcome!
Gillian Hitchcock	West of Borrowwash	Response-00446	Number of Houses	We don't need any
Gillian Hitchcock	West of Borrowwash	Response-00446	Green Belt	Keep green belt for farming!
Gillian Hitchcock	West of Borrowwash	Response-00446	Landscape	The landscape is beautiful as fields! I do not wish to look at a concrete jungle
Gillian Hitchcock	West of Borrowwash	Response-00446	Flooding / Drainage	Whilst currently a fields we don't suffer from flooding but take that away and it'll increase, if my property were to be as a result of this build I wouldn't be amused
Gillian Hitchcock	West of Borrowwash	Response-00446	Other	I really cannot see why we need housing to this scale nationwide, surely former barrack sites where houses still stand could be repurposed back for the general population! New houses these days are not affordable on today's wages
Gillian Montgomery	North of Breadsall Hill Top	Response-00625	Traffic Congestion	There is a lot of traffic NOW coming and going along Dale Acre Way , surely having more vehicles is not a good idea !!! Expanding the estate in this way can surely have a negative impact eg the air quality and the nature in the surrounding area. Also the safety aspect for children and pets . The roads around the estate are too small to cope with all this extra traffic .
Gillian Montgomery	North of Breadsall Hill Top	Response-00625	Number of Houses	Too many houses !!!
Gillian Montgomery	North of Breadsall Hill Top	Response-00625	Green Belt	Too much green belt land is being turned into housing.
Gillian Pearson	North of Breadsall Hill Top	Response-00303	Traffic Congestion	Very concerned that further housing above Breadsall Village will increase traffic volumes along Brookside Road with attendant pollution, road safety issues and noise.
Gillian Pearson	North of Breadsall Hill Top	Response-00303	Road Safety	Already mentioned as a concern
Gillian Pearson	North of Breadsall Hill Top	Response-00303	Air Quality	Unable to quantify as no information available but increasing volumes of traffic will have a deleterious effect on air quality on already very busy routes through the village of Breadsall, used as a short cut from Hilltop to A61/A38.
Gillian Pearson	North of Breadsall Hill Top	Response-00303	Wildlife / Biodiversity	Once the habitat has been destroyed the wildlife/natural habitat will be gone for ever.
Gillian Pearson	North of Breadsall Hill Top	Response-00303	Bus Services	The bus services are so infrequent as to be of no practical use to most people.
Gillian Pearson	North of Breadsall Hill Top	Response-00303	Healthcare Facilities	Will there be any additional healthcare provision included in the planning conditions? We are currently waiting several weeks for a non urgent doctor's appointment at our GP practice.
Gillian Pearson	North of Breadsall Hill Top	Response-00303	Green Belt	Breadsall is becoming subsumed by the urban sprawl of Derby and Oakwood . There will soon be no open spaces remaining, with loss of habitat for wildlife and places for people to roam amongst natural surroundings which is recognised as being so important for our wellbeing. Safeguarding land for future development is not what we should be doing - we should be safeguarding it for future generations against development.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Gillian Pearson	North of Breadsall Hill Top	response-00303	Landscape	As already stated there will soon be no natural landscape remaining around Breadsall Village.
Gillian Pearson	North of Breadsall Hill Top	response-00303	Flooding / Drainage	As residents of Breadsall Village whose property has been flooded or threatened with flooding many times in the last 10 years, we have found that Derbyshire County Council and Severn Trent Water plc are unwilling to accept responsibility for the already overburdened and inadequate drainage systems that these new properties would seek to join into. Until major infrastructure improvements are made mandatory for these new developments they should not be granted planning permission.
Gillian Pearson	North of Breadsall Hill Top	response-00303	Other	I do not believe that objections to proposed planning developments make any difference to the ultimate planning decisions made but I will continue to protest against the destruction of green fields and implore planners to ensure that conditions for necessary infrastructure improvements is made mandatory when permission is granted.
Gillian stillwell	Acorn Way, Derby	Response-01364	Traffic Congestion	This area already suffers considerable congestion , particularly at the time leesbrook school finishes for the day. The area is impassable.
Gillian stillwell	Acorn Way, Derby	Response-01364	Road Safety	The sheer amount of traffic will be an accident waiting to happen
Gillian stillwell	Acorn Way, Derby	Response-01364	Air Quality	The excessive traffic at scoool start and finish times added to the extra traffic that will be inevitable will of course decrease air quality
Gillian stillwell	Acorn Way, Derby	Response-01364	Wildlife / Biodiversity	Bound to suffer with further building
Gillian stillwell	Acorn Way, Derby	Response-01364	School Capacity	School places already too few, especially primary and infant places
Gillian stillwell	Acorn Way, Derby	Response-01364	Healthcare Facilities	Impossible to get appts in several doctors surgeries now. So adding hundreds of new houses will be disastrous.
Gillian stillwell	Acorn Way, Derby	Response-01364	Other	Oakwood is one of the largest housing estates in Europe. It is already struggling to cope. Unless it can be guaranteed there will be more school places/ doctors and a better road system and public transport more houses will be a disaster
Gill Trickett	South West of Draycott	Response-01157	Traffic Congestion	As soon as there are any temporary lights in the village, the road straight through the centre which is a main road I believe for the emergency services too - comes to a standstill with queueing traffic and basic gridlock. There is one single passing point to get from one side of the village to the other and there are no other routes around without a huge detour and the congestion is terrible.
Gill Trickett	South West of Draycott	response-01157	Road Safety	The one point in the village which all cars and vehicles must pass to get from one side of Draycott to the other - was sadly the scene of a fatal accident last night. There are not enough roads or routes through the village to accommodate the traffic that currently passes, road safety is already an issue and adding additional homes, cars and people to this village will only make the situation more grave.
Gill Trickett	South West of Draycott	Response-01157	Air Quality	More traffic, more pollution, idling cars, roadworks, construction, increased congestion and the loss of greenbelt countryside all amounts to a negative impact on air quality. We live in a village for a reason. If people want to live in a busy town or city that's fine - build more houses on the edge of these areas.
Gill Trickett	South West of Draycott	response-01157	Wildlife / Biodiversity	There are multiple protected wildlife that live I the area. Deer fawn wandering in the fields in question just last week. How is this move going to be anything other than negative for the wildlife living in this GREEN belt area.
Gill Trickett	South West of Draycott	response-01157	School Capacity	The school is tiny. 1 class per year group. There would not be space for 190 children and with 190 or more homes, this figure is not even a worse case scenario.
Gill Trickett	South West of Draycott	response-01157	Healthcare Facilities	We have no doctor or dentist in Draycott currently so it's ridiculous to consider that the local area can accommodate these extra needs for likely 400 or so more people.
Gill Trickett	South West of Draycott	Response-01157	Type of Housing	any large number of homes on the edge of a village will feel like a heavy set of building and not at all create a village. The road currently has a single file each side of independant detached houses, each unique and gently creating a blend into countryside as you leave the village. No-one wants to enter a village and be met with a huge housing estate of towering buildings, crammed together in a tight space.
Gill Trickett	South West of Draycott	response-01157	Number of Houses	Any number of houses is unacceptable. If houses need to be built, build on greybelt areas or the edge of suburbs, towns and cities. The definition of village is rural area. If this is built on, the village no longer exists. There are other areas houses can be built that would meet the government requirements without building on greenbelt in a rural location putting a strain on all of these categories - services, road congestion etc
Gill Trickett	South West of Draycott	Response-01157	Green Belt	Greenbelt should not be touched. It's greenbelt for a reason. Greybelt and brownbelt should be explored first and there are sites that meet these requirements elsewhere locally that should be built on. The powers that be cannot just disregard greenbelt classification because they feel like it.
Gill Trickett	South West of Draycott	response-01157	Flooding / Drainage	Draycott floods. Period. We have a river. Houses are flooded. Fields are flooded. Gardens are often underwater. If you build on greenbelt or any surrounding fields - which this development would be, the water will be displaced and just move somewhere else, threatening to flood more of the village.
Gill Trickett	South West of Draycott	response-01157	Other	Access to the fields, the bridge as you enter the village, the danger to add possibly 400 cars coming in and out. The site being a location for another fatal accident a few years ago when a motorcyclist died and the bridge causing a lack of visibility as people already speed in and through the village.
Gill West	West of Sandiacre	Response-01725	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Gill West	West of Sandiacre	Response-01725	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Gill West	West of Sandiacre	response-01725	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Gill West	West of Sandiacre	Response-01725	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Gill West	West of Sandiacre	response-01725	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Gill West	West of Sandiacre	Response-01725	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
			Type of Housing	High density housing is preposterous not in keeping with current housing.
Gill West	West of Sandiacre	Response-01725	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Gill West	West of Sandiacre	Response-01725	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Gill West	West of Sandiacre	Response-01725	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Gilly Turrini	South of West Hallam	Response-00151	Traffic Congestion	This road is already a parking and traffic hazard due to the school and existing road junction . Also site traffic will be hazardous
Gilly Turrini	South of West Hallam	Response-00151	Road Safety	Large school right opposite the proposed build site with lots of traffic already will put children, parents and staff at higher risk of RTC
			Air Quality	This build will create more road traffic creating more air pollution
Gilly Turrini	South of West Hallam	Response-00151	Wildlife / Biodiversity	We need to keep our green belt for nature, habitats and cleaner air
Gilly Turrini	South of West Hallam	Response-00151	Green Belt	Green belt should be protected for the sake of our planet. West Hallam used to be a village and is now a semi rural suburb of Ilkeston
Glenn Richardson	South of West Hallam	Response-00316	Traffic Congestion	Beech lane is already a highways nightmare. parking (especially at school time ) is at best dangerous..Numerous accidents have occurred involving both pedestrians & vehicles..It's a miracle no child has been seriously injured ..All week the park is in constant use with especially grassroots football which again causes traffic problems with very often cars parked along the whole of beech lane ..Anyone with any common knowledge would realise that any sort of developments on the land would add to the problems.
Glenn Richardson	South of West Hallam	Response-00316	Road Safety	It's not rocket science to realise that building opposite a large school & a major road junction into the village isn't going to help with the already ludicrous traffic problems on an already saturated beech lane ..Perhaps the council should come & take a look at for them self ..Increasing the volume of traffic using the road is again increasing the dangers to the local community
Glenn Richardson	South of West Hallam	Response-00316	Air Quality	With cars often queuing for a considerable amount of time owing to only being enough room at peak times for single lane traffic it's obviously going to effect the air quality surrounding the school & adjacent park where people meet to play sports & recreation
Glenn Richardson	South of West Hallam	Response-00316	Wildlife / Biodiversity	I've got numerous videos and pictures of the amazing diverse wild life around the questioned area ..It's a corridor for wild life ..It's a habitat for deer ,badgers,foxes bats & hundreds of varieties of birds ..from kestrels,barn owls& buzzard to woodpecker,pheasant & owls ?not to mention the common bird.im a regular user of an app to recognise bird calls & the variety is amazing ?.this development would have a massive negatively affect on this
Glenn Richardson	South of West Hallam	Response-00316	School Capacity	Scargill school is already nearly full to capacity & its almost impossible to get pre school places & child care
Glenn Richardson	South of West Hallam	Response-00316	Healthcare Facilities	It's already impossible to register for an nhs dentist in this area & almost as hard to get a doctors appointment..We've lived in the village for over 20 years & only our kids can get a dentist locally.
Glenn Richardson	South of West Hallam	Response-00316	Number of Houses	Do we really need more housing when the new builds on the white hart site are still empty ?yet again another planning office disgraceful decision
Glenn Richardson	South of West Hallam	Response-00316	Green Belt	Consider that 10 years ago this wonderful council turned down our building application to extend our house ( which we won on appeal from the Secretary of State) on the grounds of it spoiling the view of greenbelt land from the junction of station road & beech lane ?.the same view you want to spoil with the proposed development?This land is a vital part of the local eco structure
Glenn Richardson	South of West Hallam	Response-00316	Landscape	Such a detrimental impact on the landscape & the diverse wildlife habitat .For many residents it's their only view of gods great countryside
Glenn Richardson	South of West Hallam	Response-00316	Flooding / Drainage	the fields off beech lane & station road act as natural flood plains.Since the council allowed the development on the old white hart pub site ,drainage is a constant problem (I've got videos to reinforce this )
Glenn Richardson	South of West Hallam	Response-00316	Other	So with the only pub in the village closed , the pav bar is now the hub of the community.We back on too the cricket club & occasionally we hear music / noise late at night ,but it's great to see the community using it as an asset ..Bonfire night sees the whole village get together ..I'm sure the people living on the proposed development won't be happy about that ..thus creating great concern that we might loose another community hub ..In the day time the field is used by numerous people exercising themselves/dogs/children etc in a safe & friendly environment
Glyn Holner	West of Sandiacre	Response-01697	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Glyn Holner	West of Sandiacre	Response-01697	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Glyn Holner	West of Sandiacre	Response-01697	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Glyn Holner	West of Sandiacre	Response-01697	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Glyn Holner	West of Sandiacre	Response-01697	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Glyn Holner	West of Sandiacre	Response-01697	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
			Type of Housing	High density housing is preposterous not in keeping with current housing.
Glyn Holner	West of Sandiacre	Response-01697	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Glyn Hallier	West of Sandiacre	Response-01697	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Glyn Hallier	West of Sandiacre	Response-01697	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Glynn Booker	Acorn Way, Derby	Response-00394	Traffic Congestion	Morley road is in poor condition and not suitable for heavy traffic as the weight limit sign indicates as no through road to heavy traffic. The round about at the top of Morely road is over capacity as it is, without any additional vehicle traffic.
Glynn Booker	Acorn Way, Derby	Response-00394	Road Safety	The additional road traffic and lack of foot path on the field side is a major safety concern.
Glynn Booker	Acorn Way, Derby	Response-00394	Air Quality	Currently the natural forma has a chance to absorb the amount of carbon produced, the additional concrete and tarmac will mean less carbon absorption especially with the increase in traffic.
Glynn Booker	Acorn Way, Derby	Response-00394	Wildlife / Biodiversity	This is traditionally green belt/ farm land with an abundance of wildlife, don't the wild animals have a right to homes?
Glynn Booker	Acorn Way, Derby	Response-00394	Bus Services	Busses going to town don't have suitable paths and safe crossing for children. Busses have been reduced in number so unless these are being increased then mist people will elect to use cars instead.
Glynn Booker	Acorn Way, Derby	Response-00394	School Capacity	Additional pressure on schools will mean more children travelling further, All local schools are at full capacity so unless more schools are being built our children will not get the high standard of education we expect.
Glynn Booker	Acorn Way, Derby	Response-00394	Healthcare Facilities	It is hard enough getting a doctors or dentist appointment as it is without an additional 1000+ people adding to that pressure, we need more healthcare facilities not less!
Glynn Booker	Acorn Way, Derby	Response-00394	Type of Housing	I have no objection to social houses being built as long as the right infrastructure is built as well.
Glynn Booker	Acorn Way, Derby	Response-00394	Number of Houses	Reducing the number of houses from 600 to 500 will not make any difference if the infrastructure is nit being put in place to cope with any number of additional families.
Glynn Booker	Acorn Way, Derby	Response-00394	Green Belt	We shouldn't be building on green belt and when there is still brown belt land available. We must consider how we reduce our carbon not increase it without a reduction plan in place.
Glynn Booker	Acorn Way, Derby	Response-00394	Landscape	What are the considerations going to be to the Biodiversity how are you considering Biodiversity Net Gain?
Glynn Booker	Acorn Way, Derby	Response-00394	Flooding / Drainage	The proposed land is what I understand an absorption belt, without it houses lower down Morely road will be at risk of flooding.
Gordon Bruce	West of Sandiacre	Response-01455	Traffic Congestion	Traffic is backed up for several hundred m from the cross road at Bostocks Lane/Derby Road towards Rushy Lane on a daily basis. The potential developments at West Hallam and Stanton will only make this problem worse. Adding potentially a hundred or more cars exiting that area of Sandiacre will only worsen this already problematic situation. The huge problem with lack of parking at Cloudside will also be worsened by adding 180 more homes. There is no dedicated parking so cars already park on the pavement as the road is too narrow for parking and busses, lorries etc This is putting lives at risk.
Gordon Bruce	West of Sandiacre	Response-01455	Road Safety	There are already huge problems with parking for schools and nurseries as the roads in that area were not built to accommodate the number of cars parked and cars delivering children to schools etc, so problems already occur. Busses and vans struggle to get through already. There would also be a major issue with Coronation AVE and Larch drive being dug up to allow services to be laid for new housing. Parking and access are already very difficult. The extra traffic for a project of this size on an unserviced green field site is huge, as would the disruption to locals be if this were to go ahead. Safety is inevitably compromised if people who already fight for parking near their homes are given even less access if their road is dug up. The proposed entrance from Lark Drive is woefully inadequate, far too small for the volume of construction traffic, and unsafe for existing residents.
Gordon Bruce	West of Sandiacre	Response-01455	Air Quality	The proposed site is a green buffer zone, one of few, to protect the people of Sandiacre from the traffic on the M1. They already endure reduction in air quality and noise pollution and should not have this small green space removed as a local amenity.
Gordon Bruce	West of Sandiacre	Response-01455	Wildlife / Biodiversity	Stoney Clouds is a much loved local amenity where children can learn about nature and see it in action with a huge variety of birds and mammals living there. The conurbation that is Sandiacre, Stapleford and Long Eaton is sadly lacking in wild life space, so this area of nature reserve should not be removed.
Gordon Bruce	West of Sandiacre	Response-01455	Bus Services	The busses on Coronation AVE and Stanton Road are frequently held up by the many cars which struggle to park to access Cloudside, the swimming clubs at the pool and the Costcuttr shop. 180 extra houses will only make bus access more difficult.
Gordon Bruce	West of Sandiacre	Response-01455	School Capacity	Residents already struggle and worry about there being a place for their child in over subscribed schools and nurseries. This would make the problem worse.
Gordon Bruce	West of Sandiacre	Response-01455	Healthcare Facilities	They are already over subscribed and Stapleford is not taking new patients from Sandiacre. This situation is already so difficult for locals.
Gordon Bruce	West of Sandiacre	Response-01455	Type of Housing	It would not matter how many houses were planned here, the green space should not be removed for local people and wildlife.
Gordon Bruce	West of Sandiacre	Response-01455	Green Belt	This green belt is one of very few that side of the M1 in the huge conurbation. The amenity of green space is well known now as a positive for mental health.
Gordon Bruce	West of Sandiacre	Response-01455	Flooding / Drainage	There are artesian springs in this area which needs to flood in wet weather, and old drainage lower down the hill in Sandiacre that is unlikely to fare well with new housing.
Gordon Dahill	South West of Draycott	Response-00690	Other	This goes entirely against the Sandiacre Plan which is a shameful way of ignoring the local people.
Gordon Dahill	South West of Draycott	Response-00690	Traffic Congestion	The extra traffic congestion between Breaston Draycott and Borrowwash with a possible extra 1000 cars is going to cause significant traffic problems
Gordon Dahill	South West of Draycott	Response-00690	Road Safety	Access to Derby A6005 just beyond the bridge after the 40 to 30mph is barley 100 yards , plus the fact that view of the road ahead is compromised by the road dropping down towards the entrance after the bridge, where there will queuing for the entrance causing a hazard . this junction has already had several accidents , one FATAL. It will become an accident black spot. I believe that a resident living opposite the entrance recalls that an application for a small garden centre on the proposed site was rejected in the past due to highway safety concerns. Putting a pedestrian crossing will only make the road more dangerous ant the bus stop east to Nottingham is only a narrow pavement 'no shelter. Anything of any width on the pavement will mean people will need to step into the road to get by, with possible consequences. Also other proposed changes ,signes dragons teeth will not remove the basic dangers associated with this junction.
Gordon Dahill	South West of Draycott	Response-00690	Air Quality	Is going to cause significant air and noise pollution problems

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Gordon Dahill	South West of Draycott	response-00690	Wildlife / Biodiversity	The woods hedges and field borders are home to much wild life, and the field itself. These also help to CO2 and other emissions. Badgers foxes hedgehogs little owls greater spotted woodpeckers green woodpeckers buzzards sparrow hawks (nesting in the trees) many smaller birds blue tits great tits gold finch and many others. Occasionally a rare little egret when the field is waterlogged behind Lime Grove .
Gordon Dahill	South West of Draycott	response-00690	School Capacity	Availability of spaces in the local schools is not certain and secondary schools require buses to reach the schools More congestion.
Gordon Dahill	South West of Draycott	response-00690	Healthcare Facilities	Doctors and dentists are only in the adjoining villages and are already overloaded with patients.
Gordon Dahill	South West of Draycott	response-00690	Green Belt	Currently the fields being turned from GREEN to GREY BELT are areas of grain production (this country is in need of HOME grown food with foreign imports under threats from world political instability). The field between Bankfields farm and Lime Grove was being manured, ploughed and sown the VERY DAY by CHANCE ON FACEBOOK THE DAY AFTER THE FINAL DAY FOR COMMENT !!! A VERY POOR SHOW BY THE COUNCIL NOT all have access to or make use of facebook.
Gordon Dahill	South West of Draycott	response-00690	Flooding / Drainage	THE fields in question and the surrounding area flood regularly every year causing damage access and inconvenience .WE and other residents in LIME GROVE get regular texts in the early morning from the environment agency warning of flooding. Is it a COINCIDENCE that the flood plane area was CONVENIENTLY CHANGED just a FEW DAYS before the plans were announced As far as we can tell weather river and climate factors have not suddenly changed. What could make things worse, is the possibility by Derby City to start flood control in the city .The result of this would a greater flow of water down river to Draycott. Extra houses and concrete bases for huge pylons are all going to raise the chance of increased flooding also the water table is only a few inches below the surface. the removal of trees and hedges which help to absorb water, will not help the possibility of flooding.
Gordon Dahill	South West of Draycott	response-00690	Other	CONCNCIL COMMUNICATION WITH PUBLIC When we finally receive information it is LATE often MISLEADING and INACCURATE. Some replies to public queries ARROGANT CODESCENDING and SMOKE and MIRRORS. This sort of treatment and attitude from the council is not acceptable and would hope measures will be taken seriously in the future. NPPF GOLDEN RULES Two of these rules appear to be relevant to the situation. 1) .To prevent unrestricted urban sprawl. 2).To assist in safeguarding countryside from encroachment. Draycott is a small village .It has already had two large industrial buildings converted to housing. Also several other areas of small estates of housing within the Draycott village boundaries. This change of GREEN to GREY was the last green area within the village boundary 3) This developed area will be, apart from field between Draycott and Borrowash will complete the joining of Nottingham and Derby.
Gordon Daris	West of Sandiacre	Response-01639	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Gordon Daris	West of Sandiacre	response-01639	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Gordon Daris	West of Sandiacre	response-01639	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Gordon Daris	West of Sandiacre	response-01639	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Gordon Daris	West of Sandiacre	response-01639	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Gordon Daris	West of Sandiacre	response-01639	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Gordon Daris	West of Sandiacre	response-01639	Type of Housing	High density housing is preposterous not in keeping with current housing.
Gordon Daris	West of Sandiacre	response-01639	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Gordon Daris	West of Sandiacre	response-01639	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Gordon Daris	West of Sandiacre	response-01639	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Graeme Taylor	South of West Hallam	Response-01131	Traffic Congestion	Beech lane is already heavily congested this is a safety hazard and will endanger life if new development goes ahead
Graeme Taylor	South of West Hallam	response-01131	Road Safety	Beech lane is not wide enough to accommodate this development this will create road safety issues for the school and village center
Graeme Taylor	South of West Hallam	response-01131	Bus Services	There are insufficient bus services for the area already meaning increased cars and car pollution
Graeme Taylor	South of West Hallam	response-01131	School Capacity	The local school has no additional capacity and has no way to expand
Graeme Taylor	South of West Hallam	response-01131	Green Belt	It is clear that this development will sprawl further into the attractive and bio diverse green belt
Graeme Taylor	South of West Hallam	response-01131	Other	Local shopping areas are already at capacity for parking this will create significant congestion

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Graham Elliott	East of Breaston	Response-00413	Traffic Congestion	We bought our ?new build? Bungalow in Heath Gardens in 1984 due to its quiet location, no through traffic and rural setting in the protected Green Belt. This change to EBC Core Strategy to extend the road and build a further 50 Dwellings goes against everything we cherish and likely to result in the devaluation of our property. Highways Issues ? a) This development would increase the traffic on the road by at least four-fold, with the majority now passing the front of our house, massively increasing noise disturbance and air pollution. b) The access to the potential new development between the land on houses Nos. 10 and 13 is only one vehicle wide, necessitating the purchase of land from the householders to widen it. c) The rest of Heath Gardens is barely wide enough for 2 cars to pass each other, particularly around the ?chicane? in the road and hence totally unsuitable, if not impossible, for regular access for Builders, Commercial or Emergency vehicles. For example, the ?Refuge Collection Lorry? currently has to reverse down the street as there is not enough room for it to turn round.
Graham Elliott	East of Breaston	Response-00413	Road Safety	The increased traffic and pedestrian footfall would inevitably lead to ?Highway Safety Concerns?, particularly as the rear half of Heath Gardens has no pavement or room to construct one without purchasing land from the householders.
Graham Elliott	East of Breaston	Response-00413	Air Quality	M1 Noise & Air Quality - This has been an ongoing issue for residents of Heath Gardens, with little help from the Highways Agency to resolve, leading to difficulties in selling properties in this area.
Graham Elliott	East of Breaston	Response-00413	Wildlife / Biodiversity	The development would lead to a tragic loss of trees and shrubland ideal for the current wildlife. I've counted potentially 250 mature trees that would have to be removed, completely against Erewash and the Governments policy to plant millions of trees. Families of Foxes, Rabbits and Hedgehogs, plus a Badger and numerous species of Birds and Ducks have been seen on and around Heath Gardens.
Graham Elliott	East of Breaston	Response-00413	Bus Services	Currently a reasonable service and bus stops at the end of the street, however a long walk from the proposed end of the street, particularly for the elderly.
Graham Elliott	East of Breaston	Response-00413	School Capacity	I believe all local schools have very limited places.
Graham Elliott	East of Breaston	Response-00413	Healthcare Facilities	Breaston Chemists and Surgery are some distance away at the other end of the village and they are already very busy so its often difficult getting a prompt appointment. Also a problem for anyone that doesn't drive, particularly the elderly.
Graham Elliott	East of Breaston	Response-00413	Type of Housing	40% of Affordable Houses - Any housing in this Village is unlikely to be 'affordable' no matter how its constructed. No comment until detail of the location and type of housing is known.
Graham Elliott	East of Breaston	Response-00413	Number of Houses	No comment until detail of the location and type of housing is known.
Graham Elliott	East of Breaston	Response-00413	Green Belt	We strongly object to this Development , particularly the use of Protected ?Green Belt Land?, which was a key reason for us purchasing this property and we are particularly concerned as to the precedence it may set for other Green Belt land around us.
Graham Elliott	East of Breaston	Response-00413	Landscape	No comment until detail of the location, type of housing and landscaping is known.
Graham Elliott	East of Breaston	Response-00413	Flooding / Drainage	The adjacent ?Flood Alleviation Ditch? running from Longmoor Lane to Wilsthorpe Road has often proved inadequate to protect this area from flooding. Storm rainwater from the hills in Risley to the North, runs down past the Cemetery and floods Holly Avenue and the proposed site, making it totally unsuitable for residential properties, particularly as the reduction in natural soakaway land will make any potential flooding even worse.
Graham Elliott	East of Breaston	Response-00413	Other	Infrastructure - As with Heath Gardens, the potential occupants are likely to be elderly, retired and with some non-drivers. Hence remoteness from shops, medical care, transport and the village centre is likely to be a major problem. Anyone having to walk down the street, particularly in the area with no pavement, would be at significant risk of harm.
Graham Wakeling	South West of Draycott	Response-01238	Traffic Congestion	Draycott's roads are already far too busy, adding more houses will only further the traffic congestion problem(s) and that will be unacceptable.
Graham Wakeling	South West of Draycott	Response-01238	Road Safety	Further to road congestion, Road safety will suffer, many accidents have occurred in and around Draycott (even one just this week). Also as a pet owner who's cat has suffered RTA recently, The proposed new housing developments will increase the problem.
Graham Wakeling	South West of Draycott	Response-01238	Air Quality	Air quality will decrease, There will be many more cars and trucks on the roads around Draycott, And new build houses with log burning stoves, garden fires.
Graham Wakeling	South West of Draycott	Response-01238	Wildlife / Biodiversity	I strongly object to the to the proposed reclassification of greenbelt land, Wildlife and biodiversity will be heavily affected, and will not recover, Wildlife will be forced away from its natural habits and closer to dangerous inner city locations. Biodiversity will be massively affected, many wild plants will be destroyed and lost forever. Newt populations will also suffer. From a human prospective green spaces, trees and wild life are important to local residents mental health and wellbeing.
Graham Wakeling	South West of Draycott	Response-01238	Bus Services	as a sometime(s) bus user the increase in population to the village would make the services busier, less likely to be able to be seated. Also an increase in parking will occur around Draycott, as new residents leave cars on streets, to avoid city parking costs, taking to the buses instead.
Graham Wakeling	South West of Draycott	Response-01238	School Capacity	School capacities will increase locally, forcing current Draycott residents to seek schooling outside of the village, having a knock on affect to other local small communities.
Graham Wakeling	South West of Draycott	Response-01238	Healthcare Facilities	Local Doctors, Dentists and pharmacies will be affected, increasing waiting times, and making it even more impossible to be seen, and treated locally.
Graham Wakeling	South West of Draycott	Response-01238	Type of Housing	New build house will not be in keeping with traditional local houses and mills in the surrounding area. They will be a complete eye sore.
Graham Wakeling	South West of Draycott	Response-01238	Number of Houses	The proposed number of houses is ridiculous, 190... That would significantly impact local infrastructure, traffic, safety and peoples wellbeing. Destroying the local family feel to the village.
Graham Wakeling	South West of Draycott	Response-01238	Green Belt	Greenbelt land is essential to the shaping of natural landscapes and biodiversity, the loss of our Greenbelt land, while tragic enough will lead to further loss in other protected local areas.
Graham Wakeling	South West of Draycott	Response-01238	Landscape	the natural landscape will be destroyed ad lost forever, one of the great things about being in any small village is being one step from countryside and nature. skyline, natural light and character of the area will be completely altered forever.
Graham Wakeling	South West of Draycott	Response-01238	Flooding / Drainage	the proposed builds are on flood plain areas, this development will increase flood risk to Draycott and other surrounding villages.
Graham Wakeling	South West of Draycott	Response-01238	Other	Simply this proposed development cannot be allowed to go ahead. Regards, a local resident of 16 years.
Greg Cherry	East of Breaston	Response-01818	Traffic Congestion	Breaston's roads are not designed to accommodate additional traffic. Increased congestion, parking issues, and safety concerns would negatively affect both residents and commuters. Breaston Village roads are already damaged to such an extent they are at points impassable. Adding in building and delivery transport and then subsequent further residential traffic would make all of the above concerns substantially worse.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Greg Cheney	East of Breaston	response-01818	Wildlife / Biodiversity	The proposed site lies within designated Green Belt land, which is protected to prevent urban sprawl, safeguard the countryside, and preserve natural habitats. Developing this land would result in the irreversible destruction of vital wildlife habitats, negatively affecting local species such as birds, bats, and small mammals. Once lost, these green spaces and their ecological value cannot be replaced. The proposal also conflicts with the UK's Climate Change Act 2008 and Environment Act 2021, undermining efforts to reduce carbon emissions and achieve the legally required 10% Biodiversity Net Gain.
Greg Cheney	East of Breaston	response-01818	School Capacity	The village primary school and surrounding secondary schools are at or near capacity. The primary school in particular struggles with limited space and a lack of outdoor facilities already. An increase in population will add unsustainable pressure, likely forcing families to seek school places further afield. As a teacher at a local school, I can assure you that the pressures on schools is immense and close to breaking point. Adding more pupils into the area, with no extra provision considered, would be very worrying.
Greg Cheney	East of Breaston	response-01818	Healthcare Facilities	Local GP surgeries and dental practices are overstretched, and this development would exacerbate difficulties in accessing timely medical and dental care. Accessing GP services for primary health care provision for both children and adults is a huge challenge, within an already overstretched catchment. Adding further housing to the locality will further exacerbate this situation, reducing access to primary care, putting lives at risk and putting further stresses on already stretched A&E departments - no such solution is offered or suggested as part of the plans, I find it alarming that this would be overlooked. Dental care is unavailable for those not already under the care of the Breaston Dental Surgery, and waiting lists exceed the lifespan of many residents within the village.
Greg Cheney	East of Breaston	response-01818	Number of Houses	Breaston is a historic, rural village with a distinct character and strong sense of community. The proposed development of 50 houses would fundamentally alter the scale and character of the village, threatening to turn it into a town and undermining the reasons many residents choose to live here.
Greg Cheney	East of Breaston	response-01818	Green Belt	Conflict with National and Local Planning Policy According to the National Planning Policy Framework (NPPF 2023): ? Paragraph 140 states that Green Belt boundaries should only be altered in exceptional circumstances. ? Paragraphs 149-150 confirm that inappropriate development in the Green Belt should not be approved except in very special circumstances. No compelling justification has been provided to demonstrate that these criteria have been met. Furthermore: ? The Council must first demonstrate a five-year housing land supply before considering Green Belt release. No clear evidence has been presented to confirm that all suitable brownfield and non-Green Belt options have been exhausted.
Greg Cheney	East of Breaston	response-01818	Flooding / Drainage	Recent events, including severe storms in late 2023 and early 2024, have highlighted Breaston's vulnerability to flooding, with many properties suffering internal damage. The proposed development site acts as a natural soakaway and is frequently waterlogged, as evidenced by photos and videos taken by local residents. Replacing this land with hard surfaces would increase surface water runoff, raising the flood risk for both existing homes and new properties, especially given the increasingly unpredictable climate.
Greg Cox	West of Sandiacre	Response-01702	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Greg Cox	West of Sandiacre	response-01702	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Greg Cox	West of Sandiacre	response-01702	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Greg Cox	West of Sandiacre	response-01702	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Greg Cox	West of Sandiacre	response-01702	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Greg Cox	West of Sandiacre	response-01702	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Greg Cox	West of Sandiacre	response-01702	Type of Housing	High density housing is preposterous not in keeping with current housing.
Greg Cox	West of Sandiacre	response-01702	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Greg Cox	West of Sandiacre	Response-01702	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Greg Cox	West of Sandiacre	response-01702	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Gregg Bartrum	West of Sandiacre	Response-01591	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Gregg Bartrum	West of Sandiacre	response-01591	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Gregg Bartrum	West of Sandiacre	response-01591	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Gregg Bartrum	West of Sandiacre	Response-01591	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Gregg Bartrum	West of Sandiacre	Response-01591	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. Gregg Bartrum	West of Sandiacre	Response-01591	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Gregg Bartrum	West of Sandiacre	Response-01591	Type of Housing	High density housing is preposterous not in keeping with current housing.
Gregg Bartrum	West of Sandiacre	Response-01591	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Gregg Bartrum	West of Sandiacre	Response-01591	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Gregg Bartrum	West of Sandiacre	Response-01591	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Gregory Robin Watts	South West of Kirk Hallam	Response-01297	Traffic Congestion	The proposed housing will put massive strain on the already inadequate road network especially in conjunction with the development of the industrial site at New Stanton. Traffic flows will increase through Stanton by Dale and Dale Abbey as drivers search less congested routes to Jn 25 on the M1. This will lead to increase pollution and noise for residents who live a matter of metres from these routes.
Gregory Robin Watts	South West of Kirk Hallam	Response-01297	Road Safety	Increases in traffic volumes especially in the neighbouring villages and Kirk Hallam itself will necessarily increase the risk of accidents as it becomes more difficult to cross these busy routes. Cyclists will be deterred from using these routes because of increased perceived risk of collisions with passing vehicles
Gregory Robin Watts	South West of Kirk Hallam	Response-01297	Air Quality	Air quality will be impacted due to the increased traffic flow from this new development
Gregory Robin Watts	South West of Kirk Hallam	Response-01297	Wildlife / Biodiversity	Wild life and diversity will be affected as fields are covered over with housing and roads
Gregory Robin Watts	South West of Kirk Hallam	Response-01297	Green Belt	The council should take a tough view on any development on green belt land and throw out the application
Gregory Robin Watts	South West of Kirk Hallam	Response-01297	Landscape	Obviously the housing will have a large effect on the landscape as green fields are covered over with housing and roads. The tranquillity will be reduced in the surrounding countryside by increased traffic noise and reduced greenery.
Gregory Robin Watts	South West of Kirk Hallam	Response-01297	Other	There will be increased demand for water which is increasingly a scarce during long periods of dry weather that we are experiencing more frequently. No new housing should be built before we can ensure an adequate supply of water throughout the year.
Greg Watts	West of Sandiacre	Response-00733	Traffic Congestion	The proposed number of houses would place unsustainable pressure on local infrastructure, including roads
Greg Watts	West of Sandiacre	Response-00733	Road Safety	Access across or near the Stoney Clouds escarpment could be technically challenging.
Greg Watts	West of Sandiacre	Response-00733	Wildlife / Biodiversity	Access across or near the Stoney Clouds escarpment could be environmentally damaging
Greg Watts	West of Sandiacre	Response-00733	School Capacity	The proposed number of houses would place unsustainable pressure on local infrastructure, including schools
Greg Watts	West of Sandiacre	Response-00733	Healthcare Facilities	The proposed number of houses would place unsustainable pressure on local infrastructure, including healthcare facilities
Greg Watts	West of Sandiacre	Response-00733	Green Belt	The site lies within designated Green Belt, which plays a crucial role in preventing urban sprawl, preserving the openness of the countryside, and maintaining a clear boundary between communities. Development here would undermine the very purpose of the Green Belt designation. At a time when local and national planning policy emphasises the re-use of brownfield sites and the protection of open countryside, this proposal appears premature and lacking in justification. It does not align with the principles of sustainable development.
Greg Watts	West of Sandiacre	Response-00733	Landscape	The area west of Sandiacre, particularly near Stoney Clouds, is valued for its natural beauty, tranquillity, and accessibility to the public. It is used regularly for recreation, walking, and nature appreciation. A high-density housing estate in this location would irreversibly change the character of the landscape and diminish its environmental and amenity value.
Guiliano Ricci	South of West Hallam	Response-01010	Traffic Congestion	Traffic already very busy especially at school times and football time Very dangerous for children and families
Guiliano Ricci	South of West Hallam	Response-01010	Road Safety	The Hallam way junction is not safe and building a housing estate will impact on this
Guiliano Ricci	South of West Hallam	Response-01010	Air Quality	More traffic will impact on air pollution
Guiliano Ricci	South of West Hallam	Response-01010	Wildlife / Biodiversity	This is a green belt area - it has wildlife and should not be spoilt
Guiliano Ricci	South of West Hallam	Response-01010	Bus Services	The bus service is poor and would not support more housing
Guiliano Ricci	South of West Hallam	Response-01010	School Capacity	I
Guiliano Ricci	South of West Hallam	Response-01010	Type of Housing	West Hallam is a mainly owner occupied village Social housing will have a detrimental effect on the house prices of the village - social deprivation, antisocial behaviour, drugs and criminality
Guiliano Ricci	South of West Hallam	Response-01010	Landscape	Building an estate on this land will impact on my views
Hannah	North of West Hallam	Response-00252	Traffic Congestion	Crossroads at station road/park lane already black spot, surrounding streets chaos parked cars station road accidents regularly, speeding
Hannah	North of West Hallam	Response-00252	Road Safety	Station road, crossroads many accidents/extremely busy area especially at peak times. Worry about access to both nursing homes- I know Ambulances already struggle down bagot/newidgate street
Hannah	North of West Hallam	Response-00252	Air Quality	Already high lane west station road much busier than when we moved especially station road, the crossroads are a death waiting to happen
Hannah	North of West Hallam	Response-00252	Wildlife / Biodiversity	The areanof beauty, there are brand new houses standing empty at bottom of station road been empty for 2years plus! If you walk into mappery it is always full wildlife walkers
Hannah	North of West Hallam	Response-00252	Bus Services	What bus service! Sunday for my teenagers none I have to take and fetch from work!
Hannah	North of West Hallam	Response-00252	School Capacity	Interesting one as yes birth rates declining however schools can't recruit , children have more needs no wrap around care for parents and with with proposals seems only so mang be affordable? Empty houses station road brand new
Hannah	North of West Hallam	Response-00252	Flooding / Drainage	We on station road on a high water table according to survey and our underneath our house and next doors regularly floods, we have reach out to council and private. It's all built on clay

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Hannah	North West Halesan	Response-00252	Other	I have no objections to houses but I cannot understand why these places, there are so many negative points and can't see any good points to it! It just seems there is no logical especially as mention empty houses at bottom station road and lots for sale.....
Hannah	West of Sandiacre	Response-00657	Wildlife / Biodiversity	Huge area for biodiversity and enjoyable walks
Hannah McMaster	South West of Draycott	Response-01381	Traffic Congestion	The main Derby Road route is used as an alternative to the A52 at peak times. An increase in housing will increase the traffic through the village.
Hannah McMaster	South West of Draycott	Response-01381	Road Safety	There have been several fatalities in the village due to speeding along the main route of Derby Road. An increase of vehicles and a new junction will increase the likelihood of more fatalities, potentially involving children as the homes are earmarked for social housing.
Hannah McMaster	South West of Draycott	Response-01381	Wildlife / Biodiversity	The site earmarked for development is a natural habitat for hordes of wildlife including bats and badgers. This would devastate their natural habitat
Hannah McMaster	South West of Draycott	Response-01381	Healthcare Facilities	The local doctors is at capacity, waiting times are already long and services stretched. The local GP will not only have to serve the additional housing in Draycott but those proposed in Breaston also.
Hannah McMaster	South West of Draycott	Response-01381	Number of Houses	The number of houses is excessive for the space and location.
Hannah McMaster	South West of Draycott	Response-01381	Green Belt	Building on green belt lane should be a last respite, there are plenty of other sites in Erewash that could be utilised fit housing before building on green belt.
Hannah McMaster	South West of Draycott	Response-01381	Flooding / Drainage	Flooding has increased in severity year on year in Draycott, building on farmland and increasing the surface run off will exacerbate the situation, pushing the flooding further in to homes within the village. The land earmarked for building has flooded and will continue to flood.
Hannah Pritchard	South West of Draycott	Response-01399	Traffic Congestion	The introduction of 190 new dwellings is projected to increase the local population by up to 950 residents, leading to a significant rise in vehicle use. Draycott's road network, particularly the pinch points along Station Road and Wilne Road, already experiences congestion during peak hours. Adding potentially 300-500 more vehicles from the development would severely exacerbate traffic issues, increase commute times, and reduce quality of life for current residents. No substantial traffic mitigation measures have been proposed.
Hannah Pritchard	South West of Draycott	Response-01399	Road Safety	The roads surrounding the proposed development site are narrow and not designed to accommodate high traffic volumes. Increased vehicle numbers will raise the risk of accidents, particularly for pedestrians, cyclists, and school children using already pressured routes such as Hopwell Road. The lack of safe pedestrian crossings and cycleways will create a hazardous environment and increase the potential for road traffic incidents, especially near Draycott Primary School and village amenities.
Hannah Pritchard	South West of Draycott	Response-01399	Air Quality	Additional traffic resulting from the development will lead to increased emissions, worsening local air quality. This is particularly concerning near schools and homes where vulnerable populations reside. With national targets to reduce pollution, this development would run counter to environmental and public health goals, particularly in a rural area that currently benefits from relatively clean air.
Hannah Pritchard	South West of Draycott	Response-01399	Wildlife / Biodiversity	The development would result in the destruction of mature hedgerows, open grassland, and habitats vital for local wildlife, including bats, owls, badgers, and newts which have been reported in the area. Disruption to the local ecosystem cannot be reversed. The removal of these green spaces would break ecological corridors and have a knock-on effect on biodiversity in the wider area. No adequate mitigation or biodiversity net gain strategy has been demonstrated.
Hannah Pritchard	South West of Draycott	Response-01399	Bus Services	Draycott currently has a very limited and unreliable bus service (Indigo) that are infrequent and not well connected to major employment centres. Without substantial investment in reliable and frequent public transport, new residents will be car-dependent, further worsening congestion and pollution. The development does not appear to include any commitment to improve public transport provision or access.
Hannah Pritchard	South West of Draycott	Response-01399	School Capacity	Local primary and secondary schools are already near or at capacity. An influx of potentially hundreds of children from the development would overwhelm existing education provision. There is no confirmed plan or funding commitment for expanding school capacity to accommodate this growth, meaning local children may have to travel out of the area, reducing educational accessibility and increasing traffic burden.
Hannah Pritchard	South West of Draycott	Response-01399	Healthcare Facilities	The Overdale Medical Practices in Breaston and Borrowwash, which serve Draycott, are already overstretched. In January, they released a public statement citing overwhelming patient demand, leading to outsourcing of minor cases to the Draycott pharmacy. Local dental practices have also stopped accepting new NHS patients. Adding hundreds more residents without parallel investment in new or expanded facilities will render healthcare inaccessible for both current and new residents.
Hannah Pritchard	South West of Draycott	Response-01399	Type of Housing	The type and size of housing proposed have not been sufficiently detailed. If the homes are aimed at families (as is typical with new developments), this will exacerbate school and healthcare capacity issues. There is also no clear provision for genuinely affordable housing or properties suited to the elderly or first-time buyers, which should be prioritised for local housing need.
Hannah Pritchard	South West of Draycott	Response-01399	Number of Houses	A total of 190 dwellings represents a disproportionate expansion of Draycott village. During a population census done 21/03/2023, Draycott's population was noted as being 3,029 people. According to national statistics, the average occupation of dwellings in the UK is 2.4 people with the intended occupation for dwellings being 3.2; meaning that there would be a near certain population increase within the village of circa 456-608 people equating to a 15%-20% uplift. Bearing this in mind, modern property developments and affordable housing schemes design with the intention for the capability to house 5-7 people per dwelling, therefore there is also the possibility that off the back of this development, the local population could swell by 950 residents (over 30%)- an unsustainable and abrupt change for a small parish. This will strain every aspect of village life and service provision.
Hannah Pritchard	South West of Draycott	Response-01399	Green Belt	The land allocated for this development forms part of the designated green belt, intended to prevent urban sprawl and preserve rural character. The irreversible loss of this land would undermine local and national planning policy. Once developed, this green belt cannot be restored, and approval of this project would set a dangerous precedent for future green belt encroachment.
Hannah Pritchard	South West of Draycott	Response-01399	Landscape	The site is an integral part of the rural landscape that defines Draycott's identity. Development would result in the urbanisation of a tranquil, agricultural area, damaging views and the natural setting enjoyed by residents and visitors alike. It would permanently alter the visual character of the parish, impacting tourism, recreation, and quality of life.
Hannah Pritchard	South West of Draycott	Response-01399	Flooding / Drainage	The proposed development site is known locally to suffer from significant surface flooding during periods of rainfall. Building on this land will increase impermeable surfaces, worsen drainage, and heighten the risk of flooding not only on the site itself but in surrounding areas. This poses a serious risk to property, safety, and insurance premiums for both new and existing residents. The use of attenuation tanks would not be appropriate as these are designed for 1 in 100-year flood events not for areas of consistent flooding.
Harriet Farnsworth	West of Sandiacre	Response-01914	Traffic Congestion	As a house of regular bus users, the extra traffic will make the already difficult bus route which regularly gets stuck will get worse with extra traffic.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Harriet Farnsworth	West of Sandiacre	Response-01914	Road Safety	Roads are already too busy & will lead to the inevitable increase in accidents (& potholes).
Harriet Farnsworth	West of Sandiacre	Response-01914	Air Quality	Yet more cars, litter etc!
Harriet Farnsworth	West of Sandiacre	Response-01914	Wildlife / Biodiversity	Even less habitat for our fast declining wildlife.
Harriet Farnsworth	West of Sandiacre	Response-01914	Healthcare Facilities	The residents of Sandiacre already can't get into the doctors/dentist, more residents will make this worse & detriment peoples health due to long wait times.
Harriet Farnsworth	West of Sandiacre	Response-01914	Number of Houses	Way too many.
Harriet Farnsworth	West of Sandiacre	Response-01914	Green Belt	Popular spot for local dog walkers, including us, offers a wide, fresh green space to walk pets & take mindfulness walks.
Harry Fleck	West of Sandiacre	Response-01084	Road Safety	The roads up to the access site will make it unsafe for pedestrians as the road network is not wide enough to accomadate 2 passing cars and sufficient pathways. Large construction vehicles will be having to mount the pavements in order to navigate the narrow right hand bends which will cause a huge safety issue for anyone using pathways particularly with small children or the elderly
Harry Fleck	West of Sandiacre	Response-01084	Number of Houses	The proposed 180 houses is highly dense and is not in keeping with the surrounding estate.
Harry Fleck	West of Sandiacre	Response-01084	Other	There are 1970 houses currently unoccupied in the area so why is there a need to build another 180 houses on green belt land while these other properties are standing vacant?
Harry Mee	North of Breadsall Hill Top	Response-00882	Traffic Congestion	Draycott roads do not have the capacity for 190 houses. The congestion would affect people coming in and out of the village and decrease the amount of visitors to amenities.
Harry Mee	North of Breadsall Hill Top	Response-00882	Road Safety	More road users and more congestion equals more incidents, simple.
Harry Mee	North of Breadsall Hill Top	Response-00882	Air Quality	Draycott is a quiet and clean area, noise and air pollution would increase with 190 new homes.
Harry Mee	North of Breadsall Hill Top	Response-00882	Wildlife / Biodiversity	Greenbelt land retains the countryside that we have left. Destroying this, is destroying the habitat for wildlife and biodiversity.
Harry Mee	North of Breadsall Hill Top	Response-00882	School Capacity	The school is small and very limited spaces are available as it is. 190 houses would mean that less spaces are available in the school for current residents as well as new/potential.
Harry Mee	North of Breadsall Hill Top	Response-00882	Healthcare Facilities	They do not have the capacity for 190 new houses.
Harry Mee	North of Breadsall Hill Top	Response-00882	Type of Housing	Draycott village is beautiful and villages like this are hard to come across nowadays. We don't want to ruin the quaint and traditional village with ugly new build houses that you can see in any city/town/village.
Harry Mee	North of Breadsall Hill Top	Response-00882	Landscape	Running through Draycott really is a joy, and it's a joy that is shared by many. Dropping a load of ugly houses, that ruin the landscape, into the village is a terrible idea and is a great way of losing the identity of the village.
Harvey Pearson	North of Breadsall Hill Top	Response-01307	Traffic Congestion	Increased traffic through Breadsall village causing issues as has been noticed since previous housing developments in the area
Harvey Pearson	North of Breadsall Hill Top	Response-01307	Flooding / Drainage	Flooding is a main concern as this has increased and caused considerable problems in the village affecting householders since previous developments
Hayley Dexter	West of Borrowwash	Response-00519	Traffic Congestion	There is already heavy traffic and terrible potholes on the main roads in Borrowwash
Hayley Dexter	West of Borrowwash	Response-00519	Road Safety	A lot more traffic and people will have an impact on road safety in a negative way
Hayley Dexter	West of Borrowwash	Response-00519	Wildlife / Biodiversity	A large area of brown and green belt which is home to lots of wildlife who will be affected. They are already struggling and have lost many homes and habitats
Hayley Dexter	West of Borrowwash	Response-00519	School Capacity	There is one school for the whole of Borrowwash and adding this many houses will seriously impact this
Hayley Dexter	West of Borrowwash	Response-00519	Healthcare Facilities	The doctors are already struggling and patients can't get appointments!! This will impact this hugely in a negative way
Hayley Dexter	West of Borrowwash	Response-00519	Number of Houses	Far too many houses for a village that doesn't have enough amenities for the people who already live there
Hayley Dexter	West of Borrowwash	Response-00519	Green Belt	Should not be building on green belt land. It should be and is supposed to be protected for a reason!
Hayley Dexter	West of Borrowwash	Response-00519	Landscape	Building on this land will make Borrowwash blend into the next village. It will no longer be a village and more like a small town it will replace the natural land that has been there for hundreds of years that is needed
Hayley Dexter	West of Borrowwash	Response-00519	Flooding / Drainage	As we are seeing year on year, with more land disappearing for houses there is no where for rain and flood water to go as there is less and less natural drainage. The houses that back on to the land already have an issue with flooding and in heavy rain the water floods there gardens and drives and runs of into the main road causing hazards and issues to the properties already there
Hayley Dexter	West of Borrowwash	Response-00519	Other	There is hardly any parking in Borrowwash and one pub. There aren't enough amenities to those that already live in Borrowwash and adding all these houses will add and impact this in a negative way! Borrowwash is no longer a village and is large enough without building all these houses on land that shouldn't be built on anyway
Heidi Spencer	South of West Hallam	Response-00189	Traffic Congestion	Beach lane is already heavily congested especially on school drop off and pick up, adding these houses into the mix will make it a lot worse
Heidi Spencer	South of West Hallam	Response-00189	Road Safety	Beach Lane is already a massive safety concern during school drop off, pick up and football training/fixtures. Cars park everywhere making it challenging to get through. Adding these houses into so close to the school will make things a lot worse and dangerous
Heidi Spencer	South of West Hallam	Response-00189	Healthcare Facilities	The current doctors in the village doesn't have capacity to serve the community never mind adding another 90 houses and families into the mix
Heidi Spencer	South of West Hallam	Response-00189	Type of Housing	There are currently new builds at the top of Beach Lane that have sat empty since being built. Unsure there is demand for additional housing in the village. Lots of houses up for sale and not selling due to the current financial climate.
Heidi Spencer	South of West Hallam	Response-00189	Number of Houses	Too many houses to be squeezed into an area. All likely to be overlooking each other with tiny gardens
Heidi Spencer	South of West Hallam	Response-00189	Other	Concerns over the noise and disruption to the school whilst the build is taking place. What impact will this have on the children trying to learn and concentrate
Helen	West of Sandiacre	Response-00883	Traffic Congestion	The traffic in Sandiacre is already congested especially week days from 7:45 - 9:00 am and 15:00pm -18:00pm. This is going to cause more issues with HGVs entering and leaving site with deliveries etc
Helen	West of Sandiacre	Response-00883	Road Safety	Parking and traffic in this area is horrendous now with many blind spots for crossing roads. The school on Stanton Road is a nightmare at collection and drop off times. With increased traffic this is an issue with children and parents attempting to cross the road. I am already genuinely concerned a serious accident will happen without adding to this with increased traffic movements

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Helen	West of Sandiacre	response-00683	Bus Services	The 14 bus already has issues getting around the route up Stanton Road and onto the estate. Many times vehicles have to back up to allow the bus to pass due to parking and accessibility. The roads aren't wide enough for vehicles to pass as it is. With increased traffic this will cause major congestion and road rage incidents!
Helen	West of Sandiacre	response-00683	School Capacity	Schools are already up to capacity. Further housing will bring more children which when the schools are full will need to go to schools further afield causing more traffic issues
Helen	West of Sandiacre	response-00683	Healthcare Facilities	Can't get a Drs appointment now so further housing will increase the issues. Provisions or plans to create another surgery need to be considered. If Drs aren't taking on new patients due to capacity then again there will be more vehicle movement within Sandiacre which is already congested
Helen	West of Sandiacre	response-00683	Flooding / Drainage	Has a flood and drain survey been done!! Extra housing will cause issues as the drains will be unable to cope especially when we have heavy rain or storms! This will cause major flooding issues within the lower areas due to the water flowing down hill especially if the drains aren't renewed and advanced around the area
Helena Lucas	West of Borrowwash	Response-00644	Traffic Congestion	280 new houses will bring an additional one or two, if not more vehicles per household moving in and out of the villages as well as an increase in maintenance vehicles and rubbish lorries, polluting the environment further and increasing noise and road damage. Increased difficulty turning onto Nottingham Road and the back up of traffic onto the a52 will increase risk of road traffic collisions, putting more pressure on the emergency services, and putting more lives at risk. Damage to roads will increase, and in turn damage to cars, as a result will be costly for everyone.
Helena Lucas	West of Borrowwash	response-00644	Road Safety	Increased traffic as a result of 280 new builds without a plan to update access infrastructure, will mean more vehicles on the already over used roads. This will mean increased congestion, particularly during peak hours, and will increase the risk of accidents. There are no safety features in place as it is running through Borrowwash. Cars frequently speed down Nottingham road, and use our road Princess Drive as a cut through, a double parked street. My car has been damaged twice by careless drivers cutting though. I am deeply concerned that this will increase the frequency of traffic taking this option to cut through furthermore, and put mine and other families at risk who live along Princess Drive/Manor Road at risk.
Helena Lucas	West of Borrowwash	Response-00644	Air Quality	There is lots of evidence that 280 new build houses will significantly increase air pollution, during the construction phase and ongoing due to increased energy consumption from residents. Construction activities will generate dust, fumes, and emissions from vehicles, while the increased number of residents leads to more traffic, and consequently, higher levels of pollutants from vehicle exhaust, as well as increased demand for energy, potentially leading to more emissions from power plants. This will put increased pressure on healthcare services, but more worryingly, affect those living nearby who are affected by respiratory illnesses. I personally know several residence who live on adjacent streets and roads. I have worked at the nearby GP surgery and can tell you it is already overwhelmed with patients, without unnecessarily increasing demand as a direct impact of the new builds.
Helena Lucas	West of Borrowwash	response-00644	Wildlife / Biodiversity	The field in which the buildings are proposed has offered a crucial biodiverse sanctuary for a variety of birds, including owls, insects, bees, hedgehogs and other wildlife. It has been a well needed open space to allow separation to the next village and a place for these wild creatures a place to thrive. In recent years wildflowers had been planted. We walked through this field almost daily as saw first hand the positive impact on the flourishing wildlife.
Helena Lucas	West of Borrowwash	Response-00644	Bus Services	The bus services to Derby and Nottingham will become more overcrowded, especially during peak times.
Helena Lucas	West of Borrowwash	response-00644	School Capacity	West Park and the local Borrowwash Ashbrook school are oversubscribed. Placing this housing estate between West Park and the existing village will prioritise children in the new estate who will become closer in proximity to the school, potentially forcing families out of the original village in order to fall closer to the catchment area. This will cause families significant costs or force families to transport their children to alternative schools, causing increased pressure and stress on families, and again increasing road pollution and congestion.
Helena Lucas	West of Borrowwash	Response-00644	Healthcare Facilities	I have worked at the local GP Practice on Nottingham Road in Borrowwash, It is always fully booked with appointments. One way to facilitate increased numbers of patients would be to increase the number of appointments by reducing appointment times and/or increasing the number of appointments per GP or other Healthcare Professionals. This leads to burnout and staff leaving the role. I understand that the surgery is extending to the neighbouring property, however increasing and retaining staff numbers would remain a challenge. This will put Borrowwash Residence at risk, as access to the GP surgeries will become more difficult. Furthermore, this puts pressure on other healthcare services affecting patient outcomes.
Helena Lucas	West of Borrowwash	response-00644	Type of Housing	The average new build home has a lifespan of just 40-60 years. This highlights they are not a sustainable or cost efficient way to house people long term. It is a shortsighted solution to a bigger issue. They are an eyesore and will not fit in with the surrounding environment, particularly against the Victorian cottages along Victoria Road. Wear and tear of these houses will increase maintenance costs, again increasing waste and traffic pollution.
Helena Lucas	West of Borrowwash	Response-00644	Number of Houses	280 house will take approximately 3 years to complete, taking into account possible additional complications such material shortages, weather and unforeseen complication. Taking into account other building projects within the village nearby, the disruption will be unbearable for residence living in and around the village. The scale of the project will bring in potentially 1000 new residence into the village, it will be far too overcrowded putting pressure on the already pressured local services.
Helena Lucas	West of Borrowwash	response-00644	Green Belt	This area is a precious greenbelt marking a divide between the next village of Spondon and Derby. To disrupt this area would be immoral and deeply upset residence within the village of Borrowwash. It is also a concern that other greenbelt areas would be built upon once this estate has been rolled out.
Helena Lucas	West of Borrowwash	Response-00644	Landscape	The new development will cause the disruption of natural habitats, including wildlife corridors, leading to fragmented ecosystems and significantly reduced biodiversity. The construction activities will disturb the soil, leading to erosion and pollution of water sources. Increased Runoff and Flooding The new surfaces such as roads and rooftops increase the amount of rainwater runoff, potentially leading to flooding in certain areas. Nottingham Road and the A52 are already impacted by dangerous flash flooding which will worsen and cause increased risk of collisions, injuries, death and damage to property and roads. The new buildings will alter the visual landscape, impact the privacy of residence living on Victoria Road particularly, and surrounding area. It will affect increased noise levels and light pollution, disrupting wildlife and residence quality of Life further.
Helena Lucas	West of Borrowwash	response-00644	Flooding / Drainage	Borrowwash and the surrounding main roads are already subject to significant flooding and flash floods. Adding 280 new build houses over this greenbelt area, a significant feature in helping to manage heavy rainfall, will significantly and worryingly compound this issue further. As the field itself is prone to retaining a lot of water through periods of wet weather, the water run off to the remaining field will beside the new build will cause dangerous flooding to the ground and stream flowing to the edge of the field.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Helena Lucas	West of Borrowash	Response-00644	Other	On a final note, myself and husband have been residents for 18 years on Princess Drive, we have raised our family in peace, within this proud and hard working community. An influx of such a high number of new residents will alter the atmosphere of the village, cause years of distress, upset, ill health, damage to property and cars, and cause social issues affecting school admissions, and put pressure on local services. It would also be devastating to see an area of greenbelt land demolished forever where there are many properties or derelict buildings that could be renovated instead. With the cost of living and food bank issues, poor quality food and goods being brought into the country, or being poisoned with pesticides, this space should be used as a community hub to grow food, encourage bees and wildlife and be a place the community can gather to improve health, and wellbeing, and foster learning how to become self sufficient again like the preceding generations. This would significantly set Borrowash apart. Not just be another village vanishing into the large scale building site that Derby is becoming.
Helen Blackwell	North of West Hallam	Response-00457	Traffic Congestion	Millhouse junction has limited visibility and a busy junction. Housing here will add further congestion. Reducing the speed limit may help.
Helen Blackwell	North of West Hallam	Response-00457	Road Safety	With millhouse junction being busy with limited visibility adding further traffic from both west hallam developments will cause the junction to become dangerous and will increase the number of road traffic accidents.
Helen Blackwell	North of West Hallam	Response-00457	Wildlife / Biodiversity	This is a field used for horses. You can see where animals have made tracks. Building on greenfield sites will always have a negative impact on wildlife. It is only yesterday we found a dead owl near a building being extended on High Lane West. What other life will be lost?
Helen Blackwell	North of West Hallam	Response-00457	Green Belt	When there is so much land that is no longer in use undeveloped greenbelt land should not be used.
Helen Blackwell	South of West Hallam	Response-00456	Traffic Congestion	Beech Lane is always congested, especially at school drop off and pick up. At minimum a car park for parents would be needed.
Helen Blackwell	South of West Hallam	Response-00456	Road Safety	Cars mount the pavement on beech lane, additional traffic to an already congested road opposite a school will make beech lane more dangerous.
Helen Blackwell	South of West Hallam	Response-00456	Wildlife / Biodiversity	Building on grassland will inevitably have a negative impact on wildlife.
Helen Collins	South of West Hallam	Response-00034	Traffic Congestion	Beech Lane is already a busy road through the village. It is particularly congested at peak times of the school day and sports sessions on Scargill Recreation Ground. To add another possible 90 - 180 cars exiting onto this already busy road would not only be dangerous, but also cause unacceptable levels of congestion in the immediate area and at the main exit points in and out of the village, St. Wilfreds Road and Station road onto Hight Lane and Beech Lane onto Station Road.
Helen Collins	South of West Hallam	Response-00034	Road Safety	Beech Lane is already busy road through the village. The location of the proposed site so close to the school will create additional traffic and congestion which will be dangerous. Exiting my home (Hallam Way, nr Beech Lane) that is close to the school is already very challenging at peak times, due to the road layout, the number of cars parked (often inappropriately) and the increased pedestrian traffic. The increase in traffic onto Beech Lane in particular at peak times will be an increased danger to the many families exiting cars and walking to and from school. There are no designated crossing points or school crossing patrols to support the safety of the young children attending school.
Helen Collins	South of West Hallam	Response-00034	Air Quality	Increased traffic and pollution is inevitable from any building site and the consequential increase in residents with cars.
Helen Collins	South of West Hallam	Response-00034	Wildlife / Biodiversity	Obviously it's reducing the amount of green space around the village which means a direct loss of wildlife habitat in the immediate area and effect upon the surrounding area.
Helen Collins	South of West Hallam	Response-00034	Bus Services	The bus services to the village are poor, consequently inhabitants do rely on their own transport. Hence any new inhabitants must do the same and will only add to levels of traffic and congestion.
Helen Collins	South of West Hallam	Response-00034	Healthcare Facilities	I understand that the 2 local practices in the village are already overstretched with appointments hard to obtain. There is not capacity to support the additional numbers of inhabitants proposed.
Helen Collins	South of West Hallam	Response-00034	Type of Housing	Many houses in the village are being bought and developed, selling at a high price. More affordable housing is needed everywhere. If such a number of houses were to be built, it would be more appropriate to provide 100% affordable homes.
Helen Collins	South of West Hallam	Response-00034	Number of Houses	Too many houses proposed. In addition more large expensive houses are not needed. Affordable housing for young people is needed, they are currently priced out of the area.
Helen Collins	South of West Hallam	Response-00034	Green Belt	I opposed houses being built on green belt anywhere. There are many brown field sites that should be utilised for housing developments.
Helen Collins	South of West Hallam	Response-00034	Landscape	It's a pleasure to be able to live so close to open land, people have invested in the location of their home for this reason. To have this taken away and spoiled is not acceptable. One small area, becomes another and another until large areas of land are lost. New houses are often 3 stories to capitalise on quantity of houses in a small area, which also affects the landscape.
Helen Collins	South of West Hallam	Response-00034	Other	Areas such as ours need young people and affordable housing but not at the expense of the loss of key greenbelt areas. The infrastructure of the village does not currently lend itself to such a development.
Helen Foster	North of Breadsall Hill Top	Response-00650	Traffic Congestion	Congestion in Breadsall village is already a significant problem, particularly following the development of housing at Lime Lane and Dale Acre Way. The village has turned into a 'rat-run' for Oakwood residents seeking access to the A61 and A38, and during peak times, both road safety and air quality are severely impacted.
Helen Foster	North of Breadsall Hill Top	Response-00650	Road Safety	This proposal raises significant concerns about the increase in traffic volume, particularly along Brookside Road, a relatively narrow road not designed for heavy use, and as a consequence heightened risks for both drivers and pedestrians.
Helen Foster	North of Breadsall Hill Top	Response-00650	Wildlife / Biodiversity	This area lies in close proximity to an SSSI (LNR on the Great Northern Greenway) and woodland (Willowholt and Mill Plantations) which play host to a number of species including but not limited to: of brown-eared pipistrelle bats, common toads, trout, smooth lizards, badgers, foxes, woodpeckers, swallows, martins, tawny owls, barn owls, (wild) bee hives and rare orchids (common spotted/heath spotted). Furthermore one residence on Brookside road close to the proposed site contains a maternity roost of over 200 soprano pipistrelle bats which use the woodland and proposed site as a feeding ground. In section 9.5 of the Breadsall Neighbourhood Plan it states: 'it is proposed that a number of smaller sites should be designated as Local Green Spaces as they provide habitat for wildlife, including protected species, such as whiteclawed crayfish, water vole, badgers and bats. These sites are as follows: 1 Dam Brook and banks 2 Boosemoor Brook and banks 3 Croft Wood 4 Willowholt Plantation 5 Mill Plantation' ...and later in the section: '2 Prevention of development on sites of special importance. Given the absence of pressure for anything other than small-scale development in the parish there is no justification for development of any of the sites identified above as local wildlife sites and Local Green Spaces. These should therefore be protected from development unless the wildlife ceases to occupy the site in question. The SSSI already enjoys strong protection through national policy.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Helen Foster	North of Breadsall Hill Top	response-00650	Number of Houses	The traffic, light, and noise pollution generated by a development of this size would negatively affect the amenity value of the nearby conservation area and village in general. Additionally, this extension would ensure that Breadsall would become a suburb of Derby. I refer again to the NPPF 13. Protecting Green Belt land: 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.
Helen Foster	North of Breadsall Hill Top	response-00650	Green Belt	This expansion of the Derby conurbation directly contradicts the findings of the previous Strategic Housing Land Availability Assessment (SHLAA 359), which deemed the site unsuitable for residential development. NPPF 13. Protecting Green Belt land 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. 143. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.
Helen Foster	North of Breadsall Hill Top	response-00650	Landscape	Once this green wedge/buffer zone is built upon, Breadsall's identity as a village will be gone, forever.
Helen Foster	North of Breadsall Hill Top	response-00650	Flooding / Drainage	Breadsall village already suffers from heavy flooding during periods of heavy rain. This proposal must be rejected, and alternative sites should be sought that do not put existing homes in such obvious and predictable danger. On page 2 of P&DG's Green Wedge Review, it states: 4. ?The Green Wedge provides vital flood storage and provides space to allow water to soak away naturally, reducing the need for engineered drainage? Paragraph 159 of the NPPF (Planning and flood risk) states that: Inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere.
Helen fox	South of West Hallam	Response-00064	Traffic Congestion	The village is too small to take on that much more traffic which would likely lead to more accidents in the narrow village. School time is already horrendous as it is for parking never mind adding more cars to the scenario it would just be a waiting game for a child to become injured crossing to get to school.
Helen fox	South of West Hallam	response-00064	Road Safety	In a small village where plans are underway to construct additional housing, concerns regarding road safety have emerged. The increase in residential development could lead to heightened traffic, posing risks to pedestrians and cyclists. This potential surge in vehicles may compromise the tranquility and safety of the village, ultimately detracting from its charm and livability. Therefore, careful consideration of road safety is essential to preserve the village's character and protect its residents.
Helen fox	South of West Hallam	Response-00064	Air Quality	The air quality could be significantly compromised, posing serious risks to the community. Increased construction and population density may lead to higher levels of pollution, which can adversely affect the health of residents and the overall environment. Such developments could disrupt the village's tranquil atmosphere, diminishing its appeal and potentially harming local ecosystems. Therefore, careful consideration must be given to the implications of expanding housing in this area.
Helen fox	South of West Hallam	response-00064	Wildlife / Biodiversity	The proposed construction of additional housing in a small village poses significant risks to local wildlife and biodiversity. The disruption of natural habitats can lead to the decline of various species, ultimately upsetting the ecological balance. Furthermore, the loss of biodiversity can have detrimental effects on the village itself, as it may diminish the natural resources and ecosystem services that the community relies on, such as clean air and water, pollination of crops, and recreational opportunities. This development could compromise the village's environmental integrity, making it less sustainable in the long term.
Helen fox	South of West Hallam	response-00064	Bus Services	Local bus services may face significant challenges. The increase in residential development could lead to heightened traffic congestion, making it difficult for buses to maintain their schedules and efficiency. Furthermore, the potential rise in population may not be matched by an equivalent demand for public transport, resulting in underutilized services that could ultimately be reduced or eliminated. This decline in bus services would be detrimental to the village, as it would limit mobility for residents, particularly those without access to private vehicles, thereby isolating them and diminishing the overall quality of life in the community.
Helen fox	South of West Hallam	response-00064	School Capacity	The existing school capacity may be adversely affected. An influx of new residents could lead to overcrowded classrooms, straining educational resources and diminishing the quality of instruction. This situation could ultimately hinder the village's development, as a well-functioning school is essential for attracting families and fostering a vibrant community. The potential decline in educational standards may deter new families from settling in the area, thereby stunting the village's growth and vitality.
Helen fox	South of West Hallam	response-00064	Healthcare Facilities	The proposed construction of additional housing could negatively impact the healthcare system. An increase in population may strain existing medical resources, leading to longer wait times and reduced access to care for residents. Furthermore, the influx of new residents could overwhelm local healthcare facilities, diminishing the quality of services available. This situation could ultimately be detrimental to the overall well-being of the village, as adequate healthcare is essential for maintaining a healthy community.
Helen fox	South of West Hallam	response-00064	Type of Housing	The influx of new homes may disrupt the village's character and social fabric, leading to overcrowding and strain on local resources. Additionally, the type of housing planned may not align with the village's architectural style or cultural heritage, further diminishing its unique identity. Such developments could also result in environmental degradation, affecting the natural landscape and quality of life for existing residents. Overall, the introduction of these housing projects could prove detrimental to the village's long-term sustainability and well-being.
Helen fox	South of West Hallam	response-00064	Number of Houses	The construction of additional houses could have negative consequences for the community. An influx of new homes may strain local resources, disrupt the village's character, and lead to overcrowding. Furthermore, increased traffic and demand for services could overwhelm existing infrastructure, diminishing the quality of life for current residents. Preserving the village's unique identity and ensuring sustainable development should be prioritized over rapid expansion.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Helen Fox	South of West Hallam	Response-00964	Green Belt	Constructing on greenbelt land would adversely affect our small village just to expand housing. Such development threatens the village's character and environment, disrupting the natural landscape that provides essential ecological benefits. Additionally, increased housing could lead to overcrowding, straining local resources and infrastructure, while diminishing the community's sense of identity and cohesion. The loss of green spaces would not only impact residents' quality of life but also undermine the village's appeal, potentially leading to long-term economic consequences.
Helen Fox	South of West Hallam	Response-00964	Landscape	Increased construction can lead to changes in land use and drainage patterns, exacerbating the risk of flooding. This not only threatens the safety of residents but can also damage infrastructure and disrupt local ecosystems. Furthermore, the potential for flooding may deter new residents and investors, ultimately hindering the village's growth and economic stability. The long-term consequences of such environmental challenges could be detrimental to the community's overall well-being and sustainability.
Helen Fox	South of West Hallam	Response-00964	Flooding / Drainage	Flooding can significantly impact a small village, particularly in areas where there are plans for new housing developments. Increased construction can lead to changes in land use and drainage patterns, exacerbating the risk of flooding. This not only threatens the safety of residents but can also damage infrastructure and disrupt local ecosystems. Furthermore, the potential for flooding may deter new residents and investors, ultimately hindering the village's growth and economic stability. The long-term consequences of such environmental challenges could be detrimental to the community's overall well-being and sustainability.
Helen Gillain	West of Sandiacre	Response-00964	Traffic Congestion	Roads are currently barely passable with vehicles parked either side, the roads could not cope with any more traffic
Helen Gillain	West of Sandiacre	Response-00964	Road Safety	with vehicles parked either side of road and on pavement visibility is poor and poses a danger for for vehicles and pedestrian
Helen Gillain	West of Sandiacre	Response-00964	Air Quality	Brake dust from cars struggling to get through narrow roads would have a severe impact on air quality and affect the health of local residents
Helen Gillain	West of Sandiacre	Response-00964	Wildlife / Biodiversity	There is a wild variety of wildlife on the proposed site .. it has been reported that over 50 different bird species have been noted including rare birds of prey including and sparrowhawks and buzzards! .. building on this site would affect the natural habitat and may lead to extinction
Helen Gillain	West of Sandiacre	Response-00964	Bus Services	One one day alone I witnessed 2 busses struggling to get through Coronation Avenue ... I am told by an i4 Trent Barton Driver that this service is regularly cancelled due to inaccessability issues
Helen Gillain	West of Sandiacre	Response-00964	School Capacity	Schools would be stretched to cope with the extra pupils this would create
Helen Gillain	West of Sandiacre	Response-00964	Healthcare Facilities	Doctors are already struggling to cope with waits of approx 6 weeks for an appointment ... extra patients is not a viable proposition for this area
Helen Gillain	West of Sandiacre	Response-00964	Type of Housing	High density housing is out of character in this area
Helen Gillain	West of Sandiacre	Response-00964	Number of Houses	The number of houses proposed is unservicable in this area
Helen Gillain	West of Sandiacre	Response-00964	Green Belt	The area is green belt and it is important to keep it so ... we need green space for both physical and mental wellbeing
Helen Gillain	West of Sandiacre	Response-00964	Landscape	The landscape houses a wide variety of wildlife and biodiversity ... building here would affect this and also affect global warming
Helen Gillain	West of Sandiacre	Response-00964	Flooding / Drainage	Drains would be unable to cope with the increased number of homes, there would be no natural soak away and flooding would be inevitable
Helen Gillain	West of Sandiacre	Response-00964	Other	EMERGENCY SERVICES .... With roads that are already barely passable this number of increased population would create an even bigger strain on the emergency services .. if Ambulances and Fire Engines cannot pass through and could lead to fatalities!
Helen Johnson	South of West Hallam	Response-00170	Traffic Congestion	Traffic is horrendous already in morning rush hour . Parking for the school is a real safety issue
Helen Johnson	South of West Hallam	Response-00170	Road Safety	Not enough parking. The village has to manage schools commuters and Tesco deliveries. Many homes on beech lane do not have drives so this also adds to the congestion
Helen Johnson	South of West Hallam	Response-00170	Air Quality	Will always be affected by volume of traffic
Helen Johnson	South of West Hallam	Response-00170	Wildlife / Biodiversity	Again affected by volume of traffic
Helen Johnson	South of West Hallam	Response-00170	Bus Services	Already struggle to get through the village
Helen Johnson	South of West Hallam	Response-00170	School Capacity	Over subscribed
Helen Johnson	South of West Hallam	Response-00170	Healthcare Facilities	Would put extra strain on the practice
Helen Johnson	South of West Hallam	Response-00170	Number of Houses	Over density of area..
Helen Johnson	South of West Hallam	Response-00170	Green Belt	Over density
Helen Johnson	South of West Hallam	Response-00170	Landscape	All tha will be seen is houses
Helen Johnson	South of West Hallam	Response-00170	Flooding / Drainage	Site all ready floods on Beach lane
Helen Johnson	South of West Hallam	Response-00170	Other	Village already struggling with parking issues,traffic along beach lane and st Wilfred's junction off high line and st Wilfred's has had many collisions
Helen Patenall	South of West Hallam	Response-00868	Traffic Congestion	Beech Lane is is a congested area of West Hallam, particularly at the start and end of the school day and at the weekends when the Powtrel recreation ground is being used. Cars are parked on both sides of the road. I have witnessed on several occasions drivers approaching the village 'running the gauntlet' from the end of the parked cars (near to Pavilion Court T-junction) at some considerable speed to get past the parked cars and onto the village before the approach of oncoming traffic. This driver behaviour is putting children and their parents at risk and is quite the reason why the village speed-watch has to operate in this area. Building more properties will increase the volume of traffic at the congested times even more thus adding more risk to pedestrians in the area.
Helen Patenall	South of West Hallam	Response-00868	Road Safety	please see previous comment
Helen Patenall	South of West Hallam	Response-00868	Air Quality	Air quality will be impacted by the increase in traffic in the area. More housing = more vehicles (possibly several vehicles at one property) = less clean air.
Helen Patenall	South of West Hallam	Response-00868	Wildlife / Biodiversity	The proposed are for development is teeming with wildlife, it is currently a field covered in grass. Birds, insects and other wildlife will be lost by developing the area. I walk on a very regular basis past the proposed site and the area is constantly frequented by birds.
Helen Patenall	South of West Hallam	Response-00868	Bus Services	The bus service in West Hallam is woefully inadequate. The buses run very infrequently during the day and the last bus available in the evening is 18:20. A perusal of the bus timetables will support this point
Helen Patenall	South of West Hallam	Response-00868	Healthcare Facilities	Again, another inadequate service in the village. The surgeries in the Dales often refer patients to Littlewick medical centre which is some 3 miles away, all too frequently the only service provided by the Dales medical centre is a consultation by telephone, this clearly is not satisfactory.
Helen Patenall	South of West Hallam	Response-00868	Type of Housing	Type of housing is irrelevant. Whichever 'type' is proposed is not required and would lead to a drain on already strained local services.
Helen Patenall	South of West Hallam	Response-00868	Number of Houses	As previously commented upon, more houses are not required, infrastructure is already at breaking point

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Helen Patenall	South of West Hallam	Response-00868	Green Belt	By definition green belt is "an area of open land, on which building is restricted". I have always been led to believe that the proposed site is green belt land. It seems more than suspicious that all the area around the proposed site remains green belt on the map. It would seem to me that the green belt rules protecting the proposed site have been 'altered' to suit political aims, this is underhand and bordering on the deceitful/corrupt. Proposals to develop the land in the past have been refused, why is it ok to build now?
Helen Patenall	South of West Hallam	Response-00868	Landscape	The proposed development is alleged to "keep line of site views", this statement is nonsense, the view of rolling hills and a much treasured historic landmark (Cat and Fiddle Windmill) will be blighted and obscured from view for residents of our village
Helen Patenall	South of West Hallam	Response-00868	Flooding / Drainage	The land is boggy when wet, if the proposed site is covered in housing where will all the rainwater run off to?
Helen Patenall	South of West Hallam	Response-00868	Other	The site has been previously refused for development, so why has this changed all of a sudden?
Helen Patenall	North of West Hallam	Response-00872	Traffic Congestion	see following comment
Helen Patenall	North of West Hallam	Response-00872	Road Safety	Exit from the proposed site to High lane West is real road safety issue due to the volume of traffic, particularly at busy times
Helen Patenall	North of West Hallam	Response-00872	Air Quality	Air quality will be impacted by the increase in traffic in the area. More housing = more vehicles (possibly several vehicles at one property) = less clean air.
Helen Patenall	North of West Hallam	Response-00872	Wildlife / Biodiversity	The proposed are for development is teeming with wildlife, it is currently a field covered in grass with horses grazing. Birds, insects and other wildlife will be lost by developing the area. I walk on a very regular basis past the proposed site and the area is constantly frequented by birds and where would the horses have to be moved to?
Helen Patenall	North of West Hallam	Response-00872	Bus Services	The bus service in West Hallam is woefully inadequate. The buses run very infrequently during the day and the last bus available in the evening is 18:20. A perusal of the bus timetables will support this point
Helen Patenall	North of West Hallam	Response-00872	Healthcare Facilities	Again, another inadequate service in the village. The surgeries in the Dales often refer patients to Littlewick medical centre which is some 3 miles away, all too frequently the only service provided by the Dales medical centre is a consultation by telephone, this clearly is not satisfactory.
Helen Patenall	North of West Hallam	Response-00872	Type of Housing	Type of housing is irrelevant. Whichever 'type' is proposed is not required and would lead to a drain on already strained local services.
Helen Patenall	North of West Hallam	Response-00872	Number of Houses	As previously commented upon, more houses are not required, infrastructure is already at breaking point
Helen Patenall	North of West Hallam	Response-00872	Green Belt	By definition green belt is "an area of open land, on which building is restricted". I have always been led to believe that the proposed site is green belt land. It seems more than suspicious that all the area around the proposed site remains green belt on the map. It would seem to me that the green belt rules protecting the proposed site have been 'altered' to suit political aims, this is underhand and bordering on the deceitful/corrupt.
Helen Patenall	North of West Hallam	Response-00872	Flooding / Drainage	The land is a known flood problem and is always boggy and water logged for some time after any prolonged spell of rain, affecting gardens and footpaths in the area. I am led to believe Severn Trent Water are aware of the issues
Helen Pearce	West of Borrowwash	Response-01550	Traffic Congestion	Roads are already too busy and it takes a minor accident on the A52 to cause disruption for our small village.
Helen Pearce	West of Borrowwash	Response-01550	Wildlife / Biodiversity	The proposed building plans will destroy the habitats of the bats, owls and many other threatened species which have had a safe home in our fields for many years.
Helen Pearce	West of Borrowwash	Response-01550	Healthcare Facilities	The doctors and dentists are already oversubscribed. No new provision is being made for the influx of new homeowners.
Helen Pearce	West of Borrowwash	Response-01550	Flooding / Drainage	Borrowwash has seen an increase in flooding over the recent years. Our house on Victoria Avenue has usually been unaffected due to the natural drainage that the fields and nearby brooks provide. The new plans will destroy this provision for all of the houses on Victoria Avenue, increasing our flood risk which our Victorian pipework is not equipped to deal with.
Helen Richards	West of Borrowwash	Response-01550	Other	The houses on Victoria Avenue are over 200 years old, the views across the fields from our gardens have been unspoilt for centuries and these new plans will spoil the peacefulness and history of our small village street. We feel that the space allocated for parkland would be better suited to housing and leave the space behind Victoria Avenue as parklands. This would cause much less disruption to the residents, protect much of the wildlife living in the hedgerows etc and protect the privacy and peace of the residents of Victoria Avenue.
Helen Richardson	West of Sandiacre	Response-00432	Traffic Congestion	I object to the proposed development of 108 new homes. My primary concern lies with the detrimental impact this will have on local traffic flow. The existing road infrastructure is not only poorly maintained but also lacks the capacity to absorb the additional traffic generated by this development. Without concrete plans and funding for significant road improvements and maintenance, this development will severely worsen existing congestion and further deteriorate the condition of our roads.
Helen Richardson	West of Sandiacre	Response-00432	Road Safety	I object to the proposed development of 108 new homes due to the significant increase in traffic and the consequent detrimental impact on road safety. The existing road network in Sandiacre, already burdened and poorly maintained, will be further strained by a substantial increase in vehicular movements, leading to a heightened risk of accidents for pedestrians, cyclists, and other road users.
Helen Richardson	West of Sandiacre	Response-00432	Wildlife / Biodiversity	Stoney Cloud is a significant site with many threatened native plants. The building works alone will threaten the diversity, may well disturb the bats and other wildlife that inhabit the area.
Helen Richardson	West of Sandiacre	Response-00432	Bus Services	There are no significant bus services that service the proposed area apart from the R4 which has a limited time table.
Helen Richardson	West of Sandiacre	Response-00432	Healthcare Facilities	My objection to this development is based on the apparent lack of consideration for the increased demand on healthcare services. The proposal for 108 new homes makes no mention of how the additional residents will be accommodated by local healthcare facilities. Without a clear plan and commitment to expanding the capacity of GP surgeries, dental practices, and other essential health services, this development is unsustainable and will negatively impact the health and well-being of the entire community.
Helen Richardson	West of Sandiacre	Response-00432	Number of Houses	It is unclear how the proposal for 108 new homes on Green Belt aligns with a strategy that prioritizes the efficient use of existing housing stock, particularly in light of the significant number of existing vacant homes in the Erewash area. It appears that a more sustainable and resource-efficient solution would be to focus on incentivizing and facilitating the re-occupation of the over 700 empty properties currently standing within the borough. This approach would address housing needs without the detrimental impact of developing valuable Green Belt land.
Helen Richardson	West of Sandiacre	Response-00432	Green Belt	I strongly object to the proposed development of 108 new homes on Green Belt land. This development directly undermines the fundamental purpose of the Green Belt, which is to prevent urban sprawl, protect the countryside, and maintain the distinct character of settlements like Sandiacre. Building on this land sets a dangerous precedent and erodes the vital buffer between urban areas.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Helen Shaw	North of Borrowwash	Response-00521	Traffic Congestion	There is already an influx of cars cutting up Cole Lane meaning queues on to the A52. It is also a dangerous junction - getting on and getting off. There has been many accidents at this junction.
Helen Shaw	North of Borrowwash	response-00521	Road Safety	The actual junction off the A52 is a nightmare. Even though you indicate to say you're pulling off cars behind you don't slow down which in turn if there are cars wanting to turn right into the new houses (when built) could mean accidents as you're having to maintain your fast speed to get off the A52 so no one runs into the back of you. If there is a vehicle waiting it's going to be very dangerous. Likewise joining the A52 from Cole Lane is also dangerous and the more cars the more people will pull out when not safe to do so resulting in more accidents. It is an accident black spot! The entrance is also too close to the footbridge and the A52.
			Air Quality	The houses are going to be very close to the A52 so air quality will be poor!
Helen Shaw	North of Borrowwash	response-00521	Wildlife / Biodiversity	Erewhash are losing too much green spaces which has a knock on effect to the wildlife. My children and my now grandchildren loved/love to look for the horses in the field when we walk over the bridge. It will be a shame to build houses on the field.
			Healthcare Facilities	Building more houses without the infrastructure such as doctors and dentists is madness!
Helen Shaw	North of Borrowwash	response-00521	Green Belt	Green belt should never be built on when there are plenty of brown field sites which could be used instead. Once it's gone it's gone forever!
Helen Shaw	North of Borrowwash	response-00521	Flooding / Drainage	The A52 gets a lot of surface water from the nearby fields especially on the other side going towards Nottingham. Many cars get caught out and aqua plane with many a nasty accident (landing in the boundary hedges). So if houses are built the water will have to go somewhere and that somewhere will be the road surface which will result in more accidents as motorists don't slow down in bad conditions.
Helen Stanley	South of West Hallam	Response-01555	Traffic Congestion	The village can't cope with the thought traffic currently. The number of houses proposed could add another 240 to already narrow roads and bust junctions with the village itself and at the major junctions to high lane and at station road to Stanley
Helen Stanley	South of West Hallam	response-01555	Road Safety	The narrow road are beech Lane can not cope with more traffic Creating a junction opposite the school is an accident waiting to happen. At school drop off and pick up times and every weekend with football matches beech lane is full of red cars resulting in difficult passing situation s. The new housing could add another 240 cars which the village just can't cope with
Helen Stanley	South of West Hallam	Response-01555	Air Quality	More cars more pollution
			Wildlife / Biodiversity	This is a lovely open space with our village, providing habitats in the long grass and surrounding hedgerows These will be permanently lost
Helen Stanley	South of West Hallam	response-01555	Bus Services	Evening and weekend service is poor, not the well connected village mention I the application
			School Capacity	Current staff levels would not permit more students
Helen Stanley	South of West Hallam	response-01555	Number of Houses	The density of housing could not be in keeping with the village. Worry that the development would be set out to encourage future expansion
Helen Stanley	South of West Hallam	response-01555	Green Belt	Development would create a block between greenbelt land and the village Current acts as a buffer between the village and adjacent greenbelt
Helen Stanley	North of West Hallam	Response-01558	Traffic Congestion	This is a busy and dangerous road junction without adding more traffic
			Road Safety	Dangerous junction already More car will try and cross straight over to access the village meaning greaterniak of accident
Helen Stanley	North of West Hallam	Response-01558	Air Quality	More cars more pollution
			Wildlife / Biodiversity	This is part of the greenbelt Nd should not be built on Lows of habit in trees and hedgerows
Helen Stanley	North of West Hallam	response-01558	Number of Houses	Too many houses for such a small area Worrying that the layout would encourage future expansion and further loss of land
Helen Stanley	North of West Hallam	response-01558	Green Belt	Permanent loss of greenbelt, habitats and increased risk of future expansion with the proposed layout
Helen Taylor-Tipton	South of West Hallam	Response-00246	Road Safety	Lights needed at Mapperley crossroads
Helen Taylor-Tipton	North of West Hallam	Response-00245	Green Belt	Never to be built on
Helen Thompson	West of Sandiacre	Response-01356	Traffic Congestion	This area is already congested . It will make the roads less safe and more difficult for the bus to travel through. It is particularly difficult to navigate into and out of the junction of Church street and Town street/ Ilkeston road especially given the number of lorries coming from and to Stanton that have difficulty navigating the bend without using the other side of the road - more cars will increase the problems and safety issues. During building, lorries will add to the problems on already narrow streets. Have traffic studies been carried out ?
Helen Thompson	West of Sandiacre	response-01356	Road Safety	There are existing road safety concerns in this area which will be increased by more traffic and people. You should study the traffic safety issues around Cloudside school when the children come out at 3.15. Walking on the school side of Stanton Road can be hazardous as traffic comes very near or on the pavement - this includes the bus. Also people park on the pavement at the bottom of Beech Avenue. The junction of Church Street and Town street/Ilkeston road is hazardous already due to the number of lorries coming to and from the Stanton site which have problems on the corner without crossing onto the wrong side of the road.
Helen Thompson	West of Sandiacre	response-01356	Air Quality	Many more lorries and vans are coming through Sandiacre from the Stanton site using Ilkeston Road/Town Street/ Derby Road to and from the M1. More housing will bring more traffic especially while it's built. Are there up to date measurements of the existing air quality for instance at the traffic lights by the canal and at the motorway junction to assess this issue?
Helen Thompson	West of Sandiacre	response-01356	Wildlife / Biodiversity	This site is part of an important wildlife corridor linking to Stoney Clouds Nature reserve, the Erewhash canal and across to Stanton by dale. The area provides a range of habitats for wildlife. It should be preserved not built on. Have the views of Derbyshire Wildlife Trust been sought?
Helen Thompson	West of Sandiacre	response-01356	Bus Services	I think this will exacerbate the problems of bus access through this area due to increased traffic and parking. Has the bus company been consulted with especially about existing problems?
Helen Thompson	West of Sandiacre	response-01356	Number of Houses	The council has recently adopted the Sandiacre neighbourhood plan which was prepared in consultation with residents and voted for. This identifies other sites for housing development and advocates for protection of our green spaces.
Helen Thompson	West of Sandiacre	Response-01356	Green Belt	This is an important part of the Green Belt for Sandiacre. There is not a clear break in building between Sandiacre, Long Eaton and Risleigh and only the canal between Sandiacre and Stapleford ; therefore people value the green countryside including this site , the Nature reserve and the fields along the canal as they form literally a green belt in this area. Attempts by the council to reclassify sections of Green Belt don't sit well with common sense and fail to recognise the importance of our Green Belt for leisure activities beneficial to health and happiness.
			Landscape	This plan will replace attractive green fields with housing.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Helen Thompson	West of Sandiacre	Response-01356	Flooding / Drainage	There is already regular flooding along Ilkeston road as you leave Sandiacre and recently in Sandiacre itself. The proposed building will further restrict the amount of rain that is soaked up by replacing green fields with concrete and tarmac. Has the effects been calculated?
Helen Thompson	West of Sandiacre	Response-01356	Other	I think you fail to understand the importance of the Stoney Clouds area to local people - there is a very strong attachment to this just like the importance of Sycamore Gap to people in that area.
Helen Vickeds	South of West Hallam	Response-00062	Traffic Congestion	This area is very close to the school which already is a traffic black spot at the start and end of school. The roads become heavily blocked with parked cars which will be increased with more junctions in and out of Beech Lane
Helen Vickeds	South of West Hallam	Response-00062	Road Safety	The proposed site would have entrances / exits onto a very tight bend increasing the risk of accidents as well as entering the village across from the school already a very busy junction on Beech Lane / Hallam Way at school times
Helen Vickeds	South of West Hallam	Response-00062	Wildlife / Biodiversity	Removal of an area that has been untouched for many years which has a large variety of wildlife & vegetation will negatively impact the biodiversity in the area.
Helen Vickeds	South of West Hallam	Response-00062	School Capacity	The school is already a very popular school attracting children from outside the area. An additional of more housing attracting further families will put strain on the school
Helen Vickeds	South of West Hallam	Response-00062	Healthcare Facilities	Both doctors are already busy within West Hallam and people struggle to get access. Therefore additional housing will only seek to increase the impact
Helen Vickeds	South of West Hallam	Response-00062	Green Belt	Protecting green belt land is important and brown field sites / areas in towns with empty buildings should be considered as the first option before impacting our previous green belt
Helen Walker	Acorn Way, Derby	Response-00333	Traffic Congestion	Acorn way is a dangerous road already without adding in houses off it which have to come onto this already busy road, The traffic which uses this road is quite heavy and can be queuing without adding more traffic to it.
Helen Walker	Acorn Way, Derby	Response-00333	Road Safety	An accident waiting to happen if these houses are added to this road, there has already been accidents on this road and it is crazy how one half of the road is under one council and the other by a different council crazy all because of stupid boundaries!
Helen Walker	Acorn Way, Derby	Response-00333	Air Quality	More traffic more air pollution and the air quality is just going to get worse more standing traffic
Helen Walker	Acorn Way, Derby	Response-00333	Wildlife / Biodiversity	Just have no regard for the wildlife which lives in this area their natural habitats are been disturbed and destroyed we have to protect it not kill it
Helen Walker	Acorn Way, Derby	Response-00333	Bus Services	What buses no buses go down Acorn Way !
Helen Walker	Acorn Way, Derby	Response-00333	School Capacity	Local schools won't cope the extra pupils and it won't be Erewash Schools it will be City Schools which will have to cope.
Helen Walker	Acorn Way, Derby	Response-00333	Healthcare Facilities	Again the local docs and health facilities will not be able to cope with extra patients again it won't be Erewash Docs etc it will be City ones which will have cope
Helen Walker	Acorn Way, Derby	Response-00333	Green Belt	Building on green belt when there are lots of empty properties which can be used as places to live if they were renovated and would make areas look nicer places than creating concrete jungles of houses upon house
Helen Walker	Acorn Way, Derby	Response-00333	Landscape	What landscape you are totally destroying it, concrete jungles are been created, there are no landscapes where you can see green fields anymore
Helen Walker	Acorn Way, Derby	Response-00333	Flooding / Drainage	Acorn way floods ! Has done and always will do and even more so if more houses are built the two councils need to work together to make this road a safer place, nothing has really changed since the join glad does down there many years ago when it had rained hard and was flooded, less trees etc and you will get more water and floods
Helen Walker	Acorn Way, Derby	Response-00333	Other	This a totally crazy idea to put houses down here for so many reason but safety has to be one of the main reasons for it not happening, this road was originally built so the people of Oakwood did not have to go through Chaddesden to reduce traffic congestion and air pollution etc now you just creating that problem here now.
Helen Walker	North of Breadsall Hill Top	Response-00325	Traffic Congestion	There is far too much traffic already and by adding on these houses to this area it will meant the area will become a car park, since the other houses which were built in recent years on the fields which surround Oakwood it is impossible to leave the Oakwood estate at certain times in the morning and trying to get home at night
Helen Walker	North of Breadsall Hill Top	Response-00325	Road Safety	The increased traffic will increase the risk of accidents the road is too fast at 40mph as it is, there is a nursery which does not have a crossing near it, will more traffic there is likely to be a serious accident.
Helen Walker	North of Breadsall Hill Top	Response-00325	Air Quality	Our air quality have been greatly reduced when the additional houses were built and we do not have the green open spaces anymore this will only get worse with even more houses, more cars, less trees and less open green spaces
Helen Walker	North of Breadsall Hill Top	Response-00325	Wildlife / Biodiversity	So you think it is acceptable to kill all the wild life around and remove their habitat, and create a concrete jungle, we have lost so much wildlife in recent years and it is trying to find food where ever it can we often have foxes trying to find food where we live in Oakwood.
Helen Walker	North of Breadsall Hill Top	Response-00325	Bus Services	I use the H1 when I don't want to take my car into town so this is going to get busier than it already is with additional houses around
Helen Walker	North of Breadsall Hill Top	Response-00325	School Capacity	There has always been a problem with schools around this area, Oakwood never had the schools it was promised when it was built my children are all grown up but my granddaughter goes to the same school they went to in Allestree as there are no good schools in this area and a lack of places
Helen Walker	North of Breadsall Hill Top	Response-00325	Healthcare Facilities	Don't start on healthcare what healthcare we go to a doctors in Spondon and have done for years again no adequate health provisions for Oakwood and the surrounding area before the last lot of houses were built and even less now, we are Derby City yet it is Erewash who are wanting these houses built but won't be affecting their health facilities as it will be again all the docs etc around here fighting to provide facilities for them.
Helen Walker	North of Breadsall Hill Top	Response-00325	Number of Houses	Far too many do not need them, why don't they go and look at all the empty buildings which are around, pubs, shops, empty houses etc and start to make them into properties which people can live on and not come into green belt land we need fields, trees wildlife open spaces not a concrete jungle and no boundaries everywhere merging into one mass of houses
Helen Walker	North of Breadsall Hill Top	Response-00325	Green Belt	See my previous comment stop building on green belt land go and do up empty buildings and make them into homes
Helen Walker	North of Breadsall Hill Top	Response-00325	Landscape	What landscape we don't have one anymore just houses across from Oakwood bishops drive entrance there were lovely fields a lovely walk down to the river of railway line, further up Mansfield road there were lovely field now just houses upon house soon houses and traffic and more traffic.
Helen Walker	North of Breadsall Hill Top	Response-00325	Flooding / Drainage	Without the green belt area and trees there will be more flooding we have experienced flooding over the years in Oakwood and this will only get worse in a concrete jungle this is a known fact

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Helen Walker	North of Breadsall Hill Top	Response-00325	Other	We don't need anymore houses around here, we need to keep the green open spaces increase good air quality and not increase the pressure that the local community is under already there are so many empty places which need to be changed into accommodation.
Helen whiteman	West of Sandiacre	Response-00447	Traffic Congestion	The traffic just getting in the heavy plant would be bad enough it is a very narrow access road and it would feel safe walking up the road with plant traffic and everything that goes with it. Plus if houses get built the extra traffic would cause considerable congestion on already well used roads
Helen whiteman	West of Sandiacre	Response-00447	Road Safety	It would be impossible for it to be safe walking up coronation road with all the extra traffic it would cause so much inconvenience and it would not be safe
Helen whiteman	West of Sandiacre	Response-00447	Air Quality	We do not need at the extra pollution of this build
Helen whiteman	West of Sandiacre	Response-00447	Wildlife / Biodiversity	Stoney clouds has lots of mammals insects reptiles and amphibians on the site the poor animals have been squeezed enough as it is without more of it. Where are all the animals going to go. Leave well alone
Helen whiteman	West of Sandiacre	Response-00447	Bus Services	How are you going to get buses up there. No thought whatsoever given as usual from an uncaring council
Helen whiteman	West of Sandiacre	Response-00447	School Capacity	The local schools are full to capacity already. Where are all the extra children going to go
Helen whiteman	West of Sandiacre	Response-00447	Healthcare Facilities	We have limited health resources. The local health centre is adamant house and already is no 10 out of 10 of the Erewash surgeries. Where are all the extra people going to go and be treated. Putting extra work on already overloaded doctors surgeries The less we say on the local dentists the better
Helen whiteman	West of Sandiacre	Response-00447	Type of Housing	The type of housing is not at all going to enhance the area they will be slums within years and the new houses will not be fit for purpose
Helen whiteman	West of Sandiacre	Response-00447	Number of Houses	The whole scheme should be stopped and no houses built at all
Helen whiteman	West of Sandiacre	Response-00447	Green Belt	For goodness sake let's have a bit of green belt. This green belt which is next to Stoney clouds should be left well alone let the residents of sandiacre have one thing they can be proud of We have to put up with hundreds of Lorrie's trundling down the roads, from the Stanton site. No one care about the residents of sandiacre at all especially the local council
Helen whiteman	West of Sandiacre	Response-00447	Landscape	The landscape of the area is not suitable for building more house right next to the m1 motorway with all the pollution
Helen whiteman	West of Sandiacre	Response-00447	Flooding / Drainage	The water pressure in the house is very poor and if these house are builds it will be even worse. Further down the hill on elm avenue we are always having Severn Trent digging up and having to clear the sewers how will it be with extra housing up the hill
Helen whiteman	West of Sandiacre	Response-00447	Other	We are being bulldozed into this scheme by the labour government and their house building ideas with no thought for the local residents Once again they are being thoughtless about any one but themselves We do not need these houses Angela raynor wants them so the council jumps
Henrietta heron	West of Borrowash	Response-01354	Traffic Congestion	Already Victoria Avenue and getting on and off the A52 can be very busy, with that amount of extra car it will make the village into a large car park!
Henrietta heron	West of Borrowash	Response-01354	Road Safety	Already far too many cars
Henrietta heron	West of Borrowash	Response-01354	School Capacity	West park is already at capacity where are kids meant to go to school ??
Henrietta heron	West of Borrowash	Response-01354	Healthcare Facilities	Getting a doctors appointment is already very difficult add into this another 200 houses with multiple occupants it will add extra pressure
H Foster	South West of Draycott	Response-00691	Green Belt	Greenbelt is sacrosant and to be able at the click of a button to change parameters to suit this council that is going against all the wishes of the sensible majority holds dear It won't be long before the whole of our area is covered in concrete and tarmac and the people of this area will have to drive to get a breath of true countryside Please look for more suitable, non arable land that does not flood, is not green belt
H Foster	West of Sandiacre	Response-00714	Green Belt	Greenbelt is sacrosant and to be able at the click of a button to change parameters to suit this council that is going against all the wishes of the sensible majority holds dear It won't be long before the whole of our area is covered in concrete and tarmac and the people of this area will have to drive to get a breath of true countryside Please look for more suitable, non arable land
Hilary M McCullagh	East of Breaston	Response-00804	Traffic Congestion	Breaston's roads are not designed to accommodate additional traffic. Increased congestion, parking issues, and safety concerns would negatively affect both residents and commuters. Long queues already occur regularly approaching the Wilsthorpe roundabout and on Longmoor Lane.
Hilary M McCullagh	East of Breaston	Response-00804	Green Belt	This proposed development would have a deeply damaging impact on Breaston's Green Belt, infrastructure, natural environment, flood resilience, and community identity. There are more appropriate, sustainable locations for housing development that do not involve sacrificing protected countryside
Hilary M McCullagh	East of Breaston	Response-00804	Flooding / Drainage	Our garden has suffered a number of episodes of flooding up to the house, but fortunately not inside - yet. The first occurred in 1986 but there were no further major episodes here until 2019. Since then there have been at least three occurrences following severe storms in the 2020s. They have highlighted Breaston's vulnerability to flooding, with many properties suffering internal damage. The development site acts as a natural soakaway and is frequently waterlogged, as evidenced by photos and videos taken by local residents. Replacing this land with hard surfaces would increase surface water runoff, raising the flood risk for both existing homes and new properties, especially given the increasingly unpredictable climate.
Hilary M McCullagh	East of Breaston	Response-00804	Other	The Holly Avenue end of Breaston suffers from wind affected noise pollution from the M1, exacerbated by the 4 lane running now in operation. The proposed development would be even nearer to the motorway and would require some form of noise mitigation measures.
Hollie Briggs	South of West Hallam	Response-00040	Road Safety	Really silly location for new houses due to the 300+ children that walk to and from school, the increased traffic will become very dangerous for the children.
Hollie Briggs	South of West Hallam	Response-00040	Air Quality	We do not want any more poor air quality. We supposed to live in a ?nicer? area.
Hollie Briggs	South of West Hallam	Response-00040	Type of Housing	Absolutely do NOT want social housing!
Holly Mohamed	South of West Hallam	Response-00076	Traffic Congestion	Increased Traffic: The addition of approximately 90 homes will significantly increase traffic on Beech Lane and surrounding roads. Currently, these roads are already experiencing congestion, particularly during peak hours. The increased traffic could lead to longer commute times and increased frustration for current residents. Infrastructure Strain: The existing road infrastructure may not be equipped to handle the additional traffic. This could lead to potential bottlenecks and delays, especially at key junctions and intersections. The increased wear and tear on the roads could also result in higher maintenance costs for the local council.
Holly Mohamed	South of West Hallam	Response-00076	Road Safety	Safety Concerns: More vehicles on the road can increase the risk of accidents, particularly in residential areas where children and pedestrians are present. The safety of residents, especially school children, could be compromised. There have already been concerns about speeding vehicles in the area, and additional traffic could exacerbate this issue. Inadequate Road Design: The current road design may not support the increased traffic volume, potentially leading to hazardous conditions. Narrow roads and lack of proper pedestrian crossings could pose significant risks to both drivers and pedestrians.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Holly Mohamed	South of West Hallam	response-00076	Healthcare Facilities	Strain on Healthcare Services: The local healthcare facilities, such as West Hallam Medical Centre, are already under pressure. An influx of new residents could exacerbate this, leading to longer wait times and reduced quality of care. The medical centre currently serves a large number of patients, and additional residents could overwhelm the existing healthcare infrastructure. Limited Capacity: With only a few medical centres in the area, the additional population may overwhelm the existing healthcare infrastructure. This could result in longer waiting times for appointments and reduced access to essential healthcare services.
Holly Mohamed	South of West Hallam	response-00076	Type of Housing	Reputation of Developers: Some developers have a reputation for cutting corners to reduce costs, which can compromise the quality and safety of the homes. This can result in homes that do not meet the expected standards and require significant repairs shortly after purchase. White Hart Development Example: The White Hart development in West Hallam is a prime example of cutting corners. Residents have reported issues such as poorly finished interiors, inadequate drainage systems, and insufficient parking spaces. These problems highlight the risks associated with new developments and the potential for similar issues in the proposed residential development.
Holly Mohamed	South of West Hallam	response-00076	Green Belt	Loss of Greenbelt Land: The proposed development is on greenbelt land, which is meant to be preserved for its environmental and recreational value. Building on this land would lead to the loss of natural habitats and green spaces that are vital for the community's well-being. Greenbelt land serves as a buffer between urban and rural areas, and its loss could have long-term environmental impacts. Urban Sprawl: Developing greenbelt land can contribute to urban sprawl, reducing the separation between towns and leading to a loss of rural character. Once greenbelt land is developed, it is lost forever, which can have long-term negative impacts on the environment and community. The development could set a precedent for future encroachments on greenbelt land, further eroding its value.
Homewood	North of West Hallam	Response-01069	Traffic Congestion	Already huge issues with traffic
Homewood	North of West Hallam	Response-01069	Bus Services	Already limited service
Homewood	North of West Hallam	Response-01069	School Capacity	Lack of school places traffic increase at drop off and collection
Homewood	North of West Hallam	Response-01069	Number of Houses	Not needed, there are so many other places where affordable housing where there is better transport to main towns
Homewood	North of West Hallam	Response-01069	Flooding / Drainage	Already have major issues
Homewood	South of West Hallam	Response-01074	Traffic Congestion	Already issues on main roads, not enough routes through to main towns. Will be especially bad at school drop off times
Homewood	South of West Hallam	Response-01074	Wildlife / Biodiversity	It's an area with rich wildlife and diverse species which will end up being affected
Homewood	South of West Hallam	Response-01074	Bus Services	Already limited services here
Homewood	South of West Hallam	Response-01074	School Capacity	Schools are already at capacity - is there going to be a new primary and secondary?
Homewood	South of West Hallam	Response-01074	Type of Housing	Not an area where social housing would be suitable as you need to drive or use transport for most facilities - already limited
Homewood	South of West Hallam	Response-01074	Number of Houses	No need for such a large development here
Howard marshall	North of West Hallam	Response-00124	Traffic Congestion	West hallam already congested heavily. This junction hazardous as it is! Leave our green land alone!
Howard marshall	North of West Hallam	Response-00124	Green Belt	Green belt land is there for a reason! Wildlife needed! Money cause rules and not interested in the public.
Hulland, Bdverley	North of Breadsall Hill Top	Response-00496	Traffic Congestion	Congestion and noise Already enough houses and not fair on residents already there
Hulland, Bdverley	North of Breadsall Hill Top	Response-00496	Road Safety	More traffic, more accidents
Hulland, Bdverley	North of Breadsall Hill Top	Response-00496	Air Quality	Definitely air quality will be not healthy with more traffuc
Hulland, Bdverley	North of Breadsall Hill Top	Response-00496	Wildlife / Biodiversity	Chaddesden wood is beautiful, do I not destroy this With more housing, more people and traffic, find another area, enough houses in Oakwood . Will spoil it. Also, big Not enough good schools, only ones with room , poor reports
Hulland, Bdverley	North of Breadsall Hill Top	Response-00496	Bus Services	Will spoil estate if put buses through here
Hulland, Bdverley	North of Breadsall Hill Top	Response-00496	School Capacity	More good quality schools needed
Hulland, Bdverley	North of Breadsall Hill Top	Response-00496	Healthcare Facilities	GP - already struggle to get in at GP, more houses just makes even worse than it us
Hulland, Bdverley	North of Breadsall Hill Top	Response-00496	Type of Housing	NO to More housing
Hulland, Bdverley	North of Breadsall Hill Top	Response-00496	Number of Houses	No more
Hulland, Bdverley	North of Breadsall Hill Top	Response-00496	Green Belt	Save green belt for our next generation to grow up with Look elsewhere
Hulland, Bdverley	North of Breadsall Hill Top	Response-00496	Flooding / Drainage	Flooding and drainage is bound to impact homes
Hulland, Bdverley	North of Breadsall Hill Top	Response-00496	Other	Please build no more houses where persimmon homes are, Oakwood estate large enough
Iain Campbell	Acorn Way, Derby	Response-01179	Traffic Congestion	This will create an influx of traffic congestion with a possibility of 1100 cars with 2 cars per household being the normal now.
Iain Campbell	Acorn Way, Derby	Response-01179	Road Safety	This will create more traffic, increasing the risks of RTA's as this is near a busy school, people also use this area for walking dogs.
Iain Campbell	Acorn Way, Derby	Response-01179	Air Quality	With a potential of 1100 cars and a increase of buses this will effect the air quality!
Iain Campbell	Acorn Way, Derby	Response-01179	Wildlife / Biodiversity	There is a number of birds of prey within that area, I counted 7 the other day in the potential housing spot. This would be a huge impact and a potential a lose of the birds of prey as they use this area for feeding the young. This is a safe area for people to walk their dogs.
Iain Campbell	Acorn Way, Derby	Response-01179	School Capacity	Morley gardens is currently a pickup area for school children, this site could cause an increase of congestion spoiling was is a quiet area. THE REASON WE MOVED HERE
Iain Campbell	Acorn Way, Derby	Response-01179	Healthcare Facilities	This will impact the service (doctors, dentists etc ) in the area to a poor standard, making it even harder to get urgent face to face appointments!
Iain Campbell	Acorn Way, Derby	Response-01179	Type of Housing	Who are these houses for?
Iain Campbell	Acorn Way, Derby	Response-01179	Number of Houses	550 is a lot of houses within that area, this could possibly increase crime, which at the moment is very low
Iain Campbell	Acorn Way, Derby	Response-01179	Green Belt	What happened to protecting the environment, is this no longer a priority
Iain Campbell	Acorn Way, Derby	Response-01179	Landscape	We chose to move here because of the quiet location, building houses will effect everyone this area.
Iain Campbell	Acorn Way, Derby	Response-01179	Flooding / Drainage	The fields soak up the rain avoiding floods, this site has a potential to cause flooding in the area which you are wanting to create 550 homes next to Morley Road which already has water drainage issues under heavy rain
Iain Campbell	Acorn Way, Derby	Response-01179	Other	This is unacceptable and has a potential to have an effect on peoples Mental Health in this area. Oakwood has always been considered as a nice peaceful area which will be affected if this goes ahead!!!!

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Iain Harrison	South of West Hallam	Response-01214	Traffic Congestion	Traffic congestion is also a major and growing problem. The village shop car park is consistently overflowing, and the road leading up to St Wilfrid's Church is lined with parked cars on both sides, reducing it to a narrow and often dangerous route. Beech Lane is effectively a single-lane road much of the time, due to constant on-street parking near the park. Adding more housing in this location will dramatically worsen an already chaotic traffic situation. It is unthinkable that further development is even being considered in such an overburdened area. The idea of building more homes on greenbelt land in a village already at capacity is not just short-sighted?it's a gross failure of proper planning and governance.
Iain Harrison	South of West Hallam	response-01214	Road Safety	Road safety is another serious concern. The top of Hallam Way and Beech Lane?adjacent to the proposed housing development?has long been a dangerous crossing point. For years, a lollipop lady was stationed there to help children cross safely on their way to and from school, until that essential service was cut due to government funding reductions. Despite this, the road remains hazardous, particularly during peak times. Increasing the volume of traffic, along with the number of pedestrians and parked vehicles, will only heighten the risk of accidents. Once again, the idea of intensifying pressure on an already unsafe area is nothing short of reckless.
Iain Harrison	South of West Hallam	response-01214	Air Quality	Building on greenbelt land in West Hallam directly contradicts national air quality and environmental improvement goals. The UK government's Environmental Improvement Plan 2023 emphasizes the importance of preserving green spaces to enhance air quality and public health. Greenbelt areas, like the proposed development site, play a crucial role in filtering pollutants, reducing carbon emissions, and providing cleaner air for communities. GOV.UK Moreover, the Clean Air Strategy 2019 outlines the necessity of reducing air pollution through sustainable land use and transportation planning. Developing housing on greenbelt land often leads to increased vehicle dependency due to inadequate public transport options, exacerbating air pollution levels. In West Hallam, the limited bus services, especially after the discontinuation of the Black Cat service, mean that new residents would likely rely heavily on personal vehicles. This shift would not only increase traffic congestion but also deteriorate local air quality, posing health risks to existing and future residents. Preserving greenbelt land aligns with national objectives to improve air quality and public health. Prioritizing brownfield sites for development, which are often better integrated with existing infrastructure and public transport, supports these goals more effectively.
Iain Harrison	South of West Hallam	Response-01214	Wildlife / Biodiversity	he proposed site is a wild, open field that currently supports a variety of local wildlife. My family and I regularly see foxes and other animals in this area?it is part of a fragile but vital natural ecosystem that contributes to biodiversity and supports pollinators, birds, and small mammals. Building over it would be a permanent loss, not just of greenbelt land, but of habitat. According to the Wildlife Trusts and other conservation groups, building on greenbelt and greenfield sites often causes irreversible damage to local biodiversity, fragmenting habitats and disrupting the natural corridors that wildlife rely on to survive. This is particularly unjustifiable when there are numerous brownfield sites and derelict properties across Ilkeston and the wider borough that remain unused or underutilized. National planning guidelines (such as those from the Campaign to Protect Rural England and the government's own National Planning Policy Framework) encourage the development of brownfield land before greenbelt is even considered. Why is this not being enforced? Why are we targeting wildlife-rich, undeveloped land when there are more sustainable alternatives readily available? Once this green space is gone, it is gone for good. The loss of biodiversity, access to nature, and clean air cannot be undone.
Iain Harrison	South of West Hallam	response-01214	Bus Services	Public transport provision in West Hallam is extremely limited. Since the loss of the Black Cat service several years ago, residents have been left with minimal bus coverage. The current service is infrequent and does not run in the evenings, making it virtually unusable for commuting, appointments, or social activities. This lack of reliable public transport means that any new housing will inevitably lead to a sharp increase in car ownership and road usage?putting even more strain on already congested roads, insufficient parking, and overburdened infrastructure. Sustainable development should reduce dependency on cars, not increase it. In a village with such poor transport links, building more homes without first addressing this issue is entirely counterproductive.
Iain Harrison	South of West Hallam	response-01214	School Capacity	As a parent with children attending the local school?and living right next to it?! can say with certainty that the school is already at full capacity and struggling. Despite the best efforts of the dedicated staff, the school is underfunded and frequently relies on parents and the community to raise money for basic supplies and equipment. It's difficult enough to meet the needs of current students, let alone absorb an influx of new children from additional housing. Exactly where are these new families expected to send their children? Or is the push for profit now outweighing critical considerations like education, healthcare, traffic safety, air quality, and environmental preservation?
Iain Harrison	South of West Hallam	response-01214	Healthcare Facilities	I have lived in West Hallam for 20 years. When we first moved here, accessing healthcare was straightforward?! could see a GP without difficulty and register with an NHS dentist locally. Now, it's virtually impossible to get a doctor's appointment, with both surgeries constantly full and waiting times unacceptably long. NHS dental care is entirely unavailable in the area. The healthcare infrastructure is already stretched beyond capacity. Adding more housing?and by extension, more residents?will place even greater strain on already overburdened services. To continue building on greenbelt land in a village already at breaking point is irresponsible and deeply concerning. This proposal reflects a complete disregard for the well-being of current residents and the long-term sustainability of the community.
Iain Harrison	South of West Hallam	response-01214	Green Belt	The greenbelt exists for a reason. It was established to prevent urban sprawl, safeguard the countryside, and preserve the character of rural communities like West Hallam. The National Planning Policy Framework (NPPF) clearly states that greenbelt land should only be built on in exceptional circumstances?and overburdening a village with housing, without first exhausting all brownfield alternatives, does not meet that threshold. The Campaign to Protect Rural England (CPRE) has repeatedly found that there is enough brownfield land in England to build over 1 million new homes, without touching a single acre of greenbelt. In fact, building on greenbelt often leads to low-density, car-dependent developments that increase emissions, traffic, and pollution, while erasing the green spaces that benefit both people and wildlife. Greenbelt land is not "spare" or "unused"?it is performing vital functions: absorbing carbon, filtering air and water, supporting mental health through access to nature, and providing food and shelter for wildlife. Once built over, it cannot be restored. To sacrifice this for short-term gain, especially when better options exist, is poor planning and an affront to the long-term well-being of the community and the environment.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Iain Hamison	South of West Hallam	Response-01214	Flooding / Drainage	looding and drainage are also serious concerns that must not be overlooked. Greenbelt land?particularly open fields like the one in question?plays a crucial role in natural drainage and flood prevention. These areas absorb rainwater, reduce surface runoff, and help manage the water table. Once this land is replaced with tarmac, roofs, and paved driveways, water has nowhere to go. This dramatically increases the risk of surface water flooding both on the development site and in the surrounding village. West Hallam already experiences flooding issues during periods of heavy rainfall, and the infrastructure for drainage is clearly not equipped to handle additional pressure. The Environment Agency has repeatedly warned that developments on previously undeveloped land without proper sustainable drainage systems (SuDS) can lead to increased flood risk not just locally, but downstream as well. With climate change leading to more intense and unpredictable weather events, building over natural drainage areas is both irresponsible and dangerous. Short-term housing gains should never come at the expense of long-term flood resilience and community safety.
Iain Hamison	South of West Hallam	Response-01214	Other	This proposed development represents a serious and irreversible threat to the fabric of our local community. West Hallam is a village?small, close-knit, and already stretched to its limits in terms of healthcare, education, transport, and infrastructure. The people who live here do so because of its peaceful environment, rural setting, and community spirit. Pushing through further housing developments on precious greenbelt land will not only overwhelm our already fragile services?it will erode the very character that makes this village a special place to live. The destruction of the surrounding countryside is not a minor side effect?it is the loss of vital green space, biodiversity, and the mental and physical wellbeing that comes with access to nature. Once it is gone, it is gone forever. There are better, more sustainable alternatives?brownfield sites, empty homes, and underused urban areas?which should be prioritized before sacrificing the greenbelt. I urge you to reject this proposal in the interests of environmental integrity, community wellbeing, and responsible planning for future generations.
Iain Pendry	North of Borrowwash	Response-01185	Traffic Congestion	Don't believe this will be a significant issue
Iain Pendry	North of Borrowwash	Response-01185	Wildlife / Biodiversity	Given this area is directly adjacent to the A52 only concern would be management of noise and air pollution for those living in the site
Iain Pendry	North of Borrowwash	Response-01185	Type of Housing	The area is in desperate need of affordable housing and hence this proposal must require the developer to make provision for substantial numbers of affordable houses / starter homes
Iain Pendry	North of Borrowwash	Response-01185	Other	I am in favour of these proposals. Borrowwash and Ockbrook desperately need additional housing stock to enable young people and young families to be able to afford their first homes. I hope that the council find some way to; a. Ensure that a substantial number of houses are deemed affordable, smaller homes in order to address this need, and that b. Some kind of provision is made that housing is preferentially offered to local people.
Iain Pendry	West of Borrowwash	Response-01188	Traffic Congestion	I would have a significant concern about vehicle access onto and off the site. Both adjacent roads are very heavily congested, and clear provision will need to be made to ensure that site access is safe, and maintains the flow of traffic on the Nottingham Road, and on Victoria avenue.
Iain Pendry	West of Borrowwash	Response-01188	Healthcare Facilities	Healthcare provision in Borrowwash is already very significant stretched, with it being almost impossible to get a Dr or Dental appointment at the local practices. Whilst I support the additional houses in the villages, very serious consideration needs to be given to how the additional population will not further degrade these already stretched health services. I would expect to see statements from these local health providers laying out how they will meet these challenges, and what support is to be provided to them to enable them to do so.
Iain Pendry	West of Borrowwash	Response-01188	Type of Housing	Given the lack of affordable housing in the villages, serious consideration must be given to ensuring that a substantial number of houses are affordable, starter homes suitable for young people and young families.
Iain Pendry	West of Borrowwash	Response-01188	Other	The consultation makes no recommendations on the lack of cultural or sporting facilities in the village. It would be good to see that - in addition to this housing stock - thought is given to releasing more property for local services, pubs, exercise and sporting facilities. For example, Borrowwash is served by only one public house, at the opposite end of the village, whilst the Wilmot Arms is abandoned and an eyesore. The "Three Chefs" shop is boarded up and blocks the use of valuable retail or recreational use. These issues need to be addressed.
Iain	West of Sandiacre	Response-00493	Traffic Congestion	Sandiacre already has high level of traffic due to the town being a thoroughfare from the m1 and lorries from the nearby industrial park
Iain	West of Sandiacre	Response-00493	Road Safety	High levels of traffic will in turn lead to more accidents, especially during school transit hours
Iain	West of Sandiacre	Response-00493	Air Quality	Increase in traffic will deplete air quality in an already bad area
Iain	West of Sandiacre	Response-00493	Wildlife / Biodiversity	Building on these meadows will impact invertebrate breeding and therefore have a knock on effect up the food chain. The nature reserve supports species such as sparrowhawk, kestrel and barn owl which will suffer as a result.
Iain	West of Sandiacre	Response-00493	School Capacity	Increase in population will put further strain on freisland school which already has high class numbers and not enough classrooms
Iain	West of Sandiacre	Response-00493	Healthcare Facilities	More strain on Adam house GP surgery which already struggles to see current patient numbers
Iain	West of Sandiacre	Response-00493	Type of Housing	Probably tasteless.....
Iain	West of Sandiacre	Response-00493	Green Belt	Building on green space during a climate crisis is not a good idea, find a brownfield site to develop on
Iain	West of Sandiacre	Response-00493	Landscape	Impacting the views on and around stoney clouds nature reserve
Iain Bailey	West of Sandiacre	Response-00505	Traffic Congestion	The roads to and from are not suitable to accommodate this extra level of traffic
Iain Bailey	West of Sandiacre	Response-00505	Wildlife / Biodiversity	This is an area off the Stoney Clouds nature reserve and this will affect the wildlife living in the area in the short term while building and long term with additional people and pet animals
Iain Bailey	West of Sandiacre	Response-00505	Healthcare Facilities	There are already no healthcare facilities in sandiacre suitable and stapleford as it is currently difficult to get an appointment
Iain Bailey	West of Sandiacre	Response-00505	Flooding / Drainage	This will affect the drainage as this area holds a lot of water in wet periods which will now flow down into the neighbouring streets and drainage system which is already poor
Iain Bloor	West of Borrowwash	Response-00778	Healthcare Facilities	It is already difficult to get appointments at the local doctors surgeries , an influx of so many new households would make this extremely difficult
Iain Brown	South of West Hallam	Response-00163	Traffic Congestion	too near school , parking at school would cause serious conjection at shool times
Iain Brown	South of West Hallam	Response-00163	Wildlife / Biodiversity	open land for walking and bird watching
Iain Brown	South of West Hallam	Response-00163	Number of Houses	too many houses should be more bungalows
Iain Brown	South of West Hallam	Response-00163	Green Belt	open land for walking and bird watching
Iain Brown	South of West Hallam	Response-00163	Other	west hallam is big enough if you need to build housing build on already built on land
Iain Burton	East of Breaston	Response-00194	Traffic Congestion	Heath gardens is not suitable for this large vehicles.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Ian Burton	East of Erewash	Response-00134	Road Safety	Heath garden is a small culdesac with a very tight S bend that would be unsuitable for large construction type vehicles. I would consider it dangerous due to health and safety.
Ian Burton	East of Erewash	Response-00134	Wildlife / Biodiversity	Wildlife including badgers are on this site.
Ian Burton	East of Erewash	Response-00134	Flooding / Drainage	The area is prone to flooding and has done so many times
Ian Frearson	North of Borrowwash	Response-00719	Traffic Congestion	This proposal would generate an unacceptable volume of traffic from and to the adjacent Arterial route A52 (T) as well as the unacceptable and unsafe below current standard for the proposed access into the site that would itself contravene current site development requirements. The numbers of dwellings of around 60 will generate some 100 vehicles from new residents making the access and egress on and off the A52 an unacceptable risk.
Ian Frearson	North of Borrowwash	Response-00719	Road Safety	previous comments on the safety of the unacceptable proposal should be noted and repeated here.
Ian Frearson	North of Borrowwash	Response-00719	Wildlife / Biodiversity	a diminution of the available space for use for biodiversity will be reduced by the whole development area and as such will threaten the viability of red book species.
Ian Frearson	North of Borrowwash	Response-00719	School Capacity	This proposal will put more pressure on the already overcapacity schools available.
Ian Frearson	North of Borrowwash	Response-00719	Healthcare Facilities	This proposal would put increased pressure on the already stretched facilities available.
Ian Frearson	North of Borrowwash	Response-00719	Type of Housing	This should not need consideration since the entire proposal should not be considered further.
Ian Frearson	North of Borrowwash	Response-00719	Green Belt	This proposal would naturally affect the local and surrounding Green Belt and potentially affect any Red Book species present
Ian Frearson	North of Borrowwash	Response-00719	Flooding / Drainage	Any development of this nature should have a restricted drainage run off based on a maximum impermeability factor of 0.5% of the development area to take into account dramatic change in uses and the capacity of downstream sites. It is considered that this would be very difficult to achieve so render the development proposal unviable. Discharges from this site would put additional pressure on the already stretched land bordering the current main river site of the Ock Brook. Current flooding events from the Ock already threaten existing residential homes in the area.
Ian Frearson	West of Borrowwash	Response-01267	Traffic Congestion	A development of around 280 dwellings as proposed will generate far more traffic movements on and off the Derby road than currently that will put more pressure on the existing highway network and make the routes to and from the village less safe. The proposal does not allow for a secondary access to the site and this would mean a main route into and from the site of Distributor standard. Traffic movements to and from the Derby road would put additional pressure on the existing route that is already extremely busy at peak times
Ian Frearson	West of Borrowwash	Response-01267	Road Safety	The additional pressure generated by this proposal on the existing highway network will lead to a less safe access and egress to Derby Road and potentially increase accidents substantially
Ian Frearson	West of Borrowwash	Response-01267	Air Quality	The additional construction and subsequent developed site will generate far more pollution to the area than is currently generated by the agricultural site thereby affecting adversely the existing wildlife.
Ian Frearson	West of Borrowwash	Response-01267	Wildlife / Biodiversity	The proposal would adversely affect the wildlife of the area by both displacement to that using the current site and that using the adjacent site
Ian Frearson	West of Borrowwash	Response-01267	Bus Services	The proposals would put more pressure on the existing public transport services and yet does not lend itself to the provision of a 7.3m carriageway highway within the development proposal.
Ian Frearson	West of Borrowwash	Response-01267	School Capacity	This proposal is unsuitable for the existing school provision and would generate a potentially estimated 300 school placements based on similar developments. It would overwhelm the existing school provision and should not be considered as a suitable site for development without a serious commitment for increasing the school placements available.
Ian Frearson	West of Borrowwash	Response-01267	Healthcare Facilities	The proposal would require the provision of an additional health facility for Doctors and Dentist practices without which the existing provision would be overwhelmed
Ian Frearson	West of Borrowwash	Response-01267	Type of Housing	This site should not be considered as it reduces the division buffer between the City of Derby and Erewash.
Ian Frearson	West of Borrowwash	Response-01267	Green Belt	This site is an important provision of green belt and buffer between the City of Derby and Erewash and as such should be retained and maintained either as agricultural land or managed open space in order to increase the quality and area of land available to wildlife.
Ian Frearson	West of Borrowwash	Response-01267	Flooding / Drainage	The proposal would generate additional pressure on an already busy sewerage system as follows. Firstly an increase in the flood potential from surface water generation discharged into the boundary brook between Derby and Erewash. This proposal has the potential to see an additional discharge of surface water approaching 1,000 litres / sec influencing the crossing of the Derby Road at a low point already a potential for flooding and forward to the railway and on to the adjacent development before its discharge into the River Derwent. The proposal would affect the provision of Foul sewerage provision onto an already overloaded system
Ian Hamilton	West of Borrowwash	Response-01325	Traffic Congestion	The roads through and around the village are already in poor state of repair and clearly cannot handle the current volume of traffic. The size of the proposed development is unrealistic.
Ian Hamilton	West of Borrowwash	Response-01325	Road Safety	The A52 junctions in Borrowwash, Spondon and Ockbrook are already very busy and result in queues. The number of houses proposed will result in issues in safely accessing and exiting the road.
Ian Hamilton	West of Borrowwash	Response-01325	Wildlife / Biodiversity	The hedgerows bordering the proposed development are home to a wide range of birds. The destruction of habitats and disruption caused by a long period of development would be catastrophic to the wildlife in the area.
Ian Hamilton	West of Borrowwash	Response-01325	Number of Houses	The size of the proposed development is completely unrealistic and would overburden already inadequate infrastructure and services such as roads, dentists and doctors.
Ian herbert	West of Sandiacre	Response-00939	Traffic Congestion	180 homes is a significant increase in the daily traffic movements feeding out through stanton road to either rushy lane or church and the busy/dangerous junction with town street/lenton street.
Ian herbert	West of Sandiacre	Response-00939	Road Safety	the access road to this site is totally unsuited to heavy construction vehicle access and then high residential movements as the area is only suitable for car based commuting.
Ian herbert	West of Sandiacre	Response-00939	Air Quality	Sandiacre is presently plagued with fine dust from a wood recycling yard which conduction open air operations on town street. any further residential development and traffic movements will add to the already dangerous particulate levels through brake dust and tyre particulates.
Ian herbert	West of Sandiacre	Response-00939	Bus Services	The i4 bus service does go near to the proposed site but residents will find that after 6pm it becomes a cinderella service with frequent cancellations and only once and hour after 8pm.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Ian Herbert	West of Sandiacre	Response-00939	School Capacity	cloudside school is already at capacity with an ever widening catchment area and significant traffic issues on stanton road.
Ian Herbert	West of Sandiacre	Response-00939	Healthcare Facilities	the only medical service, adams house, is already full and overstretched.
Ian Herbert	West of Sandiacre	Response-00939	Type of Housing	180 house is just way too dense. perhaps a very limited number of prestige family homes might be viable
Ian Herbert	West of Sandiacre	Response-00939	Number of Houses	180 houses is excessive and only 50 to 70 would be appropriate
Ian Herbert	West of Sandiacre	Response-00939	Green Belt	this land should stay as green buffer between sandiacre and the motorway.
Ian Herbert	West of Sandiacre	Response-00939	Landscape	the present land borders and adds to the green space comprising the stony clouds nature reserve. an important recreational area for wildlife and people.
Ian Herbert	West of Sandiacre	Response-00939	Flooding / Drainage	this will increase the pressure on the victorian sewer system draining down to town street.
Ian Lockwood	North of Breadsall Hill Top	Response-01491	Traffic Congestion	Traffic congestion in Breadsall village is already a major concern, especially since the housing developments at Lime Lane and Dale Acre Way. The village has effectively become a shortcut for Oakwood residents heading to the A61 and A38, leading to serious issues with road safety and air quality during peak hours.
Ian Lockwood	North of Breadsall Hill Top	Response-01491	Road Safety	There are already significant queues at rush hour on Brookside Road in Breadsall, which is a narrow road not built for the volume of traffic it already receives as a result of other recent housing developments. This development will only compound this and increase the already multiple daily instances of near-misses around the traffic calming area and junction with Church Lane and Croft Lane, not to mention the heavy queueing at Pektron island where Croft Lane meets the A61.
Ian Lockwood	North of Breadsall Hill Top	Response-01491	Air Quality	See comments re: Traffic Congestion and also more generally the increase in traffic on the A608 that is already congested at rush hour.
Ian Lockwood	North of Breadsall Hill Top	Response-01491	Wildlife / Biodiversity	This area is situated close to a Site of Special Scientific Interest (SSSI), specifically the Local Nature Reserve (LNR) on the Great Northern Greenway, as well as the Willowholt and Mill Plantations?woodlands that support a rich variety of wildlife. Species observed here include, but are not limited to: brown long-eared and pipistrelle bats, common toads, trout, smooth lizards, badgers, foxes, woodpeckers, swallows, martins, tawny owls, barn owls, wild bee hives, and rare orchids such as the common spotted and heath spotted varieties. Notably, a residence on Brookside Road near the proposed development site contains a maternity roost of over 200 soprano pipistrelle bats, which rely on the adjacent woodland and proposed site as a vital feeding ground. Section 9.5 of the Breadsall Neighbourhood Plan highlights the ecological value of this area, proposing that several smaller sites be designated as Local Green Spaces due to their role in supporting wildlife, including protected species like white-clawed crayfish, water voles, badgers, and bats. These designated sites include: Dam Brook and its banks Boosemoor Brook and its banks Croft Wood Willowholt Plantation Mill Plantation The same section further states: ?Prevention of development on sites of special importance. Given the absence of pressure for anything other than small-scale development in the parish, there is no justification for the development of any of the sites identified above as local wildlife sites and Local Green Spaces. These should therefore be protected from development unless the wildlife ceases to occupy the site in question.? The SSSI already benefits from strong national policy protections, reinforcing the case against development in this sensitive ecological area.
Ian Lockwood	North of Breadsall Hill Top	Response-01491	Number of Houses	The traffic, light, and noise pollution resulting from a development of this scale would significantly diminish the amenity value of the nearby conservation area and the village as a whole. Moreover, such an expansion would effectively transform Breadsall into a suburb of Derby. This concern is supported by the National Planning Policy Framework (NPPF), Section 13: Protecting Green Belt Land. Paragraph 143 outlines the five key purposes of the Green Belt: a) To check the unrestricted sprawl of large built-up areas b) To prevent neighbouring towns from merging into one another c) To safeguard the countryside from encroachment d) To preserve the setting and special character of historic towns e) To assist in urban regeneration by encouraging the reuse of derelict and other urban land The proposed development directly conflicts with several of these purposes, particularly those relating to urban sprawl, countryside protection, and the preservation of historic character.
Ian Lockwood	North of Breadsall Hill Top	Response-01491	Green Belt	This proposed expansion of the Derby conurbation is in direct contradiction to the findings of the previous Strategic Housing Land Availability Assessment (SHLAA 359), which identified the site as unsuitable for residential development. According to the National Planning Policy Framework (NPPF), Section 13: Protecting Green Belt Land, paragraph 142 states that the Government places great importance on Green Belts. The core objective of Green Belt policy is to prevent urban sprawl by maintaining land as permanently open, with openness and permanence being its defining features. Paragraph 143 outlines five purposes served by Green Belt land: a) To check the unrestricted sprawl of large built-up areas b) To prevent neighbouring towns from merging c) To safeguard the countryside from encroachment d) To preserve the setting and special character of historic towns e) To support urban regeneration by encouraging the reuse of derelict and other urban land The proposed development undermines these principles, particularly those aimed at preventing urban sprawl, protecting the countryside, and maintaining the distinct character of historic settlements.
Ian Lockwood	North of Breadsall Hill Top	Response-01491	Landscape	The green space that marks Breadsall out as a village in its own right will be forever destroyed, merging it into a single large conurbation with no identity of its own whilst destroying a countryside landscape enjoyed by many.
Ian Lockwood	North of Breadsall Hill Top	Response-01491	Flooding / Drainage	Breadsall village already experiences significant flooding during periods of heavy rainfall. Approving this proposal would place existing homes at further, entirely foreseeable risk with mitigations such as those in place at the recent Lime Lane development already proven to be inadequate. It must therefore be rejected in favour of alternative sites that do not carry such inherent danger. The importance of this area in mitigating flood risk is acknowledged in P&DG's Green Wedge Review (Page 2), which states: ?The Green Wedge provides vital flood storage and provides space to allow water to soak away naturally, reducing the need for engineered drainage.? Additionally, Paragraph 159 of the National Planning Policy Framework (NPPF), under Planning and Flood Risk, states: ?Inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere.? This proposal directly conflicts with both local and national policy guidance regarding flood risk and the responsible siting of development.
Ian Steele	West of Sandiacre	Response-00780	Traffic Congestion	Sandiacre, stoney clouds is a peaceful area, more traffic will ruin it for those already here
Ian Steele	West of Sandiacre	Response-00780	Road Safety	The roads are narrow and tight even for the amount of residents here already
Ian Steele	West of Sandiacre	Response-00780	Air Quality	More traffic will not improve the air quality we enjoy already in stoney clouds area

Name of Responder	Consultation Site	Response ID	Response Category	Detail
IAN TAYLOR	West of Sandiacre	Response-00972	Traffic Congestion	Traffic in the adjoining area and on Stanton Road in particular is already overloaded , particularly on school days. It will be impossible to provide adequate and safe access to the site given existing conditions. It has also been demonstrated that construction vehicles will have considerable difficulty in accessing the site during development.
IAN TAYLOR	West of Sandiacre	Response-00972	Road Safety	For the reasons stated at 1, increased congestion means less safety on the roads and adjoining footpaths.
IAN TAYLOR	West of Sandiacre	Response-00972	Air Quality	Vehicle use will remain a mix of petrol, diesel and electric for the foreseeable future. Increased numbers of idling engines due to obstructions and queues will only exacerbate the problem.
IAN TAYLOR	West of Sandiacre	Response-00972	Wildlife / Biodiversity	The proposed site forms part of an important wildlife corridor adjoining the M1. The open space currently used for grazing is just as important for biodiversity as the wooded areas. The site adjoins the Stoney Clouds Nature Reserve and is essentially part of the same ecosystem. The destruction of the open spaces representing the development site and increased footfall on the Nature Reserve in the future will have an irreversible impact on the wildlife in the local area.
IAN TAYLOR	West of Sandiacre	Response-00972	Bus Services	There is currently only one bus route in this area (i4) which is already liable to regular disruption due to congestion on Stanton Road and other roads. Buses regularly cannot turn onto Spencer Avenue, causing delays and impacting pedestrian safety.
IAN TAYLOR	West of Sandiacre	Response-00972	School Capacity	If the development goes ahead with 180 units, it is unlikely that the current schools in the area will be able to absorb the increased numbers of students expected to be living in a development of that size.
IAN TAYLOR	West of Sandiacre	Response-00972	Healthcare Facilities	If the development goes ahead with 180 units, it is unlikely that the current healthcare providers in the area will be able to absorb the increased numbers of people expected to be living in a development of that size. There are currently no dentists places available.
IAN TAYLOR	West of Sandiacre	Response-00972	Type of Housing	The numbers and density of the proposed housing units are inconsistent with the density of the existing residential area.
IAN TAYLOR	West of Sandiacre	Response-00972	Number of Houses	A recent study indicates that the density of the proposed housing will be twice the density of existing developments. This is neither desirable nor acceptable.
IAN TAYLOR	West of Sandiacre	Response-00972	Green Belt	The site adjoins the Stoney Clouds Nature Reserve and is essentially part of the same ecosystem. Together with surrounding farmland they form part of the green belt around Sandiacre and should be treated equally.
IAN TAYLOR	West of Sandiacre	Response-00972	Landscape	The site adjoins the Stoney Clouds Nature Reserve and is essentially part of the same ecosystem. Together with surrounding farmland they form part of the green belt around Sandiacre. The proposed development will inevitably damage the landscape.
IAN TAYLOR	West of Sandiacre	Response-00972	Flooding / Drainage	Sandiacre is already liable to flooding from the River Erewash. Any significant development will increase rain run off to the River and potentially increase this risk. Additional development will also create additional sewage which needs to be treated.
IAN TAYLOR	West of Sandiacre	Response-00972	Other	I object to the proposed development which will damage the environment, increase pollution and add pressure to existing services such as schools and medical facilities. It will also cause significant traffic disruption to the area both during construction and if the houses are built. Notwithstanding the proposed Section 106 obligations to be imposed, there is simply insufficient space to alter the existing road system to accommodate this.
Ian telfer	West of Sandiacre	Response-00991	Traffic Congestion	Already takes me ages to get off stanton road in the mornings. When the stanton lorry park really gets going it will be 24/7 gridlocked
Ian telfer	West of Sandiacre	Response-00991	Road Safety	Cars trying to get past school traffic is dangerous. More houses = more cars!!
Ian telfer	West of Sandiacre	Response-00991	Air Quality	On taft avenue we are already covered in wood dust from town street and at night seemingly everyone has wood burning stoves, and not burning clean legal wood.
Ian telfer	West of Sandiacre	Response-00991	School Capacity	Schools here are already at capacity and taking kids from ockbrook and Spondon now
Ian telfer	West of Sandiacre	Response-00991	Healthcare Facilities	Can't get in at the doctors already.
Ian telfer	West of Sandiacre	Response-00991	Number of Houses	180!! Way too many in my opinion
Ian telfer	West of Sandiacre	Response-00991	Green Belt	We need some green land within the conurbation. There's loads of suitable land between Sandiacre and Borrowash. Most of which isn't actually growing food but exercising horses!!
Ian Ward	West of Sandiacre	Response-01628	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Ian Ward	West of Sandiacre	Response-01628	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Ian Ward	West of Sandiacre	Response-01628	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Ian Ward	West of Sandiacre	Response-01628	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Ian Ward	West of Sandiacre	Response-01628	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
Ian Ward	West of Sandiacre	Response-01628	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Ian Ward	West of Sandiacre	Response-01628	Type of Housing	High density housing is preposterous not in keeping with current housing.
Ian Ward	West of Sandiacre	Response-01628	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Ian Ward	West of Sandiacre	Response-01628	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Ian Wood	West of Sandiacre	response-01867	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Ian Wood	West of Borrowwash	Response-00987	Wildlife / Biodiversity	The reduction in open space/green belt will inevitably have a negative impact on existing wildlife and biodiversity
Irina Anthony	West of Sandiacre	Response-01867	Healthcare Facilities	Additional housing will inevitably have a detrimental effect on the current inhabitants being able to access doctors and other healthcare provision.
Irina Anthony	West of Sandiacre	Response-01867	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Irina Anthony	West of Sandiacre	response-01867	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Irina Anthony	West of Sandiacre	response-01867	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Irina Anthony	West of Sandiacre	response-01867	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Irina Anthony	West of Sandiacre	response-01867	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. Irina Anthony	West of Sandiacre	response-01867	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Iris Howes	South of West Hallam	Response-01169	Traffic Congestion	Beech Lane is not equipped to accommodate the traffic levels this development would bring. It becomes gridlocked during school runs
Iris Howes	South of West Hallam	response-01169	Road Safety	cars often have to mount the kerb to pass, putting pedestrians ? especially children ? at risk. I've lived here a long time and witnessed many accidents over the years. Its also sad to see children struggling to cross a road in what should be a safe area.
Iris Howes	South of West Hallam	Response-01169	Wildlife / Biodiversity	Wildlife including deer, birds of prey, and protected newts are frequently observed in this area. Development would destroy their habitats and disrupt the local ecosystem.
Iris Howes	South of West Hallam	response-01169	Bus Services	Bus services in West Hallam are infrequent and unreliable. Most new residents would inevitably rely on private cars, adding to the congestion.
Iris Howes	South of West Hallam	Response-01169	Healthcare Facilities	GP services are already stretched, with delays of up to five weeks for appointments. Residents are being directed to practices outside the village.
Iris Howes	South of West Hallam	response-01169	Number of Houses	Past applications ? even those proposing a single property ? have been rejected on this same site. Nothing has changed that would justify approval for a large-scale development now.
Iris Howes	South of West Hallam	Response-01169	Green Belt	This proposal would consume a large area of designated Green Belt land. Once built on, this land is lost for good ? along with its role in separating communities, preserving natural beauty, and supporting biodiversity. West Hallam has grown over the year and now need to protect our green spaces and fight for the ?village? it should be.
Isabelle Love	West of Sandiacre	Response-00529	Traffic Congestion	Already issues with traffic in this area of Sandiacre, cars park all along roads as many houses do not have drives, increased traffic in this area will pose safety risks for pedestrians (particularly children). The bus already struggles in this area, further congestion will exasperate the issues. There will also be increased traffic down Rushy Lane once people take the back way through Sandiacre to gain access to the M1 & A52
Isabelle Love	West of Sandiacre	response-00529	Road Safety	With further traffic obviously comes the greater risk to pedestrians (particularly children).
Isabelle Love	West of Sandiacre	response-00529	Air Quality	Again, more traffic (and there will be a lot with potentially x2 cars per household) there is obvious dangers with the increase of air pollution, the area already has to deal with pollution from the M1 and removing more green sites and adding more congestion produces obvious results.
Isabelle Love	West of Sandiacre	response-00529	Wildlife / Biodiversity	The area is home to a wide range of wild life, we frequently spot birds of prey up there, not to mention badgers, bats and hedgehogs - all of which should be protected and have had the land they should be living on squeezed further and further. The surrounding areas were once green and are now concrete.
Isabelle Love	West of Sandiacre	response-00529	Bus Services	One bus that passes through the area to commute to Nottingham (not Derby), and struggles to do so, this will only encourage the use of cars. I4 is a poor service at the best of times.
Isabelle Love	West of Sandiacre	Response-00529	School Capacity	Obvious issues with the introduction of 180 houses. Stretch services stretch even thinner, the schools seem to only just be recovering (I have lived here my whole life and attended Friesland school from 2004-2009 - the teachers struggled back then with classes of 30, pupils are failed there).
Isabelle Love	West of Sandiacre	response-00529	Healthcare Facilities	Again, an obvious issue but one that is more pressing. Adams house surgery has been running a dismal service for the past 20 years, a service that has gone from bad to worse with you not even being able to get through in the morning for an emergency appointment. Whilst pregnant (the midwife service thankfully was forced to make room for me) I witnessed no end of elderly patients who would walk into the facility begging to be seen. The one chemist we had in Sandiacre - at this surgery - has now closed. It is obvious that surrounding pharmacies are also struggling as they often have no stock, forcing patients to make multiple trips to pick up one prescription - and issue that will also only exasperate the traffic congestion this building site proposes.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Isabelle Love	West of Sandiacre	Response-00529	Type of Housing	180 houses in that stretch of home is an appealing proposal. We have all seen the state of new builds - no gardens to even TRY and relieve the issue of removing further greenbelt. New builds are often ugly, uniform copies of each other with the only objective for greedy developers being how many they can stuff into and already overstuffed area!! People cannot afford these atrocious houses either, meaning they will likely attract people from outside the area, resulting in the local population looking to buy in the same situation, except now the area is worse with too many people in it. There?s also the issue of devaluing the existing homes in this area, when people no longer want to buy them with the area being so congested.
Isabelle Love	West of Sandiacre	Response-00529	Number of Houses	Too many houses for such a small area - obliviously. One house is too much given where it is proposed, but 180 is utterly ridiculous
Isabelle Love	West of Sandiacre	Response-00529	Green Belt	There are so many brown field sites that can be developed on that is so confusing that the land grab seems to be for the greenbelt - an area that SHOULD be protected for the good of the community as well as wildlife. Removing all lush land for uniform houses is detrimental to wildlife and to the mental health of the residents who enjoy breathing fresh air.
Isabelle Love	West of Sandiacre	Response-00529	Landscape	The changes to landscape due to constant development in Erewash has been vast and detrimental. The entire area is becoming gridlocked and hideous. In the last 40 years Erewash has seen enough development and it is time mindless politicians turned their attention elsewhere.
Isabelle Love	West of Sandiacre	Response-00529	Flooding / Drainage	The area floods regularly, obviously not help by Erewash councils failure to maintain drains, but the site is a flood risk despite this. Building yet more houses on flood plains in this area will not only prove a poor investment for the people buying the house, it will just move the water onto areas people already live, or onto stones which will again affect the wildlife.
Isabelle Love	West of Sandiacre	Response-00529	Other	I am incredibly confused and concerned that this area has even been put forward for development. Sandiacre has recently just had a new build site off Longmoore lane, into an area that already has stretch or nonexistent facilities. The lack of awareness or compassion for residents is evident and feels like nothing more than a shameless attempt at yet more money for Erewash council. I?m frankly disgusted and sincerely hope that common sense prevails and is rejected by planning as much as it is rejected by the residents.
Isobel Ball	West of Sandiacre	Response-01092	Traffic Congestion	West sandiacre is a quiet area. Many people walk their pets in the green areas or even just to clear their heads. I am also one of these people. My dad is buried not too far from these plans and i would hate for it to turn into a congested, dusty and polluted area. This many houses will absolutely rise traffic congestion, it will attract lorry?s and cranes, which will disrupt and pollute the area with noise, dust, litter and disruption. Many people live here with small children and dogs, and enjoy the quiet nature in which they live. These plans will heavily heavily disrupt that and it is simply unfair
Isobel Ball	West of Sandiacre	Response-01092	Road Safety	Similar to the traffic congestion notes i entered. Small children and dogs live in this area as it is close to the local primary schools. An increase of lorry?s and equipment being carted up there everyday is in no way safe for the families/ habitats/farm animals that reside in this area. It is incredibly dangerous and someone will get hurt.
Isobel Ball	West of Sandiacre	Response-01092	Air Quality	Undoubtedly, the machinery and digging that will be required to understand this type of planning on a green area. Will contribute heavily to air pollution, it will fill the air with dust and gases which is merely unsustainable for the type of area planned. It will drastically affect the livelihood of those already living in the area.
Isobel Ball	West of Sandiacre	Response-01092	Wildlife / Biodiversity	Building housing in an area so large and so eco diverse will no doubt have various implications on the wildlife in this zone. As someone passionate about ecosystems and habitats i simply cannot endorse it. Many animals will die as a result of building this many houses here.
Isobel Ball	West of Sandiacre	Response-01092	Bus Services	Our bus services are already strained. With some not showing up and most overcrowded. It is almost impossible to get where you need to be without leaving at least 2x earlier than is required. This is already a difficulty many of us face living in this area. So building houses to live hundreds more will absolutely escalate this issue. Furthermore, buses may have to become more frequent to accommodate to the additional passengers. Which will make the difficulty of getting around those tight corners and streets more frequent, thus, making congestion far far worse.
Isobel Ball	West of Sandiacre	Response-01092	School Capacity	Our schools are already far above max capacity, especially with the recent influx of asylum seekers taking up housing in erewash. There simply isn?t enough room, children living here already are struggling to secure spots in our schools and are having to redirect to the next closest catchment areas. It is unfair to have more children who currently and have always lived here being moved to various other schools because of a sudden increase in population. Particularly for cloudside. It is equally unfair for families moving into these new planned houses to have to send their children to school far away because they cannot rely on convenience.
Isobel Ball	West of Sandiacre	Response-01092	Healthcare Facilities	Adam house is sandiacres dominating GP choice. Now patients are already being redirected to sawley due to the strain and excess pressure on the NHS. Those in south sandiacre will almost 100% be sent to sawley permanently if these plans are followed through with, as they will be closest out of the catchment for adam house. This is absolutely unfair, we should not be building additional housing in a village already oversubscribed.
Isobel Ball	West of Sandiacre	Response-01092	Number of Houses	Everything i have already said in every comment, except quadrupled. Because this is not a few houses it is housing to live hundreds of residents.
Isobel Ball	West of Sandiacre	Response-01092	Green Belt	It is absolutely absurd to be building on green belt areas when there are so many brown belt areas in dire need of usage. Green belts are beautiful places full of wildlife and colour and many of us adore this particular spot. It is greedy and selfish, especially in the position we are currently in with climate change and deforestation, destruction of habitats the list goes on. Building here will most likely entail destruction of grass and concreting over it and chopping down trees to make room. Why do it? When there are so many empty spaces where many many more houses could be built? It is hardly a thought through plan and i know of no one local who endorses it. It?s destroying beauty and animal habitats, trees we require to survive.
Isobel Ball	West of Sandiacre	Response-01092	Landscape	The green areas of west sandiacre, stoney clouds, the old and new golf courses are special places to many sandiacre residents. For me personally, as an owner of a golden retriever. The land in wish is projected to be built on is an area very special to me and my pup. It is a beautiful and safe area away from heavy population and busy areas and many of us treasure that. It?s a place i hew up walking through, especially with my dad who passed away when i was 11. So for me and my family the area holds great weight and importance. We should be allocating houses to brown belt areas where there is no use for the land. Not green belts. Everyone deserves housing, but not here.
Isobel Ball	West of Sandiacre	Response-01092	Flooding / Drainage	Rather straightforward but undeniably building an estate based on concrete and tarmac will not be good for flooding/drainage. Green areas almost naturally allow for flooding and soak up excess water and rain. Never mind what it?ll look like having to install drainage systems in this area, and the damage that will do.
J. E. Lord	West of Sandiacre	Response-01601	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
J. E. Lord	West of Sandiacre	Response-01601	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
J. E. Lord	West of Sandiacre	Response-01601	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
J. E. Lord	West of Sandiacre	Response-01601	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
J. E. Lord	West of Sandiacre	Response-01601	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. It also struggles up the hill during winter and regularly gets held up on Beech Avenue. Many at the top of the hill cannot use the current bus service because of the steep terrain.
J. E. Lord	West of Sandiacre	Response-01601	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
J. E. Lord	West of Sandiacre	Response-01601	Type of Housing	High density housing is preposterous not in keeping with current housing.
J. E. Lord	West of Sandiacre	Response-01601	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
J. E. Lord	West of Sandiacre	Response-01601	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
J. E. Lord	West of Sandiacre	Response-01601	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Jack	South of West Hallam	Response-00278	Traffic Congestion	Already this road is terrible for traffic and key times of the day. The increased housing will add further stress on the road etc
Jack	South of West Hallam	Response-00278	Other	I could add stuff in every box but it won't make a difference. This clearly isn't a suitable site due to the roads and infrastructure in the local area which are already over stretched
Jack Bointon	North of Breadsall Hill Top	Response-00969	Traffic Congestion	Traffic congestion will be dramatically worsened. The major road running through Hill Top has already got bad traffic, but if this proposal is accepted, then the road will be even worse.
Jack Bointon	North of Breadsall Hill Top	Response-00969	Air Quality	The air quality will be worse. More traffic will mean that the air will be severely worsened, making it an even worse place to live in. Health will be made worse because of this: especially with those with severe lung diseases.
Jack Bointon	North of Breadsall Hill Top	Response-00969	Number of Houses	Too many houses and too many people living here at the moment.
Jack Bointon	North of Breadsall Hill Top	Response-00969	Green Belt	This allocation will damage the preservation of wildlife and the environment. There are a lot of beautiful creatures where their homes will be destroyed.
Jack Collins	East of Breaston	Response-00908	Traffic Congestion	The village road network is not equipped to handle additional traffic volumes. Increased congestion, parking problems, and road safety risks would result in a marked decline in quality of life for both residents and commuters.
Jack Collins	East of Breaston	Response-00908	Wildlife / Biodiversity	Development here would lead to the permanent loss of vital green space and the destruction of natural habitats supporting a variety of wildlife, including birds, bats, and small mammals. Once developed, this ecological value cannot be restored. The development also runs counter to the Climate Change Act 2008 and the Environment Act 2021, undermining national commitments to reduce carbon emissions and meet the 10% Biodiversity Net Gain requirement.
Jack Collins	East of Breaston	Response-00908	School Capacity	The village primary school already faces constraints in space and facilities, while nearby secondary schools operate near or at full capacity. An influx of families would worsen the situation and could force children to seek school places outside the area.
Jack Collins	East of Breaston	Response-00908	Healthcare Facilities	Local GP surgeries and dental practices are under significant strain, and any increase in population would make access to timely care even more difficult.
Jack Collins	East of Breaston	Response-00908	Number of Houses	Breaston is a historic rural village with a strong sense of identity and community. Introducing a large-scale development of 50 houses would significantly alter the village's scale and character, pushing it toward becoming a suburban extension rather than a distinct settlement. This would undermine the very qualities that make Breaston a desirable place to live.
Jack Collins	East of Breaston	Response-00908	Green Belt	The land in question is designated Green Belt, protected to limit urban sprawl, safeguard the countryside, and preserve biodiversity. Development here would lead to the permanent loss of vital green space. Contradiction with Planning Policy and Legislation. Under the National Planning Policy Framework (NPPF 2023): Paragraph 140 states that changes to Green Belt boundaries should only be made in exceptional circumstances. Paragraphs 149-150 highlight that inappropriate development in the Green Belt should only be permitted under very special circumstances. No compelling justification has been presented to meet these thresholds. Additionally: The Council is required to demonstrate a five-year housing land supply before Green Belt release is considered. There is no clear evidence that all brownfield and non-Green Belt options have been fully explored. More appropriate, sustainable sites should be prioritised - sites that do not require sacrificing protected countryside and the long-term wellbeing of our community
Jack Collins	East of Breaston	Response-00908	Flooding / Drainage	Recent flooding events in late 2023 and early 2024 demonstrated the village's vulnerability to extreme weather. The proposed site, which currently functions as a natural soakaway and is often waterlogged, plays a key role in managing surface water. Development would replace permeable land with hard surfaces, significantly raising flood risk for both existing and future properties at a time when climate unpredictability is on the rise.
Jack Greatorex	West of Sandiacre	Response-01731	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Jack Greatorex	West of Sandiacre	Response-01731	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Jack Greatorex	West of Sandiacre	Response-01731	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Jack Greatorex	West of Sandiacre	Response-01731	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Jack Greatorex	West of Sandiacre	Response-01731	Type of Housing	High density housing is preposterous not in keeping with current housing.
Jack Greatorex	West of Sandiacre	Response-01731	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Jack Greatorex	West of Sandiacre	Response-01731	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Jack Greatorex	West of Sandiacre	Response-01731	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Jackie Lewis	North of Breadsall Hill Top	Response-00955	Flooding / Drainage	Flooding is already an issue with the building of two housing developments so, even though these have had flooding prevention items in planning and some afterwards, the footpaths and roads now form a gully taking water into what is an at risk village. More housing and less green space/trees to absorb this is only going to flood the village more often.
Jack McQueenie	West of Sandiacre	Response-01823	Other	Title? Wrong. Land earmarked is Due North of Sandiacre town centre.
Jack McQueenie	West of Sandiacre	Response-01823	Flooding / Drainage	The hilltop acts as a giant sponge in the winter months, it is a marsh from November through to May. If built upon the houses will sink and the quickly released rain water will Flood Sandiacre Every Winter. Such as it did in the Floods of October 2023. Necessitating Insurance Companies paying out Hundreds of Millions of Pounds to homeowners and Progress Rail.
Jacky Kinirey	West of Borrowash	Response-01209	Traffic Congestion	The build up of traffic along Nottingham/Derby Road during peak times. The A52 has traffic problems then Borrowash and surrounding areas are gridlocked. Access to a new housing estate would cause if more traffic chaos
Jacky Kinirey	West of Borrowash	Response-01209	Wildlife / Biodiversity	We need green spaces wildlife has to live and thrive.
Jacky Kinirey	West of Borrowash	Response-01209	Healthcare Facilities	Our NHS is over stretched at the moment we need more local services for example doctors, dentists, facilities for the elderly to go to, so they do not feel isolated or alone. Building more houses without planning long term for an ageing population is shortsighted and irresponsible.
Jacky Kinirey	West of Borrowash	Response-01209	Type of Housing	Houses for 1st time buyers is absolutely essential. Maybe part owned. Not 5/6 bedroom houses they're are plenty in Borrowash.
Jacky Kinirey	West of Borrowash	Response-01209	Green Belt	Greenbelt is called that for a reason not to be built on. We need this stretch of land .
Jacob Whitt	West of Sandiacre	Response-01748	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
Jacob Whitt	West of Sandiacre	Response-01748	Road Safety	Existing roads are steep rising to 80m, twisted and narrow with blind corners, little visibility and parked cars to contend with. At peak time traffic congregates along Stanton Road and it is dangerous to attempt crossing the road. Access via the narrow cart track at the top of Larch Drive and Cloud side Road is unsuitable for this volume of traffic. The presence of heavy duty construction vehicles would be dangerous to residents property during icy weather conditions.
Jacob Whitt	West of Sandiacre	Response-01748	Air Quality	Disruption from heavy dusty construction vehicles, their noise, vibration and dirt would be detrimental to residents and wildlife for many years. Pollution is historically high in this area because of the proximity to A52 and M1. In particular congestion at peak times accessing Junction 25 still takes place. Widening has brought the heavy goods vehicles even closer to nearby houses. This site acts as a lung absorbing much of pollution. Animals and wildlife will be greatly affected by Noise, Air and Light pollution affecting their natural behaviour.
Jacob Whitt	West of Sandiacre	Response-01748	Wildlife / Biodiversity	This site of approx. 13 acres has a diverse habitat for all of our native species, flora and fauna. Its close proximity to Stoney Clouds Nature Reserve would impact dramatically on all wildlife many of which are already struggling with loss of habitat.
Jacob Whitt	West of Sandiacre	Response-01748	Bus Services	The bus is unable to access the roads above Coronation Avenue because of the terrain, steepness and parked vehicles so would not be able to access the even higher new site. Jacob Whitt	West of Sandiacre	Response-01748	Healthcare Facilities	Just one doctors practice and one dentist. It is difficult to obtain an appointment at either and to do so requires standing in all weathers at 8am. Often no appointments are available.
Jacob Whitt	West of Sandiacre	Response-01748	Type of Housing	High density housing is preposterous not in keeping with current housing.
Jacob Whitt	West of Sandiacre	Response-01748	Number of Houses	It is the highest density of all the proposals and will give rise for concern for further phases in the future.
Jacob Whitt	West of Sandiacre	Response-01748	Green Belt	You should be protecting the greenbelt. It provides recreation and wellbeing to everyone as well as animals, insects, amphibians, lizards and birds. There are plenty of alternative more suitable sites.
Jacob Whitt	West of Sandiacre	Response-01748	Landscape	This proposal will change the existing beautiful landscape forever and turn it into a sterile concrete jungle. The fantastic views across the parishes and its beautiful walk will be destroyed and the skyline blotted out.
Jacqueline Hyett	South West of Draycott	Response-01548	Wildlife / Biodiversity	The land to the south west of Draycott is home to a significant amount of wildlife from birds, foxes, hedgehogs and squirrels and the development of 190 homes will mean the death of many different animals and the destruction of this mature natural habitat. Recognise the loss of the ecology in the area and the importance of the flora, fauna and wildlife. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. The taking away of grazing/arable land and the disruption for the wildlife.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Jacqueline Hyett	South West of Draycott	response-01546	Healthcare Facilities	Loss of open space and green spaces ? this is vital for our community?s wellbeing This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish, and the small villages surrounding it of Borrowwash and Breaston. To improve local accessibility to healthcare, education, employment, retail facilities and recreational resources including open spaces to enhance wellbeing and promote healthy and sustainable lifestyles. This application will have a negative effect on both wellbeing and health including mental and emotional wellbeing.
Jacqueline Hyett	South West of Draycott	response-01546	Green Belt	Protecting Green Belt land, this land should be kept open and unharmed. Protecting public rights of way and access, a large number of footpaths would be affected. Harm to the landscape is therefore intensified.. This land is rural in character, providing a tranquil transitional landscape between the rural areas of Draycott Parish and Borrowwash and other villages surrounding it of Breaston and Borrowwash. The proposal is far too big overpowering the area completely changing the whole heritage and important landscape denying the villages of Draycott and surrounding areas some of its most beautiful escapes to walk freely into the countryside as they have done so for many years. The area has an abundance of wildlife especially special and red species of birds who are frequently noted year on year in the area, these will all lose their annual nesting sites what a compromise! We/I wish to strongly object to the whole application it is in the wrong area and is condemning the villages to living in the midst of a housing estate. Unnecessary damage to green field sites, resulting in an irreversible stain on the landscape. There are 109 existing Brownfield sites in EBC giving 81H with 103 of these having full planning permission. These sites should be prioritised first for development before Greenbelt land is considered. Will totally spoil a greenbelt area with lovely views.
JACQUELINE LOUISE KELLY	Acorn Way, Derby	Response-00327	Traffic Congestion	An extra 550 houses - just about every family has 1 to 2 cars, thats an extra 550 to 1000+ vehicles using Acorn Way and the neighbouring housing estate each day Acorn way is already extremely heavily congested at peak times with traffic causing mayhem, the traffic often building up around a bend and causing accidents, I myself have been shunted on Acorn Way due to traffic on the blind bend and I know of lots of accidents and fatalities on that road
JACQUELINE LOUISE KELLY	Acorn Way, Derby	response-00327	Road Safety	Morley Road, Acorn Way and Nottingham Road are already overloaded with traffic, with the side roads being used as "Rat Runs" an extra 500 to 1000 plus vehicles from the extra houses will just compound the situation My own street Wilsthore Road is used as a rat run to avoid the congestion on the main roads, and there are accidents, near miss accidents, speeding, and full on arguments and standoffs just about every single day .....how will another 1000 odd vehicles help that matter
JACQUELINE LOUISE KELLY	Acorn Way, Derby	response-00327	Healthcare Facilities	It is almost impossible to get a doctors appointment, the surgeries are so busy - the other day I was on hold several times for a total of over an hour and half, only to be cut off three times when I reached caller number one, another 550 families trying to access the same facilities will overburden the system completely
JACQUELINE LOUISE KELLY	Acorn Way, Derby	response-00327	Other	The Council Tax paid by these new families in these houses will NOT be going to pay for the services they will actually be using
Jacqueline Marshall	West of Sandiacre	Response-01436	Traffic Congestion	Sandiacre is a heavily congested area due to the closeness of Junction 25 of the M1, the A52 a major highway linking Nottingham and Derby, Stanton along with the Stanton ironworks Development plans The traffic from the motorway turning on to Derby Road is already excessive due to the large number of Lorries on both Derby Road and Town Street. A road system that is unable to cope with it and a traffic light junction over the canal in the centre of our small town was declared by DCC as a failed junction in 2016/2017.
Jacqueline Marshall	West of Sandiacre	Response-01436	Road Safety	Cloud side Academy is on Stanton Road in Sandiacre and is close to the proposed development. I walk this road regularly and witness first hand road safety issues on a daily basis Allowing approximately another 360 cars onto this road from the proposed development will increase the dangers for young children and older residents and must be taken into consideration. There is also an infant school on Victoria Road which will also be affected by increased traffic along with Albert Road, King Edward Street and Butt Street as drivers from the proposed development search for easy access to major roads there are no controlled crossings on the residential roads, cars already cause safety problems at drop off and pick up times. Allowing another 360 cars onto to these roads are putting young and old lives at risk.
Jacqueline Marshall	West of Sandiacre	Response-01436	Air Quality	The increased traffic from extra Lorries if the development goes ahead will without doubt be detrimental to our health. The estimated 360 cars from the proposed development will create a decline in Air Quality for our residents.
Jacqueline Marshall	West of Sandiacre	Response-01436	Wildlife / Biodiversity	Stones Clouds
Jacqueline Marshall	West of Sandiacre	Response-01436	Bus Services	If you have checked how difficult it is for buses to navigate the route that they take at present you would fully understand that extra buses can not be accommodated and would not be able to access the proposed development without great disruption to residents.
Jacqueline Marshall	West of Sandiacre	Response-01436	School Capacity	Have local schools and childcare facilities been advised in advance of the influx of children and are they fully equipped and financially stable enough to handle the increase.
Jacqueline Marshall	West of Sandiacre	response-01436	Healthcare Facilities	We don?t have enough Healthcare facilities in Sandiacre at present. A lack of GP surgeries, NHS Dentists. No Pharmacy Are Doctors advised in advance when new developments are proposed? What facilities have been included in the proposed plan?
Jacqueline Marshall	West of Sandiacre	response-01436	Number of Houses	The number of houses is too large and SHOULD NOT be allowed on THE GREEN BELT it will have a detrimental impact on people living close to the proposed development and will spoil a beautiful place loved by many residents of both Sandiacre and Stapleford.
Jacqueline Marshall	West of Sandiacre	response-01436	Green Belt	Houses SHOULD NOT be built on the GREEN BELT until ALL other options have been investigated and in this instance I do not believe that this has happened. Residents should be informed where else was looked at before it was decided that this was the only option.
Jacqueline Marshall	West of Sandiacre	Response-01436	Landscape	Stones Clouds provides beautiful views over Erewash and is a well loved and well used site. Green spaces are necessary to our mental wellbeing and are part of social prescribing and you are planning to reduce and completely change the landscape
Jacqueline Marshall	West of Sandiacre	response-01436	Other	On a personal level I am at a loss with the reasoning behind this development. We need our green spaces for our mental wellbeing. We needs trees to offset carbon bootprints and to help keep towns and cities cool and act as a buffer to air pollution. It?s no good ticking a box just to fulfill Government figures without looking at the bigger picture and the detrimental impact on landscape, loss of green spaces, and an increase in air pollution, This development should not be allowed under any circumstances.
Jacqueline Shakh	South of West Hallam	Response-00095	Traffic Congestion	Too much traffic now
Jacqueline Shakh	South of West Hallam	Response-00095	Road Safety	Too bear the school
Jacqueline Shakh	South of West Hallam	Response-00095	School Capacity	Need a bigger school for extra children
Jacqueline Shakh	South of West Hallam	Response-00095	Healthcare Facilities	Can't get in at the doctors now
Jacqueline Shakh	South of West Hallam	response-00095	Landscape	Spoiling beautiful views for existing residents.

Name of Responder	Consultation Site	Response ID	Response Category	Detail
Jade Harland-Toomer	South of West Hallam	Response-00217	Traffic Congestion	The traffic outside of the school now is dangerous adding housing opposite will make this worse
Jade Harland-Toomer	South of West Hallam	Response-00217	Road Safety	Dangerous junction opposite school
Jade Harland-Toomer	South of West Hallam	Response-00217	School Capacity	The school is stretched as it is
Jade Harland-Toomer	North of West Hallam	Response-00218	Traffic Congestion	Bad junction with 4 way traffic without adding more traffic
Jade Harland-Toomer	North of West Hallam	Response-00218	Road Safety	The road quality isn't great
Jade Harland-Toomer	North of West Hallam	Response-00218	Wildlife / Biodiversity	Lots of animals live in this land
Jade Smith	West of Sandiacre	Response-01783	Traffic Congestion	This would increase traffic on unsuitable and dangerous roads by over 700 vehicles a day giving rise to an excess of 19,000 vehicles a year on roads not suited to this volume of traffic.
